# Dedication

---

To the trinity of great women in my life —

My patient mother, *Barbara Mae Mallory* (1937-2003), who in the 1960s introduced me to the beauty of Islam through Islamic arts and calligraphy exhibited at the New York Metropolitan Museum, and to the spiritualism of Islam from the poetry of Maulana Jalāluddin Rumi (1207-1273), whom she read even on her last day.

My dear wife, *Kara Tan Bhala*, who grew up in a Muslim country, Malaysia, in a Buddhist Chinese family and attended Catholic convent school, who has witnessed in many countries the evils of ignorance and extremism, and who rightly pushed me to write this book out of her compassion for people, regardless of their faith, so that they may be better educated.

Our little gift from God (Allāh), our daughter, *Shera Tan Bhala*, who has travelled with us to no fewer than 23 countries, many of them Islamic, and helped us see them better through her loving eyes, generous heart, and empathetic spirit, and for whom I pray this book makes her future world more peaceful.

# Preface

---

... One race did not settle everything, as I had thought it would.  
One race is only the prelude to another.

— Sir Roger Bannister (1929– )

*The Four-Minute Mile* 225 (Guilford, Connecticut: The Lyons Press, 1981)

First person to run a sub-4 minute mile (3:59.4 on 6 May 1954 at the Iffley Road Track, Oxford University)

No background in law, religion, history, or foreign languages is required to read *Understanding Islamic Law (Shari'a)*. Only a dedicated mind and open heart are needed. This book is designed for two audiences: law students and legal practitioners. It is a textbook for future lawyers and reference for current ones. But, it cannot possibly resolve all issues about Islamic Law. It is a prelude for further study and contemplation, a point intimated in the above quotation from one of my heroes about one of my favorite activities — running. Finishing this book after nearly 3 years, like finishing a long run, left me with the certitude I had more to learn, just as I could improve as a runner.

This book also is eminently suitable for students of other disciplines, and non-lawyers, who are interested in or need to know about the subject. Along with my law students, many non-law graduate students and professionals in other fields have completed successfully the Islamic Law (*Shari'a*) course at the University of Kansas School of Law since I first offered it in the fall 2003 semester. That also is true of the honorable men and women, for whom I have enormous respect, who took the course in the fall 2010 semester at the Command and General Staff College (CGSC) at Fort Leavenworth, Kansas. To all of them, I owe much. Hailing from Bangladesh, Canada, China, Egypt, India, Iran, Korea, Pakistan, Saudi Arabia, Syria, United Arab Emirates (UAE), and from cities, suburbs, or farms around Kansas and across the United States, the students taught the teacher about the subject, and constructively criticized earlier iterations of this book.

It sounds not only striking, but also supercilious, to state that *Understanding Islamic Law (Shari'a)* is the first comprehensive textbook and treatise on the topic ever written for the English-speaking market by an American law professor. The book is the first work to incorporate systematically comparisons and contrasts with American law and Catholic Christian teaching.<sup>1</sup> And, it is the first such work to address frankly controversial matters from abortion to Wall Street, paying particular attention to women's issues. Still, there is no genius on the part of the author, who is nothing more than a struggling student of the *Shari'a*. Rather, the book reflects the under-developed state of Islamic Law in American legal education and practice.

<sup>1</sup> For an overview of the American legal system, see Gerald Paul McAlinn, Dan Rosen & John P. Stern, *An Introduction to American Law* (Durham, North Carolina: Carolina Academic Press, 2d ed., 2010). For brief discussions of Catholicism, by the Chaplain at Cambridge University and a Professor of Philosophy at Boston College, respectively, see Alban McCoy, *An Intelligent Person's Guide to Catholicism* (London, England: Continuum, 2005) and Peter Kreeft, *Fundamentals of the Faith — Essays in Christian Apologetics* (San Francisco, California: Ignatius Press, 1988). For a monumental work on the religion and history of Christianity, see Diarmaid MacCulloch, *Christianity — The First Three Thousand Years* (New York, New York: Viking, 2009).

## Preface

True, Dr. Majid Khadduri (1909-2007) and Dr. Herbert J. Liebesny (1911-1985), edited a collection of 15 essays, *Law in the Middle East*, published by the Middle East Institute in Washington, D.C. in 1955. In 1975, Dr. Liebesny produced *The Law of the Near & Middle East — Readings, Cases, & Materials*, published by the State University of New York Press, which compiled materials from a graduate seminar he taught at The George Washington University. Nevertheless, and despite more books appearing on a variety of Islamic topics in the intervening decades, no full-length, English-language treatment of Muslim law, religion, and history, covering not just the Arab world (in which roughly 300 million Muslims live), but also East Asia, Africa, and other regions (where the other 1 billion Muslims live), has appeared.

That a major text and reference work did not emerge after the Iran Hostage Crisis, which ran for 444 days starting on 4 November 1979, is shocking. After all, that debacle was a rude awakening involving legal issues and *Shi'ite* Islam. Before the terrorist atrocities of 11 September 2001, discourse on Islamic Law was the province a small group of law professors, many of whom were Muslim, and a niche area of practice for precious few specialist practitioners. Since then, the circle has expanded only modestly, even though the group never was a cabal. To the contrary, *Shari'a* experts are delighted and pleasantly welcome newcomers to the field.

The problem has been a lack of attention to modernizing the international and comparative law curriculum and practice in the United States in the wake of paradigmatic shifts around the globe. More accurately, the problem has been a lack of including Islam and the *Shari'a* in the modernization plans. Perhaps we in the American legal academy have been too complacent in our familiar Euro-centrism. Perhaps now we are too dazzled by China, and forget that even the Chinese Communist Party (CCP) has an uneasy time in its rule over a vast Muslim population, the Uyghurs, in the Far West of the People's Republic. Perhaps we exalt too much the preciously-placed law review article as a mode of scholarship over the old-fashioned book that is useful to students and practitioners. We use student law review editors as means to an end, especially when we leverage one journal over another. In so doing, we miss the opportunity to orient ourselves to be instruments of service through the patient preparation of teaching materials.

To be sure, Islamic legal scholarship is as old as Islam. Hence, there are innumerable volumes on the *Shari'a* — in Arabic, written by Muslims, with a Muslim audience in mind. There also are countless books in English, many written by Muslims, on the religion and history of Islam, and on specialty Islamic fields, such as Family Law, Inheritance Law, and International Law. Some such books are written originally in English. Others are in translation from Arabic, French, or German. With a few notable exceptions, many of which are cited herein, the authors tend not to be foreign lawyers or law professors. None of these books is oriented to the needs of the contemporary English-speaking legal classroom or demands of modern legal practice. Likewise, within the American legal academy and among practitioners, fine law review articles and books have been written on focused Islamic legal topics. But, the bottom-line is where can a newcomer, an average English-speaking law student or legal practitioner, learn about the breadth and depth of Islamic Law?

There certainly is nothing wrong with a book on Islamic Law written by a Muslim. But, it is not the same as one written by a non-Muslim. In first case, the author is writing from inside the system to which she adheres. It is difficult to see outside the paradigm, even if the author creatively and courageously advocates certain reforms against centuries

## Preface

of tradition and understanding. In the second case, the author is doing her best to empathize, but still is explaining and assessing the paradigm from the outside looking in. Her instincts may be less honed, her appreciation of nuances less sophisticated, than her Muslim counterpart. But, in contrast to her Muslim counterpart, perhaps she can view the paradigm more systemically and systematically, and ask different questions. One type of work is not better than the other. Both kinds of contributions are necessary for a full understanding and appraisal. Writing this book puts me in both positions. I am a non-Muslim writing about the *Shari'a*. I am an American lawyer and a Catholic comparing the subject to American law and Catholicism.

In the present age of globalization, such is the status of many law students and young lawyers in America. They — or shall I say, we? — are blended and mixed in ways scarcely imaginable when the last Kansan to become President, Dwight D. Eisenhower (1890-1969), occupied the White House. We are on the inside of some paradigms angling for a more holistic view, and on the outside of other systems yearning to get in. This problem is a good one to have. It suggests we are unwilling and even unable to be limited and defined by traditional boundaries. That spirit of adventure, along with a dedicated mind and open heart, surely ought to lead to greater peace, tolerance, and understanding.

In keeping with the present age and contemporary Kansas, *Understanding Islamic Law (Shari'a)* is the product of a decidedly mixed author: an imperfect Roman Catholic in love with his faith, who is proud of his half-Indian (Punjabi), half-Canadian (Scottish) heritage. These influences, plus the impressions of my Malaysian-Chinese wife, our blessedly mixed daughter, and our travels around the world, resonate throughout this book. I try to ensure they do so transparently, as teaching is not supposed to be an exercise in veiled indoctrination.

Accordingly, I confess a special exertion in respect of the influence of my faith. When drawing comparisons and contrasts to Catholic Christianity, I rely on the three recognized sources of Catholicism: Sacred Scripture (*i.e.*, the Bible), the Magisterium (*i.e.*, the teachings of the Church through the Popes, Cardinals, Bishops, Priests, and Nuns), and Sacred Tradition (*i.e.*, the practices of the Church, many of which are from its earliest days). The *Catechism of the Catholic Church* provides a single-volume summary of the substance of all three sources.<sup>2</sup>

Notably, in writing *Understanding Islamic Law (Shari'a)*, I am mindful of two quotes from such sources. First, there is the 2000 document, *Dominus Iesus*. In this Declaration, Pope John Paul II (1920-2005) states that “to consider the Church as one way of salvation alongside those constituted by the other religions” is “contrary to the faith.” Likewise, his successor, Pope Benedict XVI (1927-) warns repeatedly that one danger of relativism is the trivialization of different religions by equating them all. In turn, one consequence is false ecumenism and inauthentic inter-faith dialogue.

Second, in respect of Muslims, the Church teaches in the document from the Second Vatican Council, *Lumen Gentium*, that:

The plan of salvation also includes those who acknowledge the Creator, *in the first place amongst whom are the Muslims*; these profess to hold the faith of Abraham,

<sup>2</sup> See CATECHISM OF THE CATHOLIC CHURCH (United States Catholic Conference, Inc., Washington, D.C.: Libreria Editrice Vaticana, 2d ed. 1997).

## Preface

and together with us they adore the one merciful God, mankind's judge on the last day.<sup>3</sup>

*Dominus Iesus* is (*inter alia*) an admonition against relativism, against trivializing Catholicism by equating it with, or subordinating it to, other paths to salvation. *Lumen Gentium* is (*inter alia*) an admonition against pride, against arrogance. It is the province of God, not man, to judge fitness for salvation.

Until then, there are many joys from writing this book to cherish: a greater admiration for Islam and the *Shari'a*, a better appreciation of the gift of the Catholic faith, and a clearer understanding of the common points, amidst undeniable differences, shared by Muslims and Christians, and Muslim and Christian lawyers, in our common human dignity derived from God.

And for now, *Understanding Islamic Law (Shari'a)* spells the beginning of the end of one of the conventional excuses for not teaching a course in Islamic Law, namely, that there are no readily available, bound teaching materials. In time, there may well be more choices than this volume, and so there should be. Let 100 flowers bloom, particularly in a field as rich and elegant as the *Shari'a*.

<sup>3</sup> *Lumen Gentium*, ¶ 16, quoted in CATECHISM, *supra*, at ¶ 841 (emphasis added).

## Notes on Manuscript Preparation

### Use of "Holy" and "PBUH"

It is respectful to refer to the sacred text of Islam, the Qur'ān, as the "Holy Qur'ān," somewhat akin to the phraseology "Holy Bible." Indeed, it is respectful to refer to insert "Holy" before each reference to the Qur'ān.

Likewise, it is respectful to use the phrase "Peace Be Upon Him," or "PBUH," sometimes put in parentheses, after mentioning the name of the Prophet Muhammad (570/571-632 A.D.). Thus, traditional constructions would be "The Prophet (PBUH)" or "Muhammad, Peace Be Upon Him." Similarly, following the name of special persons associated with Muhammad, such as his Companions (*Ṣaḥābah*), a phrase after the name of a male Companion, like "May Allāh Be Pleased with Him" or "May the Blessing of Allāh Be Upon Him" (*Raḍīa Allāhu 'Anhu*) is respectful. And, a phrase like "May Allāh Be Pleased With Her" or "May the Blessing of Allāh Be Upon Her" (*Raḍīa Allāhu 'Anhā*) after invoking the name of his female Companions or his wives, particularly, Khadyja (*circa* 555-619) and 'Ā'isha (614-678), is respectful.

The title Qur'ān and names "Prophet" and "Muhammad" are used a large number of times in *Understanding Islamic Law (Shari'a)*. That also is true of the *Ṣaḥābah*, Khadyja, and 'Ā'isha. I respect the conventions. Thus, I mean to say "Holy Qur'ān" and "PBUH" in every instance, and to include an expression of honor for the *Ṣaḥābah* and wives. Chapter titles manifest this respect explicitly. However, to repeat the prefix "Holy," suffix "PBUH," or phrase of honor throughout the text of every Chapter would consume space that may be dedicated to other substantive matters. The reader is sufficiently sensitive and sensible to appreciate my respect for the Qur'ān, Prophet, Companions, and wives, and mentally fill in the appropriate prefix or suffix. In other words, hereinafter all references to the Qur'ān implicitly mean "Holy Qur'ān," all references to Muhammad implicitly include "PBUH," and all references to the *Ṣaḥābah* and wives implicitly are followed by the customary phrase of honor.

### Use of Diacritical Signs

Notwithstanding the matter of Arabic, I spice the text of *Understanding Islamic Law (Shari'a)* heavily with Arabic terms, as well as quotations from the Qur'ān, *ḥadīth*, and Muslim scholars. I do not render Arabic terms into simpler, bowdlerized English words, such as "Koran." Rather, two British scholars of Sikhism, W. Owen Cole and Piara Singh Sambhi, inspire me:

We have decided to retain Sikh words as much as possible in the hope that readers will make the attempt to *enter the world of Sikhism rather than try to bring it into their own*.<sup>4</sup>

Likewise, to help the law student or lawyer enter the Islamic legal mind, I endeavor to be

<sup>4</sup> THE SIKHS, *supra*, at xiv (emphasis added).

## Notes on Manuscript Preparation

faithful to Arabic terms. I use diacritical marks on letters of Arabic terms to assist in their pronunciation.

The diacritics, and all Arabic terms, are explained in the Glossary in the final Part of this book. Also to make the text user-friendly, I put every Arabic term in italics, with five exceptions:

- Allāh
- Qur'ān
- Islam
- Muslim
- Proper nouns, specifically, names of persons (e.g., Muhammad) or places (e.g., Mecca).

Further, like a foreign language teacher, I repeat certain key terms so they become second nature and are incorporated into normal patterns of thought and discussion.

There is, of course, a considerable degree of variation in the English spelling of Arabic terms, as the title of the sacred text of Islam well illustrates. The distinctions present a problem not so much when I write a passage, but rather when I quote from another source with a spelling different from mine. Typically, my choice is to leave the different spelling in the quotation untouched rather than harmonize it with my own. (To be sure, the third option — to alter mine in conformity with the quote — is one I sometimes select.) I suspect I will not satisfy the reader who prefers perfect consistency when I report that my solution is *ad hoc*. On a case-by-case basis, I determine whether it seems in the best interests of a smooth and edifying text to leave original spellings in the quote, or to intrude and “correct” them for consistency. Certainly, I correct minor typographical and punctuation errors in any quote.

### Key Primary Sources

As for quotations from the Qur'ān, I use the following English language hardcover edition: *THE QUR'AN — A New Translation by M.A.S. Abdel Haleem* (Oxford, England: Oxford University Press, 2004). Technically, any version of the Islamic holy scripture other than the Arabic is considered not authentic, but rather a translation, which necessarily involves interpretative judgments by the translator. The first English language translation did not appear until 1649, roughly 1,000 years after the Prophet Muhammad received revelations from God (Allāh). The edition I use happens to be widely available, in both hardbound and paperback form, and received strong review in no less a publication than *The Economist*.<sup>5</sup>

I confess a bias in favor of this translator, Professor Haleem, of the School of Oriental and African Studies (SOAS) of the University of London. He “argues it is time that English become one of the familiar languages of Islam, like Urdu.”<sup>6</sup> Unless and until Islamic legal materials are available widely in English, and the Qur'ān itself is seen as

<sup>5</sup> See *Found in Translation*, *THE ECONOMIST*, 22 May 2004, at 77 (stating the translator “has managed to transform the complex grammar and structure of the holy book into a form of modern English which reads easily and flows smoothly without taking liberties with the inviolable text”). [Hereinafter, *Found in Translation*.]

<sup>6</sup> *Found in Translation*, *supra*.

## Notes on Manuscript Preparation

authentic in vernacular languages, like the Bible and other sacred texts, the claim of Islam to universality remains weaker than it might be. In any event, by no means is it the only esteemed English-language edition. One particularly beautiful one, approved by Cairo's renowned Al Azhar University, is *An Interpretation of the Qur'an*.<sup>7</sup> Readers may enjoy examining others to compare and contrast decisions on diction made by the translators.

For quotations of a *ḥadīth*, as far as possible I obtain them directly from either or both of the following sources:

- THE TRANSLATION OF THE MEANINGS OF SAHIH AL-BUKHARI, ARABIC-ENGLISH by Dr. Muhammad Muhsin Khan (Islamic University, Medina, Kingdom of Saudi Arabia: Dar Ahya Us-Sunnah, Al Nabawiya, March 1978), 8 volumes.
- SAHIH MUSLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM'-US-SAHIH BY IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDUL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASSAN (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990), 8 volumes.

For the convenience of the reader, and in homage to the formidable work of the compilers, I introduce quotations from these sources by referring to “*Imām* Bukhari” and “*Imām* Muslim,” respectively.

Islamic religious and legal scholars regard as definitive any *ḥadīth* found in either, or better yet, both compilations. Fortunately, beautiful hard-bound multi-volume sets of *Bukhari* and *Muslim* are easily available in English. In certain instances, I take the liberty of correcting what are obvious, minor typographical errors apparently introduced by the Pakistani or other foreign printer, and left uncorrected by the editor or editors. Examples are corrections of a missing or wrong letter or punctuation mark. In no way do these corrections alter the substantive text or meaning of a *ḥadīth*. On occasion, I find it helpful to quote from a *ḥadīth* not recounted by *Imāms* Bukhari or Muslim. In such instances, I take them, with credit, from a secondary source.

Finally, all translations from the Bible are taken from *The Catholic Study Bible*. This edition, published by Oxford University Press (New York, New York) in 1990, is the New American Bible translation. It is highly appealing because of its prodigious yet accessible supplementary information and analysis. It contains a Readers Guide to every Book in the Old and New Testament, articles on key topics such as Biblical Texts and their Background, Biblical Archaeology, and the Geography of the Holy Land. It also has introductory notes, footnotes, and maps.

### Citations

Each Chapter of this book is self-contained, though the topics are all related. Thus, footnotes are numbered consecutively in each Chapter. To some degree, the Blue Book system of citation familiar to American lawyers is used. However, that system conveys

<sup>7</sup> See *AN INTERPRETATION OF THE QUR'AN — ENGLISH TRANSLATION OF THE MEANINGS, A BILINGUAL EDITION* (New York, New York: New York University Press, 2002, Majid Fakhry, trans.).

---

## Notes on Manuscript Preparation

insufficient information about some sources — for example, the name and location of a book publisher — which may be helpful to the reader seeking to access those sources. Moreover, that system uses abbreviations that may be unfamiliar to foreign readers. Thus, I have provided as full information as possible about each source, even if not called for by the Blue Book.

---

## Acknowledgments

“Blessed” hardly is too strong a word to describe how I feel by my ten Research Assistants (RAs) at the University of Kansas, and their substantive contributions to the first edition of this book. It is not an overstatement to say that without the help of this elite but humble team, the end result would have been much diminished.

- Ahmed D. Alyousef

S.J.D. Candidate, University of Kansas School of Law. J.D., University of Kansas School of Law (Certificate in International Trade and Finance, and Certificate in Business and Commercial Law), 2009. LL.M., University of Missouri — Kansas City (UMKC) School of Law, 2006. LL.B., Imām Mohammed bin Saud University School of *Shari’a* (Riyadh, Kingdom of Saudi Arabia), 2000.

Ahmed, a native of Quassim, which is 300 kilometers north of Riyadh, and of Ras Al Khaimah, United Arab Emirates (UAE), is fluent in Arabic and English, and works on international business matters, including Islamic insurance (*takaful*). “Ras Al Khaimah” literally means the “top of the tent,” which is appropriate as he is a leader at Kansas in both the International Law Society and Islamic Law Students Association.

Ahmed’s research memo on Islamic partnerships is the basis for the Chapters on Business Associations. His memos on risk (*gharar*), interest (*ribā*), and Islamic insurance are the bases for portions of the Chapters on those topics. His memos on the life of the Prophet Muhammad are the basis for portions of the Chapters on the Prophet. His personal pilgrimage figures into the account of the *Hajj* in the Chapter on the Five Pillars.

- Adam Casner

J.D., University of Kansas (Certificate in International Trade and Finance), 2010. B.A. (Italian, Economics Minor), University of Texas, 2005.

Before coming to the Law School at Kansas, Adam worked in business development for a mobile radiology company. He has lived in Rome, Italy and Limerick, Ireland, and speaks Italian and Spanish. While in Law School, he did litigation work in litigation in Kansas City, and now practices domestic and international business law in Texas.

Adam’s research memos on the Four-Rightly Guided Caliphs (*Rashidun*) and Islamic Law of War are the bases for the Chapters on those topics.

- Elena Delkhah

J.D. University of Kansas (Certificate in International Trade and Finance), expected 2011. B.B.A., Business Administration (Concentration in International Business), University of Kansas, 2006.

Elena was born and raised in Tehran, Iran, and migrated to Lawrence, Kansas in 1987. She speaks Farsi, and travels back to Iran.

Her research memo on the history of Iran, covering the *Sunni* — *Shi’ite* split, *Safavid* Dynasty, regime of the Shah, 1978-79 Islamic Revolution, and Constitution of the Islamic Republic, factored into various Chapters.

- Adham Hashish

## Acknowledgments

S.J.D. candidate, University of Kansas School of Law. L.L.M. (International and Comparative Law), The George Washington University School of Law, 2008. L.L.B. *magna cum laude*, Alexandria University Faculty of Law (Alexandria, Egypt), 2003. Graduate Diploma (International Law), Tanta University (Tanta, Egypt), 2004. Graduate Diploma (Public Law), AinShams University (Cairo, Egypt), 2005.

Adham, who is from Egypt, was appointed Lecturer on Law at Alexandria University Faculty of Law in 2006. His scholarship focuses on law and development, especially as it affects good governance, the ethics of multinational corporate conduct, and weaknesses in the legal infrastructure of developing countries. In 2005, he served as a Delegate Judge on the Egyptian Administrative Court (State Council).

Adham is fluent in Arabic and English, and gave indispensable help on the Glossary of Arabic Terms, the meaning of the word "Qur'ān," and the wives of the Prophet Muhammad. Generously sharing his considerable knowledge and experience in Islamic Law, he provided invaluable insights and corrections on all of the Chapters.

- Beau Jackson

J.D., University of Kansas School of Law (Certificate in International Trade and Finance), 2009. B.A. (Political Science and History), University of Kansas, 2003.

Beau, originally from Wichita, Kansas, practices international trade law at Adduci, Mastriani & Schaumburg, L.L.P., in Washington, D.C. Before coming to the Law School, he served as a Peace Corps Volunteer in Cape Verde, West Africa. While at Kansas, he was President of the International Law Society and an editor on the *Kansas Journal of Law and Public Policy*.

Beau's research memos on the *Umayyad* and *Abbasid* Caliphates, Crusades, economic development in the Muslim world, the Muslim Brotherhood, and *Al Qaeda* are the bases for the Chapters on those topics.

- Ayesha Shebaryar Mehdi

J.D. and M.H.S.A. (Masters in Health Services Administration), University of Kansas School of Law, 2009. B.B.A. (Bachelors in Business Administration), Walsh College of Accountancy and Business Administration, Troy, Michigan, 2004.

Ayesha immigrated in 2002 to the United States from her hometown of Lahore, Pakistan, where she had a career as a journalist. At Kansas, Ayesha served as an editor of the *Kansas Journal of Law and Public Policy* for two consecutive years, and participated in the National Health Law Moot Court Competition. She teaches health care law at the University of Nevada Las Vegas (UNLV), is an Executive Director of the Hope Cancer Care of Nevada, Las Vegas, and balances her responsibilities as a wife and mother.

Ayesha's research memos on mixed marriages and inheritance are the bases for portions of the Chapters on Family Law and Inheritance Law, respectively.

- Matt Odom

J.D., University of Kansas School of Law (Certificate in International Trade and Finance), 2010. B.A. (Political Science), Fort Hays State University, 2004.

Before coming to the Law School at Kansas, Matt was a United States Army Enlisted Infantryman, and is a Veteran of Operation Iraqi Freedom, with service in Baghdad (2005-2006). He has a keen interest in international and comparative law, including

## Acknowledgments

human rights and humanitarian law. Matt's practice interests are in international and comparative law.

Matt's research work on the Prophet as a military leader is the basis for part of the Chapter on Muhammad. His research memo on the twelve *Shi'ite Imāms* is the basis for part of the Chapter on *Shi'ism*. His memos on the compilation of the Qur'ān, *naskh* (repeal), and Islamic countries and international law on religious freedom, are the bases for discussion on those topics.

- Ellen O'Leary

J.D., University of Kansas School of Law (Certificate in International Trade and Finance), 2011. B.A. (Classics, Political Science), Truman State University, 2006.

Ellen is from Shawnee, Kansas. She studied Comparative Law in Istanbul, Turkey, and Bio Diversity Law in the United States Virgin Islands. Likewise, she has worked abroad and at home — with the Istanbul office of the British law firm Denton Wilde Sapte, and with the Lawrence, Kansas firm of Wisler, Trevino, and Rosenthal. In college, Ellen was inducted into the Classics Honor Society, *Eta Sigma Phi*, and at the Kansas Law School she earned top honors in Islamic Law. Active in the Law School community, she served as Treasurer for the International Law Society and Women in Law. Ellen is a referee for youth and adult soccer, and an instructor to teach others to be referees.

Ellen carefully edited virtually every Chapter, re-drafted sections of several Chapters, and her insights on many points added great value. Her research memoranda on analogical reasoning (*ijma'*), consensus (*qiyās*), and *ijtihād* (independent reasoning) formed part of the basis of the Chapter on the Four Sources of Islamic Law (*uṣūl al-fiqh*), and on additional sources. A Latin scholar, Ellen also provided all Latin translations.

- Jomana Jihad Qaddour

J.D., University of Kansas School of Law (Certificate in International Trade and Finance), 2009. B.A. (Human Biology and International Studies), University of Kansas, 2006.

Jomana, a Syrian-American, is from Overland Park, Kansas and works on domestic and international business law, and intellectual property law matters. Fluent in Arabic and English, she has a keen interest in Middle Eastern affairs, has participated in a variety of activities designed to build understanding and tolerance among competing constituencies in that region, and travels frequently to the region.

Jomana's research memos on abortion, contraception, women's dress, and women's employment are the bases for portions of the Chapters on Family Law. Her memo on *hawāla* banking is the basis for a portion of a Chapter on Finance. Her memo on the meaning of "*jihād*" is the basis for a portion of a Chapter on International Law.

- Ben Sharp

J.D., University of Kansas School of Law (Certificate in International Trade and Finance, and Certificate in Business and Commercial Law), 2009. M.Sc. (Philosophy of the Social Sciences), London School of Economics, 2005. B.S. (Philosophy), Kansas State University, 2003.

Ben is from Rossville, Kansas and practices international business law. While at Kansas, he served as an editor of the *Kansas Journal of Law and Public Policy*. He

## Acknowledgments

practices domestic and international business law in Minneapolis.

Ben's research memos on non-Islamic debt instruments and insurance products, and on socially responsible investing, are the bases for portions of the Chapters on Islamic Finance. His memos on the Ottomans, Anglo-Muhammadan Law, Four *Sunni* Schools, and *Shi'ite* legal doctrines are the bases for Chapters on those topics.

As the Research Assistants and I worked collaboratively on this book, they became part of my family. My wife, Kara, our daughter, Shera, and I miss them. We shall always remember them well.

I am grateful to the University of Kansas School of Law for generous financial support provided through Research Assistant funds and summer research grants. Set amidst gorgeous landscape, Kansas is a marvelous mix of the cosmopolitan and contemplative.

## Introduction: Ten Threshold Issues

A fool finds no pleasure in understanding but delights in airing his own opinions.

THE BOOK OF PROVERBS (New International Version), 18:2

### SYNOPSIS

- [1] What Does "*Shari'a*" Mean?
- [2] What Does "Islam" Mean?
- [3] Use of Name "Allāh" and Promise of Muhammad to Saint Catherine (628 A.D.)?

### [1] WHAT DOES "*SHARĪ'A*" MEAN?

The word "*Shari'a*" typically is translated as "Islamic Law."<sup>1</sup> That was not its original meaning, as Professor Seymour Gonne Vesey-Fitzgerald (1884-1954 A.D.) of the School of Oriental and African Studies (SOAS) at the University of London explained:

The word *shari'a* originally meant the path or track by which camels were taken to water, and so by transfer the path ordained of God by which men achieve salvation. This conception of a path or way of life is very common in early Islam.<sup>2</sup>

Translating "*Shari'a*" as "Islamic Law" is not wrong. But, from an American legal mindset, it is incomplete in two respects.

As to the first respect, consider what Professor Joseph Schacht (1902-1969) of Columbia University wrote:

*Islamic Law is the epitome of the Islamic spirit, the most typical manifestation of the Islamic way of life, the kernel of Islam itself.* For the majority of Muslims, the law has always been and still is of much greater practical importance than the

<sup>1</sup> See, e.g., Michael J.T. McMillen, *International Legal Developments in Review: 2007 — Islamic Law Forum*, 42 THE INTERNATIONAL LAWYER 1017-1032 (Summer 2008) (stating the *Shari'a* "is what is commonly referred to as Islamic law.").

<sup>2</sup> S.G. Vesey-Fitzgerald, *Nature and Sources of the Shari'a*, in I LAW IN THE MIDDLE EAST 86 (Majid Khadduri & Herbert J. Liebesny, eds., Washington, D.C.: The Middle East Institute, 1955). [Hereinafter, Vesey-Fitzgerald.]

## Introduction: Ten Threshold Issues

dogma. Even today the law remains a decisive element in the struggle which is being fought in Islam between traditionalism and modernism under the impact of Western ideas.<sup>10</sup>

Similarly, Professor Vesey-Fitzgerald said:

Islam is not only a religion, it is a political system, and though in modern times devout Muslims have endeavored to separate the two aspects, Islam's whole classical literature is based upon the assumption that they are inseparable. Most legal systems have at one time or another in their history been intimately connected with religion; but the two great Semitic systems, the Jewish and the Islamic, are probably unique in the thoroughness with which they identify law with the personal command of a single Almighty God. . . .<sup>11</sup>

In other words, the *Shari'a* occupies a much more prestigious place in the minds of Muslims than does American law in the minds of Americans. It is one thing to respect the American legal system for its various geniuses (e.g., Bill of Rights, federalism, judicial independence, separation of powers, and transparency). It is quite another thing to revere a legal system because of its Divine characteristic.

As to the second reason why a straight equation of "*Shari'a*" with "Islamic Law" is incomplete, consider the contrast Professor Vesey-Fitzgerald draws:

To the Westerner, law is a system of commands enforced by the sanction of the state. This concept is wholly alien to Islamic theory. On the one hand, the state has from time to time enforced much which could not be called law; on the other hand, the law of God remains the law of God even though there is no one to enforce it, and even though in many of its details it is quite incapable of enforcement. Indeed, the law is revered for its divine character even by people who do not profess to obey it; and so we find communities living according to customs completely at variance with the divine command, yet on occasion imbued with religious fanaticism.

Law, then, in any sense in which a Western lawyer would recognize the term, is but a part of the whole Islamic system, or rather, it is not even a part but one of several inextricably combined elements thereof. *Shari'a*, the Islamic term which is commonly rendered in English by "law" is, rather, the "Whole Duty of Man." Moral and pastoral theology and ethics; high spiritual aspiration and the detailed ritualistic and formal observance which to some minds is a vehicle for such aspiration and to others a substitute for it; all aspects of law; public and private hygiene; and even courtesy and good manners are all part and parcel of the *Shari'a*, a system which sometimes appears to be rigid and inflexible; at other to be imbued with that dislike of extremes, that spirit of reasonable compromise which was part of the Prophet's own character.<sup>12</sup>

<sup>10</sup> Joseph Schacht, *Pre-Islamic Background and Early Development of Jurisprudence*, in I LAW IN THE MIDDLE EAST 86 (Majid Khadduri & Herbert J. Lievesny, eds., Washington, D.C.: The Middle East Institute, 1955) (emphasis added) (extracted from JOSEPH SCHACHT, THE ORIGINS OF MUHAMMADAN JURISPRUDENCE (London, England: Oxford University Press 1950).

<sup>12</sup> Vesey-Fitzgerald, *supra*, at 85-86 (emphasis added).

## Introduction: Ten Threshold Issues

The reference to law as a system of commands is to the legal philosophy of John Austin (1790-1859), who in his 1832 book *The Province of Jurisprudence Determined* defined "law" as a command of a sovereign that is habitually obeyed under the threat of punishment. This "Command Theory" of law is classified as strict positivism, meaning there is no connection between law, on the one hand, and morality or religion, on the other hand.

Muslims find such a proposition puzzling, absurd, or even heretical. *Surah* (Chapter) 6, *ayah* (verse) 162 states:

Say [Prophet], "My prayers and sacrifice, my life and death are all for God, Lord of all the Worlds. . . ."<sup>13</sup>

This passage connotes that the *Shari'a* is to govern all of life. Thus, legal positivism, the proposition that law and morality are or ought to be separate, and the project of its modern-day exponents, like Judge Richard Posner (1939-) of the United States Court of Appeals for the Seventh Circuit, which is "the demystification of law and in particular the freeing of it from moral theory, a great mystifier," are devilishly off track.<sup>14</sup> God (Allāh) revealed a law, the *Shari'a*, for all people, in all places, at all times. Why would man try to separate the inseparable, law from morality? Prominent Christian thinkers make the same point: Saints Augustine (354-430) and Thomas Aquinas (1225-1274) urged that a secular law that violates God's law is no law at all, and the Reverend Dr. Martin Luther King (1929-1968) agreed, citing them in his powerful 13 April 1963 *Letter from a Birmingham Jail*.

In truth, the likes of Judge Posner make two fatal errors. First, they presume utilitarian analysis is not a moral theory. All they are doing is substituting one moral theory for another. Along with deontology and virtue ethics, utilitarian theory is a recognized framework in moral philosophy. All three address the same question: is an action moral?:

- In a deontological framework, championed by Immanuel Kant (1724-1804), the emphasis is on duty. Actions are intrinsically right or wrong, regardless of their consequences, if they conform to moral imperatives such as "do not steal" or "do not kill."
- Under virtue ethics, originated by Aristotle (384-322 B.C.), the focus is not on the actions of an agent, but rather on the agent herself. Does she live an ethical life, possess virtues, and if so, which ones, and thereby have a moral character? If the agent has such a character, then her acts will be moral.
- Utilitarian theory is the most common form of consequentialism, and holds that whether an act is right depends not on the agent but the outcome of the act. It entails a cost-benefit calculation familiar in law and economics, with a judgment as to the morality of an act depending on whether that act maximizes the good, the good being defined as pleasure by Jeremy Bentham (1748-1832), or well-being by John Stuart Mill (1806-1873).

Notably, Christian theologians use all three of these moral frameworks in reasoning and

<sup>13</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem 6:162 at 93 (Oxford, England: Oxford University Press, 2004) (emphasis added). [Hereinafter, Qur'an.]

<sup>14</sup> RICHARD A. POSNER, THE PROBLEMATICS OF MORAL AND LEGAL THEORY vii (Cambridge, Massachusetts: Harvard University Press, 1999).

## Introduction: Ten Threshold Issues

argumentation, which is a testament to how much more broad-minded they are than positivist thinkers.

The second error of legal positivism is it endeavors to separate the inseparable. Pope John Paul II (1920-2005) spoke for Christians and Muslims alike when he said:

Even if some are reluctant to refer to the religious dimension of human beings and human history, even if others want to consign religion to the private sphere, even if believing communities are persecuted, Christians will still proclaim that *religious experience is part of human experience. It is a vital element in shaping the person and the society to which people belong.*<sup>15</sup>

Likewise, Blessed Cardinal John Henry Newman (1801-1890) stated in 1865:

Liberalism . . . is the mistake of subjecting to human judgment those revealed doctrines which are in their nature beyond and independent of it, and of claiming to determine on intrinsic grounds the truth and value of propositions which rest for their reception simply on the external authority of the Divine Word.<sup>16</sup>

Stated differently, both reasoned and revealed truth are sources of Truth, and they are at times independent — but never contradictory — of one another. From a Muslim as well as Christian perspective, law, morality, and religion are inseparable. In turn, the scope of law is not restricted to working out hypothetical disputes between abstract parties, like plaintiffs and defendants, prosecution and accused, debtors and creditors, shareholders and management, benefactors and beneficiaries, and so forth. That scope encompasses such matters, but extends far beyond them to religious practice (such as the Five Pillars of Islam), personal attire (*i.e.*, how to dress in public versus private), and etiquette. They are not merely matters of religious or social habit, as a legal positivist would say. Rather, they are part of the law — Islamic Law — itself.

In sum, to think of “the *Shari’a*” and “Islamic Law” as synonyms is to ignore the reality that for Muslims, the *Shari’a* is an entire way of life linked to Allāh.

### [2] WHAT DOES “ISLAM” MEAN?

“Islam” means “submission.” The purpose of life is to discern and submit to the Will of Allāh in preparation for a Day of Judgment. Through His mercy, God has made his will known, in an authoritative way, by the revelation of the Qur’ān to his Messenger, the Prophet Muhammad. Thus, during the last 14 centuries since the first revelation in 619 A.D., Muslims (especially Muslim scholars) have dedicated a large amount of time and attention to understanding precisely what it is God expects of them. They have studied and debated the Qur’ān, trying to derive from it the principles, requirements, rights, and duties that should govern their lives. And why bother considering submission to the Will of Allāh? Because a Day of Judgment will come, on which each person will be held accountable for his or her life, and merit entry into heaven or condemnation to hell based on the degree to which that person made a resolute effort to submit.

<sup>15</sup> Pope John Paul II, 13 January 2001 Address to the Diplomatic Corps accredited to the Holy See (quoted in *Address of the Holy Father to the New Ambassador of Iraq to the Holy See*, 28 April 2001), posted at [www.vatican.va](http://www.vatican.va) (emphasis added).

<sup>16</sup> JOHN HENRY NEWMAN, *Apologia Pro Vita Sua* Appendix 2: Matter Peculiar to the 1865 Edition, Note A — Liberalism, at 493 (1864).

## Introduction: Ten Threshold Issues

Thus, Islam is a system built around an ideal. The ideal is to identify everything that a Muslim should do in order to lead life in accordance with Divine Will. The consequence of the many centuries of study and debate over the text of the Qur’ān, and the elaborations on that text by the Prophet Muhammad (*ḥadīth*) and Muslim scholars through analogical reasoning (*qiyās*) and consensus (*ijma’*), is one of the great intellectual achievements in history: the development of an authoritative body of “dos” and “don’ts,” an expression of those things a Muslim is supposed to do, and those things a Muslim is not supposed to do, so as to behave in accordance with the Will of Allāh and thereby gain entry into Paradise. Those “dos” and “don’ts” are the *Shari’a*, or the “legislation” that is called “Islamic Law.”

It is sometimes remarked that Islam, like Judaism, is a legalistic system, because it focuses less on what a person believes about God than on what a person does or does not do in life. With the extraordinary elaboration of the Qur’ān and Qur’ānic-based legislation, the impression conveyed is that adhering to the *Shari’a* is a merely ticking boxes. This characterization is wrong. The “legislation,” ultimately, is advisory in character. Its purpose is to facilitate the ability of Muslims to know how to conform their lives with the Will of Allāh. While Islam is a regime to lead life in accordance with this Will, and while “Islamic law” is that regime, Islam, like any religion, is about trust in what is not usually seen readily or experienced directly. It is about faith.

### [3] USE OF NAME “ALLĀH” AND PROMISE OF MUHAMMAD TO SAINT CATHERINE (628 A.D.)?

We all worship the same God. All too often, religious extremists spread the poisonous message that our prayers are directed to different powers. The Ancient Greeks, Trojans, and Romans paid homage to the same deities, calling them different names. Yet, these Ancient peoples warred, as chronicled, for instance, in *The Iliad* by Homer (*circa* 8<sup>th</sup> century B.C.). In recent times, Islamist fanatics have asserted the name “Allāh” is reserved exclusively for Muslims. This assertion comes from quarters as disparate as Saudi Arabia and Malaysia. All adherents to it misunderstand pre-Islamic history and Islam itself, and attribute false motives to non-Muslims. These errors sow division where there is none, and in turn push all of us down the slippery slope toward violent conflict.

An example comes from Malaysia, which is home to approximately 850,000 Catholic Christians amidst a population of 25.7 million people. Of the total population, Muslims account for 60.4 percent, Buddhists 19.2 percent, Christians 9.1 percent (3.3 percent of whom are Catholic), and Hindus 6.3 percent.<sup>17</sup> Taking the position that “Allāh” is an Islamic word, the Malaysian government banned non-Muslims from using the word “Allāh” to refer to “God.”<sup>18</sup> The government, or its extremist backers, thought the Catholic Church posed a threat, namely, conversion of Muslims. There was an irony in that fear. Malaysia has four large ethnic groups: Malays (53 percent), Chinese (26 percent), Indian (8 percent), and Indigenous (12 percent); and Malays are required by the Constitution to be Muslim.<sup>19</sup> Arguably, some Malays feel insecure amidst economic

<sup>17</sup> See CENTRAL INTELLIGENCE AGENCY, *THE WORLD FACTBOOK, Malaysia*, posted at [www.cia.gov/library/publications/the-world-factbook/geos/my.html](http://www.cia.gov/library/publications/the-world-factbook/geos/my.html). The data are as of July 2010.

<sup>18</sup> See *Malaysian Court Rules Non-Muslims May Call God Allah*, BBC NEWS, 31 December 2009, posted at <http://news.bbc.co.uk>.

<sup>19</sup> See Kevin Brown, *The “Allah” Spat Masks Ethnic Malays’ Feelings of Insecurity*, FINANCIAL TIMES, 13 January 2010, at 2. [Hereinafter, BROWL.]

## Introduction: Ten Threshold Issues

reforms and political changes that undermine the dominance they have long enjoyed, partly through positive discrimination in their favor under the 1970 New Economic Policy implemented after race riots in 1969.<sup>20</sup>

Nevertheless, in 2007, Malaysian government prohibited *The Herald*, a publication of the Catholic Church in Malaysia, from using "Allāh" to describe the Christian God. Arguing that the name "Allāh" needed protection from insults and abuse, and use of this name by non-Muslims confused Muslims, the Malaysian government effectively ordered *The Herald* to cease publication, because it insisted on its right to use the word "Allāh" to refer to the one God of both Muslims and Christians. The argument of the government was more than shockingly patronizing toward Malays. It ignored the manifestly respectful use of "Allāh" by non-Muslims, and was incongruous with Islamic tradition and illogical.<sup>21</sup> That tradition holds there are 99 Names of Allāh, including *Al Rahman* (The All-Compassionate) and *Al Rahim* (The All Merciful). Surely the 100<sup>th</sup> name, "God," would not confuse a people who have successfully navigated the other 99 names.

In 2007, *The Herald* filed suit. In December 2009, the High Court of Malaysia, in Kuala Lumpur, held that Christians have the right to use the word "Allāh" when referring to "God." The High Court, in a decision by female Christian Chinese justice Lau Bee Lan, agreed with the argument of *The Herald* that Malay-speaking indigenous Christians in Malaysian Borneo (the states of Sabah and Sarawak) had used the word "Allāh" for decades, as there is no alternative in the Malay language, and Christians in Muslim countries like Egypt and Syria had used it for centuries.<sup>22</sup> Moreover, the Court said Articles 10-12 of the Malaysian Constitution protects freedom of speech and religion, and use of the "Allāh" is part of the exercise of those freedoms. The High Court won plaudits for its judicial independence. But, its decision triggered a spate of fire bombings of churches, many of the Protestant, by a small number of extremists.<sup>23</sup>

<sup>20</sup> See Brown, *supra*.

<sup>21</sup> Anecdotal, in 2007 the *Majlis Agama Negeri Perlis* (Religious Assembly of the State of Perlis) — a large group of learned Muslim Malaysian *ulema* — issued a *fatwā* stating there is absolutely nothing wrong with non-Muslims using the word "Allāh." The *fatwā* has not been circulated widely, but (assuming it exists) apparently the Malaysian government paid little heed to it. See *Marina Mahathir and the Word Allah*, 9 January 2010, posted at <http://all4one4all.wordpress.com/2010/01/09/marina-mahathir-the-word-allah/>. The blogger is the daughter of Dr. Mahathir bin Mohamad (1925-), who served as the Prime Minister of Malaysia from 1981-2003.

<sup>22</sup> See *Titular Roman Catholic Archbishop of Kuala Lumpur v. Menteri Dalam Negeri*, High Court in Malaya, No. R1-25-28-2009, 31 December 2009; Brown, *supra*; *God and Allah in Malaysia*, ASIA SENTINEL, 3 January 2010, posted at [www.asiasentinel.com/index.php?Itemid=178&id=2217&option=com\\_content&task=view](http://www.asiasentinel.com/index.php?Itemid=178&id=2217&option=com_content&task=view).

<sup>23</sup> The violence apparently caused the High Court to stay its own decision, pending a hearing of an appeal by the Malaysian government to the Federal Court of Malaysia (the apex of the Malaysian judiciary).

In March 2011, the Malaysian Home Ministry agreed to release 35,000 Bibles. For months it had impounded them because they used the word "Allāh." The Bibles, printed in Indonesia, principally were for Christians in East Malaysia, i.e., the states of Sabah and Sarawak. Christians explained their Bibles have referred to "Allāh" since before September 1963, when Malaysia was formed as a federal state (along with Sabah, Sarawak, and Singapore) following independence from Britain in August 1957 as the Federation of Malay States. (In August 1965, Singapore became an independent

## Introduction: Ten Threshold Issues

Not surprisingly, I have no patience for such nonsense, and nor does the Qur'ān. *Surah* 22, *ayat* 39-40 states:

<sup>39</sup>Those who have been attacked are permitted to take up arms because they have been wronged — God has the power to help them — <sup>40</sup>those who have been driven unjustly from their homes only for saying, "Our Lord is God." *If God did not repel some people by means of others, many monasteries, churches, synagogues, and mosques, where God's name is much invoked, would have been destroyed. God is sure to help those who help His cause — God is strong and mighty. . . .*<sup>24</sup>

This passage is about more than self-defense. It calls for respect for houses of worship, in which the name of God is invoked and extolled.

Likewise, the Prophet Muhammad clearly established a tradition (*Sunnah*) of tolerance toward Christians. Dr. Muqtedar Khan, the Director of Islamic Studies at the University of Delaware, explains the context and meaning of "The Promise to Saint Catherine's Monastery" by Muhammad, and quotes this extraordinary Promise in its entirety:

In 628 AD, a delegation from St. Catherine's Monastery came to Prophet Muhammad and requested his protection. He responded by granting them a charter of rights, which I reproduce below in its entirety. St. Catherine's Monastery is located at the foot of Mt. Sinai and is the world's oldest monastery. It possesses a huge collection of Christian manuscripts, second only to the Vatican, and is a world heritage site. It also boasts the oldest collection of Christian icons. It is a treasure house of Christian history that has remained safe for 1400 years under Muslim protection.

### *The Promise to St. Catherine:*

"This is a message from Muhammad ibn Abdullah, as a covenant to those who adopt Christianity, near and far, we are with them.

Verily I, the servants, the helpers, and my followers defend them, because Christians are my citizens; and by God! I hold out against anything that displeases them.

No compulsion is to be on them. Neither are their judges to be removed from their jobs nor their monks from their monasteries. No one is to destroy a house of their religion, to damage it, or to carry anything from it to the Muslims' houses.

Should anyone take any of these, he would spoil God's covenant and disobey His Prophet. Verily, they are my allies and have my secure charter against all that they hate.

No one is to force them to travel or to oblige them to fight. The Muslims are to fight for them. If a female Christian is married to a Muslim, it is not to take place without her approval. She is not to be prevented from visiting her church to pray. Their churches are to be respected. They are neither to be prevented from repairing them nor the sacredness of their covenants.

country). The Malaysian government insisted it took its decision to resolve inter-faith issues amicably, though political analysts suggested it sought increased support from Christian voters in future East Malaysian elections. See *Malaysia to Release 35,000 Bibles Amid "Allāh" Row*, BBC NEWS, 16 March 2011, posted at <http://www.bbc.co.uk/news>.

<sup>24</sup> QUR'AN, *supra*, 22:39-40 at 212.

## Introduction: Ten Threshold Issues

No one of the nation (Muslims) is to disobey the covenant till the Last Day (end of the world)."<sup>25</sup>

The first and the final sentence of the charter are critical. They make the promise eternal and universal. Muhammad asserts that Muslims are with Christians near and far straight away rejecting any future attempts to limit the promise to St. Catherine alone. By ordering Muslims to obey it until the Day of Judgment the charter again undermines any future attempts to revoke the privileges. These rights are inalienable. Muhammad declared Christians, all of them, as his allies and he equated ill treatment of Christians with violating God's covenant.

A remarkable aspect of the charter is that it imposes no conditions on Christians for enjoying its privileges. It is enough that they are Christians. They are not required to alter their beliefs, they do not have to make any payments and they do not have any obligations. This is a charter of rights without any duties!

The document is not a modern human rights treaty but even though it was penned in 628 A.D., it clearly protects the right to property, freedom of religion, freedom of work, and security of the person.

Accordingly, throughout *Understanding Islamic Law (Shari'a)*, the names "God" and "Allāh" are used interchangeably. Often, the expression "God (Allāh)" is used as a deliberate reminder that we do indeed worship the same Almighty.

### [4] DOES ARABIC MATTER?

The Qur'ān was recited to the Prophet Muhammad from Allāh through the Archangel Gabriel (Jibreel) between the years 610 and 632 A.D. in the Arabic language. The vast majority of Muslims do not speak Arabic, much less the Classical Arabic in which the Qur'ān is written and recited. Most non-Arab Muslims try to learn a bit of Arabic, perhaps enough to know a few verses (*ayat*) and chapters (*surat*), or even the entire text. But, aside from the call to prayer and certain readings from the Qur'ān in a mosque, most non-Arab Muslims live their religious and secular life in the vernacular.

Nonetheless, the fact, which is referred to in the Qur'ān, the revelation occurred in Arabic explains the reverence all Muslims, whether Arabs or not, have for Arabic. There is little if any analogy here to Latin and Catholic Christians. Different parts of the Bible were written in different original languages, notably Hebrew and Ancient Greek, and translated from them. For Catholics, there is nothing particularly sacrosanct about the original languages. To the contrary, Pentecost, which marks the end of the Easter Season in the Church calendar, is a seminal event in establishing the universality of the Christian message. As Jesus promised, the Holy Spirit came down from above, and as described in *The Acts of the Apostles*:

<sup>1</sup>When the time for Pentecost was fulfilled, they [the Twelve Apostles, Peter, John, James, Andrew, Philip, Thomas, Bartholomew, Matthew, James (son of Alphaeus), Simon the Zealot, Judas (son of James), and Matthias] were all in one place together. <sup>2</sup>And suddenly there came from the sky a noise like a strong driving wind,

<sup>25</sup> Dr. Muqtadar Khan, *Prophet Muhammad's Promise to Christians*, AL JAZEERA MAGAZINE, 1 January 2010, posted at <http://aljazeera.com/news/articles/39/Prophet-Muhammads-promise-to-Christians.html>.

## Introduction: Ten Threshold Issues

and it filled the entire house in which they were. <sup>3</sup>Then there appeared to them tongues as of fire, which parted and came to rest on each one of them. <sup>4</sup>And they were all filled with the Holy Spirit and began to speak in different tongues, as the Spirit enabled them to proclaim.

<sup>5</sup>Now there were devout Jews from every nation under heaven staying in Jerusalem. <sup>6</sup>At this sound, they gathered in a large crowd, but they were confused because each one heard them speaking in his own language. <sup>7</sup>They were astounded, and in amazement they asked, "Are not all these people [the Apostles] who are speaking Galileans?" <sup>8</sup>Then how does each of us hear them in his own native language? <sup>9</sup>We are Parthians, Medes, and Elamites, inhabitants of Mesopotamia, Judea and Cappadocia, Pontus and Asia, <sup>10</sup>Phrygia and Pamphylia, Egypt and the districts of Libya, near Cyrene, as well as travelers from Rome, <sup>11</sup>both Jews and converts to Judaism, Cretans and Arabs, yet we hear them speaking in our own tongues of the mighty acts of God."<sup>26</sup>

Put simply, the Apostles spoke fluently in different languages, ones they never had studied, and each person listening to them understood what was said in his or her own native language. That each Apostle could convey the message in different languages, and that each listener could understand the other regardless of the language spoken, meant the Christian message was a universal one, and could be conveyed in any language.

Here, then, is an important contrast with implications for studying the *Shari'a*. While Islam, like Christianity, proclaims a universal message, Islamic history knows no event like Pentecost. For one faith, the original language of its message matters. For the other faith, the message transcends the original medium of its expression.

Whether Arab or not, Muslims try to learn rudimentary Classical Arabic. To them, the proper way to comprehend completely the Qur'ān is in that language. It is not possible to translate the Qur'ān into any other language and call the resulting text an authentic "Qur'ān." This sacred text is to be read, recited, and heard in its original mode of expression. Any translation is an interpretation bearing the qualification (often in a subtitle) of "interpretation" or "translation." Only in the language in which Allāh chose to reveal the Message is the full, accurate, and complete meaning conveyed.

Catholic Christians simply do not approach the Bible in a like manner. Certainly, knowledge of Hebrew, Ancient Greek, or Latin is encouraged for laity and non-specialists, as it can broaden and deepen understanding of that sacred text. But, over the last 6 centuries, the Bible has been printed in over 2,000 languages.<sup>27</sup> It may be added that Buddhists, like Catholics, do not take that view of sacred texts, including the earliest ones of Theravada Buddhism, which were composed in Pāli (and are called the *Tipitaka*, or *Pāli Canon*, written down in Sri Lanka in the 1<sup>st</sup> century B.C. at the Fourth Buddhist

<sup>26</sup> See *The Acts of the Apostles*, 2:1-11, in THE CATHOLIC STUDY BIBLE 186-187 (New York, New York: Oxford University Press, 1990, New American Bible trans.). (emphasis added). See also *Sermon by a Sixth Century African Author*, in THE DIVINE OFFICE — THE LITURGY OF THE HOURS vol. II (Lenten Season & Easter Season), second reading for Seventh Week of Easter, Saturday, at 1005-1007 (New York, New York: Catholic Book Publishing Co., 1976) (stating: "The disciples spoke in the language of every nation. At Pentecost God chose this means to indicate the presence of the Holy Spirit: whoever had received the Spirit spoke in every kind of tongue.").

## Introduction: Ten Threshold Issues

Council). To be sure, some monks, scholars, and practicing Buddhists study Pāli so as to read or chant the texts in the original. But, the message of these texts, too, is universal — catholic with a small “c.” Hence, for example, Tibetan monks read them in Tibetan.

As a further illustration of contrast, the relationship between the Qur’ān and Arabic is not analogous to the relationship between the sacred text of Sikhism and the original languages in which it was composed. That text is the *Adi Granth* (“First Book”), or *Sri Guru Granth Sahib*. Compiled initially in 1604 by the fifth of the 10 Sikh Gurus, Arjan Dev (1563-1606), and supplemented between 1704-1706 by the tenth one, Gobind Singh (1666-1708), it is written in Gurmukhi script.<sup>28</sup> This script, commonly called “Punjabi,” is used regardless of whether the passage (technically, hymn) originally was composed in medieval Hindi, Punjabi, or some other language such as Persian.<sup>29</sup> Following the passing of Guru Gobind Singh, as of 1708, the *Adi Granth* became the perpetual Guru for Sikhs, a fascinating transformation from a line of living, human Gurus to a single, scriptural one.<sup>30</sup> However, among all sacred scriptures in the world, the *Adi Granth* is unique in that it records passages from other faiths, namely, from Hinduism and Islam.<sup>31</sup> The Sikh text is “catholic,” then, in this sense of inclusiveness, and it was Guru Arjan Dev who insisted on the use of a uniform script, namely, Gurmukhi.

In any event, the obvious problem for prospective students of the *Shari’a*, and interested legal practitioners, be they Muslim or not, is that most of them do not know Classical Arabic — and, frankly, never will. For English-speaking law students and lawyers, the problem is acute: few of them ever are likely to allocate the years of time required to master that beautiful language. Even if they would like to, they do not have the time. To some of them, this reality is a “deal breaker.” Paralyzed with insecurity about their linguistic limits, they over-react, and abandon the effort to learn about Islamic Law. Alas, the perfect (knowing Classical Arabic) becomes the enemy of the good (learning about the *Shari’a* in English). The consequences are potentially dreadful.

The vast majority of Muslims, like their non-Muslim sisters and brothers, are not intransigent about how to approach the *Shari’a*. They agree it is perfectly appropriate to “interpret” the Qur’ān. They welcome the interest and enthusiasm of non-Muslims to learn a bit about their law, religion, and history. Yet, should the project be abandoned, then a vital bridge to building peace, tolerance, and understanding (learning the *Shari’a* and Islamic religion and history from which it is inseparable) never gets built. Put bluntly, to remain paralyzed poses a national security threat to the United States and other non-Muslim countries. Law students are supposed to be at the forefront of bridge builders within and across countries, not remain behind walls of ignorance and prejudice buttressed by a fear of imperfection. An “us-versus-them” mentality sets in, those walls become fortresses, miscalculations occur, and violence erupts (again).

<sup>28</sup> “Guru” typically is translated as “teacher.” It comes from two words, “gu” (darkness) and “ru” (light). See W. OWEN COLE & PIARA SINGH SAMBHI, *THE SIKHS — THEIR RELIGIOUS BELIEFS AND PRACTICES* 50 (New York, New York: Routledge, 1978). [Hereinafter, *THE SIKHS*.] Hence, a Guru is “one who delivers a person from ignorance by giving him the message which liberates and the technique to realize it.” *Id.* at xxii.

<sup>29</sup> See *THE SIKHS*, *supra*, at 50.

<sup>30</sup> See *THE SIKHS*, *supra*, at 43.

<sup>31</sup> See *THE SIKHS*, *supra*, at 52.

## Introduction: Ten Threshold Issues

### [5] SPHERE OF APPLICATION OF SHARI’A?

To whom and when is Islamic Law applicable? The message of Islam and disciplines of the *Shari’a* purport to be for all time, place, and people. Universally applicable, the precepts of Islam, and the *Shari’a* at least in the sense of the personal obligations it establishes, such as the Five Pillars, bind all Muslims, regardless of when or where they live. This fact intimates there are two dimensions to discerning the scope of the *Shari’a*.

First, is the person a Muslim or a non-Muslim? Generally, the *Shari’a* is not imposed on non-Muslims. But, depending on the country and matter at issue, it may be. For example, non-Muslims are expected to respect the Islamic legal obligation not to drink alcohol when living or traveling in the Kingdom of Saudi Arabia. Should they commit the crime of drinking alcohol (*shurb al-khamr*), they risk having imposed on them a *Shari’a* punishment (specifically, a “hadd,” or “limit,” sanction — flogging — which is associated with a *haqq Allāh* offense, or “claim of God”). As another example, a non-Muslim doing business in a Muslim country with Muslims may want, or even have, to respect *Shari’a* rules on banking and financial transactions, particularly as they concern interest (*ribā*).

Second, in what jurisdiction does the person, Muslim or non-Muslim, reside? Muslim countries can be divided into six categories in terms of whether, and how, they adhere to the *Shari’a* on matters in the public sphere, such as Contracts, Property, Business Associations, Banking and Finance, Family Law, and Criminal Law. Consider the diversity in the Middle East, South Asia, and Far East:

#### (1) Officially Islamic Country, but Secular Legal System —

Islam is the official religion of the country. But, the *Shari’a* plays little (if any) role in the legal life of the country. Islamic Law affects the private lives of Muslims, such as adherence to the Five Pillars, to the extent they are devout practitioners. Examples include Iraq before 2005.

#### (2) Islamic Majority Country, but Secular Legal System —

Islam is the official religion of a majority of people in the country. But, there is no official state religion. The *Shari’a* plays little (if any) role in the legal life of the country. Again, it affects the private sphere, to the extent individual Muslims prefer. Examples include Jordan and Syria.

#### (3) Secular Country and Legal System —

Nothing is mentioned in the Constitution of the country about Islam as a religion or the *Shari’a* as a legal system. Once again, adherence to the personal obligations associated with Islamic Law is regarded as a private matter. An example would be Turkey. Likewise, Iraq under Saddam Hussein was the most militantly secular country in the Arab Muslim World.

#### (4) Islam is the Basis for Some Law —

The country is all or majority Muslim, and Islam may or may not be declared as the official state religion. The legal system uses the *Shari’a* in certain areas. Thus, Islamic Law governs not only the private sphere, but also some aspects of the public life. For example, Israel and Palestine adhere to the Millet System on matters of Personal Status. Under the secular Constitution of India, the minority Muslim community is permitted to follow Islamic Family Law.

#### (5) Islam is Part of a Mixed Legal System —

## Introduction: Ten Threshold Issues

Again the country is all or majority Muslim, and Islam may or may not be propounded as the official religion. The legal system is mixed, in that it has features from Common Law, Civil Law, and Islamic Law. Depending on the country, the *Shari'a* component in the legal system is increasingly prominent. Here again, Islamic Law matters in both the private and public spheres. Mixed, or hybrid legal systems characterize almost all Muslim countries on the Indian Subcontinent and in East Asia. They include Bangladesh, Brunei, Indonesia, Malaysia, and Pakistan.

### (6) *Islam is the Legal System* —

Again the country is all or majority Muslim, but Islam almost certainly is the officially recognized state religion. Islam is the law itself, that is, the *Shari'a* is the “law of the land.” It is supplemented by governmental decrees of one form or another, but only when and to the extent necessary. Consequently, Islamic Law affects private behavior, plus all aspects of public life. The Kingdom of Saudi Arabia and Libya are examples. Indeed, adorning the green flag of the Kingdom is the *Shahada*. Certain violent extremist groups, most notoriously *Al Qaeda*, seek to impose the *Shari'a* in areas under their control or influence.

Table I-1 summarizes the two dimensions of the question of applicability of Islamic Law.

The Table also can be used diagonally, that is, to consider the applicability of the *Shari'a* to Muslims in a Muslim country entering into transactions with non-Muslims in a non-Muslim country (or vice versa). For example, does the *Shari'a* apply to a contract or banking transaction between a Muslim in Saudi Arabia and a non-Muslim in England? The answer is “it depends.” First, the Muslim party may prefer the transaction comport with Islamic Law, for example, have no interest (*ribā*), and the British party may agree. Alternatively, the British party may insist on non-Islamic rules (such as English banking law), which allow for interest. In this latter instance, the transaction still would be legally valid in Saudi Arabia. But, in the event of a dispute between the parties, a *Shari'a* court would not enforce the deal.

### [6] APOLOGY FOR *SHARĪ'A*?

Two aspects are missing from *Understanding Islamic Law (Shari'a)*, and intentionally so. First, this book is not an apology for Islam or the *Shari'a*. In modern parlance, “apology” connotes a statement of sorrow, sometimes coupled with an explanation. The Latin root of the term “apology” refers to offering a reasoned defense of a proposition. The point here is not to defend Islam and the *Shari'a* against any and all challenges.

Yet, this book is not a mere regurgitation of Islamic legal precepts. To the contrary, it endeavors to show the reasons for them. Often, these reasons are impressive, appealing in an ecumenical sense, and even persuasive. Credit must be given where credit is due, and all the more so if doing so contributes to dialogue among faiths and legal systems by spotlighting areas of agreement and narrowing points of disagreement.

## Introduction: Ten Threshold Issues

Table I-1:  
Applicability of the *Shari'a*

Country →	Muslim Country in which the <i>Shari'a</i> is All or Part of the Legal System		Non-Muslim Country
	↓		
Muslim	The <i>Shari'a</i> is applicable in both the public and private spheres.		The <i>Shari'a</i> is applicable in the private sphere, to the extent the individual seeks to follow it.
Non-Muslim	The <i>Shari'a</i> is not applicable in the private sphere, but may be applicable to certain transactions or events (e.g., contracts, banking, and certain criminal matters) in the public sphere.		The <i>Shari'a</i> is not applicable.

It is appropriate to emphasize reason in a book on Islamic Law. Not to do so is a terrible disservice to this sacred legal system. Reason — the application of the intellect manifest through non-violent discourse — has been a part of Islam since the Prophet Muhammad received the message of the Qur'ān from Allāh. *Surah* (chapter) 16, *ayah* (verse) 125 of the Qur'ān states clearly:

[Prophet Muhammad], call people to the way of your Lord with wisdom and beautiful teaching. Argue with them in the most courteous way, for your Lord knows best who has strayed from His way and who is rightly guided.<sup>32</sup>

That *surah* 16 is a Meccan *surah*, meaning (*inter alia*) it was revealed to Muhammad early on, before the *Hijra*, is all the more evidence that reason is an innate part of Islam. Of course, the use of reason has ebbed and flowed in Islam, as in all religions. At different times, and led (sometimes misguided) by different leaders, reason has been de-emphasized at the expense of faith. At other times, the opposite has occurred.

To my mind, reason and faith are inseparable, as Pope John Paul II beautifully points out in his September 1998 Encyclical Letter, *Fides et Ratio*.<sup>33</sup> His successor, Pope Benedict XVI (1927-), calls for a re-balancing of faith and reason in Islam, with greater emphasis on reason, even independent reasoning (*ijtihad*). Many observers view this call as provocative, particularly in respect of the September 2006 address at Regensburg

<sup>32</sup> QUR'AN, *supra* 16:125 at 174 (emphasis added).

<sup>33</sup> See Encyclical Letter, *Fides et Ratio*, of the Supreme Pontiff John Paul II to the Bishops of the Catholic Church on the Relationship Between Faith and Reason (14 September 1998), posted at [www.vatican.va](http://www.vatican.va).

## Introduction: Ten Threshold Issues

University, Germany.<sup>34</sup> In that speech, the Holy Father quotes, without endorsing, a Byzantine ruler. The quote and the key paragraphs around it are as follows:

... I read the edition by Professor [Adel] Theodore Khoury (Münster) [a German Catholic theologian and expert on Islam (1930-)] of part of the dialogue carried on — perhaps in 1391 in the winter barracks near Ankara — by the erudite Byzantine emperor Manuel II Palaiologos (1350-1425) and an educated Persian on the subject of Christianity and Islam, and the truth of both. It was presumably the emperor himself who set down this dialogue, during the siege of Constantinople between 1394 and 1402; and this would explain why his arguments are given in greater detail than those of his Persian interlocutor. The dialogue ranges widely over the structures of faith contained in the Bible and in the Qur'an, and deals especially with the image of God and of man, while necessarily returning repeatedly to the relationship between — as they were called — three "Laws" or "rules of life:" the Old Testament, the New Testament and the Qur'an. It is not my intention to discuss this question in the present lecture; here I would like to discuss only one point — itself rather marginal to the dialogue as a whole — which, in the context of the issue of "faith and reason," I found interesting and which can serve as the starting-point for my reflections on this issue.

In the seventh conversation . . . edited by Professor Khoury, the emperor touches on the theme of the holy war. The emperor must have known that surah 2, 256 reads: "There is no compulsion in religion." According to some of the experts, this is probably one of the surahs of the early period, when Mohammed was still powerless and under threat. But naturally the emperor also knew the instructions, developed later and recorded in the Qur'an, concerning holy war. Without descending to details, such as the difference in treatment accorded to those who have the "Book" and the "infidels," he addresses his interlocutor with a startling brusqueness, a brusqueness that we find unacceptable, on the central question about the relationship between religion and violence in general, saying:

"Show me just what Mohammed brought that was new, and there you will find things only evil and inhuman, such as his command to spread by the sword the faith he preached."

The emperor, after having expressed himself so forcefully, goes on to explain in detail the reasons why spreading the faith through violence is something unreasonable. Violence is incompatible with the nature of God and the nature of the soul. "God", he says,

"is not pleased by blood — and not acting reasonably . . . is contrary to God's nature. Faith is born of the soul, not the body. Whoever would lead someone to faith needs the ability to speak well and to reason properly, without violence and threats. . . . To convince a reasonable soul, one does not need a strong arm, or weapons of any kind, or any other means of threatening a person with death. . . ."

The decisive statement in this argument against violent conversion is this: not to act in accordance with reason is contrary to God's nature. The editor, Theodore Khoury, observes: For the emperor, as a Byzantine shaped by Greek philosophy, this statement

<sup>34</sup> For one synopsis of the controversy, see *Regensburg Lecture*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Regensburg\\_lecture](http://en.wikipedia.org/wiki/Regensburg_lecture).

## Introduction: Ten Threshold Issues

is self-evident. But for Muslim teaching, God is absolutely transcendent. His will is not bound up with any of our categories, even that of rationality. Here Khoury quotes a work of the noted French Islamist R. Armaldez, who points out that Ibn Hazm went so far as to state that God is not bound even by his own word, and that nothing would oblige him to reveal the truth to us. Were it God's will, we would even have to practice idolatry.

At this point, as far as understanding of God and thus the concrete practice of religion is concerned, we are faced with an unavoidable dilemma. Is the conviction that acting unreasonably contradicts God's nature merely a Greek idea, or is it always and intrinsically true? I believe that here we can see the profound harmony between what is Greek in the best sense of the word and the biblical understanding of faith in God.<sup>35</sup>

Manifestly, the speech was drafted by an academic at heart for scholarly debate about faith, reason, and violence.<sup>36</sup>

One reaction to the speech was:

It is not so much that what he says is controversial, but that people find it painful to hear.<sup>37</sup>

This reaction is an intelligent, nuanced one. There were less open-minded and even violent responses, despite Pope Benedict adding in a footnote to the controversial quotation:

In the Muslim world, this quotation has unfortunately been taken as an expression of my personal position, thus arousing understandable indignation. I hope that the reader of my text can see immediately that this sentence does not express my personal view of the Qur'an, for which I have the respect due to the holy book of a great religion. In quoting the text of the Emperor Manuel II, I intended solely to draw out the essential relationship between faith and reason. On this point I am in agreement with Manuel II, but without endorsing his polemic.<sup>38</sup>

The broader, deeper, and indispensable point made in *Fides et Ratio*, and exemplified in the Regensburg speech, is a courageous one: faith without reason leads to blind adherence, and even extremism; and reason without faith is a cold intellectual cul-de-sac that historically has justified hideously inhuman acts. Thus, as Pope John Paul II put it metaphorically, faith and reason are two wings of the same bird, without which the bird cannot fly, but with which it can soar.

<sup>35</sup> Papal Address at University of Regensburg, "Three Stages in the Program of De-Hellenization," Apostolic Journey of His Holiness Benedict XVI to München, Altötting and Regensburg, 9-14 September 2006, Meeting with the Representatives of Science, Lecture of the Holy Father, Aula Magna of the University of Regensburg (12 September 2006), Faith, Reason and the University — Memories and Reflections, posted at <http://www.zenit.org/article-16955?l=english> (official Vatican translation) (footnotes omitted, emphasis added, minor formatting and spelling changes). <sup>38</sup> Regensburg Address, *supra*, at fn. 3.

## Introduction: Ten Threshold Issues

Extremism is antithetical to flight. It kills the bird. Yet, among some liberal, elite intellectual circles, it is popular to eschew use of the word "extremism." Former British Foreign Secretary David Miliband (1965-) argued in a May 2009 speech to the Oxford Centre for Islamic Studies that habitual use of the distinction between "moderates" and "extremists" among Muslim political and religious movements results in lazy stereotypes.<sup>39</sup> Worse yet, the distinction obfuscates a variety of national territorial struggles with pan-Islamist *jihādī* struggles. Are Uyghur Muslims in Xinjiang Province, China, Kashmiri Muslims in northwest India and Pakistan, and Chechnyan Muslims in the Russian Caucasus all part of a broad *Al Qaeda* movement? Or, are they more an eclectic and diverse group of nationalist fighters? Ostensibly, the question is academic. They are violent, and commit heinous terrorist acts. But, if they are to be dealt successfully and justly, then the question matters. How to deal with them depends partly on who they are and how they think.

The Foreign Secretary makes a valid point. Nevertheless, I do rely on the distinction between "moderates" and "extremists" in various parts of this book. A person entirely unwilling to entertain the possibility of synthesizing faith and reason is an "extremist" in the lexicographic meaning, given by the *Oxford English Dictionary*, of the term: "lacking restraint or moderation," "advocating immoderate measures," "outermost," "furthest from the center," "situated at either end." Its synonyms include "rigid," "harsh," "draconian," "uncompromising," "drastic," "outrageous," and "beyond the pale." As do all faiths at one point or another in history, Islam is bedeviled by a small minority of "extremists." That is no secret, including to Muslims, and to use euphemisms is to commit the same blunder: obfuscation of the truth.

### [7] ATTACK ON *SHARĪʿA*?

The second missing dimension is attack. This book is not an attack on Islam or the *Sharīʿa*. A prospective reader hoping for a polemical account, or castigation, of the religion and sacred legal tradition it has spawned will be disappointed. I have no interest in the level of discourse about Islam characteristic typical of the mainstream American media. Even after the horrors of 9/11 and the blunders in Iraq and Afghanistan, in the United States and throughout the English-speaking world, the inattentiveness, misunderstanding, ignorance, and prejudice toward Islam and its legal system remain dangerously high and widespread. The "danger" is that inattentiveness, misunderstanding, ignorance, and prejudice lead to clashes between civilizations. Given the destructive potential of modern weaponry, the world cannot afford such clashes. Our survival depends in part on proving that the thesis of Samuel Huntington, in *The Clash of Civilizations*, is wrong, or cannot be allowed to come true. Writing a tract would be orthogonal to the common interests of Muslims and non-Muslims alike.

That is not to say this book is uncritical of Islam or Islamic Law. If I am not an antagonist against Islam and the *Sharīʿa*, I also am not a cheerleader. There are plenty of points at which the book offers candid observations. The two leading examples, and the ones about which I cannot pretend to be objective, are religious freedom and the treatment of women. Bluntly put, on these topics, many parts of the Muslim world are backward, and some of the trends therein are depressing if not outrageous. Many of my Muslim friends not only agree with these points, but argue far more articulately than I do in

<sup>39</sup> See *Engaging Islamists — Miliband Asks Right Questions as Muslims Await Obama*, FINANCIAL TIMES, 22 May 2009, at 8.

## Introduction: Ten Threshold Issues

first-rate research publications like the *Arab Human Development Report*.

### [8] IMPORTANCE OF UNDERSTANDING *SHARĪʿA*?

The purpose of this book is aptly conveyed by the first word of the title — "Understanding." The book is supposed to be a reasonably comprehensive and balanced treatment of a sacred legal system and the religion and history associated with that system. This treatment is designed for the student of the *Sharīʿa*, whether she is enrolled formally in a law school or other graduate program, or has moved on into professional legal practice or the academy.

Unless the world is content with rising tensions and deeper schisms that too often yield the poisons of incivility and violence, more understanding is needed than currently exists about Islam. Non-Muslims in the United States generally have little knowledge of Islam, and concomitantly, some prejudice against it. In January 2010, Gallup published *Religious Perceptions in America*. The report contains an in-depth analysis of the attitudes of in the United States toward Muslims and Islam. Among its most striking findings are:<sup>40</sup>

- Of the four faiths studied, Judaism, Christianity, Islam, and Buddhism, Islam elicits the most negative views. Over half of Americans (53 percent) state that their opinion of Islam is "not favorable at all" (31 percent) or "not too favorable" (22 percent).
- Nearly two-thirds of Americans (63 percent) confess they have "very little knowledge" of Islam (40 percent), or "none at all" (23 percent).
- Americans view Islam more negatively than they view Muslims, suggesting an ability to distinguish between a religion and its adherents. But, Americans are more than twice as likely to hold negative feelings toward Muslims than toward Jews, Christians, or Buddhists. Nearly half of Americans (43 percent) confess they are "a little" prejudiced toward Muslims. Almost 1 in 10 Americans (9 percent) say they harbor "a great deal of prejudice" against them.
- In respect of individual prejudice, Americans who do not know a Muslim are twice as likely to say they are greatly prejudiced toward Muslims. Knowing the name of the Prophet of Islam (Muhammad) makes an American twice as likely to have "a great deal of prejudice" toward Islam.
- Notably, neither other faiths (except for their extreme fringes) nor adherence to them is to blame for prejudicial attitudes. A key variable associated with "a great deal of prejudice" by Americans against Muslims is absence (in terms of attendance less than once a week) from church or other religious service. In contrast, Americans who attend a service more than once a week are more than twice as likely to say they feel no prejudice against Muslims.
- On religious freedom, two-thirds of Americans (66 percent) feel Muslims are not accepting of other religions. A similar proportion (68 percent) disagrees with the proposition that the religious beliefs of Christians and Muslims are basically the same.
- On women and diversity, the vast majority of Americans (81 percent) do not agree that most Muslims believe women and men should have equal rights.

<sup>40</sup> See Gallup, *Religious Perceptions in America*, Executive Summary 4-5 (2009).

## Introduction: Ten Threshold Issues

Nearly half (47 percent) of Americans think most Muslims accept others from different races.

Lest it be thought this negativity is an American phenomenon, consider the result of an October 2010 opinion poll of Germans by ARD state television: 37 percent of Germans agreed with the proposition that " 'Germany without Islam' would be a better place."<sup>41</sup>

The mirror-image of many of these points also seems to be true. Muslims, both in the United States and around the world are not always familiar with those other faiths. That is especially true if they do not live in close proximity to persons of other faiths. This ignorance is a breeding ground for stereotypes and prejudice. One consolation in the Gallup findings is that nearly three-quarters of Americans (70 percent) agree that most Muslims want peace. There is reason to believe most Muslims would say the same about most Americans, and thus both groups would adduce the ability to differentiate individuals from governments, and people from policies.

My professional station in life is a teacher. A teacher is supposed to explain, and in doing so probe with a critical intellect and compassionate heart. The explanation is supposed to stimulate the student, which occurs only if the teacher is passionate about the subject matter. I am passionate about the study of Islam and the *Shari'a*. That is not to say I am a master of the subject — hardly.

My primary area of scholarship is International Trade Law. I know well, in my head and heart, that I do not have the confidence or command in writing about the *Shari'a* that I sense (perhaps foolishly so!) in Trade. That is, I am more cognizant of what I do not know in Trade than in Islamic Law. After all, through the 1,600 years since the advent of Islam, thousands upon thousands of scholars (who know Arabic, which I do not, aside from a few tutorials and limited vocabulary) have devoted their lives to the study of Islamic Law. I am not, and never will be, in their league.

Nevertheless, my sense of "mission" to write this book has never wavered, and indeed increased with each day of work on the project. The problem with that elite league is it has not engaged the contemporary English-speaking law student. Treatises on the *Shari'a*, written in Arabic, stacked away on some dusty shelf at a school of Qur'anic thought in Damascus, are inaccessible to this student. The grand scholarship of Islamic scholars through the ages plays little role in the life of the average American law student. That, by the way, is ironic. Many Anglo-American legal doctrines originate (directly or indirectly) in Islamic Law concepts, or bear an uncanny resemblance to them.

So, there is a choice: be paralyzed with fear of what I do not know, and do nothing, or try to bridge the gap with what I do know and can readily learn in a limited span of time. The teacher in me, moved by the critical period in world history in which my students are destined to practice, impelled me to write this book. In making that choice, I faced a stark truth: I cannot be objective. Indeed, I do not believe value-free scholarship is possible, or even desirable. C.S. Lewis (1898-1963) persuaded me of this truth through his 1944 book, *The Abolition of Man*.<sup>42</sup>

<sup>41</sup> Quentin Peel, *Merkel Needs to Reconcile the Economic and Political Realities*, FINANCIAL TIMES, 19 October 2010, at 2.

<sup>42</sup> See C.S. LEWIS, *THE ABOLITION OF MAN — REFLECTIONS ON EDUCATION WITH SPECIAL REFERENCE TO THE TEACHING OF ENGLISH IN THE UPPER FORMS OF SCHOOLS* (1944, New York, New York: Harper Collins Publishers, Inc., 2001 ed.).

## Introduction: Ten Threshold Issues

### [9] COMPARED TO WHAT?

Islamic Law as taught in American and other English-medium law schools is not a course in catechesis, though it certainly can have the positive benefit of helping students think through their own questions about religion. It is not, strictly speaking, a trade course in the sense of preparing students to practice Islamic Law, though it certainly can have that positive benefit. Instead, Islamic Law is a course that falls under the rubric of "Comparative Law." For most of the post-Second World War era, that rubric was far narrower than it sounds: it meant comparing American Law to Civil Law, *i.e.*, it was a Euro-centric label under which most courses examined French or German Law.

In more recent decades, "Comparative Law" has come to encompass courses in Chinese Law, Japanese Law, the Law of Latin American countries, and the Law of Indigenous Peoples. That is a right and proper development, if for no other reason than to correct the prior imbalance in favor of the western European continent. An additional supporting rationale is the rising cultural, economic, and political importance of the non-western world. No law student, regardless of where he or she practices, is immune from influences from the "Third World."

It is equally right and proper that Islamic Law has been incorporated into the Comparative Law curriculum of a large and growing number of American and English-medium law schools. It may well be the case that Islamic Law is increasingly mainstreamed into this curriculum, and viewed by Deans and faculties alike not as an "exotic" course, but rather as fairly important to producing educated, globally-minded lawyers — the way, for example, Chinese Law seems to be.

Yet, this happy trend begs a question: to what should Islamic Law be compared? The question is asked in any Comparative Law course. What, for instance, is the reference point for examining Chinese Law? At one level, it is important not to dwell on the question. The highest and noblest goal of a Comparative Law course is to develop a sense of empathy for the other legal system. That requires an effort to see the other legal system from within, and view it as lawyers and scholars in that legal system would view it. But, in a practical sense, a frame of reference — a starting point — always is helpful. It is in the nature of the legal mind to examine the unfamiliar by relating it to the known.

I answer the question of what the *Shari'a* ought to be compared with as I suspect most lawyers and legal scholars do: I start with what I know. But, Islamic Law is a sacred legal system. It comes from God (Allāh), not just a secular parliament or court. That means the *Shari'a* is best compared not only with a secular legal system, but also another sacred tradition. To compare an Islamic legal rule only with American law is a recipe for under-appreciating the richness and depth of *Shari'a*, with no disrespect intended to American law. The dimension of the Divine cannot be extricated from Islamic Law, whereas it can and often is in respect of American Law. (Whether it should be is another, and hotly debated, question.)

Setting aside the insight most authors get from writing a book — the more they learn, the more they realize what they do not know — my familiarity is with a little bit of American Law and Catholic Christianity. Stress should be placed on "a little bit." Much as I love and respect them, I do not claim to know either of these broad and deep areas well. I am fairly certain that in the pages of this book, experts in these fields, along with authentic scholars of the *Shari'a*, will find I have goofed up various points. I apologize,

## Introduction: Ten Threshold Issues

of course, in advance, and assure that no disrespect is intended. I welcome corrections for a Second Edition. Yet, the facts remain I am educated in the American legal system, practiced at the Federal Reserve in New York, and am a (flawed) Roman Catholic. The American legal and Catholic Christian paradigms are the ones in which my mind, body, and soul operate everyday. I neither can nor wish to leave them at home when I go to work. They impart the reference points for comparisons with Islamic Law.

### (1) Demographics Matter

Certainly, a less personally expedient, and more pragmatic, defense of comparing the *Shari'a* with American Law, and with Catholic Christianity, exists. Consider the following three arguments. First, demographics matter. They drive a great deal of life. There are now 1.57 billion Muslims in the world:<sup>43</sup>

- 2.5 million Muslims are in the United States, accounting for 0.8 percent of the American population, and 0.2 percent of the global Islamic population.
- 315.3 million Muslims are in the Middle East and North Africa, accounting for 91.2 percent or more of the people in these regions, but just 20.1 percent of the global Islamic population.
- 972.5 million Muslims are in the Asia — Pacific region, accounting for over 61.9 percent of the global Islamic population.
- The largest Islamic country in the world is Indonesia, with roughly 220 million people, most of whom are Muslim. India is home to between 180-250 million Muslims. Bangladesh and Pakistan boast populations, almost all of which are Muslim, of about 170 million each. If the numbers of Muslims on the Indian Subcontinent, specifically, Bangladesh, India, and Pakistan, are summed together, they exceed the number of Hindus in India.
- Undergoing rapid population growth, Pakistan soon may be the fourth largest country in the world, following China, India, and the United States.<sup>44</sup> But, its decrepit infrastructure and corrupt political system render it incapable of supporting that population with a decent standard of living.
- With about 6.8 billion people on the planet, about one out of every four persons, or 22.9 percent of the population of the world, is a Muslim.
- Of the total Islamic population in the world, between 10-13 percent are *Shi'ites*, with between 68-80 percent of them living in Iran, Iraq, India, and Pakistan, and the remaining 87-90 percent of Muslims are *Sunnis*.

It must be added that two out of five people in the Arab world live on less than U.S. \$2 per day.<sup>45</sup> This last statistic is poignant in light of the oft-remarked link between poverty, or oppression more generally, on the one hand, and vulnerability to the evil temptation of

<sup>43</sup> Unless otherwise noted, these data are from an October 2009 study by the Pew Forum on Religion & Public Life, *Mapping the Global Muslim Population: A Report on the Size and Distribution of the World's Muslim Population*, and are based on research in over 200 countries. See <http://pewforum.org>. For further statistics, see, e.g., *CIA World Factbook*, posted at [www.cia.gov/library/publications/the-world-factbook/](http://www.cia.gov/library/publications/the-world-factbook/).

<sup>45</sup> *Waking From Its Sleep*, THE ECONOMIST, 25 July 2009, at 9.

## Introduction: Ten Threshold Issues

extremism, on the other hand. Saudi Arabia is a case in point. Like Pakistan and Egypt, it is experiencing rapid population growth.<sup>46</sup> Over 60 percent of the Saudi population is less than 30 years old. But, it lacks the robust educational and job opportunities to match the aspirations of its young people, a disconnect that is all the more excruciating given the tight cultural, social, and religious milieu in the Kingdom.

There also are 1.13 billion Roman Catholics, and a further roughly 1.1 billion Protestants. Thus, one out of every three persons is Christian, with nearly out of ever five being Catholic or Protestant. By comparing Islam and Catholic Christianity, over 40 percent of the professed faith of the world — nearly half — is covered. Insofar as adherents to Protestantism are familiar with Catholicism, the figure rises to almost 60 percent, or nearly two out of every three persons. In any work on Comparative Law, the opportunity to have that work resonate with such large percentages of the global community is rare.

As an important aside, one obvious inference from the above demographic statistics is that the tendency to equate "Arab" and "Muslim," fueled by mainstream media coverage of Islam in the non-Muslim western world, is erroneous. Indeed, it can prove insulting to Arab and non-Arab Muslim communities around the world. The Muslim population of China probably exceeds the entire population of any Arab country.

Note some basic terminology: an "Arab" is a speaker of Arabic, regardless of his or her faith. The word "Islam" means "submission." It is properly and specifically used to mean submission to the Will of Allāh. A "Muslim" is anyone who follows "Islam," and thus who seeks to submit to the Will of Allāh. To submit to that Will, a Muslim must exert effort, or struggle, that is, practice a "*jihad al-akbar*," to discern what it is God wants from him or her. Manifestly, not all Arabs are Muslims. Conversely, not all Muslims are Arabs. Indeed, the vast majority of Muslims are not Arabs. Rather, they make their home in East and South Asia. A large and growing number of Catholic Christians also make their home in East and South Asia. And, American influence — while arguably in relative decline vis-à-vis other powers — still is pre-eminent. It will be for decades. Thus, to study the *Shari'a* with some comparisons to Catholic Christianity and American Law "works" to appreciate a bit about Islam in a pluralistic and somewhat American-oriented environment.

To be sure, Arabs play an important role in Islamic history. It was on the Arabian Peninsula the Qur'ān was revealed, in Arabic. It is to the Arabian Peninsula every Muslim goes, or tries to go, on the *Hajj* pilgrimage. Consequently, all Muslims have a special reverence for Arabs, Arab lands, and Arabic. But, there are rivalries, sometimes fierce and violent, between Arabs and non-Arab Muslims, such as Persians or Turks. Ironically, of the three largest countries in the Middle East — Iran, Turkey, and Egypt — only one of them, Egypt, is Arab. The demographic significance of Egypt is partly in its population density. As Herodotus said, Egypt is the gift of the Nile. Nearly all of its population lives around this river. Omitting the desert from the calculation makes Egypt the most densely populated place on earth, with 2,000 people per square kilometer, double that of Bangladesh.<sup>47</sup>

<sup>46</sup> See [www.businessinsider.com/10-countries-on-the-verge-of-a-demographic-crisis-2010-2#saudi-arabia-380-billion-gdp-4](http://www.businessinsider.com/10-countries-on-the-verge-of-a-demographic-crisis-2010-2#saudi-arabia-380-billion-gdp-4). (The data are as of June 2010.)

<sup>47</sup> See [www.businessinsider.com/10-countries-on-the-verge-of-a-demographic-crisis-2010-2#egypt-188-billion-gdp-3](http://www.businessinsider.com/10-countries-on-the-verge-of-a-demographic-crisis-2010-2#egypt-188-billion-gdp-3). (The data are as of June 2010.)

(2) History Matters

As for the second defense of the comparative undertaking here, it is this: history matters. It shapes our present consciousness and future dispositions. Christianity has known Islam since the birth of that great faith. Much of the early interaction was unpleasant, indeed violent. To this day, Christianity still is getting to know Islam better, and recover from past misinterpretations and misunderstandings.

The Catholic Church has global interests, not only in the doctrinal sense of proclaiming a universal message of salvation, but also in the practical sense of protecting Christian minorities in Muslim lands. As for the United States, in the post-Second World War era, or actually just before it with the discovery of oil on the Arabian Peninsula in the 1930s, it came into direct, sustained interaction with the Arab Muslim world. Since then, the contacts have metastasized throughout the Islamic world.

(3) Political Economy Matters

Third, political economy matters. It is about the grand issues of war and peace, and wealth and poverty. In the post-9/11 era, the United States must come to a peaceful accommodation with the Islamic world, and assist it in its continued economic development. The alternative is continued uneasy, unstable, and unpredictable relations.

As a (if not the) superpower, the United States has global interests. That is true whether the topic is energy and natural resources, democracy, nuclear proliferation, religious freedom, or women's rights. On virtually every topic of cross-border relevance, America cannot avoid Islam any more than Christianity can do so: Islam is a "fact on the ground," and a growing one at that.

Perhaps the greatest global interest America has is security. Security is unattainable when a sizeable percentage of the population of the world feels a sense of oppression and, rightly or wrongly, lists Americans or Christians as among the causes. Ironically, through more and richer comparisons among the *Shari'a*, American law, and Catholic Christianity, on many such topics, and on security itself, the three parties might well find themselves in agreement, even alliance. Americans and Muslims, as well as Christians and Muslims, know each other as brothers and sisters. And, yet, they do not. It is in their collective self-interest to do so.

[10] OTHER REASONABLE COMPARISONS?

I concede the argument that a better analogy than (1) Islamic Law-to-American Law and Islamic Law-to-Catholic Christian teaching would be (2) Islamic Law-to-Canon Law, (3) Islamic Law-to-Jewish Law, or (4) Islamic Law-to-Hindu Law. Indeed, what Jesuit Father John A. Hardon (1914-2000) writes of Canon Law easily be said of the *Shari'a*:

Canon Law is only an attempt to organize and systematize for prudential reasons the external aspects of what is essentially not juridical: *the will of God in its demands on the will of man*.<sup>49</sup>

Thus, when making comparisons, why not draw them directly to another sacred legal

<sup>49</sup> JOHN A. HARDON, S.J., *THE CATHOLIC CATECHISM — A CONTEMPORARY CATECHISM OF THE TEACHINGS OF THE CATHOLIC CHURCH* 336 (New York, New York: Doubleday, 1981) (emphasis added).

tradition? I offer two rather anemic answers.

First, my knowledge of Jewish and Hindu Law is woefully inadequate, and bested by only a marginal understanding of a few points in Canon Law. As the title connotes, the point of *Understanding Islamic Law (Shari'a)* is to understand Islamic Law. Comparisons to American law and Catholic Christian teaching are used to facilitate that understanding. Given my constraints, comparisons to other sacred legal systems would obfuscate matters and rightly subject the book to criticism.

Second, Canon, Jewish, and Hindu Law are of relatively limited applicability. The demographic and political economy factors render such a comparison relatively less compelling as a practical matter, however intellectually appealing they may be. Canon Law, which is the law of the Catholic Church itself, has its roots in the Council of Jerusalem (or Apostolic Conference), which occurred around 50 A.D. There are 1,752 canons. They govern ecclesiastical matters, particularly the actions of Bishops, who are responsible for all decisions in their dioceses and oversee the operations of their local churches. While there are a large number of Catholics in the world affected by that Law, the direct, daily impact is on the clergy and religious orders. The *Shari'a* is more expansive in scope than Canon Law, guiding not only Islamic clergy, but also extending into economic, social, and political realms. Perhaps this difference is based on the foundational sacred texts: while the New Testament of the Bible provides general guidelines and examples of virtue and sin, the Qur'ān specifies punishments for those sins and metes out inheritance in a specific way.<sup>50</sup>

There are approximately 14 million Jews in the world (with estimates ranging from 12 to over 17 million, based on different interpretations of who qualifies as a "Jew"), accounting for roughly 0.25 percent of the global population.<sup>50</sup> (To be sure, it is important to be mindful of the principle of human dignity in mind, and the Catholic Christian precept that each life is unique, unrepeatable, and of inestimable value. Hence, the importance of life must never be valued in a utilitarian calculation involving numbers.) Even Israel does not run itself entirely on Jewish Law.

As for Hindu Law, the majority population of India, the Hindus, are for the most part bound by the secular legal system of India guaranteed by the Constitution of that country and the principles of its founders, namely, Mahatma Gandhi (1869-1948) and Jawaharlal Nehru (1889-1964). Arguably India's finest post-Partition achievement is it is a home for adherents of all faiths, who live in relative peace alongside and integrated with one another, in the largest free-market democracy in the world.

A final point about comparisons is worth making. I try to avoid being profoundly stupid, though perhaps surrender an opportunity to be stunningly brave. That is, I eschew extending the comparison of the *Shari'a* along both the secular and sacred axes.

On the secular axis, I refer to "American" law, by which I mean the law of the United States at a federal or state level. Thus, I have resisted the temptation to use the term "Anglo-American" law, and thereby encompass the law of the United Kingdom. America received much law from England. England still provides America with legal inspiration.

<sup>49</sup> See JAMES A. BILL & JOHN ALDEN WILLIAMS, *ROMAN CATHOLICISM AND SHI'IT MUSLIMS: PRAYER, PASSION, AND POLITICS* 97 (Chapel Hill, North Carolina: University of North Carolina Press, 2002).

## Introduction: Ten Threshold Issues

Indubitably, there are comparisons and contrasts that are legitimate between Islamic and English law, but I best leave them to be drawn by others.

On the sacred axis, I dearly would like to include comparisons and contrasts to Protestant Christianity, at least as I understand it through mainstream denominations such as Anglicanism, Lutheranism, and Methodism. I occasionally do so in the classroom from the safety of standing behind the lecture podium. Yet, as with English law, I simply lack the competence to put these points in writing in any credible fashion. Consequently, at the risk of passing up some potentially edifying, and even obvious, comparisons and contrasts with Protestantism, I have erred on the side of caution. I would not want to perpetrate an intellectual injustice to my Protestant brothers and sisters. After all, it is quite enough of a task to try and get Islamic Law "right," and not do too much damage in rendering comparisons to Catholic Christianity and American Law.

I ask the reader to accept my limitations, and of course forgive my mistakes. I hope that in doing so, the reader — regardless of the faith she follows or legal jurisdiction in which she resides — still will find *Understanding Islamic Law (Shari'a)* to be an inclusive and thought-provoking text.

§ 13.03	DESIRABILITY: SCALE OF RELIGIOUS AND LEGAL QUALIFICATIONS (AL AḤKĀM AL KHAMSA)	322
§ 13.04	VALIDITY: SCALE OF VALIDITY	325
§ 13.05	RELATIONSHIP BETWEEN SCALES	327

### Chapter 14 CONTROVERSIAL ADDITIONAL SOURCES 331

§ 14.01	INDIVIDUAL REASONING (IJTIHĀD)	332
[A]	Doctrinal Development and Methodology	332
[B]	Definition	334
[B]	Closing of Gate to <i>Ijtihād</i> Around 900 A.D.	335
[C]	Was the Gate Really Closed?	337
[D]	Does the Gate Need Re-Opening?	338
§ 14.02	IMITATION (TAKLĪD)	339
[A]	Importance and Evolution of <i>Taklīd</i>	339
[B]	Rejection of Custom (' <i>Urf</i> )	340
§ 14.03	JURISTIC PREFERENCE (ISTIḤSĀN)	340
§ 14.04	PUBLIC INTEREST REASONING (ISTIṢLĀḤ)	341
§ 14.05	CREATIVITY, MUFTĪS, AND FATWĀS	342
[A]	<i>Mujtahid</i> in Every Generation?	342
[B]	Nature of <i>Mufis</i> and <i>Fatwās</i>	342
§ 14.06	SHĪ'ITE DISTINCTIONS	344
[A]	Five Roots	344
[B]	<i>İjma'</i> and Consistency with <i>İmām</i>	344
[C]	<i>Ḥadīth</i> of <i>İmām</i> Qualify	345
[D]	Lesser Role for <i>Qiyās</i>	345
[E]	Greater Role for <i>Ijtihād</i>	346

### PART SIX PRACTICE 351

#### Chapter 15 FIVE PILLARS OF ISLAM 353

§ 15.01	FIRST PILLAR: BEARING WITNESS (SHAHĀDA)	354
§ 15.02	SECOND PILLAR: PRAYER (SALAḤ)	356
[A]	Five-Fold Daily Prayer	356
[B]	Comparison with Catholic <i>Liturgy of the Hours</i>	358
[C]	First Call ( <i>Adhān</i> ) and Second Call ( <i>Iqama</i> ) to Prayer	358
[D]	Commerce and Prayer	361
[E]	Direction of Prayer ( <i>Qibla</i> )	362

## Table of Contents

[F]	Women and Prayer	363
§ 15.03	THIRD PILLAR: ALMSGIVING (ZAKĀT)	367
[A]	Virtues of Charity and Community	367
[B]	Distinction with <i>Zakāt al Fitr</i>	368
[C]	Effects and Beneficiaries	369
[D]	Formula and Administration	370
[E]	Does Intent ( <i>Niyah</i> ) Matter?	373
[F]	<i>Shi'ite</i> Distinction: <i>Khums</i> (Wealth Tax)	373
§ 15.04	FOURTH PILLAR: FASTING (SAWM) AND RAMADĀN	375
§ 15.05	FIFTH PILLAR: PILGRIMAGE (HĀJJ)	378
[A]	<i>Meqat</i> (Six Starting Points)	379
[B]	Muslims Only	380
[C]	Female Pilgrims	381
[D]	Preparation at <i>Meqat</i>	382
[E]	Steps in 'Umrah	382
[F]	Three Types of <i>Hajj</i> and Steps	383
<b>Chapter 16</b>	<b>FOUR SUNNITE SCHOOLS OF ISLAMIC LAW</b>	<b>387</b>
§ 16.01	HISTORICAL BASIS FOR FOUR SCHOOLS	388
§ 16.02	FIVE COMPARATIVE POINTS	391
§ 16.03	HANAFĪ SCHOOL	391
[A]	Life of Abū Ḥanifa and Other Key Figures	392
[B]	Jurisprudential Foundations and Evolution	393
[C]	Hierarchy within <i>Hanafi</i> School	394
§ 16.04	MĀLIKĪ SCHOOL	395
[A]	Life of Mālik ibn Anas Al Asbahi	396
[B]	Transplantation of <i>Mālikī</i> School	396
[C]	<i>Mālikī</i> School Sources of Law	397
§ 16.05	SHĀFI'Ī SCHOOL	400
[A]	Life of Muhammad Al Shāfi'i and Development of <i>Shāfi'i</i> School	400
[B]	<i>Shāfi'i</i> School Sources of Law	401
§ 16.06	HANBALĪ SCHOOL	403
[A]	Founders (Ibn Ḥanbal, Ibn Taymiyya, and Ibn Abd Al Wahhāb) and Development of <i>Hanbali</i> School	403
[B]	<i>Hanbali</i> Sources of Law	406

## Table of Contents

<b>PART SEVEN</b>	<b>COMMERCIAL LAW, CAPITALISM, AND GLOBAL TRADE</b>	<b>409</b>
<b>Chapter 17</b>	<b>ISLAM AND CAPITALIST ECONOMIC GROWTH</b>	<b>411</b>
§ 17.01	STEREOTYPES	411
§ 17.02	CONVENTIONAL ECONOMIC INDICATORS	414
§ 17.03	HUMAN DEVELOPMENT AND FREEDOM	415
§ 17.04	WHY THE POOR PERFORMANCE?	427
<b>Chapter 18</b>	<b>PROPERTY LAW: OWNERSHIP AND PROPERTY</b>	<b>433</b>
§ 18.01	GOD AND WEALTH	433
[A]	Regency and Vice-Regency	433
[B]	Freedom and Right to Private Ownership	436
[C]	Proper Attitude to Private Wealth	439
§ 18.02	PROPERTY	444
[A]	What is "Property"?	444
[B]	Certain Rights as Property	446
[C]	Validity: Void ( <i>Bā'il</i> ) versus Voidable ( <i>Fās'id</i> )	448
[D]	Objects of Commerce ( <i>Māl</i> )	448
§ 18.03	OWNERSHIP	451
[A]	What is "Ownership"?	451
[B]	Is Ownership Possible?	452
[C]	Complete versus Deficient Ownership	453
[D]	Ownership by Women	456
<b>Chapter 19</b>	<b>PROPERTY LAW: PUBLIC PROPERTY, PRIVATE PROPERTY, AND POSSESSION</b>	<b>457</b>
§ 19.01	PUBLIC (COMMUNITY) PROPERTY	458
[A]	Principle of Original Permissibility ( <i>Ibāha</i> )	458
[B]	Public Ownership and Nature	459
[C]	Four Categories of Publicly Owned Property	462
[D]	Governmental Assignment ( <i>Iqtā'</i> ) of Public Property and Oil Concession Contracts	466
§ 19.02	PRIVATE PROPERTY	470
[A]	Lawful versus Unlawful Acquisition	470
[B]	Lawful Acquisition of Un-Owned Land	471
[C]	Lawful Acquisition of Un-Owned Land	474
[D]	Finding Treasure ( <i>Luqta</i> )	477
[E]	Individual versus Joint Ownership	479
[F]	Termination of Ownership	480

## Table of Contents

§ 19.03	POSSESSION	481
[A]	Right to Possess	481
[B]	Legitimate versus Illegitimate Possession	482
[C]	Adverse Possession	483
[D]	Deposits ( <i>Amāna</i> ), Pledges ( <i>Rahn</i> ), and Liens ( <i>Habs</i> )	484
<b>Chapter 20</b>	<b>PROPERTY LAW: PROTECTING AND RESTRICTING PRIVATE OWNERSHIP</b>	<b>489</b>
§ 20.01	PROTECTING PRIVATE PROPERTY	490
[A]	Self-Defense	490
[B]	Protecting Private Property: Penal Law	492
§ 20.02	RESTRICTIONS ON OWNERSHIP: GENERAL DOCTRINES	493
[A]	Good Neighborly Relations	493
[B]	Social Responsibilities of Private Owners	494
[C]	Four Categories of Restrictions	495
§ 20.03	CATEGORY #1 RESTRICTIONS: PREVENTING HARM	496
[A]	Harm Principle, Intent, and Preemption	496
[B]	1877 Ottoman Mejelle and Examples of Harm Principle	500
[C]	Women, Privacy, and Physical Barriers	507
§ 20.04	CATEGORY #2 RESTRICTIONS: PUBLIC INTEREST	509
[A]	Encumbrances (Servitudes)	509
[B]	Takings: Expropriation ( <i>Muṣādarah</i> ), Nationalization ( <i>Ta'mim</i> ), and Their Contexts	510
[C]	Public Interest ( <i>Maṣlahah</i> ) and Other Restrictions on Takings	513
[D]	Taxation	517
§ 20.05	CATEGORY #3 RESTRICTIONS: PROMOTING COOPERATION AND RIGHT OF PRE-EMPTION ( <i>SHUF'AH</i> )	518
§ 20.06	CATEGORY #4 RESTRICTIONS: EFFICIENCY AND BARREN LAND	522
<b>Chapter 21</b>	<b>CONTRACT LAW: GENERAL PRINCIPLES AND CONTRACT FORMATION</b>	<b>525</b>
§ 21.01	ROLE OF CUSTOM AND PRACTICE	526
§ 21.02	<i>SHĪ'ITE</i> DISTINCTIONS	529
§ 21.03	IMPORTANCE OF HONESTY AND FAIR DEALING	529
§ 21.04	BROAD DEFINITION OF "CONTRACT" ( <i>'AKD</i> )	531
[A]	Inclusion of Gifts ( <i>Hibat</i> )	531
[B]	When Gifts ( <i>Hibat</i> ) are Binding	532
§ 21.05	FREEDOM OF CONTRACT WITHIN RELIGIOUS BOUNDARIES	533
§ 21.06	CONTRACT FORMATION: ESSENTIAL CONSTITUTIVE ELEMENTS	535

### MUHAMMAD (PBUH) BEFORE PROPHETHOOD (570/571–610 A.D.)

---

Let me tell you something that we Israelis have against Moses. He took us 40 years through the desert in order to bring us to the one spot in the Middle East that has no oil!

Golda Meir (1898-1978), 4th Prime Minister of Israel (1969-1974),  
Dinner in Honor of Willy Brandt, Chancellor, West Germany,  
10 June 1973 (as reported in *The New York Times*)

#### SYNOPSIS

##### § 1.01 PRE-ISLAMIC TIMES ON ARABIAN PENINSULA

- [A] Two Great Empires
- [B] Arabian Bedouin Society
- [C] Muhammad, *Hashim* Clan, and *Quraysh* Tribe
- [D] Profane Law of Arabian Bedouins
- [E] Arbitration among Bedouins and *Hakam* (Arbitrator)
- [F] Cities of Medina and Mecca

##### § 1.02 MUHAMMAD AND JESUS

- [A] Muhammad and Prophetic Tradition
- [B] Comparisons between Islam and Catholic Christianity
- [C] Free Will versus Pre-Destination
- [D] Need for Final Revelation

##### § 1.03 NON-MUSLIM CHARACTERIZATIONS OF MUHAMMAD

- [A] Portraying Muhammad
- [B] Through Early 19th Century
- [C] Recent Writings
- [D] Orientalist Fallacy

##### § 1.04 CHILDHOOD OF MUHAMMAD (570/571–595 A.D.)

- [A] Ahistorical Moment: Vitality of Life of Muhammad
- [B] Life Span: 570/571 A.D. to 632 A.D.
- [C] Special Sign: Halimah Story
- [D] Orphan, Early Childhood, and Uncle Abū Ṭalib
- [E] Another Special Sign: Story of Christian Monk Bahīra

## § 1.05 KHADYJA, MUHAMMAD, AND FAMILY BUSINESS (595–619 A.D.)

- [A] Employer, Wife, and Companion
- [B] Children

## § 1.01 PRE-ISLAMIC TIMES ON ARABIAN PENINSULA

## [A] Two Great Empires

The Prophet Muhammad was born in the year 570 or 571 A.D. in the midst of two great empires. To the west, the Roman Empire, now fully Christian and headquartered in Byzantium, was enjoying its last days of true glory. The lavish *Sassanid* Empire in the east spread all the way from Persia to India. Although much of the fighting occurred further north (near modern Syria and Iraq), Muhammad grew up in a time and place where the two powers battled constantly for control.

- *Sassanid* Persian Empire (224–651 A.D.)

Persia had been a source of consternation to Mediterranean powers since the time of the Ancient Greeks in 500 B.C. In 224 A.D., the *Sassanids* seized control over vast territory of the Parthian Empire (247 B.C.–224 A.D.), centered in Iraq and Iran, and held them until 651. *Sassanid* rule was characterized by a strong central government over a highly complex system of social organization. Along with the *Byzantines*, the *Sassanids* prized science, art and literature, and their Empire — the last pre-Islamic one in Persia — housed the greatest university of the day at Gundishapur.

- Byzantine Roman Empire (330–1453 A.D.)

The Roman Empire, led by Byzantine Emperor Justinian (483–565, reigning from 527–565), was prosperous, despite the fall of Rome itself, and the western part of the Roman Empire, in 476. The Byzantines saw themselves as the heirs of the empire built by Augustus (63 B.C.–14 A.D., reigning from 27 B.C.–14 A.D.). Although marred by frequent warfare, relations with the *Sassanid* Empire were stable, allowing an open exchange of culture and knowledge. Justinian commissioned legal scholars to research and reinstitute old Roman law through Christian eyes. Perhaps the single most influential legal document ever compiled, the *Corpus Juris Civilis*, was issued at his direction in 529. Widely considered the grandest building of the time, construction on the Church of the Holy Wisdom (*Hagia Sophia*) in Constantinople (Istanbul) also began at his behest.

## [B] Arabian Bedouin Society

The Arabian Peninsula lay to the south of the most intense fighting between the Roman and Persian Empires, though it was hardly immune from cultural influence. Most Arabs of the day were Pagan, while others adopted Christianity or Judaism from the Romans or Zoroastrianism from the Persians.

Bedouin society on the peninsula was comprised of Arab tribes. Each tribe consisted of several clans, which, in turn, broke down into family groups. People lived on the fringes of the Great Arabian Desert (which occupied the interior of the Peninsula), generally near a source of water. Tribal life was harsh and often violent, or in the terms of *Leviathan* (1651), by English political philosopher Thomas Hobbes (1588–1679), “nasty, brutish, and short.” Laws were rarely written down and justice often meant revenge.

Many settled on the western side of the Peninsula by the Red Sea to take advantage of the trade routes nearby. Ships from the Red Sea and Mediterranean Sea, and caravans from India converged in Northwestern Arabia. Mecca, where Muhammad was born, was a thriving commercial and cultural city. As the geographic midpoint on the road between Yemen (south) and Syria (north), it was the perfect trade center. Culturally, Mecca was an important pilgrimage site for many different religions. Pilgrims came from far and wide to worship at the Sacred House (*Ka’ba*) and numerous surrounding idols.

## [C] Muhammad, Hashim Clan, and Quraysh Tribe

Although from a religious perspective the tribe or clan of Muhammad are not relevant (all persons are equal before God (Allāh)), history of the Islamic Empire as well as the lineage of modern rulers speaks differently. Muhammad was born into the *Hashim* clan of the larger *Quraysh* tribe, one of the strongest and most respected tribes on the Arabian Peninsula. Edward Gibbon (1737–1794 A.D.), famed author of one of the greatest historical works ever written and Member of the British Parliament, *The Decline and Fall of the Roman Empire* (1776), points out:

He [Muhammad] sprung from the tribe of *Koreish* and the family of *Hashem*, the most illustrious of the Arabs, the princes of Mecca, and the hereditary guardians of the *Caaba* [*i.e.*, *Ka’ba*].<sup>1</sup>

This heritage gave Muhammad a certain amount of prestige and status among Arabs and later Muslims. Today, King Abdullah of the *Hashemite* Kingdom of Jordan derives power and legitimacy from his family’s direct link to the clan of Muhammad.

The *Hashim* clan name, taken from the great-grandfather of Muhammad, holds great significance itself:

‘Abd al-Muṭṭalib [the grandfather of Muhammad] was the son of Hāshim, whose name was ‘Amr; he was called Hāshim because he used to break up (*hashama*) bread for *tharid* [already-made bread that has been smashed up into small pieces, which in turn are blended into other dishes — a common and ancient practice on the Arabian Peninsula] for his people in Mecca and feed them with it.<sup>2</sup>

<sup>1</sup> EDWARD GIBBON, *THE DECLINE AND FALL OF THE ROMAN EMPIRE* 649 (1776) (New York, New York: Penguin Books, abridged version, 1980) (emphasis added). [Hereinafter, GIBBON.] The six volumes of this work originally were published between 1776 and 1788.

<sup>2</sup> THE HISTORY OF AL-JABARI (TA’RIKH AL-RUSUL WA’L-MULUK) vol. VI at 16 (Albany, New York: State of

This illustrates the clan's devotion to and protection of the city of Mecca and her people. Clan members understood they gained honor and respect by seeing to the needs of the people and caring for the sacred *Ka'ba*.

The full name of the Prophet is a map of his heritage: Muhammad Ibn Abdullah Ibn 'Abd Al-Muṭṭalib Ibn Hāshim. "Ibn" means "son," whereas "Abū," means "father." The word "Abd" means "slave," thus "Abdullah" means "slave of God." Thus, his entire name reads: Muhammad, Son of Abdullah, the slave of God, who is the son of 'Abd Al-Muṭṭalib, who is the son Hāshim. The name 'Abd Al-Muṭṭalib derives from pagan times.

The ancestors and immediate family of Muhammad embody were examples of the noble tradition of the clan:

The grandfather of Mohammed was Abdol Motalleb (i.e., 'Abd Al-Muṭṭalib), the son of Hashem, a wealthy and generous citizen who relieved the distress of famine with the supplies of commerce. Mecca, which had been fed by the liberality of the father [Hashem], was saved by the courage of the son ['Abd Al-Muṭṭalib]. The kingdom of Yemen was subject to the Christian princes of Abyssinia; their vassal Abrahah was provoked by an insult to avenge the honour of the cross; and the holy city [Mecca] was invested by a train of elephants and an army of Africans. A treaty was proposed; and in the first audience the grandfather of Mohammed demanded the restitution of his cattle. "And why," said Abrahah, "do you not rather implore my clemency in favour of your temple [the *Ka'ba*], which I have threatened to destroy?" "Because," replied the intrepid chief, "the cattle is [*sic*] my own; the Caaba belongs to the gods, and *they* will defend their house from injury and sacrilege." The want of provisions, or the valour of the Koreish, compelled the Abyssinians to a disgraceful retreat. . . .

The glory of Abdol Motalleb was crowned with domestic happiness; his life was prolonged to the age of one hundred and ten years; and he became the father of six daughters and thirteen sons. His best beloved Abdallah [father of Muhammad] was the most beautiful and modest of the Arabian youth; and in the first night, when he consummated his marriage with Amina [mother of Muhammad], of the noble race of the Zahrites, two hundred virgins are said to have expired of jealousy and despair. Mohammed, the only son of Abdallah and Amina, was born at Mecca four years after the death of [the Roman Emperor] Justinian and two months after the defeat of the Abyssinians, whose victory would have introduced into the Caaba the religion of the Christians.<sup>3</sup>

Clearly, Muhammad was brought up in a respected tradition in an honorable family.

New York Press, 1988) (W. Montgomery Watt & M. V. McDonald, trans. and annot.). [Hereinafter, *AL TABAHI*.]

<sup>3</sup> Gibson, *supra*, at 650.

## [D] Profane Law of Arabian Bedouins

The Bedouins may have lacked a single, unified government, but the tribes shared several common rules. A system of customary tribal law existed to prevent the strong from crushing the weak, giving people a means of settling disputes over property, succession, or crime beyond the law of the sword. The laws accrued from previous decisions and were grounded in practicality rather than piety.

In criminal cases between tribes, punishment became a matter of redress. In a modern legal sense, criminal wrongs were treated as torts. Jail time was not an option for the migrant tribes. Instead, guilty individuals or their tribes compensated the victim's family or tribe for the harm with "blood money." This practice gave rise to a complex network of blood feuds when a tribe's guilt or liability was questioned.

## [E] Arbitration among Bedouins and *Ḥakam* (Arbitrator)

The Bedouin tribes and populations of the Arab cities did not have a formal, central government until the Prophet united them under the banner of Islam. Until then, parties negotiated directly if a problem arose among them. Failure to reach a settlement led the parties to seek the counsel of an arbitrator (*ḥakam*). A *ḥakam* could be anyone the parties could agree upon, based on outstanding personal qualities, reputation, and competence. Over time certain families became well known for solving disputes.

After the selection of the *ḥakam*, the parties had to agree on and submit the legal issue at the heart of the dispute. Depending on the question, a *ḥakam* could refuse to take the case. He may refuse it anyway if he believed his decision was not likely to be followed. To ensure compliance with the judgment, parties provided collateral in the form of property or hostages to the *ḥakam* or other appropriate neutral entity.

All decisions of the *ḥakam* were final. There was no appellate process in the desert. Enforcement was left up to tribal honor and retention of the collateral was the only thing binding a losing party to an unfavorable outcome in the absence of a sheriff.

The final decision of a *ḥakam* functioned as a statement of rights on a disputed point.<sup>4</sup> These judgments were often recorded both before and after the time of Muhammad. The practice of writing down legal matters may be rooted in the traditions of Syria and Iraq, where written language first developed.

Significantly, the decisions of *ḥakams* carried serious weight. Because they were written down, and added to the body of customary law, prior rulings affected later judgments in similar cases, formulating an early system of legal precedent:

It [the decision of the *ḥakam*] therefore became easily an authoritative statement of what the customary law was, or ought to be; the function of the arbitrator merged into that of a lawmaker, an authoritative expounder of

<sup>4</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 8 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, *SCHACHT*.]

the normative legal custom or *sunna*. The arbitrators applied and at the same time developed the *sunna*; it was the *sunna*, with the force of public opinion behind it, which had in the first place insisted on the procedure of negotiation and arbitration.<sup>5</sup>

The Arab tribes deferred to these decisions and held the *hakam* in high respect. Due to a lack of central authority, the *hakams* began to shape the law with their decisions, evolving a legislative function. The personal characteristics of Muhammad made him the quintessential *hakam* and positioned him to define the law in Islamic terms.

## [F] Cities of Medina and Mecca

Just before, and during the lifetime of Muhammad, several cities along the Hejaz Mountains prospered. Located between these Mountains and Red Sea, Medina and Mecca were valuable trading and cultural centers. As permanent settlements, these towns had a more-fully developed legal system than the nomadic Bedouins.

### • Medina (Yathrib)

Medina, originally known as Yathrib, is one of the three holy cities of Islam (with Mecca and Jerusalem). Today, it is known as “Al-Medina Al-Monawwarrah,” meaning “the Illuminated (*Monawwarrah*) City (*Medina*).” The city was established on an oasis of palm trees along the caravan routes along the Peninsula. Medina was closely connected with Mecca, even before the *Hijra*, by family ties, including the mother and grandfather of Muhammad. Additionally, Medina was home to a significant minority of Arab Jews, ensuring a multicultural atmosphere inside the city walls.

### • Mecca

Mecca has been an important Arab city since it was founded by the Prophet Abraham (Ibrahim), when he moved his wife, Hagar (Hajar), and son Ishmael (Ismā‘il). Major tribes began settling here, as well, once the *ZamZam* Well was dug. Located at the crossroads between civilizations, Mecca grew into a significant hub for trade. Caravans from southern Arabia, Byzantine Syria, *Sassanid* Persia, and India converged on Mecca, forcing the city to develop a customary commercial law, not unlike the European *lex mercatoria* (law of the merchant), strictly enforced by the traders themselves. Before the advent and spread of Islam, loans with interest were common in commercial dealings.

With the advent of Islam, Mecca became the epicenter of the faith. Mecca is the birthplace of Muhammad as well as the site of the *Ka’ba*, an ancient pagan shrine. When the Muslims returned to Mecca in 10 *Ramādān* 8 A.H. (January 630 A.D.), all pagan idols were removed and the *Ka’ba* was rededicated to Allāh. For every devout Muslim today, daily prayer (*salah*) is preformed facing toward the *Ka’ba* in Mecca.

## § 1.02 MUHAMMAD AND JESUS

### [A] Muhammad and Prophetic Tradition

A threshold question about Muhammad is epistemological: how are the events of his life known? After Muhammad died, in 632 A.D., and for the first few centuries thereafter, his life was the subject of prodigious and meticulous research by Muslim scholars. They collected, compiled, and wrote down accounts of the life of Muhammad. One of the leading biographers was a Persian scholar named Abū Ja’far Muhammad ibn Jarir Al Tabari, known as Al Tabari. Born in 838 (224 A.H.) in Amol, Tabaristan, Iran, near the Caspian Sea, and dying in 923 (310 A.H.), Al Tabari produced not only a multi-volume biography of Muhammad, but also an exegesis of the Qur’ān. Indeed, he memorized the sacred text by age 7. Al Tabari is perhaps the most important source on early Islamic history, and though he wrote in Arabic, his works are available in English.

Muhammad Ibn Abdullah Ibn ‘Abd Al-Muṭṭalib Ibn Hāshim is only the immediate lineage of the Prophet. Muhammad garnered respect in his time not only as a member of the *Hashim* clan and *Quraysh* tribe, but also through his Prophetic heritage. Al Tabari recounts Adam, Abraham, and Ishmael as ancestors of Muhammad. Through this sacred heritage, Muslims regard Islam as the continuation of the Judeo-Christian tradition. Muhammad is the recipient of the final revelation in a long line of prophets, including Jesus Christ. Thus, it is puzzling, if not insulting, to Muslims to consider Muhammad as outside of this line, or to consider Islam as an “other” religion.

The chain of prophecy, which Muslims believe Muhammad sealed, is long and grand. Allāh began to guide mankind with prophecy long before Muhammad. Continuous revelation is acknowledged in the Qur’ān in *surah* 4, *ayah* 163–65:

<sup>163</sup>We [God] have enlightened you [Muhammad], as we enlightened Noah, and the Prophets after him. We enlightened Abraham, and Ishmael, and Isaac, and Jacob and the tribes, and Jesus, and Job, and Jonah, and Aaron, and Solomon, and we gave David the Psalms. <sup>164</sup>Concerning some Messengers, We have already told you their stories. Concerning other Messengers, We have not told you their stories. And, God spoke directly to Moses. <sup>165</sup>But, God bears witness that what He has sent to you [Muhammad], He has sent it from His own comprehension.<sup>6</sup>

Abraham, an important figure in Judaism and Christianity, is recognized in the Qur’ān as an important figure in Islam as well. Consider a passage from *surah* 3, *ayah* 67 of the Qur’ān:

<sup>67</sup>Abraham was not a Jew, nor a Christian, but rather he was true in faith. He was a Muslim [i.e., one who has bowed down before God and submitted to God’s will].<sup>7</sup>

<sup>6</sup> THE QUR’AN — A New Translation by M.A.S. Abdel Haleem (Oxford, England: Oxford University Press, 2004), 4:163–65 at 65–66. [Hereinafter, QUR’AN.]

<sup>7</sup> QUR’AN, *supra*, 3:67 at 39.

Revelation, begun with Adam, continuing through the Prophets of the Old and New Testaments, is recognized and revered by Muslims:

The God of nature has written his existence on all his works, and his law in the heart of man. To restore the knowledge of the one, and the practice of the other, has been the real or pretended aim of the prophets of every age; the liberality of Mohammed allowed to his predecessors the same credit which he claimed for himself; and the chain of inspiration was prolonged from the fall of Adam to the promulgation of the Koran. . . . The authority and station of Adam, Noah, Abraham, Moses, Christ, and Mohammed rise in just gradation above each other; *but whosoever hates or rejects any one of the prophets is numbered with the infidels.*<sup>8</sup>

Islam teaches that when Muhammad died in 632 A.D., he brought the Judeo-Christian and Islamic Prophetic traditions to a close.

### [B] Comparisons between Islam and Catholic Christianity

Table 1-1:

Summary of Key Comparisons and Contrasts between Islam and Catholic Christianity on Foundational Points

Foundational Point	Islam	Catholic Christianity
<i>God</i>		
<i>One God or Many?</i>	Monotheism	Monotheism
<i>Nature of God?</i>	Omnipotent, Omniscient, Omnipresent	Omnipotent, Omniscient, Omnipresent
<i>Trinity?</i>	No	Yes, Triune God, which means 3 persons in one God Head: God the Father, God the Son, and God the Holy Spirit.
<i>Creation</i>		
<i>What did God create?</i>	Universe and everything in it, including Angels (from light), <i>jinn</i> s (from fire), human beings (from mud), animals, birds, fish, insects, and plants. God created the devil, Satan (from fire, like <i>jinn</i> s), who is either a fallen angel or a <i>jinn</i> .	Universe and everything in it, including Angels, human beings, animals, birds, fish, insects, and plants. God created the devil, Satan, who is a fallen angel.
<i>Adam and Eve?</i>	Fall from Paradise	Fall from Paradise

Foundational Point	Islam	Catholic Christianity
<i>Temptation?</i>	Tempted by Satan, disobeyed the order of Allāh not to eat from the Forbidden Tree, and thus committed the sin of disobedience.	Tempted by Satan, disobeyed the order of God not to eat from the Forbidden Tree, and this disobedience reflected pride and a desire to be equal with God.
<i>Doctrine of Original Sin?</i>	No	Yes, the souls of all human beings are tainted by the stain of the sin of Adam and Eve.
<i>Free will?</i>	Yes, Allāh knows what a person is going to do, what choices the person will make, but each person has free will to make those choices.	Yes, God knows what a person is going to do, what choices the person will make, but each person has free will to make those choices.
<i>Marian Dogmas</i>		
<i>Immaculate Conception?</i>	Yes, Mary was conceived without sin and committed no sin.	Yes, Mary was conceived without sin and committed no sin.
<i>Annunciation?</i>	Yes, the Archangel Gabriel (Jibreel) was sent by Allāh to inform Mary that she would have a child by miraculous means.	Yes, the Archangel Gabriel was sent by God to inform Mary that God had chosen her to have a child, and she responded affirmatively.
<i>Virginity of Mary?</i>	Yes, Mary conceived by miraculous means. Like Adam, Jesus has no human father, nor does he have a step-father, as Mary was never married. Note the miracle of Jesus speaking as an infant to explain his miraculous birth and that he is a servant of God.	Yes, Mary conceived Jesus of the Holy Spirit. Like Adam, Jesus has no human father, but rather a step-father, Joseph.
<i>Assumption?</i>	Yes, in that Mary went to Heaven after she died.	Yes, the body and soul of Mary are assumed into Heaven with no time in Purgatory.
<i>Special Reverence for Mary?</i>	Yes	Yes
<i>Jesus</i>		

<sup>8</sup> Ginnos, *supra*, at 654–655 (emphasis added).

Foundational Point	Islam	Catholic Christianity
<i>Nature of Jesus?</i>	Fully human only. Greatest of all Prophets before Muhammad.  Muslims accept the entire line of Judeo-Christian Prophets, starting with Adam, Enoch (Idris), Noah, and so on through Moses and Jesus, and regard Muhammad as in this tradition.  Further, some Islamic scholars highlight the four greatest Prophets: Abraham, Moses, Jesus, and Muhammad.	Fully Divine and fully human. Son of God.
<i>Crucifixion?</i>	No, Jesus did not die on the Cross.  Angels took Jesus up to Heaven, where he is alive to this day, and an imposter died in his place.	Yes, Jesus died on the Cross.
<i>Resurrection?</i>	No	Yes
<i>Ascension?</i>	Yes, but not after his death.  Rather, before he died Jesus was taken up to Heaven by Angels, where he remains alive.	Yes, following the Resurrection.
<b>The End</b>		
<i>Day of Judgment? (Particular Judgment)</i>	Yes, called the "First Judgment."  Upon death, each person is judged according to his or her deeds in life, though the result is not a final determination as to entry into Heaven or condemnation to Hell.  The First Judgment metes out rewards or punishments to a person, while resting in his grave as something akin to a room from Paradise or a room from Hell, to await the Final Judgment.	Yes, which occurs upon the death of each person.

Foundational Point	Islam	Catholic Christianity
<i>Final Judgment (including Second Coming of Christ)</i>	Yes, when Christ fights and kills the Anti-Christ in the Battle of Armageddon, resulting in world peace.  Thereafter, Jesus will live as the leader, and Prophet, and die as a normal person. The prophecy of Jesus will continue from the past, whereas Muhammad, having been born after Jesus, remains the last "new" Prophet.  After Armageddon, at the end of time, Allāh will order the Angel of Death to take the soul of each person, and each soul faces a Final Judgment to go to Paradise or Hell, the ultimate reward or punishment.  Final Judgment will be based not only on the deeds of a person during their life, but also on the mercy of Allāh.	Yes, there is a Battle of Armageddon at the end of time, <i>Parousia</i> (the second coming) occurs, resulting in final victory as foretold in <i>The Book of Revelations</i> .
<i>Possible Outcomes?</i>	Heaven or Hell, arguably soul may go through a cleansing process before Heaven.	Heaven or Hell, possible cleansing of soul in Purgatory before Heaven.

Throughout the course of human history few people have been as revered and reviled as much as the Prophet Muhammad. Those who revere him do so for the same reasons as those who revile him. Muslims exalt Muhammad, because he founded the whole structure of Islamic Law and all legal and religious institutions. The first Islamic community was build up around his personality and practices. So, Muslims today revere him as much as Muslims did when Muhammad lived fourteen centuries ago.

In contrast to the Christian view of Jesus, Muslims do not regard Muhammad as divine. Instead, Islam teaches that he was fallible as a man in his normal life, but infallible as the Prophet bearing the messages of Allāh. The Table below offers a basic and simplistic comparison between Catholic Christianity and Islamic beliefs. Note that Protestant and Catholic views are the same on most points and Islam shares many of the foundations of faith with them.

Christians believe Jesus Christ holds a dual nature — both fully divine, as the Son of God, and fully human. Muslims accept Jesus as the greatest prophet since

Abraham and until Muhammad. However, they do not regard Jesus as Divine:

... Jesus was a mere mortal; and at the day of judgment his testimony will serve to condemn both the Jews, who reject him as a prophet, and the Christians, who adore him as the Son of God.<sup>9</sup>

The question for Christians — which Jesus himself poses when He asks His disciples, “But who do you say that I am?” — is about His true nature.<sup>10</sup> Is Jesus a dead hero or the resurrected Lord?

The nature of Jesus is the first of several contrasts between Islamic and Catholic Christianity. Both faiths agree God is the only True God, and believe He is omnipotent, omniscient, and omnipresent. But, they diverge on the concept of the Holy Trinity. The Holy Trinity is God the Father, God the Son (Jesus), and God the Holy Spirit. In Islam, the Trinity is at best an unnecessary complication concerning a monotheistic God, and at worst a heretical step towards polytheism. *Surah 4, ayah 171* states:

People of the Book, do not go to excess in your religion, and do not say anything about God except the truth: the Messiah, Jesus, son of Mary, was nothing more than a messenger of God, His word, conveyed to Mary, a spirit from Him. So believe in God and His messengers and do not speak of a “Trinity” — stop [this], that is better for you — God is only one God, He is far above having a son, everything in the heavens and earth belongs to Him and He is sufficient protector.<sup>11</sup>

In contrast, the Trinity is an essential part of Catholic (and, indeed, Protestant) Christian faith, and understood ultimately as a mystery.

Both faiths agree God created the universe and everything in it, though Muslims believe He also created *jinn*s (spirits neither angels nor human), which are not part of Christian views. Satan, also created by God, is a fallen angel in Catholic Christianity, but Muslims debate whether or not the devil may be a *jinn* instead. All agree the race of Man began with Adam and Eve and their Fall from Paradise. However, Muslims do not believe in the Doctrine of Original Sin (i.e. the sin of Pride when Adam and Eve sought to be equal with God), which taints the souls of all subsequent people.

Mary, the Mother of Jesus, offers considerable common ground. Both faiths essentially agree on the Doctrine of the Annunciation.<sup>12</sup> Like Catholic Christianity,

<sup>9</sup> Gibbon, *supra*, at 656.

<sup>10</sup> See *The Gospel According to Mark*, 8:29, in *THE CATHOLIC STUDY BIBLE* 81 (New York, New York: Oxford University Press, 1990, New American Bible trans.).

<sup>11</sup> Qur'an, *supra*, 4:171, at 66 (emphasis).

Perhaps it is sign of how little many correspondents, including religion writers, in the mainstream secular media know about religion that they cite passages such as this one to support the proposition that Muslims accept Jesus as the “Word” of God in the same way as do Christians, and analogize this passage to that in *The Gospel According to John*, 1:1. See, e.g., Robert Wright, *The Meaning of the Koran*, *NEW YORK TIMES*, 14 September 2010, posted at <http://opinionator.blogs.nytimes.com/2010/09/14/the-meaning-of-the-koran/>.

<sup>12</sup> See Qur'an, 19:16–26, at 191–192.

Islam professes two of the Marian Dogmas: the Doctrine of the Immaculate Conception, i.e. that Mary was conceived without sin, and the Virginity of Mary, i.e. that Mary conceived of the Holy Spirit.<sup>13</sup> In emphasizing the special place Christ has in Islam, Gibbon even suggests the Qur'an provided inspiration for the Catholic Christian Doctrine of the Immaculate Conception:

For the author of Christianity the Mohammedans are taught by the prophet [Muhammad] to entertain a *high and mysterious reverence*. “Verily, Christ Jesus, the son of Mary, is the apostle of God, and his word, which he conveyed unto Mary, and a Spirit proceeding from him: honourable in this world, and in the world to come; and one of those who approach near to the presence of God.” The wonders of the genuine and apocryphal Gospels are profusely heaped on his head, and the *Latin church has not disdained to borrow from the Koran the immaculate conception of his virgin mother*.<sup>14</sup>

In fact, Mary is referred to more times in the Qur'an than in the New Testament.

Some of the largest doctrinal differences concern the death and Resurrection of Jesus. Unlike Catholic Christianity, Islam does not hold to a belief in the Crucifixion. From an Islamic perspective, Christ did not die on the Cross.

The malice of his [Jesus'] enemies aspersed his reputation and conspired against his life; but their intention only was guilty; a phantom or a criminal was substituted on the cross; and the innocent saint was translated to the seventh heaven.<sup>15</sup>

Specifically, Jesus knew he would be arrested by the Roman soldiers, and asked his disciples if any of them were willing to take his place and sacrifice himself for Jesus. One disciple, who looked like Jesus, volunteered, was arrested by the soldiers, and crucified in lieu of Jesus. Jesus was rescued by Angels, and taken up to Heaven by them, where he remains, alive, to this day. Whereas the Resurrection is an essential part of Catholic Christian faith, it is not accepted in Islam.

That said, both faiths teach that there is a Day of Judgment, i.e. a Particular Judgment for each person upon death, and a Final Judgment that results in permanent entry into Heaven or damnation in hell. Catholic Christianity, and arguably Islam, holds to a concept of Purgatory. Both faiths also believe the Final Judgment will be marked by the Second Coming of Christ. According to some Islamic sources, the Second Coming may occur with Christ returning through a minaret at the *Umayyad* Mosque in Damascus.

One way to summarize these comparisons and contrasts is to consider the question: Does God intervene in human history? Both Islam and Catholic Christianity respond in the affirmative. But, they take a different view as to how God intervenes. In Islam, the intervention was Allāh giving the Qur'an to Muhammad through the Archangel Gabriel (Jibreel), to be passed on to humanity. Thereafter,

<sup>13</sup> See Qur'an, 19:27–35, at 192.

<sup>14</sup> Gibbon, *supra*, at 655 (emphasis added).

<sup>15</sup> Gibbon, *supra*, at 656.

people must struggle to learn the Will of God for themselves in their lives, and to submit to it. People must climb "up" the mountain, toward God and Eternal Life. In contrast, Catholic Christianity proposes God intervened in human history by incarnating Himself in the human flesh (Jesus), conducting a ministry on earth, dying, and being resurrected. God came "down" from the mountain, to and for all people.

For Muslims, Muhammad is a unique figure of utter probity and of total honesty. He was an example of perfect integrity, as the perfect father, a model husband, businessman, and leader and organizer as ever existed. In brief, Muslims believe that in all ways, the Prophet came as close to perfection as is possible for a fallible human being.

Professor Hussain explains:

At the time of the Prophet, trade routes crisscrossed the Arabian Peninsula and the people of Mecca were in the forefront of trading activity. The Prophet himself had been a successful businessman, as agent for his first wife, Khadijah. The traditions [such as recounted by Majid Ali Khan, *Muhammad the Final Messenger* 62-64 (1983)] relate that she first employed him to take charge of a trading expedition to Syria on her behalf. Later, she was so impressed by his honesty and trustworthiness that she offered to marry him and he accepted the offer. After the marriage, he undertook further trading ventures to differing places in Arabia, including Yemen and Bahrain.<sup>16</sup>

This account is remarkable not only for what it says about Muhammad himself, namely, his professional probity and cosmopolitan experience around the Levant and Gulf regions, but also for two other reasons.

First, Muhammad's complete integrity in business should be emulated by all Muslims. He is a role model for all economic agents, from farmers to financiers. Second, it was the woman business owner (Khadija) who proposed marriage to the man (Muhammad). There is nothing un-Islamic about the empowerment of women in family or commercial matters. To the contrary, the idea of a partnership in all matters between wife and husband was acceptable. Despite the appearance of customs, practices, and ideologies from time to time, and in certain countries, no revelations came to Muhammad to alter the status of, or esteem for, his wife Khadija.

### [C] Free Will versus Pre-Destination

One point worth emphasizing is that Islam, like Catholic Christianity, is not a fatalistic religion. The first basic tenet of Islam is Allāh is the one, true God. He is omnipotent, omniscient, and omnipresent, and who will render a Final Judgment for each person based on the extent to which he or she led his life in accordance with His Will. "Islam" means submission, and the criterion for judgment is whether

a person exerted an effort to learn, understand, and submit to the Will of God. Success in submission in every instance is not required. People try, fall down, and get up again. Rather, the challenge is to get up again, not succumb to a faithless life, i.e. at Final Judgment, the key issue is whether a person struggled — engaged in *jihād* — to submit. (Note "*jihād*" is not primarily a military concept.)

How can a person possibly discern the Will of God? Through His mercy, God gave humankind an expression of His will: the Qur'ān. This sacred text serves as a guide for acts and omissions. Moreover, God provided a guide-to-the-guide, the Prophet Muhammad. As the Qur'ān states, the Prophet provides an "excellent pattern,"<sup>17</sup> hence the importance of the tradition of Muhammad (*Sunnah*).

Interestingly, over the last 1,400 years, Muslim religious scholars (*ulema*) have asked a logical question: if God is all powerful, so much so that everything that happens is the Will of God, and if God knows everything and created everything, then what role is left in this system for individual human responsibility? Put differently, if God has determined all things, then has God already determined whether a particular individual will, or will not, lead his life in accordance with God's Will? Non-Muslim Western theologians and philosophers dub the problem one of free will versus pre-destination.

One way to approach this problem is to point out many *ulema* view it as irrelevant because God is unknowable. It is a theme resonating throughout the Qur'ān that God has a purpose in what He does, but it is foolish for a human being, possessing only a weak mind, to presume this purpose can be comprehended fully. Only if God makes the purpose known specifically in the Qur'ān can it be appreciated.

This approach, however true, is unsatisfying insofar as human beings have curious intellects and an innate sense of purpose. Surely people are not to behave with impunity under the guise of a pre-destined outcome on the Day of Final Judgment. Surely they must remain "on the hook" to try to live according to the Will of God. There are plenty of Qur'ānic injunctions to the effect that each person is accountable to God, and must decide what to do in light of that existential fact. Maybe God has predetermined matters, but the individual does not know with certainty this to be so. It is prudent not to give up the effort to implement in life the Will of God.

Islam, then, is not a fatalistic religion. Yet, there is a misperception in the non-Muslim West about this point, leading to stereotypes about Muslims:

The doctrine of eternal decrees and *absolute predestination* is strictly embraced by the Mohammedans; and they struggle with the common difficulties, *how* to reconcile the prescience of God with the freedom and responsibility of man, *how* to explain the permission of evil under the reign of infinite power and infinite goodness.<sup>18</sup>

<sup>16</sup> JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 158-159 (Annandale, New South Wales, Australia: The Federation Press, 1999) (emphasis added). Professor Hussain is a Lecturer in Law at the University of Technology Sydney (UTS) in Sydney, Australia.

<sup>17</sup> See Qur'an, *supra*, 33:21 at 268.

<sup>18</sup> GIBBON, *supra*, at 654 (emphasis on "how" original; other emphasis added).

Some observers not only believe Muslims are fatalistic, but also extend this error to say that because Islam preaches fatalism, some Muslims do not work hard. They are wont to use terms like “*insha’Allah*” (“God willing”) when things do not work out, and “*al hamdulillah*” (“thanks be to God”) or “*māshā’Allah*” (“God has willed it”) when they do. In truth, Muslims do not approach life from a fatalistic standpoint. God’s Will is God’s business, and He has made some of His Will explicit to human beings, in the Qur’ān, so they can structure their life properly. Indeed, the inference from the very fact of the revelation, that God gave the Qur’ān as a guide, is obvious: A person must strive to meet the challenge of living up to His Will.

Thus, unlike the task of Sisyphus, the struggle (*jihād*) is not bleak or hopeless.<sup>19</sup> The act of struggle is a statement of hope and faith. It is the obligation of a Muslim to struggle unceasingly to meet the challenge of living according to the Will of God. At each moment in life, a Muslim is duty-bound to apply the principles revealed in the Qur’ān so as to address the circumstances of the moment and thereby meet the Will of God. Throughout the life of a Muslim, every act should be motivated by a sense of responding to the Will of God. That is the true *jihād*. Conceptually, there is little disagreement with Catholic Christianity. Each adherent is asked to reflect prayerfully on what God calls him or her to do in a given situation, and let Jesus, through His teachings in sacred scripture, tradition, and the Church, dictate the response. For Muslims and Catholic Christians, responding to the challenge promises salvation at Final Judgment.

#### [D] Need for Final Revelation

If all the earlier revelations from God to the pre-Muhammadan Prophets were authentic, then why was it necessary for God to reveal more to the Prophet Muhammad? The Qur’ān unambiguously indicates that the way in which people interpreted and implemented the earlier revelations led to corruption. That is, the earlier revelations had value, but that value was corrupted over time:

During six hundred years [i.e., up until the lifetime of Muhammad] the Gospel was the way of truth and salvation; but the Christians insensibly forgot both the laws and the examples of their founder, and Muhammad was instructed by the Gnostics to accuse the church as well as the synagogue of corrupting the integrity of the sacred text. The piety of Moses and of Christ rejoiced in the assurance of a future Prophet, more illustrious than themselves: the evangetic promise of the *Paraclete*, or Holy Ghost [Holy Spirit], was prefigured in the name and accomplished in the person of Mohammed, the greatest and the last of the apostles of God.

...

... If the Christian apostles, St. Peter or St. Paul, could return to the Vatican, they might possibly inquire the name of the Deity who is worshipped with such mysterious rites in that magnificent temple. At Oxford or Geneva they would experience less surprise, but it might still be

<sup>19</sup> See OVID IV, METAMORPHOSES, BOOKS IX–XV 10.44 (8 A.D.) (Cambridge, Massachusetts: Harvard University Press Loeb Classical Library, 1984) (Frank Justus Miller, trans.); ALBERT CAMUS, THE MYTH OF SISYPHUS (1942) (New York, New York: Penguin Classics, 2000) (Justin O’Brien, trans.).

incumbent on them to peruse the catechism of the church and to study the orthodox commentators on their own writings and the words of their Master.<sup>20</sup>

Why, then, were the earlier Prophetic messages corrupted?

The simple answer is the nature of the human intellect. From a Muslim perspective, Jews and Christians were blessed by glimmerings of revelation. But, they came to misunderstand and misapply what had been sent down to them. Further, transmission is a risky business. During the process of passing on a Divine Message from one Prophet to a community, and to subsequent generations and their successors, teachings may become garbled. The faiths built around earlier revelations are deserving of respect, but suffer from fundamental flaws.

One such corruption, say Muslims, is the foundational Christian teaching that Jesus is the Son of God, and concomitantly, the Doctrine of the Trinity. Surely this line of belief is orthogonal to monotheism, to the tenet of the unity of God. Thus, to point out the corruption and return to the original Truth, God in His mercy sent another Message, this time via Muhammad.

This Message, the Qur’ān, describes itself as a “*kitāb*” (“book,” particularly in the sense of “scripture”). “*Kitāb*” refers to a living document that is the full expression of the Will of God, of something that is in Heaven, which sometimes is referred to as the “*Umm al-Kitāb*” (Mother of the Book). That *Kitāb* existed long before the days of Muhammad, and God entrusted each of the earlier Prophets with the responsibility of passing on a portion of its contents, to help people learn to know what God willed for them.

Consequently, Christians and Jews are “people of the book,” or “*ahl al kitāb*,” and the Qur’ān refers to them as such. They are to be respected and for much of Islamic history Muslims have sought to create a place in their societies for them. But the earlier revelations to them were insufficient, perhaps even incomplete. The revelation to Muhammad is an opportunity to eliminate all confusion, and eradicate all misunderstanding. The revelation to Muhammad is, concept-by-concept, chapter-by-chapter, verse-for-verse, word-for-word, the *Kitāb*. That is, the Qur’ān contains a whole, unimpeachable Message from God, and is the recitation of the True *Kitāb* that is the literal expression of His Will. It was the greatest act of Divine mercy to intervene, once again, in human history to reveal this entirety.

#### § 1.03 NON-MUSLIM CHARACTERIZATIONS OF MUHAMMAD

##### [A] Portraying Muhammad

It is a myth the *Shari’a* forbids any and all depictions — in the sense of drawings, paintings, or sculptures — of the Prophet Muhammad. The Qur’ān, in *surah* 21, states:

<sup>20</sup> GIBBON, *supra*, at 656, 659.

<sup>51</sup>Long ago We bestowed right judgment on Abraham and We knew him well. <sup>52</sup>He [Abraham] said to his father and his people, "What are these images to which you are so devoted?" <sup>53</sup>They replied, "We found our fathers worshipping them." <sup>54</sup>He said, "You and your fathers have clearly gone astray."<sup>21</sup>

Indeed, there is no Qur'anic provision, nor any credible *hadith*, forbidding anyone — Muslim or non-Muslim — from portraying the Prophet. Yet, in practice there is a broad bar, which seems to be based on culture. Not only are movies, television programs, and plays depicting the Prophet off-limits in Islamic countries, but so too are productions about his Companions (*Ṣaḥābah*) and other Prophets before Muhammad. Thus, for example, *The Passion of the Christ*, the controversial 2004 movie by Mel Gibson, was banned in Egyptian cinemas. (There was no controversy in Saudi Arabia, as the Kingdom does not have public cinemas.)

The above-quoted Qur'anic passage concerns ritualistic worship of pagan idols, which Islam does not countenance. Extremist groups, such as the Taliban, cite passages in the Qur'an about the singular uniqueness and oneness of God, as well as certain *hadiths*, to support a prophylactic ban on depicting Muhammad. Their advocacy has led to un-Islamic acts, such as the destruction of symbols of other faiths, as when the Taliban blew up two 6th century A.D. Buddhist statues (the Buddhas of Bayman) in Hazarajat, central Afghanistan, in March 2001. Such advocacy also runs counter to much of Islamic history. Through the ages, Islamic art has been full of gorgeous scenes from the life of Muhammad. These depictions are a testament to the glory of Islamic civilization.

In the non-Muslim world, one of the most important depictions is in the United States Supreme Court. It contains a frieze showing Muhammad, along with Moses and other famous figures. All of the figures in that frieze are revered for their law-giving roles and their search for justice. Notably, in 2000, Professor Taha Jaber Al-Alwani of Al Azhar University, who also served as Chairman of the *Fiqh* Council of North America, said the Supreme Court depiction of Muhammad was permissible under the *Shari'a*<sup>22</sup> because the intent is to praise Muhammad as a statesman, not to suggest either Muhammad or the Supreme Court embody or emulate divine power. So, what is inappropriate in terms of a depiction of Muhammad?

<sup>21</sup> Qur'an, *supra*, 21:51–54, at 205.

<sup>22</sup> Characterizations of the Prophet are a subject of academic controversy within the Islamic world. For example, in February 2010, scholars at Al Azhar University in Cairo debated the topic, not only in relation to Muhammad and his Companions (*Ṣaḥābah*), but also to Prophets and leading figures from other faiths, including Jesus. Interestingly, what prompted the Al Azhar conference was an Iranian television drama about the life story of the Old Testament Prophet Joseph (Yūsuf), son of Jacob. In January 2010, the Islamic Research Institute in Cairo (which is related to Al Azhar University, and headed by the Grand *Imām* of Al Azhar) issued a *fatwā* ruling that characterizations of Muhammad, *Ṣaḥābah*, and earlier Prophets, such as in a theatrical production, are forbidden (*harām*). (This *fatwā* restated the long-standing view of Al Azhar as reflected in an earlier *fatwā*.) Based on the *fatwā*, the Egyptian government declined to allow the program to be aired on television.

A related development occurred on September 30, 2010 when the United Arab Emirates (UAE), specifically, Dubai and Qatar (namely, the MBC Group, which is incorporated in Dubai and Qatar Television), agreed to cooperate on production of an historical television drama on the life of the Second of the Four Rightly Guided Caliphs (*Rashidun*), 'Umar. Under the Al Azhar *fatwā*, depicting the Companions of the Prophet is *harām*, and 'Umar most definitely was one of the *Ṣaḥābah*.

There are two boundaries. First, no depiction should infringe on the province of God. Any suggestion that the Prophet is divine, and the subject of worship, would be un-Islamic. Second, no depiction should be insulting. Mere depiction is not unlawful; rather, any depiction should portray Muhammad in a positive light. Of course, these boundaries may be easier to conceptualize than to apply in practice: take the potentially blasphemous 2005 Danish Cartoon Affair as a case in point.<sup>23</sup>

## [B] Through Early 19th Century

The view of the Prophet Muhammad held by non-Muslims is neither monolithic nor constant through history. Non-Muslims have held different views, which have changed over time. Throughout much of western history, neither the Qur'an nor the Prophet Muhammad has been widely or well understood. Consequently, in the centuries since the birth of Islam, both have been treated disrespectfully in the non-Muslim world.

From the Middle Ages up through the early 19th century, non-Muslim western writers tended to insult the Prophet. He is described by some Medieval writers as the Anti-Christ. He is portrayed as a figure who lacked morals, of total iniquity. He is said to be the man who introduced the great threat to Christianity, and who brought about the loss of the "Christian heartland" (i.e. parts of the Middle East, especially Jerusalem).

A notable exception to these negative depictions is that by Gibbon, who describes Muhammad from those who lived with him:

According to the tradition of his companions [the *Ṣaḥābah*], Mohammed was distinguished by the beauty of his person, an outward gift which is seldom despised except by those to whom it has been refused. Before he spoke, the orator engaged on his side the affections of a public or private audience. They applauded his commanding presence, his majestic aspect, his piercing eye, his gracious smile, his flowing beard, his countenance that painted every sensation of the soul, and his gestures that enforced each expression of the tongue. . . . His memory was capacious and retentive; his wit easy and social; his imagination sublime; his judgment clear, rapid, and decisive. He possessed the courage both of thought and action; and although his designs might gradually expand with his success, the first idea which he entertained of his divine mission bears the stamp of an original and superior genius.<sup>24</sup>

Yet, even Gibbon was not immune from prejudicial remarks. Consider this passage:

. . . In the spirit of enthusiasm or vanity the prophet rests the truth of his mission on the merit of his book, audaciously challenges both men and angels to imitate the beauties of a single page, and presumes to assert that God alone could dictate this incomparable performance:

<sup>23</sup> See JYTTE KLAUSEN, *THE CARTOONS THAT SHOOK THE WORLD* 141 (New Haven, Connecticut: Yale University Press, 2009).

<sup>24</sup> GIBBON, *supra*, at 651–652.

This argument is most powerfully addressed to a devout Arabian whose mind is attuned to faith and rapture, whose ear is delighted by the music of sounds, and whose ignorance is incapable of comparing the productions of human genius. . . .

. . .

The talents of Mohammed are entitled to our applause, but his success has perhaps too strongly attracted our admiration. Are we surprised that a multitude of proselytes should embrace the doctrine and the passions of an eloquent fanatic? In the heresies of the church the same seduction has been tried and repeated from the time of the apostles to that of the reformers.<sup>25</sup>

The passages seem to describe different people, the first one presenting a glowing account of Muhammad, but the second one intimates a certain pride and employs a depreciatory epithet. Moreover, the second passage, while not impugning all Arabs, certainly casts in a negative light those of simple faith.

These passages from *The Decline and Fall of the Roman Empire*, a book in the Western canon, bespeak the spectrum of views about Muhammad, and by extension Islam and Arabs, in the non-Muslim West during the Middle Ages and even to the present day. Gibbon displays two or more competing views of Islam. Worse, not everyone was as charitable as having two minds about Islam and its Prophet. Some renditions carelessly or intentionally neglected the *Ṣahābah*, and were unflattering.

Candidly, the Christian Church had difficulty coming to terms with Muhammad. Arguably, it did not do so during the first several centuries following the life of Muhammad. Ignorance and the prejudice it bred prevailed over knowledge and understanding. Evidence seems to have been manufactured to "demonstrate" his lack of morality, reject his status as a Prophet, and deny the validity of the Message that passed through him. Still today, Muslims believe many Westerners still harbor old-fashioned, negative views of the Prophet. They point out their historical and literary classics do not treat Jesus in a base manner, for to do so would be contrary to Islamic precepts.

### [C] Recent Writings

More recently, in the later 19th, 20th and 21st centuries A.D., non-Muslim Western writing on Muhammad tends to portray him as a unique, inspired man. But, from the perspective of Muslims, these Western writings still harbor a bias, namely, they look at the life of the Prophet only in order to see how Islam began as a religion. In other words, Muslims say that Westerners care about the life of the Prophet only for the reason of understanding how Revelation came about.

That is not to say that Muslims are unconcerned with the life of Muhammad. They do care about the life of the Prophet, his circumstances, and how the first Islamic community came about. But, to Muslims, there is no point at all in seeking to understand where the Revelation came from. They do not see any purpose in investigating how the economic circumstances of the Prophet or the town into

which he was born created social disorder to which the Qur'an was a response. If the Qur'an responded to those social disorders, then it is because God chose to respond to those disorders. It has nothing to do with the judgment of Muhammad about those disorders.

### [D] Orientalist Fallacy

The term "Orientalist" is used — by Westerners and Arabs alike — to describe Western scholars who focus on the Middle East, particularly Islam and the Arab World. Orientalists have spent a great deal of time researching the 6th century A.D., i.e. the period in which Muhammad arose and Islam was born. Two Orientalist arguments in particular bring tension. First is the assertion Muhammad took, or borrowed, from Christianity and Judaism to create his new Revelation. The second assertion is that Muhammad responded to specific economic and social circumstances on the Arabian Peninsula. Why do Muslims get upset about these sorts of arguments?

The answer is because these assertions imply that Muhammad created the Revelations for himself. No Muslim in the world believes that is possible in any way. The Revelation is not the product of any human's mind. Thus, Muslims completely reject Western efforts to look for the origins or sources of the Revelation. Indeed, Muslims find that whole mode of discourse insulting. By means of a recital, God passed the Qur'an, the true essence of His will. Muslims agree God chose a particular moment for the Revelation of the Qur'an (in 610-632). He chose a particular people (Arabs), and He chose a particular person (Muhammad).

God gave the Revelation so Muhammad could pass the message onto his people, the Arabs, who in turn could pass the word on to the rest of humankind — a Revelation for all people. Inevitably, the Arabs have played, and continue to play, a major part in Islamic history. Also, the Qur'an is given in Arabic, making the Arabic language important to Muslims around the world. However, the vast majority of Muslims are not native speakers of Arabic, but all Muslims, to some degree, try to learn a bit of Arabic.

Essentially, Muslims do not believe the Revelation's sole intentions were to answer with the current economic, political, or social forces. Nor do they believe the Revelation was the product of the mind of Muhammad. In order to relate to Western thought, this sort of analysis has also been done on Christianity (looking at various Christian doctrines as the product of Vatican politics, and that Jesus was more human than divine). Some Christians agree, but many do not, with this sort of analysis. Muslims would probably agree that at a particular moment in human history God chose to act, and that kind of theological speculation in trying to find the answer leads nowhere.

<sup>25</sup> Gibbon, *supra*, at 657, 658.

## § 1.04 CHILDHOOD OF MUHAMMAD (570/571-595 A.D.)

## [A] Ahistorical Moment: Vitality of Life of Muhammad

Turning to the pre-Prophetic life of Muhammad, it is critical to appreciate that Muslims relate directly to Arab life during the days of the Prophet. Even though that era is long gone, many Muslims regard it as a unique and living period. Thus, Muslim children are reared on stories about the Prophet, about the people with whom he interacted, and the community that grew around him. Similarly, Christians teach Bible stories, which continue to inform and shape their lives.

For instance, Muslims and Christians frequently use names from their special ahistorical periods. Muslim males are often named "Muhammad," making it the most common first name in the world. They also use the name "Khadyja," the wife of the Prophet, or "Fātimah," the daughter of the Prophet, for Muslim daughters. Similarly, Christians use the names of the Gospels (Matthew, Mark, Luke, and John) frequently for boys, and Mary, the Virgin Mother of Jesus, for women. A large number of names from the *New Testament* are used widely by Christians as well.

## [B] Life Span: 570/571 A.D. to 632 A.D.

'Abd Al-Muṭṭalib, grandfather and ultimate guardian of an orphaned Muhammad, had ten sons, including 'Abdullah, father of the Prophet. 'Abdullah married Āminah bint Wāḥb ("bint" means "daughter"), also a member of the *Quraysh* tribe living in Mecca. Shortly after 'Abdullah and Āminah were married, he left for Syria in a trade caravan. Tragically, he died on the journey, and was buried in Medina, leaving Āminah a young and pregnant widow.

Āminah gave birth to her son in Mecca in 570 or 571 A.D. Upon receiving news of the birth of his grandson, Al-Muṭṭalib named the boy "Muhammad," and sent him to be raised in the desert among the Bedouins, following an old *Quraysh* custom. This tradition served, first, to educate children in pure Arabic language. It also was a practical way to protect children from diseases common in Mecca, a bustling city frequented by commercial and religious caravans. Finally, growing up in the harsh desert gave children greater physical strength and imbued them in time-honored cultural values. The *Quraysh* wanted their children to learn the responsibility and rich tradition of desert life.

Indispensable to this custom were Bedouin women, who came to Mecca as nurses to take a baby back to bring up in their tribe. Ḥalimah, a nurse from the *Banu Sa'd* tribe, was the final nurse to arrive to Mecca on the day Āminah sought to foster her son. All the other nurses refused to take Muhammad, because his father was dead, which made a substantial payment unlikely. Ḥalimah, left with no other options, took the infant Muhammad rather than return to her tribe empty-handed.

So it was that Muhammad came to be raised by Ḥalimah as a nomad. Muhammad turned out to be a clever child, learning the language and *Banu Sa'd* tribal customs quickly. When Ḥalimah returned to Mecca a few years later to

possibly chose another child to nurse, she kept Muhammad with her despite the desire of Āminah to have him back. Ḥalimah, who did not wish to be parted from Muhammad, convinced Āminah her son may still be in danger of urban diseases. In the end, Muhammad stayed in the desert with Ḥalimah for two more years.

## [C] Special Sign: Ḥalimah Story

Islamic tradition speaks of certain events in the youth of Muhammad that foretell his prophetic fate. Muhammad was four years old, playing with other children, when Ḥalimah's own son ran to report he had been taken to the ground by two strange men, robed in white, who opened his chest and reached inside. Ḥalimah raced to the scene to find him dazed and pale, but otherwise unharmed. Muhammad confirmed this story, adding the men had touched something inside his chest, but he was unsure what it was.<sup>26</sup>

Fearful for her foster child, Ḥalimah returned Muhammad to his mother. Once Ḥalimah recounted the tale, Āminah mentioned she had noticed strange things as well and believed they were signs foretelling his fate. Years later, Muhammad spoke of the event, saying the two men split open his chest to remove a black clot from his heart and then washed his chest with snow (or, in differing versions, water from the *ZamZam* Well).<sup>27</sup> Some *ulema* believe a Qur'anic verse confirms this particular cleansing story:

<sup>1</sup>Did We not relieve your heart for you [Prophet], <sup>2</sup>and remove the burden <sup>3</sup>that weighed so heavily on your back, <sup>4</sup>and raise your reputation high?<sup>28</sup>

Taken either literally or figuratively, this event can be seen as a purification of Muhammad's soul, allowing or foretelling of his eventual elevation to prophet-hood.

After his time in the desert, Muhammad lived with his mother in Mecca. When he turned 6 years old, Āminah decided to move to Medina. Tragically, Āminah died on the way, and Muhammad was returned to Mecca into the custody of his grandfather, 'Abd Al-Muṭṭalib. Muhammad enjoyed the attention of his loving grandfather for two years until the death of 'Abd Al-Muṭṭalib, when he passed into the care of Abū Ṭalib, his uncle.

'Abd Al-Muṭṭalib died eight years after the Year of the Elephant. 'Abd Al-Muṭṭalib had entrusted the Messenger of God to the care of his paternal uncle Abū Ṭalib, because Abū Ṭalib and 'Abdallah, the father of the Messenger of God, had had the same mother. Abū Ṭalib assumed responsibility for the Messenger of God after the death of his grandfather and kept him with him.<sup>29</sup>

Although fate was not kind to young Muhammad, these events shaped his personality, instilling a deep appreciation for family that he would pass on to the

<sup>26</sup> TARIQ RAMADAN, *IN THE FOOTSTEPS OF THE PROPHET — LESSONS FROM THE LIFE OF MUHAMMAD* 14 (New York, New York: Oxford University Press, 2007). [Hereinafter, RAMADAN.]

<sup>27</sup> See RAMADAN, *supra*, at 14.

<sup>28</sup> QUR'AN, *supra* 94:1-4 at 426.

<sup>29</sup> AL ṬABARI, *supra*, vol. VI at 45.

Islamic world.

### [D] Orphan, Early Childhood, and Uncle Abū Ṭalib

Abū Ṭalib, uncle and now guardian of Muhammad, was a well respected man in Mecca, albeit not an extraordinarily wealthy one.<sup>30</sup> Poverty proved a formative experience for Muhammad. Abū Ṭalib could not afford to put Muhammad through any further schooling, and Muhammad could not read or write as a result. But, the years spent with the Bedouins gave Muhammad a strong background in the spoken word, and his time with Abū Ṭalib gave him a forum to hone his eloquence.<sup>31</sup>

Muhammad had to find work early in life to support himself and his family. Auspiciously, he worked as a shepherd for the people of Mecca:

There was no prophet who was not a shepherd. He was asked: "And you too, Messenger of God?" He answered: "And myself as well."<sup>32</sup>

Shepherding taught Muhammad important virtues, especially responsibility and patience.

Muhammad matured with Abū Ṭalib and his wife, Fātimah, as his surrogate parents.<sup>33</sup> The family was close and supportive, even when Muhammad began receiving Revelations and others denounced him. Abū Ṭalib resolutely stood by him as his father-figure, teacher, and protector. His importance in Islamic history was solidified when he became one of the first converts to Islam.

### [E] Another Special Sign: Story of Christian Monk Bahīra

Like many Meccans, Abū Ṭalib was a trader. He traveled via merchant caravan to the Levant (modern-day Israel, Jordan, Lebanon, Palestine, and Syria). When Muhammad was 12 years old, he insisted on accompanying his uncle to Syria, just as the caravan was about to depart. Abū Ṭalib acquiesced:

Once Abū Ṭalib was going on a trading expedition to Syria with party of Quraysh, but when he had made his preparations and was ready to set out, the Messenger of God, as they allege, could not bear to be separated from him. Abū Ṭalib took pity on him and said, "By God, I will take him with me, and we shall never part from one another," or words to that effect; and took him with him.<sup>34</sup>

This journey, to the fair of Bostra, was the first of two Muhammad took to Syria.<sup>35</sup> The second came when Khadyja employed him to go to a commercial fair in Damascus.

<sup>30</sup> See GIBBON, *supra*, at 650–651.

<sup>31</sup> See GIBBON, *supra*, at 652.

<sup>32</sup> RAMADAN, *supra*, at 17.

<sup>33</sup> RAMADAN, *supra*, at 16.

<sup>34</sup> AL ṬABARĪ, *supra*, vol. VI at 45.

<sup>35</sup> See GIBBON, *supra*, at 652. Gibbon writes that Muhammad undertook this journey when age 13. See *id.*

While journeying with Uncle Abū Ṭalib to Syria, Muhammad passed Bahīra, a Christian monk. Bahīra noticed something different about this caravan:

The caravan halted at Buhra in Syria, where there was a learned Christian monk named Bahīra in his cell. There had always been a monk in that cell, and their knowledge was passed on, it is alleged, by means of a book which was handed down from generation to generation. When the caravan halted at Bahīra's cell this year, he prepared a copious meal for them, because while he was in his cell he had seen the Messenger of God shaded by a cloud which marked him out from among the company. Then they had come near, and, when they halted in the shade of a tree close to him, he observed the cloud covering the tree and bending down its branches over the Messenger of God until he was in the shade beneath it. When Bahīra saw this, he descended from his cell and sent the caravan a message inviting them all. When he saw the Messenger of God, he observed him very intently, noting features of his person whose description he had found in his book. After the company had finished the meal and dispersed, he asked the Messenger of God about certain matters which had taken place both when he was awake and when he was asleep. The Messenger of God told him, and he found that these things corresponded to the description which he had found in his book. Finally, he looked at Muhammad's back, and saw the seal of prophethood between his shoulders.

After this Bahīra asked Muhammad's uncle, Abū Ṭalib, "What relation is this boy to you?" "My son," he replied. "He is not your son," said Bahīra. "This boy's father cannot be living," "He is my brother's son," said Abū Ṭalib. "What happened to his father?" he asked. "He died while the boy's mother was pregnant with him," he replied. "You have spoken the truth," said Bahīra. "Take him back to your country, and be on your guard against the Jews, for, by God, if they see him and recognize what I have recognized in him, they will seek to do him harm. Great things lie ahead of him, so take him back quickly to his country!" His uncle then took him quickly back to Mecca.<sup>36</sup>

Muhammad returned to Mecca, continuing to live as a shepherd into his early twenties. He did not leave Mecca, nor join another caravan until he went as a trader with Khadyja more than a decade later.

## § 1.05 KHADYJA, MUHAMMAD, AND FAMILY BUSINESS (595–619 A.D.)

### [A] Employer, Wife, and Companion

Muhammad was known among the Meccans for his truthfulness. They would call him "Al Ṣādiq Al Amain" which means "The Truthful and The Trustworthy." This reputation encouraged Khadyja, who was one of the wealthiest people in Mecca, to hire Muhammad for one of her caravans to Syria. Khadyja chose the 25-year-old

<sup>36</sup> AL ṬABARĪ, *supra*, vol. VI at 45–46.

Muhammad to lead a caravan to Damascus based on his outstanding reputation, rather than his experience as a trader, as he had not completed a merchant trip before.<sup>37</sup>

This second opportunity to go to Syria was to be an important experience for Muhammad. While stopping to rest along the voyage, Muhammad encountered a different Christian Monk, also bearing a fateful message:

The Messenger of God accepted, and set out to trade with her property accompanied by her slave Maysarah. When he reached Syria he halted in the shade of a tree near a monk's cell. The monk went up to Maysarah and said, "Who is this man who has halted beneath this tree?" Maysarah replied, "He is a man of Quraysh, one of the people of the sacred precinct (Haram)." "No one has halted beneath this tree but a prophet," said the monk.

The Messenger of God sold the goods which he had brought with him, bought what he wanted to buy, and then set off back to Mecca accompanied by Maysarah. They assert that whenever the noonday heat grew intense Maysarah saw two angles shading him from the sun as he rode his camel. When he arrived in Mecca, he brought Khadijah her property, which she sold for twice the price or nearly so.<sup>38</sup>

The journey proved Muhammad to be a successful businessman with the ability to double profit by making two sales in one trip. The first trade was selling the goods from Mecca in Syria, and the second one was selling merchandise from Syria in Mecca. For merchants at the time, this kind of transaction was unorthodox.

Khadyja was impressed by the profit he made and amazed by his enterprising work. This deepened her respect of him, and brought them into a closer relationship:

... in his twenty-fifth year [i.e., 595 A.D.] he [Muhammad] entered into the service of Cadijah, a rich and noble widow of Mecca, who soon rewarded his fidelity with the gift of her hand and fortune.<sup>39</sup>

Impressed by Muhammad, and curious as to his personality, Khadyja called her slave, Maysarah, to ask about him. Maysarah told her about his experience with Muhammad on a journey, which encouraged her to act on her desire to marry him. Al-Ṭabari recounts:

Then Maysarah informed her of what the monk had said and how he himself had seen the two angels shading him. Khadijah was a resolute, intelligent and noble woman, and in addition to this God wished to ennoble her, so when Maysarah told her these things she sent for the Messenger of God and, it is reported, said to him, "Cousin, your kinship to me, your standing among your people, your reliability, your character and your truthfulness make you a desirable match." Then she offered herself to him

in marriage. Khadijah was then the most distinguished of the women of Quraysh in lineage, the most highly honored, and the wealthiest, and all the men of her tribe would have been eager to accept this proposal had it been made to them. When she made this offer to the Messenger of God he told his uncles about it, and Hamzah b. [bin] 'Abd al-Muṭṭalib went with him to Khuwaylid b. Asad and asked for (his daughter) Khadijah's hand on Muhammad's behalf. Khuwaylid married Khadijah to the Messenger of God, and she bore all his children except for Ibrāhīm.<sup>40</sup>

Their relationship grew from trust and blossomed into love, resulting in a successful union, beneficial to both husband and wife:

The marriage contract, in the simple style of antiquity, recites the mutual love of Mohammed and Cadijah, describes him as the most accomplished of the tribe of Koreish, and stipulates a dowry of twelve ounces of gold and twenty camels, which was supplied by the liberality of his uncle [Abū Ṭalib]. By this alliance, the son of Abdallah was restored to the station of his ancestors; and the judicious matron was content with his domestic virtues. . . .<sup>41</sup>

Their marriage also was a distinctive one.

First, the proposal in this marriage came from Khadyja, which is different from most marriages in the Arab tradition. It is not typical in Arab culture for a woman to issue a marriage proposal, but Khadyja offers a healthy counter-example. More generally, their marriage, and her equality of footing, suggests that Islam gives, or ought to give, women a high personal status and community standing. Many *hadīths* of the Prophet discuss the treatment of women, including his *Khutbat Alwada'* (Farewell Sermon).

Second, the Prophet himself was a role model in every respect. He was a model husband to Khadyja, faithful and kind. After their marriage, he continued his successful career in commerce, though he did not leave Mecca on any merchant caravans. He cared for the property of Khadyja, and was known for his great integrity.

Third, the relationship between the Prophet and Khadyja was a highly effective working partnership. She was not only a wife of Muhammad but also was the principal advisor and companion of the Muhammad. In sum, given these distinctive features, it is not surprising Khadyja plays an exceptionally prominent role in the minds of Muslims.

## [B] Children

Muhammad and Khadyja lived together in Mecca for many years. Khadyja was the mother to all the children of Muhammad, except for Ibrahim. All of their children were born before the first Revelation. They had four daughters and two sons in all:

<sup>37</sup> AL-ṬABARĪ, *supra*, vol. VI at 47.

<sup>38</sup> AL-ṬABARĪ, *supra*, vol. VI at 47–48.

<sup>39</sup> GIBBON, *supra*, at 651.

<sup>40</sup> AL-ṬABARĪ, *supra*, vol. VI at 48.

<sup>41</sup> GIBBON, *supra*, at 651.

They were Zaynab, Ruqayyah, Umm Kulthūm, Fātimah, al-Qāsim from whom he received his kunyah [nickname] Abū al-Qāsim — al-Tāhir [Abdullah], and al-Tayyib. Al-Qāsim — al-Tāhir, and al-Tayyib died during the Jāhiliyyah, while all of his daughters lived until Islam, became Muslims and emigrated with him to al-Madinah.<sup>42</sup>

The dates of birth of the children are the subject of debate among Muslim historians. No confirmed reliable sources give definitive dates.

Both Al-Qasim and Abdullah died before they reached the age of two. Then, Zaynab was born when Muhammad was about 30 years old and died in 630 A.D. Her husband is Abū Al 'Aṣṣ. Following Zaynab, the second daughter was Ruqayyah. Her first husband was her cousin Utbah Ibn Abū Lahab. His father Abū Lahab, had two sons: Utbah and Utaibah. Abū Lahab himself was an uncle of Muhammad, and loved Muhammad until the revelations, at which point he opposed Muhammad and the Message that was being revealed to him. Thus, Abū Lahab forced Utbah to divorce Ruqayyah, because of this hostility. Subsequently, Ruqayyah married 'Uthman Ibn 'Affan, the third of the Four Rightly Guided Caliphs (*Rashidun*). Ruqayyah died in 624.

The third daughter, Umm Kulthum, was born in 604. Her first husband was Utaibah Ibn Abū Lahab, the younger of the two sons of Abū Lahab. Once again, Abū Lahab forced his son, Utaibah, to divorce Umm Kulthum out of opposition to Muhammad and his Prophecy. Thereafter, Umm Kulthum married 'Uthman Ibn 'Affan after the death of her sister, Ruqayyah. Umm Kulthum died in 630.<sup>43</sup>

Fātimah is the youngest child of Muhammad and Khadyja. She was born 5 years before the First Revelation, in 605, and died in 632. Her husband was 'Alī ibn Abū Talib, the fourth Caliph, and leader of the *Shī'ite* movement. Fātimah and 'Alī together had five children. Abū Talib, of course, was the uncle who protected the Prophet, and who raised both 'Alī and Muhammad. Their children are Hasan, Hussein (also spelled "Husayn"), Zaynab, Umm Kulthum, and Muhsin, who died in his infancy. Fātimah was the only child of Muhammad to die after her father.

The last child of Muhammad, who was not from his marriage to Khadyja, was Ibrahim. Ibrahim was born in 630 to Mary Al-Qibṭiyyah, a Coptic Christian:

All of the Prophet's sons had died. Ibrahim, his last son born to his Coptic wife Mary, also died in infancy [at age 2]. [ . . . ] When Ibrahim died, the Prophet took him on his lap again, embraced him, and described his sorrow while on the brink of tears. Some were surprised. He gave them this answer: "Eyes may water and hearts may be broken, but we do not say anything except what God will be pleased with." He pointed to his tongue and said: "God will ask us about this."<sup>44</sup>

Muhammad was a caring father and grandfather. He is renowned for having loved all children, smiling when he saw any child. Like many fathers, he enjoyed carrying

and walking around with his children on his shoulders:

He carried his grandsons Hasan and Husayn [Hussein] on his back. Despite his unique status, he did this without hesitation to herald the honor that they would attain later. One time when they were on his back, Umar [the second Caliph] came into the Prophets house and, seeing them, exclaimed "What a beautiful mount you have!" The Messenger added immediately: "What beautiful riders they are!"<sup>45</sup>

However, his love for his children and grandchildren did not become an unhealthy indulgence. Rather, Muhammad endeavored to teach them right from wrong:

For example, once Hasan or Husayn wanted to eat a date that had been given to distribute among the poor as alms. The Messenger immediately took it from his hand and said: "Anything given as alms is forbidden to us."<sup>46</sup>

This moral pedagogy, which Muhammad hoped to implant in the hearts of his children and grandchildren, extended to situations small and large.

Notably, the care and love Muhammad showed for young persons extended beyond his family circle:

Whenever he returned to Madina, he would carry children on his mount. On such occasions, the Messenger embraced not only his grandchildren but also those in his house and those nearby. He conquered their hearts through his compassion. He loved all children.

He loved his granddaughter Umama as much as he loved Hasan and Husayn [Hussein]. He often went out with her on his shoulder, and even placed her on his back while praying. When he prostrated, he put her down; when he had finished, he placed her on his back again. He showed this degree of love to Umama to teach his male followers how to treat girls. This was a vital necessity, for only a decade earlier it had been social norm to bury infant or young girls alive. Such public paternal affection for a grand-daughter had never been seen before in Arabia.

The Messenger proclaimed that Islam allows no discrimination between son and daughter. How could there be? One is Muhammad, the other is Khadija; one is Adam, the other is Eve; one is Ali, the other is Fatima. For every great man there is a great woman.

Fatima, the daughter of the Messenger, is the mother of all members of his household. She is our mother, too. As soon as Fatima entered, the Messenger would stand, take her hands and make her sit where he had been sitting. He would ask about her health and family, show his paternal love for her, and compliment her.<sup>47</sup>

<sup>42</sup> AL TABARĪ, *supra*, vol. VI at 48-49 (emphasis added).

<sup>43</sup> See *Muhammad*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Muhammad>.

<sup>44</sup> M. FETHULLAH GÜLEN, M. FETHULLAH GÜLEN, PROPHET MUHAMMAD: ASPECTS OF HIS LIFE vol. 1, 197 (Fairfax, Virginia: The Fountain, 2000). (Hereinafter, GÜLEN.)

<sup>45</sup> GÜLEN, *supra*, vol. 1 at 197 (emphasis added).

<sup>46</sup> GÜLEN, *supra*, vol. 1 at 198.

<sup>47</sup> GÜLEN, *supra*, vol. 1 at 198-99.

In sum, Muhammad served as father not only to his own household, but also to all his community. His words and deeds evinced an equal concern for men and women, and demonstrated how his people might better care for and love each other.

## Chapter 2

### MUHAMMAD (PBUH) AS PROPHET (610–632 A.D.)

Love never fails. Prophecies will cease, tongues will be silent, knowledge will pass away. Our knowledge is imperfect and our prophesying is imperfect. There are in the end three things that last: faith, hope, and love, and the greatest of these is love.

*The First Letter of Saint Paul to the Corinthians, 13:8-9, 13*

#### SYNOPSIS

##### § 2.01 PROPHET IN MECCA

- [A] First Revelation
- [B] Reaction of Meccans

## [D] Mathematical versus Physical Determinations

## § 2.01 PROPHET IN MECCA

## [A] First Revelation

The Prophet Muhammad began receiving the Revelations that began the religion of Islam in 610 A.D., which continued until he died in 632. In that time, he gathered a following, unified a people, established a peaceful social framework, and spread his Message throughout Arabia. A few decades after his death, Islamic influence stretched east from the border of China through North Africa and the Iberian Peninsula in the west.

Yet, Muhammad was keenly interested in religion long before then. In his *tour de force*, *The Decline and Fall of the Roman Empire* (1776), English historian and Member of Parliament, Edward Gibbon (1737-1794) writes:

From his earliest youth Mohammed was addicted to religious contemplation; each year, during the month of Ramadan, he withdrew from the world and from the arms of Cadijah; in the cave of Hera, three miles from Mecca, he consulted the spirit of fraud or enthusiasm whose abode is not in the heavens but in the mind of the prophet.<sup>1</sup>

It is uncertain whether his early solitary meditation was beset with an unsavory, earth-bound spirit, as Gibbon speculates. What is certain according to the Qur'an, is God (Allāh) chose Muhammad to carry an authentic message because of his excellence:

The Messenger of God is an excellent model for those of you who put your hope in God and the Last Day and remember Him often.<sup>2</sup>

The life of Muhammad was not only a story of a Prophet but also of a father, husband, teacher, merchant, leader, warrior, and more.

The turning point in his life, and a seminal event in world history, occurred in 610. Muhammad received the first revelation at the age of 40. He spent considerable time in a cave, *Ghar Hirā'*, atop *Jabal An-nur* (the Mountain of Light), near Mecca. There, one day, the Archangel Gabriel (Jibreel) appeared to Muhammad, grasped him, and ordered him to "Recite!" three times. Muhammad answered "No" each time, saying he could not read or write. Gabriel refused to accept this answer and squeezed Muhammad so hard Muhammad felt he would die. Thereby persuaded, Muhammad asked the Archangel what he was to read. Gabriel replied: "Recite in the name of the Lord who creates!"

<sup>1</sup> EDWARD GIBBON, *THE DECLINE AND FALL OF THE ROMAN EMPIRE* 653 (1776) (New York, New York: Penguin Books, abridged version, 1980). [Hereinafter, GIBBON.] The 6 volumes of this work originally were published between 1776 and 1788.

<sup>2</sup> *THE QUR'AN — A New Translation by M.A.S. Abdel Haleem* 30:21 at 268 (Oxford, England: Oxford University Press, 2004). [Hereinafter, QUR'AN.]

The dramatic story is told by the Persian, Abū Ja'far Muhammad ibn Jarir al-Tabari (838-923), the most famous biographer of the Prophet, in his opus *Tarikh al-Tabari (History of the Prophets and Kings)*:

The Messenger of God said, "Gabriel came to me as I was sleeping with a brocade cloth in which was writing. He said, 'Recite!' and I said, 'I cannot recite.' He pressed me tight and almost stifled me, until I thought that I should die. Then he let me go, and said, 'Recite!' I said, 'What shall I recite?' only saying that in order to free myself from him, fearing that he might repeat what he had done to me. He said:

'Recite in the name of your Lord who creates! He creates man from a clot of blood. Recite: And your Lord is the Most Bountiful, He who teaches by the pen, teaches man what he knew not.'

I recited it, and then he desisted and departed.<sup>3</sup>

This response of Muhammad to the Archangel is the starting point of Islam.

Muhammad, despite his initial hesitation over his illiteracy, becomes the Messenger (*Rasūl*) of God. Frightened by the experience, the Prophet fled from the cave and ran to Mecca. Every time he turned to glance back, Gabriel filled the sky and repeated Muhammad was the Messenger of God:

I was halfway up the mountain I heard a voice from heaven saying, "O Muhammad, you are the Messenger of God, and I am Gabriel," I raised my head to heaven, and there was Gabriel in the form of a man with his feet set on the horizon, saying, "O Muhammad, you are the Messenger of God and I am Gabriel."<sup>4</sup>

A shaken Muhammad returned and said to his wife, Khadyja, "cover me, cover me." Concerned for her husband, Khadyja sought advice from Waraqa Ibn Nawfal, her learned Christian cousin. Waraqa recognized Muhammad as the next Prophet, but warned her Muhammad would experience great hardship in this role. The Prophet recalled:

Then she rose up, gathered her garments around her, and went to Waraqa b. Nawfal b. Asad, who was her paternal cousin. He had become a Christian, read the Scriptures, and learned from the people of the Torah and Gospel. She told him what the Messenger of God had told her that he had seen and heard. Waraqa said, "Holy, Holy! By Him in whose hand is the soul of Waraqa, if what you say is true, Khadijah, there has come him the greatest Nāmūs — meaning by Nāmūs, Gabriel — he who came to Moses (that means that) Muhammad is the prophet of this community. Tell him to stand firm."<sup>5</sup>

<sup>3</sup> *THE HISTORY OF AL-TABARI (TARİKH AL-RUSUL WA'L-MULUK)* vol. VI at 71 (Albany, New York: State of New York Press, 1988) (W. MONTGOMERY WATT & M. V. McDONALD, trans. & annotat.) (footnote omitted). [Hereinafter, AL TABARI.]

<sup>4</sup> AL TABARI, *supra*, vol. VI at 71.

<sup>5</sup> AL TABARI, *supra*, vol. VI at 72.

Khadyja repeated the words of Waraqa to Muhammad, easing his mind. When Muhammad returned to Mecca, he encountered Waraqa while walking around the *Ka'ba*. Waraqa asked and Muhammad answered questions about the experience. After hearing the entire tale from Muhammad, Waraqa said:

By Him in whose hand is my soul, you are the prophet of this community, and there has come to you the greatest Nāmūs, he who came to Moses. They will call you a liar, molest you, drive you out, and fight you. If I live to see that, I will come to God's assistance in a way which he knows.<sup>6</sup>

Waraqa then grasped Muhammad, bestowing a kiss on his brow, strengthening the resolve of the Prophet for the trials to come.<sup>7</sup>

The fact Muhammad sought advice first from Khadyja demonstrates his respect for her; he did not go to his uncle Abū Ṭālib or his close friend Abū Bakr. He trusted Khadyja's opinion, showing that both men and women are worthy of intellectual merit. It also illustrates how women need not be only mothers and wives, but can also be supportive and sincere consultants.

### [B] Reaction of Meccans

Muhammad was reluctant share the Revelations with anyone until he received one commanding him to spread the Message of God. He called the people of Mecca to the mountain, *Jabal Al-Ṣafā*, to ask them if they would believe if he told them something incredible. They replied he had never given them a reason to doubt his word. Thus encouraged, Muhammad told them of his Revelations and his role as the Prophet. The entire crowd rebuked him, save one: 'Alī, the young nephew of Muhammad.

When God revealed the verse, "and warn your tribe of near kindred," the Messenger of God went out, mounted al-Ṣafā, and called out, "Beware this morning!" some said, "Who is that calling out?" and others said, "It is Muhammad." Then he said, "Banū so-and-so, Banū 'Abd al-Muṭṭalib, Banū 'Abd Manāf!" They gathered round him, and he said, "If I were to tell you that horsemen were coming out at the foot of that mountain, would you believe me?" They replied, "We have never known you to tell a lie." Then he said, "I am 'a warner to you in the face of a terrible doom." Abū Lahab [an Uncle of the Prophet] said, "May you perish! Did you only bring us together for this?" Then the following *sūrah* was revealed: "The power of Abū Lahab will perish, and he will be perish . . ." reciting to the end of the *sūrah*.<sup>8</sup>

Muhammad faced discrimination in the wake of his pronouncement, especially from his uncle, Abū Lahab. Despite the opposition, Khadyja, 'Alī, and Abū Bakr believed Muhammad, and gradually more people followed suit.

<sup>6</sup> AL ṬABARĪ, *supra*, vol. VI at 72-73.

<sup>7</sup> AL ṬABARĪ, *supra*, vol. VI at 72-73.

<sup>8</sup> AL ṬABARĪ, *supra*, vol. VI at 89.

As more Revelations came to Muhammad, he recited them to his loyal followers to be recorded, as he himself was illiterate. The beautiful language of the Revelations bespeaks their Divine source. The eloquence of the Arabic itself converted many when they realized not even the Prophet could compose something so wonderful.

Perhaps faith comes easier to the downtrodden than the mighty. The weakest citizens in Mecca (the poor, slaves, and women who lacked protectors) became the first Muslims. Women often were treated as second class citizens and regarded as property of men. Khadyja, a woman with power and status, was a rare exception. Muhammad received many revelations on the status of women that assure their legal right to inheritance, divorce, and equality. The Qur'ān has a *sūrah* called "Al-Nisaa" (Women).

As the Muslim following grew, so did hostility toward Muhammad. Abū Ṭālib, uncle of Muhammad and civic leader in Mecca, protected Muhammad despite being a pagan, and never believing Muhammad was the Prophet. Abū Ṭālib protected his family honor rather than take bribes by those in Mecca who wanted to remove Muhammad.

. . . a number of the nobles of Quraysh, went to Abū Ṭālib and said, "Abū Ṭālib, your nephew has reviled our gods, denounced our religion, derided our traditional values and told us that our forefathers were misguided. Either curb his attacks on us or give us a free hand to deal with him, for you are just as opposed to him as we are, and we will deal with him for you." Abū Ṭālib gave them a mild answer and declined courteously, and they left him. The Messenger of God continued as before, proclaiming the faith of God and summoning people to it.<sup>9</sup>

At the insistence of the *Quraysh*, Abū Ṭālib once asked Muhammad to cease his mission to spare himself and his family abuse. Muhammad despaired over the request and replied:

"Uncle, if they were to place the sun in my right hand and the moon in my left, on condition that I should abandon (carrying on) my preaching before God gave victory or I died in the attempt, I should not abandon it." Then the Messenger of God burst into tears and wept, and rose up. When he turned away, Abū Ṭālib called him back and said, "Come here, nephew." The Messenger of God came up to him, and said, "Go, nephew, and say what you like. By God, I will never hand you over for any reason."<sup>10</sup>

Without protection, Muhammad likely would have faced even harsher treatment. Muslims caught practicing their faith were persecuted or killed outright by Meccans. Thus, the religion spread in secrecy, though the Prophet, convinced of his Divine mandate to spread the Message of Allāh, taught and practiced in public.

<sup>9</sup> AL ṬABARĪ, *supra*, vol. VI at 93-94.

<sup>10</sup> AL ṬABARĪ, *supra*, vol. VI at 96-97.

### [C] Boycott of Clan of Prophet

After seven years of preaching, the *Quraysh* regarded Muhammad and Islam as a credible threat to business and their pagan beliefs. They feared his faith would drive traders from Mecca and pagan pilgrims from the *Ka'ba*. Muhammad himself, protected by Abū Ṭalib, and his growing flock were difficult to quash. Thus, the *Quraysh* leaders imposed a boycott on the *Hashim* clan. They forbade trading with the *Hashimites*, and banned visiting, talking, and marriage with it members. Aghast at such treatment, Abū Ṭalib moved his family to the arid *Alshi'b* Valley, where they lived for three years with minimal food and water. Abū Ṭalib, still fearful for Muhammad, asked him to sleep in the same tent each night for protection.

Still, Islam spread among the clans, further threatening the *status quo*. In response, the *Quraysh* leaders ostracized the Banū Hāshim and the Banū al-Muṭṭalib clans. After a document attesting to their ostracism was posted inside the *Ka'ba*, both clans joined Abū Ṭalib in the desert valley. Abū Lahab, however, chose to support the *Quraysh* leaders rather than Muhammad.

The clans spent three years in the desert, living in desperate conditions, before several Meccan leaders saw the folly of this division.<sup>11</sup> Hashim Bin Lou'ī, Zohair Bin Ummaiah, Abū Albukhtri Bin Hisham, Zom'ah Bin Al'swad, and Almuṭ'im Bin 'Udai gathered the Meccans around the *Ka'ba*. They announced an end to all sanctions. Not everyone agreed, but the outcast clans were allowed to return to their homes in Mecca.

### [D] Death of Abū Ṭalib, Khadyja and Trip to Ṭa'if

In 619, just six months after returning to Mecca, Abū Ṭalib died, leaving Muhammad without a protector. Khadyja, his beloved wife and best friend, died a short time later. Grieving and suddenly alone, Muhammad came under further attack from the Meccan Establishment:

[. . .] This was three years before his emigration to al-Madinah. Their death was a great affliction to the messenger of God. This is because after the death of Abū Ṭalib, Quraysh went to greater lengths in molesting him than they had ever done during his lifetime. One of them even poured dust upon his head.

[. . .] When that foolish person poured dust upon the Messenger of God's head, he went into his house with the dust still on his head. One of his daughters stood next to him washing off the dust and weeping, while the Messenger of God said to her, "Do not weep, daughter, for God will protect your father." The Messenger of God used to say, "Quraysh never did anything unpleasant to me until Abū Ṭalib died."<sup>12</sup>

Muhammad traveled south down the *Sarawat* Mountains, to *Ta'if*, to escape Mecca and search for followers. He found more hostility. The people of *Ta'if* chased him out

from their city, assailing him with stones and curses, until he bled on the road. Before arriving back at Mecca, Muhammad approached Almuṭ'im Bin 'Udai, seeking his protection. As a matter of honor, Almuṭ'im called upon his clan to keep Muhammad safe. Under the aegis of this clan, Muhammad was able to re-enter Mecca peacefully.

### [E] Isra' and Mi'raj

One evening in 621, the Prophet woke while sleeping near the *Ka'ba* to meet the Archangel Gabriel. The winged steed, *Buraq*, stood nearby waiting to bear Muhammad on a journey. The first leg of this famous trip, *Isra'*, took him from Mecca to Jerusalem. The second, *Mi'raj*, bore Muhammad from Jerusalem to the Heavens where he met his Prophetic ancestors and received instruction regarding daily prayer from Allāh himself:

Then he was taken up to the earthly heaven. Gabriel asked for admittance, and they said, "Who is it?" "Gabriel," he said. "Who is with you?" they said. "Muhammad," he answered. "Has his mission commenced?" they asked. "Yes," he said. "Welcome," they said, and called down God's blessings on him. When he went in, he saw before him a huge and handsome man. "Who is this, Gabriel?" he asked. "This is your father, Adam," he replied. Then they took him to the second heaven. Gabriel asked for admission, and they said the same as before. Indeed, the same questions were asked and the same answers given in all the heavens. When Muhammad went in to the second heaven he saw before him two men. "Who are these, Gabriel?" He asked. "John and Jesus, the two maternal cousins," he replied. Then he was taken to the third heaven, and when he went in he saw before him a man. "Who is this, Gabriel?" he asked. He replied, "Your brother Joseph who was given preeminence in beauty over other men as is the full moon over the stars at night." Then he was taken to the fourth heaven, and he saw before him a man and said, "Who is this, Gabriel?" "This is Idris," he said, and recited:

And we raised him high station. [Surah 19, *ayah* 57.]

Then he was taken to the fifth heaven, and saw before him a man and said, "Who is this, Gabriel?" "This is Aaron," he said. Then he was taken to the sixth heaven, and he saw before him a man and said, "Who is this, Gabriel?" "This is Moses," he said. Then he was taken to the seventh heaven, and he saw before him a man and said, "Who is this, Gabriel?" "This is your father Abraham," he said.

Then he took him to Paradise, and there before him was a river whiter than milk and sweeter than honey, with pearly domes on either side of it. "What is this, Gabriel?" he asked. Gabriel replied, "This is al-Kawther, which your lord has given to you, and these are your dwellings." Then Gabriel took a handful of its earth and lo! It was fragrant musk. Then he went out to the Sidrat al-Muntahā, which was a lote tree bearing fruits the largest of which were like earthenware jars and the smallest like eggs. Then his Lord drew nigh.

<sup>11</sup> Al-TABARĪ, *supra*, vol. VI at 105-106.

<sup>12</sup> Al-TABARĪ, *supra*, vol. VI at 115.

"Till he distant two bows' length or nearer." Because of the nearness of its Lord the lote tree [a mystical Islamic metaphor for the uppermost boundary of knowledge that a human can reach] became covered by the like of such jewels as pearls, rubies, chrysolites, and colored pearls. God made Revelation to his servant, cause him to understand and know, and prescribed for him fifty prayers (daily).

Then he went back past Moses, who said to him, "What did he impose your community?" "Fifty prayers," he said. "Go back to your Lord," said Moses, "and ask him to lighten the burden for your community, for your community is the weakest in strength and the shortest-live." Then he told Muhammad what he himself had suffered at hands of the Children of Israel. The Messenger of God went back, and God reduced the number by ten. Then he passed Moses again, who said, "Go back to your Lord and ask him to lighten the burden further." This continued until he had gone back five times. Once more Moses said, "Go back to your Lord and ask him to lighten the burden," but the Messenger of God said, "I am not going back, although I do not wish to disobey you," for it had been put into his heart that he should not go back. God said, "My speech is not to be changed, and my decision and precept is not to be reversed, but he (Muhammad) lightened the burden of prayer on my community to a tenth of what it was first."<sup>13</sup>

The Prophet told the Meccans about this journey, who unsurprisingly did not believe it and thought him mad. To prove his madness, they asked him to describe Jerusalem, knowing he had never seen the city. To their surprise, he described Jerusalem in detail. Yet, even after this test, only Abū Bakr, close friend and Companion (*ṣaḥābiy*) of Muhammad, believed the tale. Abū Bakr told the crowd: "I believe that Muhammad receives messages from Allāh and that is more extraordinary than a trip to Jerusalem and if Muhammad said that, and then it is truthful."<sup>14</sup>

### [F] Assassination Attempt

The Meccans resorted to drastic action when the Prophet reached people outside of Mecca with his Message. The *Quraysh* leaders gathered in the *Dar al-Nadwah* (House of Assembly), whereupon they decided killing Muhammad was the only way to stop him, his followers, and the threats they posed to the Meccan Establishment. They elected to have a young man from each clan surprise Muhammad in his bed. Each youth was told to strike the Prophet once with a sword to share his blood among all the clans, which would make it impossible for the family of Muhammad to seek retribution:

They gathered together for this purpose and at the fixed time went into the House of Assembly to deliberate there about the Messenger of God. On the morning of the day fixed (the day called al-Zaḥmah) they went there, and the Devil met them in the form of a venerable old man wearing a coarse garment and stood at the door of the house. When they saw him standing

<sup>13</sup> AL-TABARĪ, *supra*, vol. VI at 78-80.

<sup>14</sup> AL-TABARĪ, *supra*, vol. VI at 78-80.

at the door they said, "Who is this old man?" He said, "I am an old man from Najd who has heard what you have arranged to meet for and has come to be with you to hear what say; perhaps you will not lack judgment and good advice from him." They replied, "Certainly, come in," so he went in with them. All the nobles of *Quraysh*, of every clan, had gathered there; [ . . . ] In addition there were others, some from *Quraysh* and others who were not counted as *Quraysh*.

They said to one another, "This man has done what he has done, and you have seen it for yourselves. We cannot be sure that he will not fall upon us with his followers who are not of us; so come to a decision about him." When they began to deliberate, one of them said, "keep him in fetters, lock him up, and wait for the same kind of death to overtake him which overtook other poets of his sort before him, Zuhayr, al-Nābighah and others." The old man from Najd said, "No, by God, this is not judicious; if you were to imprison him as you say, news of what had happened to him would leak out to his companions from behind the door which you had shut upon him, and in no time at all they would fall upon you and snatch him away from your hands. Then their numbers would grow against you and they would seize power from you. This is not judicious, so consider something else."

They consulted again, and one of them said, "Let us expel him from among us and banish him from our land; when he has left us, by God, we will not care where goes or where he settles. Then harm which he has been doing will disappear, we shall be rid of him and we shall be able to put our affairs in order again and restore our social harmony to what it was before." The old man from Najd said, "By God, this is not judicious; do you not see the beauty of his discourse, the sweetness of his speech and how dominates hearts of men with the message which he brings? By God, if you expel him, I think it not unlikely that he will descend upon some tribe of the Arabs and win them over with this speech and discourse of his so that they follow him in his plans; then he will lead them against you, crush you with them, seize power from your hands and do with you what he wants. Come to some other decision about him."

Abū Jahl b. Hishām said, "By God, I have an idea about him, which I do not think you have hit upon yet." "What is it, Abū al-Ḥakam?" they asked. He said, "I think that you should take one young, strong, well-born, noble young man from each clan; then we should give each young man a sharp sword; then they should make for him and strike him with their swords as one man and kill him. Thus we shall be relieved of him, and if they do this, the responsibility for shedding his blood will be divided upon among all the clans, and the Banū 'Abd Manaf will not be able to wage war against the whole of their tribe, and will be content to take money from us, which we can pay them." The old man from Najd was saying, "What this man says is right. This is the correct decision; you have no other." Thereupon they dispersed, having agreed upon this.<sup>15</sup>

<sup>15</sup> AL-TABARĪ, *supra*, vol. VI at 140-142.

On the night of the assassination attempt, the Archangel Gabriel warned the Prophet of the plot and bid him to sleep somewhere else. 'Ali took his place, knowing the *Quraysh* would strike the Prophet, to give Muhammad and Abū Bakr time to escape to *Jabal Thaur* (Bull Mountain), south of Mecca. When they discovered Muhammad had fled, the leaders sent search parties north to capture the Prophet. The pair stayed in the southern mountains for three days to confuse those who anticipated Muhammad would flee to Medina.

## § 2.02 ESTABLISHMENT OF ISLAMIC STATE

### [A] *Hijra* (622 A.D.)

On the third day at *Jabal Thaur*, Gabriel appeared and told Muhammad to leave Mecca. Thirteen years after the first Revelation, the Prophet fled from Mecca to Medina. Descending the mountain, the tearful Prophet said, "Allāh knows that I love you Mecca but your people are chasing me out."<sup>16</sup>

Medina, an agricultural town, was home to two rival tribes, the Alaoose and Alkhazraj, plus Jews, Christians, and newly converted Muslims. Many in Medina knew of the Prophet's flight from Mecca and waited for him on the south side of town. His failure to appear caused his followers to fear he may have been captured or killed. When he did appear, the people of Medina greeted him, singing a famous poem:

O' the White Moon rose over us  
from the valley of Wada'  
and we owe it to show gratefulness  
where the call is to Allāh

O you who were raised amongst us  
coming with a work to be obeyed  
You have brought to this city nobleness  
Welcome, best caller to God's way

Muhammad began his leadership in Medina by unifying the rival tribes and uniting them with his followers under the banner of Islam, creating peace and prosperity in the city.

The day the Prophet arrived in Medina, 20 September 622 (*Rabi' Alawwal* 1 A.H.), marks the beginning of the Islamic calendar. The *Hijra* (migration) from Mecca to Medina signifies the creation of a new Islamic state. The leader of that state, after Muhammad and the first of the Four Rightly Guided Caliphs (*Rashidun*), Abū Bakr, was 'Umar, who established the official Islamic calendar based on the *Hijra*:

A money order was brought before 'Umar which fell due in (the money of) Sha'bān. 'Umar said, "Which Sha'bān? The one which is coming or the one we are in now?" Then he said to the Messenger of God's Companions, "Contrive something for the people which they can recognize." Some said,

<sup>16</sup> AL ṬABARĪ, *supra*, vol. VI at 140-142.

"Write according to the chronology of the Greeks; it is said that they date their letters from the time of Alexander, but that was a long time ago." Others said, "Write according to the chronology of the Persian; it is said that wherever a king rises up amongst them he discards the era of his predecessors." In the end they agreed that they would see how long the Messenger of God had remained in al-Madinah. They found this to be ten years, and the era was reckoned from the Messenger of God's emigration.<sup>17</sup>

The people of Medina promised Muhammad a home and support within the city. He assumed authority shortly after his arrival, establishing peace among tribes and tolerance for non-Muslims. Those who chose not to convert to Islam freely practiced their own faith. The Islamic community (*ummah*), made up of Meccan immigrants (*Al-muhajirun*), and Medinan supporters (*Al-Anṣar*), flourished under the guidance of the Prophet.

### [B] Constitution of *Medina* and Battle of Badr (624 A.D.)

As the new leader of Medina, Muhammad gathered the heads of each tribe, including the Jewish tribe, to draft a constitution for the city. A compelling piece of statecraft, this treaty provided for the common defense against external attacks, calling on each tribe to defend one another. These terms guaranteed protection to all the people of Medina, regardless of their race or religion. A modern-day analog might be Article 5 of the April 1949 *North Atlantic Treaty*, which is a mutual defense commitment among members of the North Atlantic Treaty Organization (NATO) that deems an attack on any NATO member an attack on all of them.

Muhammad also began building the first mosque (*masjid*), personally helping with construction by carrying bricks. The *masjid* served as a conference hall, school, and community center, as well as a house of worship. At Medina, Muhammad relayed Messages from Allāh brought by Gabriel to his followers, men and women alike. The Prophet used the *masjid* as a hub for messengers sent to surrounding tribes with invitations to convert to Islam.

As for Muslims still living in Mecca, they endured continued persecution after Muhammad fled. They were banned from carrying weapons in the city and eventually removed from their homes. Though Islam gained strength and power in Medina, the Prophet eschewed revenge on Mecca. Indeed, one specific revelation allows the use of force only for self-defense, prohibiting initial aggression.<sup>18</sup>

On 13 March 624 (17 *Ramādān* 2 A.H.), Muhammad fought his first battle against a substantially larger Meccan force. Muhammad led a small contingent of 300 men to intercept a *Quraysh* caravan near the Badr Well. The Meccans heard of his plans and sent 1,000 knights to eliminate the Muslim forces. Acting as a general on the battlefield, the Prophet made it clear to his soldiers they were not fighting for revenge and were not to kill any women, children, or other non-combatants. The Geneva Convention, which entered into force in 1949, contains similar

<sup>17</sup> AL ṬABARĪ, *supra*, vol. VI at 158.

<sup>18</sup> See QUR'AN, *supra*, 2:190-93 at 21-22.

provisions.<sup>19</sup>

These rules of war, enumerated by the Prophet, bind the entire Islamic nation. Before sending troops to meet Romans forces to the north, Abū Bakr ordered General Usama ibn Zaid:

Do not drown nor burn date orchards. Do not hamstring livestock nor cut down fruit trees nor destroy churches. Do not kill children nor elders nor women. Do not slaughter any sheep or cows or camels except for food. You will find people who secluded themselves from society in monasteries. Leave them to their seclusion.<sup>20</sup>

In brief, Muslims cite these points (*inter alia*) to make the case Islam counseled against violence from its earliest days.

As for the Battle of Badr, the Prophet acted on the advice of Habbab ibn Munthir in choosing the site of the well:

O Messenger of God, do you consider that this is a position in which God has placed you, and that it is not for us to move it forward or back, or do you consider that it is a matter of judgment, tactics and stratagem?" He replied, "Certainly not; it is a matter of judgment, tactics and stratagem." Then al-Habbab b. Munthir b. al-Jamūh said, "O Messenger of God, this is not the proper position for you. Arise with your men and go to the nearest well to the enemy. Halt there and then fill in the other wells. Then build a cistern next to it and fill it with water. Then we will fight the enemy and have water to drink while they do not." The messenger of God said, "You have given judicious advice." Then the Messenger of God and the men who were with him arose and went to the well nearest to the enemy and halted there. Then he gave orders to fill in the other wells, and to build a cistern next to the well at which he had halted. This was filled with water and then they drew water from it in their drinking vessels.<sup>21</sup>

This example is an instance of a trait of Muhammad championed by Muslims, namely, he valued the counsel of his Companions (*Ṣaḥābah*).

The Meccans suffered a swift defeat at Badr. The battle, fought in two stages, began with a traditional clash of champions. 'Alī Ḥamza, Uncle of the Prophet, and 'Ubaydah Ibn Al-Ḥārith, a Companion of the Prophet (*Ṣaḥābah*), quickly dispatched the *Quraysh* knight he faced. After this fight, the two armies met on the desert sand. The battle ended before noon. Said to be aided by angels from Allāh, the Muslims won:

<sup>123</sup>God helped you at Badr when you were very weak. Be mindful of God, so that you may be grateful. <sup>124</sup>Remember when you said to the believers, 'Will you be satisfied if your Lord reinforces you by sending down three

thousand angels? <sup>125</sup>Well, if you are steadfast and mindful of God, your Lord will reinforce you with five thousand swooping angels if the enemy should suddenly attack you!" and God arranged it so, <sup>126</sup>as a message of hope for you [believers] to put your hearts at rest — help comes only from God, the mighty, the Wise — <sup>127</sup>and in order to cut off the flanks of disbelievers' army and frustrate them, to make them withdraw in total defeat.<sup>22</sup>

This first battle under command of the Prophet, sometimes referred to as the "Separation between the Just and Unjust," shocked and angered the Meccans.

Muhammad brought the prisoners of Badr to Medina, yet ensured most of them were treated well. To be sure, he ordered some prisoners to be executed for their earlier crimes in Mecca, thereby enforcing *surah* 2, *ayah* 194 and *surah* 16, *ayah* 126 of the Qur'ān. But, to all other prisoners he also offered three options. They could win their freedom by: (1) converting to Islam, as *surah* 8, *ayah* 70 suggests; (2) paying ransom, as *surah* 47, *ayah* 4 suggests; or (3) teaching ten Muslims to read and write. Muslims cite the third option for the proposition Muhammad cherished education and literacy.

### [C] Battle of 'Uḥud (625 A.D.)

Resentment festered in the hearts and minds of Meccan leaders after the defeat at Badr. A year later they marshaled a force of 3,000 troops to attack Muhammad directly. Muhammad, gathering an army of his own, asked his followers where they should fight the brewing battle:

[A]lthough the Messenger of God had not wanted to go out of Medina, some men of the Muslims [ . . . ] said, O Messenger of God, lead us out to our enemies so that they may not think that we are too cowardly and weak to face them." [ . . . ] Those who were eager to meet the enemy, however, continued to press the Messenger of God until he went into his house and put on his coat of mail.<sup>23</sup>

Again acting on the advice of his peers, Muhammad led his army out of Medina to meet the Meccans at the base of Mount 'Uḥud.

The two armies faced one another on 23 March 625 (7 Shawwal 3 A.H.), the Muslims led by the Prophet and the Meccans commanded by Abū Sufyan (leader of the *Umayyad* Family, namesake of the *Umayyad* Caliphate, and father of Muawiyah I, the first *Umayyad* Caliph). Though outnumbered 3-to-1, the Muslim army controlled the battlefield. But, Muslim archers grew arrogant and left their positions, despite direct orders from the Prophet:

If you see us victorious over them, do not leave your position, and if you see them victorious over us, do not come to our assistance.<sup>24</sup>

<sup>19</sup> Geneva Convention (No. 4) Relative to the Protection of Civilian Persons in Time of War, Part III, § I, Art. 27, Aug. 12, 1949.

<sup>20</sup> Shaykh G. F. Haddad, *Abu Bakr and International Law*, living Islam — Islamic Tradition (11 April 2004), posted at [www.livingislam.org/abahil\\_e.html](http://www.livingislam.org/abahil_e.html).

<sup>21</sup> AL-TABARĪ, *supra*, vol. VI at 47.

<sup>22</sup> QUR'AN, *supra*, 3:123-27 at 43-44.

<sup>23</sup> AL-TABARĪ, *supra*, vol. VII at 108.

<sup>24</sup> AL-TABARĪ, *supra*, vol. VII at 113.

This prideful error exposed the entire Muslim army, and the tide of battle turned against it. Khalid ibn Alwalid, a Meccan leader and grizzled veteran, took part of his army around the mountain to surprise the Muslims on their unprotected flank. Many Muslim soldiers were slain. The Prophet himself was wounded, and he lost his uncle and champion, Ḥamzah, plus many *Ṣaḥābah*.

Pain and grief spread throughout the young Muslim community (*ummah*). Shortly after this defeat, the Prophet related a Revelation:

God fulfilled his promise to you: you were routing them, with His permission, but then you flattered, disputed the order, and disobeyed, once He had brought you within sight of your goal — some of you desire the gains of this world and others desire the world to come — and then He prevented you from [defeating] them as a punishment. He has now forgiven you: God is most gracious to the believer.<sup>153</sup> You fled without looking back while the Messenger was calling out to you from behind, and God rewarded you with sorrow for sorrow. [He has now forgiven you] so that you may not grieve for what you missed or for what happened to you. God is well aware of everything you do.<sup>154</sup> After sorrow, He caused calm to descend upon you, a sleep that overtook some of you.

Another group, caring only for themselves, entertained false thoughts about God, thoughts more appropriate to pagan ignorance, and said, 'Do we get a say in any of this?' [Prophet], tell them, 'everything to do with this affair is in God's hand.' They conceal in their hearts things they will not reveal to you. They say, 'If we had had our say in this, none of us would have been killed here.' Tell them, 'even if you had resolved to stay at home, those who were destined to be killed would still have gone out to meet their deaths.' God did this in order to test everything within you and order to prove what is in your hearts. God knows your innermost thoughts very well.<sup>155</sup> As for those of you who turned away on the day the two armies met in battle, it was Satan who caused them to slip, through some of their actions. God has now pardoned them: God is most forgiving and forbearing.<sup>25</sup>

The defeat at Uhud is still used today to teach Muslims the consequences of disobedience and pride.

#### [D] Battle of Trench (*Ghazwat Alkhandaq*) or Confederates (*Alaḥzab*) (627 A.D.)

The Meccan victory at the Battle of Uhud emboldened *Quraysh* leaders to launch another attack to put an end to their Muslim problem once and for all. On 31 March 627 (8 *Dhu Al-Q'ada* 5 A.H.), Meccan General Abū Sufyan assembled an army of over 10,000 men, one of the largest armies Arabia had ever seen. This Army of Confederates (*Alaḥzab*), so called because its troops hailed from multiple tribes in and around Mecca, included the largest Jewish tribe, the *Banū Quraydah*, which was a signatory to the mutual defense and protection treaty of Medina.

Abū Sufyan planned to attack Medina from the north, while the *Banū Quraydah* would approach the city from the south. Muhammad had only 3,000 troops to defend Medina, so he needed a clever strategy to have any chance of success. One of his soldiers, Salman Alfarisi (Salman the Persian), suggested digging a trench north of the city in between the mountains surrounding Medina to the east and west. When they came upon the trench, the Meccans were stymied by it. Abū Sufyan could not move his grand army across it, and had to settle by laying siege on the far side. During the siege, the Meccans sent an emissary from the Jewish Khaybar tribe to encourage the *Banū Quraydah* to break from the treaty and attack Medina.

Muhammad, trusting in his treaty, left the southern flank of the city unguarded. However, he perceived something strange in the movements of the Meccan army and feared the *Banū Quraydah* may have been switched allegiance. Muhammad immediately sent three men south to ascertain the loyalty of the *Banū Quraydah*. The ambassadors were to cheer openly if the tribe remained loyal, but quietly hint to Muhammad if the *Banū Quraydah* broke the treaty. When his men returned from the south with a quiet hint, Muhammad dispatched a portion of the army to guard against the *Banū Quraydah*.

The broken treaty was an ominous portent, but a glimmer of hope presented itself. A respected Arab leader of the Meccan army, Nu'aym Ibn Mas'ud, secretly converted to Islam. His defection, and subsequent advice to Muhammad, ended the siege and thereby part of the threat from the Confederate Army. Still, the Muslims were so outnumbered their chance for victory hinged on fomenting dissension among Meccan forces.

Nu'aym rapidly devised a way to pit the *Banū Quraydah* against the larger Meccan force. First, he told *Banū Quraydah* the Meccans were deserting the battle, leaving them to fight Muhammad alone. He suggested they demand a few Meccan leaders as collateral for their continued cooperation. If Abū Sufyan refused them, then they would know the Meccans surely are abandoning the battlefield. Nu'aym then reported to Abū Sufyan that the *Banū Quraydah* regretted breaking the treaty with Muhammad and were prepared to offer Meccan leaders as prisoners to Muhammad to prove their loyalty. Nu'aym led the Meccans to suspect the *Banū Quraydah* either would kill them or send them to Muhammad.

Thus, the groundwork for mutual suspicion was laid. The *Banū Quraydah* sent a messenger to Abū Sufyan asking for a few leaders to solidify dealings between them. Doubtful of their motives, Abū Sufyan refused, leading the *Banū Quraydah* to believe the Meccans were ready to retreat. Subsequent communications could not achieve positive results, as the trust of the Confederates was broken.

Just as Nu'aym drove a wedge in between the two main factions in the Confederate Army, the seasons changed, and the weather turned cold, windy and wet. Many tribes with no real stake in the conflict simply packed up and returned home. Others signed covert peace treaties with Muhammad and then departed. With their forces disintegrating, the Meccans abandoned their siege just 2 weeks after beginning it.

The Qur'an itself provides an account of the battle:

<sup>25</sup> Qur'an, *supra*, 3:152-155 at 45-46.

<sup>9</sup>You who believe, remember God's goodness to you when mighty armies massed against you: We sent a violent wind and invisible forces against them. God sees all that you do. <sup>10</sup>They massed against you from above and below; your eye rolled [with fear], your hearts rose into your throats, and you thought [ill] thoughts of God. <sup>11</sup>There the believers were sorely tested and deeply shaken: <sup>12</sup>the hypocrites and the sick at heart said, "God and His messenger promised us nothing but delusions!" <sup>13</sup>Some of them said, "People of Yathrib [Medina], you will not be able to withstand [the attack], so go back!" Some of them asked the Prophet's permission to leave, saying, "Our houses are exposed," even though they were not — they just wanted to run away: <sup>14</sup>had the city been invaded from all sides, and the enemy invited them to rebel, they would have done so almost with — out hesitation. <sup>15</sup>Yet they had already promised God that they would not turn tail and flee, and a promise to God will be answered for. <sup>16</sup>[Prophet], say, "Running away will not benefit you. If you managed to escape death or slaughter, you will only be permitted to enjoy [life] for a short while." <sup>17</sup>Say, "If God wishes to harm you, who can protect you? If God wishes to show you mercy, who can prevent Him?" They will find no one but God to protect or help them.

<sup>18</sup>God knows exactly who among you hinder others, who [secretly] say to their brothers, "Come and join us," who hardly ever come out to fight. <sup>19</sup>who begrudge you [believers] any help. When fear comes, you [Prophet] see them looking at you with eyes rolling like someone in their death throes; when fear has passed, they attack you with sharp tongues and begrudge you any good. Such men do not believe any God brings their deeds nothing — that is all too easy for God. <sup>20</sup>They think the joint forces have not gone, and if the joint forces did come again they would wish they were in the desert, wandering among the Bedouin and seeking news about you [from a safe distance]. Even if they were with you [believers], they would hardly fight at all. <sup>21</sup>The messenger of God is an excellent model for those of you who put your hope in God and the last Day and remember Him after.

<sup>22</sup>When the believers saw the joint forces, they said, "This is what God and His Messenger promised us: the promise of God and His Messenger is true," and this only served to increase their faith and submission to God. <sup>23</sup>There are men among the believers who honored their pledge to God: some of them have fulfilled it by death, and some are still waiting. They have not changed in the least. <sup>24</sup>[Such trials are ordained] so that God may reward the truthful for their honesty and punish the hypocrites, if He so wills, or He may relent towards them, for God is forgiving and merciful. <sup>25</sup>God sent back the disbelievers along with their rage — they gained no benefit — and spare the believers from fighting. <sup>26</sup>

Once the Meccans withdrew, Muhammad marched his army into the territory of the *Banā Quraydah*, where he stayed for 25 days. The tribe surrendered under the condition that Muhammad would not be the judge to decide their future. Instead, the *Banā Quraydah* chose Sa'ad Ibn Mu'adh, a leader in Medina and of the

*Banā Aus* (allies of the *Banā Quraydah*), as the judge. Sa'ad, who fought and was injured in the battle, sentenced all the *Banā Quraydah* men to death, but ordered all non-combatants left alone.

By some accounts, in respect of parties who broke the treaty, an arbitrator decided to kill the combatants, but spare the rest of the town. <sup>27</sup> Effectively, that decision meant the execution of men and enslavement of women. In such accounts, it is unclear whether Muhammad advocated that decision, or possibly even made it himself.

In any event, it is an error to view the harshness of the punishment as related to the religion of the *Banā Quraydah* tribe, Judaism. Rather, the sanction was severe because the tribe betrayed the treaty of mutual defense and put the lives of Median citizens in mortal danger. Thus, it is an abuse of the episode to cite it in an accusation of anti-Semitism against the Prophet. It is more accurate to appreciate Muhammad respected the Jewish people and held them in high regard. Muhammad knew and befriended several Jews, wed one, and displayed concern upon hearing a Jewish neighbor fell ill and died:

A funeral procession passed in front of the Prophet . . . and he stood up. When he was told that it was the coffin of a Jew, he said, "Is it not a living being (soul)?" <sup>28</sup>

The Prophet left his armor with another Jewish neighbor as collateral in a business transaction to set an example of equality. Moreover, several Qur'anic passages insist Muslims honor other Peoples of the Book (*ahl al kitāb*), i.e., Jews and Christians.

The Muslim victory at the Battle of Trench turned the tide in the Arab world. Other tribes knew they could not defeat the Muslim army, causing many of them to convert to Islam or sign peace treaties with Muhammad.

### [E] Truce of Ḥudaybiyah between Prophet and Mecca (628 A.D.)

Once the leaders of Mecca and most of the Arabian Peninsula were unified under the banner of Islam, they ceased overt hostilities. In 628 A.D., Muhammad embarked on his own pilgrimage (*Hajj*) to the *Ka'ba* in Mecca, with 1,400 unarmed men and women. Before reaching it, they waited a few miles north at Ḥudaybiyah, for permission to enter.

The large movement of people put the *Quraysh* in a difficult position. The Establishment chafed at the idea of letting Muhammad back into Mecca. But, as guardians of the Holy City, the Meccan leaders were duty-bound to allow pilgrims in to worship. Ultimately, the leaders sent Suhayl Ibn 'Amr to negotiate a peace treaty, the first between Meccans and Muslims, with Muhammad:

<sup>27</sup> See KAREN ARMSTRONG, *MUHAMMAD 270* (New York, New York: HarperCollins, 1992).

<sup>28</sup> THE TRANSLATION OF THE MEANINGS OF SAHIH AL-BUKHARI, ARABIC-ENGLISH by Dr. Muhammad Muhsin Khan, vol. II, book XXIII (The Book of Funerals — *Al-Jana'iz*), p. 224, *hadith* no. 399 (Dar Ahyā Us-Sunnah, Al Nabawiya, March 1978). [Hereinafter, *BUKHARI*.]

When the Prophet . . . was checked from going to the Ka'ba, the people of Mecca made peace with him on the condition that he would (be allowed to) enter Mecca (next year) and stay there for three days, that he would not enter (the city) except with swords in their sheaths and arms encased in their covers, that he would not take away with him anyone from its dwellers, nor would he prevent anyone from those with him to stay on in Mecca (if he so desired). He said to 'Ali: Write down the terms settled between us. (So, 'Ali wrote): In the name of Allāh. . . . This is what Muhammad, the Messenger of Allāh, has settled (with the Meccans). The polytheists said to him: If we knew that thou art the Messenger of Allāh, we would follow you. But write: Muhammad b. 'Abdullah. So he told 'Ali to strike out these words. 'Ali said: No, By Allāh, I will not strike them out. The Messenger of Allāh. . . said: Show me their place (on the parchment). So he ('Ali) showed him their place and he (the Holy Prophet) stuck them out; and 'Ali wrote: Ibn 'Abdullah. (According to the terms of the treaty, next year) the Holy Prophet . . . stayed there for three days. When it was the third day, they said to 'Ali: This is the last day according to the terms of your companion. So tell him to leave. 'Ali informed the Prophet . . . accordingly, He said: Yes, and left (the city).<sup>29</sup>

Most Muslims were upset at the wording and terms of the agreement. Those words and terms were disrespectful to the Prophet, and to be denied admittance to Mecca for 1 year was an insult. Nevertheless, Muhammad secured the release of many Muslims in Meccan custody as his part of the bargain.

Muhammad and his followers had brought several animals to be sacrificed at the end of their anticipated *Hajj*. Although the pilgrims were not allowed into Mecca for 1 year, Muhammad ordered them to make the sacrifices. They refused in protest over the terms of the treaty. Muhammad responded by asked his wife, Um Salamah, for advice, trusting her opinion on resolving internal conflicts. She told him to begin the sacrifices himself, and surely the others would follow. Um Salamah was correct, and the other Muslims sacrificed their animals with the Prophet.

Though the Prophet and his followers returned to Medina without entering Mecca, his power and influence steadily grew, in part because of his widening reputation as an effective diplomat. The requisite year passed, and in 629 A.D. Muslims preformed the *Hajj*, remaining in Mecca for 3 days, as stipulated in the treaty. The *Quraysh* departed the city for the surrounding mountains, where they watched the Prophet circle the *Ka'ba* and saw a black man atop the Holy edifice. Bilal ibn Ribah, an African and former slave, was ordered by the Prophet to ascend the *Ka'ba* and call all Muslims to prayer on account of his beautiful voice and

<sup>29</sup> SAHĪḤ MUṢLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE *AL-JAM'-US-SAHĪḤ* BY IMAM MUṢLIM, RENDERED INTO ENGLISH BY ABDUL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASSAN VOL. IIIA, p. 204-205, *hadith* no. 1783R2 (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1960) (footnotes omitted). [Hereinafter, MUSLIM.] Dr. Hassan comments that the fact Muhammad asked 'Ali to show him where on the parchment the words "the Messenger of Allāh" appeared is proof Muhammad "was unlettered and he could not read any writing." *Id.* at fn. (1). His willingness to strike these words is indicative of his humility.

unwavering conviction in the Islamic faith. Out went the call of "Allāh *hu Akbar!*" (God is the Greatest), and the Prophet later honored Bilal with the title "Caller of Prayers," and the event is testament to the proposition that Islam and racial discrimination are supposed to be strangers.

### [F] Breaking the Truce and Glorious Victory (*Fatah Al Mubeen*) (630 A.D.)

Peace is more than the absence of war. The Meccans embodied this insight: despite the peace treaty, they still resented the Muslims. In response to a Meccan attack against a Muslim ally, Muhammad marched 10,000 troops toward Mecca in January 630 A.D. (10 *Ramādān* 8 A.H.). The Meccans realized they could not defeat such an army. Thus, they allowed the Prophet to enter the city without resistance. Many of them converted to Islam.

Muhammad, with head bowed as a sign of respect, entered Mecca proclaiming victory without bloodshed as the plan of Allāh. As the Prophet lifted his head, looking from face to face and remembering the abuses he suffered at the hands of many in his gaze, he asked the Meccans what they would do if they had the upper hand. He sensed their fear, but spoke comforting words. He proclaimed a general pardon for all citizens of Mecca. The sudden reprieve shocked everyone. Amnesty is unusual, or at least unexpected, during wartime. The amnesty bespoke the commitment of Muhammad to peaceful resolution of conflicts, and the use of reason to cultivate respect from adversaries.

The bloodless capture of Mecca in 630 by the Muslims spoke volumes about the power the Prophet wielded. Many tribes, which had held out against Islam, took this Glorious Victory (*Fatah Al Mubeen*) as a sign from Allāh and converted. After the victory, the Prophet returned to his home in Medina, sending Abū Bakr to lead the *Hajj* the next year. Abū Bakr led a diverse group of pilgrims to Mecca in the footsteps of the Prophet, returning to Medina upon completion of this journey.

### § 2.03 PROPHET RETURNS TO MECCA AS LEADER (632 A.D.)

#### [A] Farewell Pilgrimage (*Hajjat Alwada'*) and Farewell Sermon (*Khuṭbat Alwada'*)

In 632 A.D., Muhammad performed his final *Hajj*, entering Mecca as the leader rather than enemy of its inhabitants. Tens of thousands of Muslims traveled with the Prophet on this *Hajjat Alwada'* (Farewell Pilgrimage). On 9 *Dhul-Hijjah*, 10 A.H. in the 'Uranah valley of Mount Arafat, Muhammad delivered the *Khuṭbat Alwada'* (Farewell Sermon). Significantly, this speech is recorded in every collection of *hadiths*. After beginning with praise and thanks to Allāh, the Prophet continued:

"O People! Lend me an attentive ear, for I know not whether after this year I shall ever be amongst you again. Therefore, listen carefully to what

I am saying and Take These Words to Those Who Could Not Be Present Here Today.

"O People! Just as you regard this month, this day, this city as Sacred, so regard the life and property of every Muslim as a sacred trust. Return the goods entrusted to you to their rightful owners. Hurt no one so that no one may hurt you. Remember that you will indeed meet your LORD, and that he will indeed reckon your deeds.

"Allāh has forbidden you to take usury (interest), therefore all interest obligations shall henceforth be waived. Your capital is yours to keep. You will neither inflict nor suffer any inequity. Allāh has judged that there shall be no interest and that all the interest due to Abbas ibn 'Abd al-Muṭṭalib (Prophet's Uncle) be waived.

"Every right arising out of homicide in pre-Islamic days is henceforth waived and the first such right that I waive is that arising from the murder of Rabi'ah ibn al-Harithiah.

"O Men! The unbelievers indulge in tampering with the calendar in order to make permissible that which Allāh forbade, and to prohibit which Allāh has made permissible. With Allāh the months are twelve in number. Four of them are holy, three of these are successive and one occurs singly between the months of *Jumada* and *Shaban*.

"Beware of Satan, for the safety of your religion. He has lost all hope of that he will be able to lead you astray in big things, so beware of following him in small things.

"O People! it is true that you have certain rights with regard to your women but they also have rights over you. Remember that you have taken them as your wives only under Allāh's trust and with His permission. If they abide by your right then to them belongs the right to be fed and clothed in kindness. Do treat your women well and be kind to them for they are your partners and committed helpers. And it is your right that they do not make friends with anyone of whom you do not approve, as well as never to be unchaste.

"O People! Listen to me in earnest, worship Allāh, say your five daily prayers, fast during month of *Ramādān*, and give your wealth in *Zakāt* (obligatory charity). Perform *Hajj* if you can afford to.

"All mankind is from Adam and Eve, an Arab has no superiority over a non-Arab nor a non-Arab has any superiority over an Arab; also a white has no superiority over black nor a black has any superiority over white except by piety and good action. Learn that every Muslim is a brother to every Muslim and that the Muslims constitute one brotherhood. Nothing shall be legitimate to a Muslim which belongs to a fellow Muslim unless it was given freely and willingly.

"Do not therefore do injustice to yourselves. Remember one day you will meet Allāh and answer your deeds. So beware, do not stray from the path of righteousness after I am gone.

"O People! No Prophet or Apostle Will Come after Me and No New Faith Will Be Born. Reason well, therefore, O People! And understand words which I convey to you. I leave behind me two things, the Qur'an and my *Sunnah* and if you follow these you will never go astray.

"All those who listen to me shall pass on my words to others and those to others again; and may the last ones understand my words better than those who listen to me directly.

"Be my witness O Allāh, that I have conveyed your message to your people."

As part of this sermon, the Prophet recited [to] them a Revelation from Allāh which he had just received and which completed the Qur'an, for it was the last passage of the entire sacred text to be revealed:

This day the disbelievers despair of prevailing against your religion, so fear them not, but fear Me (Allāh)! This day have I perfected for you your religion and fulfilled My favor unto you, and it hath been My good pleasure to choose Islam for you as your religion (*Surah* 5, *Ayah* 3).

The sermon was repeated sentence by sentence by Safwan's brother Rabi'ah [*Radia Allāhu* (May God Be Pleased With Him)], who had a powerful voice, at the request of the Prophet and he faithfully proclaimed to over ten thousand gathered on the occasion. Toward the end of his Farewell Sermon, the Prophet asked:

"O people, have I faithfully delivered unto you my message?" A powerful murmur of assent "O Allāh, yes!" arose from thousands of pilgrims and the vibrant words "*Allahumma na'm*" rolled like thunder throughout the valley. The Prophet raised his forefinger and said: "Be my witness O Allāh, that I have conveyed your message to your people."<sup>30</sup>

## [B] Themes in *Khuṭbat Alwada'* (Farewell Sermon)

The *Khuṭbat Alwada'* marks a maturation point for the Islamic community (*ummah*). It is an *ummah* under God: the beginning of the sermon reminds listeners Allāh, the one and only true God, is the one issuing commands. Moreover, *Khuṭbat Alwada'* lays out basic principles for Muslims to follow in their daily private and public lives. Faith and obedience are paramount and should shape the way a Muslim behaves.

The Farewell Sermon also is significant because in it, the Prophet addresses legal issues, such as the proper sources of law, proscriptions against certain practices, and individual rights and responsibilities. The *ummah* should first look to the Qur'an and *Sunnah* to set acceptable standards for their society. These sources include guidelines on how to practice the faith and value others in society. Specifically, Muhammad rejects usury (*ribā*), the practice of lending with interest. Abū Talib, uncle and protector of Muhammad, became wealthy as a lender, making

<sup>30</sup> Dr. Z. Haq, The Last Sermon of Prophet Muhammad, Books and E-Books on Muslim History and Civilization (1990), posted at [www.cyberistan.org/islamic/sermon.html](http://www.cyberistan.org/islamic/sermon.html).

the ban on the practice by the Prophet even more significant, as it had adverse consequences for his direct family. Yet, no one, including the Prophet and his family, is above the law.

Additionally, fundamental rights and universal respect pervade the *Khuṭbat Alwada'*. Every person has the right to life and property. Mutual respect and non-discrimination (racial, gender, or class-based) are key values, as everyone is equal to Allāh. People should not judge one another, because Allāh will preside over everyone on Judgment Day. No person has the right to harm another, and the dignity of all people (including women) is entitled to respect.

## § 2.04 WIVES OF THE PROPHET

The Qur'ānic passage embodies the "No More Than Four Wives Rule"; it was revealed when the Prophet had more than four wives simultaneously. Reportedly, Muhammad had nine wives at the time of its revelation. However, aside from the temporal sequence — that the revelation came after these marriages — there is a different Qur'ānic passage understood as a special exemption for the Prophet from the limitation to four wives.<sup>31</sup>

The passage, one of the "Prophet's Special Rules," was revealed to Muhammad at age 60, three years before his death:

<sup>30</sup>Prophet, We have made lawful for you the wives whose dowries you have a paid, and any slaves God has assigned to you through war, and the daughters of your uncles and aunts on your father's and mother's sides, who migrated with you. Also any believing woman who offers herself [without dowry] to the Prophet and whom the Prophet wishes to wed — *this only applies to you* [Prophet] and not the rest of the believers: We know exactly what We have made obligatory for them concerning their wives and slave-girls — so you should not be blamed: God is most forgiving, most merciful. <sup>31</sup>You may make any of [your women] wait and receive any of them as you wish, but you will not be at fault if you invite one whose turn you have previously set aside: this way it is more likely that they will be satisfied and will not be distressed. All will be content with what you have given them. God knows what is in your hearts: God is all knowing, forbearing. <sup>32</sup>You [Prophet] are *not permitted to take any further wives*, nor to exchange the wives you have for others, even if these attract you with their beauty. But this does not apply to your slave-girls: God is watchful over all. <sup>32</sup>

This passage ratifies the more-than-four marriages of Muhammad, and thus is a *sui generis* Divine dispensation.

But, the passage also regulates any further marriages: the Prophet cannot take on additional wives, even if he divorces one of them. This stricture applies to his wives too, according to *surah* 33, *ayat* 28-29 and 53: they cannot re-marry to other

<sup>31</sup> See Qur'AN, *supra*, 33:50 at 270.

<sup>32</sup> Qur'AN, *supra*, 33:50-52 at 270 (emphasis added). See also *id.*, 33:37 at 269.

men. Muslims regard these Qur'ānic passages as matters of faith, not as permission for lustful behavior. Likewise, *surah* 33, *ayat* 30-33 set higher moral standards for the wives of the Prophet than other Muslim wives. Thus, one *ḥadīth* records that when Muhammad had nine wives, he thought perhaps he ought to divorce two of them. He did not, apparently on this revelation from Allāh.<sup>33</sup> In any event, the wives of the Prophet were only for him, meaning none remarried after his death in 632 A.D.<sup>34</sup>

Muhammad had 11 (or, possibly, 13) wives over the course of his life, including more than four at once. While the wives of Muhammad are not revered by Muslims like the Virgin Mary is in Catholic Christianity, they are very special and highly respected in their own right. Their names are popular for baby girls — Khadyja and 'Āisha being prominent examples. Indeed, all of the wives of the Prophet occupy a distinguished place in the history of Islam. After all, Khadyja comforted Muhammad after the first Revelation, and assured him he was not mad, but rather had heard an authentic message from Allāh. And 'Āisha related many important *ḥadīths* — over 2,000 in total. Thus, all of the wives of Muhammad are given the title "Mothers of Believers" (*Umm al-Mominin*):

The Prophet is more caring towards the believers than they are themselves, while *his wives are their mothers*.<sup>35</sup>

This title is redolent of the appellations given by Catholic Christians to Mary, such as "Our Mother," and bespeaks the exceptional esteem accorded by Muslims to his wives.

Several of the marriages of Muhammad were arranged to stop wars between tribes. For a losing tribe to avoid being enslaved, Muhammad sometimes married a woman from that tribe, including a Jewish woman from a defeated Jewish tribe. He then declared all members of the losing tribe free, on the ground that as the Prophet he could not have slaves related to him.

Events in the individual biographies are necessary to appreciate the social significance of the wives of Muhammad, and their extraordinary contribution of the Mothers to Islam. The women in Muhammad's life are (in chronological order):

- Khadyjah bint Khuwaylid
- Sawda bint Zama
- 'Āisha bint Abi Bakr

<sup>33</sup> See Qur'AN, *supra*, 33:52 at 270.

The circumstances surrounding the Revelation of the first *ayah* in *surah* 66 have to do with an event (either the revealing of a confidence, Muhammad's relations with Mary the Copt, the "honey" incident, or the wife's habit of back-talking) that appear to have led to speculation that Muhammad would divorce his wives. See *id.*, 66:3. The speculation centered on the month-long separation of Muhammad from his wives. At the end of the month he gave his wives the choice of divorce, or to remain with him. See *id.*, 33:28-29. His wives chose to remain with him. The *ḥadīth* that references this event is found in the *Book of Injānīn*, by Imām Bukhari (specifically chapter 49, *ḥadīth* no. 2336). This *ḥadīth* concerns a general grievance Muhammad may have had as to the habit of Hafsa of back-talking.

<sup>34</sup> See Qur'AN, *supra*, 33:53 at 270.

<sup>35</sup> Qur'AN, *supra*, fn. c to 33:6 at 266 (emphasis added). See also *id.*, fn. c to 33:6.

- Hafsa bint 'Umar
- Zaynab bint Khuzayma
- Umm Salama Hind
- Zaynab bint Jahsh
- Juwayriya bint Al Harith
- Ramlah bint Abi Sufyan (Umm Habiba)
- Safiyah bint Huyeyi ibn Akhtab
- Barra bint Al Harith (Maymuna bint Al Harith)
- Maria Al Qibtiyya (Maria the Copt)
- Raihana bint Zayd

There is no question the first 11 of these women were wives of the Prophet. The status of the last two, Maria, and Raihana, is in dispute. It is not clear whether they were wives or concubines of Muhammad. In either case, both Maria and Raihana represent important persons in early Islam, and along with all the wives of Muhammad are honored with the title "*Umm Al Momineen*" ("Mother of the Believers").

#### (1) Khadyja bint Khuwaylid

One of the most significant women in the life of Muhammad was his first wife, Khadyja. Khadyja, born in 555, was about 15 years older than Muhammad,<sup>36</sup> and was a businesswoman whose family managed trade caravans in pre-Islamic Arabia. She inherited her family business, and met Muhammad when she hired him to manage a commercial caravan to Syria.<sup>37</sup> The caravan Muhammad oversaw was successful, and his relationship with Khadyja bloomed. The two were married in 595,<sup>38</sup> when Muhammad was about 25 years old, 15 years before he began to receive revelations from Allah through the Archangel Gabriel.<sup>39</sup>

The marriage of Muhammad and Khadyja is important for many reasons, not least of which is the emotional and financial support she provided to her husband, and to proselytization of the young faith. Also significant, and befitting her role in the genesis of Islam, is that Khadyja never took part in the idol worship common in pre-Islamic Arabia.<sup>40</sup> Unsullied by paganism, Khadyja was the loyal wife and

<sup>36</sup> See Khadijah bint Khuwaylid, Wikipedia, posted at [http://en.wikipedia.org/wiki/Khadijah\\_bint\\_Khuwaylid](http://en.wikipedia.org/wiki/Khadijah_bint_Khuwaylid). [Hereinafter, Khadijah.]

<sup>37</sup> See E. van Donzel, B. Lewis & Ch. Pellat eds., *The Encyclopedia of Islam*, vol. 4-5 at 898-899 (Leiden, the Netherlands: E.J. Brill, new ed., 1978) (entry on Khadijah by W. Montgomery Watt). [Hereinafter, Donzel.]

<sup>38</sup> See Ronen Yitzhak, *Muhammad's Jewish Wives: Rayhana bint Zayd and Safiyya bint Bughayy in the Classic Islamic Tradition*, 9 JOURNAL OF RELIGION & SOCIETY (2007), posted at <http://mores.creighton.edu/JRS/2007/2007-29.html>. <sup>39</sup> See Khadijah, *supra*.

<sup>40</sup> See Khadijah, *supra*.

companion Muhammad needed when Gabriel first visited him in 610. She stood by him during this dramatic event in his life, and was one of the first, if not the first, to convert to Islam.<sup>41</sup>

The marriage between Muhammad and Khadyja was fruitful but tragic. Although some sources claim only one son was born, many claim they had two sons: Qasim and Abd-Allah, neither surviving past early childhood. They also had four daughters: Fatimah, Zainab, Umm Kulthum, and Ruqqayah.<sup>42</sup> Of them, Umm Kulthum and Ruqqayah predeceased Muhammad. Both had been married to the famous Companion, and third Rightly Guided Caliph, 'Uthman. 'Uthman was married first to Ruqqayah, until her death, and then to Umm Kulthum, until her death.<sup>43</sup> Fatimah, the most famous of Muhammad's children, married his young cousin 'Ali ibn Abi Talib, the fourth of the four *Rashidun* Caliphs.

It is understood Muhammad practiced polygamy. But, his marriage with Khadyja was monogamous. Khadyja passed away in 619, after they were married for 24 years.<sup>44</sup>

#### (2) Sawda bint Zama

After the death of Khadyja, Muhammad began a progression of marriages that would lead to his vilification by historical and contemporary opponents. Following the death of her first husband, Sawda bint Zama migrated to Mecca from Abyssinia (now Ethiopia).<sup>45</sup> Muhammad next married this older widow, Sawda, though there is some question as to whether this marriage, or his marriage with 'Aisha came first.<sup>46</sup> Muhammad's marriage with Sawda probably took place in 620, before the *Hijra* of 622.<sup>47</sup> Sawda was an early convert to Islam, and when Muslims faced persecution in Mecca, she became the first Muslim woman to immigrate to Abyssinia.<sup>48</sup>

Muhammad had seen and appreciated her suffering during her journey to Mecca on account of her faith in Islam, which led to her betrothal and marriage to him.<sup>49</sup> Shortly after their marriage, Sawda started taking care of the children and home of Muhammad. This marriage was the first of several Muhammad shared with Muslim widows.

<sup>43</sup> See Wikipedia, posted at [http://en.wikipedia.org/wiki/Uthman\\_ibn\\_Affan#After\\_his\\_conversion\\_to\\_Islam](http://en.wikipedia.org/wiki/Uthman_ibn_Affan#After_his_conversion_to_Islam).

<sup>44</sup> See Donzel, *supra*, vol. 4-5 at 898-899.

<sup>45</sup> See Bosworth, *supra*, vol. VIII FASCICLES 143-144 at 89-90, which also states that while in Abyssinia, her first husband converted to Christianity causing their divorce, and died.

<sup>46</sup> See C.E. Bosworth, E. Van Donzel, W.P. Heinrichs & G. Lecomte eds., *The Encyclopedia of Islam* vol. 8, 89-90 (Leiden, The Netherlands: E.J. Brill, new ed., 1965), which states it is not certain whether Muhammad first married Sawda or 'Aisha. [Hereinafter, Bosworth.]

<sup>47</sup> See <http://forum.e-dz.com/index.php?topic=3841-women-around-the-prophet-sawda-bint-zama-r>; Bosworth, *supra*, vol. 8 at 89-90 (entry for Sawda bt. Zam'a, by V. Vacca-Ruth Roded).

<sup>48</sup> See [www.2muslims.com/cgi-bin/links/detail\\_page.cgi?ID=218759](http://www.2muslims.com/cgi-bin/links/detail_page.cgi?ID=218759).

<sup>49</sup> See [http://islam.wikia.com/wiki/Sawda\\_bint\\_Zama](http://islam.wikia.com/wiki/Sawda_bint_Zama).

Sawda was an older woman when she married Muhammad. Yet, her precise birth date is unknown, making her age at the time of her marriage uncertain. Many sources claim she was older than Muhammad, who was about 50 years old at the time. If this is true, then it is unlikely she died in 674 (as she would have been at least 104 years old by then).<sup>50</sup> No children were born to Sawda and Muhammad.

Sawda is best known for two events. First, Sawda was the catalyst for the revelation of *surah* 4, *ayah* 127, when she implored Muhammad not to divorce her.<sup>51</sup> Sawda, desiring only to remain married to Muhammad, on account of her age relinquished her time with the Prophet to 'Ā'isha.<sup>52</sup> Second, the *ḥadīth* of the *ḥijāb* is directly related to her. Upon seeing Sawda one night, as she went to the latrine, 'Umar, who would become the second *Rashidun* Caliph, recognized her. Preferring *ḥijābs* be worn, he told Muhammad of the encounter.<sup>53</sup> Five *ḥadīths* can be traced to Sawda.<sup>54</sup>

### (3) 'Ā'isha bint Abū Bakr

Many historians believe the third wife of the Prophet, 'Ā'isha, was his favorite. Perhaps her beauty won her this high regard. Or, perhaps it was because her father was Abū Bakr, the best friend of Muhammad, and having a close connection to his family was desirable.<sup>55</sup> The marriage to 'Ā'isha has attracted controversy due to her young age at both marriage and consummation. Many histories record her age at 9 years old at the time of marriage, when she first went to live with Muhammad, and when the marriage was consummated. Some modern day historians record her age at consummation as 14, but the vast majority of records indicate she was indeed 9.

Notwithstanding this controversy, 'Ā'isha probably was born around 614, and died in 678.<sup>56</sup> As the daughter of Abū Bakr, her betrothal to Muhammad perhaps was intended to strengthen the ties between the two men.<sup>57</sup> As a young girl, or possibly as a baby, she migrated to Abyssinia with her family. Upon their return to Mecca, a previously betrothal was set aside, and 'Ā'isha was married to Muhammad. She lived with her parents for several years before going to Muhammad.<sup>58</sup> This marriage likely took place just after that of Muhammad and Sawda, but sources disagree as to which one came first. Though the marriage of Muhammad and 'Ā'isha was happy and loving, it was barren of children.

<sup>50</sup> See H.A.R. Gibb, J.H. KRAMERS, E. LEVI-PROVENCAL & J. SCHACHT EDS., *THE ENCYCLOPEDIA OF ISLAM* Vol. I, 307-308 (Leiden, Netherlands: E.J. Brill, new ed., 1960) (reporting Sawda was 30 when she married Muhammad). [Hereinafter, Gibb.]

<sup>51</sup> See [www.search.com/reference/Sawda\\_bint\\_Zama](http://www.search.com/reference/Sawda_bint_Zama). But see [www.scribd.com/doc/7090987/2Sauda-Bint-Zama](http://www.scribd.com/doc/7090987/2Sauda-Bint-Zama) (stating *surah* 4, *ayah* 148 was revealed).

<sup>52</sup> See BOSWORTH, *supra*, vol. VIII FASCICLES 143-144 at 89-90.

<sup>53</sup> See BUKHARI, *supra*, vol. I, book IV (The Book of Wudu' (Ablution)), p. 107, *ḥadīth* nos. 147-148.

<sup>54</sup> See [www.scribd.com/doc/7090987/2Sauda-Bint-Zama](http://www.scribd.com/doc/7090987/2Sauda-Bint-Zama).

<sup>55</sup> See Gibb, *supra*, vol. I at 307-308.

<sup>57</sup> See Gibb, *supra*, vol. I at 307-308.

<sup>58</sup> See [www.viewwiki.com/en/Aisha](http://www.viewwiki.com/en/Aisha).

It is hard to overstate the important place the wives of the Prophet occupy in the Muslim psyche, and 'Ā'isha, along with Khadyja, is the quintessential example. 'Ā'isha was a highly intelligent woman, who memorized the Qur'an as it was revealed, and who related many *ḥadīths* after the death of the Prophet in 632. She is one of only four people who personally related over 2,000 *ḥadīths*,<sup>59</sup> including the *ḥadīth* of the *ḥijāb* involving Sawda.<sup>60</sup> Of the 2,210 *ḥadīths* she narrated, *Imāms* Bukhari and Muslim record 316 of them. 'Ā'isha is also closely connected to many *āyat* in the Qur'an.

It was an event involving 'Ā'isha for which *surah* 24, *ayah* 4 was revealed.<sup>61</sup> This *ayah* mandates four witnesses must accompany accusations of unlawful sexual intercourse (*kadhif*). The setting prior to this revelation was a caravan with which 'Ā'isha was traveling. The caravan accidentally left 'Ā'isha behind after she went to look for a favorite necklace she had dropped. (Evidently, she was so light that her bearers were unaware that she was not on the caravan.<sup>62</sup>) Luckily, a young man rescued 'Ā'isha and returned her to the caravan. The circumstances of her return (in the company of a young soldier, after an unexpected absence) led some people to speculate she committed adultery with her rescuer.<sup>63</sup> She did not. In addition to *surah* 24, *ayah* 4, and *ayah* 11-19 were also revealed, chastising the accusers of 'Ā'isha.

The revelation of *surah* 66, *ayah* 1-6 also related to 'Ā'isha (as well as to Hafsa, Zaynab bint Jahsh, and Maria). Different transmitters report the incident leading to this revelation differently. Though the Qur'an is silent as to the reason for this revelation, it is said Hafsa and 'Ā'isha were jealous about the amount of time Muhammad spent with Zaynab bint Jahsh (or about his relationship with Maria the Copt).

One version states Muhammad devoted more time to Zaynab than to either 'Ā'isha or Hafsa. It was said Zaynab shared a honey flavored drink with Muhammad during his visits, and because of his love for sweets, Muhammad was often late to visit his other wives.<sup>64</sup> 'Ā'isha and Hafsa became jealous and decided each would tell Muhammad separately that the drink gave him bad breath. Muhammad forbid himself honey, after hearing the tale from more than one wife. Another version of this story proposes the "honey" is actually Maria the Copt. Upon discovering Muhammad with Maria one night, Hafsa grew jealous.<sup>65</sup> Whatever the truth, whether the thing Muhammad forbade himself was food, or a woman, God had declared it lawful for him (*surah* 66, *ayah* 1).

Following this incident, and as a capstone, *ayah* 3-5 encourage the wives of the Prophet to support Muhammad. Accordingly, 'Ā'isha took care of Muhammad

<sup>59</sup> See [www.viewwiki.com/en/Aisha](http://www.viewwiki.com/en/Aisha).

<sup>60</sup> This *ḥadīth* is recounted in BUKHARI, *supra*, vol. I, book 4, *ḥadīth* nos. 147-148 at 107.

<sup>65</sup> See Quran English, *supra*.

during his fatal illness. After his death, he was buried within her chambers.<sup>66</sup>

#### (4) Hafsa bint Omar

Two or three years after the *Hijra*, Muhammad married Hafsa bint Omar (*circa* 609–665/666).<sup>67</sup> She was the daughter of Omar, a loyal companion and trusted advisor to Muhammad, and second of the *Rashidun* Caliphs. Hafsa was married previously, but her first husband died of wounds sustained in the Battle of 'Uḥud.<sup>68</sup> Therefore, although Hafsa was not the first widow to whom the Prophet was wed, she was his first war widow — but, not the last. Following the examples Muhammad provided, many Muslim men in the early days of Islam married widows of slain soldiers. This practice might have been intended to assure soldiers and society that the families of the faithful who died in combat would be taken care of after their deaths.

Muhammad might have divorced Hafsa at one point. If so, then he took her back after the Archangel Gabriel pointed out her virtuous and pious nature.<sup>69</sup> She is said to have been involved in the incident leading to the revelation of the beginning of *surah* 66 (the incident involving either the honey or Maria the Copt), either with or without 'Ā'isha. *Surah* 66, *ayah* 3 might have been revealed after Muhammad told something to Hafsa in confidence, but instead of keeping a secret, Hafsa shared the news with 'Ā'isha.<sup>70</sup>

#### (5) Zaynab bint Khuzayma

The next wife of Muhammad was Zaynab bint Khuzayma. Born in 595, she was a war widow whose previous husband had been killed at the Battle of Badr.<sup>71</sup> She was known for her charity and love of the poor. These virtues earned her the title "*Umm Al Masakin*" ("Mother of the Destitute," or "Mother of the Poor").<sup>72</sup> Other than Khadyjah, she is the only wife of Muhammad certain to have predeceased him.<sup>73</sup> She died after just 8 months of marriage, in 625 or 626.

#### (6) Umm Salama Hind bint Abi Umayya

In 625, Muhammad married Umm Salama Hind (*circa* 580–680), another war widow, as her husband was killed at the Battle of 'Uḥud.<sup>74</sup> Not much is known of her

life. While married to her first husband, she made two migrations to Abyssinia.<sup>75</sup> She had one son and two daughters. She narrated several hundred *hadiths*, and is second only to 'Ā'isha among the wives as a transmitter of his non-Prophetic statements.<sup>76</sup>

#### (7) Zaynab bint Jahsh

The Prophet then married Zaynab bint Jahsh (born *circa* 593), a first cousin of Muhammad. This marriage was the first in a series of unions in which Muhammad sought social peace among different groups through matrimonial ties. Zaynab played an instrumental role on behalf of Islam during her first marriage to Zayd ibn Harithah (sometimes referred to as Zayd ibn Muhammad). Zayd had been the slave of Muhammad. While the Qur'an does not prohibit slavery, it repeatedly encourages the manumission of slaves, and the *Sunnah* of the Prophet forbids treatment of any category of persons as second class citizens. Muhammad sought to elevate the status of former slaves to one equal with other members of the Muslim community.

These factors, plus a sense of injustice of slavery, caused Muhammad freed to free Zayd. He adopted Zayd as a son, and when Zayd was old enough, Muhammad arranged for Zayd's marriage to Zaynab. She was from an upper-class background. The marriage was meant to underscore to the *ummah* the fact former slaves were Muslims, and regardless of their previous status as slaves, they were full members of the *ummah* and deserved respect.<sup>77</sup>

After initial resistance due to the disparity between their socioeconomic backgrounds, Zaynab agreed to marry Zayd. The relationship ended in divorce, regrettably owing to their inability to adapt to their inter-social class marriage.<sup>78</sup> There is some dispute regarding the circumstances of this divorce. Some historians contend Muhammad asked Zayd to divorce Zaynab so that he himself could marry her.<sup>79</sup>

After the divorce of Zayd and Zaynab, Muhammad challenged (following a revelation) another aspect of pre-Islamic Arabian life. Through his marriage to Zaynab, Muhammad struck against the practice that adopted children had equal familial status with biological children. The marriage of Muhammad and Zaynab would have been "taboo" under former social norms.<sup>80</sup> That is, the marriage would have been forbidden as one between two people united in a family as father-in-law and daughter-in-law. However, the marriage showed the *ummah* that adoptive children are not equal to biological children within a family unit, and that marriage to the former spouses of adoptive children is not forbidden. *Surah* 33, *ayah* 4–5 and 37–38 of the Qur'an speak about these events and the status of adoptive children.

<sup>80</sup> See Zaynab (1), *supra*.

Additionally, these verses stand for the proposition the Prophet could have more than four wives. Finally, the marriage of Muhammad and Zaynab illustrates that a divorcée is permitted to re-marry later in life.<sup>81</sup>

The marriage occurred in 627. It is unclear whether there was an earthly ceremony to celebrate it. Possibly, the revelation of *surah* 33, *ayat* 37-38, or some other revelation concerning their marriage, represented a Heavenly ceremony, negating the need for an earthly one.<sup>82</sup> What is clear is *surah* 33, *ayat* 37-38 (as well as *ayah* 53) were revealed at the time of the marriage.

Notwithstanding her affluence, it is said Zaynab was extremely generous to the poor. Her generosity was so great that when Muhammad told his wives that the first to join him in Paradise after his death would be the one with "the longest arms,"<sup>83</sup> (referring to the most generous) he was referring to her. Zaynab died in 642. She was the first of Muhammad's widows to pass after his death.<sup>84</sup>

#### (8) Juwayriya (Barra) bint Al Harith

Muhammad married Juwayriya bint Al Harith (born *circa* 608), a member of the Jewish clan Banu Mustaliq, and daughter of a tribal chief. Muslim soldiers captured and imprisoned her after her people had been defeated, and her husband killed in battle. Unhappy at the prospect of living as a slave, she approached Muhammad to ask for relief. In response, Muhammad embraced her father and proposed marriage to her. Muhammad and Juwayriya were married in 628. This marriage helped repair the fracture and feuds between her people and the Muslims, and helped win Jewish converts to Islam.<sup>85</sup>

#### (9) Ramlah bint Abi Sufyan (Umm Habiba)

Ramlah bint Abi Sufyan (*circa* 589-666) was one of the first Muslims, as well as a migrant to Abyssinia. Her first husband, whom she divorced when he became a Christian, was the brother of Zaynab bint Jahsh, and her cousin was 'Uthman, later the third *Rashidun* Caliph. The marriage between Ramlah, who became widowed, and the Prophet occurred in 629, while she was in Abyssinia and he was in Medina.<sup>86</sup> Her father, Abi Sufyan, was an enemy of Islam for many years, encouraging tribes to fight against Muslims. But, upon his conversion, *surah* 60, *ayah* 7 was revealed.<sup>87</sup>

<sup>87</sup> See [www.islamawomen.com/articles/ramlah\\_bint\\_abi\\_sufyan.php](http://www.islamawomen.com/articles/ramlah_bint_abi_sufyan.php).

#### (10) Safiyah bint Huyeyi ibn Akhtab

The tenth wife of Muhammad was Safiyah bint Huyeyi ibn Akhtab (*circa* 610-670 or 672), a Jewish widow of the Banu Nadir tribe, which the Muslims defeated at the Battle of Khaybar.<sup>88</sup> Her first husband was executed for hiding treasure in violation of the peace treaty between Muslim forces and the Banu Nadir.<sup>89</sup> Muhammad chose Safiyah from the captive women. To compensate the man to whom she originally belonged, Muhammad freed her as a dowry, and married her.<sup>90</sup> This marriage might have been intended to cement an alliance with the Banu Nadir, and emphasize that Jews are not to be persecuted.<sup>91</sup>

Safiyah is said to have been especially beautiful. Perhaps because of her beauty, and the fact she had been a Jew, the other wives taunted her. Yet, Muhammad always stood by her, reminding his wives that Safiyah had converted, and was a good Muslim.<sup>92</sup>

#### (11) Maymuna bint Al Harith (Burrah bint Al Harith)

According to some sources, Maymuna (*circa* 594-674, or 681) was the last woman whom the Prophet married.<sup>93</sup> His marriage to Maymuna occurred in 630, while he was visiting Mecca during a truce between Muslims and the Meccan tribes.<sup>94</sup> The wedding ceremony took place on the borders of Mecca, to encourage Meccans to participate and thereby enhance relations between them and Muslims.

The sister of Maymuna married Ja'far Abi ibn Talib, who was the son of Abi Talib, as well as the brother of 'Ali. Thus, Maymuna was related to Muhammad before their marriage. That is, she was a member of the People of the House (*Ahl Al Bayt*), i.e., the family. She sought marriage to Muhammad in accordance with *surah* 33, *ayah* 50.

#### (12) Maria Al Qibtiyya (Maria the Copt)

It is not clear whether Muhammad married the Egyptian Maria, commonly called "Maria the Copt," or whether she was his slave. Initially, she was a gift to Muhammad from Al Muqwaqis, a Byzantine noble, Egyptian Christian, and leader of the Copts, who sent her to him during the year of deputations, perhaps in thanks for the Message of Islam.<sup>95</sup> Some sources suggest Maria was the servant of Hafsa. Maria was the mother of the only child of Muhammad apart from those he had with

<sup>88</sup> See Bosworth, *supra*, vol. VIII, Fascicules 143-144, at 817.

<sup>89</sup> See Yitzhak, *supra*, 9 (stating her husband had been killed during the fighting, rather than after its cessation).

<sup>91</sup> See Yitzhak, *supra*, at 9.

<sup>92</sup> See Yitzhak, *supra*, at 9.

<sup>93</sup> See Bosworth, *supra*, vol. VI, Fascicules 113-114, at 918.

<sup>94</sup> See Maymuna bint al-Harith, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Maymuna\\_bint\\_al-Harith](http://en.wikipedia.org/wiki/Maymuna_bint_al-Harith).

<sup>95</sup> See Maria al-Qibtiyya, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Maria\\_al-Qibtiyya](http://en.wikipedia.org/wiki/Maria_al-Qibtiyya). [Hereinafter, *Maria* (1).]

Khadyja. The child was a son named Ibrahim, who sadly died in infancy.<sup>96</sup> On the assumption that Muhammad did marry Maria, he did so to demonstrate that a Muslim male may wed a non-Muslim woman who is from the Peoples of the Book (*Ahl Al Kitāb*).

Maria had been a Christian, but converted to Islam after traveling to Muslim lands. Maria did not live in the same compound as the wives of Muhammad, which suggests she was a concubine rather than a wife.<sup>97</sup> It is possible Hafsa caught Muhammad having relations with Maria, which in turn triggered the controversy mentioned at the beginning of *surah* 66 of the Qur'an.<sup>98</sup> Maria died in 637.

### (13) Raihana bint Zayd

The status of Raihana bint Zayd, between wife and concubine, is unclear as well. She was a Jewish woman of the *Banu Qurayza* tribe. Her tribe, which did not honor a mutual defense agreement with the Muslims, surrendered to Muhammad after the Battle of the Trench. The men of the tribe, including her husband, were executed. The women and children were taken as slaves. If the two were married, then Muhammad might not have waited the requisite period of time before marrying a widow. Notwithstanding the controversy over the status of Raihana, it seems clear she was treated no differently than the other wives of Muhammad. It also appears Muhammad sought to demonstrate via his relationship to this Jewish widow that Jews were not to be persecuted. Disagreement exists as to the time Raihana died, namely, it is uncertain whether she died before Muhammad or became his widow when he passed away in 632.<sup>99</sup>

## § 2.05 DEATH OF PROPHET (632 A.D.)

After finishing the *Hajj* in 632, Muhammad returned to Medina. In this year, the Prophet knew his time had come, telling his daughter, Fātimah, he will die soon. He told her the Archangel Gabriel asked him to recite the Qur'an twice, whereas Gabriel usually asked him to recite it once every year:

The Messenger of God said to Fātimah, (Gabriel) has reviewed the Qur'an with me once a year, but this year he has reviewed it with me twice, and I fancy that my time has come.<sup>100</sup>

The cause of death is a controversial issue among Muslim and non-Muslim biographers.

Some relate the sickness to meat the Prophet ate after the Battle of Khaybar in 629. A Jewish woman cooked a meal for Muhammad and his Companions in appreciation for letting them remain in Khaybar:

<sup>96</sup> See [www.spiritual-temple.com/maria-al-qibtiyya/maria-in-muhammad-s-household.html](http://www.spiritual-temple.com/maria-al-qibtiyya/maria-in-muhammad-s-household.html). [Hereinafter, *Maria* (2).]

<sup>97</sup> See *Maria* (1), *supra*.

<sup>98</sup> See *Maria* (2), *supra*.

<sup>99</sup> See Yitzhak, *supra*, at 9.

<sup>100</sup> AL-TABARI, *supra*, vol. VI at 61.

[A] Jewess came to Allah's Messenger with poisoned mutton and he took of that what had been brought to him (Allah's Messenger). (When the effect of this poison were felt by him) he called for her and asked her about that, whereupon she said: I had determined to kill you. Thereupon he said: Allah will never give you the power to do it. He (the narrator) said that they (the Companions of the Holy Prophet) said: Should not we kill her? Thereupon he said: No. He (Anas-narrator) said: I felt (the effects of this poison) on the uvula of Allah's Messenger.<sup>101</sup>

Further, speculative evidence of the poisoning theory comes from *surah* 5, *ayah* 3, the last verse of the Qur'an revealed to Muhammad. Much of it concerns dietary restrictions. But, the last sentence of that verse is relevant to the issue of how Muhammad died:

Today I [Allah] have perfected your religion for you, completed My blessing upon you, and chosen as your religion *Islam*: total devotion to God. . . .<sup>102</sup>

The inference some *ulema* draw from this verse is it indicates Muhammad had fulfilled his role as Messenger. There was no more to be revealed, hence the phrases associated with Muhammad and his faith "seal of the Prophet" and "finality of Islam."<sup>103</sup> Arguably, the passage is a harbinger it was time for Muhammad to go on to the next life.

It is vital to add many Muslims do not accept this account. Indeed, in Saudi Arabia, many if not most standard schools do not teach this account. Moreover, there is a problem of causation: the poisoning of the mutton appears to have occurred 3 years before the death of the Prophet, *i.e.*, in 629 not 632. As to the fate of the Jewish woman, *Imām* Muslim clearly records that the Prophet forgave her. Apparently, other sources — some of which are on the internet and are of dubious credibility — suggest the *Sahābah* felt her fate should depend on what happens to the Prophet or the other Companions who ate the poisoned mutton: if either or both die, then an offense under the *Shari'a* has occurred, and she should be killed for the murder or murders she committed. One of Companions did succumb; hence these sources indicate she was executed.

Other biographers of the Prophet report he died a natural death. This version of the story is more reliable due to the authenticity of the sources. A few months after his return to Medina, he felt ill and suffered headaches and weakness. Several days later, on 8 June 632 (12 *Rabi' Al-Awwal* 11 A.H.), he died.

The news of his death was hard to believe. The *ummah* was shocked by his passing, even if owing to his illness it was not entirely unanticipated. Some of his Companions did not believe the traumatic news:

Allah's Apostle . . . died while Abū Bakr was at a place called As-Sunah (Al-Āliya). 'Umar stood up and said, "By Allah! Allah's Apostle . . . is not dead!" 'Umar (later on) said, "By Allah! Nothing occurred to my mind

<sup>101</sup> MUSLIM, *supra*, vol. III.B at 450, *hadith* no. 2190.

<sup>102</sup> QUR'AN, *supra*, 5:3 at 68.

<sup>103</sup> KENNETH CRAGG, THE EVENT OF THE QUR'AN: ISLAM IN ITS SCRIPTURE (Oxford, England: Oneworld Publications, 1994).

except that." He said, "Verily! Allāh will resurrect him and he will cut the hands and legs of some men." Then Abū Bakr came and uncovered the face of Allāh's Apostle . . . , kissed him and said, "Let my mother and father be sacrificed for you, (O Allāh's Apostle), you are good in life and in death. By Allāh in Whose Hands my life is, Allāh will never make you taste death twice." . . . When Abū Bakr spoke, 'Umar sat down. Abū Bakr praised and glorified Allāh and said, No doubt! Whoever worshipped Muḥammad, then Muḥammad is dead, but whoever worshipped Allāh, then Allāh is Alive and shall never die." Then he recited Allāh's Statement [from the Qur'an]: —

(O Muḥammad) Verily you will  
die, and they also will die. (39:30)

He also recited: —

Muḥammad . . . is no more  
than an Apostle; and indeed many  
Apostles have passed away,  
before him, If he dies  
Or is killed, will you then  
Turn back on your heels?  
And he who turns back  
On his heels, not the least  
Harm will he do to Allāh  
And Allāh will give reward to those  
Who are grateful.' (3:144)

The people wept loudly, and the Anṣār were assembled with Sa'd bin 'Uḥāda in the shed of Bani Sā'ida. They said (to the emigrants). "There should be one 'Amīr from us and one from you." Then Abū Bakr, 'Umar bin Al-Ḥaṭṭāb and Abū 'Uḥāda bin Al-Jarrāh went to them. 'Umar wanted to speak but Abū Bakr stopped him. 'Umar later on used to say, "By Allāh, I intended only to say something that appealed to me and I was afraid that Abū Bakr would not speak so well. Then Abū Bakr spoke and his speech was very eloquent. He said in his statement, "We are the rulers and you (Anṣār) are the ministers (i.e., advisers)," Ḥubāb bin Al-Mundhir said, "No, by Allāh we won't accept this. But there must be a ruler from us and a ruler from you." Abū Bakr said, "No, we will be the rulers and you will be the ministers, for they (i.e., Quraysh) are the best family amongst the Arabs and of best origin. So you should elect either 'Umar or Abū 'Uḥāda bin Al-Jarrāh as your ruler." 'Umar said (to Abū Bakr), "No but we elect you, for you are our chief and the best amongst us and the most beloved of all of us to Allāh's Apostle. . . . So 'Umar took Abū Bakr's hand and gave the pledge of allegiance and the people too gave the pledge of allegiance to Abū Bakr.<sup>104</sup> . . .

Upon his death, the Uncle of the Prophet, Alabbas (father of the *Abbasid* family, and namesake of the *Abbasid* Caliphate), supervised the preparation of his burial.

<sup>104</sup> BUḤĀRI, *supra*, vol. V, book LVII (The Virtues and the Merits of the Companions of the Prophet), pp. 14-15, *hadith* no. 19.

The body of Muḥammad was washed interred in the house of his beloved wife, 'Āisha. Shortly thereafter, a constitutional assembly unanimously elected Abū Bakr as the first Caliph.

## § 2.06 ISLAMIC LUNAR CALENDAR

### [A] "A.D." versus "A.H."

When studying events in Islamic History students, non-Muslims find themselves faced with an unfamiliar system of dating. For instance, when reading about the year in which the Prophet Muḥammad, a non-Muslim might be puzzled by several different dates: 632 A.D., 632 C.E., 11 A.H. or 11. The reason for these different dates is the Muslim Calendar is not the equivalent of the calendar used in the United States, other Western countries, or most of Asia and Africa. There are several differences between Muslim and non-Muslim calendars of which non-Muslims should be aware.

First, the calendar commonly used throughout the non-Muslim world is based on the life of Jesus Christ. This calendar is known as the *Gregorian* calendar, as it is named for Pope Gregory XIII. Pope Gregory instituted the use of this calendar in 1582 A.D. by issuing an order known as a *Papal Bull*.<sup>105</sup> The *Gregorian* calendar is based on the earlier *Julian* calendar, which was first officially instituted by Julius Caesar.<sup>106</sup>

The *Gregorian* calendar indicates the two eras recognized by the Christian Church by inserting one of two abbreviations: B.C., or A.D. The first abbreviation, B.C., indicates that the specified year, for instance 332 B.C., was 332 years *before the birth of Jesus Christ*. (That year happens to be the one in which Alexander the Great conquered Palestine.) The second abbreviation, A.D., indicates that the specified year, for instance 632 A.D. was 632 years after the birth of Jesus. "A.D." stands for the Latin words "*Anno Domini*" (sometimes spelled "*Anno Domine*") which means the "year of our Lord." (That year happens to be the one in which Muḥammad died.)

For many years some scholars have been de-Christianizing historical dates by using a different, secular set of abbreviations: they seek to replace "B.C." with "B.C.E.," and to replace "A.D." with "C.E." They use these abbreviations in the same manner, and indicate the same respective years and eras as indicated by the *Gregorian* calendar. The only difference is the substitute abbreviations do not indicate the life of Jesus specifically, and therefore intimate a diminution of the role of Christ. In the case of these newer abbreviations, "B.C.E." stands for *Before the Common Era*; and "C.E." stands for *Common Era*. "Common" is an obvious effort to supplant the word "Christian."

In contrast to the *Gregorian* calendar, the Muslim calendar began dating years when Muḥammad and his Companions (*Ṣaḥābah*) emigrated from Mecca to

<sup>105</sup> See *Gregorian Calendar*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Gregorian\\_calendar](http://en.wikipedia.org/wiki/Gregorian_calendar).

<sup>106</sup> See *Julian Calendar*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Julian\\_calendar](http://en.wikipedia.org/wiki/Julian_calendar).

Medina:

"The *Hijra*," as this emigration is called, marked the beginning of the Muslim community as an autonomous political community, and the year in which it took place — 622 C.E. — was subsequently adopted by Muslims as the year 1 of the Islamic calendar (A.H. 1).<sup>107</sup>

The Muslim Calendar uses the *lunar* cycle in determining the length of years and months, whereas the *Gregorian* (and also *Julian*) calendar is a *solar tropical* calendar.

### [B] Lunar versus Solar Calendars

A lunar year is approximately 11 days shorter than a year as calculated using the *Gregorian* calendar.<sup>108</sup> The Muslim year is about 354 days in length, in contrast with the traditional non-Muslim 365 day-long year, which is based on *solar tropical* calendars. Therefore, the Holy Month of *Ramādān* is about 11 days earlier each year, when cast in terms of the *Gregorian* calendar.

Another difference between lunar and solar calendars is that the solar-based *Gregorian* calendar indicates the season, i.e., spring, summer, fall, and winter). The lunar-based Muslim calendar does not do so.<sup>109</sup> That is to say, "December" connotes a winter month in the northern hemisphere, and a summer month in the southern hemisphere. But, the month of *Ramādān* could occur in any season, depending on the year in question. When the Muslim Calendar is in *Ramādān*, there is no indication of what season it is. Overall, the cycle is about 30 years.

There are 12 months in the Muslim Calendar. They are set out in Table 2-1:

Table 2-1:  
Months of the Muslim Calendar

Month Number	Month Name
1 <sup>st</sup>	<i>Muharram (Moharram)</i>
2 <sup>nd</sup>	<i>Safar (Safar)</i>
3 <sup>rd</sup>	<i>Rabi' Al-Awwal</i>
4 <sup>th</sup>	<i>Rabi' Al-Thani</i>
5 <sup>th</sup>	<i>Jumadi Al-Awwal</i>
6 <sup>th</sup>	<i>Jumadi Al-Thani</i>
7 <sup>th</sup>	<i>Rajab</i>
8 <sup>th</sup>	<i>Sha'ban</i>
9 <sup>th</sup>	<i>Ramādān (Ramadan)</i>
10 <sup>th</sup>	<i>Shawwāl</i>
11 <sup>th</sup>	<i>Dhu Al-Q'ada</i>
12 <sup>th</sup>	<i>Dhu Al-Hijja</i>

<sup>107</sup> Fred M. Donner, *The Historical Context*, in *THE CAMBRIDGE COMPANION TO THE QUR'AN* 26 (Jane Dammen McAuliffe ed., New York, New York: Cambridge University Press, 2006).

<sup>108</sup> See *Islamic Calendar*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Islamic\\_calendar](http://en.wikipedia.org/wiki/Islamic_calendar). [Hereinafter, *Islamic Calendar*.]

<sup>109</sup> See *Solar Calendar*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Solar\\_calendar](http://en.wikipedia.org/wiki/Solar_calendar).

### [C] Formulas to Convert between "A.D." and "A.H."

Determining the equivalent year when working from either the *Gregorian*, or Muslim calendar can be a difficult task. Calendars, by their nature, are complex. When considering the *Gregorian* and Muslim calendars, as indicated, it must be remembered that one is a *solar tropical* calendar, while the other is a *lunar* calendar. The distinct types of calendars require a complex system of adding days at predetermined intervals to maintain its accuracy with the corresponding astronomical cycle. Under the *Gregorian* calendar this system periodically adds one day to the month of February in periodically spaced years that are known as "leap years." That day, of course, is the 29th of February.

Any year that is not a leap year is called a "common year." Leap years generally occur every four years. For example, 2008 and 2012 are leap years. However, when centuries change, a leap year only occurs if the year is divisible by 400, regardless of its divisibility by 4. Therefore, the year 2000 was a leap year as will be 2400, 2800, and 3200, while 1500, 1700, 1800 and 1900 are not. However, if a millennia year is divisible by 4000, then a leap year does not occur, even if the year is perfectly divisible by both 4 and 400. So, the years 4000, 8000, 16,000, 24,000 are not leap years even though these years are perfectly divisible by both 4 and 400.<sup>110</sup>

There is a similar system used with the Muslim calendar, which is called "*kabisha*."<sup>111</sup> This system adds one day to every third year. This day is added as the last day of the last month of the Muslim year, *Dhu al-Hijja*. In a normal year, this month has 29 days. In a "*kabisha*" year, *Dhu al-Hijja* has 30 days.

Converting from one calendar to another is a less complicated task than figuring out leap or *kabisha* years. There are a number of useful resources available both in the library and on-line.<sup>112</sup> One such resource gives the following formulas:<sup>113</sup>

- To convert a *Gregorian* (A.D. or C.E.) year to its counterpart *Hijra* year:

$$\text{Year A.H.} = 1.030684 \times (\text{Year A.D.} - 621.5643)$$

- To convert a *Hijrah* year (A.H.) to a *Gregorian* year:

$$\text{Year A.D.} = 0.970229 \times \text{Year A.H.} + 621.5643$$

Because of the complexities mentioned below these formulas are not quite accurate. However, they are very nearly correct, and can be used in converting *Gregorian* years to *Hijra* years and *vice versa*.

Using the first conversion formula, consider the year the University of Kansas was founded, 1865 A.D. It can be converted into its *Hijrah* year counterpart:

$$1.030684 \times (1865 - 621.5643) = 1281 \text{ to } 1282 \text{ A.H.}$$

<sup>110</sup> See <http://www.britannica.com>.

<sup>111</sup> <http://www.classicalislam.com/pages/history/dating.htm>. [Hereinafter, *Classical Islam*.]

<sup>112</sup> See, e.g., [www.calendarhome.com/convert](http://www.calendarhome.com/convert).

<sup>113</sup> See *Classical Islam*, *supra*.

Consider the second conversion formula by plugging the *Hijra* year of 1430 A.H. into it. The result is a calculation of the approximate value of the *Gregorian* counterpart of 1430 A.H. This *Hijra* year corresponds to 2009:

$$0.970229 \times 1430 + 621.5643 = 2008.99$$

This value does not quite equal the *Gregorian* year of 2009. But, the year 1430 A.H. overlaps 2008 and 2009, and accounts for some of the variation. Fortunately, to facilitate conversions from one calendar to another, several internet websites are available.<sup>114</sup>

It is easy to assume all cultures use the same calendars. However, there are many calendars in use throughout the world. The *Gregorian* and Muslim calendars are just two of these. There also are Jewish, Hindu, and Buddhist calendars. Although business meetings typically are marked by the *Gregorian* date, lawyers should be aware that not all cultures measure time the same way. An Internet search can mean the difference between complementing and insulting a prospective client or business partner, or between attending and missing (by years!) an important meeting.

#### [D] Mathematical versus Physical Determinations

A final point about the Islamic lunar calendar concerns astronomical calculations. Knowing when — with precision — key dates or times occur is important in practicing the Five Pillars. It matters not only to establish the starting and ending points of the fasting month of *Ramādān*, and for the *Hajj* season, but also every day in respect of the times to pray. How do Muslims know when a particular date begins or ends?

In a practical sense, Muslims can and do find the right times and dates via a newspaper, the internet, iPhone applications, announcement at a mosque, or simply word-of-mouth. But, this response begs a question: how is the right time or date calculated in the first place? There are two answers: mathematical calculations or physical determinations.<sup>115</sup> Each answer has its proponents. For example, Zulfikar Ali Shah of the Fiqh Council of North America favors the use of math to make astronomical calculations, and explains why in his book *The Astronomical Calculations and Ramādān* (2009). Hamza Yusuf of the Zaytuna Institute prefers physical observation — that is, use of the human eye — to render the necessary determinations. He defends this method in his book, *Caesarian Moon Births* (2006). The debate is a lively one, and is a testament to the use by Muslim scholars of careful analysis on a topic that inherently blends faith and science.

Both Zulfikar Ali Shah and Hamza Yusuf agree that the Qur'ān and *Sunnah* are the top two sources of Islamic Law, followed by consensus (*ijma'*) among legal scholars (*fukahā*), and finally, analogical reasoning (*qiyās*) applied by those

scholars. Shah's argument in favor of mathematical calculations starts with a textual analysis of *surah* 2 of the Qur'ān, which calls for a witnessing of the month of *Ramādān* as the trigger to commence fasting. The relevant Arabic verb is "*shahida*." Nothing in *surah* 2 (or in any other part of the Qur'ān) mandates physical sighting of the moon, nor compels a restrictive linguistic interpretation of this verb to mean eye witness. Shah finds a restrictive approach outdated, as it is based on the traditional culture in which jurists centuries ago lived. Thus, Shah infers that physical sighting is one, but not the only, method to make necessary astronomical calculations. Shah also suggests that mathematical calculations are used for prayer times and the *qibla*, based on the *Sunnah*, so they ought to be permissible for identifying the start and end of *Ramādān*. Put simply, just because physical sighting of the moon was the only method available at the time of the Prophet does not mean Muslims should restrict themselves to that method today, especially when it imposes practical burdens. No longer do they live in an era of mass illiteracy, or in one in which accurate astronomical calculations are impossible.

In contrast, Yusuf points to Qur'ānic passages in *surah* 2 concerning the *Ramādān* and *Hajj*. He argues their specificity in identifying the moon as a clock, i.e., as a device to time the fast and pilgrimage, suggests physical sighting is the proper methodology to identify "start" and "stop" points. As for the *Sunnah*, Yusuf says inconsistency that Shah criticizes makes sense: nothing in the *Sunnah* bars the use of mathematical calculations for prayer times and the *qibla* (the proper direction to face for prayer), but the *Sunnah* does reference sighting the moon to begin and break the fast. Moreover, Yusuf notes that consensus (*ijma'*) historically favors sighting of the moon with the physical eye as a mandatory condition for starting and ending *Ramādān*. Shah concedes that point, but urges the consensus should not be a stricture that undermines the original intent of the Qur'ān, nor should new scholarship in favor of a different consensus be precluded or ignored. Yusuf retorts with both pride and scorn: pride in the observational astronomy of Muslims, such as during the *Abbasid* Caliphate, and scorn for abstract, theoretical mathematics of modern times.

<sup>114</sup> See, e.g., <http://islamicfinder.com>.

<sup>115</sup> This discussion draws in part on an unpublished Book Review by Mr. Faisal Ali, University of Kansas School of Law J.D. Class of 2010, dated 1 December 2009, of *The Astronomical Calculations and Ramādān — A Fiqh Discourse*, by Zulfikar Ali Shah (Herdon, Virginia: International Institute of Islamic Thought, 2009).

## Chapter 3

### HOLY QUR'ĀN (610–650 A.D.): REVELATION, COMPILATION, AND TENETS

---

1. Faith and reason are both gifts of God to mankind.
2. Faith and reason do not contradict each other, but faith might in some cases be above reason, but never against it.
3. Faith and reason are intrinsically non-violent. Neither reason nor faith should be used for violence; unfortunately, both of them have been sometimes misused to perpetrate violence. In any case, these events cannot question either reason or faith.
- ...
5. Christians and Muslims should go beyond tolerance, accepting differences, while remaining aware of commonalities and thanking God for them. They are called to mutual respect, thereby condemning derision of religious beliefs.
- ...
7. Religious traditions cannot be judged on the basis of a single verse or a passage present in their respective holy Books. A holistic vision as well as an adequate hermeneutical method is necessary for a fair understanding of them.

Pontifical Council for Inter-Religious Dialogue, Sixth Colloquium, *Faith and Reason in Christianity and Islam*, Rome, 28-30 April 2008, posted at [www.vatican.va](http://www.vatican.va)

#### SYNOPSIS

### § 3.01 PROGRESSIVE REVELATION AND ORIGINS

#### [A] Theory of *Umm Al Kitāb*

A fascinating question in Islamic thought concerns the origins of the Qur'ān. A sinister possibility is noted and rejected by British historian and Member of Parliament Edward Gibbon (1737–1794):

... the enemies of Mohammed have named the Jew, the Persian, and the Syrian monk, whom they accuse of lending their secret aid to the composition of the Koran. Conversation enriches the understanding, but solitude is the school of genius; and the uniformity of a work denotes the hand of a single artist.<sup>1</sup>

In other words, the sacred scripture of Islam was not the product of human minds, nor from the mind of the Prophet. To the contrary, the sacred text is a gift from Allāh.

<sup>1</sup> EDWARD GIBBON, *THE DECLINE AND FALL OF THE ROMAN EMPIRE* 653 (1776) (New York, New York: Penguin Books, abridged version, 1980). [Hereinafter, GIBBON.] The 6 volumes of this work originally were published between 1776 and 1788.

How might Allāh have sent down this text? Some *ulema* believe an *Umm Al Kitāb* (Mother of the Book) exists. This Book also is called the “Guarded Tablet” or “Tablet Preserved.” The Book includes all the sacred texts sent to the prophets before Muhammad, such as the Old Testament prophecies, and even the Gospels of the New Testament. It also includes the final revelation, namely, the Qur'ān. The *ulema* are not clear as to whether the *Umm Al Kitāb* always existed, even before the creation of the universe and thus before time, or whether it came into existence with the origin of the world. Indeed, *Sunni* and *Shi'ite* scholars disagree on this point.

Did Allāh transmit the Qur'ān, out of the *Umm Al Kitāb*, from the highest to lowest Heaven? Some *ulema* expound on this question:

Abū Ameenah Bilal Philips noting some *hadīth* with admittedly weak *isnads* (narrative chains in the *Hadīths*) explains: “Allāh caused the Qur'aan to descend from the Protected Tablet . . . on which it was written to the lowest heaven. In this revelation all of the Qur'aan was sent down at one time to a station in the lowest heaven referred to as '*Bayt al-Izzah*' (the House of Honor or Power). The blessed night on which this descent took place is called '*Laylatul Qadr*' (Night of Decree), one of the odd numbered nights in the last ten days of *Ramadaan*.” Whenever the Mother of the Book came into existence, it is the source for the books given the messengers in pre-Islamic times that were superseded by the fullest revelation from God given to and through Muhammad. Another way to express the same point is that the Mother of the Book contains all the books or teachings revealed by earlier prophets and messengers in their uncorrupted forms, as well as the Qur'an revealed to Muhammad. The Qur'an is in full agreement and harmony with the other books.<sup>2</sup>

Does the *Umm Al Kitāb* contain the Qur'ān exactly as revealed to Muhammad? Or does it differ from the Qur'ān and previous sacred texts, because it includes hidden meanings not set out in that revelation? Muslim scholars are uncertain, and admit both as possibilities. According to standard Islamic understanding, once the entirety of the Qur'ān was in the lowest Heaven, the Archangel Gabriel (Jibreel) transmitted it in progressive states to the Prophet, and the last revelation to him is the completion of revelations from God — hence the common expression “Seal of the Prophet.”<sup>3</sup>

#### [B] Staged Revelation

One Orientalist fallacy is the Qur'ān sprang from the mind of Muhammad. To the contrary, the Muslims view the theory of the *Umm Al Kitāb*:

<sup>2</sup> WALTER H. WAGNER, *OPENING THE QUR'AN — INTRODUCING ISLAM'S HOLY BOOK* 147 (Notre Dame, Indiana: University of Notre Dame Press, 2008).

<sup>3</sup> See THE QUR'AN — *A New Translation* by M.A.S. Abdel Haleem (Oxford, England: Oxford University Press, 2004), 5:3 at 67. [Hereinafter QUR'AN.] *Surah* 5, *ayah* 3 is said by Muslim scholars to be the last one revealed to the Prophet, 81 days before he died, and Muhammad mentions it in his Farewell Sermon.

But Mohammed was content with a character more humble, yet more sublime, of a simple editor: the substance of the Koran, according to himself or his disciples, is uncreated and eternal, subsisting in the essence of the Deity and inscribed with a pen of light on the table of his everlasting decrees. A paper copy, in a volume of silk and gems, was brought down to the lowest heaven by the angel Gabriel . . . and this trusty messenger successively revealed the chapters and verses to the Arabian prophet.<sup>4</sup>

The period of this staged revelation to Muhammad was 22 years, from 610 A.D. when he was about 40 years old, until 632, the year of his death.

The Qur'ân itself refers to its staged revelation:

In truth, We have sent it, and in truth, it descended. And, what We sent to You is to make things clear, and to warn — a Koran, which We have divided into parts, so that You might recite it to mankind at intervals. For We have revealed it by stages.<sup>5</sup>

The end result was a sacred text, the Qur'ân, which contains 6,236 *ayat* (verses). (Detractors from Islam sometimes misstate the figure, 6,666, hoping to associate the text with the devil.) These *ayat* are organized into 114 *surahs* (chapters): 86 are Meccan *surahs* revealed from 610-622, and 23 are Medinan *surahs* revealed from 622-632.

Why did Allâh reveal the message to Muhammad in stages over the last 22 years of the life of Muhammad? Why not transmit it all at once? The human mind cannot possibly know the purpose of Allâh for the progressive revelation, but one possible explanation may be Allâh sent the revelations in bits to allow mankind to comprehend it rather than overwhelming everyone all at once. Perhaps there is an analogy with studying the *Shar'ia*: comprehending its scale and profundity takes time.

### § 3.02 FIVE BASIC FEATURES

Muslims believe the Qur'ân has the following features:

- (1) There is a grand pattern in the way in which the Qur'ân was revealed.
- (2) Each *ayah* was revealed to Muhammad at an appropriate time.
- (3) The Qur'ân is timeless.
- (4) The Qur'ân was revealed and is recited in an oral manner.
- (5) The Qur'ân is a living reality.

These features reflect, in part, the staged manner in which the Qur'ân was revealed.

<sup>4</sup> Gibbon, *supra*, at 656-657.

<sup>5</sup> Qur'ân, *supra*, 17:105-106 at 181-82.

#### [A] Pattern

Perusing the Qur'ân is not like reading the Bible. The Old and New Testaments are largely chronological (across and within books), they yield a panoramic history of the relationship between God and humankind, and contain countless didactic stories. In contrast, the Qur'ân is not chronological, and the *surahs* and *ayat* are not organized in the exact order they were revealed to the Prophet. It is not uncommon for the first-time non-Muslim western reader, steeped in the linear narrative of Judeo-Christian culture, to find the Qur'ân scattered. Verses next to each other deal with entirely different issues, and the overall reading experience becomes frustrating, perhaps especially for a legal mind, which demands a transparent order and purpose. Gibbon thus writes:

The harmony and copiousness of style [of the Qur'ân] will not reach, in a version, the European infidel; he will peruse with impatience the endless incoherent rhapsody of fable and precept and declamation, which seldom excites a sentiment or an idea, which sometimes crawls in the dust, and is sometimes lost in the clouds. The divine attributes exalt the fancy of the Arabian missionary; but his loftiest strains must yield to the sublime simplicity of the book of Job [in the Old Testament], composed in a remote age, in the same country, and in the same language. If the composition of the Koran exceeds the faculties of a man, to what superior intelligence should we ascribe the *Illiad* of Homer or the *Philippics* of Demosthenes?<sup>6</sup>

Aside from its gratuitous and judgmental sarcasm, there are at least two problems with this approach to the Qur'ân.

First, this approach understates the difficulty of reading the Bible, particularly the Old Testament. First timers to this text often are advised, rightly, to read the New Testament, and then its predecessor. By reading how the story ends, it is easier to understand the beginning and middle. The New Testament is shorter, and frequently more direct, than the Old Testament. Moreover, neither the Old nor New Testament is organized by topic. On almost any issue, multiple parts of the Bible will be relevant.

Second, this approach is impatient. There is a grand pattern in the way the Qur'ân was revealed. Just because passages are not arranged along a linear time line does not mean they bear no pattern. Rather, only God knows the nature and purpose of the pattern. Glimmerings are possible for a devout, contemplative, meditative reader. For instance, by focusing on a particular *surah*, a sense of commonality in that chapter emerges.

#### [B] Timing

Muslims believe the Qur'ân is a seamless document. But, they also believe each verse was revealed at the appropriate moment. That is, each verse was revealed when it was time for that revelation to take place. The verses were appropriate for informing some feature of the life of the Prophet, or of the community (*ummah*)

<sup>6</sup> Gibbon, *supra*, at 657-658.

that the Prophet led. Muslims say a particular verse was revealed at a specific moment because the meaning of that verse would be clear in that moment, in the context of that moment.

Theoretically, the revelation was made clear because it was done in stages. If the Qur'ān had been given all at once, then it would have been too overwhelming. The first Muslim community could not possibly have assimilated it all at once. It had to be given in stages, and in Arabic, so the first *ummah* could assimilate it properly.

### [C] Timelessness

When searching for a grand pattern, history shows how the order of revelation reflected the circumstances of the moment. But, the revelations bespeak the timeless nature of the Qur'ān. That is, the progressive revelation of the Qur'ān interacted with circumstances in the life of the Prophet and his community. Nevertheless, the Message of the Qur'ān is timeless.

Because the Qur'ān reflects the Will of Allāh, His Will applies to all times and circumstances. Muslims prefer not to suggest a verse, or the order of revelation of verses, were designed to resolve a specific problem at the time. A particular verse may have helped to resolve a problem in the life of the Prophet or his community. But, it did so precisely because of the timeless nature of the verse: it resolves that problem at any time.

### [D] Oral Revelation

Many times throughout the Qur'ān Allāh addresses the Prophet using the word "Recite." The Qur'ān often refers to itself as a recitation, thereby clearly conveying that the words were delivered orally to him by Allāh via the Archangel Gabriel, and that Muslims should hear it orally. Oral exposure remains significant. Muslims may read the Qur'ān to comprehend it, and ask scholars about its meaning. But, Muslims believe that truly to understand the Qur'ān, it is necessary to hear it recited, especially in Arabic.

### [E] Living Reality

The revelation of the Qur'ān to and through the Prophet is a living reality, not just an historical event, for Muslims. A Muslim lives within the "system:" always aware of the presence of the Qur'ān as the essence of Allāh expressed therein, of the need to respond to the Will of Allāh, of the extent to which he is (or is not) responding to the Will of Allāh. Muslims see Islam as a powerful living force that informs everything they do. This means Muslims have sought to find in the Qur'ān everything they need — all of the information — to lead their life in accordance with the Will of Allāh.

## § 3.03 COMPILATION AND ORGANIZATION

### [A] Literalism, Faith, and Orientalist Scholarship

A fascinating and controversial historical question is how and when the revelations to the Prophet Muhammad became the written document that has come to be known as the Qur'ān. How, when, and through whose efforts did the Islamic community (*ummah*) arrive at a canonical text of the Qur'ān? Many scholars, both Muslims and non-Muslims, have studied the origin of this sacred scripture. Western scholars specializing in Qur'ānic studies are known as "Orientalists." Because of the place of honor the Qur'ān occupies in Islam and Islamic culture, its study by Orientalists is a sensitive subject in some Muslim quarters for two reasons.

The first reason is literalism. Muslims believe the Qur'ān contains the *verbatim* Word of God as spoken to Muhammad through the Archangel Gabriel. Based on faith, it is a text to be accepted literally, one that declares itself to be inerrant. A literalist approach can, though it need not, become an unthinking one. In contrast, Orientalists study the Qur'ān from an academic perspective, which by nature is skeptical and critical. Consequently, some Muslims see the Orientalist approach to Qur'ānic study, relying on documents and records, or generating scholarly conferences and papers, which do not conform to orthodox Islamic belief, disparages their faith. That is so even if Orientalist scholars, despite their academic bent, have no intention whatsoever of disrespect.

Source documents can be particularly contentious. Often, documents used by Orientalists to piece together the early days of Islam were written several generations after the events they chronicle took place. Through some of these documents, conflicts between *Sunni* and *Shī'ite* Islam sometimes are apparent, and show different pictures of historical events and people. Using such documents to uncover the past can put an Orientalist scholar in conflict with a sectarian Muslim whose faith alone guides belief about the origins of the written Qur'ān, Muhammad, and early Muslim history.

Second, there is a common presumption not only among Orientalists, but throughout the secular academy, that faith and reason are incompatible. That presumption implies skepticism, even cynicism, about any explanation based on revealed truth as distinct from reasoned truth. Put bluntly, the response to an inquiry of "because the Qur'ān says so" simply is insufficient to the conventional academic mind. Surely, more inquiry will produce a "better" explanation? Perhaps, but for some Muslims, the response is more than sufficient, and pushing beyond it is futile at best and insulting at worst.

Neither literalism nor a tension between faith and reason plague Catholic Christianity. Hence, Biblical archaeology and hermeneutics are long-standing, widely-accepted, and widely-respected fields of study in Catholic theology. Catholic Christians do not regard the Bible in a literal sense: what it contains is true, but not every account in it happened exactly as it states. Moreover, faith and reason cannot contradict each other, but rather complement and reinforce each other. Thus, for example, how the world came into being, which is set out *The Book of*

*Genesis*, the start of the Old Testament, offers some accounts, but creation may not have occurred precisely as *Genesis* says. The Catholic Church accepts the scientific theory of evolution, and here is an example of faith and reason: reason discovered evolution; and faith teaches that evolution was the mechanism God chose and set in motion.

### [B] Revelation Writers

It is generally believed that Muhammad was illiterate.<sup>7</sup> Or, as politely expressed in Muslim circles, by tradition the Prophet was illiterate. However, he was in the habit of employing many secretaries, who with the help of other faithful Muslims wrote down many of the revelations he received before he died. The use by Muhammad of secretaries, and their duty to record the revelations, is supported by *hadith*.<sup>8</sup>

These secretaries, or scribes, are known as "Revelation Writers," many of whom were among his Companions (*Ṣaḥābah*). So, while the revelations were not collected into one official compendium during the life of the Prophet, every revelation had been memorialized in written form before his death.<sup>9</sup> This process was supported by some of his wives, including Khadyja, and many of his *Ṣaḥābah*, including the first four Caliphs (*Rashidun*), not to mention other faithful Muslims whose names are lost to history.

### [C] Four Types of Compilation

The term "compilation" in respect of the Qur'ān carries four distinct meanings:

- (1) Memorizing the entire Qur'ān by heart.
- (2) Arranging the *surat* (chapters) of the Qur'ān in correct order.
- (3) Arranging the *ayat* (verses) in each *surah* of the Qur'ān in correct order.
- (4) Writing down the entire Qur'ān as a definitive text.

The first task was accomplished by the Prophet during his lifetime, and by many *Ṣaḥābah*. To the present, some Muslims memorize the Qur'ān, and a "*hafiz*" is a person who has done so. Some Islamic schools (*mederis* or *madrasas*) emphasize rote memorization of the Qur'ān, to the consternation of many Muslim and non-Muslim authorities, who are concerned this education occurs at the cost of teaching skills needed for economic growth and development, and renders students vulnerable to manipulation by extremists. In the time of the Prophet, however, the

<sup>7</sup> See M.M. AL-AZAMI, *THE HISTORY OF THE QUR'ANIC TEXT FROM REVELATION TO COMPILATION: A COMPARATIVE STUDY WITH THE OLD AND NEW TESTAMENTS* 55 (Leicester, United Kingdom: U.K. Islamic Academy, 2003). [Hereinafter, AL AZAMI.] Professor Al Azami is a *Sunni* scholar of *hadith* at King Saud University in Riyadh, Kingdom of Saudi Arabia. But see W. MONTGOMERY WATT & RICHARD BELL, *INTRODUCTION TO THE QUR'AN* 34 (Edinburgh, United Kingdom: Edinburgh University Press, 1970). [Hereinafter, WATT.]

<sup>8</sup> See AL AZAMI, *supra*, at 68-69.

<sup>9</sup> See AL AZAMI, *supra*, at 77.

culture was an oral one. Memorizing and re-telling was the common way to convey information and knowledge.

As to arrangement of the *surat*, that occurred after the death of Muhammad, during the Caliphate of 'Uthman. However, scholars disagree as to whether Muhammad told his Companions the correct order of the chapters before he died. The *ayat* were put in the correct order during the lifetime of the Prophet. In particular, the Archangel Gabriel instructed Muhammad as to the correct order. Each year (around *Ramadhān*), Gabriel asked Muhammad to recite the entirety of what had been revealed to him up to that point. Muhammad was able to check that he had memorized each verse accurately, put the verses in the proper order, and correct any mistakes. In the year of his death, 632 A.D., two checks were made, and the fact Gabriel asked Muhammad twice in one year was a harbinger of his impending demise. Note, then, the order of the verses was set by the time the Prophet died, as was their division into chapters. But, whether the order of the chapters was set before his passing is uncertain.

What about the fourth aspect of compilation? Gibbon summarizes the efforts at writing down the Qur'ān as follows:

... the fragments of the Koran were produced at the discretion of Mohammed; each revelation is suited to the emergencies of his policy or passion; and all contradiction is removed by the saving maxim that any text of Scripture is abrogated or modified by any subsequent passage. The word of God and of the apostle was diligently recorded by his disciples on palm-leaves and the shoulder-bones of mutton; and the pages, without order or connection, were cast into a domestic chest in the custody of one of his wives. Two years after the death of Mohammed the sacred volume was collected and published by his friend and successor Abubeker [i.e., the First of the *Rashidun*]; the work was revised by the caliph Othman [the Second of the *Rashidun*], in the thirtieth year of the Hegira; and the various editions of the Koran assert the same miraculous privilege of a uniform and incorruptible text.<sup>10</sup>

The actual process was both more involved and interesting than Gibbon's summary might suggest. The first two of the *Rashidun* played a major role: Abū Bakr and 'Uthman.

### [D] Abū Bakr, Zaid bin Thabit, and Muṣṣḥaf

Abū Bakr, the first of the *Rashidun*, who reigned from 632-634, gathered the revelations received by Muhammad into one central, but unofficial volume. He did so in the first year after Muhammad died, in 633, for two reasons. First, with the death of the Prophet, the revelations were sealed — the last of them had been received in 632. Second, many *hafiz* (i.e., people who had memorized the Qur'ān) died in the campaigns of the Wars of Apostasy (*Riddah* Wars). The Battle of Yamamah,<sup>11</sup> in 632 (12 A.H.),<sup>12</sup> was particularly bloody, and many *hafiz*, who

<sup>10</sup> GIBBON, *supra*, at 657.

<sup>11</sup> See AL AZAMI, *supra*, at 77; but see WATT, *supra*, at 41 (explaining that the death lists available for

doubled as soldiers, were killed. Abū Bakr knew the deaths of so many *ḥafīz* created the potential for some revelations to be lost forever. Thus, in 633, with prompting from 'Umar, the Caliph began to collect, compile, and transcribe the revelations.<sup>12</sup> He ordered nothing of the Word of Allāh was to be lost.

Abū Bakr chose Zaid ibn Thabit to lead these efforts.<sup>14</sup> That was for good reason. Zaid, one of the Revelation Writers, was the personal scribe of Muhammad. Muhammad selected him to write down verses of the Qur'ān. Moreover, Zaid witnessed the last recitation of the Qur'ān by the Prophet in the presence of the Archangel Gabriel.

Zaid set about his task by locating Qur'ānic material all over the Arabian Peninsula, and according to him:

started locating the Quranic material and collecting it from parchments, scapula, leafstalks of date palms and from the memories of men (who knew it by heart).<sup>15</sup>

Devout Muslims brought to Zaid any evidence, be it writings or memories, of the revelations. Zaid used a system of witnesses to authenticate each revelation to ensure no illegitimate material found its way into the compilation.<sup>16</sup> This system was exacting. A purported revelation had to meet the highest standards to be judged veritable, namely:

- (1) There had to be two Muslim witnesses to testify written material was genuine as recorded *verbatim* in the presence of the Prophet.<sup>17</sup> Thus, Zaid would not accept memorization of a text alone; there had to be at least two corroborating witnesses that it was written down with Muhammad himself present.
- (2) The written material had to be from the last recitation to the Prophet as supervised by, and in the presence of, the Archangel Gabriel. Earlier recitations, for example, from 610 or 620, were discounted, as the last one was the full, complete, and accurate rendition of the Message sent by Allāh. To be sure, those earlier recitations were not irrelevant; rather, they had been repeated and refined over the years, culminating in the final one. An imperfect analogy might be the earlier versions, while authentic in themselves, were akin to a draft manuscript that goes through editing to yield a final form.

the battles in Yamamah generally contain the names of new converts to Islam who would likely not have known the revelations by heart).

<sup>12</sup> See Arthur Jeffery, *Materials for the History of the Text of the Koran* (1902), in *THE ORIGINS OF THE KORAN* 117 (Ibn Warraq ed., Amherst, New York: Prometheus Books, 1998).

<sup>13</sup> See AL AZAMI, *supra*, at 78.

<sup>14</sup> AL AZAMI, *supra*, at 78.

<sup>15</sup> Quoted in Zaid ibn Thabit, Wikipedia, posted at [http://en.wikipedia.org/wiki/Zaid\\_ibn\\_Thabit](http://en.wikipedia.org/wiki/Zaid_ibn_Thabit). [Hereinafter, Zaid ibn Thabit.]

<sup>16</sup> See AL AZAMI, *supra*, at 83-84.

<sup>17</sup> AL AZAMI, *supra*, at 80.

Assuming these two criteria were met, Zaid insisted authentic written material be placed in the same order as the Prophet had commanded, as commanded by Gabriel.

Then, with *bona fide* primary source material in hand, Zaid prepared sheets, or written pages (*suhuf*, or singular, sheet, or written page, *sahifa*) containing all of the verses. (The pages were comprised of leather, particularly from goats or sheep, or other materials, and sometimes rolled up as scrolls.) From the *suhuf*, he compiled a version of the Qur'ān, known as "*Mushaf*," which he presented to Abū Bakr.<sup>18</sup> It is worth pausing to appreciate that Zaid and his colleagues wrestled with issues that are central in modern-day American Evidence Law, namely, relevancy and authentication.

The *Mushaf* (plural, *masahif*) refers to the collected bundle of *suhuf*, and into a particular order, and in a single volume. Literally, "*Mushaf*" means "collection of pages," or "manuscript bound between two boards." In this context, it refers to the collected, written pages of the Qur'ān. Thus, Muslim scholars distinguish between the "Qur'ān," which is the revelation to Muhammad (because "Al Qur'ān" means "The Recitation") and the "*Mushaf*," which is the written expression of that revelation. Among Orientalists, the *Mushaf* also is referred to as the Codex, or more specifically, the Abū Bakr Codex. Note, too, that sometimes this text is dubbed the "*Suhuf*," connoting many sheets of parchment that technically not, but are identical to, the Qur'ān.<sup>19</sup>

Abū Bakr kept the *Mushaf* in his house. Significantly, he did not order the destruction of other versions of Qur'ānic passages, thus at the time there remained alternative fragmentary evidence that might, or might not, have borne differences from the *Mushaf* in respect of included or excluded verses, or the ordering of verses. It would be the Caliph 'Uthmān who would expunge this record.

Before dying in 634, Abū Bakr passed on the *Mushaf* to 'Umar, the second of the *Rashidun* Caliphs. 'Umar spread the Message contained in the Qur'ān around the Muslim world by sending teachers to its near and far reaches, and by expanding Muslim-controlled territory.<sup>20</sup> When 'Umar died in 644, the *Mushaf* passed to Ḥafṣa bint 'Umar, the daughter of 'Umar and a wife (and widow) of the Prophet.<sup>21</sup> Like two other wives ('Āisha and Umm Salamah Hind), Ḥafṣa memorized the entire Qur'ān. Until the second gathering, under the Caliphate of 'Uthmān, the *Mushaf* remained in the home of Ḥafṣa.

### [E] 'Uthmān and Canonical Text

The official compilation of the Qur'ān, and the version used ever since — the canonical text — was completed by the third *Rashīdun* Caliph, 'Uthmān, who reigned from 644–656, the successor to 'Umar. The motivation of 'Uthmān to compile a definitive Qur'ān also was found on the field of battle. His expeditionary forces, some of whom were Companions of the Prophet (*Ṣaḥābah*), came from different linguistic backgrounds, and could not agree on the proper recitation of the revelations.<sup>22</sup> The root cause of the problem is believed to have been the practice of Muhammad of teaching Muslim soldiers in their native dialects, rather than in the ritual dialect of the Qur'ān. Indeed, seven different ways of reciting the Qur'ān, called "*Qirā'āt*," emerged. ("*Qirā'āt*" refers to a method of reading or recitation.) The differences were on matters of style and grammar, such as the use of pronouns (e.g., the correct person, "you" versus "they," "he" versus "we," etc.), adjectives (e.g., "mighty" versus "multitudinous"), and verbs (with slightly different connotations).<sup>23</sup> As the great Arab-Islamic Empire expanded, and the efforts of the Caliph to spread the faith to new subjects were undermined not only by these quarrels, but also by the logical demand of prospective converts to Islam for a single, unified message recited in a consistent manner. The *Qirā'āt* generated controversies among the apostles of Islam, and created confusion among their sought-after flock.

'Uthmān put an end to the infighting associated with different vernaculars by compiling the revelations into an official text, the 'Uthman Codex. This Codex uses the *Qurayshī* dialect of Arabic, the dialect in which Muhammad, a member of the *Quraysh* tribe, received the revelations from Gabriel.<sup>24</sup> To assist in his undertaking, 'Uthmān used the *Mushaf* that had come into the possession of Ḥafṣa, though the extent to which it played a role in his compilation is debated.<sup>25</sup> He may have copied the *Mushaf verbatim*. Or, 'Uthmān may have used it as a reference, while contemporaneously collecting written and oral recollections from believers, and then checking his final compilation against the *Mushaf* to ensure its accuracy.

Whichever is the case, the newly collected Qur'ān is believed to have been identical with the previously collected *Sukuf*. It is not thought that there are differences between the Abū Bakr text and the 'Uthmān text of the Qur'ān, meaning specifically that 'Uthman is not thought to have changed the work done under Abū Bakr. Seeing no continued need "for the numerous fragments of the Qur'ān circulating in people's hands" 'Uthman ordered them burned, to which the

<sup>22</sup> See AL AZAMI, *supra*, at 87.

<sup>23</sup> See *Qir'at*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Qir'at>.

The term "*qirā'āt*" is closely related to the term "*akraf*," which refers to the seven different ways in which the Qur'ān is said to have been revealed, that is, the seven Arabic dialects in which it was recited. As explained above, they were standardized into a single dialect, *Qurayshī*, during the Caliphate of 'Uthman. The difference is that "*qirā'āt*" concerns pronunciation. See *id.*

<sup>24</sup> See AL AZAMI, *supra*, at 87–88.

<sup>25</sup> See AL AZAMI, *supra*, at 88; but see Watt, *supra*, at 40–42 (expressing doubt that Abū Bakr ever compiled an official composite document of the revelations to Muhammad).

people gave "unanimous approval."<sup>26</sup> Evidently, 'Uthman also was motivated to destroy all other Qur'ānic versions and fragments to ensure nothing incompatible with the text he prepared would survive and cause confusion about the Message as to its substantive content (i.e., included or excluded passages), or the precise order of *surat* and *ayat*. 'Uthman then sent copies of the Official Codex to teachers in several Muslim cities throughout the Empire, instructing them to teach from this Qur'ān.<sup>27</sup> Along with these copies, he sent guidebooks to ensure all differences among the seven *Qirā'āt* were eliminated.

The burning of the *Mushaf* and whatever other fragments were in existence at the time is, in retrospect, a tragedy. Ideally, the Abū Bakr Codex and all extant documentation would have been stored in a secure location. Subsequent generations of scholars then could have a clear, linear record of how the canonical text of the Qur'ān evolved. In any event, Muslims believe the Qur'ān compiled by 'Uthmān, when read in its proper language, contains the *verbatim* revelations to Muhammad, just as they were revealed by God through the Archangel Gabriel.

### [F] Meccan Surahs (610–622 A.D.) and Medinan Surahs (622–632 A.D.)

With respect to patterns in the Qur'ān, it is possible to see two basic categories that correspond with the two periods of the "ministry" of the Prophet. Muhammad received the first revelation in 610 and soon began sharing the revelations with his small following. The verses revealed while he was living in Mecca, where he endured persecution and abuse from city leaders, are collected into what are called the "Meccan *surahs*." The Prophet fled to Medina in 622, where his Message was welcomed. The verses revealed during this time until his death are organized in the "Medinan *surahs*." Generally speaking, the Medinan *surahs* tend to come first, and the Meccan *surahs* tend to occupy much of the end of the Qur'ān. Table 3-1 summarizes the names, origin, and placement of the 114 Qur'ānic chapters.

Table 3-1:  
Chapters (*Surat*) of the Qur'ān — Place of Revelation

Surah Number	English (Arabic) Title	Place of Revelation <sup>28</sup>
1	The Opening ( <i>Al-Fatiha</i> )	Revealed twice, once in Mecca and once in Medina. <sup>29</sup>

• **First Stage: Meccan Surahs (610-622)**

The first stage began when the Prophet received the first revelation in 610 and lasted until the *Hijra* in 622, when Muhammad and his followers left Mecca and moved north to Medina. Most of the revelations given to the Prophet while in Mecca reflect the original location. These verses tend to be short, powerful, and poetic. They are profound, but their profundity is compressed in a small number of words.

The pithy, potent *surat* of the Meccan period focus on warnings. They identify the power of Allāh, they warn humans that there will be an end of time, a Final Judgment, and they warn people to prepare for that end of time. These *surat* are recited throughout the modern Islamic world as every Muslim is called to prayer. There is a kind of poetry and power to the words even if a listener is unable to understand the Arabic words. They were appropriate for the circumstances when the revelation began.

• **Second Stage: Medinan Surahs (622-632)**

When the Prophet moved to Medina with his community, known as the *Hijra*, the second stage of his ministry began. This stage would continue for the last 10 years of his life, as the Prophet was the leader of a more complete Islamic community that was inspired by the principles of the Message he bore.

Throughout the second stage, Medina was the base for the Prophet. The very movement of the Prophet made Medina hugely important in the history of Islam. Medina became the place where the first real Islamic community was founded and came into being. After 12 hard years in Mecca, the Prophet established a community (*umma*) guided by the principles of the Qur'ān. In Medina, as he led this community, the nature of the revelations changed. The verses illuminate the newly-created *umma* as it develops and matures. It was appropriate, in the eyes of Allāh, for the change to take place, and to reveal the verses to support the evolution of the *umma*.

The chapters received in Medina are longer than those from Mecca, hence the Medinan *surat* occupy much of the space of the Qur'ān. The Medinan *surat* take the

<sup>31</sup> See [www.islamicity.com](http://www.islamicity.com).

form of advisory statements. The Medinan period is known as the period of "Qur'anic Legislation." The verses in the Medinan *surat* detail what one is supposed to do to respond to the warnings given repeatedly in the revelation of the Meccan *surat*. Thus, much of "Islamic Law" comes from the Medinan period.

The Medinan *surat* also contain elaborate stories. There are several parallels between them and stories in the Old Testament of the Bible. From an Islamic perspective, the true stories are the versions in the Qur'an, while the Biblical accounts somehow were corrupted to one degree or another. These differences aside, a commonality in the Judeo-Christian-Islamic heritage are stories about great early figures — the Prophets who preceded Muhammad.

### § 3.04 COMPARISONS TO BIBLE

#### [A] Overview

In approaching the Bible and its compilation, it is important to understand the similarities and differences between the *Tanak* and Old Testament. First, the *Tanak* is the Jewish sacred text, or holy book, while the Old Testament is part of the Christian holy book. The Old Testament occupies much more than half of the Christian Bible, and is specifically concerned with the time before Jesus Christ was born.

The *Tanak* is divided into 3 separate collections of books: the *Torah*, the *Prophets* (*Nevi'im*), and the *Writings* (*Kethuvim*). These books are roughly in chronological order, and they comprise the original canon of the Jewish faith:<sup>32</sup>

- The *Torah*, consisting of 5 books, chronicles the origins of humanity followed by the story of Abraham. Abraham was the father of Isaac and Ishmael, who are the patriarchs of the Judaism and Islam. The last 4 books contain the story of Moses, who received the 10 Commandments from God.<sup>33</sup>
- The books of the *Nevi'im* (*Prophets*) contain a recitation of an early period of Jewish history. Jewish conquests and defeats of this period are recounted, including the story of King David, along with many prophecies.<sup>34</sup>
- The *Kethuvim* (*Writings*) holds the *Psalms*, which are devotional hymns used at both Jewish Temple, and in Christian worship. The *Kethuvim* also contain a recitation of Jewish history that ends by leaving the future of the Jewish people uncertain.<sup>35</sup> Both the *Nevi'im* and *Kethuvim* are meant to call people back to a life of faith towards God, and to show when Israel has

<sup>32</sup> See STEPHEN L. HARRIS, UNDERSTANDING THE BIBLE 3 (New York, New York: McGraw Hill Higher Education, 6th ed., 2003). [Hereinafter, HARRIS.]

<sup>33</sup> See HARRIS, *supra*, at 10.

<sup>34</sup> See HARRIS, *supra*, at 10.

<sup>35</sup> See HARRIS, *supra*, at 10.

followed Divine Law, and when it has not.<sup>36</sup>

The Old Testament recognized by the Catholic Church contains the same books found in the *Tanak*. However, there are 14 additional books present in the Catholic Old Testament. These additional books include later writings never adopted in the Jewish faith.<sup>37</sup> They are sometimes known as the *Apocryphal* books, meaning "hidden," or "deuterocanonical," meaning they are the "second canon."<sup>38</sup> These books had fallen out of use by Protestant Christians. But, lately they have regained some measure of popularity by being included in many current publications of Bibles used by Protestants, although these books are sometimes contained in a separate section.

The Old Testament also is divided into groupings of books. However, the book sections in the Catholic Old Testament do not conform to the sections found in the *Tanak*. The first section of the Christian Old Testament is known as the *Pentateuch*, which (as the title intimates) is composed of the first 5 books of the Bible: *Genesis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*.<sup>39</sup> The following sections are the *Historical Books*, *Wisdom Books*, and *Prophetic Books*:

- *Pentateuch*: These books form the basis on which the rest of the Christian Bible, and *Tanak* are based. Even though the *Pentateuch* is divided into 5 separate books "[it] has always been understood as a single work,"<sup>40</sup> The *Pentateuch* relates Christian and Jewish beliefs concerning the Creation of the world by God (in *Genesis*), through the period of Jewish slavery in Egypt and to the verge of settlement in the Promised Land (*Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*).<sup>41</sup> These books are written in the form of prose that teach the laws and historical narratives of the early Jewish People.<sup>42</sup>
- *Historical Books*: Generally this section of the Old Testament is composed of the books ranging from *Joshua* to 2 *Maccabees*. The Catholic Study Bible starts *The Historical Books* with 1 *Samuel*.<sup>43</sup> The message of this grouping of books is that Israel is punished when it sins, but can flourish if the people return to a goodly life. Also included in the *Historical Books* is the promise

<sup>36</sup> See THE CATHOLIC STUDY BIBLE RG 37 (New York, New York: Oxford University Press, 1990, New American Bible trans.). [Hereinafter, BIBLE.]

<sup>37</sup> See HARRIS, *supra*, at 3.

<sup>38</sup> HARRIS, *supra*, at 6. "Deuterocanonical" connotes the book is a later writing that was originally composed in Greek instead of Hebrew, and not adopted for use in the *Tanak*. See BIBLE, *supra*, at RG 37.

<sup>39</sup> The name "*Pentateuch*" comes from the title given in the earliest Greek translation that dates to the 2nd century B.C., and means a five part writing." See BIBLE, *supra*, at RG 37. In the *Tanak* these books are known as the *Torah*. This reference to the *Torah*, and all other references herein to the *Torah*, *Nevi'im*, and *Kethuvim*, are from HARRIS, *supra*, at 4–5.

<sup>40</sup> BIBLE, *supra*, at RG 36–37.

<sup>41</sup> See BIBLE, *supra*, at RG 39.

<sup>42</sup> See BIBLE, *supra*, at RG 38.

<sup>43</sup> See BIBLE, *supra*, at RG 37.

of God that the ancestral line of King David will not perish.<sup>44</sup>

- *The Wisdom Books:* This section of the Old Testament consists of the books from *Job* to *Ecclesiastes*. These books teach that there is a proper way to live, in which people seek what is good and avoid what is evil. By seeking what is good, through a virtuous life, a person becomes successful and happy. This success and happiness is evidence of the wisdom a person gained throughout life.<sup>45</sup> "Israel's wisdom tradition . . . may not focus on specifics of religion but it is highly ethical, fundamentally monotheistic, and, at times, equates wisdom with fidelity to the law of Israel."<sup>46</sup>
- *The Prophetic Books:* This section of the Old Testament contains the books from *Isaiah* to *Malachi*. These books recount the lives and teaching of people who were called by and received the messages from God to humankind, then transmitted those messages to their communities through the Prophets. They passed judgment on the actions of the people and guided the people concerning public, private, and political matters.<sup>47</sup>

All Christians believe Jesus Christ is the Messiah whose coming is prophesized in the Old Testament. Saint Joseph, the earthly step-father of Jesus, who adopted Jesus as his son, was a descendant of King David. Thus, Christians believe Jesus is the heir of David, and His birth fulfills the promise of God, recorded in *2 Samuel*, as to the line of David.

The first 4 books of the New Testament are the Gospels as related by Saints Matthew, Mark, Luke and John. Following the Gospels is a history of the early Christian Church, the New Testament Letters, and the Revelation to Saint John:

- *The Gospels:* The word "Gospel" means "Good News."<sup>48</sup> There are 5 books in this section: *The Gospel According to Matthew*; *The Gospel According to Mark*; *The Gospel According to Luke*; *The Gospel According to John*; and *The Acts of the Apostles*. The first 4 books each tell the story of Jesus Christ, and the word "Gospel" is used to define His incarnation as a human, the Crucifixion, and the Resurrection that Christians believe provides humanity with salvation from sin, including original sin. (Muslims do not believe in original sin, and thus do not see the need for salvation from it. Likewise, they do not believe Christ was the Son of God, or that he was crucified or resurrected. Rather, they believe he was saved at the last minute and raised up to Heaven.) *The Acts of the Apostles* tells the story of the expansion of the early Christian Church to Gentiles and focuses largely on the works of Saints Peter and Paul.<sup>49</sup>
- *The New Testament Letters:* This section of the New Testament starts with *The Letter to the Romans*, and ends with *The Letter to the Hebrews*. These

<sup>45</sup> See BIBLE, *supra*, at RG 231-232.

<sup>46</sup> BIBLE, *supra*, at RG 232.

<sup>47</sup> See BIBLE, *supra*, at RG 877.

<sup>48</sup> See BIBLE, *supra*, The New Testament at 1.

<sup>49</sup> See BIBLE, *supra*, The New Testament at 184-185.

14 letters are all attributed to Saint Paul, although some of them are believed to have been written by his disciples and secretaries.<sup>50</sup> Saint Paul was writing words of encouragement to the wide-spread Christian communities, and the letters that are actually his work predate the books of the Gospels.<sup>51</sup>

- *The Catholic Letters:* There are 7 books in this section of the New Testament, from *The Letter of James*, to *The Letter of Jude*. While Saint Paul addressed a specific Christian community as his audience, these letters address Christians in general, and were written by authors of the second and third generations of Christianity.<sup>52</sup> In contrast to *The Catholic Letters* is *The Book of Revelation*. *Revelation* is attributed to Saint John, and it is full of apocalyptic symbolism. The message found in it is even in times of trouble (including the actual apocalypse) Christians need have no fear, because Christ will bring them through those times, and into Heaven.<sup>53</sup>

Extra-canonical writings are also present in Jewish and Christian history. These are writings that for one reason or another are not included in the Christian books. Examples of controversial extra-canonical writings are the Gnostic Gospels.

## [B] Tabular Summary

Table 3-2 is a SYNOPSIS of the Bible, both Old and New Testaments. This Table has 73 rows and 3 columns. The 73 rows cover each of the separate books in the Hebrew and Catholic Christian Bibles. The first column provides the section of the Bible in which the discussed book is found. The second column lists the title of the book. The third column summarizes information on authorship, and date and place of composition.

<sup>50</sup> See BIBLE, *supra*, The New Testament at 228.

<sup>51</sup> See BIBLE, *supra*, The New Testament at 228.

<sup>52</sup> See BIBLE, *supra*, The New Testament at 228, 368.

<sup>53</sup> See BIBLE, *supra*, The New Testament at 398-400.

Table 3-2:  
The Bible — Old and New Testaments

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The Pentateuch: <i>Torah</i>	Genesis	There are four separate traditions which are sources for The Book of Genesis. They are the <i>Yahwist</i> (characterized by referring to God with the name <i>Yahweh</i> and written in the 9th or 10th century B.C.), <i>Elohist</i> (characterized by using the more generic term <i>Elohim</i> for God, written after 900 B.C.), <i>Priestly</i> (chronological lists and genealogies (work ended in 458 B.C. with Ezra), and <i>Deuteronomist</i> (characterized by its hortatory style, and themes of worship centered around the Temple, 800-700 B.C.). It is not clear when this book was written, but certain historical events are captured within it, which are also documented in non-Biblical sources, and can be dated to 2000-1500 B.C. The social conditions reflected in this book reflect the conditions present after 2000 B.C. Traditionalists believe Moses is the author of the Pentateuch. However, it is more likely there was a series of authors, which ended with Ezra's declaration of the text as sacred in 458 B.C. Genesis contains narrative prose as its literary form.
The Pentateuch: <i>Torah</i>	Exodus	Exodus contains both narrative and legal prose. The historical events documented in Exodus probably took place around 1300 B.C.
The Pentateuch: <i>Torah</i>	Leviticus	Leviticus contains legal prose.
The Pentateuch: <i>Torah</i>	Numbers	Numbers contains both legal and narrative prose.
The Pentateuch: <i>Torah</i>	Deuteronomy	Deuteronomy contains legal prose, and was approximately composed around 700 B.C.

All quotations are from *id.*, Readers Guide (RG).

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	Joshua	The approximate date of composition is 600 B.C.
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	Judges	Depicts events taking place between B.C. 1220-1050, but was written after 586.
The Historical Books- <i>Kethuvim</i>	Ruth	It is not clear if this book was written before or after Israel's period in Exile. While the style seems similar to that used before exile, the context seems to be from around 450B.C.
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	1 Samuel	The approximate date of composition is 600 B.C.
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	2 Samuel	The approximate date of composition is 600 B.C.
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	1 Kings	The approximate date of composition is 600 B.C.
The Historical Books-Deuteronomistic History: <i>Nevi'im</i>	2 Kings	Describes King Josiah's reign (640-609 B.C.), and written after 586.
The Historical Books-Chronicler's History: <i>Kethuvim</i>	1 Chronicles	Written in the 500s B.C.
The Historical Books-Chronicler's History: <i>Kethuvim</i>	2 Chronicles	The approximate date of composition of 2 Chronicles might be 450 B.C. <sup>57</sup>
The Historical Books-Chronicler's History: <i>Kethuvim</i>	Ezra	Written after Ezra arrived in Jerusalem in 398 B.C.
The Historical Books-Chronicler's History: <i>Kethuvim</i>	Nehemiah	Written after Nehemiah arrived in Jerusalem, in 445 B.C. At least part of this work is written in the first person, and is attributed to Nehemiah himself.

<sup>57</sup> See <http://netministries.org/Basics/BB2Chron.htm>

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The Historical Books: Deuterocanonical	Tobit	Tobit is the work of a single author, who wished to compose a religious novel of sorts.
The Historical Books: Deuterocanonical	Judith	Judith was not a book intended to report accurately the history of Israel, but is instead a meditation on God's care for Israel.
The Historical Books: <i>Kethuvim</i>	Esther	Portrays events that took place in the 5th century B.C. <sup>58</sup>
The Historical Books: Deuterocanonical	1 Maccabees	1 Maccabees depicts historical events that took place between 175-104 B.C.
The Historical Books: Deuterocanonical	2 Maccabees	2 Maccabees depicts historical events which took place between 180 and 161 B.C.
The Wisdom Books: <i>Kethuvim</i>	Job	There are three hypotheses as to the date of this book: 7th, 6th, or 5th century B.C.
The Wisdom Books: <i>Kethuvim</i>	Psalms	Psalms is a collection of separate books attributed to different authors. Dating the Psalms is difficult but at least some are traditionally attributed to King David or to others who lived during the same time.
The Wisdom Books: <i>Kethuvim</i>	Proverbs	At least part of Proverbs can be linked to a reform movement of King Hezekiah who ruled during the 7th century B.C.
The Wisdom Books: Deuterocanonical <i>Kethuvim</i>	Ecclesiastes	This book was probably written during the 3rd century B.C. although questions remain regarding its date, place of origin and authorship.
The Wisdom Books: <i>Kethuvim</i>	Song of Songs	An interpretive approach, such as was used in the <i>Song of Songs</i> , was common from about 20 B.C. to 54 A.D. in Jewish tradition, and likewise from 185 to 254 A.D. in Christian circles.
The Wisdom Books: Deuterocanonical	Wisdom	The approximate date of composition for this book is the 1st century B.C. It was written in Greek but is a Jewish work.
The Wisdom Books	Sirach	Sirach was written by Jesus, son of Eleazar between 200 and 175 B.C., and "was translated into Greek sometime after 132 B.C."

<sup>58</sup> See HARRIS, *supra*, at 293.

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The Prophetic Books: <i>Nevi'im</i>	Isaiah	This book is generally attributed to Isaiah in the 8th century B.C., although there is the presence of at least one other author who was writing "at the end of the Babylonian exile," and covers 742-500.
The Prophetic Books: <i>Nevi'im</i>	Jeremiah	Much of this book is attributed to Jeremiah or to his disciples, and it was written in the 7th and 6th centuries B.C.
The Prophetic Books: <i>Kethuvim</i>	Lamentations	Although this book is sometimes attributed to Jeremiah and his distress at the destruction of the Temple there are indications within the book that Jeremiah is not its author.
The Prophetic Books: Deuterocanonical	Baruch	Baruch was the secretary to Jeremiah and would have been composing works shortly after Jeremiah. However, a reference to Sirach places at least one of the authors no earlier than 190 B.C., with a compilation within a single book probably dating from 180.
The Prophetic Books: <i>Nevi'im</i>	Ezekiel	Ezekiel prophesied from 593-571 B.C. but this work continued to be edited by later scholars.
The Prophetic Books: <i>Kethuvim</i>	Daniel	The earlier parts of Daniel were written between 168 and 164 B.C., but there are later additions. The author of Daniel is not known.
The Prophetic Books: <i>Nevi'im</i>	Hosea	Hosea was a Prophet in the 8th century B.C.
The Prophetic Books: <i>Nevi'im</i>	Joel	Joel was written around 400 B.C.
The Prophetic Books: <i>Nevi'im</i>	Amos	Amos was an early Prophet whose teachings were transmitted orally, and were only put in book form during a later period. He probably lived in the 8th century B.C.
The Prophetic Books: <i>Nevi'im</i>	Obadiah	6th or 5th century B.C.
The Prophetic Books: <i>Nevi'im</i>	Jonah	Jonah was written in the postexilic period.
The Prophetic Books: <i>Nevi'im</i>	Micah	Micah was an 8th century B.C. Prophet, and some of this book is attributed directly to him. However, at least two chapters were "probably added after the Babylonian exile."
The Prophetic Books: <i>Nevi'im</i>	Nahum	Nahum depicts the fall of Ninevah, which took place in 612 B.C.

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The Prophetic Books: <i>Nevi'im</i>	Habakkuk	Habakkuk prophesied only a few years after Nahum.
The Prophetic Books: <i>Nevi'im</i>	Zephaniah	Zephaniah was a slightly earlier Prophet than Nahum.
The Prophetic Books: <i>Nevi'im</i>	Haggai	520 B.C.
The Prophetic Books: <i>Nevi'im</i>	Zechariah	Zechariah was a contemporary of Haggai, but more than one author wrote this book.
The Prophetic Books: <i>Nevi'im</i>	Malachi	Malachi was written around 455 B.C.
The Gospels	Matthew	The majority of scholars currently believe that Matthew was not the author of this book. This belief is based in large part on the fact it draws greatly from Mark. The author of Mark does not claim to have been a companion of Jesus. Matthew was probably written around 80 A.D., in the Roman capital of Syria.
The Gospels	Mark	It is believed Mark was the first Gospel written, and was used as one of two sources by the writers of Matthew and Luke. John Mark, who is referred to as the interpreter of Peter, probably wrote this book around 70 A.D. Because this book evinces a lack of familiarity with Jewish customs, some scholars believe a gentile wrote it, probably in Syria.
The Gospels	Luke	Authorship by Luke generally is attributed to a Syrian named Luke. Luke was not a first generation Christian, and he used both The Gospel of Mark and another source in writing this book. It was probably written around 80 or 90 A.D.
The Gospels	John	John might represent a tradition separate than the tradition that produced Matthew, Mark and Luke. This book likely has more than one author, although it may be later editors inadvertently changed the text. An eyewitness to the life of Jesus likely wrote this book, but the final arrangement probably was not completed until around 90 A.D.
The Gospels	Acts	Acts was probably written by the same Luke to which the Gospel is attributed.
The New Testament Letters	Romans	Saint Paul wrote this letter probably between 56 and 58 A.D., from Corinth Greece.

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The New Testament Letters	1 Corinthians	Saint Paul wrote this letter around 56 A.D., from Ephesus.
The New Testament Letters	2 Corinthians	Saint Paul wrote this letter around 57 A.D., probably in Macedonia.
The New Testament Letters	Galatians	Saint Paul wrote this letter, probably around 55 A.D. from Ephesus.
The New Testament Letters	Ephesians	Saint Paul might or might not be the author of this letter. Possibly, it was written by a secretary acting on order from Paul, and may be a circular letter, rather than intended only for the Ephesians. It probably was written around 90 A.D.
The New Testament Letters	Philippians	Saint Paul wrote this letter, although the place and time of writing are debated. It may have been written in Caesarea between 57-58 A.D., or in Rome between 59 and 63, or Ephesus in 55. There also is the possibility that it is a composite of several Pauline letters.
The New Testament Letters	Colossians	Saint Paul wrote this letter, but the place and time of composition remain debated.
The New Testament Letters	1 Thessalonians	This letter was written by Saint Paul, because of news brought to him by Timothy, probably around 51 A.D.
The New Testament Letters	2 Thessalonians	This letter might not have been written by Saint Paul, but only on his authority. It probably was written around 80 A.D.
The New Testament Letters	1 Timothy	There are problems concerning authorship with this letter. If it was written by Saint Paul, then he probably did so around 65 A.D. If it was written by some other author, then it might have been composed "as late as the early second century" A.D.
The New Testament Letters	2 Timothy	See 1 Timothy
The New Testament Letters	Titus	See 1 Timothy

Section of Bible <sup>54</sup>	Title of Book <sup>55</sup>	Authorship and Estimated Date of Writing <sup>56</sup>
The New Testament Letters	Philemon	This letter was written by Saint Paul, likely while he was imprisoned in Rome between 61 and 63 A.D.
The New Testament Letters	Hebrews	It is not known who wrote this letter, or where it was written.
The Catholic Letters	James	This letter might have been written, through use of a secretary by a relative of Jesus named James. If so, then it probably is the earliest written New Testament work, dating to before 70 A.D. However, some scholars doubt this date, and place it around 90.
The Catholic Letters	1 Peter	This letter might be that of Saint Peter working through a secretary, or to a later author. If Peter is the author, then it likely was written around 60 A.D. Some scholars suggest the letter was written about 30 years later.
The Catholic Letters	2 Peter	This letter was not written by Saint Peter. It likely was likely written in the early to middle 2nd century A.D.
The Catholic Letters	1 John	1 John is much more like a treatise than a letter, and probably was written by a person in the same community that produced the Gospel According to John. This book was probably written towards "the end of the first century" A.D.
The Catholic Letters	2 John	2 and 3 John likely were written by the same author, and they are related to 1 John and the Gospel According to John.
The Catholic Letters	3 John	See 2 John.
The Catholic Letters	Jude	Jude likely was the brother of James, the relative of Jesus. Scholars do not believe Jude was the author of this work, instead proposing it was written at the earliest, at the end of the 1st century A.D.
The Catholic Letters	Revelation	The author of this book likely was "a disciple of John the Apostle," who wrote this apocalyptic book towards the end of the 1st century A.D.

## § 3.05 CONTROVERSIES ABOUT READINGS AND LANGUAGE

### [A] Debate about Variant Readings (*Qirā'āt*)

A corollary to the belief the Qur'ān is the *verbatim* Word of God (Allāh) is a belief the Qur'ān is timeless and unchanging. Muslims have had to defend this belief from the scholastic assault of Orientalists, who study the origins of the written Qur'ān. A point of contention concerns variant recitations of the Qur'ān — the *Qirā'āt*. Orientalist scholars argue the existence of variant readings (whether they are recitations believed by Muslims to be orthodox or not) are proof of the human origins of the Qur'ān. Muslim scholars counter that differences in recitation exist because Allāh allowed the Prophet to teach his followers in their own native dialects rather than in the *Qurayshi* dialect in which the Qur'ān was revealed — a problem faced and solved in the Caliphate of 'Uthmān.<sup>59</sup> Muslims urge that notwithstanding linguistic differences, each of the variant recitations is authoritative and correct as Muhammad taught them.<sup>60</sup>

Ibn Mujāhid was a Muslim scholar who advocated the use of only seven versions of the revelations. These seven *Qirā'āt* were believed to be the seven dialects in which Muhammad taught converts who did not understand the *Qurayshi* dialect.<sup>61</sup> Through the efforts of Ibn Mujāhid and others, the use of readings that did not conform to these seven recitations became illegal.<sup>62</sup> The illegality of non-conforming readings extended even to ones attributed to Companions of the Prophet, namely, Ubayy ibn-Ka'b and 'Abd-Allah Ibn Mas'ūd.<sup>63</sup> The New Standard Egyptian Edition of the Qur'ān makes use of one of these seven readings: the reading attributed to a teacher from Kufa, Iraq, named Hafs.<sup>64</sup>

A second area of friction between Orientalist and Islamic scholarship is the skeletal form of the early Qur'ānic text. In its earliest forms, the text did not include diacritical marks. Diacritical marks are signs placed above or below Arabic character script, not only to assist in pronunciation (as the marks signify vowel sounds like "a," "e," and "u"), but also to clarify an otherwise ambiguous meaning. When these marks are not present, it is possible to give a character a meaning other than the one intended by its author. This absence potentially would allow a person reading the Qur'ān to insert a meaning different from that taught by Muhammad.

Muslims scholars believe the early skeletal texts remain faithful to the Codex of 'Uthmān.<sup>65</sup> Also, because of the importance placed on oral learning in the Muslim

<sup>59</sup> See AL AZAMI, *supra*, at 151-153.

<sup>60</sup> See AL AZAMI, *supra*, at 153.

<sup>61</sup> See W. MONTGOMERY WATT AND RICHARD BELL, INTRODUCTION TO THE QUR'AN 48 (Edinburgh, United Kingdom: Edinburgh University Press, 1970).

<sup>62</sup> See ENCYCLOPEDIA OF ISLAM, *supra*, vol. 3 at 880 (entry on Ibn Mujāhid by J. Robson).

<sup>63</sup> See WATT, *supra*, at 49.

<sup>64</sup> See WATT, *supra*, at 49.

<sup>65</sup> See AL AZAMI, *supra*, at 156.

tradition, teachers would have known and used the correct meanings of the characters, even when diacritical marks were absent.<sup>66</sup> If believers inserted their own marks and meanings, then — Muslim scholars argue — there would be thousands of different readings present throughout the world. Yet, in fact, there are few differences in recitation around the world, and Muslim (and some non-Muslim) scholars attribute any to scribal error.<sup>67</sup>

### [B] Debate about Classical Arabic

There are also disagreements between Orientalist and Muslim scholars concerning the origins of Classical Arabic, which is the traditional language of the Qur'ān. A question piquing Orientalists is where and when Classical Arabic originated. Traditional Muslim scholars believe Classical Arabic was the language spoken by Ishmael, the patron of Islam, an early Prophet, and the son of Abraham and Hagar. Muslims believe Ishmael delivered his prophecies to his people in written and spoken Arabic. They conclude Classical Arabic actually gave rise to the other languages used on the Arabian Peninsula, which do not strictly conform to Arabic, and which pre-date Muhammad. These other languages include Nabatean, which Muslims contend is a form of Arabic.<sup>68</sup>

Because the dialect in which Muhammad received his revelations is an important religious issue, some Muslims see non-orthodox scholarship into the origins of Classical Arabic as an attack on Islam. Muslim scholars have offered many replies to these Orientalist investigations, including the dedication by Professor M.M. Al Azami of three chapters in one of his books, each of which support the traditional Muslim view of the origins of Classical Arabic.

Notably, the *hadiths* (the non-Prophetic utterances of Muhammad) have not convinced non-Muslim scholars. In 1905, the German Orientalist Karl Vollers (1857–1909) proposed Muhammad did not speak the Classical Arabic associated with modern Islam, and instead proposes this language developed only after the death of Muhammad.<sup>69</sup> Vollers contends the Classic Arabic associated with the Qur'ān actually was a higher language used only in poetry, and to which the Qur'ān eventually was adapted.<sup>70</sup> Vollers and others claim the language spoken by Muhammad and his companions lacked the *i'rāb*. "*I'rāb*" refers to traditional Arabic grammar, and in particular, the way words are pronounced, such as the spoken endings of Arabic words, as sometimes indicated by diacritical marks.<sup>71</sup> This higher language, known today as Classical Arabic, eventually replaced the original local language spoken by the Prophet.<sup>72</sup> Muslim scholars, and other notable Orientalists

<sup>66</sup> See Al Azami, *supra*, at 159.

<sup>67</sup> See Al Azami, *supra*, at 156.

<sup>68</sup> See Al Azami, *supra*, at 120–121.

<sup>69</sup> See Paul E. Kahle, *The Arabic Readers of the Koran* (1949), in *WHAT THE KORAN REALLY SAYS* 201–202 (Idn Warraq ed., Amherst, New York: Prometheus Books, 1998). (Hereinafter, Kahle.)

<sup>70</sup> See Paul E. Kahle, *The Arabic Readers of the Koran* (1949), in *WHAT THE KORAN REALLY SAYS* 201–202 (Idn Warraq ed., Amherst, New York: Prometheus Books, 1998).

<sup>71</sup> See Kahle, *supra*, at 202.

<sup>72</sup> See Kahle, *supra*, at 202.

such as the German Theodor Nöldeke (1836–1930), have criticized the arguments of Vollers.<sup>73</sup>

Despite such criticisms, another German Orientalist, Paul E. Kahle (1875–1964), pressed onward with this line of research and argument. Kahle emphasizes a little known early Islamic text *At-Tamhid Fi Ma Tifat At-Tajwid*, which Al Mālikā composed in 400 A.H.<sup>74</sup> This text “contains more than 120 exhortations admonishing people to use the *i'rāb* in reading the Koran,”<sup>75</sup> some of which are attributed to Muhammad or the *Ṣaḥābah*, and others to later historical figures. The fact these exhortations were written down, not only by the Muslim scholar Al Farrā', but also by other early Muslim scholars, leads Kahle to conclude Classical Arabic was not the language generally used to recite the Qur'ān during the lifetime of Al Farrā'.<sup>76</sup> Kahle proposes two historical alternatives:

- (1) The Prophet used the rules of Classical Arabic to recite the Qur'ān, and that, because of its difficulty, later converts to Islam had to be encouraged to use it; or
- (2) Conversely, the Prophet and *Ṣaḥābah* did not observe the rules of Classical Arabic, which actually developed after the death of Muhammad, but instead recited the sacred text based on the rules of Bedouin poetry.<sup>77</sup>

Under the second alternative, says Kahle, Classical Arabic only became the official language of the Qur'ān one or two centuries after Muhammad died.

Yahyā ibn Ziyād Al Farrā', who died in 822 (207 A.H.), was an early Muslim scholar exploring some of the same issues as Kahle. Al Farrā' studied Arabic grammar, poetry and *hadiths*, and was aware of controversies about the Arabic language.<sup>78</sup> Yet, he was unable to find a solution to them. Kahle states:

Al-Farrā' was in a difficult position. As a *grammarian* he could not deny that correct Arabic was to be found in Bedouin poetry. As a good *Muslim* he had to believe that the word of God had been revealed to the Prophet in the most correct language. As a *theologian* he was not allowed to admit any alterations in the language of the Holy Book. So he had to find a compromise. He found it by declaring that the influence of Bedouin language on the language in Mecca had taken place long before the time of the Prophet. From the different tribes of the Arabs who had come on pilgrimage to Mecca, the Kuraish had been able to hear all kinds of Arabic. So they had been able to select from the different forms of Arabic the best of each, just as they had selected their wives [by making their selection of wives only on unveiled women in order to increase their people's beauty and dignity]. In this manner their language had become superior to all the languages spoken by Arabs, superior also to the language spoken by the

<sup>73</sup> See Kahle, *supra*, at 202–203.

<sup>74</sup> See Kahle, *supra*, at 204–207.

<sup>75</sup> See Kahle, *supra*, at 204.

<sup>76</sup> See Kahle, *supra*, at 207.

<sup>77</sup> See Kahle, *supra*, at 207.

<sup>78</sup> See [www.inamreza.net/eng/inamreza.php?id=901](http://www.inamreza.net/eng/inamreza.php?id=901).

Bedouins, since certain inaccuracies that are to be found in the language spoken by the Bedouins had not been taken over by the Kuraish and were not to be found in the language spoken by the people of Mecca. In such a way the model Arabic that was used for reading the Koran from the end of the first century onward was identified by Al-Farrā' with the language spoken by the Kuraish in the time of the Prophet.<sup>79</sup>

Kahle believes the reports of Al Farrā' that early Muslims often studied in Bedouin neighborhoods to learn proper Arabic. But, Kahle concludes these trips would not have been necessary if Classical Arabic had been the primary language spoken in Mecca.<sup>80</sup>

Why are more non-conforming texts of the Qur'ān not available for study? Kahle proposes they were suppressed through burning, and their proponents were chastised. Kahle lists one such persecuted person as Ibn Miksam, who died in 354 A.H. Ibn Miksam added diacritical marks to the text of 'Uthmān according only to the grammatical rules of Arabic, but the diacritics did not conform to any of the seven official recitations (*Qirā'āt*).<sup>81</sup>

When in 322 A.H. Ibn Miksam's practice was condemned by a court of lawyers and readers, before which he had to appear, summoned by the Sultan, he had to recant and his books were burned, and we know of them only from occasional quotations.<sup>82</sup>

Kahle dates grammatical traditions that apply strict rules to yield conforming results as no later than 200 A.H.<sup>83</sup>

In sum, Al Azami, Kahle, and other scholars have addressed their beliefs concerning the origins of Classical Arabic and its use by Muhammad in the revelations of the Qur'ān. They are two among many scholars through the ages who have studied this subject arrived at divergent conclusions.

### § 3.06 THREE GRAND TENETS

"Islam" means "submission," that is, "submission to the will of God." But what does "submission to the will of God" mean? In a metaphysical sense, and in a practical day-to-day sense, this is a very difficult question. Specifically, Muslims believe there are three key articles of faith common to all of Islam, which help distinguish a Muslim from a non-Muslim. These tenets are the essence of what Muslims need to believe. All Muslims, regardless of where they live, their race, ethnicity, or language, agree on these simple and profound axioms.

<sup>79</sup> Kahle, *supra*, at 209 (emphasis original).

<sup>80</sup> See Kahle, *supra*, at 209-210.

<sup>81</sup> See Kahle, *supra*, at 203.

<sup>82</sup> Kahle, *supra*, at 203.

<sup>83</sup> See Kahle, *supra*, at 206. See also *id.* at 205 (quoting the Prophet as saying: "Whoever recites the Koran and reads it with i'rāb, he has a favor with God which is granted to him, if he desires he hastens it for him in this world, if he desires, he reserves it for him in the other world.").

#### [A] Tenet #1: Monotheism

Monotheism is the single most important message in the Qur'ān. Gibbon explains:

The creed of Mohammed is free from suspicion or ambiguity, and the Koran is a glorious testimony to the unity of God. The prophet of Mecca rejected the worship of idols and men, of stars and planets, on the rational principle that whatever rises must set, that whatever is born must die, that whatever is corruptible must decay and perish. In the *Author of the universe* his rational enthusiasm confessed and adored an infinite and eternal being, without form or place, without issue or similitude, present to our most secret thoughts, existing by the necessity of his own nature, and deriving from himself all moral and intellectual perfection.<sup>84</sup>

If there is any objectionable point in this passage, then it is only the possibility that the opening phrase "creed of Mohammed" intimates that monotheism was an idea of the Prophet, rather than a Truth revealed to him.

Simply put, Islam is relentlessly and uncompromisingly monotheistic. God is one, God is alone, and there are no other powers in the universe that are equivalent to God. There is only one God in the universe, and He is omnipotent, omniscient, and omnipresent. Catholic Christianity agrees on all of these points. This message is repeated over and over again in both the Meccan and Medinan *surahs* of the Qur'ān:

<sup>102</sup>That is God, your Lord. There is no God but He, the Creator of everything. Therefore, worship Him, who is above all as a Guardian. There is only one God, and God is all powerful.<sup>85</sup>

The Arabic word for "God," of course, is "Allāh". The word "Allāh" does not connote some strange, distant deity nor a weird being worthy of cult worship. Rather, the word "Allāh" is as common in Arabic as "God" is to Christians and Jews.

While there is unequivocal agreement on the tenet of monotheism, there is some difference between Islam and Catholic Christianity on the extent of theological speculation about the nature of God:

The metaphysical questions on the attributes of God and the liberty of man have been agitated in the schools of the Mohammedans as well as in those of the Christians; but among the former they have never engaged the passions of the people or disturbed the tranquility of the state. The cause of this important difference may be found in the separation or union of the regal and sacerdotal [i.e., priestly] characters.<sup>86</sup>

In other words, the history of Islamic theology, in sharp contrast to the history of Christian theology, has not been characterized by a vast body of speculation about the nature of God. Christianity underwent a considerable theological debate about the Holy Trinity — was God one being with three aspects, or not? Islam did not

<sup>84</sup> Gibbon, *supra*, at 653-654 (emphasis added).

<sup>85</sup> Qur'ān, *supra*, 6:102 at 88.

<sup>86</sup> Gibbon, *supra*, at 660.

burden itself with theological disputes about the Trinity of God. Its message has retained a profound simplicity and elegance: there is only one God in the universe, Allāh, and He has given to men and women a guide, the Qur'ān, and a guide-to-the-guide, the *Sunna* of the Prophet Muhammad, by which they can order their lives to be in accordance with His Will.

From an Islamic perspective, dilated discussions about the nature of God are useless. God cannot be known by the human mind and intellect, which are feeble and limited. No vision can comprehend Him; rather, He comprehends all visions. God is so much the center of everything, to dwell on His essential nature is to waste time. No person possibly can comprehend what God looks like, what He is composed of, or what is character is. Indeed, the questions are rather foolish, if not arrogant. Human language is circumscribed, and lacks the appropriate concepts and words to capture such an overwhelming reality. For Islamic theology, beyond His unity, omnipotence, omniscience, and omnipresent, not much else can be said.

Despite this fact, a number of Islamic philosophers have explored the aspects of God. For example, most Muslims would agree God has no gender, or if God has a gender, it is a characteristic that cannot be known. When Muslims use the masculine pronoun "He" for God, it does not mean God is a male. Rather, in the Qur'ān, God refers to Himself as "He." Human language is unable to convey that God is all things.

However, there is a way mankind can seek a glimmer of the nature of God. By looking into the actions of God, and through those actions, His Nature may be reflected:

<sup>24</sup>He is God, the Creator, the Maker, the Fashioner. To Him belong the best of names. Whatever is in Heaven or on Earth declares His praises and glory.<sup>27</sup>

"To Him belong the best of names" does not mean the "name" of God, in the sense that God has a name like "Mike" or "Akbar." To think of God like that is insulting. Rather, it means a True Name, a Name that deals with the actual nature of God, which man cannot possibly know.

By describing His attributes and understanding His actions, mortal men can better understand Him. The "99 Names of God," refers to list of His actions in the Qur'ān:

<sup>25</sup>He is God. There is no other God than He. He knows what is secret and what is open. He is the most gracious and the most merciful. He is God, there is no other God than He. <sup>26</sup>He is God: there is no other god than Him, the Sovereign, the Holy One, the Source of Peace, the Guardian of Faith, the Guarantor of Safety, the Mighty, the Irresistible, the Supreme Power. Glory to God.<sup>28</sup>

All of these adjectives that the Qur'ān uses can be put into a single phrase — the All Powerful, the Merciful. These words terms that a Muslim can use to address the

<sup>27</sup> Qur'ān, *supra*, 59:24 at 367.

<sup>28</sup> Qur'ān, *supra*, 59:22-23 at 367.

unknowable Force, the grand and central Force of the universe.

Examining the actions of God can bring mortals closer to understanding His Will. Creation, the greatest of His actions, is perhaps the most visible example. According to the Qur'ān, God created: the universe and all the creatures in it. These creatures include: men and women, angels, the devil, and *jinn*s.

Remember, God instituted the process of revelation with the Archangel Gabriel through the Prophet, and then onto the rest of human kind. Also, Muslims (like Christians) believe in the existence of the devil, and believe that the he was a fallen Angel, and Angel who has turned away from the path of God, or is a *jinn*. They believe the devil constantly tempts men and women, trying to get them to leave the path of God — the path expressed in the Qur'ān. *Jinn*s are still other creatures, spirits that God created, which are made from fire that are neither human, nor divine. The Qur'ān identifies God as the author of creation:

<sup>1</sup>Whatever is in heaven or on earth, let it declare the praises and glories of God, who is the exalted, the all wise. <sup>2</sup>To Him belongs dominion over heaven and earth. He gives life and death, and He has power over all things. <sup>3</sup>He is the first and the last, the evident and the hidden, and He has knowledge of all things. <sup>4</sup>He it is who created the heavens and the earth in 6 days, and then assumed His throne. <sup>5</sup>He knows what enters the earth, and what comes from it, what comes from heaven and ascends to it. He is with you wherever you are. God is aware of all that you do. <sup>6</sup>He has full knowledge of the secrets of all hearts.<sup>89</sup>

Observe that Muslims, Christians, and Jews agree that God created everything, and did so in 6 days. Again, Muslims believe this point because it is set forth in the Qur'ān.

What purpose do men and women have on earth, given that God created them and the earth? Men and women are on earth to magnify and glorify God through their deeds and thoughts. This purpose leads to the second basic tenet of Islam: a Day of Judgment.

## [B] Tenet #2: First and Final Judgment

In connection with the first tenet, Muslims hold that God created all things, including humankind. The creation of the universe, of humankind, was a purposeful one. That purpose was judgment, with the ultimate outcome for each soul being entry into Heaven or condemnation to hell.

Salvation in Islam means being brought up into Heaven. The Qur'ān has several descriptions of the nature of Heaven. Some are very physical, and speak of eternal pleasures. But, the most important description, again like Christianity, is being in the presence of God. Heaven, to a Muslim and a Christian, is being in the presence of God, feeling God's warmth and love. Hell is ever-lasting damnation, ever-lasting fire. It is the absence of God — the distance from God.

<sup>89</sup> Qur'ān, *supra*, 57:1-6 at 359.

The Qur'ān and Muslim theologians extensively discuss the judgment process. After death, a person waits for the final coming, when the person faces God, to undergo a series of stages before the Final Judgment is rendered sending that person to Heaven or hell. When a Muslim dies, a First Judgment — what Catholic Christians call “Particular Judgment” — will occur. There are two possible outcomes to this First Judgment:

**(1) For a Virtuous Muslim, and For Believers —**

Suppose the decedent has been virtuous in her life, striving to understand and apply the Will of Allāh in her endeavors. Or, suppose the decedent is a believer. Whether “believer” narrowly means a Muslim, broadly covers all people who believe in God (i.e., non-atheists), or in an intermediate sense refers to persons who are People of the Book (*ahl al kitāb*) is debatable.

In either case, the soul of the decedent will go up to Heaven, and not be denied permission to enter. Allāh will say to His Angels: “write in my Servant Book her name, and take her soul back to Earth.” This “Servant Book” is a record of the righteous, those who lived their lives in the service of Allāh, a “list of the truly good . . . in Illiyyin . . . a clearly written list,” as *surah* 83, *ayat* 18 and 20 put it.<sup>90</sup> “Illiyyin” has a dual meaning: it is record, or ledger, of the deeds of good people, or a high place, or in effect, Heaven. Then, her soul will be put back into her body, and a stage of questioning will commence. She will be asked “Who is your Lord?” “What is your religion,” and “Who is your Messenger?” She will answer these questions, and be richly rewarded for her answers: a window to Paradise will be opened to her. She will remain asleep in her grave, awaiting Final Judgment.

**(2) For a Mischievous Muslim, and For an Unbeliever —**

Suppose the decedent is a Muslim who has not sought to discern the Will of Allāh and submit to it, or is an unbeliever. Whether “unbeliever” narrowly means an atheist, broadly covers all non-Muslims, or in an intermediate sense refers to persons who are not *ahl al kitāb* is debatable.

In any event, the soul of the decedent will go up to Heaven, but permission to enter will be denied, and that soul will be thrown back down to Earth. Allāh will instruct His Angels to “write the name of the dead person in the Servant Book that is in the lowest level, and take her soul back to Earth.” This Book records the names of unfaithful servants. As *surah* 83, *ayat* 7 and 9 explain, it is a “list of the wicked in Sijjīn . . . a clearly numbered list.”<sup>91</sup> “Sijjīn” has a dual meaning: the register of sinners, or a prison, specifically, a deep pit that is a part of hell. Then, the soul of the decedent will be put back into her body, and questioning will commence: “Who is your Lord?”, “What is your religion,” and “Who is your Messenger?” She will be unable to answer these questions, and, therefore, punished. A window to hell will be opened for her, and she will sleep in her grave awaiting Final Judgment.

<sup>90</sup> Qur'ān, *supra*, 83:18, 20 at 413.

<sup>91</sup> Qur'ān, *supra*, 83:7, 9 at 413.

At Final Judgment, God will judge all people who live, who have ever lived, and who ever will live. God will judge each person according to whether or not he led his life in accordance with His Will. There are many statements in the Qur'ān about the Final Judgment and its nature:

<sup>92</sup>To God belongs dominion over heaven and earth, and the day of the hour of Judgment will be the day when the dealers in falsehood will perish.

<sup>28</sup>Every community you will see bowing the knee before God. <sup>29</sup>Every community will be called to its record. This day you will be recompensed for what you did. This, our record, speaks about you with truth, for we recorded in it all that you did.<sup>92</sup>

Notice that God has dominion over everything, including the Day of Judgment. The Qur'ān makes it clear only God knows when the Final Judgment will come; no person can know when the end of time will occur. The Final Judgment is left to God to decide when it happens, and mankind will not know when until it actually takes place.

On the Day of Final Judgment — or what Catholic Christians know also as the Judgment of Nations — all people will rise from their graves. When they do, the last reckoning will commence. There are four possible outcomes:

**(1) For Virtuous Muslims and Believers —**

Virtuous Muslims and believers will gain eventual entry into Paradise. Before entry, they will be held in a place called Kantara, which is akin to a bridge to Heaven. They will be purified of every jealousy, envy, and other vice they might have. Then, they will be admitted to Heaven for all eternity.

**(2) For Mischievous Muslims —**

Less-than-good Muslims will be condemned to hell. But, this punishment will — or may be — temporary.

**(3) For Unbelievers —**

Unbelievers will be condemned to hell. This punishment will be permanent.

**(4) For People whose Good and Bad Deeds are Equal —**

Some people — presumably, Muslims and believers — will not have led a sufficiently virtuous life to merit entry into Paradise, but not have led such an execrable life as to justify damnation. Their good and bad deeds were equal, meaning their good deeds keep them out of hell, but their bad deeds keep them out of Heaven. For them, there is a place called “Al Arāf,” which also is the title of *surah* 7 of the Qur'ān.

How will Allāh decide where to put a particular person? That is, on what criteria will He render Final Judgment? The answer is not entirely clear, but again the Book, or Books, of Records kept in Illiyyin and Sijjīn, in which the deeds of each

<sup>92</sup> Qur'ān, *supra*, 45:27-29 at 325-26.

person are recorded, matter. They will be used for reference in the Final Judgment. Ultimate salvation will depend on whether a person tried earnestly to do what that person was supposed to do, in terms of what Allāh expected. Salvation also will depend on whether that person sought sincerely to avoid actions Allāh forbade.

As repeated throughout the Qur'ân, Allāh will be merciful in His Final Judgment. At the end of time, when Allāh goes through the Book of Records, no doubt He will find every single person has failed to live his entire life completely in accordance with His will. Human beings are fallible, so God is merciful. A *bona fide* effort, trying to emulate ideal behavior, may sway Allāh to save rather than condemn a person.

In this respect, it is worth recalling that unlike Christianity, there is no Doctrine of Original Sin in Islam, and nothing analogous to it. Indeed, there is no word in Arabic comparable to the word "sin" with the same theological meaning that "sin" has in Christian theology. Muslims believe by doing something wrong, a person turns away from what God expects. Consequently, Salvation is based on doing the proper things as God has directed in the Qur'ân. The Meccan *sūrah*s, in particular, include many warnings about what God desires from His people and the consequences for failing to obey. If a person fails these expectations, that person must repent sincerely, and behave accordingly in the future, not presuming on the mercy of Allāh.

### [C] An Islamic Purgatory?

The ultimate fate of the fourth category of persons — those whose good and bad deeds are roughly equal — is intriguing. Are their souls in a kind of Islamic Purgatory? *Sūrah* 7, *āyat* 40-43 and 46-51 of the Qur'ân seem to suggest a third option, between Heaven and hell, for souls not yet ready for the former yet not deserving of the latter:

<sup>40</sup>The gates of Heaven will not be open to those who rejected Our revelations and arrogantly spurned them; even if a thick rope were to pass through the eye of a needle they would not enter the Garden. This is how We punish those who do evil — <sup>41</sup>Hell will be their resting place and their covering, layer upon layer — this is how We punish those who do evil. <sup>42</sup>But those who believe and do good deeds — and We do not burden any soul with more than its can bear — are the people of the Garden and there they will remain. <sup>43</sup>We shall have removed all ill feeling from their hearts; streams will flow at their feet. . . .

<sup>44</sup>A barrier divides the two groups with men on its heights recognizing each group by their marks: they will call out to the people of the Garden, "Peace be with you!" — they will not have entered, but they will be hoping, <sup>45</sup>and when their glance falls upon the people of the Fire, they will say, "Our Lord, do not let us join the evildoers!" — <sup>46</sup>and the people of the heights will call out to certain men they recognize by their marks, "What use have been your great numbers and your false pride?" <sup>47</sup>And are these the people you swore God would never bless? [Now these people are being told], "Enter

the Garden! You have nothing to fear, nor shall you grieve."<sup>48</sup>

Clearly, *āyat* 40-43 identify two groups of people: those who are saved, and for whom the gates of Heaven are open, and evildoers, who are tormented in hell. *Āyat* 43 suggests that with respect to the people of the Garden, the saved, God will have removed all ill feelings from their hearts. That removal suggests a cleansing process before entry into the Garden. *Āyat* 46-47 identify a third group, between "the two groups," who are men on the "heights" of a "barrier" — the people of the heights. This third group recognizes people of the Garden, and hopes to join them. The third group also recognizes the people of the Fire, in hell, and beseeches God not to be sent there.

Is there, then, something of a cleansing process, in Islamic theology akin to what Catholic Christianity calls "Purgatory"? That is, are Al Arāf, or a "Barrier," or the "Heights," the same as Purgatory?<sup>49</sup> The question of whether such a process occurs, or a way-station between Heaven and hell exists, has not been a major one debated among Islamic religious scholars (*ulema*), and unsurprisingly less attention has been given to the matter from a comparative vantage point.

The definition of "Purgatory" in Catholic theology is:

A state of final purification after death and before entrance into heaven for those who died in God's friendship, but were only imperfectly purified; a final cleansing of human imperfection before one is able to enter the joy of heaven.<sup>50</sup>

Typically, Purgatory is conceived of as an intermediate place, en route to Heaven. Yet, it is not a physical location. Rather, it is a post-death process for a soul that is saved through which that soul obtains the holiness needed to enter Heaven.<sup>51</sup> The essence of what happens in Purgatory:

<sup>40</sup> Qur'ân, *supra*, 40-43, 46-49 at 97-98 (emphasis added).

<sup>44</sup> Interestingly, some Turkish dictionaries translate "Purgatory" as "Arāf," and many Turkish words are derived from Arabic. See, e.g., [www.zargan.com/sozluk.asp?Sozcuk=A%27raf&DisplayLang:=2](http://www.zargan.com/sozluk.asp?Sozcuk=A%27raf&DisplayLang:=2) and [http://translate.google.com/translate?hl=en&auto\[en\]araf](http://translate.google.com/translate?hl=en&auto[en]araf) (both translating "Arāf" as "purgatory"). But see *TÜRKÇE/OSMANLICA-İNGİLİZCE REDHOUSE SÖZLÜĞÜ* (REDHOUSE TURKISH/OTTOMAN TO ENGLISH DICTIONARY) 68 (İstanbul, Turkey: SEV Matbaacılık ve Yayıncılık AS (SEV Printing and Publishing Inc), 1997) (translating "Arāf" as "a place separating Paradise from Hell"). Interestingly, some Persian (*Farsi*) dictionary also may translate "Arāf" as "Purgatory." See, e.g., [www.farsidict.com](http://www.farsidict.com).

Possibly, a related point is an Islamic doctrine known as punishment in the grave. According to this doctrine, when a person dies, two angels punish the decedent until they have sanctioned him for all his bad deeds, or until the Day of Final Judgment.

<sup>49</sup> CATECHISM OF THE CATHOLIC CHURCH, *Glossary* at 896 (United States Catholic Conference, Inc., Washington, D.C.: Libreria Editrice Vaticana, 2nd ed. 1997) [Hereinafter, CATECHISM.] For theological treatments of Purgatory, John A. Hardon, S.J., *THE CATHOLIC CATECHISM* 273-80 (1981) [hereinafter, HARDON]; MONIKA K. HELLWIG, *UNDERSTANDING CATHOLICISM* 180-81 (1981).

<sup>50</sup> See CATECHISM, *supra*, at ¶¶ 1030-1032 at 268-269, ¶ 1054 at 275. Similarly, Father Hardon states: [In spite of some popular notions to the contrary, the Church has never passed judgment as to whether purgatory is a place or in a determined space where the souls are cleansed. It simply understands the expression to mean the state or condition under which the faithful departed undergo purification.

HARDON, *supra*, at 274.

is the suffering of the faithful which causes a "purging" of temporal punishment due to sin.<sup>97</sup>

At first glance, both are intermediate states in which souls experience some tribulation.

But, the concepts are distinct. First, there is a difference in the nature of the concepts. The Qur'ân describes Al Arâf, or the Barrier or Heights, in distinctly physical terms, whereas Catholic sources emphasize the preparation of a soul for Heaven. Second, there may be a difference in the timing when the concepts become relevant. Purgatory is associated with Particular Judgment in Catholic theology. Its possible Islamic analog seems to be connected with Final Judgment. Third, perhaps there is a distinction as to atmosphere. The prevailing atmosphere in Al Arâf may be one uncertainty as to the final disposition of a soul, whereas souls in Purgatory are happy knowing the purification they undergo there is to ready them for the Beatific vision (i.e., to see God).

### [D] Conceptions of Heaven and Hell

The concepts of Heaven and hell in Islam and Catholic Christianity are strikingly similar. First, in both faiths, they are Divine creations, in addition to the earth, for humans to inhabit after death. Second, each place bears similar characteristics: Heaven holds pleasure and plenty, while hell burns with eternal flame and pain.

The Qur'ân presents Heaven in a tangible, visceral way. Faithful Muslims can expect a lush garden bearing succulent fruit, plush couches covered in silk, and sweet bubbling springs after death.<sup>98</sup> Allâh created a place with fresh dates and cool shade, rewards a desert-dwelling Bedouin could have imagined, making conversion to Islam easy and appealing.

The Bible, also born in the harsh climes of the Levant, contains similar descriptions of Heaven. It is a blessed place God created to receive His faithful adherents and provide them with ease and joy after death. A River of Life runs through the middle of a marvelous city, feeding an ever-bearing tree to free every person from want.<sup>99</sup>

The physical description of Heaven in the Qur'ân is naturalistic, focusing on fruit, water, and shade outside. In contrast, the Biblical depiction of Paradise is constructed, with several references to God building a city for his faithful in the Heavens.<sup>100</sup>

Faithfully departed Muslims are reunited with previously deceased loved ones and family members. *Surah* 56 promises those that ascend to Heaven will see "many from the past" and many from later generations.<sup>101</sup> Numerous passages

<sup>97</sup> See REV. PETER KLEIN, *THE CATHOLIC SOURCE BOOK* 120 (Dubuque, Iowa: Brown-Roa, 2000).

<sup>98</sup> See QUR'ÂN *supra*, 55:46-78 at 354-55.

<sup>99</sup> See BIBLE, *supra*, *Revelations* 22:1-5 at 423.

<sup>100</sup> See BIBLE, *supra*, *Psalms* 19:1 at 658, *John* 14:2 at 172, and *2 Corinthians* 5:1 at 281.

<sup>101</sup> QUR'ÂN, *supra*, 56:39-40 at 356.

in the Qur'ân also declare decedents will be "pair[ed] with beautiful-eyed maidens"<sup>102</sup> or "pure spouses."<sup>103</sup>

A common myth, based on ignorance and disdain, holds that extremists are awarded 99 virgins in Heaven if they carry out an act of suicide in their (purported) defense of Islam. This belief could not be more wrong. First, suicide is a major sin and commission of it excludes a person from Heaven and puts them in hell.<sup>104</sup> Second, there is no Qur'anic basis for the number of wives accorded to anyone in Heaven. The Qur'ân states the dead may be paired with:

<sup>34</sup>incomparable companions <sup>35</sup>We have specially created — <sup>36</sup>virginal,  
<sup>37</sup>loving, of matching age.<sup>105</sup>

But the numerical source is found in a very weak *hadith*.<sup>106</sup> According to Ibn Kathir (d. 1373 A.D.) in his Qur'anic commentary (*Tafsir*) of *Surah Al-Rahman* (55), *ayah* 72:

Muhammad was heard [to] say: "The smallest reward for the people of Heaven is an abode where there are eighty thousand servants and seventy two wives, over which stands a dome decorated with pearls, aquamarine and ruby, as wide as the distance from [Damascus, Syria] to San'a [in Yemen]."<sup>107</sup>

In no way does this passage link martyrdom or sacrifice to extremist acts, much less draw from Qur'anic revelations about the true rewards of Heaven.

Hell, in both religions, is the destination for faithful sinners or righteous non-believers.<sup>108</sup> It is a terrible place, where the shades of the dead are constantly burned by fire, whipped by arid winds, and scalded by boiling water that fails to quench any thirst.<sup>109</sup> Both holy texts are redolent with images of blazing fire and tormented souls.

<sup>102</sup> QUR'ÂN, *supra*, 52:20 at 345.

<sup>103</sup> QUR'ÂN, *supra*, 2:25 at 6.

<sup>104</sup> See THE TRANSLATION OF THE MEANINGS OF SAHÎH AL-BUKHÂRI, ARABIC-ENGLISH by Dr. Muhammad Muhsin Khan (Islamic University, Medina, Kingdom of Saudi Arabia: Dar Ahya Us-Sunnah, Al Nahawiya, March 1978), vol. II, book XXIII (The Book of Funerals — Al-Jana'iz), *hadith* no. 445, p. 251, and vol. VIII, book LXXIII (The Book of Al Adab (Good Manners)), *hadith* no. 73, pp. 44-45.

<sup>105</sup> QUR'ÂN, *supra*, 56:34-37 at 356.

<sup>106</sup> SALAHUDDIN YUSUF, RIYADHUS SALHIN, COMMENTARY ON NAWAWI, Chapter 372, (Riyadh, Kingdom of Saudi Arabia: Dar-us-Salam Publications, 1999), posted at [http://en.wikipedia.org/wiki/Houri#cite\\_ref-50](http://en.wikipedia.org/wiki/Houri#cite_ref-50).

<sup>107</sup> AL-TIRMIDHI, SUNAN, vol. IV: "The Features of Heaven as Described by the Messenger of Allah," Chap. 21, *hadith* no. 2987, also quoted in IBN KATHIR, TAFSIR (QUR'ANIC COMMENTARY) (commentary on *Surah Rahman* (55), *ayah* 72), posted at *Hour*, WIKIPEDIA, [http://en.wikipedia.org/wiki/Houri#cite\\_ref-50](http://en.wikipedia.org/wiki/Houri#cite_ref-50). Interestingly, the Arabic word "Huri" or "Huriyah" seems on occasion to be translated as "maiden" or "virgin," but in fact it refers to splendid companions who are well-matched and of equal age, and to lovely eyed, voluptuous women of modest gaze. The point is the correct meaning is not confined to the sexual dimension, but more broadly encompasses beauty and goodness.

<sup>108</sup> See QUR'ÂN, *supra*, 2:174-175 at 19.

<sup>109</sup> See QUR'ÂN, *supra*, 56:42-44 at 356-357.

Passages in the Old Testaments condemn the godless to “dwell with the consuming fire”<sup>110</sup> and regard them with “shame and everlasting contempt.”<sup>111</sup> In the New Testament, idolaters are subjected to the wrath of God:

He will be tormented with burning sulfur in the presence of Holy Angels and of the Lamb. And the smoke of their torments rises for ever and ever. There is no rest day or night for those who worship the beast and his image, or for anyone who receives the mark of his name.<sup>112</sup>

The sinful are separated from the faithful by a literal and figurative chasm:<sup>113</sup> want or satisfaction, torment or joy.

The Qur'ān often refers to the Mercy of Allāh, only to warn shortly after of the punishment for ignoring His Message.<sup>114</sup> Once condemned to hell, there is little chance of ever escaping the torture of the fire:

As for those who conceal the Scripture that God sent down and sell it for a small price, they only fill their bellies with Fire. God will not speak to them on the Day of Resurrection, nor will He purify them: an agonizing torment awaits them.<sup>115</sup>

As with Heaven, metaphorical images of the torments of hell are readily comprehensible to a desert-dwelling audience. Threats of constant heat and thirst are all too real to Arab Bedouins, making the Message of Allāh and salvation in Heaven all the more alluring.

### [E] Tenet #3: Intervention

God, in His infinite mercy, intervened in human history, at a specific moment, and in a specific place, to give humankind a guide (the Qur'ān), through the Prophet, which would make His Will known. This third tenet is linked to the second tenet which tells Muslims that they must lead their lives in accordance with His Will, and the Final Judgment will be based on whether or not they succeeded.

The Qur'ān is the ultimate expression of God's Will, as revealed to the Prophet Muhammad beginning in 610. “Qur'ān” literally means “recital” in Arabic. Muslims use the Arabic definite article “al” (“the”), and say “*al Qur'ān*,” which means “the Recital” — to Muslims, the greatest, most significant recital ever in all human history.

<sup>110</sup> Bible, *supra*, Isaiah 33:14 at 912.

<sup>114</sup> See Qur'an, *supra*, 2:39 at 7.

<sup>115</sup> Qur'an, *supra*, at 2:174 at 19.

### § 3.07 NO APPEAL

There is no appeal against the Qur'ān. After all, if the Qur'ān is the recitation of the literal expression of the Will of God, and if there is only one God in the universe who is all powerful, then there can be no appeal. The Qur'ān is not the product of a Divine inspiration given in the words of a man. When the Prophet Muhammad recited the Qur'ān to his community, he made it plain to them, and they understood, that it was the Will of God as He, Allāh, wanted it expressed.

Indeed, the whole question of appeal is absurd. It is a western, and perhaps secular, legal perspective. To a Muslim, there is no reason to appealing against the words of the Qur'ān. The Qur'ān exists for each of person as an absolute, authoritative guide:

<sup>27</sup>We have placed before mankind in this *Koran* every tale, so that they [mankind] are advised. <sup>28</sup>It is an Arabic *Koran*, without error, so that they may guard against evil.

...

<sup>41</sup>Indeed, We have sent down to you the book with truth for mankind. Whoever receives guidance benefits his own soul. But, he who strays injures his own soul. And you [Muhammad] are not set over them [mankind] to dispose of their affairs.<sup>116</sup>

Clearly, the Qur'ān is an absolute statement or expression of the Will of Allāh. Acceptable and unacceptable actions are defined by the Qur'ān. Good behavior, in accordance with this guide, is the gateway to Heaven.

### § 3.08 NO INTERCESSION

Individuals have free will to choose their behavior. It is up to individual Muslims, to approach God, as manifest in the Qur'ān, and to read, hear, and assimilate it, and draw from it everything they need to know about His Will. Individuals are responsible for conducting their lives within those principles. There will be no intercession from any human or other agency on your behalf before God at the Final Judgment:

<sup>43</sup>Do they take for intercessors others besides God? Even if they have no authority and no knowledge, <sup>44</sup>say this [*i.e.*, you, Muhammad, say this] this: To God holy, to God alone, is intercession.<sup>117</sup>

At the end time, God will judge each person. The Qur'ān does not create a human agency, or invest in any person — including the Prophet Muhammad — an absolute Divine authority to define what is right or wrong, or how to understand the Qur'ān. Understanding is an important individual journey.

Here, then, is a difference with Christianity. Jesus has authority to tell right from wrong, as Christians believe Christ is God. In the Catholic tradition, there are

<sup>116</sup> Qur'an, *supra*, 39:27-28, 41 at 297-98.

<sup>117</sup> Qur'an, *supra*, 39:43-44 at 298.

angels and saints who may intercede on behalf of an individual, or on behalf of those in purgatory.

Note how "protestant" the Muslim faith is. Nothing stands between the individual and God. Like the Protestant Christian movement beginning with the Reformation in the 16th century, but to a stronger degree, Muslims insist submission to God is between the individual and God. God gives guidance through the Qur'ân and *Sunnah* of the Prophet, but leaves it to each person to discern and apply the precepts to everyday life.

### GOLDEN AGE

## Chapter 4

### CALIPHS OF MECCA AND MEDINA (*RASHIDUN*) (632–661 A.D.)

---

*Ozymandias* (1818)

I met a traveler from an antique land  
Who said: Two vast and trunkless legs of stone  
Stand in the desert . . . Near them, on the sand  
Half sunk, a shattered visage lies, whose frown,  
And wrinkled lip, and sneer of cold command,  
Tell that its sculptor well those passions read  
Which yet survive, stamped on these lifeless things,  
The hand that mocked them, and the heart that fed:  
And on the pedestal these words appear:  
“My name is Ozymandias, king of kings:  
Look on my works, ye Mighty, and despair!”  
Nothing beside remains. Round the decay  
Of that colossal wreck, boundless and bare  
The lone and level sands stretch far away.

Percy Bysshe Shelley (1792-1822),  
*The Poems of Percy Bysshe Shelley* 255 (Stephen Spender, ed.,  
New York, New York: Heritage Press 1974)

#### SYNOPSIS

§ 4.01 DEATH OF MUHAMMAD AND SUCCESSION CRISIS (632 A.D.)

§ 4.02 FOUR RIGHTLY GUIDED CALIPHS (*RASHIDUN*)

[A] Abū Bakr As Siddiq

[B] ‘Umar Ibn Al Khaṭṭāb

[C] ‘Uthmān Ibn Affan

[D] ‘Alī ibn Abi Ṭalib

§ 4.03 LEGAL DEVELOPMENTS

§ 4.01 DEATH OF MUHAMMAD AND SUCCESSION CRISIS  
(632 A.D.)

After the death of Muhammad in 632 A.D., a power vacuum swept through the growing Muslim community. Before his death, Muhammad did not choose a successor, nor did he set forth how his successor should be chosen. Some scholars

even question whether Muhammad intended there to be a successor at all.<sup>1</sup> Amid the chaos surrounding the Prophet's death emerged two competing views as to who should be the successor to the Prophet. This early split would lay the foundations for the *Sunni* and *Shi'ite* sects.

The *Shi'a* minority believed, 'Ali, the cousin and son-in-law of Muhammad, was chosen by the Prophet to be the next leader. In addition, 'Ali and his followers believed succession should be based on blood-ties to the Prophet.

The *Sunni* majority believed succession should be based on following the traditions, acts, words and statements of the Prophet.<sup>2</sup> Therefore leadership should pass on to the most senior, pious, wise and noble person. This community chose Abū Bakr to become the first Khalifa or Caliph.<sup>3</sup> Bakr would be succeeded by Omar<sup>4</sup>, followed by 'Uthmān, and then by 'Ali. These first four successors to Muhammad are known as the "*Rashidun*."<sup>5</sup> Later Caliphs (probably as a result of influence from 'Ali who was the last of the *Rashidun* and the original supporter of bloodline succession) received their status in a hereditary fashion.<sup>6</sup>

#### § 4.02 FOUR RIGHTLY GUIDED CALIPHS (RASHIDUN)

Table 4-1:  
The Four Rightly Guided Caliphs (*Rashidun*)

Caliph	Years Served (A.D.)	Most Notable Aspect of Reign
Abū Bakr	632-634	Expansion of the Muslim Empire during the <i>Riddah</i> Wars, unifying all of Arabia.
'Umar (Omar)	634-644	Further expansion into Egypt, Syria and Iraq. Dissemination of the teachings of the Qur'an. Established legal system with prescribed punishments and jail system. Sometimes called "Umar the Great."
'Uthmān	644-656	Conquests across Africa, Armenia and Afghanistan. Official version (canonical text) of the Qur'an.
'Ali	656-661	First Civil War (First <i>Fitna</i> ) within the Muslim Empire.

<sup>1</sup> This view, noted in Roy Jackson, *Fifty Key Figures In Islam*, at 9 (Routledge, 2006), is speculative.

<sup>2</sup> The term "*Sunni*" is derived from the Arabic word "*Sunnah*," which means "tradition."

<sup>3</sup> Arabic term for "successor" or "representative."

<sup>4</sup> Sometimes written as "Umar."

<sup>5</sup> "*Rashidun*" has been translated to mean Rightly Guided or Righteously Guided.

<sup>6</sup> See ALBERT HOURANI, *A HISTORY OF THE ARAB PEOPLES* 25 (New York, New York: MJF Books, 1991). [Hereinafter, HOURANI.]

#### [A] Abū Bakr As Siddiq

Abū Bakr was chosen as the first Caliph, leading the Muslim community in the wake of Muhammad's death. He was a likely candidate for the position because he was one of the first, if not the first, to convert to Islam, and a close friend and confidant to the Prophet. Abū Bakr traveled with Muhammad to Medina in the *Hijra*, and led public prayer during Muhammad's fatal illness.<sup>7</sup> He also was the father-in-law of Muhammad father-in-law after the marriage of his daughter, 'Aisha, to the Prophet. In his inaugural speech, Abū Bakr is quoted as saying:

if I neglect the laws of God and His messenger [Muhammad], then  
refuse me obedience.<sup>8</sup>

This statement established the Qur'an and the teachings of the Prophet as the governing body of law and principles to guide the Muslim community.

Abū Bakr enjoyed a relatively short reign as Caliph, spanning from June of 632 until August of 634. Despite this short time period, he was able to unify and expand the geographic range of Islam due to his ability to convert large populations to Islam as a result of successful military conquests. Abū Bakr followed in the teachings of Muhammad and did not exact revenge on his conquered enemies which added to the popularity of the conquering Muslims. He also purchased the freedom slaves who were being persecuted for their belief in Islam.<sup>9</sup>

Perhaps one of most significant contributions of Abū Bakr to Islam and the Muslim community (*ummah*), was his success in the *Riddah* Wars. ("*Riddah*" means "apostasy," so the conflicts also are known as the Wars of Apostasy.) These wars were the result of uprisings by several tribes who had given allegiance to Muhammad. These tribes took the position that their allegiance was just that, only to Muhammad, and thus with Muhammad's death, so too died the allegiance. Bakr resisted this notion, proclaiming that the allegiance was to Islam and Allāh, not just the Messenger. Bakr appointed Khalid ibn Al Walid as the commander of the newly established army.<sup>10</sup> Khalid was once described by Muhammad as "the sword of Allāh."<sup>11</sup> By winning many fierce battles, Khalid expanded the modest territory claimed under Muhammad to include the entire Arabian Peninsula, and extending northward into present day Iraq and Syria.<sup>12</sup>

Abū Bakr, like the Prophet, died from illness just two years into his reign. Unlike Muhammad, Bakr left no question about succession, appointing Omar ibn al Khaṭṭab as the next Caliph. Bakr left a legacy of being known as the most generous,

<sup>10</sup> See PAYNE, *supra*, at 90.

<sup>11</sup> PAYNE, *supra*, at 94.

<sup>12</sup> See MALISE RUTHVEN, *HISTORICAL ATLAS OF ISLAM* at 27 (Cambridge, Massachusetts: Harvard University Press, 2004). [Hereinafter, *HISTORICAL ATLAS OF ISLAM*.]

devout and learned.<sup>13</sup> Through his appointment of Omar, Bakr established principles of law known as *shura*, leadership through consultation, *aqd*, the contract between a ruler and the ruled, and *bayah*, the oath allegiance given to the leader.<sup>14</sup>

### [B] 'Umar Ibn Al Khaṭṭāb

Unlike Abū Bakr, who was appointed by a committee of sorts, 'Umar received his appointment from Abū Bakr himself. Despite the direct appointment, 'Umar was likely to have been the successor if the choice had gone to a group deliberation.<sup>15</sup> As a staunch supporter of the appointment of Abū Bakr to the Caliphate after the death of Muhammad, he helped keep order during that tumultuous time.<sup>16</sup> 'Umar enjoyed a much longer tenure as Caliph, his reign spanning ten years from 634-644.

'Umar continued the rapid expansion of the Muslim empire, relying on the military prowess of Khalid. Muslim armies struck blows to the Sasanian and Byzantine empires, claiming territories in present day Iran and Egypt.<sup>17</sup> In addition, the Persian army was decimated, though no large territorial gains were claimed.<sup>18</sup> Although 'Umar maintained the policy of Abū Bakr toward conquered populations with respect to freedom of religion, and taxation, he reversed course when it came to infidel participation in successive raids on new territories. Before the reign of 'Umar, the conquered populations were not allowed to participate in such raids. Now, they were not only allowed, but also actively encouraged to do so.<sup>19</sup> He also created a stipend system known as *diwan*, where stipends were paid to those who fought for the Islamic cause. However, this system carried a hierarchy based on conversion to Islam and service to the religion which created different classes and laid the foundations for later civil wars.<sup>20</sup>

'Umar also set legal precedents for various crimes, establishing jails and police to enforce them.<sup>21</sup> For instance, adultery carried a punishment of stoning and drunkenness was punished with 80 lashes of a whip.<sup>22</sup> 'Umar was dedicated to the dissemination of the word of the Qur'ān. He sent teachers to all provinces,<sup>23</sup> and is responsible for the collection of numerous *ḥadīth*.<sup>24</sup> Further, 'Umar established the

<sup>20</sup> See HOURANI, *supra*, at 24.

<sup>21</sup> See ALVIN J. SCHMIDT, *THE GREAT DIVIDE 104* (Regina Orthodox Press, 2004). [Hereinafter, SCHMIDT.]

<sup>22</sup> See SCHMIDT, *supra*, at 105.

<sup>23</sup> See SCHMIDT, *supra*, at 104 (Regina Orthodox Press, 2004).

<sup>24</sup> "Ḥadīth" are the words and acts of Muhammad and other early Muslims and are considered a

Islamic calendar, using the year of the *Hijrah* as year 1.

A few years before his death, 'Umar removed Khalid from his position as commander of the army. This move was likely a combination of the extravagant lifestyle of Khalid and a desire to disassociate the success of expansion with prowess of Khalid as a warrior.<sup>25</sup> 'Umar was assassinated a few years later by a Persian slave who stabbed him in the back while at prayer in a mosque.<sup>26</sup> In the few days 'Umar survived after this attack, he appointed an election committee to choose his successor.<sup>27</sup> This resulted in the choosing of 'Uthmān Ibn Affan.

### [C] 'Uthmān Ibn Affan

By some historical accounts, the election committee first offered leadership to 'Ali on the condition he maintain the policies of Abū Bakr and 'Umar. 'Ali could not accept these stipulations and refused the offer, leaving 'Uthmān to take up the mantle of Caliph.<sup>28</sup> Although his time as Caliph was marred by civil unrest, 'Uthmān managed to keep control for 12 years, from 644-656.

'Uthmān, lacking any military skill himself and a strong general like Khalid, was still able to harness the momentum and continue the expansion of the Muslim Empire. By the end of his reign, the Empire has surged East into present day Afghanistan and parts of Pakistan, North through Armenia bordering the Black Sea and over to the Caspian Sea and West into portions of Turkey.<sup>29</sup> 'Uthmān shirked the predating fears of crossing the Mediterranean sending the Muslim navy to conquer Cyprus.<sup>30</sup> Instead, his problems came from his appointments of provincial governors in the newly conquered territories as well as some pre-existing establishments.

Legend says the problems of 'Uthmān began when he lost the seal-ring of the Prophet Muhammad.<sup>31</sup> More likely, his problems were a result of perceived nepotism in his appointments. By selecting family members rather than those most qualified to serve, 'Uthmān was ignoring the *Sunnah* of those before him. A prime example can be seen in a province of Persia where 'Uthmān cycled through a series of incompetent relatives as local rulers.<sup>32</sup> Dissent from this area as well as a group from Egypt under similar conditions were responsible for his eventual murder.

particularly authoritative source, second only to the Qur'ān. See *OXFORD DICTIONARY OF ISLAM*, *supra*, at 101.

<sup>25</sup> See PAYNE, *supra*, at 100.

<sup>26</sup> See SCHMIDT, *supra*, at 43.

<sup>27</sup> See JOHN L. ESPOSITO, *ISLAM: THE STRAIGHT PATH 38* (New York, New York: Oxford University Press, expanded ed., 1991). [Hereinafter, *STRAIGHT PATH*.]

<sup>28</sup> See JACKSON, *supra*, at 18.

<sup>29</sup> See *HISTORICAL ATLAS OF ISLAM*, *supra*, at 29.

<sup>30</sup> See PAYNE, *supra*, at 107.

<sup>31</sup> See *NEW ENCYCLOPEDIA OF ISLAM*, *supra*, at 466.

<sup>32</sup> See PAYNE, *supra*, at 106-107.

Prior to his death, 'Uthmān authorized the compilation of an official version of the Qur'ān.<sup>33</sup> In the process variant collections of the Qur'ān were destroyed so that the surviving versions were uniform.<sup>34</sup> 'Uthmān reputedly died with a copy of the Qur'ān in his lap when the angry mob stormed his home.<sup>35</sup>

#### [D] 'Ali ibn Abī Ṭalib

In the wake of the murder of 'Uthmān, and consequent power vacuum, 'Ali was recognized by most Muslims as the next Caliph. Nevertheless, several factions remained opposed to him, which led to his demise after 6 years of the First Muslim Civil War, or First *Fitna*, which lasted from 656–661.<sup>36</sup> (The Second *Fitna* lasted from about 680/683 to 685/692.) The Caliphate of 'Ali corresponded with the years of the First *Fitna*, and in 661, he was assassinated. Focused on discord within the Arab-Islamic Empire, 'Ali never had the opportunity to continue the efforts of his predecessors to expand that Empire.

The first wave of opposition included 'Āisha, favorite wife of the Prophet after Khadyja, and two Companions of the Prophet (*Ṣaḥābah*), Talha ibn Ubaydallah and Al Zubayr ibn Al Awwam. 'Ali was reluctant to fight, but armed conflict was inevitable. The two forces met at the Battle of the Camel (also called the "Battle of Bassorah" or "Battle of Jamal"), in 656 A.D. 'Ali quashed the movement against him.<sup>37</sup> This battle marked the first clash between two Muslim forces.<sup>38</sup> His next struggle was with Muawiyah, a powerful provincial governor from Persia who had also laid claim to the Caliphate. 'Ali marched his army of followers into war with Muawiyah at the "Battle of Siffin," which occurred between May and July 657 A.D. (37 A.H.).<sup>39</sup> This Battle ended in a stalemate wherein 'Ali and Muawiyah agreed to settle the dispute through arbitration — a costly mistake for 'Ali. A group known as the *Khārijites* (i.e., seceders, or secessionists) splintered off from his support base believing that the issue of who was to reign as Caliph was to be decided by the Will of God (Allāh), not the negotiations of men.<sup>40</sup> It would be a member of this faction who would later assassinate 'Ali.

'Ali did not accomplish much for the Muslim community (*ummah*) during his reign as Caliph. Still, his behavior prior to becoming Caliph had an overall positive impact on Islam. The followers of 'Ali — the *Shī'ites* — contend he was the first male convert to Islam, not Abū Bakr. Regardless, 'Ali was definitely one of the first, and his contributions to the religion in its infancy were invaluable. When Muhammad and the small group of supporters left for Medina during the *Hijra*, 'Ali slept in the bed of Muhammad, pretending to be the sleeping Prophet so as to

create a diversion.<sup>41</sup> After the death of the Prophet, and appointment of Abū Bakr, 'Ali instructed his followers not to protest because he feared a split in the religion would be detrimental to its success.<sup>42</sup> Despite his thrice-thwarted claim to the Caliphate, and his difficult reign as Caliph, 'Ali remained a loyal supporter and advisor to all three of the preceding *Rashidun*.<sup>43</sup>

Within the *Shī'ite* Muslim community, 'Ali was and is revered as possessing absolute spiritual and temporal authority. His tomb, in Najaf, Iraq, is a place of pilgrimage for *Shī'ite* Muslims.<sup>44</sup> Each year, *Shī'ites* celebrate the Festival of *Ghadir* to mark his appointment as successor to the Prophet.<sup>45</sup> Today, his discourses, sermons, letters, and sayings serve as the *Shī'ite* framework for Islamic government.<sup>46</sup> Further, his compilation of the Qur'ān is the version used today by *Shī'ites*. It differs from the version commissioned by 'Uthmān in that it is longer, and contains references to 'Ali.<sup>47</sup> The death of 'Ali marked the end of the *Rashidun* Caliphs, and the beginning of the *Umayyad* Caliphate.

#### § 4.03 LEGAL DEVELOPMENTS

In a few decades following the death of the Prophet Muhammad, Islam spread rapidly across much of the known world, partly through peaceful conversion, and partly through violent conquest. Islamic Law developed through the *Rashidun*, the *Umayyad* and *Abbasid* Caliphates, and subsequent Regional Sultanates. Inevitably as with all empires, the political and military prowess of Muslim authorities waned, and the territory they held shrank. But, the *Shari'a* remained, influenced by these authorities during their respective periods of grandeur.

Consider, then, legal developments during the *Rashidun* era. The Prophet Muhammad did not do away with the pre-Islamic system of arbitration that had been used by the Bedouins and sedentary Arab communities. To the contrary, Muhammad himself was a renowned *hakam*, and the Qur'ān modified and refined pre-Islamic arbitral practices. In fact, the Caliphs of Medina continued the arbitral system, though they were not the supreme arbitrators — thus affirming a modest degree of separation between judicial and political functions. The Caliphs were supreme rulers and administrators.

As supreme rulers, the *Rashidun* Caliphs were the chief lawgivers for the Islamic community, aside from the law given by the Qur'ān itself, which of course possessed a unique religious authority. As supreme administrators, the Caliphs focused on organizing the territories that had been conquered. However, these Caliphs did not lay much of a foundation for administration of the *Shari'a*. For instance, they did not appoint *qādis* (Islamic judges).

<sup>33</sup> See JACKSON, *supra*, at 19.

<sup>34</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 329.

<sup>35</sup> See SCHMIDT, *supra*, at 44.

<sup>36</sup> See JOHN L. ESPPOSITO ED., OXFORD HISTORY OF ISLAM 15 (New York, New York: Oxford University Press, 1999). [Hereinafter, OXFORD HISTORY OF ISLAM.]

<sup>37</sup> See OXFORD HISTORY OF ISLAM, *supra*, at 15.

<sup>38</sup> See STRAIGHT PATH, *supra*, at 39.

<sup>39</sup> See NEW ENCYCLOPEDIA OF ISLAM, *supra*, at 40.

<sup>40</sup> See NEW ENCYCLOPEDIA OF ISLAM, *supra*, at 40.

<sup>41</sup> See JACKSON, *supra*, at 17.

<sup>42</sup> See JACKSON, *supra*, at 18.

<sup>43</sup> See NEW ENCYCLOPEDIA OF ISLAM, *supra*, at 41.

<sup>44</sup> See NEW ENCYCLOPEDIA OF ISLAM, *supra*, at 41.

<sup>45</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 15.

<sup>46</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 15.

<sup>47</sup> See JACKSON, *supra*, at 18.

Their dual roles as supreme political and administrative authorities sometimes led to the development of legal rules and practices that went beyond Qur'anic Legislation. While in pursuit of the organization of conquered territories, the Caliphs of Medina extended Penal Law by adding punishments. For example, authors of satirical poems against rival tribes would be punished with flogging. That kind of satirical poetry had been common in pre-Islamic times, but the Caliphs (like Muhammad himself) sought to break the tribe as a unit of social organization, and create a transcendent Islamic community. Additionally, the punishment for unlawful intercourse was stoning to death. This punishment is not set forth in the Qur'an. Rather, it is a punishment borrowed from Mosaic Law (that is, the Law of Moses — Jewish Law).<sup>48</sup>

The Caliphs began to create these punishments to fill in the gaps left between the Qur'an and real life. They, like the Prophet before them, sought to create an Islamic community, and in so doing confronted the ancient Arabian tribal system. If the *Shar'ia* was to mean anything in a practical everyday sense, in terms of changing the behavior of individuals on matters like sexual morals, then it would have to have serious sanctions associated with it.

Still, the Caliphs did not simply (and probably could not) sweep away Pre-Islamic Customary Law. The arbitral system remained. So, too, did vestiges of retaliatory actions and the payment of blood money. If the kin of the victim wanted to retaliate, or exact a payment of blood money, then oftentimes the Caliphs did not stand in the way.

In other words, during the reign of the Caliphs of Medina, the legislative and administrative activities of the "government" were not separated, but the arbitral activities were conducted by other persons not necessarily holding official positions. To this day, arbitration plays a very prominent role in dispute resolution under the *Shar'ia*, and in most instances, supreme political leaders are not supreme arbitrators.

#### § 5.01 ORIGINS

The *Umayyad* Caliphate was the second of four Arab caliphates established after the death of Muhammad. Historically one of the five or six largest empires of the world, headquartered in Damascus, the *Umayyad* Caliphate represented the political unity of the Muslim world from the years 661 to 750 A.D. Territorial expansion (and the administrative and cultural problems created by such expansion) is the most notable legacy of the *Umayyad* Caliphate.

Interestingly, the original intentions of the *Umayyad* clan had nothing to do with a reverence for Islam. The *Umayyads* once hoped to kill Muhammad and strangle the new faith before it matured.<sup>1</sup> After three leaders of the *Umayyad* clan were killed by prominent *Hashemites* (the clan to which Muhammad belonged) at the

<sup>1</sup> See, e.g., ROBERT PAYNE, *THE HISTORY OF ISLAM* at 117 (New York, U.S.A.: Dorset Press, (1959)). [Hereinafter, PAYNE.]

Battle of Badr, Abū Sufyan Ibn Harb (560-650 A.D.), the grandson of Umayya, pledged to exterminate the adherents of Islam.<sup>2</sup> By the year 630, however, when Muhammad took control of Mecca and announced a general amnesty for all, Abū Sufyan changed course and embraced the new religion. This event commenced a roughly 30-year period in which the *Umayyads* patiently and cunningly acquired the title deeds to the faith.

The ascendancy of the *Umayyad* clan was manifest in the Caliphate of Uthman Ibn Affan (644-656), an *Umayyad* and the third of the four Rightly Guided Caliphs (*Rashidun*).<sup>3</sup> Uthman instituted an astonishingly audacious system of nepotism. By the end of his reign, nearly all the governorships, the imperial treasury, and the armed forces throughout Arabia were controlled by his close relatives.<sup>4</sup> Though the *Umayyad* Caliphate would not be officially launched until after the five-year reign of 'Alī (a *Hashemite* and the fourth Rightly Guided Caliph), the foundation for *Umayyad* control over the Muslim world was established.

Following the assassination of 'Alī in 661, Muawiyah (602-680), the son of Abū Sufyan and Governor of Syria under Uthman, successfully persuaded a number of supporters of 'Alī to proclaim him as Caliph instead of Hasan, the son of 'Alī and his wife, Fātimah. Immediately following his elevation, Muawiyah moved the capital of the Caliphate to Damascus, and later set in motion the process of dynastic rule. From there, a succession of *Umayyad* rulers instituted a continuous policy of expansion and centralization of authority. Indeed, the *Umayyad*s transformed the Islamic community "from an Arab [sheikhdom] into an Islamic empire whose rulers were dependent on religion for legitimacy and the military for power and stability."<sup>5</sup> Ironically, those who fought Muhammad ended up inheriting the religious empire which Muhammad built.

## § 5.02 DEVELOPMENT AND EXPANSION

Table 5-1:  
*Umayyad Caliphs*<sup>6</sup>

Caliph	Years Served (A.D.)	Most Notable Aspect of Reign
Muawiyah I (also spelled "Mu'awiyya" or "Mu'awiyah")	661-680	Massive territorial expansion.  Caliphate becomes a dynastic Empire.
Yazid I	680-683	Continuous war over the legitimacy of dynastic rule. Battle of Karbala

<sup>2</sup> See PAYNE, *supra*, at 34-39.

<sup>3</sup> See PAYNE, *supra*, at 106.

<sup>4</sup> See PAYNE, *supra*, at 107.

<sup>6</sup> See PAYNE, *supra*, at 117-152.

Caliph	Years Served (A.D.)	Most Notable Aspect of Reign
Muawiyah II	683-684	Died of the plague 2 months into reign
Marwan I	684-685	Recaptured Egypt for the Caliphate, but died 9 months later
Abd al-Malik	685-705	Reconsolidation of <i>Umayyad</i> control over the Caliphate. Construction of Dome of the Rock. Arabic becomes official language; Muslim coinage
Al-Walid I	705-715	Conquered Spain in west, and armies reach China to the east. Empire at its largest size. Mosque of the Prophet in Medina rebuilt. Great Mosque of Damascus constructed. Believed by some to have poisoned the 4th <i>Shī'ite Imām</i> , Zayn al 'Ābidin.
Suleiman	715-717	Siege of Constantinople fails, end of Arab attacks on Byzantine capital
Umar	717-720	Most gentle of the <i>Umayyad</i> Caliphs, and the only one to be regarded as "righteous" in subsequent Islamic tradition
Yazid II	720-724	Destruction of Christian images within the territory of the Caliphate
Hishām	724-743	Costly defeats in the east and west, curtailment of military expansion, but puts down a rebellion by Fiver <i>Shī'ites</i> ( <i>Zaydis</i> ) led by Zayd ibn 'Alī, half brother of the 5th <i>Shī'ite Imām</i> , Muhammad al Baqir
Al-Walid II	743-744	Widespread corruption and rapid decline of the Caliphate
Yazid III	744	Promised to rid the Empire of corruption, but died 5 months into reign
Ibrahim	744	Two-month reign, then overthrown by Marwan II
Marwan II	744-750	Attempts to re-establish central authority ultimately fails. Ongoing struggles against opposition movements; Empire falls to the <i>Abbasids</i>

Assuming power in 661 A.D., the *Umayyad*s wasted no time in establishing the fundamental characteristics of the new Caliphate: imperial, dynastic, and domi-

nated by an Arab military aristocracy.<sup>7</sup> In a practical and symbolic move, the capital of the Islamic Empire shifted to Damascus, a cosmopolitan Byzantine city, and stark contrast from the less sophisticated Arabian heartland. The location of the city facilitated the *Umayyad* army's conquest of the entire Persian and half the Byzantine (Roman) Empire. Within a decade, Muslim forces conquered Kufa (Iraq), Syria, Palestine, Persia, and Egypt. Advancing further into North Africa, the Caliphate's army established bases in Tunisia, from there moving westward and conquering Morocco. Soon thereafter Muslim forces entered Spain.<sup>8</sup> On the eastern front, the empire steadfastly expanded its borders across Central Asia, eventually establishing an important presence on the Indian Subcontinent.<sup>9</sup>

As the borders of the Empire expanded, assimilating conquered peoples into the new polity became increasingly important. For that to happen, those conquered had to become productive (though not equal) citizens of the Caliphate. Native civil servants and ministers often were retained to assist and train their new Muslim masters.<sup>10</sup> The new Caliphate needed to take advantage of existing knowledge and practices, thus, secretaries and commercial traders were drawn liberally from the groups that served previous rulers.<sup>11</sup> These efforts helped set a foundation which allowed the Caliphate to launch three major initiatives, each aimed at making a statement about imperial permanence.

The first initiative was the creation of a new style of coinage, occurring around the year 690,<sup>12</sup> because currency was a symbol of power and identity. Rather than producing coins that displayed human figures, the *Umayyads* strategically chose to mint coins proclaiming in Arabic the oneness of God and the truth of the religion.<sup>13</sup> It was a powerful message intended to symbolize the purported Divine authority of the Caliphate.

The second initiative, also occurring around 690, was the elevation of Arabic as the official language of administration.<sup>14</sup> A unifying language helped simplify governance of the Caliphate, and furthered the Arabization and Islamization of the culture, state, and society.<sup>15</sup> Once Arabic became the official language, its status as the *lingua franca* of North Africa and the Middle East was inevitable.

Finally, the *Umayyads* oversaw the creation of exquisite monumental buildings, solidifying the notion of the power and permanence of the Caliphate.<sup>16</sup> In particular, the magnificent Dome of the Rock, was built in the 690s on the site of the Jewish

Temple in Jerusalem.<sup>17</sup> This mosque, along with a series of great mosques built throughout the empire, was intended as a sign the *Umayyad* Caliphate would endure. Moreover, such buildings symbolized the growth of a new and distinct community — the Islamic *ummah*.

## § 5.03 LEGAL, POLITICAL, AND SOCIAL STRUCTURE

The advent of *Umayyad* rule brought forth the gradual development of an Islamic legal system, though not necessarily a cohesive one. The Four Rightly Guided Caliphs, oversaw an ad hoc approach to law, rendering decisions as new questions arose.<sup>18</sup> In a sense, each controversy was a “case of first impression,” and did not carry any substantial precedential value. In contrast, the *Umayyads* established an administrative structure, incorporating the office of the *qādi* (judge).<sup>19</sup> Usually, the *qādi* was an official appointed by the caliph to serve as his delegate to provincial governments, settling disputes and making sure decrees from Damascus were implemented correctly. These early judges relied on the Arab customary laws of the particular province under their jurisdiction, as well as the Qur’ān and their own personal judgment.<sup>20</sup> As a result, the legal code was an amalgamation of administrative decrees and judicial decisions that differed significantly from one locale to another.

The political systems of earlier Arab societies, fashioned for smaller, less diverse, more tribally-inclined communities, were not suited for an empire. *Umayyad* rulers thus developed a strong, centralized Arab kingdom, adopting Byzantine institutional and bureaucratic styles and modifying them to meet Arab Muslim needs.<sup>21</sup> *Umayyad* governance was based on the perpetuation of an Arab military aristocracy and maintaining power through a hereditary social caste system. A new mid-level ruling class developed, drawing heavily from army leaders and tribal chiefs. Above all else, these rulers were committed to the idea of a unified kingdom and were hostile to insurgent claims to power based on local solidarity.<sup>22</sup>

The traditional, accepted role of a Caliph as protector of the faith gave the *Umayyads* enormous power. *Umayyad* rulers relied heavily on Islam, both for legitimacy and as a means of justifying their conquests.<sup>23</sup> However, their government was not so much directed at the promotion of Islam, but toward worldly ends determined by self-interest.<sup>24</sup> The most basic objective of the Caliphate was to maintain power, but the size and diversity of their kingdom would eventually complicate their ambitions.

<sup>17</sup> See HOURANI, *supra*, at 28. Professor Hourani argues that “the building of the Dome in this place has been convincingly interpreted as a symbolic act placing Islam in the lineage of Abraham and disassociating it from Judaism and Christianity.” *Id.*

<sup>18</sup> See ESPPOSITO, *supra*, at 76.

<sup>22</sup> See HOURANI, *supra*, at 26.

<sup>23</sup> See, ESPPOSITO, *supra*, at 42.

<sup>24</sup> See, ESPPOSITO, *supra*, at 42.

Muslim society in the Caliphate was divided into four primary classes.<sup>25</sup> Arab Muslims made up the elite, though (in contrast to the pre-*Umayyad* Era) the companions of the Prophet were not given special status. The next class consisted of non-Arab converts to Islam. Though all Muslims are theoretically equal before God, the *Umayyads* treated non-Arab Muslims as second-class citizens, in particular, they did not receive the special tax privileges of Arab Muslims. The third class was the *dhimmi*, or non-Muslim People of the Book, those who possessed a revealed Scripture (Jews and Christians). The *dhimmi* were treated as distinct communities within the Caliphate. Finally, there was a slave class, comprised mostly of captives from battle.

The *Umayyads* held to a less universalist conception of Islam than their rivals and, arguably, even regarded the religion as property of the conquering aristocracy.<sup>26</sup> Indeed, the Caliphs appear to have viewed themselves as God's representatives, and did not feel it incumbent upon them to share their power with the emerging class of religious scholars.<sup>27</sup> Above all else, the *Umayyads* transformed the Islamic Caliphate from a fundamentally religious institution to a dynastic one. This controversial transformation would play a key role in the decline of the Caliphate.

## § 5.04 DISCONTENT

As with any empire, animosity towards the *Umayyad* Caliphate was present from the very beginning. Many critics and opponents, seeking to legitimate their own aspirations, used an "Islamic yardstick" to condemn the *Umayyads*.<sup>28</sup> The first major wave of turmoil broke out upon the death of Muawiyah in 680 A.D. The issue was over whom should succeed him: his chosen successor, Yazid (645-683), or a member of the family of 'Ali, namely, his son Hussein (626-680) (also spelled "Husayn").<sup>29</sup>

The resulting conflict became known as the Second *Fitna*, or civil war.<sup>30</sup> When Yazid came to power, Hussein was persuaded by a group of supporters in Iraq to lead a rebellion. Popular support never materialized, but Hussein and his small band of followers already set off toward Damascus.<sup>31</sup> They never reached their destination, however, as they were slaughtered by an *Umayyad* army at Karbala.<sup>32</sup> The slaughter of Hussein was a catalyzing event, leading directly to the division of the Islamic community into *Sunni* and *Shi'ite* branches. Yet, the victory at Karbala haunted the *Umayyads*, as the Caliphate continually struggled to bring Iraq under

<sup>31</sup> See ESPOSITO, *supra*, at 45.

<sup>32</sup> See ESPOSITO, *supra*, at 45.

its control.<sup>33</sup> Karbala provided *Shi'ites* with an act of martyrdom on the grandest of proportions, which deepened their hatred of the *Umayyads* and strengthened their resolve to undermine the Empire.

Another group, known as the *Kharijites* (a quasi-revolutionary Islamic group that regarded the *Umayyads* as usurpers), led numerous uprisings and revolts against the *Umayyad* Caliphate.<sup>34</sup> They splintered from the main Islamic community because they believed leadership was Divinely given, making the arbitration between 'Ali and Muawiyah invalid. The *Kharijites* also promoted Islamic egalitarianism, the diametric opposite of the social and political caste system of the *Umayyads*.<sup>35</sup>

Critically, the Caliphate was also challenged by religious scholars (*ulema*) who felt the obsession of the *Umayyads* with wealth and power undermined not only the traditional Arab way of life, but also God's law.<sup>36</sup> While these scholars generally recognized *Umayyad* accomplishments as necessary to establishing a functional Arab empire, they believed the *Umayyad* practice of incorporating the indigenous bureaucracy of conquered lands produced an un-Islamic society.<sup>37</sup> Imperial expansion brought in a diversity of customary laws from Medina, Damascus, Iraq, Basra, etc., producing a confused and contradictory body of laws. The *ulema* believed *Umayyad* practice should entirely conform with Islamic principles. Because the institutions and law of the Caliphate were not sourced in Islam, the Caliphate itself was un-Islamic.

Additionally, the non-Arab Muslims were disgruntled over the special tax privileges afforded to Arab Muslims but not to them.<sup>38</sup> They were usually forced to pay the same amount as that levied on non-Muslims, which, they argued, violated the principles of Islamic egalitarianism. As a consequence, the large percentage of the Caliphate population made up of non-Arab Muslims became increasingly alienated from the *Umayyads* and major threat to the stability of the empire.

After several years of contrast and inequality within the Caliphate, animosity and social unrest emerged. Armies clothed in splendid silk rode out to massacre defenseless villagers, while the *Umayyad* nobility wrote poetry and ordered the construction of massive, beautiful buildings. Luxury and poverty, modernism and barbarism existing side by side could not sustain an Empire with such gross inconsistencies.

## § 5.05 COLLAPSE

The violent and politically crude path the *Umayyads* followed to power ultimately contributed to the Caliphate's demise. By 730 A.D., anti-*Umayyad* sentiment intensified and grew to encompass multiple factions: *Shī'ites* and *Khārijites* who regarded the *Umayyads* as usurpers; religious scholars who denounced the failure of the *Umayyads* to uphold Islamic law; and non-Arab Muslims who resented their second-class status.<sup>39</sup>

The growing size and strength of the Muslim community also worked against the *Umayyads*.<sup>40</sup> Their political base, Syria, was becoming increasingly weak in relation to the growing Muslim countries further east. The nascent cities in Iraq, Iran, and Africa (many of which did not exist prior to Islam) were more fully Arab than the Syrian cities, and were firmly grounded in the religion.<sup>41</sup> Their citizens began to assert their independence from a Caliphate they viewed as illegitimate, out of touch, or both.

The *Hashimiyya* movement, led by the *Abbasid* family of Iraq, finally overthrew the *Umayyad* Caliphate.<sup>42</sup> The *Abbasids* took advantage of the various sources of discontent with *Umayyad* rule, effectively piecing together a diverse opposition organization. They kept their own identity secret, simply rallying supporters in the name of "the family of Muhammad."<sup>43</sup> This vague sentiment particularly appealed to many *Shī'ites*, who assumed the movement was in favor of a descendant of 'Alī.<sup>44</sup> Unlike earlier rebellions by the supporters of 'Alī and Hussein, the *Abbasids* patiently organized a cohesive underground movement. They strategically built up a secure power base before rising in open revolt, allowing them to take the *Umayyads* largely by surprise.<sup>45</sup>

In 746, the opposition movement rallied around Abū Muslim, a freed *Abbasid* slave.<sup>46</sup> He initiated a massive revolt against *Umayyad* rule in the eastern, Persian areas of the empire (Khurasan), in 747. Soon thereafter these opposition forces established control over Khurasan and dispatched an army westwards.<sup>47</sup> Once full-scale war erupted and Iraq fell to the *Hashimiyya* in 749, the *Umayyad* Caliph Marwan was compelled to mobilize troops and advance to the south. The two forces clashed in January 750 at the Battle of the Zab in Iraq, and the *Umayyads* were defeated. Damascus fell to the *Abbasids* in April 750, effectively ending the *Umayyad* Caliphate once and for all.

§ 5.06 SALIENT DEVELOPMENTS IN *SHAR'Ā*

As a legal matter, it is important to avoid underestimating the role the *Umayyad* Caliphate played in the development of the *Shar'ā*. The *Umayyads* created a new Arab-Muslim society, along with a new, more mature legal system for the administration of justice, and Islamic jurisprudence. The illustrations below highlight the procedural and administrative contributions of the *Umayyads* to the *Shar'ā*. Further illustrations are in the areas of taxes and war.

The motives of the *Umayyads* were not entirely altruistic. The rulers were a savvy lot. Thus, for example, they supported the application of serious Criminal Law penalties (*ḥadd*), some of which are set forth in the Qur'ān. While working to prevent tribal feuds, the *Umayyad* rulers upheld retaliatory punishments (*ta'zīr*) authorized by the Qur'ān for victims, or their kin, against perpetrators. Certainly, such policies helped unify the Caliphate and foster basic rule-of-law and stability, all under an Islamic banner.

[A] Appointment of *Qāḍīs*

As Arab Muslims expanded their Empire under the Caliphs of Medina, and the conquered territories expanded and were consolidated by the *Umayyads*, it became necessary to administer the law. This problem was especially acute in urban areas, where case volumes increased.

The pre-Islamic arbitration system in which a *ḥakam* (arbitrator) played the central role was not suitable for a vast Empire with its urban centers.<sup>48</sup> As a result, the *Umayyad* Caliphate appointed sitting Islamic judges, *qāḍīs*, in place of *ad hoc* *ḥakam*. Whereas the *ḥakam* exercised authority over the case at bar, the *qāḍī* had far more extensive powers, and in effect was the delegate of the *Umayyad* governor of a particular jurisdiction. *Qāḍīs* were trusted with the governor's judicial power, although he always retained the ability to decide any lawsuit he wished and to dismiss the *qāḍī* himself.<sup>49</sup>

Accordingly, in his sweeping history, *The Decline and Fall of the Roman Empire* (1776 A.D.), English historian and Member of Parliament Edward Gibbon (1737-1794) describes the context and role of the "Cadi" in rather cynical terms:

... It was the interest of the caliphs, the successors of the prophet and commanders of the faithful, to repress and discourage all religious innovations; the order, the discipline, the temporal and spiritual ambition of the clergy are unknown to the Moslems; and the sages of the law are the guides of their conscience and the oracles of their faith. From the Atlantic to the Ganges the Koran is acknowledged as the fundamental code not only of theology but of civil and criminal jurisprudence; and the laws which regulate the actions and the property of mankind are guarded by the infallible and immutable sanction of the will of God. This religious servitude is attended with some practical disadvantage; the illiterate legislator has

<sup>48</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 24 (Oxford, England: Oxford University Press (Clarendon Paperbacks), 1982). [Hereinafter, SCHACHT.]

<sup>49</sup> See SCHACHT, *supra*, at 24.

been often misled by his own prejudices and those of his country; and the institutions of the Arabian desert may be ill adapted to the wealth and numbers of Ispahan [Isfahan] and Constantinople. On these occasions *the Cadi respectfully places on his head the holy volume and substitutes a dexterous interpretation more apposite to the principles of equity and the manners and policy of the times.*<sup>50</sup>

True enough, the *qāḍī* was not an independent judge. While he was not appointed directly by the Caliph, he was appointed by the chief executive of the territory, namely, the provincial governor, and served as his legal secretary. In turn, the governor served at the pleasure of the Caliph. Thus, in a secular sense, the power of the *qāḍī* derived from the Caliph through the provincial governor.<sup>51</sup>

However, Gibbon's description understates the expertise of the *qāḍī*. As the years of the *Umayyad* Caliphate progressed, particularly by 715-720, the appointments went to increasingly specialized individuals. While there was no organized system for technical legal training, those persons selected as *qāḍīs* were pious, and studied Islamic law in their spare time. They met with other similarly-situated people to discuss the subject, and through their intellectual gatherings developed a sound reputation, including among the Caliphs themselves.

These specialists tended to have a singular focus: the conformity of existing customs and practices with the Qur'ān, and the narrowing of any gaps so as to realize in practice an Islamic way of life. They examined behaviors from a religious standpoint, particularly an ethical one in the Qur'ānic sense, using that standard to condone, reject, or suggest changes.<sup>52</sup> This task quickly became burdensome, necessitating a further position. Thus, Muslims of the *Umayyad* Caliphate borrowed another office from the *Sassanid* Persians, called the "Clerk of the Court," or, in Arabic, "*katib*."<sup>53</sup> The *katib* functioned as a secretary to the *qāḍī*. But, at this point, justice was administered in a decentralized manner. It was left to provincial governors to select their legal secretaries, and for these *qāḍīs* to make use of their own secretaries.

Thus, in the late *Umayyad* Caliphate, a specialized judicial office, the *qāḍī*, with both secular and religious dimensions to the office, emerges. Individuals appointed to the office were private scholars, known for their piety and knowledge, and thereby the object of reverence from the public. Indeed, these *qāḍīs* were, "the first *muftīs* in Islam."<sup>54</sup>

A "*muftī*" is a specialist in Islamic law who gives an opinion that is considered authoritative. Thus, criticism by a *muftī* of a governmental act on the ground of that act being religiously unacceptable carries great weight. The "precedent" for such criticism began with the *qāḍīs-cum-muftīs* of the *Umayyad* Period. Yes, the Caliphs

appointed them, and yes, they hardly were a bastion of political opposition to the Caliphs. But no, they were not utterly silent when an act or regulation of the Caliph was ripe for criticism.

However, the reach of the *qāḍī* was limited only to Muslims. A *qāḍī* did not hear cases involving the non-Muslim peoples living in the Empire. For the non-Muslim communities, the traditional legal officers, such as ecclesiastical and rabbinical tribunals for Christians and Jews, respectively, continued to exercise their functions.<sup>55</sup>

## [B] Decisions of *Qāḍīs*

Jurisdiction over Muslims was a critical issue in the *Umayyad* Caliphate. With it, *Umayyad* officials developed a body of judicial decisions that "laid the basic foundations of what was to become Islamic law."<sup>56</sup> That is not to say their decisions launched a systematic common law, or that the doctrine of *stare decisis* emerged. It did not.

Judicial precedent, in the Anglo-American sense of authority of a previous decision, is not officially part of the *Shar'ā*. That is, prior decisions are not one of the Four Sources of Islamic Law: Qur'ān, *Sunnah*, *qiyās* (analogical reasoning), and *ijma'* (consensus), i.e., they are not part of the *uṣūl al-fiqh*. Yet, the last two sources, particularly *ijma'*, bear at least a passing resemblance. At the same time, the *Umayyad qāḍīs* did exercise some discretion, called "*ra'y*" (sound opinion). They were careful to operate within the parameters of the Qur'ān and prevailing Islamic religious norms, and thereby certain legal practices arose.

One example is in the law of evidence. The *qāḍīs* imposed an obligation on a plaintiff to take an oath in order to avoid relying exclusively on witnesses for evidence to support the plaintiff's claim.<sup>57</sup> In so doing, the *qāḍīs* were incorporating Qur'ānic obligations and Islamic norms with their practical concern about excessive dependence on one kind of evidence.

More generally, the *qāḍīs* used Qur'ānic principles as the benchmark for evaluating customs and practices. Doing so allowed them to incorporate Islamic norms and ethics into the substance of the law. Indeed, given the vast territory of the *Umayyad* Caliphate, they accomplished what the Prophet tried to do in the early Islamic community on a much larger scale.<sup>58</sup>

## [C] Ancient Schools of Law

Another illustration of the importance of the *Umayyad* era in the development of the *Shar'ā* relates to the emergence of the Ancient *Sunni* Schools of Law.<sup>59</sup> That is to say, many *Sunni* Schools developed during the 7th, 8th, and 9th

<sup>50</sup> EDWARD GIBBON, *THE DECLINE AND FALL OF THE ROMAN EMPIRE* 653 (1776) (New York, New York: Penguin Books, abridged version, 1980) (emphasis added). The 6 volumes of this work originally were published between 1776 and 1788.

<sup>58</sup> See SCHACHT, *supra*, at 27.

<sup>59</sup> See SCHACHT, *supra*, at 28.

centuries A.D. As the number of *qādīs* grew, they tended to coalesce into different groups. Their members became known as pious religious scholars (*ulema*) and religious lawyers (i.e., lawyers specializing in Islamic Law), called "*fukahā*."

For example, there were Schools in the Hejaz (at Mecca and Medina), and in Iraq (at Basra and Kufa). The Schools in Iraq were particularly influential (with Kufa being especially renowned), and the Schools in the Hejaz tended to follow, rather than catalyze, legal developments. These Ancient Schools developed not because of religious differences among Muslims, but rather as the result of geographic distance and the consequent difficulty of regular travel and communication. It also was the result of differences in local conditions and practices.

However, from a broad and fundamental standpoint, the Ancient Schools did not differ materially on either legal principles or methodology. While they had their idiosyncrasies, they followed a considerable body of common doctrine.<sup>60</sup> This commonality was, first and foremost, taking the Qur'ān seriously, in the sense of taking a set of maxims from the Qur'ān, and then application of these norms to everyday issues to reach formal, legal conclusions. The Qur'ān was the font of legal principle that would govern problems of the family, inheritance, commerce, crime, and so forth.

There was a second dimension to what the Ancient Schools held in common: the emergence of the *Sunnah* as a source of law. In a general sense, "*Sunnah*" means "practice," "well-established precedent," "ancient practice," or "lifestyle."<sup>61</sup> A key question is: whose practice, precedent, or lifestyle? The obvious answer is that of the Prophet and the First Islamic Community at Medina and later Mecca. What the Prophet (first) and the First Islamic Community (second) did and said represented the ideal for Muslims, behavior as one ought to behave in order to submit to the Will of God.

Put differently, the Qur'ān was a living tradition, a source of law made alive by the Ancient Schools of Law. It was made alive by the *Sunnah*, by reference to what the Prophet's words and deeds, and secondarily to the lifestyle of the First Islamic Community. The *Sunnah* was an ideal that provided guidance to Muslims to lead their lives in accordance with God's Revelation as manifest in the Qur'ān. Therefore, the *Sunnah* itself was guidance to the *ulema* in understanding and applying Qur'ānic principles to legal problems.

Therein lay an important development ushered in by the Ancient Schools, initially by the Schools in Iraq, and later by those in Syria. The *Sunnah* of the Prophet was important for political and theological reasons, but these Schools rendered it relevant in a legal context. The practices of the Prophet, as verified by the *ulema*, were a basis for legal decision-making, and thus for regulating the behavior of Muslims in an effort to continue a living tradition.

In sum, there was commonality among the Ancient Schools on the importance of the Qur'ān and the importance of the *Sunnah* of the Prophet in a legal context.

<sup>60</sup> See SCHACHT, *supra*, at 29.

<sup>61</sup> SCHACHT, *supra*, at 30.

But, commonality does not mean unanimity. There were disagreements within Schools, and those with legal perspectives different from the majority in their School often made their views known. Consider the example of the School at Kufa, where the views of Ibn Mas'ud were widely accepted. Those *ulema* who disagreed with some of the doctrines of Ibn Mas'ud had to invoke an arguably higher authority than Ibn Mas'ud, namely, the Caliph 'Alī (whose headquarters were in Kufa). Those views, ascribed to 'Alī, were sporadic and never universally accepted.<sup>62</sup>

## [D] Traditionists and Increasing Reliance on *Sunnah* of Prophet

The Traditionist movement may be "the most important single event in the history of Islamic law in the second century of the *Hijra*" (i.e., 722-822 A.D.).<sup>63</sup> The reason for emphasis on the event is simple: the movement led to increasing dependence on the *Sunnah* of the Prophet as an authoritative source of Islamic Law, and correspondingly less reliance on independent reasoning (*ijtihād*).

Traditionists were found throughout the Umayyad Caliphate, particularly wherever one of the Ancient Schools was located. But they opposed the Ancient Schools of Law on a crucial point: the *Sunnah* of the Prophet. The Traditionists were not content with resting legal doctrine on a claim to a living tradition of the Prophet, or to a teaching of one of the Companions of the Prophet. Rather, they insisted on a detailed statement — a "tradition" — by a witness of the sayings and deeds of the Prophet.

Likewise, they insisted on proof of an unbroken and unadulterated chain from that witness to the present day through which the *Sunnah* was transmitted orally by reliable people. In Arabic, that chain of transmission of a tradition, or more precisely the transmitters, is called "*isnād*."

As Professor Schacht points out, the Traditionists:

disliked all human reasoning and personal opinion which had become an integral part of the living tradition of the ancient schools and which had, indeed, been a constituent element of Islamic legal thought from its very beginnings. . . . Their general tendency was towards strictness and rigorism. . . . They were occasionally interested in purely legal issues, . . . but they were mainly concerned with subordinating the legal subject-matter to religious and moral principles, expressed in traditions from the Prophet.<sup>64</sup>

In brief, the Traditionists demanded adherence to the actual, proven words and actions of the Prophet as a basis for Islamic Law.

While their motives may have been pure, Professor Schacht doubts the authenticity (in terms of tracing a clear line back to the Prophet) of most traditions they

<sup>62</sup> See SCHACHT, *supra*, at 33.

<sup>63</sup> See SCHACHT, *supra*, at 34.

<sup>64</sup> SCHACHT, *supra*, at 34-35.

advocated.<sup>65</sup> In any event, while some traditions gained acceptance as authoritative, there was strong resistance from the Ancient Schools of Law. Hence, many of the traditions did not prevail against the interpretations rendered by the *ulema* from these Schools.

One example of unsuccessful traditions circulated by the Traditionists is when they urged that the Prophet prohibit any commercial practice that would cause an artificial rise or fall in prices, such as outbidding.<sup>66</sup> On that basis, the Traditionists said any contract made that involved such practices was invalid.

The Traditionists lost most of the battles, but not the war. Even though most of the traditions they held to be authentically those of the Prophet did not prevail against the opposition of the Ancient Schools, does not mean they lost all. Eventually, their thesis came to be accepted: once a tradition was proven to be that of the Prophet — authentic part of the *Sunnah* of the Prophet — then it could not be rejected.

At best, the *ulema* could try to circumscribe the impact of the tradition of the Prophet, and try to render it more consistent with the living tradition they advocated, through two devices. First, they could add their interpretation to that tradition. Second, they could invoke other traditions, infusing them with their own perspectives.

But, over time, the *Sunnah* of the Prophet became accepted as a source of law second in importance only to the Qur'an itself. Thus, the Traditionists won the "war" in the sense of shifting the debate to the ground of authentic tradition.

The element of personal discretion and individual opinion in Islamic law was prior to the growth of traditions, particularly the traditions from the Prophet, but because of the success of the main thesis of the Traditionists, most of what had originally been discretionary decisions and the result of individual reasoning by the scholars was put into the mouth of the Prophet.<sup>67</sup>

In brief, the *Sunnah* of the Prophet was a later development — it did not pre-date the use of reasoning. It took time for the tradition of the Prophet to be accepted by the *ulema* as an authoritative source of Islamic Law.

That this acceptance was gradual must be stressed. In retrospect, it may seem obvious the *Sunnah* should be important, and all Muslims after the death of the Prophet in 632 onwards accepted it as such. However, as the intellectual struggles between the Traditionists and the *ulema* of the Ancient Schools show, that was not the case. The authoritativeness of the *Sunnah* was not taken for granted from the earliest days of Islam.

<sup>65</sup> See SCHACHT, *supra*, at 35.

<sup>66</sup> See SCHACHT, *supra*, at 35.

<sup>67</sup> SCHACHT, *supra*, at 40.

## [E] Increasing "Islamicization" of Legal Rules

In part because of the efforts of the Traditionists to find authority for rules in the sayings and deeds of the Prophet, during the *Umayyad* Caliphate the field of law became increasingly religious in character. This process, called "Islamicization," is meant to convey the idea that legal reasoning, on the one hand, and considerations of religious and ethical points, on the other hand, became less and less distinct.<sup>68</sup> In brief, the subject matter of law was seen through an Islamic lens, and legal issues were handled in a more pronounced Islamic manner.

## [F] Inspector of Market (*Amil al-Souq*)

What about the old Roman magistrates, who were part of the Byzantine Empire? Here is a final illustration of the legal importance of the *Umayyad* Caliphate. In the lands of Byzantium that were over-run by the Muslims, the magistrates fled. But, while Muslims in the *Umayyad* era did not assimilate the Roman magistrates, they did pick up on one office: the inspector of the market, who in Arabic is called "*amil al-souq*" or "*sahib al-souq*," (During the *Abbasid* Caliphate, the equivalent title "*muhtasib*" was used.) The inspector of the market held limited civil and criminal powers.

## § 5.07 SHARĀ'Ā NOT YET A COMPLETE SYSTEM

The above illustrations should not suggest the *Sharī'a* became a complete system, in theory or in practice, during the *Umayyad* Caliphate. To the contrary, Islamic Law still was in its formative period in 750 A.D. when the Caliphate collapsed. In fact, in the context of the decisions of *qādis*, "[t]he scene was set for a more thorough process of Islamicizing the existing customary law."<sup>69</sup> But, some of the tendencies that animated in Islamic legal thinking since the time of the Prophet crystallized, and were consummated, during this Caliphate.

  - [E] Failed Attempt at Codification

#### § 6.01 ORIGINS

The *Abbasid* Caliphate was the third of the Islamic Caliphates, coming after the Four Rightly Guided Caliphs and immediately following the *Umayyad* Caliphate. It was ruled by the *Abbasid* dynasty of caliphs, who established their capital in the new city of Baghdad after overthrowing the *Umayyads* in 750 A.D. Under *Abbasid* rule, the Islamic community enjoyed prodigious economic prosperity and a remarkable flourishing of intellectual and cultural advancement. Though their actual power was severely curtailed after about 950, *Abbasid* caliphs reigned until 1258, when the Mongol commander Hulagu Khan conquered Baghdad.

The *Umayyads* were overthrown by an opposition movement led by Abu Muslim, a freed *Abbasid* slave.<sup>1</sup> The *Abbasids* distinguished themselves from the *Umayyads* by attacking the *Umayyads*' dubious moral character and ineffective methods of

<sup>1</sup> JOHN ESPOSITO, *ISLAM: THE STRAIGHT PATH* at 52 (New York, New York: Oxford University Press (1991)). [Hereinafter, ESPOSITO.]

political administration. The movement was fueled by support from various Islamic factions, including, notably, non-Arab Muslims (especially Persians) and *Shī'ites*. The revolt gradually gained the support of most Arabs as well.

From the early stages of their movement, the *Abbasids* enjoyed the overwhelming backing of non-Arab Muslims, known as the "*ma'wali*." The *Abbasids* used the second-class status of the *ma'wali* in the *Umayyad* Caliphate to foster unease in the kingdom.<sup>2</sup> Frustrated by their marginalization and inability to rise in the kinship-based Arab society, the *ma'wali* formed an especially important bloc in the *Abbasids* revolution. Persians, in particular, were a key component of the revolt, as they were eager to form a society centered not on the old Arab aristocracy but on a capable, functioning bureaucracy in which they could participate.

*Shī'ites* also were early supporters of the opposition movement, persuaded and encouraged by the familial connection to the Prophet touted by the *Abbasids*. Indeed, the *Abbasids* based their claim to rule the Islamic Caliphate on their descent from Abbas ibn Abd al-Muttalib, one of the youngest uncles of the Prophet Muhammad. These groups and others, motivated by their frustration with the *status quo*, hope for a more pure Islamic society, and individual hunger for political or financial gain, effectively coalesced and brought down the once-mighty *Umayyad* Caliphate. The fissures in the *Abbasids* coalition, however, would later contribute to the gradual weakening of their power.

The seizure of power by the *Abbasids*, and continued dynastic reign, were legitimized on Islam. Indeed, discontent with the *Umayyads* was so great, and the *Abbasids* coalition so diverse, the *Abbasids* seem to have come to power "under the banner of Islam."<sup>3</sup> However, the *Abbasids* did not take their Islamic mandate for granted. Rather, they took great care publicly to align their government with the religion: fostering the development of Islamic scholarship, building mosques, and becoming great patrons of the emerging religious class, the *ulema*.<sup>4</sup> Much more systematically than the *Umayyads*, the *Abbasids* sought to justify their rule in Islamic terms.

As evidence, the *Abbasid* Caliphs claimed to rule by Divine authority as members of the family of the Prophet.<sup>5</sup> They saw themselves as recipients of a Divine mandate, changing the title of the Caliph from "Successor or Deputy of the Prophet" to "Deputy of God," or, the Persian-inspired title, "Shadow of God on Earth."<sup>6</sup> This exalted, heavenly-like status was reinforced by the exquisite palace of the Caliph, a plethora of devoted attendants, and a formal court etiquette. All subjects were required to bow before the Caliph and kiss the ground, an unmistakable signal of the caliph's absolute power. The *Abbasid* Caliphs clearly held

a deep belief in the God-given authority of kings.<sup>7</sup>

## § 6.02 CONSOLIDATION AND DEVELOPMENT

Table 6-1:  
*Abbasid Caliphs*<sup>a</sup>

Caliph	Years Served (A.D.)	Major Developments During Reign
Abū'l Abbas As-Saffah	750-754	<i>Abbasids</i> consolidate power, establish capital at Hashimiyah.
Al Mansūr	754-775	Baghdad built as new capital. <i>Abbasids</i> use massive violence to quash rivals.
Al Mahdi	775-785	Renewed "Holy War" against Byzantium. Arab-Islamic Empire prospers.
Al Hadi	785-786	Morocco lost as <i>Shī'ites</i> flee and found the <i>Idrisid</i> Dynasty.
Harūn Al Rashīd	786-809	Arab-Islamic Empire reaches height of its political and economic glory. Most famous <i>Abbasid</i> Caliph.
Al Amin	809-813	Army suffers major defeat at Rayy. Baghdad seized by rebels.
Al Ma'mun	813-833	Islamic Golden Age, with renaissance of sciences and arts.
Al Mu'tasim	833-842	Capital moved to Sāmarrā, Iraq. Arab-Islamic Empire becomes more militant.
Al Wathiq	842-847	Empire begins to dwindle. Rise of Turkish Praetorian guards.
Al Mutawakkil	847-861	Military defeated by Greeks. Great Mosque at Sāmarrā, Iraq built.
Al Muntasir	861-862	None.
Al Musta'in	862-866	None.
Al Mu'tazz	866-869	None.
Al Muhtadi	869-870	None.
Al Mu'tamid	870-892	Decay halted. Army reorganized, government restructured.
Al Mu'tadid	892-902	Baghdad restored as capital. Egypt re-conquered.

<sup>7</sup> ROBERT PAYNE, *THE HISTORY OF ISLAM*, at 153 (New York, New York: Dorset Press (1959)). [Hereinafter, PAYNE.]

<sup>a</sup> Caliphs marked with an asterisk (\*) ruled over a fragmented Empire and had little, if any, actual power. Most of them were mere figureheads, used by whoever held power as a symbol of legitimate Islamic government.

Caliph	Years Served (A.D.)	Major Developments During Reign
Al Muktafi	902-908	Arab-Islamic Empire regains glory. Byzantines defeated, economy prospers.
Al Muqtadir	908-932	Last <i>Abbasid</i> Caliph to have any real power. Arab-Islamic Empire declines again.
Al Qahir	932-934	Significance of Caliphs diminishes. Arab-Islamic Empire all but dead.
Al Radi	934-940	Rise of Turkish guards, on whom the Caliphs depend greatly.
Al Muttaqi	940-944	None.
Al Mustakfi	944-946	None.
*Al Muti	946-974	<i>Buwayhids</i> seize Baghdad, Turkish guards ousted.
*Al Ta'i	974-991	<i>Buwayhids</i> chart a new course, creating libraries and hospitals.
*Al Qadir	991-1031	Arab-Islamic Empire prospers again. New literature flourishes.
*Al Qa'im	1031-1075	Turmoil and struggle for power. Rise of <i>Seljuk</i> Turkish Dynasty.
*Al Muqtadi	1075-1094	Sultans acknowledge the spiritual jurisdiction of <i>Abbasids</i> .
*Al Mustazhir	1094-1118	Jerusalem conquered in First Crusade.
*Al Mustarshid	1118-1135	<i>Abbasids</i> try unsuccessfully to reassert political power.
*Al Rashid	1135-1136	Another failed attempt at independence from the <i>Seljuk</i> Turks.
*Al Muqtafi	1136-1160	Crusades rage, though <i>Seljuk</i> Turks not enthusiastic for war.
*Al Mustanjid	1160-1170	<i>Fatimid</i> Dynasty in Egypt ( <i>Shi'ite</i> ) extinguished, <i>Sunni</i> Islam again prevails.
*Al Mustadi	1170-1180	None.
*Al Nasir	1180-1225	<i>Seljuk</i> Turkish Sultanate erodes, power vacuum in Iraq
*Ali az-Zahir	1225-1226	None.
*Al Mustansir	1226-1242	Founding of the Al Mustansiriyya Madrasa.
*Al Musta'sim	1242-1258	Baghdad sacked by Mongols. <i>Abbasid</i> Caliphate finally dies.

The first major decision by the *Abbasids* was to move the capital of the Arab-Islamic Empire from Damascus to the newly-created city of Baghdad, known

in Arabic as the City of Peace.<sup>9</sup> This move, in 762 A.D., reflected an imperial transition to a Persian-influenced culture. Indeed, the power of the *Abbasids* lay less in the eastern Mediterranean countries than in southern Iraq, Iran, and central Asia. This geographical transition was significant. Persian culture differed from Arab culture. The Persians were a settled people, were influenced greatly by the Far East, and admired extravagance, glamour, and majesty more than their *Umayyad* predecessors.<sup>10</sup>

In government, the *Abbasids* took from, but greatly refined, *Umayyad* practice. Though they keenly understood the appreciation of the *Umayyads* for centralized authority, the *Abbasids* delegated various administrative powers. The administration was divided into a number of *diwans* (offices): a bureau for the affairs of the army, a chancery to draw up documents and handle official correspondence, a treasury to supervise and keep records of revenue and expenditure.<sup>11</sup> At its peak around the mid-ninth century, the *Abbasid* administration was staffed by thousands of clerks and secretaries who served as the bureaucratic machinery of the empire. The *Abbasids* established a new position called "*vizier*," whose main purpose was to serve as an adviser to the Caliph. A substantial amount of authority was delegated to local emirs, a development which gradually led to the replacement of the Arab aristocracy with a Persian bureaucracy.

The most pressing difficulty facing the *Abbasid* leadership was overcoming the political challenges created by the far-flung nature of the Arab-Islamic Empire.<sup>12</sup> These rulers, governing through a vast hierarchy of widely dispersed officials, had to ensure those officials did not become too strong or abuse their power. An intelligence system was thus created to keep the caliph informed of happenings in the outlying provinces.<sup>13</sup> But, given the limited ability of leaders in Baghdad to communicate directly with those in the provinces, implementing administrative decrees was an inherently complex task. Perhaps as a consequence, military operations during the early period were minimal. Rather than pursuing conquest and expansion, the leaders of the Caliphate focused their energies on internal matters, seeking to establish order and to remind local governors not to operate independently of central authority.

Despite their appetite for splendor, *Abbasid* caliphs were capable of being as merciless and autocratic as their *Umayyad* predecessors. As evidence, Abū al Abbas (reigned 750-754), the first *Abbasid* caliph, proudly took the title "the blood shedder" (*al-Saffah*) — a designation perhaps earned by his insistence on having the royal executioner by his side at all times.<sup>14</sup> In a strategic move, the *Abbasids* replaced the Syrian-dominated military aristocracy with a salaried army and corresponding bureaucracy, comprised mainly of Persians. Though the *Abbasids*

<sup>9</sup> See ESPPOSITO, *supra*, at 52.

<sup>14</sup> See PAYNE, *supra*, at 154.

explained this change through reference to the principles of Islamic egalitarianism, it was more likely the result of their goal of instituting royal favor and instilling fear in would-be detractors.<sup>15</sup>

Violence was ubiquitous during the early years of the Caliphate, employed whenever necessary to consolidate the authority of the *Abbasids*. Abu Muslim, who almost singlehandedly brought the *Abbasids* to power, was seen as a rival and promptly killed.<sup>16</sup> Even the *Shīʿite* supporters of the *Abbasids* were viewed as intolerable threats. Though the *Shīʿites* had played an important role in the war of the *Abbasids* against the *Umayyads*, they became disaffected once the *Abbasids* embraced *Sunni* Islam and disavowed any support for *Shīʿi* beliefs.<sup>17</sup> Careful to avoid a boiling conflict, early *Abbasid* Caliphs brutally crushed the *Shīʿites*.<sup>18</sup>

### § 6.03 FLOWERING OF ISLAMIC CIVILIZATION

The *Abbasids* proudly claim they introduced a “*dawlah*,” or new era. The first two centuries of the Caliphate were marked by unparalleled splendor and prosperity. In contrast to the military-driven successes of the *Umayyads*, *Abbasid* accomplishments were based not on conquest, but instead on trade, commerce, industry, and agriculture.<sup>19</sup> All this was made possible by the absorption of such a large area into a single political empire — a development which allowed for linkage of the two great sea basins of the civilized world, the Mediterranean and the Indian Ocean. The movement of armies, merchants, scholars, and pilgrims became easier, as did ideas, styles, and beliefs.<sup>20</sup>

Moreover, a vast sphere of interaction was created, making it possible for there to grow functioning governments, bustling cities, international trade, and even an impressive agricultural surplus. An internationally recognized monetary system developed, using the *Abbasid dinar* as the primary instrument of exchange. Economic relations demanded a shared system of behavior, which became possible as yet more of the populations ruled by Muslims converted to Islam. The trends were thus mutually reinforcing: as Islam grew, collective prosperity increased; as communities and regions prospered, Islam became further entrenched throughout the Arab-Islamic Empire.

The seemingly infinite wealth and resources of the *Abbasid* Caliphs enabled them to become great patrons of art, culture, and the sciences. Influenced by the purported *hadith*, “the ink of a scholar is more holy than the blood of a martyr,” *Abbasid* leaders stressed the value of knowledge and actively championed intellec-

tual pursuits. What can rightly be called the Islamic Renaissance began with Caliph Al Mamun around 819 A.D. Under Al Mamun, for the first time in Islamic history, a ruler “identified himself with the cultural aspirations of his people and celebrated the native genius of [those] he ruled.”<sup>21</sup> Al Mamun established a “House of Wisdom” (*Bayt Al-Hikmah*) in Baghdad, where both Muslim and non-Muslim scholars gathered and translated much of the world’s knowledge into Arabic. Thus, the most important works of literature, philosophy, and the sciences from other cultures were made accessible through a collaborative effort in Baghdad between Muslims, Christians, Jews, and others. This period of translation and assimilation laid the groundwork for a truly incredible era in which the Muslim world became the unrivaled intellectual center for science, philosophy, and literature.

During the *Abbasid* years, Muslim scientists viewed the physical universe within the context of their Islamic worldview.<sup>22</sup> The scientific atmosphere also fostered a great synthesis: informed by indigenous and foreign sources (Arab, Persian, Hellenistic, and Indian) and transformed by scholars throughout Islamic world.<sup>23</sup> Scientific advancements in the first two hundred centuries of the *Abbasid* caliphate include: algebra, pioneered by Persian scientist Muhammad ibn Musa Al Khwarizmi (c. 780-850 A.D.);<sup>24</sup> the scientific method (the use of experiments to distinguish between competing theories set within an empirical orientation), developed by Ibn Al Haytham (c. 965-1039 A.D.) in his *Book of Optics*;<sup>25</sup> astronomy as advanced by Al Battani (c. 858-929 A.D.), who improved the accuracy of the measurement of the precession of the axis of the earth;<sup>26</sup> and Muslim chemists who played an important role in the foundation of modern chemistry.

Medicine in medieval Islam made notable advancements, including discoveries in the understanding of anatomy and various diseases, such as measles and smallpox. The Persian scientist Ibn Sīnā (c. 980-1037 A.D.), known in the West as Avicenna, wrote two encyclopedias, *The Canon of Medicine* and *The Book of Healing*, which later earned him the title “father of modern medicine.”<sup>27</sup> His work and that of his counterparts had directly influenced the research of European scientists during the Renaissance.

Islamic philosophy flourished during the *Abbasid* Caliphate, the result of a successful transplant from Greece to Muslim lands. Muslim philosophers appropriated Hellenistic ideas of Plato (428/427-348/347 B.C.), Aristotle (384-322 B.C.), Plotinus (204-270 A.D.), and others, and extended those teachings into their Islamic context and worldview.<sup>28</sup> Islamic philosophy emphasized the unity of God and

<sup>26</sup> See *MEDIEVAL SCIENCE*, *supra*, at 79-80.

<sup>27</sup> See *MEDIEVAL SCIENCE*, *supra*, at 256-258.

<sup>28</sup> See ESPOSITO, *supra*, at 55.

sought to explain how God can be "one" while also possessing the attributes of omnipotence and omnipresence.<sup>29</sup> Muslim philosophers studied the knotty relation between Divine creation articulated in the Qur'an, and the Aristotelian teaching of the eternity of the world.<sup>30</sup> Great Islamic philosophers of the *Abbasid* era included Al Farabi (870-950 A.D.), who came to be known as "the second teacher or master" (the first being Aristotle); Ibn Sinā, remembered as "the great commentator" on Aristotle; and Al Jahiz (781-868 A.D.), a pioneer in evolutionary thought.<sup>31</sup>

Critically, the Islamic philosophical movement was important not only in its time, but also contributed to the transmission of Greek philosophy to Medieval Europe. Indeed, the West would later retrieve part of its lost heritage when European scholars, visiting centers of Islamic learning, re-translated the Greek philosophers using the writings of the Muslim disciples of those philosophers.<sup>32</sup> Moreover, Islamic philosophy broadened the discussion of essence and existence, an issue of central significance to Saint Thomas Aquinas (1225-1274 A.D.) and Duns Scotus (1265-1308 A.D.). The emphasis of Muslim philosophers on the necessity of divine existence had important implications for later arguments by Aquinas and Scotus about the existence of God.<sup>33</sup>

A literary revolution also took place during the *Abbasid* years, facilitated in part by the increasing prominence of the Arabic language. As Islam continued to grow, accepting the Qur'an as the Word of God implied an understanding of the language in which it was written. Thus, Arabic became the medium of expression not only on the Arabian Peninsula, but also in those regions of the empire whose inhabitants converted to Islam.<sup>34</sup> Together with Arab writers, a diverse group of authors drew inspiration from the way their countries were impacted by the coming of Islam. Those authors discussed the multiplicity of cultures and the changing viewpoints on morality and behavior, seeking to express their ideas in an attractive, Islamic literary form.

The emergence of a large and literate Arabic-speaking population spurred a plethora of written works, ranging from romantic poetry to moralistic fables to spectacular fantasy tales. Underlying these works was commentary on friendship and love, envy and pride, falsity and sincerity.<sup>35</sup> Famous writers of the era include the artistic poet Ibn Al Muqaffa (died c. 756 A.D.), an *Abbasid* official of Iranian origin; the social commentator Al Jahiz (781-868 A.D.), an African Muslim of slave origin; the entertaining novelists Al Hamadhani (967-1007 A.D.) and Al Hariri (1054-1122 A.D.); and documenters of history such as Al Baladhuri (died 892 A.D.), Al Tabari (838-923 A.D.), and Al Mas'udi (c. 896-956 A.D.).<sup>36</sup> The most famous fiction

from this era is *The Book of One Thousand and One Nights (Arabian Nights)*, an epic conglomeration of folk stories with Middle Eastern, North African, and Indian elements.<sup>37</sup> The book took form in the 10th century and was concluded in the 14th century.<sup>38</sup>

## § 6.04 ADMIXTURE OF LAW AND POLITICS

Developing a cohesive body of Islamic Law, *Shari'a*, and a corresponding judicial system, was the greatest administrative accomplishment of the *Abbasids*, and arguably their most profound contribution to Islam. The attention given to law during the *Abbasid* Caliphate was in part the result of the failure of the *Umayyads* to implement an effective Islam legal system. By the 8th century A.D., numerous voices were demanding Islamic Law be defined more clearly and uniformly. The four great early Islamic legal scholars, Abū Hanifa (699-787), Mālik ibn Anas (710-795), Muhammad al Shāfi'i (768-820), and Ahmed ibn Hanbal (780-855), who eventually would be known as the founders of the *Hanafi*, *Māliki*, *Shāfi'i*, and *Hanbali* Schools of Law, respectively, systematically reviewed *Umayyad* law and customs in light of Qur'anic teachings.<sup>39</sup> They concluded dramatic change was necessary.

Having used Islam as justification for their revolution, the *Abbasid* Caliphs became committed patrons of Islamic learning. They cultivated the establishment of the *ulema*, whose essential objective was to discover, interpret, and apply the Will of God to everyday life.<sup>40</sup> The bulk of this work took place between the years 750 and 900, and the resulting consensus produced the binding legal rules that have governed much of Muslim life since.<sup>41</sup> Under the *Abbasids*, the *ulema* were the jurists, theologians, and educators of society; the ultimate interpreters and protectors of Islamic Law.<sup>42</sup> The judge (*qādi*) was to administer the law as it was articulated by the jurists — a practice which laid the foundation for the Islamic court system. Thus, law embodied not the product of government decrees, or even judges' decisions *per se*, but rather the work of scholars who painstakingly developed a comprehensive code based on the Qur'an.<sup>43</sup>

In a break from the past, the functions of judges were separated from those of the governors and Caliphs. Judges held no political or financial duties; they were to decide conflicts in light of the emerging system of Islamic Law.<sup>44</sup> Thereby, the

*Abbasids* imparted to the office of judge enhanced importance and administrative independence.

Despite the collective goal of developing a truly Islamic jurisprudence, considerable differences of opinion did arise and amplify, especially during the early years of the *Abbasid* Caliphate. These differences created divisions between the law schools and prevented the Caliphate from effectuating a truly unified legal system. Divergences were not surprising. After all, the Qur'an is not a legal treatise; only about 80 of its 6,236 verses (*ayat*) discuss law in the strict sense of the term (crime and punishment, family laws, contracts, etc.).<sup>45</sup> As a result, the doctrines of the Four *Sunni* Schools of Law depended in part on the interpretations and opinions of jurists who were, naturally, influenced by the customs of their respective environment.

A comparison of Medina and Kufa provides an illustrative example of this divergence of jurisprudence. Law in both cities stemmed from an interpretation of the Qur'an, viewed in light of the precedents of the Prophet and the Four Rightly Guided Caliphs. Where the Qur'an was silent, however, jurists in each city applied local practice in their elaboration of the law. Thus, in the Arab-dominated, patri-lineal system of Medina, jurists emphasized the Qur'an and customary tribal law, considered to be the Prophetically informed practice and consensus of the Medinan community.<sup>46</sup> An advocate of this legal perspective was *Imām* Mālik ibn Annas, whose positions were articulated in his treatise *Muwatta*.

In contrast, scholars in the younger, more diverse city of Kufa relied less on traditions and more on jurist opinion and local law.<sup>47</sup> This perspective was articulated by *Imām* Abū Hanīfa and Al Shaybani (749-805 A.D.). A practical example of the distinction between the two perspectives is found in the laws of marriage of the two cities. In Kufa, a husband was deemed the equal of his wife's family with regard to lineage and financial status, while no such law existed in the more conservative and homogenous city of Medina.<sup>48</sup>

By the end of the first 100 years of the *Abbasids* in power, significant differences between legal doctrines continued to exist. Two opposing groups emerged: those who sought to establish uniformity by limiting the use of reason and relying on the traditions of the Prophet, and those who asserted their right to reason for themselves in light of considerations such as equity or the public interest.<sup>49</sup> History is unsure where the *Abbasid* leaders stood on these issues, though they made an effort to re-consolidate their authority over the *ulema*. Indeed, by the 9th century, scholars in both camps began to feel they, not the caliphs, should be the final arbiters in matters of law.<sup>50</sup>

Sensing a threat, the *Abbasids* used a *minha* (inquisition) between 833 and 848 to play the two camps off each other.<sup>51</sup> The repercussions of the episode, however, made *Imām* Ahmed ibn Hanbal and other scholars heroes, thereby strengthening the long-term vitality of the *ulema*. When *Imām* Muhammad ibn Idris Al Shāfi'i, by then regarded as the "father of Islamic jurisprudence," thereafter decisively fixed a methodology for all *Shari'a* schools, he did so largely independent of the *Abbasid* political masters.

## § 6.05 DECAY AND DOWNFALL

The "Golden Age of Islamic Civilization" paralleled the increasing fragmentation of the universal Islamic Caliphate. Thus, while the empire experienced an unprecedented intellectual and cultural revolution brought about by the *Abbasids*, those same leaders were gradually losing their ability to rule. Governing an empire extending from the Atlantic to Central Asia was simply impossible, even for the *Abbasids*. Moreover, from the beginning of their rule they faced an inescapable problem: how to transform limited power derived from a tenuous coalition of divergent interests into something stable and enduring. Over time, this challenge proved insurmountable.

Political unity deteriorated rapidly from about 860 to 945 A.D., as regional differences precipitated a series of secessionist movements in Morocco, Tunisia, Syria, and Iran.<sup>52</sup> While regional rulers in the provinces continued to give nominal allegiance to the caliph, they exercised actual rule over their territories and established their own hereditary dynasties.<sup>53</sup> Religious differences exacerbated the problems of the *Abbasids*. *Khārijites* and *Shi'ites* staged revolts and asserted independence from the *Sunni* political authority. Adding to the *Abbasids'* difficulties was a general shortage of money. It was caused by inefficiency and extravagance in the bureaucracy, loss of tax revenues due to the rise of independent provinces, and a severe decline in the agrarian productiveness of Iraq.<sup>54</sup> As a result, the once powerful *Abbasid* Caliphate began to decline.

Seeking to protect themselves from a major revolt, in the 9th century, the *Abbasids* created an army loyal only to themselves. Drawn mainly from Turkish slaves known as *Mamluks*, the force was critical in delaying the further breakdown of the Empire. But, this mysterious army, together with the decision of Caliph Al Mutasim to transfer temporarily the capital from Baghdad to Sāmarrā, divided the Caliph from the people he claimed to rule.<sup>55</sup> The power of the *Mamluks* grew, and eventually the *Abbasid* Caliphs were at the mercy of their increasingly corrupt Turkish protectors.

The extent of the disintegration of the *Abbasid* Caliphate was evident by 945, when the *Buwayhids*, a *Shi'ite* dynasty from Western Persia, invaded Baghdad and

<sup>51</sup> See Donner, *supra*, at 27.

<sup>52</sup> See ESPOSITO, *supra*, at 58.

<sup>53</sup> See ESPOSITO, *supra*, at 58.

<sup>54</sup> See Donner, *supra*, at 30.

<sup>55</sup> See PAYNE, *supra*, at 178-180.

successfully seized power.<sup>56</sup> Although the *Buwayhids* were *Shīʿites*, they did not abolish the *Sunni* orientation of the empire and allowed the caliph to remain on his throne as a fictional leader. As a result, the *Abbasids* continued to reign, but only as a symbol of legitimate government and Muslim unity. They were effectively dispossessed of all authority to rule over the empire.<sup>57</sup> Real power passed to a series of *Buwayhid* and *Turkic* military dynasties and sultanates, or to whichever band of renegades could temporarily take hold of Baghdad.

Despite their loss of political authority, the ongoing “soft” influence of the *Abbasid* caliphs should not be underestimated. Perhaps similar to the British monarchs, the caliphs answered a deeply felt need, symbolizing the traditional virtues of the empire. Their significance was reflected in their role in official ceremonies, where they continued to be accorded half-divine status.<sup>58</sup> As the successors of Muhammad, they were viewed by many believers as the mediators between heaven and earth. Thus, they did not need to be powerful in the political sense; it was enough they existed.<sup>59</sup>

The official end of the *Abbasid* dynasty came in 1258, when the Mongol leader Hulagu Khan (c. 1217–1265), the grandson of Genghis Khan (c. 1162–1227), sacked Baghdad. The Mongol forces arrived on the eastern fringes of the Islamic world in 1219 and violently took control of many regions. They swept through Iran and the Caucasus Mountains in 1256, and thereafter set their sights on the Caliphate, or what remained of it. Upon conquering Baghdad, the Mongols executed the last *Abbasid* caliph, Al Mustasim, along with a good part of the population of the city.<sup>60</sup> In addition, the Mongols ruthlessly destroyed the Grand Library of Baghdad, or *House of Wisdom*, and other libraries in the city. The Grand Library contained innumerable precious books and documents on virtually all subjects, from medicine to philosophy to law to astronomy.

The pitiless destruction of this eminent center of learning (arguably the world's most famous and paramount intellectual center of that time) would have disastrous and long-lasting implications for the Muslim world. With just one battle, the tireless work of thousands of scholars was lost forever. Survivors are said to have claimed the Tigris River ran black for months, full of ink from the vast quantity of books thrown into the river. Perhaps more than anything else, the destruction of the Grand Library of Baghdad symbolized the end of the Golden Age of Islamic Civilization.

## § 6.06 CALIPHATE IN RETROSPECT

The elimination of the *Abbasids* and advent of the Mongols was a major turning point in Islamic history. The nomadic orientation of Mongols dealt a blow to urban life and rural agriculture, neither of which fully recovered their former levels of

prosperity.<sup>61</sup> When recovery did come, it followed new patterns: different cities rose to prominence as formerly important ones languished, and once important regions diminished in significance.<sup>62</sup> The arrival of the Mongols also accelerated the immigration of Turkish-speaking peoples, and Arabic gradually ceded its status as the *lingua franca* of the Near East. Critically, the Mongol invasion also marked the first time, since the establishment of the Caliphate over 600 years earlier, a large part of the Islamic world was ruled by a non-Muslim power. This reality forced many Muslims to doubt their assumption that God's favor for their community was revealed in their abiding political superiority.

However, the demise of the *Abbasids* — and thus the Imperial Caliphate — must not obscure the many notable achievements of the era. The expansion of the Empire established the foundation upon which Islam grew, from Spain in the west to India in the east. The *Abbasids* helped give birth to a sophisticated new civilization in Eurasia, easily the most culturally and intellectually advanced of its time. By the end of the *Abbasid* Caliphate, the Islamic community no longer was defined only by boundaries and hegemony. It was defined by a common set of religious beliefs, a uniquely Islamic culture, and an elaborate system of law and practice. These features were solidified by the end of the Caliphate, so even rule by non-Muslims could not destroy Islamic identity.

## § 6.07 SALIENT DEVELOPMENTS IN *SHARʿA*

### [A] Appointment of *Qāḍīs* Bound by *Sharīʿa*

In its legal policies, the *Abbasid* Caliphate sought centralization, specifically, the appointment of judges and the nature of the laws applied. The *Abbasid* Caliphate sought to make Islamic Law as the only law of the state. It was successful in one important sense: from this Caliphate onward, *qāḍīs* were bound to follow and apply the *Sharīʿa*.

Under the *Abbasid* Caliphate, a *qāḍī* had to be appointed formally by the central government, and be a specialist in Islamic Law.<sup>63</sup> Moreover, the Caliphate created the office of Chief *Qāḍī*, known in Arabic as “*Qāḍī Al Quḍḥat*.” The first Chief *Qāḍī* was Abū Yūsuf. He and his successors served not only as key advisors to the Caliph, but also were responsible, on behalf of the Caliph, for appointments and dismissals of *qāḍīs*. Once appointed, the job of the *qāḍī* was to apply the *Sharīʿa*, with some degree of at least theoretical independence from the central government that selected him.

<sup>62</sup> See Donner, *supra*, at 59.

<sup>63</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 50 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, SCHACHT.]

### [B] Development of Inspector of Market (*Muhtasib*)

The *Abbasids* appropriated the *Umayyad* office of *amil al-souq*, inspector of the market, who held limited civil and criminal powers. During the *Abbasid* Caliphate, however, this office, now called "*hisba*," evolved and expanded. The label attached to it changed, with the officer holding the position known as a "*muhtasib*." As a testament to its durability, the office of *hisba* still exists in some Muslim countries.

But what does an Inspector of the Market actually do? The *Abbasid* Caliphate looked to the Qur'an for the answer, specifically, *surah* 3 ayat 104, 110, 114, *surah* 7 ayah 157, *surah* 9 ayah 71, 112, *surah* 22 ayah 41, and *surah* 31 ayah 17. Generally, the answer was to "encourage good and discourage evil."<sup>64</sup> In other words, the *muhtasib* was to enforce Islamic morality in the marketplace. He was responsible for cutting off the hand of a thief caught in the act of stealing, and flogging a drunkard or an unchaste man.

### [C] No Fusion of Sacred and Profane

In one respect highly relevant to Islamic Law, the *Abbasids* failed: they never permanently fused the Sacred Law (*Shari'a*) with the political power, as is evident from the decline of the Arab-Islamic Empire in the late 800s A.D. and after. This failure is somewhat ironic, because the Caliphate intended to continue the trend toward the Islamicization of the law as it existed under the *Umayyad* Caliphate. Indeed, in the hope of distinguishing themselves from their *Umayyad* predecessors, the *Abbasids* equated the rule of law on earth with the rule of God on earth.<sup>65</sup>

Hence, the *Abbasids* supported religious law, as worked out by the *ulema*, as the legitimate normative standard for measuring behavior. They did not necessarily exempt themselves from application of the standard, sometimes asking members of the *ulema* for opinions on official matters (though not always following the religiously-based advice).

The failure to combine the sacred and profane happened because many people living under the *Abbasid* Caliphate did not embrace a complete fusion. They knew their rulers were occasionally hypocritical in their translation of religious theory into everyday practice. The Caliphate was essentially despotic, and cloaking despotism with appeals to the rule of God on earth was unsuccessful.<sup>66</sup>

The experience of the *qadis* is a good example. Though they were specialists in the *Shari'a*, and the *Abbasid* Caliphs picked them to apply it, every *qadi* could be dismissed by the Caliph, and many were. Moreover, every *qadi* needed the Caliph to execute a judgment, particularly in the area of Penal Law. In contrast, *qadis* under the *Umayyad* Caliphate, functioning as legal secretaries to the governors of the provinces, operated with both judicial and executive powers.<sup>67</sup> They could

<sup>64</sup> See SCHACHT, *supra*, at 50.

<sup>65</sup> See SCHACHT, *supra*, at 49.

<sup>66</sup> See SCHACHT, *supra*, at 49.

<sup>67</sup> See SCHACHT, *supra*, at 50.

conduct a criminal investigation, and ensure a punishment was administered. Under the *Abbasid* Caliphate, a separation of powers occurred as a result of the centralization of appointments: the *qadi* applied the substantive and procedural law of the *Shari'a*, but the police (known as "*shurta*") were given investigative and penal powers.

The reason for this separation, as much as it benefited the political interests of the *Abbasids*, lay in the *Shari'a* itself. The Islamic Law of Evidence allocates to the *shurta* the power to undertake a criminal investigation. As for civil investigations, the *Abbasids* established "Courts of Complaints," which were distinct from the tribunals of the *qadis* (though apparently with some over-lapping jurisdiction). These Courts may have been derived from the institution of the "investigation of complaints" of *Sassanid* Persia, which inquired into matters like alleged miscarriages of justice, wrongful behavior of a *qadi*, and major property disputes.<sup>68</sup>

Another example of the "bottom line" focus of *Abbasid* Caliphs on their own power is their insertion into the judiciary. Obviously, a Caliph could not legislate in a formal religious sense, given the acknowledgment of the Qur'an and *Sunnah* as sources of law. But, a Caliph could, and did when convenient, obfuscate the line between new legislation and administrative rules designed to implement existing Sacred Law.

Moreover, a Caliph could be considered to be religious scholar and lawyer, able to apply the *Shari'a* just like any *qadi*.<sup>69</sup> As such, a Caliph had at least as much room for discretion in legal decision-making as a *qadi*. His personal opinion had to be bounded by the Qur'an and *Sunnah* of the Prophet. But, on a point where there was neither Revelation nor authentic tradition, there was room for maneuver.

### [D] Split between *Shari'a* and *Siyasa*

As the years of the *Abbasid* Caliphate continued, the difference between the ideal, religiously-based law, the *Shari'a*, and what sometimes occurred in practice became more apparent. That practice, as intimated above, was administrative regulation by Caliphs dressed up as religious scholars.

The Arabic term "*siyasa*" means "policy." *Siyasa* is a broad term encompassing the discretionary power of a sovereign ruler to enforce the *Shari'a*, including through legislation on matters of police powers and criminal justice, and on taxation.<sup>70</sup> The exercise of this discretionary power was widely used by the sultans of the Ottoman Empire, and continues to be an acknowledged part of Islamic Law. Even a *qadi* must follow what a ruler says in exercising the *siyasa* power, so long as the instruction is consistent with the *Shari'a*.

Thus, there are often two layers of law, the *Shari'a* administered by the *qadi*, and the *Siyasa* comprising administrative regulations, or policies, given effect by a supreme political authorities. The *Shari'a* is Divine Law, whereas the *Siyasa* is based on custom and equity, or some modernist legislation (e.g., a code), but often

<sup>68</sup> See SCHACHT, *supra*, at 51.

<sup>69</sup> See SCHACHT, *supra*, at 53.

<sup>70</sup> See SCHACHT, *supra*, at 54.

on political expedience or whim. It functions as a "double administration of justice" prevailing "in practically the whole of the Islamic world."<sup>71</sup>

### [E] Failed Attempt at Codification

Early during the *Abbasid* Caliphate, there was an unsuccessful effort to codify the *Shari'a*. It was sponsored by an Iranian who had converted to Islam, a man named Abd-Allāh Ibn Al Mukaffa', and who was the Secretary of State to the Caliph. Ibn Al Muqaffa' wrote a treatise for one of the *Abbasid* Caliphs, Mansūr.

However, Ibn Al Mukaffa' held an expansive view of the *Sunnah*, not limited to the practices and words of the Prophet. His view also included administrative regulations implemented by the *Umayyad* Caliphate. This interpretation meant a Caliph reserved sole discretionary authority to issue decisions on administrative matters — for example, involving the military or civil administration.

To be sure, this discretion was bounded by the Qur'an and *Sunnah*, with the latter being defined broadly. Where they failed to establish a principle or obligation, the Caliph alone held the discretion to fill the void. In other words, the Caliph had the authority to codify the *Sunnah*.

In his treatise, Ibn Al Muqaffa' pointed out great differences in both the theory of Islamic jurisprudence, and the way in which Islamic law was implemented in practice. The lines of differentiation were drawn by the Ancient Schools of Law, and thus reflected geographic diversity. Ibn Al Muqaffa' criticized the divergences in legal theory and practice, and worried they were widening, in part because of flawed and excessive individual reasoning.

So, Ibn Al Muqaffa' called upon the Caliph to examine critically the state of Islamic jurisprudence and administration, and to seek a uniform codification of the law. The code would include the administrative decisions of the Caliphs, and would be revised periodically by future Caliphs. Significantly, *qādis* would be bound by the code. One would think this message would have been a popular one. After all, the treatise was "a plea . . . for state control over law [which] was in full accord with the tendencies prevailing at the very beginning of the *Abbasid* era."<sup>72</sup>

Yet, Ibn Al Mukaffa' was executed in 756 A.D. as the *Abbasid* Caliphs backed away from the extremist claim of being "cousins of the Prophet." Simultaneously, religious leaders sought to eschew an uncomfortably close relationship with the Caliphate. It was quite enough the Caliphs could appoint and dismiss *qādis*. But, to control the law itself would be too much.

In other words, Ibn Al Mukaffa' sought a tight link between "mosque and state," a popular idea when the *Abbasids* first came to power, but quickly fell into disfavor. Separation between mosque and state became the goal of many in the *ulema*, and the Caliphs, whatever their pre-disposition, had to yield. This significant atmospheric change was to the long-run benefit of the *Shari'a*.

<sup>71</sup> See SCHACHT, *supra*, at 55.

<sup>72</sup> SCHACHT, *supra*, at 56.

Islamic law became more and more removed from practice, but in the long run gained more in power over the minds than it lost in control over the bodies of the Muslims.<sup>73</sup>

That is, the fortunes of Islamic Law did not rise and fall with the Arab-Islamic Empire. A different history is that of Canon Law, the fortunes of which to some degree rose and fell with the political power of the Vatican in Europe. For Muslims, the *Shari'a* was the cornerstone of the rule of law, no matter what form of government existed.

<sup>73</sup> See SCHACHT, *supra*, at 56.

## Chapter 7

### THE CRUSADES (1095–1272 A.D.)

---

*Muslims and Christians, precisely because of the burden of our common history so often marked by misunderstanding, must today strive to be known and recognized as worshippers of God faithful to prayer; eager to uphold and live by the Almighty's decrees, merciful and compassionate, consistent in bearing witness to all that is true and good, and ever mindful of the common origin and dignity of all human persons, who remain at the apex of God's creative design for the world and for history.*

Address of His Holiness Pope Benedict XVI, Meeting with Muslim Religious Leaders, Members of the Diplomatic Corps, and Rectors of Universities in Jordan, Mosque Al Hussein bin Talal, Amman, Jordan, 9 May 2009 (emphasis added)

#### SYNOPSIS

§ 7.01 DEFINING "CRUSADES"

§ 7.02 ORIGINS OF CRUSADES

§ 7.03 FIRST CRUSADE

§ 7.04 RISE OF ZENGI AND SECOND CRUSADE

§ 7.05 RISE OF SALADIN, FALL OF JERUSALEM, AND THIRD CRUSADE

§ 7.06 FINAL FIVE CRUSADES

§ 7.07 IMPACTS AND PERCEPTIONS

#### § 7.01 DEFINING "CRUSADES"

The Crusades have come to have far-reaching religious, social, and geo-political impacts. But, in historical fact, what were the "Crusades"? Succinctly put, they were a series of religion-inspired military campaigns waged by Roman Catholic Western Europe against external and internal adversaries. These campaigns occurred between 1095 and 1272 A.D. In the end, they were largely failures, a historical fact that renders most invocations of the term puzzling, if not ominous.

The original and fundamental goal of the Crusades was to recapture Jerusalem and the surrounding Holy Land from Muslim control. Why was, and is, Jerusalem and the Holy Land important to Christians? The Archbishop of Kansas City, Kansas explains:

The answer to that question is to be found in our [Christian] belief in the incarnation of the Son of God, Jesus Christ. It is our belief that the Word became flesh and dwelt among us. The Holy Land is important to us because it is intimately linked to our belief in the historical Jesus. Jesus was not some mythical figure, the hero of some inspirational piece of fiction.

Put in a rather simple way, preserving the Christian shrines in the Holy Land and keeping them accessible to Christian pilgrims is important because we believe in Christmas. As Christians, we believe that the Lord of the universe . . . so loved us that he was conceived by the Holy Spirit in the womb of Mary. We believe he was born as a helpless baby in Jerusalem in the simplest of conditions in Bethlehem. We believe that this historical Jesus grew up in Nazareth under the care of Mary and Joseph. We believe that he performed his first miracle during a wedding feast at Cana in Galilee. We believe that Jesus walked the roads of Galilee teaching from "pulpits" in synagogues, on fishing boats, and on mounts. We believe that he fed the multitudes and healed many who were sick in body and spirit.

We believe that Jesus came to Jerusalem, taught in the temple precincts and drove the money changers out of the temple. We believe that our Lord gathered his apostles for the Passover meal and in the context of his last supper, celebrated the first Eucharist. We believe that Jesus empowered — ordained — his apostles to do this in memory of him.

We believe that our Lord asked Peter, James, and John to watch and pray with him in the Garden of Gethsemane. We believe that he was betrayed by Judas, abandoned by his apostles, brought to trial before the Sanhedrin and [Pontius] Pilate. We believe that Jesus carried the cross on the Via Dolorosa, was crucified on Calvary, and placed in the tomb of Joseph of Arimathea.

We believe in this real, historical person, Jesus Christ, who was born, lived, ministered, and died in actual places. We believe that these places were sanctified by the One who was born, lived, walked, taught, suffered, and died there.<sup>1</sup>

Consider an analogy: Jerusalem and the Holy Land are to Christians as Mecca and Medina are to Muslims. The analogy is imperfect. Christians and Muslims, respectively, differ in their understanding of who Christ and Muhammad were, and what their legacies are. Still, the comparison suggests the historical significance of territory whereupon a grand religious tradition is born. It also intimates that such territory ought to be preserved as a heritage and inspiration for, and open to the world, and never covered by the blood of war or closed to certain peoples.

Manifestly, the Crusades were directed at Muslims, although the Eastern Orthodox Byzantine Empire and disparate Jewish communities also were adversely affected. To Western Europeans of the time, a Crusade was seen as a war answering a command from God. This command was viewed — again, at the time — as

<sup>1</sup> Archbishop Joseph F. Naumann, *Catholics' Concern for Holy Land is Rooted in Historical Jesus*, THE LEAVEN (Newspaper of the Archdiocese of Kansas City, Kansas), 15 October 2010, at 2.

authorized by a legitimate authority, the Holy Father. The Pope, by virtue of his power as the Vicar of Christ, seemed to outline the objective of the war and offer crusading soldiers full remission of their sins.<sup>2</sup>

Retrospectively, the Crusades were not waged at the behest of God. And, there is reasonable debate as to the extent to which the Papacy actively condoned them. Yet, appreciating the Crusades from an Islamic vantage point remains uncommon in the non-Muslim world, despite accounts like *The Crusades Through Arab Eyes* (1984) by Amin Maalouf. For the better, though, the dominant view today among Catholic Christians is the Crusades were not religiously or morally acceptable. Further, in 2000, Pope John Paul II extended an apology for unfaithfulness to the Gospel teaching and violent actions toward believers of other faiths — an apology that apparently covered the Crusades.

## § 7.02 ORIGINS OF CRUSADES

Table 7-1:  
Summary of Crusades

Crusade Number	Years	Key Battles	Final Result	Involvement of Pope
1 <sup>st</sup> Crusade	1095-1099	Edessa, Antioch, Jerusalem	Christians take Antioch and Jerusalem, massacre of many Muslims	Urban II launches Crusade through sermon at Clermont
2 <sup>nd</sup> Crusade	1145-1149	Damascus	Muslims protect all their important cities	Eugenius III launches Crusade through Papal bull
3 <sup>rd</sup> Crusade	1188-1192	Cyprus, Acre, Arsuf	Christians make minor gains, but fail to take Jerusalem	Gregory VIII launches Crusade through Papal bull
4 <sup>th</sup> Crusade	1198-1204	Zara, Constantinople	Sack of Constantinople	Innocent III proclaims new Crusade
5 <sup>th</sup> Crusade	1213-1229	Damietta	Christians diplomatically take back Jerusalem	Innocent III launches crusade through Papal bull
6 <sup>th</sup> Crusade	1248-1254	Jerusalem	Crusaders defeated, lose Jerusalem for final time	None
7 <sup>th</sup> Crusade	1270	None	None	None
8 <sup>th</sup> Crusade	1271-1272	None	Failure for Christians, end of the Crusades	None

<sup>2</sup> CHRISTOPHER TYERMAN, *FIGHTING FOR CHRISTENDOM: HOLY WAR AND THE CRUSADES*, at 30 (Oxford University Press, 2004). [Hereinafter, TYERMAN.]

Since the advent of Islam, Christians and Muslims episodically have struggled with one another. Islam, unlike other religions, seemingly threatened the religious and political ascendancy of Christianity.<sup>3</sup> At the same time Muslim armies overtook the Eastern Roman Empire, Spain, and much of the Mediterranean, Islam challenged the essential tenets of Christian religious claims. While revering God's messengers — from Adam through Jesus — as Prophets, Islam rejected the doctrine of Christ's Divinity and the authority of the Catholic Church (and Protestant) Churches.

Instead, Islam called on all, including the People of the Book (Jews and Christians), to accept the final revelation, the Qur'an, and join the Islamic *ummah*, and to live under Islamic governance.<sup>4</sup> This universal mission was manifest in the spread of Muslim rule over many Christian territories, and by the eleventh century a significant number of Christians had converted to Islam and adopted Arabic language and manners. One event that particularly hardened Western attitudes toward the Islamic world occurred in 1009. The *Fatimid* Caliph Al Hakim bi-Amr (985–1021) ordered the destruction of the Church of the Holy Sepulchre — the spot venerated by Christians as where Christ was crucified and buried, and the scene of the empty tomb at the Resurrection. Though the Byzantine Empire was allowed to rebuild the Church 20 years later, the damage, in Christian minds, was done.

Generally, the Western European response to the growth of Islam was narrow-minded and intolerant, characterizing Muhammad as an imposter and dismissing Islam as a religion of the sword.<sup>5</sup> Christian fears and jealousy amplified as Islam grew into a powerful civilization while Western Europe languished in its Dark Ages. Europe was held together by military aristocracies who ruled over local resources by force. The relative stabilization of European borders after the Viking, Hungarian, and Islamic invasions had left a large class of armed warriors who, without an outlet for their military skills, spent their energies fighting one another and terrorizing local peoples.<sup>6</sup>

To be sure, the Catholic Church attempted to reduce the violence through initiatives such as the *Peace of God* movement (which threatened divine sanctions against those who attacked noncombatants) and the *Truce of God* movement (which attempted to stop warfare on Sundays and holy days).<sup>7</sup> But, the Church had little control over the petty knights, barons, and mercenaries, however, and so Western Europe continued to be, in many respects, a barbaric, armed camp.

The *Reconquista* in Spain and Portugal (an effort to wrest the Iberian Peninsula back from the Islamic Moors) provided a temporary outlet for some European warriors. More significantly, it became the training ground for the theological and moral justification of the Crusades. Because Christianity had no well-defined

concept of a "holy war" before the Middle Ages, the *Reconquista* represented the first time Christians had coupled a cohesive military campaign with a holy pilgrimage.<sup>8</sup> In 1063, Pope Alexander II (died 1073) set a powerful precedent when he gave his blessing (or apparently did so) to Iberian Christians in their wars against Muslims, granting both a Papal standard and an indulgence to those killed in battle. The newly established Church-sanctioned warfare would soon be used to much greater effect.

In 1074, Byzantine Emperor Michael VII Doukas (1050–1090) appealed to Pope Gregory VII (c. 1020–1085) for assistance in fighting the (Muslim) *Seljuk* Turks. Perhaps not surprisingly, the Pope viewed the Byzantine plea for aid as an ideal opportunity to employ abundant Western European warriors in the service of God.<sup>9</sup> Not only would this effort provide a much-needed outlet for the armed men of Europe, it also would complement the evolving view of the Church of its role during the 11th century reform movement: it was the Pope, not kings and emperors, who wielded supreme power. A grand army led by the Pope against the enemies of Christ would be a dramatic way to solidify Church power. Additionally, Pope Gregory saw the enterprise as a method of shoring up relations between the Christians of the East and West, which had been strained over various theological and cultural differences and resulted in the Great Schism of 1054. However, the Papal plans never were put into action. The Church became pre-occupied with the Investiture Controversy, a struggle for power between the Holy Roman Empire and Papacy.<sup>10</sup>

In 1095, the Byzantines sent another request for assistance against the Turks, this time from Emperor Alexius I Comnenus (1056–1118) to Pope Urban II (c. 1035–1099). By 1092, the Papacy had gained the upper hand in its struggle against European imperial powers, and thus possessed the moral and political authority to effectuate the dream of Gregory VII.<sup>11</sup> For Pope Urban II, such an effort would serve to reunite Christendom, enhance the powers of the Papacy, and perhaps even bring the Eastern Church under his control. Indeed, from its inception, a Crusade represented a practical expression of Papal ideology and power.<sup>12</sup>

Fortunately for the Pope, there was a major renewal of Christian piety in the preceding years, as public interest in religious affairs had increased dramatically during the Investiture Controversy. With the right dose of religious propaganda, Western Europeans were ripe to be mobilized into a sustained, Church-led military effort. At the dawn of the 12th century, the Western Church finally developed a response to Islam, which took on a quasi-revolutionary form: a mass movement of intense religious revivalism and a call for holy war against the supposed enemies of Christianity.

<sup>12</sup> TYERMAN, *supra*, at 38.

Pope Urban II parlayed the Byzantine request for military aid into a well-orchestrated recruitment drive, manifest in a preaching tour of his homeland, France, between August 1095 and September 1096.<sup>13</sup> At the Council of Clermont in November 1095, before a vast crowd of priests, knights, and peasants, Urban preached what became known as the First Crusade. No exact transcription of the homily of Urban at Clermont exists, and the four extant versions differ significantly from one another. Because all four versions were written after the First Crusade, the words put into the mouth of the Pope probably reflect what actually transpired during the Crusade, as well as what authors thought Urban should have said.<sup>14</sup> Nonetheless, taking the four versions together, along with the subsequent letters written by the Pope, he called for a Christian war of liberation. Less clear are the exact goals of that war, and precise type of liberation he sought.

The first writer to paraphrase the homily of Urban was Fulcher of Chartres (born c. 1059).<sup>15</sup> He was present at Clermont. Of the four versions, only his does not quote Pope Urban II as saying Jerusalem was a goal of the Crusade. He says Urban focused solely on liberating the Eastern Church from Muslim aggression.

The second writer was Robert of Rheims (also known as Robert the Monk). He, too, was present at Clermont. He recounts the Pope hurling insults at Muslims, describing them as the "accursed," "unclean," and a "vile" race.<sup>16</sup> Robert credits Urban with making a direct plea to liberate Jerusalem, quoting him thus: "Take the road to the Holy Sepulchre, rescue that land from a dreadful race and rule over it yourselves."<sup>17</sup>

The third writer was a Benedictine historian and theologian, Guibert of Nogent (c. 1055-1124). He probably was not present at Clermont. An unusual feature of his report is its emphasis on eschatology. He quotes Pope Urban II as putting the fight for Jerusalem in the context of "the approaching times of the Antichrist."<sup>18</sup> Unlike the other three writers, who contend Urban focused, at least in part, on the protection of Eastern Christians as cause for the mission, Guibert portrays Urban as exclusively concerned with the liberation of Jerusalem.<sup>19</sup>

The final writer, Baldric of Bourgueil (c. 1050-1130), attended the Council of Clermont. However, he wrote his account years later. He also credits Pope Urban II with a direct plea to take back Jerusalem by quoting Urban thusly: "Wage war for your own rights over Jerusalem and attack and throw out the Turks . . . [i]t ought to be a beautiful ideal for you to die for Christ in that city where Christ died for you."<sup>20</sup>

<sup>17</sup> "Account of Robert of Rheims," quoted in RILEY-SMITH, *supra*, at 42-44.

<sup>18</sup> "Account of Guibert of Nogent," quoted in RILEY-SMITH, *supra*, at 47.

<sup>19</sup> "Account of Guibert of Nogent," quoted in RILEY-SMITH, *supra*, at 45.

<sup>20</sup> "Account of Baldric of Bourgueil," quoted in RILEY-SMITH, *supra*, at 51-52.

A more accurate reflection of the thoughts of Pope Urban II on crusading probably comes from four of his own letters written in the months after Clermont. The letters confirm he granted remission of sins to those undertaking a crusade in the name of the Church. One important contrast between the letters of Urban and the transcribed homilies of Robert, Guibert, and Baldric, is the lesser emphasis on Jerusalem. Only in his letter to Flanders does the Pope mention Jerusalem as a focus of his concern, saying:

they [the Turks, or perhaps more generally Muslims] have seized the Holy City of Christ and have sold her and her churches into abominable slavery.<sup>21</sup>

In his letter to partisans in Bologna, Urban indicates Jerusalem was more of a goal for the Crusaders than for the Church. Still, he seems to condone the mission. He writes:

We have heard that many of you have felt the longing to go to Jerusalem, which you should understand pleases us exceedingly.<sup>22</sup>

Thus, there is evidence suggesting Urban may have approved extending the Crusade to Jerusalem, but he unmistakably refers to liberating the Church as a whole rather than to re-conquering Jerusalem itself. His focus is on "the churches of God in the eastern regions,"<sup>23</sup> the "liberation of the Church,"<sup>24</sup> "liberating Christianity,"<sup>25</sup> and "go[ing] to the aid of the Asian Church."<sup>26</sup>

In reviewing the primary sources concerning preaching by Pope Urban II on the First Crusade, three points become clear. First, the Pope called for a war of liberation to defend the Christian Church. Second, the key objective of that war was supposed to be defending the Byzantine Empire from Muslim aggression. Third, the Pope may not have explicitly mentioned Jerusalem as a goal of the Crusade, but he offered at least a tacit endorsement of such a mission. It remains debatable whether Urban was partially misunderstood. Either way, the scene at Clermont was repeated all across Western Europe, and a tremendous wave of enthusiasm ensued. Thousands swore to undertake the journey to Jerusalem, receiving the ceremonial "signing of the cross" and, quite significantly, the promise by the Pope of remission of their sins.<sup>27</sup>

Notably, the Pope and his deputies advocated Just War to defend Christendom. While the Papacy had struggled before with the doctrinal validity of Church-sponsored violence, Urban seemed to set aside any reservations. Yet, lest there be doubters, Urban characterized the mission as a pilgrimage. Rather than nullify the

<sup>21</sup> "Urban to All the Faithful in Flanders," December 1095, quoted in RILEY-SMITH, *supra*, at 38.

<sup>22</sup> "Urban to His Partisans in Bologna," September 1096, quoted in RILEY-SMITH, *supra*, at 39.

<sup>23</sup> "Urban to All the Faithful in Flanders," December 1095, quoted in RILEY-SMITH, *supra*, at 38.

<sup>27</sup> TYERMAN, *supra*, at 27-30.

Just War theory of Saint Augustine, Urban built on it by tying a call for a Crusade to the established practice of pilgrimage.<sup>28</sup> Each Crusader joined the cause by taking a pilgrim's vow, and each swore to make a pilgrimage (violent or not) to the Holy Sepulchre.<sup>29</sup> Thus, a Crusade was a peculiar enterprise: an armed pilgrimage, full of sword-bearing soldiers, farmers, clergy, and servants, setting off on an inevitably violent religious mission, prepared for conquest as much as defense, with overlapping allegiances to God, Pope, and self.

### § 7.03 FIRST CRUSADE

Launched in August 1096, the First Crusade was the largest and most ambitious military operation of Western Europe since the days of the Roman Empire. One of the most notable figures from this Crusade is Peter the Hermit (died 1115), a charismatic preacher whose speeches throughout France and Germany attracted thousands to the cause.<sup>30</sup> Peter led his inspired masses into Turkey months in advance of the official departure date, but his ragtag "People's Crusade" was slaughtered by Turks before even getting close to the Holy Land.<sup>31</sup> Other early misfires included brutal attacks against Jews living along the Rhine, who became easy targets for avaricious crusaders looking to plunder as they made their voyage to the east. Most of those "anti-Jewish crusades" never made it to the Holy Land either, simply evaporating along the way.

The main armies of the First Crusade arrived in Constantinople in late 1096 and early 1097. As various groups came through the city, their leaders were summoned by the clever Byzantine Emperor, Alexius, and asked to swear an oath of loyalty affirming they would give all conquests to the Byzantines. Though none of the crusading leaders were happy with this arrangement, only Raymond IV, Count of Toulouse (c. 1041/1042–1105) — by far the most powerful magnate to take up the cross — was able to avoid the oath.<sup>32</sup> Satisfied the Western Europeans would not carve up his empire, Alexius transported the crusaders across the Bosphorus, from where they would march to Antioch.

One of the most glorious cities of the ancient Roman Empire and once a cradle of Christianity, the imposing city of Antioch had long been ruled by Turkish Muslims, despite its predominantly Greek and Armenian Christian population.<sup>33</sup> The rich Christian history of Antioch was indisputable: Saint Peter had been its first bishop, and it was here that the disciples of Jesus were first called "Christians."<sup>34</sup> Painfully aware the ancient Church of Saint Peter had been converted into a mosque, the Crusaders felt a fervent duty to liberate the holy city. Their task was incredibly difficult; starving and outnumbered, overtaking the well-fortified city

seemed impossible. However, luck or divine intervention (as they believed) was on their side. An Armenian Christian inside the city who had converted to Islam but had since become disaffected sent word that he would let the Crusaders into the city.<sup>35</sup> After a bloody, protracted battle that lasted for days, the city leaders fled and the Franks<sup>36</sup> took control. God, they believed, had intervened and ensured their success.

The triumph of the Crusaders was brief. A large, well-equipped Turkish army, led by the great Kerbuqa, soon arrived outside Antioch's walls and began to besiege the city. Again it seemed impossible the exhausted and much-depleted Crusaders could survive, and their morale quickly sank. But, by another twist of fate, their fortunes changed again. Having heard the Holy Lance (the spear used to pierce the side of Christ) was buried inside the city, Peter Bartholomew (died 1099) jumped into a pit and began scrounging with his bare hands. Within minutes he cried in joy, and was pulled out of the ground holding a rusty lance head. Some of the leaders, of course, suspected Peter planted the spearhead before his dig, but nothing could restrain the excitement that swept throughout the ranks.<sup>37</sup> Completely rejuvenated, the Crusaders tore out of the city and miraculously defeated the superior Turkish army. Against all odds, Antioch was safely theirs.

In January 1099, the Crusaders set off to their ultimate destination, Jerusalem. But, word had reached the Christian leaders that the Egyptian army was mobilizing and would be ready to help defend the city. Some argued marching straight to Jerusalem was foolish, and that if the Holy Land ever were to be secure, the next step must be to destroy the Muslim power base in Egypt.<sup>38</sup> While that would have been a wise strategic policy, it did not square with the underlying role of the Crusaders as pilgrims. Their purpose was to reach the Holy Sepulchre, not the ancient pyramids. Convinced God had brought them this far, they could not lose faith now, and proceeded directly to Jerusalem.

The final march to Jerusalem was said to have been accompanied by miracles and visions, further solidifying the sense among the Crusaders that they were an instrument of Divine Providence.<sup>39</sup> On 7 June 1099, they arrived outside the great city's walls, and were greeted by the imposing mosques of Al Aqsa and Omar, and the calls to prayer echoing through the city.<sup>40</sup> Adopting a simultaneously pious and practical policy, the Crusaders built siege towers from which to attack the city, and sung hymns and visited the surrounding holy places: Mount Zion, the Garden of Gethsemane, and the Mount of Olives.<sup>41</sup> Finally, on 15 July, after weeks of preparation and days of attempts, the Crusaders forced entry into the city. The ensuing victory was accompanied by a vicious slaughter of thousands of Jews and

<sup>41</sup> ARMSTRONG, *supra*, at 177.

Muslims, which was, according to most sources, brutal even under the standard military practices at the time.<sup>42</sup> Women and children were among those massacred. The Crusaders also desecrated the Noble Sanctuary (*Haram al-Sharif*), converted the Dome of the Rock into a church, and made the *Al-Aqsa Mosque* (which they renamed the Temple of Solomon) into a residence for their king.<sup>43</sup>

After over four centuries of Muslim rule, Jerusalem and Antioch again were in Christian hands. The majority of Crusaders returned home to Europe, where they were extolled as heroes. Subsequent, minor crusades were launched (such as the Crusade of 1101), but since liberation had already been achieved, the emphasis, now, was on pilgrimage.<sup>44</sup> Those who remained in the Holy Land established four mini-states: the Kingdom of Jerusalem, the County of Edessa, the Principality of Antioch, and the County of Tripoli.<sup>45</sup> Clearly, the Crusaders did not plan to honor their oath to hand over their conquests to Byzantine Emperor Alexius I. But, Pope Urban II never directly addressed the issue of governing the new territories, so controversy arose as to who should lead the nascent Latin Kingdom.<sup>46</sup> The Christians had the luxury of worrying about politics, though, because a roughly 50-year period of relative peace between Christians and Muslims had begun.

#### § 7.04 RISE OF ZENGI AND SECOND CRUSADE

Christians and Muslims lived side-by-side in the newly-formed Crusader States, yet took minimal interest in each others' intellectual or religious backgrounds.<sup>47</sup> There was a fair amount of basic cultural exchange, however, and the two groups managed to maintain mostly peaceful relations. This *status quo* was possible largely because of disunity in the Muslim world under the *Seljuks*, *Fatimids*, and *Abbasids*; without unified opposition, the Latin Kingdom of Jerusalem was able to consolidate its power over the crusader principalities.<sup>48</sup>

A turning point came in 1128, when the Sultan of Rûm appointed Turkish commander Imad ad-Din Zengi (c. 1085–1146) as *Atabeg* of Mosul, and later gave Zengi undisputed authority over all of Syria and northern Iraq.<sup>49</sup> An intelligent and ruthless leader, Zengi preached a *jihad* and conquered the Christian city of Edessa in 1144, a victory which touched a deep nerve in the Muslim world. The buffer state that had provided a strong flank for Antioch was destroyed, and the feeling of Christian invincibility was crushed.

<sup>46</sup> MADDEN, *supra*, at 37.

<sup>47</sup> MADDEN, *supra*, at 46.

<sup>48</sup> Smith, *supra*, at 339.

<sup>49</sup> See ARMSTRONG, *supra*, at 191. "Atabeg" is a Turkish hereditary title of nobility literally meaning "father lord," and connoting a governor.

The barons of the Crusader States reported to Europe that the entire Latin East, including Jerusalem, was in grave danger. In response, Pope Eugenius III (died 1153) issued a papal bull, *Quantum Praedecessores*. It recited the glories of the First Crusade and called upon Christian knights again to take up the Cross.<sup>50</sup> Notably, the Bull detailed the privileges available to those who took the Cross, including protection of property and suspension of debt collection.<sup>51</sup> In contrast to Urban II, who relied entirely on the masses, Eugenius eagerly enrolled monarchs in his Crusade, including Louis VII of France (1120–1180) and Conrad III of Germany (1093–1152).<sup>52</sup> Created by Papal pronouncement and led by nobility, the Second Crusade was more businesslike than the First.

Recruiting efforts for the Second Crusade were led by Abbot Bernard of Clairvaux (1090–1153), a charismatic preacher akin to Peter the Hermit. Bernard realized that with a Christian kingdom already established at Jerusalem, the liberation sermons of the First Crusade were no longer appropriate. Bernard thus portrayed this Crusade as a means of redemption, an opportunity to demonstrate one's faith by taking the Cross.<sup>53</sup> Whereas the First Crusade was a vast collective enterprise on behalf of Christendom, the Second Crusade was a Divine invitation for each individual Crusader to save his soul.<sup>54</sup>

Despite solid political backing and well-articulated theological foundations, the Second Crusade was a disaster for the Europeans. The increasingly-united Muslims had solidified their hold of Edessa, forcing the Crusaders to abandon plans to recapture the city. Instead, they decided to attack Damascus, even though that city was an ally of Christian Jerusalem. Evidently the kings and leaders of the Crusade saw no reason to honor a treaty signed with infidels.<sup>55</sup> This move proved foolish. The Christians were handily defeated, and thus gained nothing from the Crusade but the enmity of an ally.

King Louis blamed the Byzantines for their lack of support, establishing the perception, later to become widespread, that the Eastern Christians were part of the problem.<sup>56</sup> Bernard claimed the Crusade failed because of the sins of Europe; if the Crusades were to succeed, he argued, Europe must purify itself. For their part, the Muslims were extremely encouraged. Most importantly, the successful defense of Damascus gave rise to a new leader, Nur ad-Din (or Nur al-Din, the son of Zengi) (1118–1174), who would now commence his own Holy War effort.

## § 7.05 RISE OF SALADIN, FALL OF JERUSALEM, AND THIRD CRUSADE

The theology of *jihād*, as developed in the *Shari'a* movement of the 8th century A.D., had been mostly absent from Muslim discourse for years. Under the leadership of Nur ad-Din, the concept of *jihād* was revived, this time as a defensive response to Crusader aggression.<sup>57</sup> Nur ad-Din reminded his brethren that while the Qur'an forbids Muslims to initiate war, it also instructs that "persecution is worse than slaughter."<sup>58</sup> For half a century the Franks had killed Muslims and driven them from their homes. Muslim apathy and disunity simply made matters worse. The *jihād* of Nur ad-Din began with a propaganda campaign: scholars advanced the theology of *jihād* and spread the word to *imāms* in Muslim cities, from where the clergy transmitted the teachings to people in Friday sermons.<sup>59</sup> By effectively re-introducing *jihād*, Nur ad-Din took the first step toward developing a strategic response to Christian aggression.

The second step was taken by Salāh ad-Din Yūsuf ibn Ayyūb (i.e., Salah ad-Din, or Salah al-Din, or transliterated in English, Saladin) (c. 1138-1193), a Kurdish commander born in Tikrit, Iraq, who defeated the Sevens *Shi'ite Fatimids* in Egypt and took control of Syria following the death of Nur ad-Din. The *Abbasid* Caliph appointed Saladin overlord of both territories, and the worst fears of the Crusaders were realized: their Christian cities were surrounded by a united Muslim kingdom.<sup>60</sup> A deeply religious man, Saladin was fiercely adamant that his state function according to the laws of Islam. He abolished unlawful taxes and spent freely on building new mosques and libraries.<sup>61</sup> Saladin was also tremendously devoted to *jihād*, and set his sights on expelling the Christians once and for all.

Knowing the armies of Saladin were on the march toward Jerusalem, Christian forces set off to thwart the threat. This was a colossal mistake. On the scorching afternoon of 3 July 1187, the two sides met at Hattin, where the forces of Saladin demolished the Christians. The Battle of Hattin marked the greatest defeat in Crusader history; almost half the fighting men in the Latin Kingdom were lost, leaving Christian cities virtually defenseless.<sup>62</sup> After taking Acre and Ascalon without a battle, Saladin marched easily to Jerusalem, which capitulated almost immediately. In contrast to the brutal violence with which the Crusaders had captured that city during the First Crusade, Saladin ordered that no Christian be killed, and forbid his troops from plundering the city.<sup>63</sup> Though many of his men were desperate to avenge the 1099 massacre, Saladin, having signed a peace treaty with Balian of Ibelin (c. 1140s-1193), the Christian commander of Jerusalem at the time, reminded his troops that Muslims must observe the legalities of the Qur'an,

which mandated that oaths and treaties be kept to the letter.<sup>64</sup> Though a number of churches were turned into mosques, Saladin left the Church of the Holy Sepulchre untouched.<sup>65</sup> Unashamed of his merciful ways, Saladin is said to have proclaimed: "Christians everywhere will remember the kindness we have done them."<sup>66</sup> Regrettably, that memory has proven quite faulty.

Impressed as they were with Saladin's humane and reasonable treatment of the Christian population of Jerusalem, Western Europeans were shocked and horrified over the loss of their holy city. They clamored for a major crusade to recover Jerusalem and restore Christian glory in the Near East. Within one month of losing Jerusalem, Pope Gregory VIII issued *Audita Tremendi*, an articulately-crafted papal bull imposing a seven-year truce throughout Europe so that rulers could focus on organizing troops for another crusade. Echoing Bernard from years earlier, the bull argued the success of a crusade was linked to the spiritual well-being of Christendom, and called on all Europeans to contribute to the cause through purification, fasting, and prayer.<sup>67</sup> A profits tax — called the "Saladin Tithe" — was imposed across many lands, a measure which greatly helped fund the effort.<sup>68</sup>

The Third Crusade marked the height of the crusading era: Europe's religious faith and chivalric virtue were mobilized into the largest military expedition of the Middle Ages, and the entire affair was led by kings and elites, most notably Richard I of England (Richard the Lionheart) and Philip II of France. The focal point of the effort of the Crusaders was the city of Acre, which they besieged for many months before Saladin surrendered. Saladin and Richard agreed that in return for the lives of a captured Muslim garrison, Saladin would pay 200,000 *dinars*, release all his hostages, and give the city back to the Christians.<sup>69</sup> Despite their agreement, soon thereafter Richard ordered 2,700 Muslims executed in full view of Saladin and his army.<sup>70</sup>

The Crusaders continued south along the Mediterranean Sea coast, defeating Muslims again at Arsuf and Jaffa. Richard then led his troops to within 12 miles of Jerusalem. He decided against an attack, as he did not have enough men to hold the city even if it were captured.<sup>71</sup> A military stalemate ensued: Richard could not take Jerusalem or attack the Muslim power base in Egypt, and Saladin was unable to take back Jaffa. The two practical-minded leaders concluded the Treaty of Jaffa on 2 September 1192. The treaty left the Franks in control of the coast from Acre to Jaffa, allowed access to Jerusalem for pilgrims, and gave freedom of movement

<sup>64</sup> ARMSTRONG, *supra*, at 258-259.

<sup>65</sup> MADDEN, *supra*, at 78.

between Muslim and Christian territories.<sup>72</sup> The Third Crusade was partially successful for the Christians, but the armies of Saladin deprived the Crusaders of their ultimate objective, Jerusalem.

## § 7.06 FINAL FIVE CRUSADES

The thin strip of Palestinian coast restored to Christians during the Third Crusade provided a commercially important base for a renewed Kingdom of Jerusalem. The holy city itself would return to Christian rule only briefly, however, and that was years ahead. The Fourth Crusade, initiated in 1202 by Pope Innocent III, chose Egypt as the target of the expedition.<sup>73</sup> Innocent III regarded recovery of the Holy Land as an urgent objective.

But, this Pope was not as effective as his predecessors at recruiting elites to the cause. His failure to recruit the Kings of Europe denied the Crusaders access to national taxes and fleets, and they were consequently forced to arrange transport from Venice.<sup>74</sup> Lacking the provisions to pay for their contracted fleets, the Crusaders were forced to accept an offer from the Venetian doge, Enrico Dandolo, in which they would help Venice capture the Christian port of Zara in return for a moratorium on their debt.<sup>75</sup> Despite the obvious Papal disapproval over an attack on fellow Christians, the Crusaders had no choice if they wished to pursue their ultimate objective. The fall of Zara marked the first, but not only, time crusading forces would sacrifice Christian brethren for their greater cause.

Another diversion was right around the corner. Alexius Angelus, son of the deposed Byzantine Emperor Isaac II, offered to subsidize the crusaders' voyage to Egypt if they helped him recapture the Byzantine throne from his usurping uncle, Alexius III. Though many Crusaders were thoroughly disgusted with the plan, the bulk of the army went forward and one month later attacked the great Christian city of Constantinople.<sup>76</sup> After a series of misunderstandings and occasional outbreaks of violence, the Crusaders sacked the city in 1204 and established the so-called Latin Empire.<sup>77</sup>

Successive Popes expressed disappointment at Greek failures to help recover the Holy Land, and animosity increased as a result. However, the Byzantine capital was never the ultimate objective of the Fourth Crusade. Nevertheless, hopes of continuing on to Egypt gradually faded, and the Fourth Crusade ended without a single force entering Muslim lands.

Two specific events launched the Fifth Crusade: issuance of the papal bull *Quia Maior* in 1213, and promulgation of a comprehensive plan to recover the Holy Land

by the Fourth Council of the Lateran in 1215.<sup>78</sup> More than any other before it, the Fifth Crusade was designed to be an enterprise administered and managed by the Church.<sup>79</sup> A well-devised campaign of recruitment, propaganda, and finance produced missions to the Near East between 1217 and 1229. In the early phases, Crusader forces achieved the remarkable feat of capturing Damietta, a key Egyptian town. The Egyptians then made an intriguing proposal: a straight-up exchange of Damietta for Jerusalem. Astonishingly, the offer was rejected by the Papal legate, Pelagius.<sup>80</sup> Instead, the Christian army attacked Cairo in July 1221, where Sultan Al Kamil, ruler of Egypt, led a brilliant counterattack, resulting in surrender by the Christians and an 8-year peace agreement.<sup>81</sup>

Despite the setback in Egypt, recruiting continued in Europe and a new expedition, led by Emperor Frederick II of the Holy Roman Empire, set off in 1228. Deftly exploiting the rivalries between the rulers of Egypt and Syria, Frederick forged a treaty with Al Kamil of Egypt that restored Jerusalem, Nazareth, and Bethlehem to the Christians for a period of 10 years.<sup>82</sup> Under the terms of the treaty, Jerusalem was to be ruled by Christians but open to all, and the Temple Mount was to be controlled by the Islamic religious authorities.<sup>83</sup> Jerusalem remained in Christian hands until 1244, when it was sacked by Turkish raiders. The city would remain under Muslim control until 1917.<sup>84</sup>

After 1229, the popularity of the Crusades waned, and they "progressed from the pragmatic to the optimistic to the desperate."<sup>85</sup> The Church decreased its role in the Crusades and focused its energies on initiatives closer to home. Truces with quarreling Muslim neighbors helped to sustain Frankish outposts, but practical-minded Christians realized their territories were barely clinging to life. The Crusade of Louis IX, launched in 1248, intended to conquer Egypt and change the balance of power in the region. Despite being one of the best prepared and most lavishly funded of all Crusades, it ended in disaster when his army was cut off from its supplies and routed in the Nile Delta.<sup>86</sup>

The arrival of the Mongols in the 1250s gave the Crusaders renewed hope. Ferocious and merciless fighters, the Mongols had stormed through the Muslim world, conquering Persia, Mesopotamia, and even the once-mighty *Abbasid* Caliphate in Baghdad.<sup>87</sup> Christians were not the least bit distressed to see the most opulent areas of Islam destroyed, and they prayed the Mongols were their long-awaited rescuers. The Christians formed an alliance with the Mongols against the militant *Mamluk* sultans of Egypt, but the Mongols were defeated soon

<sup>77</sup> These events often are regarded as critical breaking points in the Great Schism between the Eastern Orthodox Church and the Roman Catholic Church.

thereafter. The Crusaders were then vulnerable to the new Egyptian Sultan, Baibars, who was fervently committed to eradicating all Frankish settlements.

Egypt now took center stage in the Islamic world, with Baibars at the helm of power. For the first time since Saladin, the *Ayyubid* Empire was united under a single ruler, and Egypt and Syria became renewed centers of learning and cultural growth.<sup>88</sup> Baibars was focused on security, however, and was intent on pre-empting any possibility of a new crusade from the West. He thus turned his full attention to the Christians and waged a *jihād* aimed at removing, once and for all, their presence in Muslim lands. From 1263 to 1266, Baibars systematically conquered Nazareth, Caesarea, Arsuf, Jaffa, and Antioch, doing his best to massacre Christians so as to prevent any further re-building of the settlements.<sup>89</sup> After the fall of Acre in 1291, most remaining Christian outposts were evacuated without resistance. Those Christians unable to leave were massacred or enslaved, and the last vestiges of Christian rule in the Near East disappeared.

## § 7.07 IMPACTS AND PERCEPTIONS

During the two centuries in which the Crusaders occupied parts of the Near East, Muslims and Christians formed shifting alliances, traded with each other, and carried out mutually beneficial commercial activities.<sup>90</sup> The two societies often cooperated, and those who were not directly engaged in fighting lived normal lives. Still, the scale of warfare and atrocities cannot be ignored. Most historians consider it impossible to estimate the exact number of Muslims, Christians, and Jews killed during the Crusades, but the figure would certainly be in the millions.<sup>91</sup>

The extent to which the Crusades impacted the Muslim world continues to be hotly debated. Many modern scholars contend the Crusades did not have a profound influence on the development of Muslim societies. In contrast to Crusades in Europe — such as in Spain, where the *Reconquista* decisively changed the direction of the region — the Crusades in the Near East left few physical traces, as the Western presence dried up by the fourteenth century.<sup>92</sup> Moreover, it must be remembered that with few exceptions, Muslim unity was a charade; the *Abbasid* Empire comprised a loose confederation of city states, the *Shi'ite* *Fatimid* Caliphate of Egypt was in constant struggles with Turks, and the entire region was characterized by ethnic diversity and alienation from rulers.<sup>93</sup> Amidst such volatility, the arrival of Western armies may have been just one more military presence in an area already crowded with competing rulers. Indeed, while Zengi, Nur ad-Din, and Saladin cast their wars in the language of *jihād*, much of their energies were materially and ideologically directed against other Muslims.

<sup>88</sup> See ARMSTRONG, *supra*, at 448.

<sup>89</sup> See MADDEN, *supra*, at 180–181.

<sup>90</sup> See Smith, *supra*, at 341.

<sup>91</sup> See ARMSTRONG, *supra*, at 454.

<sup>92</sup> See TYERMAN, *supra*, at 81.

<sup>93</sup> See TYERMAN, *supra*, at 87.

However, it is clear that Muslims of the time were horrified by the Crusaders' brutality and embittered by the broken promises of Christian commanders such as Richard the Lionheart (1157–1199). When Muslims compared the actions of the Crusaders to Saladin's reputation as a man of honor, they probably concluded the Franks were motivated more by politics and greed than true religious devotion. Some scholars say the scars caused by the Crusades led to the creation of an Islamic mentality that imposed intellectual barriers and sought a retreat into isolation. One author writes: "Assaulted from all quarters, the Muslim world turned in on itself. It became oversensitive [and] defensive."<sup>94</sup>

If there is such an Islamic mentality, is it accurate to say the Crusades caused it? Most scholars say no, pointing out that the Crusades were virtually unknown to most Muslims until a century ago, and thus cannot be blamed for a lack of progress in the Muslim world.<sup>95</sup> As evidence, they note the first Arabic history of the Crusades was not published until 1899. Many argue there was nothing to differentiate the Crusades from any other wars fought against infidels, and that in any case, the Crusades "were unsuccessful and thus irrelevant."<sup>96</sup> The conclusion of irrelevance is probably too strong, though it is true that the Crusades were an obscurity in Muslim perceptions until the early 20th century. It was not until European colonial powers descended upon the Middle East in the wake of the collapse of the Ottoman Empire that a renewed Muslim awareness of the Crusades began.

To Muslims of the time, the Crusades were Western invasions motivated by Christian greed and hatred of Islam. To Christians of the time, the Crusades were religiously justified expeditions to reclaim the land taken by the armies of Islam. To the vast majority of modern people, the Crusades represent the abhorrent consequences of fanatical religious intolerance.

Echoing the modern view, in March 2000 Pope John Paul II apologized for "infidelities to the Gospel committed by [Christians]," and asked forgiveness:

for the violence used in the service of the truth and for the distrustful and hostile attitudes sometimes taken towards the followers of other religions.<sup>97</sup>

Many believe the words of John Paul II are a formal apology for the Crusades. But, some scholars argue they should not be construed as such. The Pope chose his words carefully, apologizing for infidelities and violence. Though not specifically referencing the Crusades of the 11th through 13th centuries, presumably he intended to cover them.<sup>98</sup>

## Chapter 8

### SUNNI-SHĪ'ITE SPLIT (632-680 A.D.)

---

The Prophet said to 'Alī, "O 'Alī,  
Thou art the Lion of God, a hero most valiant;  
Yet confide not in thy lion-like valour,  
But seek refuge under the palm-trees of the 'Truth.'  
Whoso takes obedience as his exemplar Shares its proximity to the ineffable  
Presence.  
Do thou seek to draw near to Reason; let not thy heart  
Rely, like others, on thy own virtue and piety.  
Come under the shadow of the Man of Reason  
[i.e., the *Pir*, or Perfect *Shaikh*, or Spiritual Director],  
Thou canst not find it in the road of the traditionists.

. . .

Having chosen thy [Spiritual] Director, be not weak of heart,  
Nor yet sluggish and lax as water and mud;  
But if thou takest umbrage at every rub,  
How wilt thou become a polished mirror?"

Mawlāna Jalālu-'D-Dīn Muhammad I Rūmī (1207-1273 A.D.),  
TEACHINGS OF RUMI — THE MASNAVI, Book I, Story X, *Submission to the  
Spiritual Director in MASNAVI I Ma'NAVI 45-47* (London: The Octagon  
Press, 1979) (E.H. Whinfield trans.)

## § 8.05 'ĀSHŪRĀ

## § 8.01 DIVERSITY WITHIN UNITY AND DEMOGRAPHIC REALITIES

Islam, like Christianity, is characterized not only by unity within diversity, but also by diversity within unity. There are core principles and practices, historical understandings, and future perspectives, upon which all Muslims agree, and likewise for Christians. These unifying features are like centripetal forces in physics, bringing Muslims toward a center. The belief in the authenticity and content of Message of the Qur'ān, and in the Messenger, and the Five Pillars of Islam, are the obvious centripetal forces. Indeed, at the outset, it is vital to appreciate that differences between *Shī'a* and *Sunni* Muslims do not yield disparate legal systems. In fact, for *Shī'ites* and *Sunnīs*, the vast majority of *Sharī'a* theory, jurisprudence, and black-letter rules is substantively identical. Professor Fysee explains:

Islamic law is not a systematic code, but a living and growing organism; nevertheless there is amongst its different schools a large measure of agreement, because the starting point and the basic principles are identical. The differences that exist are due to historical, political, economic and cultural reasons, and it is, therefore, obvious that this system cannot be studied without a proper regard to its historical development.<sup>1</sup>

But, there are differences — centrifugal forces, which move out from that center — that give Islam its diversity, and likewise for Christianity.

Islam, particularly *Sunni* Islam, is a decentralized religion. Thus, interpretations of the Qur'ān are variegated, as diverse as the attire of Muslim women, from bikinis on Lebanese beaches to *burkas* in the *Old Souk* of Riyadh. America itself is home to the most diverse Muslim community in the world. Just as there are Catholic and Protestant Christians, and a large number of Protestant denominations, and Eastern Orthodox Churches, there is more than one branch of Islam. In the *Sharī'a*, there are distinctions between *Shī'a* and *Sunni* on certain issues, such as the independent reasoning (*ijtihād*) as a source of law, and in certain subject areas, such as Family Law and Inheritance.

The most basic distinction among the branches of Islam, of course, is between *Sunni* and *Shī'ite*. Among *Sunni* Islam, there are Four Major Schools: *Hanafi*, *Māliki*, *Shāfi'i*, and *Hanbali*. Likewise, *Shī'ism* is no monolith. Within *Shī'ite* Islam, there are three major distinctions:

- Twelver *Shī'ites*, also known as "*Ja'fari*," "*Imāmi*," or "*Ithna 'Ashari*" *Shī'ites*.
- Sevener *Shī'ites*, also known as "*Ismā'ili*" *Shī'ites*.

<sup>1</sup> ARIF A.A. FYSEE, OUTLINES OF MUHAMMADAN LAW 1 (3rd ed., 1964), quoted in Faisal Kutty, *The Sharī'a Factor in International Commercial Arbitration*, 28 LLOYD'S OF LOS ANGELES INTERNATIONAL & COMPARATIVE LAW REVIEW 565, 579-580 (SUMMER 2006).

- Fiver *Shī'ites*, also known as "*Zaydi*" *Shī'ites*.

Within each of these delineations, there are yet more delineations.<sup>2</sup> For example, among the Twelver *Shī'ites*, a predominant line are the *Usulis*.

Notably, in August 2010 in Iran, which is a Twelver *Shī'ite* nation and the only officially *Shī'ite* nation in the world, the Supreme Leader, *Āyatollāh* Ali Khamenei took the unprecedented step of publicly rebuking senior officials, including his political allies:

Unity and solidarity among the country's officials is a religious duty, and the intentional rejection [of unity] is, especially in the upper echelon, against religious teachings.<sup>3</sup>

The *Āyatollāh* was reacting to an open split among conservative and radical fundamentalists in the government. At issue was:

a highly controversial interpretation of the Shia faith advanced by close allies of Mr. [Mahmoud] Ahmadi-Nejad [President of Iran], who advocate a radical mixture of Islam and nationalism.

Allies of Mr. Ahmadi-Nejad allegedly hold that Muslims do not need the clergy — a pillar of the Shia faith — to connect with God, and that direct links can be made with the last [12th], or "Hidden Imam" [Al Māhdi]. . . .

Some prominent fundamentalists, who describe themselves as moderates, have warned about the emergence of a "deviant" religious group around the President. In a theocratic regime, dedicated to upholding the message of Islam, disputes of this nature are of crucial importance.<sup>4</sup>

The *Āyatollāh* also was reacting to Esfandiar Rahim-Mashaie, Chief of Staff to the President, who advocated establishment of an "Iranian School of Islam," and added that were it not for Iranians, "no Islam would have remained."<sup>5</sup> For the *Āyatollāh*, that signaled too much diversity within unity, and undermined the claim of Islam to universality. The factions paid little heed to the *Āyatollāh*, and continued their infighting.<sup>6</sup>

Some observers, both Muslim and non-Muslim, regard *Shī'ism* in all of its diversity as a religion separate from Islam.<sup>7</sup> The truth or falsehood of that

<sup>2</sup> See JAMES A. BILL & JOHN ALDEN WILLIAMS, ROMAN CATHOLICS & SHI'ITE MUSLIMS: PRAYER, PASSION AND POLITICS 17 (Chapel Hill, North Carolina: The University of North Carolina Press, 2002). [Hereinafter, BILL.]

proposition notwithstanding, any treatment of Islam is incomplete without a discussion of *Shīism*. Demographic realities are one reason: *Shī'as* constitute a sizeable 10-13 percent of the worldwide population of persons identifying themselves as "Muslim." At least 23 countries have populations of *Shī'ite* Muslims in excess of 100,000. The majority of *Shī'a* reside in India, Iran, Iraq and Pakistan.\* In the United States, there are between 200,000 and 400,000 *Shī'ites*. Table 8-1 presents the global distribution of *Shī'as*.<sup>9</sup>

Among the different categories of *Shīism*, over 85 percent of all *Shī'a* are Twelver.<sup>10</sup> Table 8-2 presents the country-specific distribution of Twelver *Shī'ites*, and estimates of their percentage among the *Shī'ite* Muslim population in each country.<sup>11</sup> The countries in this Table are further testimony to the diversity within *Shī'ite* Islam.

Table 8-1:  
*Shī'ite* Demographics

Rank	Country	Population of <i>Shī'a</i> Muslims (as of 2009)	<i>Shī'a</i> as a Percentage of Total Muslim Population of Coun- try
1	Iran	66-70 million	90-95 %
2	Pakistan	17-26 million	10-15 %
3	India	16-24 million	10-15 %
4	Iraq	19-22 million	65-70 %
5	Turkey	7-11 million	10-15 %
6	Yemen	8-10 million	35-40 %
7	Azerbaijan	5-7 million	65-70 %
8	Afghanistan	3-4 million	10-15 %
9	Syria	3-4 million	15-20 %
10	Saudi Arabia	2-4 million	10-15 %
11	Nigeria	Less than 4 mil- lion	Less than 5 %
12	Lebanon	1-2 million	45-55 %
13	Tanzania	Less than 2 mil- lion	Less than 10 %
14	Kuwait	500,000-700,000	20-25 %
15	Germany	400,000-600,000	10-15 %
16	Bahrain	400,000-500,000	65-75 %

\* See THE PEW FORUM ON RELIGION AND PUBLIC LIFE, PEW RESEARCH CENTER, MAPPING THE GLOBAL MUSLIM POPULATION 8, 10 (October 2009), downloaded from <http://pewforum.org/docs/DocID=450>. [Hereinafter, PEW FORUM.]

<sup>9</sup> The statistics mentioned above and presented in the Table are from the Pew Forum on Religion and Public Life and are as of October 2009. See PEW FORUM, *supra*, at 10 (October 2009).

<sup>10</sup> *Shīa Islam*, Wikipedia, posted at [http://en.wikipedia.org/wiki/Shīa\\_Islam](http://en.wikipedia.org/wiki/Shīa_Islam).

<sup>11</sup> *Worrying Times*, THE ECONOMIST, 25 September 2010, at 60 [hereinafter, *Worrying Times*]; *Shīa Islam*, Wikipedia, posted at [http://en.wikipedia.org/wiki/Shīa\\_Islam](http://en.wikipedia.org/wiki/Shīa_Islam). The statistics in this Table are as of 2010. Note there is a statistical problem in that most countries, with the exception of Iran, either do not count *Shī'ites* or vastly underreport their numbers.

Rank	Country	Population of <i>Shī'a</i> Muslims (as of 2009)	<i>Shī'a</i> as a Percentage of Total Muslim Population of Coun- try
17	Tajikistan	Approximately 400,000	Approximately 7 %
18	United Arab Emirates (UAE)	300,000-400,000	Approximately 10 %
19	United States	200,000-400,000	10-15 %
20	Oman	100,000-300,000	5-10 %
21	United Kingdom	100,000-300,000	10-15 %
22	Bulgaria	Approximately 100,000	10-15 %
23	Qatar	Approximately 100,000	Approximately 10 %

For example, Iran is an avowedly Islamic theocracy, and regards itself as the protector of *Shī'ites* worldwide. This self-appointed role reflects both the long history of *Shī'ism* in Persia, and the persistence of discrimination against *Shī'ites*, as *The Economist* observes:

Conditions for Shias vary among the Gulf monarchies but had until recently [2010] been broadly improving. In relaxed and relatively liberal Kuwait, where Shias account for a third of the ultra-rich citizenry, they have long been prominent in business and in government. Some hold high office in Bahrain, too, but proportionately far fewer than their two-thirds share of the island kingdom's population.

Saudi Arabia has the largest number of Shias [in the Gulf outside of Iran] at 2m-odd, but they are thinly diluted in a population ten times bigger and are subject to more systematic discrimination. No Shia has become a cabinet minister or general — or even a headmistress in a state school, reflecting the Saudis' severe Wahhabism, in effect the kingdom's official doctrine. Still, in recent years the Saudi government has loosened some strictures on Shia worship and forced extremists Sunni clerics to lessen their anti-Shia vitriol.<sup>12</sup>

In contrast to Iran, Azerbaijan is a secularized democratic country, with separation of mosque and state, a legacy of respect for its Jewish minority, and a legal system in which the *Shari'a* does not predominate. As another contrast, Bahrain is an Emirate in which a *Sunni* ruling family presides over a majority *Shī'ite* population.

The diversity within the *Shī'ite* world has implications for international relations, but, the pattern is not entirely clear. Iran and the United States are on chronically hostile terms. Azerbaijan and America enjoy good relations, whereas Azerbaijan and Iran do not. Bahrain hosts the 5th Fleet of the United States Navy. Likewise,

<sup>12</sup> *Worrying Times*, *supra*.

the extent to which *Shī'ism* itself, as distinct from other factors, affects whatever pattern exists is unclear.

Table 8-2:  
Twelver *Shī'ite* Demographics

Rank	Country	Twelver <i>Shī'a</i> as a Percentage of <i>Shī'ite</i> Muslim Population of Country (Estimated)
1	Iran	90 %
2	Azerbaijan	85 %
3	Bahrain	75 %
4	Iraq	65 %
5	Yemen	45 %
6	Lebanon	35 %
7	Kuwait	35 %
8	Turkey	25 %
9	Albania	20 %
10	Pakistan	20 %
11	Afghanistan	20 %
12	Saudi Arabia	10 %

## § 8.02 SUCCESSION PROBLEM CATALYZING SCHISM

### [A] Nature of Authority

What exactly does it mean to be *Shī'a*? One way to respond is a *Shī'ite* has an essentially different view of authority than a *Sunni*. The word "*Shī'a*" is the short form of the Arabic phrase "*Shīat-u-'Alī*," meaning "Party of 'Alī."<sup>13</sup> The schism between *Shī'ite* and *Sunni* Islam dates to the time of the Prophet Muhammad. Its catalyst was a problem that plagues most religious communities after their founder dies, that bedeviled Ancient Rome, and that recurs in many contexts throughout history: succession.

When the Prophet died in 632 A.D., the first Islamic community (*ummah*) faced three key issues:

- (1) Who should be the first successor to Muhammad?
- (2) Upon what criteria should successors be selected?
- (3) What is the role of a successor? That is, would the successor to the Prophet be religious in character, or merely political and military?<sup>14</sup>

<sup>13</sup> See JOHN L. ESPINOSA, *ISLAM: THE STRAIGHT PATH* 39 (New York, New York: Oxford University Press, expanded ed., 1991). [Hereinafter, STRAIGHT PATH.]

<sup>14</sup> Mohammed Fadel, *The True, the Good, and the Reasonable: The Theological and Ethical Roots of Public Reason in Islamic Law*, 21 CANADIAN JOURNAL OF LAW & JURISPRUDENCE 5, 21 (January 2008). [Hereinafter, Fadel.]

On these issues, depending on the source, there was nearly universal agreement in the *ummah*, violent disagreement between sizeable factions, or something in between.

*Sunnis* believe the proper first successor to Muhammad was Abū Bakr, who indeed filled that role. For them, personal qualities such as piety, wisdom, and experience — not blood ties to the Prophet — are what matter in choosing a successor. As to the job, as it were, of a successor, no one can match Muhammad as the Prophet of Allāh. Hence, there is no element of religious authority in succession. Rather, leadership of the *ummah* is about taking on the political and military roles Muhammad played. That is, after Muhammad, leadership is a secular matter, as successors inherited only the political and military dimensions of the office. Note the difference on religious authority has profound implications for doctrine and change. Religious authority in the *Shī'ite* world is more centralized and hierarchical than in the *Sunni* world. Depending on the leader, the development and elaboration of doctrine may be top-down rather than bottom-up, and change can come rapidly through the order of a single individual.

In contrast, *Shī'a* believe Muhammad designated his cousin and son-in-law, Abū al Hasan 'Alī ibn Abī Ṭalīb, to be his successor, and that a blood relationship between Muhammad and a prospective successor is vital.<sup>15</sup> For them, a successor holds not only political and legal authority, but also religious authority. That is, *Shī'a* accept 'Alī as the proper successor in matters of both religion and state.

Their credence becomes vitally important once 'Alī and his family lose the Caliphate. *Shī'a* believe that notwithstanding the end of the *Rashidun* era in 660, the descendants of 'Alī (who, by blood connection, are tied to Muhammad) still retain their religious authority, which is inherited. *Shī'ites* reject the disjunctive nature of the *Sunni* interpretation. They argued the religious and political character of the successor to the Prophet is indistinguishable. As the supreme religious leader, a successor is necessarily the political leader as well — as was Muhammad. In brief, there is both a sacred and secular aspect to succession: the leader has that dominion, plus leads the Islamic community (*ummah*) on political and military matters.

The competing interpretations between *Shī'ites* and *Sunnis* on the nature of authority are more than an academic point. Rather, they continuously inform the hierarchy of Islamic governments. Consider Article 2 of the Constitution of the Islamic Republic of Iran:

The Islamic Republic is a system based on belief in:

- (1) the One God (as stated in the phrase "There is no god except Allāh"), His exclusive sovereignty and the right to legislate, and the necessity of submission to His commands;
- (2) Divine revelation and its fundamental role in setting forth the laws;
- (3) the return to God in the Hereafter, and the constructive role of this belief

<sup>15</sup> See ROY JACKSON, *FIFTY KEY FIGURES IN ISLAM* 16-21 (New York, New York: Routledge, 2006). [Hereinafter, JACKSON.]

in the course of man's ascent towards God;

- (4) the justice of God in creation and legislation;
- (5) continuous leadership (*imamah*) and perpetual guidance, and its fundamental role in ensuring the uninterrupted process of the revolution of Islam;
- (6) the exalted dignity and value of man, and his freedom coupled with responsibility before God; in which equity, justice, political, economic, social, and cultural independence, and national solidarity are secured by recourse to:
  - (1) continuous *ijtihād* of the *fukahā'* possessing necessary qualifications, exercised on the basis of the Qur'ān and the *Sunnah* of the *Ma'sumun*, upon all of whom be peace;
  - (2) sciences and arts and the most advanced results of human experience, together with the effort to advance them further;
  - (3) negation of all forms of oppression, both the infliction of and the submission to it, and of dominance, both its imposition and its acceptance.<sup>16</sup>

There is no similar provision based in the Constitution of the Kingdom of Saudi Arabia (i.e., the Basic Law, which is a charter containing 83 articles, and which was adopted on 2 March 1992 by a Royal Decree of King Fahd), nor in the Constitution of any other *Sunni* state.

### [B] Tribal Consensus or Blood Lineage?

The standard but by no means universally accepted historical narrative is that in 632, when the Prophet Muhammad died, the Muslim community (*ummah*) divided over the method by which the successor to the Prophet should be chosen. The Arabic term for "successor" or "representative," is "*Khalifa*," which in English is transliterated as "Caliph." Synonyms are "*Amir al-Mu'minin*," which means "Leader of the Faithful," as well as "*Imām al-Mu'minin*" and "*Imām al-Ummah*." The essential idea is the Caliph is the leader of an Islamic community, head of an Islamic state, and possibly both. In the debate over two methods, tribal consensus or blood line, three factions in the *ummah* emerged.

The majority faction favored the method of tribal consensus. Surely any Meccan aristocrat could assume the leadership of Islam through the process of consensus among the early converts of Mohammad.<sup>17</sup> These Muslims, of course, became known as "*Sunnīs*."

<sup>16</sup> Islamic Republic of Iran Constitution, Article 2, posted at [www.iranonline.com/iran/iran-info/Government/constitution.html](http://www.iranonline.com/iran/iran-info/Government/constitution.html). To be sure, reliance on *Shīte* ideology is not necessarily the sole cause of the hierarchical government in Iran. A case can be made the supremacy of *Shī'a* was a historical consequence of the 1978-79 Islamic Revolution, and the dynamics of the Revolution contributed to the hierarchy.

<sup>17</sup> See SANDRA MACKAY, *THE IRANIAN PERSIA, ISLAM AND THE SOUL OF A NATION* 50 (New York, New York: Plume, 1996). [Hereinafter, MACKAY.]

Members of the *ummah* in favor of the bloodline method believed a Caliph must be a direct descendant of Mohammad in order to possess the piety and wisdom of the Prophet that is needed to be a worthy successor and, in effect, representative of God (Allāh).<sup>18</sup> These Muslims, who were the minority faction, became known as "*Shītes*." The *Shītes* asserted (and still do) God chose the Prophet; the people did not appoint him. Likewise, they argued, God, not the people, should select his successor. Blood lineage is not exactly the same as a direct Divine appointment. But, when that lineage is traced back to a person who was Divinely appointed, the connection to the Almighty is less tenuous than an appointment resulting from a consensus of largely unrelated men.

Notably, there was a third faction, the *Khārijites*. The *Khārijites* believed any male believer possessed the right to assume leadership of Islam, regardless of whether he was a direct descendant of Mohammad or belonged to the elite class of Mecca.<sup>19</sup>

### [C] Fātimah and Children of 'Ali

'Ali was, of course, the first cousin of the Prophet with whom the Prophet had been raised, for instance, in the home of Abū Talib, the father of 'Ali and Uncle of the Prophet.<sup>20</sup> Because each had been raised for a time in the house of Abū Talib, their relationship has been characterized as one of "foster brothers."<sup>21</sup> Further, 'Ali is reputed to be one of the first converts to Islam following Khadyja, the very first to convert.<sup>22</sup> Indeed, many *Shītes* believe 'Ali was the first man to convert to Islam and follow the Prophet, and was both the person closest to Muhammad and his most trustworthy confidant. They also assert Mohammad died in the arms of 'Ali, and 'Ali bathed the body of Muhammad and buried him. In brief, of the four Rightly Guided Caliphs (*Rashidun*), 'Ali was the only one who was directly related to Muhammad.

Yet, a cousin is not a son. The succession problem might well have been less controversial had Muhammad been survived by a son. Yet, when Muhammad died, he left no direct male to become successor. When he passed away, only one of his four daughters was alive: Sayyida Fātimah Zahra, known as "Fātimah" (also spelled "Fatimah" or "Fatima.") She, the youngest child of Muhammad and Khadyja, was married to 'Ali, the son of Abū Talib.<sup>23</sup> It is believed the Archangel Gabriel arranged the marriage between 'Ali and Fātimah.<sup>24</sup> Further, *Shī'a* believe

<sup>18</sup> See MACKAY, *supra*, at 50.

<sup>19</sup> See MACKAY, *supra*, at 50, 53.

<sup>20</sup> See MOJIB MOHEN, *AN INTRODUCTION TO SHĪ'Ī ISLAM: THE HISTORY AND DOCTRINES OF TWELVE SHĪ'ĪSM* 11 (London, United Kingdom: Yale University Press, 1985). [Hereinafter, MOHEN.]

<sup>21</sup> MOHEN, *supra*, at 11. But see JACKSON, *supra*, at 17, in which the author states although Muhammad had been raised by Abū Talib, the relationship of 'Ali to Muhammad was in Muhammad's own house, and was a relationship more similar to that of father and son. See also BILL, *supra*, at 29.

<sup>22</sup> See BILL, *supra*, at 29; MOHEN, *supra*, at 11; JOHN L. ESPINOSA ED., *THE OXFORD DICTIONARY OF ISLAM* 15 (New York, New York: Oxford University Press, 2003). [Hereinafter, OXFORD DICTIONARY OF ISLAM.]

<sup>23</sup> See BILL, *supra*, at 52.

<sup>24</sup> See BILL, *supra*, at 28, 52-53.

that at the wedding of 'Ali and Fātima, Muhammad overheard the Angel Gabriel proclaim "Allāh Akhbar!" (God is Great), and repeated the exclamation, which has been used by Muslims ever since.<sup>25</sup>

Fātimah was a woman of great compassion. Even though early in her life her family was poor, she is reported to have given what little she had to those in greater need.<sup>26</sup> To help Fātimah and 'Ali cope with their poverty, Muhammad taught them the prayers now prayed by some Muslims with the use of prayer beads.<sup>27</sup> Indubitably, Fātimah was beloved by Muhammad, who reportedly said:

The contentment of Fatima is my contentment, her anger is my anger. Whosoever loves my daughter Fatima loves me. Whosoever makes Fatima content makes me content. Whosoever makes Fatima unhappy makes me unhappy. Fatima is part of my body. Whosoever hurts her, has hurt me, and whosoever hurts me has hurt God.<sup>28</sup>

The life of Fātimah was filled with suffering. She experienced great poverty, the deaths of her mother and father, and saw 'Ali "lose the mantle of Muslim leadership . . . to Abū Bakr."<sup>29</sup> She is remembered, perhaps most of all, because she represents the genealogical line of the Prophet Muhammad.<sup>30</sup>

In fact, it is difficult to overstate the importance of Fātimah in *Shī'ism*.<sup>31</sup> Without her, *Shī'ism* simply would not exist, at least not as it has come to be known today. Each one of the Twelve *Shī'ite Imāms* is a direct descendant of Fātimah and 'Ali.<sup>32</sup> Manifestly, 'Ali was the son-in-law of the Prophet, and his children with Fātimah were grandchildren of the Prophet. Therefore, each *Shī'ite Imam* is a direct descendant of — has a blood tie to — the Prophet. Consequently, Fātimah is known by *Shī'ites* as the "Mother of the *Imāms*," and revered by them for this Motherhood, and for her personal virtue.<sup>33</sup> To underscore her importance, she is to *Shī'ites* as the Blessed Virgin Mary is to Catholic Christians. Notably, Fātimah is not alone among women who occupy special places of honor in *Shī'ism*. Mary herself, along with Khadyja, and Asiya, the caregiver of Moses, are revered as well.<sup>34</sup>

With Fātimah, 'Ali had three children: two sons, Hasan (also spelled "Hisan"), the eldest, who was born in 625 A.D. (3 A.H.), and Hussein (also spelled "Husayn"), plus a daughter, Zaynab.<sup>35</sup> Sadly, Fātimah died only 6 months after the Prophet,

and was buried in Medina.<sup>36</sup> 'Ali remarried a woman named Fātimah bint Hizam al-Qilabiyya. She is known as "Umm ul-Banīn," or "Umm Banīn," meaning "Mother of Several Sons." With her, 'Ali had four sons: 'Abbās (the eldest), Abdullah, Jafar, and 'Uthmān.

## § 8.03 'ALI AND SUCCESSION CRISIS

### [A] Public Anointing?

Succinctly put, *Shī'a* believe Muhammad designated 'Ali to be his successor, and that 'Ali was fit to succeed Muhammad because of his faith and piety, his close relationship with Muhammad, not merely as one of the Companions of the Prophet (*Ṣaḥābah*), but more profoundly because of his blood relationship with Muhammad as his cousin. Further, 'Ali served Muhammad as a soldier and scribe. He is said to have slept in the bed of Muhammad on the eve of the *Hijrah*, thereby making it possible for Muhammad to escape his persecutors and complete his journey to Medina.<sup>37</sup>

Did Muhammad make an unequivocal, public declaration of a successor? Certainly that would have resolved any succession problem. *Shī'ites* urge that he did, and cite sayings attributed to Muhammad in which he purportedly designated 'Ali as his successor.

First, *Shī'ites* believe the Prophet told his relatives and friends during the first days of his prophecy that whoever would be the first to accept his teachings would become his successor. Muhammad voiced this intention when 'Ali was still young, at the tender age of 13. Muhammad called upon his fellow clansmen (and women) to follow God (Allāh). The young 'Ali promptly stepped forward and announced his intention to support Muhammad and live a life according to the Will of Allāh.<sup>38</sup> Touched by the enthusiasm and loyalty of 'Ali, Muhammad reportedly said:

This is my brother, my trustee and my successor among you, so listen to him and obey.<sup>39</sup>

"This," argue *Shī'ites*, surely must refer to 'Ali. 'Ali was the first man to believe the authenticity of the message delivered by Muhammad, and accept it. Hence, 'Ali was the rightful successor.

Second, *Shī'ites* contend that Muhammad believed 'Ali possessed special knowledge about Islamic leadership, specifically religious and spiritual leadership, and the insights should be transferred down to the sons and subsequent descendants of 'Ali. Therefore, Muhammad named and appointed 'Ali as his successor on 10 March 632 A.D. at a place known as "Ghadir Al Khumm" (or simply "Khum," "Khur," or

<sup>36</sup> See BILL, *supra*, at 40.

<sup>37</sup> BILL, *supra*, at 29; MOMEN, *supra*, at 12.

<sup>38</sup> See CYRIL GLASSÉ, THE NEW ENCYCLOPEDIA OF ISLAM 39 (Lanham, Maryland: AltaMira Press, 2002); MOMEN, *supra*, at 12.

<sup>39</sup> AL-TABARĪ, TA'RIKH, vol. I, at 1172-73, quoted in MOMEN, *supra*, at 12.

"Khu").<sup>40</sup> This spot, an oasis, is in Saudi Arabia near the city of Al-Juhfah. During a sermon he delivered at Khumm, Muhammad revealed his intentions:

If I was anyone's *mawla* [protector], then 'Ali is his *mawla*.<sup>41</sup>

Shī'ites assert that what happened was nothing short of the investiture of 'Ali by the Prophet as the next leader of the *ummah*. Consequently, a key annual event for Shī'ites is *Eid al Ghadir*, or the Festival of *Ghadir*, in which they celebrate this investiture.<sup>42</sup> Annually, on the 18th day of *Dhu Al-Hijja*, the last of the 12 months in the Islamic calendar, Shī'ites celebrate this Festival.<sup>43</sup>

Sunnīs have a different interpretation of the sermon. They do not believe Muhammad meant to designate 'Ali as his successor.<sup>44</sup> Rather, the Prophet simply was defending 'Ali against unjust criticism.

### [B] 'Ali Passed Over Thrice

It was around 'Ali that the *Shiat-u-'Ali* (Party of 'Ali) coalesced and pressed the case he should be the Caliph, because he boasted both religious credentials and family ties. Yet, Abū Bakr, the closest confidant of Muhammad, and also arguably the first convert, was tapped for the position. Abū Bakr was much older than 'Ali, thereby rendering Abū Bakr the choice conforming with Arab tradition favoring elder male leaders.<sup>45</sup> Thus, in the first test, the consensus-method prevailed. Significantly, Abū Bakr was named as successor to the temporal, but not religious, authority of Muhammad.<sup>46</sup>

Note that apparently no group ever seriously entertained, or considered at all, the possibility of a female successor to the Prophet. Note, too, that "consensus" did not necessarily mean unanimity. Lost to history is whether any individual voting, or secret balloting, occurred. More likely, "consensus" simply meant an agreement among the persons engaged in the selection on a candidate, with no single individual or significant group objecting and blocking that selection. (Interestingly, that is the meaning of "consensus" used in modern-day International Trade Law and the operation of the World Trade Organization (WTO).) As for the persons identifying, vetting, and debating about potential successors, they — like the candidates — were men.

To avoid any uncertainty after his death, Abū Bakr designated as his successor Umar, a member of the *Quraysh*, the old, aristocratic tribe around Mecca to which

the Prophet had belonged.<sup>47</sup> For a second time, though, 'Ali was passed over for the title of "Caliph." During the 10-year reign of Umar, 'Ali refrained from participation in the wars the Caliph waged in the name of Islam, including the invasion of Persia.<sup>48</sup> Partly through these conflicts, Islam spread far beyond the Arabian Peninsula, leading to a great Arab-Islamic, or Muslim, Empire. Eschewing battle, 'Ali devoted himself to teaching his growing number of followers the importance of self-sacrifice, justice, piety, and equality.<sup>49</sup> The personal attributes of 'Ali were appealing, and the number of his followers grew, as did his knowledge of the sacred texts of Islam.

Nevertheless, for a third time, 'Ali was passed over for the position of Caliph. A Persian slave murdered Umar.<sup>50</sup> 'Uthmān, another of early converts won by Muhammad, and a member of the *Umayyad* clan within the *Quraysh* tribe, became the third Caliph.<sup>51</sup> Predictably, the designation of 'Uthmān over 'Ali deepened the discontent already existing in a segment of the *ummah* on the topic of leadership.<sup>52</sup> Muslims in this faction strengthened in their view that only a bloodline descendant of Mohammad possessed the knowledge and wisdom of the Prophet needed to be the Caliph.<sup>53</sup> By this time, the *Shiat-u-'Ali* (Party of 'Ali) distinguished itself, as these Muslims designated themselves the "Shī'a 'Ali," or "supporters of 'Ali."<sup>54</sup>

As the era of the *Rashidun* and years of the Caliphate of 'Uthmān continued, other groups within the Arab-Islamic Empire gravitated towards 'Ali. They were more than just dissatisfied with various aspects of the rule of 'Uthmān. They were attracted by the teachings of piety and equality advanced by 'Ali:

'Ali's "life is shrouded in myth and legend and he is widely acknowledged, even by his critics, as a pious and devout individual as well as a just and well-meaning leader."<sup>55</sup>

Arab soldiers of Islam were proud of their tribal genealogies and believed they were racially superior to non-Arabs.<sup>56</sup> Opposing this tradition, 'Ali taught his followers all believers are created equal, and only through virtue is one dearer to God than another.<sup>57</sup>

From these teachings, among others, 'Ali gained support among non-Arabs, including Persians, who chafed at the second-class status elite Arabs imposed on them. Impoverished Arabs, benefitting the least from Islamic conquests, also joined

the group of followers of 'Alī. When dissidents appealed to 'Uthmān to rectify injustices perpetrated by his governors, the Caliph responded by having an *Umayyad* Governor, Muawiyah, persecute the protestors.<sup>58</sup> In 656, protestors marched on Medina calling the name of 'Alī.<sup>59</sup> 'Alī responded by leading a reform movement to depose 'Uthmān by withdrawing his mandate.<sup>60</sup> Unfortunately, 'Alī could not contain the hatred of all of the opponents of 'Uthmān. 'Uthmān, the third Caliph, was assassinated.<sup>61</sup>

### [C] Battles of Camel (656 A.D.) and Siffin (657 A.D.)

With the death of 'Uthmān in 656, 'Alī finally was designated Caliph. 'Alī reigned during a time when the Muslim community experienced serious internal turmoil and division. He believed in the unity of Islam, and taught that only if all believers challenged elitism and strictly adhered to justice and equality could harmony in the *ummah* be preserved.<sup>62</sup> Yet, his concern and advocacy for marginalized groups in society created opposition to 'Alī in the power elite of Islam, especially the *Quraysh* aristocracy in Mecca and the *Umayyad* clan in Damascus. In effect, from a *Shī'ite* perspective, 'Alī is an anti-Establishment figure battling through peaceful words and deeds Muslims gripped by tribal loyalties and besotted with the privileged status of ethnic Arabs.<sup>63</sup>

In such battles, the result, if not the precise path to it, often is foreseeable. Here, the *Umayyad* governor, Muawiyah, attempted to unseat 'Alī and vest the Caliphate in the family of the *Umayyads*.<sup>64</sup> Vowing vengeance against 'Alī for the death of 'Uthmān, the youngest wife of the Prophet, 'Ā'isha, and two of the Companions of the Prophet (*Ṣaḥābah*), Talha ibn Ubaydallah and Al Zubayr ibn al-Awwam, joined the *Umayyad* usurpers and formed an army against 'Alī. She and her forces were defeated at the Battle of the Camel, which occurred in 656 at modern-day Basra, Iraq.<sup>65</sup> The two Companions were killed.<sup>66</sup> Though 'Alī captured 'Ā'isha, he treated her with respect and returned safely to her friends in Medina, where she lived until her death.<sup>67</sup> And, though 'Alī prevailed in the Battle of Camel, he never returned to Medina, nor did he ever firmly establish himself as the head of the Islamic state.<sup>68</sup>

Indeed, the Caliphate of 'Alī continued to be marred by the violence of a divide between *Sunnis* and *Shī'ites* that was a civil war — First Muslim Civil War, or First

<sup>68</sup> See Mackey, *supra*, at 52.

*Fitna*, which lasted from 656-661. (The Second *Fitna* lasted from about 680/683 to 685/692) In Arabic, the full term is "*Fitnat Maqtal 'Uthmān*," which means the "*Fitna* of the Killing of 'Uthmān." Obviously, the *Fitna* was over who had the legitimate right to be the Caliph. A key event in the First *Fitna* was the Battle of Siffin, which occurred between May and July 657 A.D. (37 A.H.). 'Alī was forced to fight the Governor of Syria on the banks of the Euphrates River in what is now Ar-Raqqa, Syria.<sup>69</sup> That Governor was Muawiyah, who happened to be the cousin of the second *Rashidun* Caliph, 'Uthmān.<sup>70</sup> Muawiyah contested the rule of 'Alī, and accused him of sheltering the killers of 'Uthmān.<sup>71</sup> The forces of 'Alī and Muawiyah clashed, but their battle ended in religious arbitration.<sup>72</sup> A group from the army of 'Alī was unimpressed with the arbitration, formally separated themselves, and became known as the *Khārijites* (Secessionists).<sup>73</sup> The arbitration which ended the Battle of Siffin<sup>74</sup> would ultimately lead to the assassination of 'Alī, and the loss of the Caliphate by his family.

### [D] Assassination and Martyrdom of 'Alī

Thus, after the Battles of the Camel and Siffin, 'Alī continued to face opposition not only from the *Umayyads*, but also from the *Khārijites*. The *Khārijites* felt excluded from leadership, because they were neither the blood descendants of the Prophet nor the elite of Mecca.<sup>75</sup> During the month of *Ramaḍān* in 661 A.D. (40 A.H.), 'Alī was assassinated by a *Khārijite* leader, Abd Al-Rahman ibn Muljam (commonly referred to as "Ibn Muljam"), who struck the Caliph across the head with a sword.<sup>76</sup> It took 3 days for 'Alī to die, during which he protected and fed his assassin. 'Alī ordered that the assassin should be spared if he ('Alī) lived, and killed with only one stroke if he died.<sup>77</sup> The death of 'Alī sealed the fate of Ibn Muljam.

*Shī'ites* regard the death of 'Alī — their first *Imām* — as that of a martyr. *Imām* 'Alī is buried in Najaf, 86 miles south of Baghdad. The shrine over his grave is the *Imām* 'Alī Holy Shrine (also called the "*Masjid* 'Alī," or "Mosque of 'Alī.") The third holiest site in *Shī'ism*, after Mecca and Medina, it is a major place of pilgrimage.<sup>78</sup> *Shī'ites* believe the remains of Adam and Noah are buried next to those of 'Alī. To *Shī'ites*, 'Alī left a prodigious and splendid legacy. In the political realm, his discourses, sermons, letters, and sayings are the framework for *Shī'ite*

Islamic government.<sup>79</sup> In the religious realm, he is said to have compiled a version of the Qur'ān used by *Shī'a*, which purportedly differs from that commissioned by 'Uthmān in that it is longer and bears references to 'Ali.<sup>80</sup>

## § 8.04 BATTLE OF KARBALA (680 A.D.)

### [A] Abdication by Hasan, Usurpation by Yazid

With the death of 'Ali, the era of the Four Rightly Guided Caliphs (*Rashidun*) ended. Never again would Islam be unified under one Caliph governing from its birthplace on the Arabian Peninsula. The next two Caliphates, led by their family namesakes, *Umayyads* (660-750 A.D.) and *Abbasids* (750-1258), would retain the unity, but their headquarters were in Damascus and Baghdad, respectively. After the *Abbasid* Caliphate collapsed, the unity, too, would be lost. Not surprisingly, these three Caliphates, and that of the *Rashidun* in particular, are the "Golden Age" of Islam.

Yet, even during the Golden Age, the unity was parlous and tenuous at best, if it ever really existed after the Prophet died. The *Shī'ites* never greeted Abū Bakr, Umar, or 'Uthmān as *Imāms*. Even as political and military leaders, they were usurpers.<sup>81</sup> After the death of Caliph and *Imām* 'Ali, the *Sunni* — *Shī'ite* controversy persisted, even worsened. Abū Muhammad Hasan ibn 'Ali the eldest son of 'Ali and Fātimah, succeeded 'Ali as Caliph. His reign was short-lived.

Soon after ascending to the position, Hasan abdicated it — in 661 A.D. (41 A.H.) — to the nemesis of his father, Muawiyah. Hassan had little choice: Muawiyah was militarily stronger than Hasan.<sup>82</sup> Thus, Hasan abdicated to save his fellow *Shī'a* from suffering further bloodshed.<sup>83</sup> (By some accounts, Hasan surrendered his claim to continue as Caliph on the understanding he would retake the position, after Muawiyah.) After abdicating as Caliph, Hasan was forced into retirement in Medina, where he lived piously and generously. The capital of Islam moved to Damascus under *Umayyad* rule.<sup>84</sup>

Critically for *Shī'ites*, Hasan retained the mantle of *Imām*.<sup>85</sup> Herein lies an example of the *Shī'ite* distinction between political and military authority, vested in the Caliph, and religious authority, embodied in the *Imām*. Reportedly, Hasan "married and divorced perhaps as many as sixty noble women."<sup>86</sup> Hasan died around 675 A.D. (49 A.H.), and was poisoned by his wife at the prompting of

<sup>79</sup> See JACKSON, *supra*, at 20.

<sup>85</sup> See BILL, *supra*, at 36.

<sup>86</sup> BILL, *supra*, at 37.

Muawiyah.<sup>87</sup> At that juncture, the *Imāmate* passed to the younger brother of Hasan, Hussein, making Hussein the third *Shī'ite Imām*.

*Sunnis* recognize Muawiyah as the rightful *Umayyad* Caliph following the abdication by Hasan. Yet, Muawiyah and his followers returned the favor done them by Hasan by persecuting the *Shī'ites*.<sup>88</sup> To be sure, Muawiyah faced opposition from followers of 'Ali, *Khārījites*, and other subject peoples. The *Shī'a* rejected the claim of Muawiyah as Caliph, because he was not a direct descendant of the Prophet. The *Khārījites* rejected the authority of Muawiyah as Caliph: he was not chosen by the community of the faithful (*ummah*).<sup>89</sup> In their mutual repudiation of the Caliph, the followers of 'Ali and *Khārījites* allied against the *Umayyads*. Joining the opposition were subject peoples, including Persians, who embraced Islam but whose social standing remained relegated to the aristocratic *Umayyad* family and Arabs descended from illustrious tribes of the Arabian Peninsula.<sup>90</sup>

### [B] Martyrdom of *Imām* Hussein

The year 680 A.D. (61 A.H.) was a watershed in Islamic history. Twenty years after the death of 'Ali, Hussein, the second son of 'Ali and Fātimah, led a rebellion against the *Umayyads* that would turn the *Sunni* — *Shī'ite* split into a schism that has yet to be healed. Sometime before the Caliph Muawiyah died in 680, Hussein and his supporters were told they would get to take over the Caliphate once Muawiyah passed away. Yet, the promise was not kept, as Yazid, the son of Muawiyah, seized power.

Predictably, Hussein opposed the seizure, and the *Umayyads*, now led by Yazid, responded to the opposition.<sup>91</sup> Arguably, the intention of Hussein was to lead not a violent revolt, but a religious reawakening. Regardless, if there had been a deal between Muawiyah and Hussein as to who the next Caliph would be, then the son — Yazid — certainly was not respectful of it, or of the *Shī'ites*. He coveted the position for himself. The *Umayyad* troops, commanded by Yazid, met Hussein, his family, and his followers at Karbala, a hot, dry desert area about 46 miles southwest of present-day Baghdad on what is called the "Plain of Sorrow and Misfortune." Today, Karbala lies at the edge of the Iraqi desert, and is surrounded by beautiful greenery, fruit orchards, and palm groves. It is home to more than 100 mosques, 23 religious schools, a large *souk* (market), and Karbala University. In 680 A.D., at that location, the Battle of Karbala ensued. Hussein was *en route* from Mecca to Kufa to meet his supporters.

Attacked by the *Umayyads* at Karbala, Hussein never reached his destination. Leading up to the Battle, there are significant religious events. *Shī'a* believe that

<sup>87</sup> See BILL, *supra*, at 37; MOMEN, *supra*, at 28.

<sup>88</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 110.

<sup>91</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 120.

during their journey, Hussein "was tested by God but overcame all temptation."<sup>92</sup> Further, Hussein is reputed to have known he and his companions were riding toward their death. Although he gave leave to his companions, many of them chose to stay with him.<sup>93</sup>

The *Umayyad* army boasted thousands of troops. The forces of Hussein were led by 'Abbās, the half-brother of Hussein. They numbered only 72, including women and children. Hussein was warned of the extreme odds against victory, but he echoed the passion of 'Alī for social justice, stating:

O people, the Apostle of God [Muhammad] said during his life, "He who sees an oppressive ruler violating the sanctions of God, reviling the covenant of God, opposing the *Sunnah* of the Apostle of God, dealing with the servant of God sinfully and cruelly; [If a man sees such a ruler] and does not show zeal against him in word or deed, God would surely cause him to enter his abode in the fire."<sup>94</sup>

The *Umayyads* slaughtered Hussein, 'Abbās, 'Uthmān, and all of their companions. 'Abbās was ambushed while trying to get badly needed water to Hussein and the others. Hussein was the last to die, beheaded on the tenth day of the battle.<sup>95</sup>

[Husayn] accepted the inevitable slaughter that ensued. This behavior is best described by the term *mazlum*, which means wronged or unjustly oppressed. In everyday Persian, however, *mazlum* refers to "a person who is unwilling to act against others, even when he is oppressed, not out of cowardice or diffidence but because of generosity and forbearance."<sup>96</sup>

In his book *The Origins and Early Development of Shī'a Islam* (1989), S.M.H. Jafri writes that Hussein employed this sacrificial strategy deliberately.<sup>97</sup> Hussein knew a military victory, "achieved by the force of arms" would be fleeting, if it occurred at all. But, he also believed the suffering he, his family, and his compatriots endured, coupled with their unjust deaths, would "awaken the consciousness" of the Muslim community. Indeed, news of the brutality towards the grandson of the Prophet inflamed anger and anguish among the supporters of Hussein. Hussein, 'Abbās, and 'Uthmān became martyrs for *Shī'ites*, with Hussein meriting fame as the "Prince of Martyrs."<sup>98</sup>

Notably, the fact women and children participated and died in the fighting is enlightening in view of the position of some contemporary Islamist extremist groups condoning female and child suicide bombers. Moreover, there are dichotomous accounts of what precisely happened at Karbala. On the one hand, some

<sup>92</sup> STRAIGHT PATH, *supra*, at 111.

<sup>93</sup> See BILL, *supra*, at 38-39.

<sup>94</sup> Quoted in MACKAY, *supra*, at 54.

<sup>95</sup> See DAVID HARRIS, *THE CRISIS 40* (New York, New York, Little, Brown and Company, 2004). [Hereinafter, HARRIS.]

<sup>96</sup> BILL, *supra*, at 49 (emphasis original).

<sup>97</sup> MOMEN, *supra*, at 31-32 quoting S.M.H. JAFRI, *The Origins and Early Development of Shī'a Islam* 200-204 (Qum, Iran: 2nd ed., 1409 A.H./1989).

<sup>98</sup> MOMEN, *supra*, at 28.

versions emphasize the hopelessness of the position of Hussein and the tragedy of the events in a manner that evokes a sense of mourning and repentance, at least among *Shī'ites*: For example, Moojen Momen writes:

One by one Husayn's supporters fell and then the members of his family until only he and his half-brother 'Abbas . . . were left of the fighting men. 'Abbas was killed trying to obtain water for the thirsty women and children . . . Carrying his infant son in his arms, Husayn pleaded for water for the babe but an arrow lodged in the baby's throat killing him. As the troops closed around him, Husayn fought valiantly until at last he was struck a severe blow that caused him to fall face down on the ground. Even then the soldiers hesitated to deal the final blow . . . until Shimr ordered them on, and, according to some accounts himself came forward and struck the blow that ended Husayn's life.<sup>99</sup>

On the other hand, there are more antiseptic versions that portray the martyrdom of Hussein as the death of an efficient religious warrior. For example:

[Husayn] mowed down his enemies like a fire raging through the tall grass of the savannah. The earth grew bloodied and the sky grew dark as if the Day of Judgment had begun. Dark clouds veiled the sun even in Mecca so that its people wondered what caused this gloom which covered Arabia, Syria, and Egypt, reaching as far as Iran and Khurasan. . . . A voice was heard: Husayn! The enemy has overrun your tent! / The women have been taken and the children killed! / . . . He turned his horse and hurried back to the camp. There in the shrubs the enemy were waiting. They shot at him without their faces showing Hundreds of arrows flew into his face / Seventy arrows hit his tender body / and pierced the skin and spilled his precious blood / He knew that he did not have long to live / Just enough time to say: There is no god but God and Muhammad is his prophet. / His soul flew up into the cloudless sky where it was met by those who love him most: / His parents and his brother and his sons. . . . Here ends the sad account of Prince Husayn / Who lived and died a witness for the faith / A ransom for his people, for mankind.<sup>100</sup>

To be sure, both versions present Karbala as a tragedy, but in the latter account, the martyrdom of Hussein is the death of a super-human warrior, not a weebegone figure.

*Imām* Hussein was buried in Karbala, as was 'Abbās. Above their tombs are major mosques, the Shrine of Hussein ibn 'Alī (or *Imām* Hussein Shrine), and close to it, the Hadrat 'Abbās Shrine (or Al 'Abbās Mosque). They are major pilgrimage destinations for *Shī'ites*. Indeed, by one account:

pilgrimage to his [*Imām* Hussein's] tomb in Karbala [is] second in importance only to the *hajj*.<sup>101</sup>

<sup>99</sup> MOMEN, *supra*, at 30.

<sup>100</sup> Quoted in STRAIGHT PATH, *supra*, at 112.

<sup>101</sup> OXFORD DICTIONARY OF ISLAM, *supra*, at 120.

Thus, a battle that occurred nearly 1,400 years ago is crucial in defining what it means to be a "Shī'ite," and as with *Imām* 'Alī and Fātimah, it is impossible to overstate the importance of Hussein to *Shī'ites*. To underscore the point, the martyrdom of *Imām* Hussein is to *Shī'ites* as the Crucifixion of Jesus Christ is to Christians.

To *Shī'ites*, what does it mean to die a "martyr's death," and why does the martyrdom of *Imām* Hussein matter?

"A leading *Shi'i* intellectual and cleric has explained the essence of martyrdom in the following words: 'The *Shahid* [martyr] can be compared to a candle whose job it is to burn out and get extinguished in order to shed light for the benefit of others.'<sup>102</sup>

For three reasons, this martyrdom is the seminal experience in *Shī'ite* history.

First, the violent death of Hussein is seen by *Shi'a* to have been a sacrifice for the living.<sup>103</sup>

It thus seemed clear to many Muslims that Imam Husayn had poured out his life on this day and resisted iniquity until death as an atonement for the grave sins his grandfather's people had committed by disregarding the will of their Prophet.<sup>104</sup>

There is a direct analogy to the Crucifixion: just as Christians (both Catholic and Protestant) hold that Christ died on the Cross for the sins of all mankind, and to redeem mankind with God after the Fall of Adam and Eve, *Shī'ites* believe Hussein was martyred to make reparation with God after Muslims strayed from the Message He mercifully sent through Muhammad.

Second, the martyrdom of Hussein is testimony to the illegitimacy of all other Islamic authority. A loose analogy might be the persecution of Christians by the Ancient Romans before the conversion of Emperor Constantine the Great (c. 272-337 A.D.) to Christianity and his issuance of the Edict of Milan in 313 A.D., in which he established religious toleration throughout the Ancient Roman Empire. Following the martyrdom, and to the present day, *Shī'ites* reject not only Muawiyah, Yazid, and the other *Umayyad* Caliphs as licit successors to Muhammad. They also repudiate the *Abbasid* Caliphs and Ottoman Sultans. *Shi'a* recognize only 'Alī and his 11 descendants as rightful successors to the Prophet Muhammad and legitimate leaders of Islam. 'Alī and the 11 descendants are the 12 *Imāms*, and spawn the name "Twelver *Shī'ism*." (Of course, they recognize Muhammad himself as the first leader.)

The history of the Twelver *Shī'ite Imāms* is not entirely tranquil. Most of the first 11 *Imāms* — that is, 'Alī and his 10 successors — were assassinated, persecuted, or endured some hardship. *Shī'ites* believe the 12th *Imām*, Mohammad ibn al Hassan al Māhdi, the son of the 11th *Imām*, Hassan ibn Muhammad Al 'Askari, is alive, but has been in occultation (hiding) since 873, when he was 5 years old. Thus, the

<sup>102</sup> Quoted in BILL, *supra*, at 62 (emphasis added).

<sup>103</sup> See BILL, *supra*, at 37-39.

<sup>104</sup> BILL, *supra*, at 39.

occultation of the 12th *Imām*, the Al Mahdi, ended *Imāmate* succession. *Shī'ites* believe he will appear on the Day of Judgment in apocryphal triumph with Jesus Christ, and bring justice to the world.

Third, the martyrdom bespeaks a collective failure of the *Shī'ites*. All except a handful of partisans failed to rally to their *Imām* at Karbala. Consequently, they failed to mark their opposition to tyranny and injustice, and bring about legitimate Islamic rule. There is a loose analogy: the failure to stand up for their religious leader is akin to the three-fold denial of Christ by Saint Peter. There is a haunting question every *Shī'ite* and Christian faces: would I have risen to the defense of the faith at the risk of self-sacrifice?

In sum, whether and to what extent there was a *Sunni* — *Shī'ite* divide before 680 A.D. may be a matter of debate. Likewise, dating the birth of *Shī'ism* to before 680 is contested, and perhaps wrong. But, it is not possible to gainsay disunity within Islam after the Battle of Karbala. The Battle divided Islam into its two great branches: orthodox *Sunnis*, who accepted the *Umayyad* Caliphate, and breakaway *Shi'a*, the followers of 'Alī and Hussein.<sup>105</sup> During the in the 8th, 9th, and 10th centuries A.D., the *Shi'a* movement grew and flourished, albeit underground, in opposition to the established political order of the Islamic World. And, after Karbala, *Shī'ites* developed their own distinctive religious practices, including 'Ā *shūrā*, which is a hallmark of the birth of a separate sect.

## § 8.05 'ĀSHURĀ

For the *Shi'a*, the Battle of Karbala is the tragic event during which piety sacrificed itself for justice, while many of the faithful stood idle in a conflict between the light of good and darkness of evil.<sup>106</sup> Both 'Alī and Hussein died the death of a martyr. 'Alī personified devotion, religious zeal, self-sacrifice, and strict adherence to Islamic principles. Hussein embodied the example of 'Alī and applied the faith in his life.<sup>107</sup> In turn, the martyrdom of Hussein "gave *Shi'is* the ethos of suffering and martyrdom."<sup>108</sup> It led to a movement of repentance.<sup>109</sup> So important, then, is the Battle of Karbala that *Shī'ites* developed their first distinctive religious practice to commemorate it: a mourning ceremony to mark the martyrdom of *Imām* Hussein: the Festival of 'Ā *shūrā*.

The ceremony actually is a series of events that begins on the first day of *Muharram*, which is the first month of the Islamic calendar, during which the Battle of Karbala occurred. In early years, the Festival lasted 10 days, the tenth day being the most important as it marked the day Hussein was martyred.<sup>110</sup> The tenth day remains the highlight of 'Ā *shūrā*, and is the most emotional, publicly religious, and

<sup>105</sup> See MACKAY, *supra*, at 55.

<sup>109</sup> See RUTHVEN, *supra*, at 34.

<sup>110</sup> See BILL, *supra*, at 38-39; DAVID HARRIS, THE CRISIS 39-40 (New York, New York, Little, Brown and Company, 2004). [Hereinafter, HARRIS].

holy day of the year for *Shītes*.<sup>111</sup> Indeed, the word "*Āshūrā*" means "tenth."<sup>112</sup> Interestingly, Muhammad originally designated the tenth day of 10 *Muharram* as one of fasting, but because of its relationship to *Yom Kippur* (the Day of Atonement, which is the holiest day of the year for Jews), fasting on this day is a voluntary practice among *Sunnis*.<sup>113</sup>

Today, the martyrdom of Hussein is commemorated during the entire month of *Muharram*, and even the following month, *Ṣafar*, is one of mourning. Essentially, the Festival involves recitations of the story of Hussein in both private homes and mosques.<sup>114</sup> But, there are several features to '*Āshūrā*'.<sup>115</sup> Initially, mourning began in private homes. A few individuals went from house to house, retelling the events of Karbala and martyrdom of Hussein in exchange for money or food. Subsequently, the recitations occurred in public places, in front of small but ever-enlarging groups of listeners. Recitations also started in mosques. A mourning chant, *latmiya*, again recalling these events, was sung in homes and mosques.

These features remain part of the Festival. Further, there are dramatic presentations of the Battle in public and during parades.<sup>116</sup> The martyrdom of Hussein is re-enacted in "passion plays" called "*ta'ziyyas*."<sup>117</sup> There is a loose analogy to Christianity: theatrical presentations of the Nativity (the birth of Jesus) at Christmas and the Paschal Mystery (the Passion, Crucifixion, and Resurrection) during Holy Week. To non-Muslim observers, the most dramatic feature is self-flagellation: some *Shītes* publicly, often in marching in a parade, beat themselves, even to the point of drawing blood. Thus, in Iran, the faithful observe '*Āshūrā*, in their homes, mosques, streets, squares, the countryside, and any other public place.<sup>118</sup>

<sup>115</sup> Interview of Colonel Azizallah Delkhal, conducted in person by Ms. Elena Delkhal, 28 October 2009. [Hereinafter, Delkhal Interview.]

Azizallah Delkhal was born in Iran and graduated in 1965 from its four-year Military College, the Iranian equivalent of West Point, having successfully completed many high-level military courses. For 25 years, he served in the Iranian Armed Forces. He obtained the rank of a full Colonel at a time when this status was the highest military rank in the Armed Forces of the Islamic Republic of Iran. As a Colonel, he was a Counselor (i.e., member) of the Iranian Supreme Defense Council, and a Counselor and Operational Officer of the Iranian Joint Staff Army. In the latter capacity, he was responsible for coordinating operations of the separate branches of the Iranian Armed Forces during the Iran-Iraq War of 1980-1988.

Among the jobs Mr. Delkhal performed in the Armed Forces were (1) Coast Guard Commander and Political Analyst (in charge of Iran's borders with Afghanistan, Iraq, Pakistan, Turkey, and the former Soviet Union), (2) Legal Agent of Iran (responsible for resolving problems between Iran and its neighbors), (3) Military Judge, (4) Director and Assistant Director of the Secret Service, and (5) Counselor and Operational Officer of the Gendarmerie Command Headquarters. Mr. Delkhal came to the United States in 1988, and is now an American citizen. He has studied English, Paralegal Studies, and Political Science at the Johnson County Community College (Kansas).

<sup>116</sup> See HARRIS, *supra*, at 40.

<sup>117</sup> BELL, *supra*, at 70; SYKAGORT PATH, *supra*, at 112.

<sup>118</sup> The mourning ceremony for *Imām* Hussein in Iran has interesting historical roots. Before the

advent of Islam, Iranians had a similar mourning ceremony every year called *Marge Siyāvash*, or the "Death of Siyāvash," to commemorate the passing of a legendary Persian prince. The *Shah-nameh*, or "Book of Kings," is a 60,000 line epic poem written by a legendary poet in the 10th century A.D. that recounts thousands of years of Persian history, from the Achaemenid Empire (550-330 B.C.) and Parthian Empire (247 B.C.-224 A.D.), to the last pre-Islamic Empire, the Sassanid Empire (224-651 A.D.). The story of Siyāvash is contained in the *Shah-nameh*.

Siyāvash was the son of Keykavous, a Persian King, about 3,000 years ago, and a popular, beloved Persian prince. Problems Siyāvash had with his stepmother compelled him to move to Turan, where he was welcomed and held dearly by Afrāsiyāb, the King of Turan, who was an enemy of the Persians. Siyāvash married the daughter of King Afrāsiyāb, and lived a good life, until the brother of King Afrāsiyāb became jealous of Siyāvash and convinced the King to kill Siyāvash.

Devastated by the death of Siyāvash, Persians dubbed him a martyr, and mourned his passing. Annually, on the anniversary of his death, Persians commemorated the martyrdom. According to the *Shah-nameh*, the death of Siyāvash occurred in 1,000 B.C., more than 1,500 years before *Shī'a* Islam and Battle of Karbala. Arguably, '*Āshūrā* is the Islamic incarnation of the glorious ancient commemoration, *Marge Siyāvash*. Delkhal Interview, *supra*.

## Chapter 9

### SHĪ'ĪSM AND ITS IMĀMS (680–940 A.D.)

Wise people, after they have listened to the laws, become serene, like a deep, smooth, and still lake.

DHAMMAPADA

(The Path of Dharma, *i.e.*, of The Buddha's Teachings)

##### § 9.04 FIVER SHĪ'ĪSM

[A] Split Over 5th *Imām*

[B] Distinctive Beliefs

##### § 9.05 COMPARISONS WITH CATHOLIC CHRISTIANITY

##### § 9.01 SHĪ'ĪTE CONCEPT OF IMĀM

To be a *Shī'īte* is to revere 'Alī as the first *Imām*, and likewise to revere his descendants as the subsequent *Imāms*. Overall, there are 15 key figures honored by Twelver *Shī'a*. These figures are:

- First and foremost, the Prophet Muhammad,
- Then 'Alī,
- Thereafter, Fātimah, youngest daughter of Muhammad, wife of 'Alī, and mother of *Imām* Hasan and *Imām* Hussein.
- 12 blood-line descendants of the Muhammad, through Fātimah and her two sons.

Each of these historical figures has a fascinating biography and is known for making distinct contributions to *Shī'ism*.

Because *Shī'a* believe religious authority resides with the descendants of 'Alī, the controversy surrounding 'Alī is more complex than the issue of a contested succession in a Caliphate. Twelver *Shī'a* believe 'Alī was the first in a line of 12 significant religious figures, called "*Imāms*." For *Sunnīs*, the term "*imām*" simply refers to a leader of prayer. But, the term "*Imām*" as used by *Shī'ites* — with a deliberately capitalized "I" — has a markedly different connotation:

According to the theory of the *imamate* which was gradually developed from the tenth century onwards, God has placed the *imām* as His proof (*hujja*) in the world at all times, to teach authoritatively the truths of religion and govern mankind in accordance with justice. The *imāms* were descendants of the Prophet through his daughter Fātimah and her husband 'Alī, the first *imām*; each was designated by his predecessor; each was infallible in his interpretation of the Qur'an and the *sunnah* of the Prophet, through the secret knowledge given him by God; each was without sin.<sup>1</sup>

To *Shī'a*, an "*Imām*" is not simply a man who leads prayers at a mosque. He (and invariably, the *Imām* is a male) is a servant chosen by God (Allāh) wielding unique religious and political authority. Professors Bill and Williams observe:

The Twelver Imam is not selected by the community but comes to his exalted position by virtue of divine appointment, which is then made known through an infallible source.<sup>2</sup>

Similarly, Professor Esposito writes:

[T]he Imam . . . though not a prophet, is the divinely inspired, sinless, infallible, religiopolitical leader of the community . . . Whereas after the death of Muhammad, Sunni Islam came to place final religious authority for interpreting Islam in the consensus . . . the Shīi believe in the continued divine guidance through their divinely inspired guide, the Imam.<sup>3</sup>

To be sure, neither the Prophet nor any of the 12 *Shī'ite Imāms* is Divine, and the 12 *Imāms* are not like Muhammad — they were not chosen by God (Allāh) to carry a prophetic message.

But, the 12 *Imāms*, plus their family member Fātimah, who *Shī'ites* regard as the "Mother of the *Imāms*,"<sup>4</sup> share special attributes that mark them as selected by Allāh. In particular, all *Shī'ites* agree there is a succession and transmission of divine

<sup>1</sup> ALBERT HOURANI, *THE HISTORY OF THE ARAB PEOPLES 181-182* (New York, New York: MJF Books, 1991). [Hereinafter, HOURANI.]

<sup>2</sup> JAMES A. BILL & JOHN ALDEN WILLIAMS, *ROMAN CATHOLIC & SHI' MUSLIM PRAYER, PASSION AND POLITICS* 56 (Chapel Hill, North Carolina: The University of North Carolina Press, 2002). [Hereinafter, BILL.]

<sup>4</sup> JOHN L. ESPOSITO ED., *THE OXFORD DICTIONARY OF ISLAM* 84 (New York, New York: Oxford University Press, 2003). [Hereinafter, OXFORD DICTIONARY OF ISLAM.]

sources of knowledge (*aql*) through the lineage of the Prophet. This process began with 'Alī, the cousin and son-in-law of Muhammad.<sup>5</sup>

The distinctive attributes of the *Imāms* include sinlessness, and in the case of Fātimah, freedom from the corruption Muslims attribute to menstruation and childbirth. Not unlike the Catholic Christian view of the Blessed Virgin Mary, in *Shī'ite* Islam, Fātimah is seen as immaculate,<sup>6</sup> in the sense of being free from sin. There is no direct analogy in *Shī'ite* dogma to a virgin birth. But, early *Shī'a* writers emphasized the miraculous nature of the births of the *Imāms*:

The baby Imam[s were] born already circumcised and with [their] umbilical [cords] already severed; . . . they spoke immediately on birth (and sometimes from within their mother's womb) praising God; . . . each was specifically designated by the preceding Imam (or in the case of 'Alī by Muhammad); and . . . each performed miracles and was possessed of supernatural knowledge.<sup>7</sup>

During their lives, the *Imāms* acted as spiritual lodestars for humanity.<sup>8</sup> Each *Imām* guided his followers in the interpretation of the Qur'an, and each is:

thought to exist in a state of permanent grace and divine guidance that renders them infallible and impeccable (*ma'sum*).<sup>9</sup>

The lives of the *Imāms* were replete with suffering, which they patiently endured on behalf of all Muslims who had become sinful and had strayed from the path of God. Through their suffering, the *Imāms* "opened wide the gates of intercession."<sup>10</sup> *Shī'ites* believe each of the 12 *Imāms* was martyred by their enemies.

## § 9.02 TWELVER SHĪ'ISM

### [A] Safavid Dynasty (1501-1702 A.D.) and Iran

There are three principal delineations among *Shī'ites*: Twelvers (also called "*Jafaris*," "*Imāmīs*," or "*Ithna 'Ashari*"), the dominant branch, plus two minority branches, Seveners (i.e., "*Ismā'īlīs*"), and Fivers (i.e., "*Zaydis*"). Iran is the only officially *Shī'ite* nation in the world, and adheres to Twelver *Shī'ism*. Indeed, the first *Shī'a* regime in the world was in Iran, namely, the *Safavid* Dynasty (1501-1702 A.D.).

<sup>5</sup> *Twelver*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Twelver>.

<sup>6</sup> See BILL, *supra*, at 53. See also OXFORD DICTIONARY OF ISLAM, *supra*, at 84, STRAIGHT PATH, *supra*, at 112.

<sup>7</sup> MOJIB MOJIB, AN INTRODUCTION TO SHI' ISLAM: THE HISTORY AND DOCTRINES OF TWELVER SHI'ISM 23 (London, United Kingdom: Yale University Press, 1985). [Hereinafter, MOJIB.]

<sup>8</sup> See BILL, *supra*, at 56.

<sup>9</sup> BILL, *supra*, at 56.

<sup>10</sup> BILL, *supra*, at 65.

The *Safavid* family patronized *Shī'ism*, and codified Twelver doctrine as law.<sup>11</sup> Ever since, Iran has been a *Shī'ite* nation. Table 9-1 summarizes the *Safavid* Shahs and their principal achievements. In a sense, the *Safavid* monarch was not entirely legitimate. Because Al Māhdi (the 12th and Hidden *Imām*) was the true *Shī'a* leader, the monarch was the most valid ruler while awaiting the return of the Al Māhdi.<sup>12</sup>

Table 9-1:  
The *Safavid* Dynasty<sup>13</sup>

Shah	Reign (A.D.)	Most Notable Aspect of Reign
Ismail I	1501-1524	In 1501, took Tabriz, in Northern Iran. Assumed the title of "Shah." Founded the <i>Safavid</i> dynasty. Declared Twelver <i>Shī'ism</i> the official faith of Persia.
Tahmasp	1524-1576	Introduced converted slaves into court and military, with female slaves entering the harem, becoming the mother of princes. Encouraged carpet weaving as a state industry.
Ismail II	1576-1578	Reign marked by brutality and pro-Sunni policy. Poisoned to death with the participation of his sister.
Muhammad Khadabandeh	1578-1587	Weak leader. Initially dominated by wife until her death, and then by the <i>Qizilbash</i> (literally, "Crimson Heads" or "Red Heads," who were <i>Shī'ite</i> militant groups).

<sup>11</sup> See *Shia Islam*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Shia\\_Islam](http://en.wikipedia.org/wiki/Shia_Islam). [Hereinafter, *Shia Islam*.]

<sup>12</sup> See *Shia Islam*, *supra*.

<sup>13</sup> See Shapour Ghasemi, *History of Iran: Safavid Empire 1502-1736*, Iran Chamber Society, posted at [www.iranchamber.com/history/safavids/safavids.php](http://www.iranchamber.com/history/safavids/safavids.php); SANDRA MACKEN, *THE IRANIAN: PERSIA, ISLAM AND THE SOUL OF A NATION* 87 (New York, New York, Plume, 1996).

Shah	Reign (A.D.)	Most Notable Aspect of Reign
Abbas I	1587-1629	Moved the capital to Esfahan. Patronized the arts. Built palaces, mosques and schools, and paid considerable attention to welfare institutions. Encouraged international trade. Formed a strong army. Fought back the Ottomans, thereby regaining old territories of the Persian Empire. United Persia under Twelver <i>Shī'ism</i> . In long term, weakened the <i>Safavid</i> state due to his fear of revolt by his sons, which led him to abandon the practice of employing princes to govern provinces and instead confined the princes within the palace gardens; the new practice, followed by his successors, produced poorly-educated, indecisive Shahs of less competence who were easily dominated.
Safi I	1629-1642	Known for his cruelty. First of <i>Safavid</i> Shahs to be raised in the palace gardens. Put to death potential rivals including family relatives. Established peace treaty with the Ottomans, which established the Ottoman-Safavid frontier and ended over 100 years of conflict.
Abbas II	1642-1666/7	Attempted to eliminate corruption in the bureaucracy. Achieved modest peace with the Ottoman and Moghul Empires. Last fully competent period of rule by a <i>Safavid</i> Shah. Increased central authority of the state by expanding royal lawns. Intervened in provincial affairs on the side of the peasants. Adhered to the dogma that a <i>Safavid</i> ruler was sacred and perfect.
Safi II (Soleyman)	1666/7-1694	Incompetent ruler. Retreated into the harem and left his Grand Vizir to manage affairs of state. Shortly after his accession, food prices soared and famine and disease spread throughout the Persian Empire.

Shah	Reign (A.D.)	Most Notable Aspect of Reign
Hussein	1694-1722	Most incompetent <i>Safavid</i> Shah. Especially influenced by <i>Shī'a</i> religious establishment. Issued decrees forbidding alcohol consumption and banning <i>Sufism</i> in Esfahan at the insistence of <i>Shī'ite</i> clergy. Re-conquered Bahrain. Last <i>Safavid</i> Shah; surrendered <i>Safavid</i> territories to Afghan tribesmen, thus ending the <i>Safavid</i> dynasty

Interestingly, the *Safavid* Dynasty was comparatively more secular to the current regime in Iran, which took power through the 1978-79 Islamic Revolution. The theoretical underpinnings of the regime, indeed its foundational religious tenet, lie in the *Shī'ite* theory of guardianship, "*Velayat-e faqih*" (Persian), or "*Wilayāt al faqih*" (Arabic). This theory developed following the occultation of the 12th *Imām*. It is articulated in a book published in 1970 by Grand *Āyatollah* Ruhollah Moosavi Khomeini, *Velayat-e fiqh* ("Governance of Jurist"). The phrase "*Velayat-e faqih*" connotes guardianship, or governance, by jurists, the "Jurists" being Islamic legal scholars (*fukahā*). In his book, *Āyatollah* Khomeini offers a theory of *Shī'ite* governance in which there is a Supreme Leader who is both the spiritual and political guarantor of the citizens.<sup>14</sup> This book inspired the drafting of the Constitution of the Islamic Republic of Iran, though not every one of the ideas from the book was inserted into the Constitution.

As for the basic jurisprudence of Twelver *Shī'ism*, it is based on the *Ja'fari* fiqh, hence the reason "Twelvers" also are called "*Ja'faris*." The *Ja'fari* School of thought is named after the 6th *Imām*, Abū 'Abdu'llah Ja'far ibn Muhammad, commonly known as Ja'far Al Sādiq.<sup>15</sup>

## [B] Summary Table

Table 9-2 provides a brief description of each of the Twelver *Imāms*. The first column states the name of the *Imām*. The second column states the names of the father and (if known) mother of the *Imām*. With the exception of Hussein, whose father was *Imām* 'Alī, each *Imām* was the son of the previous *Imām*. The third and fourth columns, respectively, list the date and place of birth, and the date and location of the shrine, of each *Imām*. The final column summarizes the contributions of the *Imāms* to *Shī'ism*.

9	Abū Ja'far Muhammad ibn 'Alī Muhammad Al Jawād, Al Jawād, Al Taqī	Sadika  <i>Imām Al Ridhā</i>	810 A.D. (195 A.H.)	835 A.D. (220 A.H.)  Kāzimayn, Baghdad	First child <i>Imām</i> .  Known as "The Generous" (Al Jawād) and "The God Fearing" (Al Taqī).
10	Abū Al Hasan 'Alī ibn Muhammad  Al Hādī, Al Naqī	Samānah  <i>Imām Al Jawad</i>	827-830 A.D. (212-215 A.H.)  Medina	868 A.D. (254 A.H.)  Al 'Askari Mosque, Sāmarrā, Iraq	Known as "The Guide" (Al Hādī) or "The Pure" (Al Naqī). Also a child <i>Imām</i> .  Summoned to Sāmarrā by the Caliph where he remained a prisoner.
11	Hasan ibn Muhammad Al 'Askari  Al 'Askari, Al Samit	Saleel, Haditha, Sawsan, Sūsan, Hareebah (disagreement on name of Mother) <i>Imām Al Hādī</i>	844-846 A.D. (230-232 A.H.)  Medina	874 A.D. (260 A.H.)  Sāmarrā, Iraq	Many miracles attributed to him.  Father of the 12 <sup>th</sup> <i>Imām</i> , the Mahdī.

Number	Full Name and Common Name(s) <sup>16</sup>	Mother and Father <sup>17</sup>	Date and Place of Birth <sup>18</sup>	Date of Death and Place of Shrine <sup>19</sup>	Major Contributions to Shī'ism <sup>20</sup>
12	Abū Al Qāsim Muhammad ibn Hasan ibn 'Alī Al Mahdī	Khātūn Narjis  <i>Imām Al 'Askari</i>	868 A.D. (255 A.H.)  Sāmarrā, Iraq	Did not die.  Rather, went into the greater occultation in 940 A.D.	Went into occultation when he was 5 years old. Believed to be hidden on earth, and will return just before the Last Judgment.

### [C] Brief Biographies of Imāms

Aside from the Prophet, three figures loom the largest in *Shī'ite* Islam: the first *Imām*, 'Alī, his wife, the daughter of Muhammad, Fātimah, and the third *Imām*, Hussein, the second son of 'Alī and Fātimah. They are dubbed the "*Shī'a* Holy Family," loosely analogous to the Christian Holy Family, Jesus, Mary, and Joseph in the sense of the inimitable reverence *Shī'ites* and Christians accord each by Muslims and Christians, respectively.<sup>25</sup> Thereafter in significance are the remaining *Shī'ite Imāms* — numbers 4 through 12. A sketch of their fascinating lives and remarkable contributions to *Shī'ism* is set out below. Reflecting their special status, pilgrimage to their shrines is important.<sup>26</sup>

#### • 4th *Imām*: 'Alī ibn Hussein Zayn Al 'Ābidin

The common name of the 4th *Shī'ite Imām*, Zayn Al 'Ābidin, means "The Ornament," "Beauty," or "Best" "of the Worshipers." He was the only son of *Imām* Hussein to survive the massacre at Karbala in 680 A.D.<sup>27</sup> By placing her own life in jeopardy, his Aunt, Zaynab, saved Al 'Ābidin from being killed with Hussein and his companions.<sup>28</sup>

<sup>25</sup> Quoted in BILL, *supra*, at 47 (emphasis added).

<sup>26</sup> See HOURANI, *supra*, at 183-184.

<sup>27</sup> MOMEN, *supra*, at 35.

<sup>28</sup> See MOMEN, *supra*, at 31, who presents the following account:

Zaynab, the sister of Husayn [Hussein], bore herself with dignity and answered 'Ubaydu'llāh [ibn Ziyād] [the Umayyad Governor of Basra, ordered by the Caliph Yazid to take control of Kufa, which he did with force and intimidation] firmly and fearlessly. At first, 'Ubaydu'llāh wanted to put 'Alī to death also, but Zaynab protested, saying: "O Ibn Ziyād! You have spilled enough of our blood," and then she put her arms around 'Alī's neck and said: "By God! I will not be parted from him, and so if you are going to kill him, then kill me with him." And so 'Ubaydu'llāh imprisoned the captives and after a while sent them on to Damascus with the head of Husayn.

Concerning the actions of Zaynab, see also OXFORD DICTIONARY OF ISLAM, *supra*, at 347; BILL, *supra*, at 39.

*Imām* Al 'Ābidin was born in 658, the early years of the *Umayyad* Caliphate.<sup>29</sup> He lived a quiet and pious life away from the intrigue of politics.<sup>30</sup> Al 'Ābidin was a jurist and scholar, plus:

the author of a collection of prayers that are so beautiful they are sometimes called the *Psalms of the Family of the Prophet*, the "*Sahifa Sajjadiyya*."<sup>31</sup>

Al 'Ābidin died in 713 and is buried in Medina. Some believe the *Umayyad* Caliph Al Walid I poisoned him.<sup>32</sup>

• **5th Imām: Muhammad Al Bāqir ibn 'Alī Zayn Al 'Abidin**

Al Bāqir, known as "One who splits open knowledge," was the 5th *Imām*, and the son of the 4th *Imām*, Al 'Ābidin.<sup>33</sup> He also was the grandson of both Hasan and Hussein, which means he "joined in himself the two lines of descent from Fātimah and 'Alī."<sup>34</sup> Significantly, then, *Imām* Al Bāqir linked the otherwise separate lines of descendants of Hasan and Hussein. Unification of these two lines in the person of Al Bāqir ought to have made it difficult to challenge his status, and solidified his *Imāmate*.

Yet, challenge came from the Fiver *Shī'ites*, who followed Zayd ibn 'Alī and became known as *Zaydi Shī'a*, against the other *Shī'ites*, who would become known as Twelvers and Seveners. The split of the Fivers occurred, then, despite the strong blood-line claim of Al Bāqir to be the authentic *Imām*. Thus, the death of the 4th *Imām* marked the last time when the *Shī'ite* world was unified. Disunity did not end with the split of the Fivers over the legitimacy of the 5th *Imām*. Later, with a controversy over the legitimacy of the 7th *Imām*, Seveners broke away. Those left — the majority — were the Twelvers.

As for the 5th *Imām*, whom both Twelvers and Seveners recognize, Al Bāqir was a noted jurist who, interestingly, has been described as the teacher of the renowned legal scholar Abū Ḥanifa, founder of the *Ḥanafī* School, one of the Four *Sunnite* Schools of jurisprudence.<sup>35</sup> Two doctrines espoused by *Imām* Al Bāqir are especially notable. First, he held that each *Imām* specifically designates his successor (*nass*).<sup>36</sup> Second, Al Bāqir:

taught his followers that *taqiyya*, or prudent dissimulation [hiding of the truth] of *Shī'ism*, was mandatory if life or limb was in danger.<sup>37</sup>

<sup>29</sup> See MOMEN, *supra*, at 35.

<sup>30</sup> See MOMEN, *supra*, at 36; OXFORD DICTIONARY OF ISLAM, *supra*, at 347.

<sup>31</sup> BILL, *supra*, at 39.

<sup>32</sup> See BILL, *supra*, at 39; MOMEN, *supra*, at 37.

<sup>33</sup> BILL, *supra*, at 40.

<sup>34</sup> MOMEN, *supra*, at 37.

<sup>35</sup> See BILL, *supra*, at 40; JACKSON, *supra*, at 25–26. But see MOMEN, *supra*, at 38 (London, United Kingdom: Yale University Press, 1985), in which the author states that *Imām* Ḥanifa was a student of the 6th *Imām*, Al Ṣādiq.

<sup>36</sup> See MOMEN, *supra*, at 37.

<sup>37</sup> BILL, *supra*, at 40.

Additionally, it was during the *Imāmate* of Al Bāqir that *Shī'a* began to rely on the teachings of the *Imāms*, not just the pronouncements of the first three *Rashidun* Caliphs and other Traditionist Muslim scholars. This shift on the crucial matter of sources of the *Sharī'a* signaled the commencement of the legal split between *Shī'ites* and *Sunnis*.<sup>38</sup>

There is disagreement concerning when Al Bāqir died. The commonly cited date is 735. Many *Shī'a* believe he was poisoned and, therefore, is a martyr, like his predecessors.<sup>39</sup>

• **6th Imām: Abū 'Abdu'llah Ja'far ibn Muhammad**

Known as Ja'far Al Ṣādiq, meaning "The Truthful," the 6th *Imām* is one of the most important of the *Shī'ite* religious leaders.<sup>40</sup> *Imām* Al Ṣādiq was born between 699–705.<sup>41</sup> He was a renowned jurist in his own lifetime and taught many well known *Sunni* and *Shī'a* scholars.<sup>42</sup> He taught that each *Imām* must be the descendant of 'Alī, and that each is designated by his father.<sup>43</sup> He held to the view that the *Imām* is the only person able to interpret authoritatively the Qur'ān and *ḥadīth*.<sup>44</sup> *Shī'a* regarded Al Ṣādiq:

as the only authoritative teacher of the age . . . [and his legal ideals were so supported by *Shī'a* Muslims that] Twelver [*Shī'ites*] therefore call their school of Islamic law the Ja'fari School.<sup>45</sup>

Further, *Imām* Al Ṣādiq developed fully the doctrines of *naṣṣ* (designation by Divine decree, i.e., that each *Imām* is chosen by such a decree), and *taqiyya* (simulation, or hiding one's faith in times of risk or danger), as well as that of 'ilm (the special religious knowledge of the *Imāms*).<sup>46</sup>

*Imām* Al Ṣādiq died in 765. His death is attributed to poisoning ordered by the *Abbasid* Caliph Al Mansūr.<sup>47</sup> He was buried in Al Bāqir cemetery in Medina.<sup>48</sup>

<sup>38</sup> See MOMEN, *supra*, at 37.

<sup>39</sup> See BILL, *supra*, at 40; MOMEN, *supra*, at 37.

<sup>40</sup> MOMEN, *supra*, at 38.

<sup>41</sup> See MOMEN, *supra*, at 38; HEINZ HALM, *SHI'ISM* (Janet Watson & Marian Hill trans., New York, New York: Columbia University Press, 2nd ed., 2004). (Hereinafter, HALM.)

<sup>43</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 271–272. But see STRAIGHT PATH, *supra*, at 45, in which Professor Esposito states the *Imām* must be the direct descendant of 'Alī, and Muhammad, and therefore it is likely the *Imām* must also be descended from Fātimah.

<sup>44</sup> See OXFORD DICTIONARY OF ISLAM, *supra*, at 272.

<sup>45</sup> BILL, *supra*, at 40.

<sup>46</sup> See MOMEN, *supra*, at 39, 155–157.

<sup>47</sup> See MOMEN, *supra*, at 39; BILL, *supra*, at 40 (Chapel Hill, North Carolina: The University of North Carolina Press, 2002); OXFORD DICTIONARY OF ISLAM, *supra*, at 271.

<sup>48</sup> See [www.al-islam.org/shrines/baqi.htm](http://www.al-islam.org/shrines/baqi.htm).

• 7th *Imām*: Abū Al Hasan Mūsā ibn Jaʿfar

*Imām* Abūʿl-Hasan Mūsā ibn Jaʿfar was born between 737-746.<sup>49</sup> During his *Imāmate*, *Shīʿites* faced persecution by the *Abbasid* Caliphs Mansūr and Al Mahdī (who reigned from 754-775 and 775-785, respectively), and to a much greater extent by the son of Al Mahdī, Harūn Al Rashīd (786-809).<sup>50</sup> Nevertheless, the 7th *Imām* lived a life “focused on prayer, withdrawal, and teaching his disciples.”<sup>51</sup> He refused to revolt against what *Shīʿa* viewed as tyranny under the Caliphs, and taught his followers to cooperate with the government “in matters of mutual concern” so long as cooperation could be justified in religious terms.<sup>52</sup> Thus, this *Imām* is known as “Al Kāẓim,” which means “the forbearing,” “one who restrains himself,” or “the silent.”<sup>53</sup>

Al Kāẓim was imprisoned by Al Rashīd, was poisoned, and died in 799 A.D.<sup>54</sup> Some *Shīʿites* believe Al Kāẓim “voluntarily offered his life as a ransom for the sins of the *Shīʿites*, whom he believed God would soon punish for their lack of *taqīyya* [*taqīyya*, i.e., for their not hiding their faith during danger] and loyalty to the *Imām* in this time of trial.”<sup>55</sup>

• 8th *Imām*: Abū Al Hasan ʿAlī ibn Mūsā

*Imām* ʿAlī ibn Mūsā was born in Medina in 765.<sup>56</sup> The *Abbasid* Caliph Maʾmun appointed the *Imām* as one of his heirs, and gave him the name “Al Ridhā,” which means “the well pleasing,” or “the approved.”<sup>57</sup> This appointment appears to have been an effort to unite the Muslim world, which continued to face the threat of civil war.<sup>58</sup> Yet, Al Ridhā was also poisoned, and died in 818.<sup>59</sup>

• 9th *Imām*: Abū Jaʿfar Muhammad ibn ʿAlī

The 9th *Imām* was born in 810. His father, the 8th *Imām*, died when he was a young boy. Thus, at 7 years old, he succeeded Al Ridhā to the *Imāmate*, making him the first child to become an *Imām*. The succession of a youngster caused some controversy. Ultimately, it was dispelled by stories about the youngster, namely, that he had “extraordinary knowledge at a young age,” and by “referring to the fact that the Qurʾān states that Jesus was given his mission while still a child.”<sup>60</sup> He was

given the names Al Jawād, meaning “The Generous,” and Al Taqī, meaning “The God Fearing.”<sup>61</sup>

*Imām* Al Jawād had been married to Umm Al Fadl, one of the daughters of the *Abbasid* Caliph Maʾmun (who reigned from 813-833). But, the successor to the 9th *Imām* was born of a previous relationship. Al Jawād died in 835. Some *Shīʿa* accounts claim he was poisoned, but there is disagreement regarding the circumstances of his death.<sup>62</sup>

• 10th *Imām*: Abū Al Hasan ʿAlī ibn Muhammad

Abū Al Hasan ʿAlī ibn Muhammad is known as *Imām* Al Hādī, meaning “The Guide,” and also as Al Naqī, meaning “The Pure.”<sup>63</sup> He was born between 827 and 829. Like his father, he was just 7 years old when he became *Imām*.<sup>64</sup> As a young man, Al Hādī was summoned by the *Abbasid* Caliph Mutawakkil (who reigned from 847-861) to live in Sāmarrā, a city in northwest Iraq, on the east bank of the Tigris River, about 78 miles north of Baghdad. There he was treated with respect, but was kept under surveillance and not free to leave.<sup>65</sup>

*Imām* Al Hādī died in 868. Some, but not all, *Shīʿites*, believe Mutawakkil poisoned him.<sup>66</sup>

• 11th *Imām*: Abū Muhammad Hasan ibn ʿAlī

The 11th *Imām* was born between 844 and 846. Known as Al ʿAskarī, which means “The Camp,” this name was given to him because of the many years he was detained in Sāmarrā. He also is known as Al Samī, “The Silent.”<sup>67</sup> A number of miracles are attributed to Al ʿAskarī. Further, *Shīʿa* believe he concealed the birth of his son, the 12th *Imām*, to hide him from the *Abbasid* authorities. They also believe the Caliph Muʿtamid (who reigned from 870-892) killed Al ʿAskarī, by poisoning him, in 874.<sup>68</sup>

• 12th, Final, and Hidden *Imām*: Abū Al Qāsim Muhammad ibn Hasan ibn ʿAlī

*Shīʿa* believe Al ʿAskarī left a young son who succeeded him to the *Imāmate* after his death. This son, the 12th *Imām*, was born in 869. *Shīʿa* further believe his birth was kept secret so as to hide him from the *Abbasid* authorities.<sup>69</sup> The 12th *Imām*, Abū Al Qāsim Muhammad ibn Hasan ibn ʿAlī, came to be called Al Mahdī, which

means “The Guided One.”<sup>70</sup> As a child, Al Māhdi remained hidden from the Muslim people, and appeared only at the funeral of his father in 874.<sup>71</sup>

When his father died, Al Māhdi was just 5 years old, and he became *Imām* — the third child *Imām*, along with the 9th and 10th *Imāms* (Al Jawād and Al Hādī), but younger than them by 2 years. After the funeral, *Imām* Al Māhdi again disappeared from view. It was at this time, in 874, that Al Māhdi entered into the “Lesser Occultation,” or *ghayba*.<sup>72</sup> It is believed the new, 5-year old *Imām* disappeared down a well in what is now a golden-domed *Shī'ite* shrine called Al ‘Askariyyayn, in Sāmarrā, Iraq.<sup>73</sup> The word “” means the “two Al ‘Askaris,” and refers to the 10th and 11th *Imāms*, where they are buried.

Following the Lesser Occultation, there are reports of Muslims who “had dealings with” Al Māhdi, but he communicated primarily — while remaining hidden — to the *Shī'ite* community through four men known as “*safirs* (emissaries), *babs* (doors), or *nā'ibis* (deputies).”<sup>74</sup> These men were, in order of their appointments:

- ‘Uthmān al-Amrī
- Abū Ja‘far Muhammad ibn ‘Uthmān
- Abū Al Qasim Husayn ibn Ruh an-Nawbakhti
- Abū Al Husayn ‘Alī ibn Muhammad as-Samarrī.<sup>75</sup>

During the Lesser Occultation, these four *safirs* not only communicated messages from *Imām* Al Māhdi to the *Shī'a*, but also collected the *khums* tax (i.e., the annual one-fifth wealth tax among *Shī'ites*), as well as *zakāt* (the Third of the Five Pillars of Islam for all Muslims)<sup>76</sup>

The year 940 A.D. was a watershed in *Shī'ite* history. Then, just before the death of the fourth *bab*, *Imām* Al Māhdi “told” *Shī'ites* he no longer would have a messenger on Earth, and he would not appear again until the beginning of the Last Judgment.<sup>77</sup> From 940 to the present day, and until he re-appears, the 12th *Imām* has been in what is known as “the Greater Occultation.”<sup>78</sup>

Since that time [940], it is said that the hidden Imam will be seen only in visions until he comes to restore true Islam, convert the world with the help of Jesus, and fill the earth with justice and abundance instead of iniquity and need. He will rule for a period of seven, or some say nineteen, years. Human history will have achieved its apogee and its purpose, and the Day

<sup>78</sup> See MOMEN, *supra*, at 165.

of Judgment will be ushered in . . .<sup>79</sup> Faithful Twelvers meanwhile lead their lives with the full conviction that the twelfth Imam, Muhammad the Mahdi, observes them and is generally aware of their actions.<sup>80</sup>

Thus, since he entered the Greater Occultation, contact with him has ceased.<sup>81</sup> But, *Shī'ites* believe he and Jesus will return, and Christ will assist him to convert the world to *Shī'ism*. Indeed, his chosen ones — presumably all of the *Imāms*, and Islamic saints — will re-appear along with Jesus.<sup>82</sup>

The Hidden Imam, the Imam Māhdi, is in occultation awaiting the time that God has decreed for his return. This return is envisaged as occurring shortly before the final Day of Judgment. The Hidden Imam will then return as the Mahdi with a company of his chosen ones and there will also return his enemies . . . The Imam Māhdi will lead the forces of righteousness against the forces of evil in one final apocalyptic battle in which the enemies of the Imam will be defeated.<sup>83</sup>

In brief, the re-emergence of the Hidden *Imām*, along with Jesus, will be marked by apocalyptic triumph.

## § 9.03 SEVENER SHĪ'ISM

### [A] Split Over 7th *Imām*

Sevener *Shī'ism* is more mystical than Twelver *Shī'ism*, and concentrates on esoteric issues in Islam, known as “*batin*.”<sup>84</sup> Yet, the emergence of Sevener *Shī'ism* was less over theological doctrine than religious succession. There was a dispute among *Shī'ites* regarding the 7th *Imām*, specifically, about who was the true 7th *Imām*. The 6th *Imām* was Abū ‘Abdu’llah Ja‘far ibn Muhammad, known as Ja‘far Al Šādiq. His sons were Ismā‘īl ibn Ja‘far (the eldest), ‘Abdallah (middle), and Musa Al Kāzim (youngest).

It was anticipated the eldest son, Ismā‘īl, would be the successor to his father, Al Šādiq. However, Ismā‘īl pre-deceased his father. Likewise, ‘Abdallah died during the lifetime of Al Šādiq. Twelver *Shī'ites* believe the younger brother of Ismā‘īl, Musa Al Kāzim was the true *Imām*.<sup>85</sup> In contrast, with the deaths of Ismā‘īl and ‘Abdallah, one sect of *Shī'ites*, coalesced around his teachings and became the Seveners, or *Ismā‘īlis*, after Ismā‘īl.<sup>86</sup> This sect — the *Ismā‘īlis* — believed, and still believes, that *Imām* Ja‘far Al Šādiq designated his son Ismā‘īl to be his

successor. With *Imāmate* succession going through Ismā'il, then, the *Ismā'ilis* contend the subsequent legitimate leader was the son of Ismā'il, namely, Muhammad ibn Ismā'il. Indeed, Seveners believe Ismā'il, before he died, rightfully designated as the next *Imām* before Ismā'il himself died.<sup>87</sup>

### [B] *Fatimid Caliphate (909–1171 A.D.)*

A significant period in the history of *Ismā'ilī* Islam was the *Fatimid* Caliphate (known in Arabic as "*Al-Fātimīyyūn*"). It was led by 'Abdullāh al-Mahdī Billah, who claimed to be the legitimate successor of the first *Imām*, 'Alī.<sup>88</sup> The *Fatimids* originated in what is now Eastern Algeria and modern-day Turkey, and in 909 A.D. established what became an *Ismā'ilī* Empire. In 969, they built a new capital, Cairo (in Arabic, *Al Qāhira*), and it is in this year that the famed city enters Middle Eastern history.<sup>89</sup>

At its zenith, the *Fatimid* Caliphate stretched across North Africa, east to Palestine, Syria, the Hejaz (Western Saudi Arabia) and Yemen, south to the Red Sea coast of Africa, and north to Sicily.<sup>90</sup> The *Fatimids* were great traders, with routes across the Mediterranean Sea and Indian Ocean, and diplomatic ties extending to China. They also were known for their religious tolerance towards Christians and Jews (which, to be sure, could advance the commercial and financial needs of the Caliphate), and for their emphasis on merit over blood lineage in doling out positions and patronage. The Caliph Muizz established *Al Azhar* University, the first in the Middle East and one of the oldest, if not the oldest, in the world.

But, by the 1040s, the Empire was in decline, unable to contain independence movements by local leaders, and incapable of repelling invaders, who grabbed pieces of *Fatimid* territory.<sup>91</sup> After 1070, those invaders included Turks and Crusaders, who pushed the *Fatimids* back into Egypt. In 1169, enemies seizing the power base in Cairo, Egypt. In 1171, the forces of Salah ad-Din (Salah al-Din, or typically in English, Saladin) sacked the *Fatimid* Empire, and it collapsed.<sup>92</sup> Nonetheless, to this day the *Fatimid* Caliphate is the only *Sevener Shī'ite* regime, much less Empire, the world has seen.

### [C] *Nizārītes and Druze*

During the reign of the *Fatimids*, various branches of *Sevener Shī'ism* emerged. The *Nizārītes*, or *Nizārīs*, are the dominant branch, by number, claiming two-thirds of all *Ismā'ilīs*.<sup>93</sup> The *Nizārī* take their name from Nizār, the son of a *Fatimid* Caliph. In 1094 A.D. (487 A.H.) an Armenian General named Badr al-Jamāl disinherited Nizār from the throne of the Caliphate.<sup>94</sup> That action prompted the *Nizārīs* to break away from the mainstream of *Ismā'ilī Shī'ism* around 1100. In their early days, the *Nizārīs* were known as "Assassins" (*Tulimīyyah*).<sup>95</sup> Because they fought against both Muslims and Christians. They survived the sacking of the *Fatimid* Empire by the forces of Saladin in 1171, and no less impressively, survived the onslaught of the Mongols in 1256 A.D. (654 A.H.).<sup>96</sup>

The *Nizārī* understanding of *Shī'ism* is closest to that of the original *Ismā'ilīs* who split from Twelver *Shī'ism*.<sup>97</sup> In this sense, the *Nizārītes* might be dubbed "Orthodox" *Ismā'ilīs*. A key feature of *Nizārīte Shī'ism* is belief in the actual, "physical decent" of the *Imāmate*.<sup>98</sup> That means in every era, there is a living *Nizārī Imām* who is an authentic descendant of 'Alī and Fātimah, and who is visible to all. The *Nizārī Imāms* have been known as "Aga Khans" since the early 19th century A.D., when Hasan Ali Shah Mehalatee became the first Aga Khan.<sup>99</sup>

The current *Nizārī Imām* is Aga Khan IV.<sup>100</sup> He is Prince Karim Al Hussein, who was born in 1936, and who became *Imām* in 1957.<sup>101</sup> He lives near Paris, France.<sup>102</sup> Each individual *Nizārī* is spiritually bound to the extant *Imām*, but each one also is encouraged to accord due respect to the preceding *Imām* (e.g., Aga Khan III).<sup>103</sup> In consequence, there is a sense of continuity and allegiance among the *Nizārītes*.

Today, there are over 1 million *Nizārīs*.<sup>104</sup> Most of them live in the Middle and Near East and Indian Subcontinent, particularly Afghanistan, India, Iran, Pakistan, Syria, Yemen, plus China and several East African countries. Their geographic spread perhaps reflects in part the trade and diplomatic links of the old

Fatimid Caliphate.<sup>105</sup> India, where the *Nizāris* are known as "*Khojas*," is home to the largest *Nizāri* community.<sup>106</sup>

The *Druze* are a second significant branch of *Sevener Shī'ism* that emerged during the *Fatimid* Caliphate. They broke away from the *Ismā'īlis* in 1017, seeking to purge the *Seveners* of corruption from within.<sup>107</sup> The *Druze* incorporate secular philosophy, particularly that of Ancient Greece, and Gnosticism, into their religious beliefs and practices. Consequently, some Muslims have denigrated them, even dubbing them non-Muslims.<sup>108</sup> There are only about 1 million *Druze* globally, with most of them living in the Levant (specifically, Lebanon, Jordan, Syria, and Israel) or other parts of the Eastern Mediterranean.<sup>109</sup> They are a relatively closed community.

## § 9.04 FIVER SHĪ'ISM

### [A] Split Over 5th *Imām*

The pattern should be clear by now: "Twelver" *Shī'ites* believe in a particular succession of 12 *Imāms*, ending with the Hidden *Imām*, the *Al Māhdi*, who in 940 A.D. went into the greater occultation. "Sevener" *Shī'ites* agree with Twelvers on the first 6 *Imāms*, but thereafter depart from the Twelvers. With "Fivers," the common ground is reduced further. *Fiver Shī'ites* agree with Twelvers on only the first 4 *Imāms*. Thus, *Shī'ite* Islam is a schism with *Sunni* Islam, Fivers, like *Seveners*, are a schism within the schism, and a dispute over succession of religious leadership catalyzed each schism.

The 5th Twelver *Shī'ite Imām* was Muhammad Al Baqir ibn 'Ali Zayn Al 'Abidin. Fivers dispute the succession of Muhammad Al Baqir as the *bona fide Imām*.<sup>110</sup> Fivers, also called "*Zaydis*," contend Al Baqir failed to take action against corrupt government, in contrast to the first three *Imāms* 'Ali, Hasan ibn 'Ali, and Hussein ibn 'Ali.<sup>111</sup> *Zaydi Shī'a* take their name from Zayd ibn 'Ali (695-740), the half-brother of Al Baqir and grandson of *Imām* Hussein (who, of course, was the grandson of the Prophet).<sup>112</sup>

Zayd successfully attracted followers from among the *Shī'ite* community, because of his willingness to oppose militarily the injustice of the Caliphs in open rebellion.<sup>113</sup> Zayd led an open rebellion against the *Umayyad* Caliph Hishām, but

was killed in 740 A.D. (122 A.H.) during the month of *Ṣafar*.<sup>114</sup> Among Fivers, his end led to his renown as "Zayd the Martyr." Following the footsteps of his father, Yahya, the son of Zayd was killed soon thereafter.<sup>115</sup> Fivers emphasize a hallmark of the life of a *bona fide Imām* is resisting, in one manner or another, corrupt rule.<sup>116</sup> A true *Imām*, they urge, is not only a descendant of 'Ali and Fātimah, but also is willing to fight for his people.

### [B] Distinctive Beliefs

While championing the rights of the people and campaigning, even with force, for good government are hallmarks of *Fiver Shī'ism*, in a religious sense, Fivers are considered the most moderate of the three branches of *Shī'a* Islam.<sup>117</sup> Two reasons justify this reputation. First, *Zaydis* do not regard their *Imāms* as infallible. Second, they do not believe the *Imāms* receive Divine guidance.<sup>118</sup> In brief, a *Fiver Imām* is not an inerrant, "supernaturally endowed" religious leader free from sin.<sup>119</sup>

Indeed, Fivers believe any descendant of 'Ali and Fātimah is eligible to be *Imām*, as long as that man is pious, refrains from major sins, and is willing to fight for *Shī'ites*.<sup>120</sup> Of course, the *Zaydi* belief in the *Imām-as-warrior* is incongruous with the Twelver belief that *Imāms* are willing to endure patiently the hardships that attend injustice. There is a crucial religious implication of the *Zaydi* belief: if an *Imām* must be a willing warrior ready to defend his people, battle-ready, as it were, then there can be no *Imām* in occultation, nor can there be any child *Imām*.<sup>121</sup> Here again, the contrast with Twelver *Shī'ism* is stark. *Zaydis* further believe, differently from Twelvers, that there can be more than one *Imām* in the world at the same time, as long as they exist in "widely separated regions."<sup>122</sup>

*Zaydi Shī'a* are not as widespread as Twelver *Shī'ites*. The *Seveners* reside mostly in Yemen, Iraq, and certain parts of Africa.<sup>123</sup> They are most pronounced in Yemen, where they comprise 40-45 percent of the total population.<sup>124</sup> Within Yemen, they are located mainly in the northwest. From there, and Southern Saudi Arabia, they lead an active revolt against the government.<sup>125</sup> This movement is known as "*Shabab Al Moumineen*," which means "Believing Youth" or "Youthful

Believers," or simply, the "Houthis" (from the name of their former commander, Hussein Badreddin Al Houthi, who Yemeni forces reportedly killed in September 2004).<sup>126</sup>

## § 9.05 COMPARISONS WITH CATHOLIC CHRISTIANITY

In the spring of 1999, recognizing the difficulties between the two faiths, Muhammad Khatami, then President of Iran and leader of the officially *Shī'ite* state, visited Pope John Paul II at the Vatican for a private audience. The two religious leaders spoke of mutual admiration and common ground between their faiths, and explored ways to foster dialog, rather than mistrust and violence, between *Shī'ite* Muslims and Catholic Christians. This meeting was a significant step toward understanding between the two communities throughout the world.<sup>127</sup>

The two faiths differ in many ways. Yet, Roman Catholicism shares several fundamental characteristics in belief and practice with Twelver *Shī'ism*. Both religions are headed by an ordered succession of infallible leaders who can and do issue binding interpretations of dogma and religious law. In Catholicism, that succession is apostolic; in *Shī'ism*, it is linked to the Prophet Muhammad. Both faiths place significant weight on philosophy and metaphysics. And, both are founded on (and by) comparable martyred figures (Jesus Christ and *Imām* Hussein) and their mothers (Mary and Fātimah).<sup>128</sup>

As regards leadership, authority, and hierarchy, the Catholic Church and Twelver *Shī'ism* are characterized by a top-down, Divinely guided clergy. (To be sure, in practice, much development occurs from the bottom up, and from the laity, as senior figures in both faiths not only recognize, but also are eager to point out.) In Roman Catholicism, the Supreme Pontiffs are the final part of the Petrine Supremacy, that is, the succession of Saint Peter to Jesus as the head of the Church. (To date, there have been 265 Popes, including Saint Peter (who served from 32-47 A.D.), making it the longest-standing, continual office in history.) The Pope is able to claim supreme leadership of the Church through the first Pope, Saint Peter, who draws authority through Jesus and ultimately God.<sup>129</sup> Popes are chosen by the divinely guided College of Cardinals (meeting in the Sistine Chapel).

When declared so, their specific teachings on matters of faith and morals are regarded as infallible.<sup>130</sup> "Infallibility," in the Catholic sense, means:

The gift of the Holy Spirit to the Church whereby the pastors of the Church, the pope and bishops in union with him, can definitively proclaim a doctrine of faith or morals for the belief of the faithful. . . . This gift is

<sup>126</sup> See *Houthis*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Houthis>.

<sup>127</sup> BILL, *supra*, at 1-5.

<sup>128</sup> See BILL, *supra*, at 47.

<sup>129</sup> BILL, *supra*, at 10.

<sup>130</sup> See *Papal Infallibility*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Papal\\_infallibility](http://en.wikipedia.org/wiki/Papal_infallibility). [Hereinafter, *Papal Infallibility*.]

related to the inability of the whole body of the faithful to err in matters of faith and morals. . . .<sup>131</sup>

In discussions of Papal infallibility, among the points often neglected is the proposition in the second sentence: the entirety of the Church, including the laity, will not err on a matter of faith and morals, which means:

"The whole body of the faithful . . . cannot err in matters of belief. This characteristic is shown in the supernatural appreciation of faith (*sensus fidei*) on the part of the whole people, when, 'from the bishops to the last of the faithful,' they manifest a universal consent in matters of faith and morals."<sup>132</sup>

Interestingly, this proposition exists in Islam. An oft-quoted *ḥadīth* from the Prophet Muhammad is: "My community will never agree upon an error."<sup>133</sup>

However, *ex cathedra*<sup>134</sup> (literally, "from the chair," in the sense of official) teachings must satisfy strict parameters, and Popes are parsimonious in dubbing them "infallible." According to the First Vatican Council (December 1869-October 1870), which declared the doctrine of Papal infallibility, a statement is "infallible" if:

- (1) Roman Pontiff
- (2) speaks *ex cathedra* in which
- (3) he defines
- (4) that a doctrine concerning faith or morals
- (5) must be held by the whole Church.<sup>135</sup>

<sup>131</sup> CATECHISM OF THE CATHOLIC CHURCH, *Glossary* at 883 (United States Catholic Conference, Inc., Washington, D.C.: Libreria Editrice Vaticana, 2nd ed. 1997). [Hereinafter, *CATECHISM*.]

<sup>132</sup> *Catechism*, *supra*, ¶ 92 at 28 (quoting *Lumen Gentium* 12, from the October 1962-December 1965 Second Vatican Council, November 1964).

<sup>133</sup> Quoted in *Ijma*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Ijma>. See also C.G. WEERAMASTY, *ISLAMIC JURISPRUDENCE — AN INTERNATIONAL PERSPECTIVE* 39 (1988, Kuala Lumpur, Malaysia: The Other Press, 2001 ed.) (quoting this *ḥadīth* as: "My nation will not unanimously agree in error.")

<sup>134</sup> "Ex" is a preposition meaning "from," and "cathedra" is the singular, nominative, feminine word for "chair," referring to the Pope's office as leader of the Church.

<sup>135</sup> *Papal Infallibility*, *supra*, quoting from The Dogmatic Constitution from Vatican I, *Pastor Aeternus* (Eternal Shepherd), ch. 4 (session 4, 18 July 1870), posted at [www.fishbeaters.com/pastoraeternus.html](http://www.fishbeaters.com/pastoraeternus.html). Likewise, the *Catechism* states:

"The Roman Pontiff, head of the college of bishops, enjoys this infallibility in virtue of his office, when, as supreme pastor and teacher of all the faithful — who confirms his brethren in the faith — he proclaims by a definitive act a doctrine pertaining to faith or morals . . . The infallibility promised to the Church is also present in the body of the bishops when, together with Peter's successor, they exercise the supreme Magisterium," above all in an Ecumenical Council. (quoting *Lumen Gentium* 25, from the October 1962-December 1965 Second Vatican Council, November 1964) When the Church through its supreme Magisterium proposes a doctrine "for belief as being divinely revealed," [quoting *Dogmatic Constitution on Divine Revelation — Dei Verbum* 10 § 2, from the Second Vatican Council, November 1965] and as the teaching of Christ, the definitions "must be adhered to with the obedience of faith." [quoting *Lumen Gentium* 25] This infallibility extends as far as the deposit of divine Revelation itself.

*CATECHISM*, *supra*, ¶ 891 at 235-236.

No Pope is held to be infallible outside his role as leader of the Church, or even impeccable in all respects. In fact, a Pope may still sin and err while holding the office, and indeed Popes avail themselves of the Sacrament of Reconciliation.

The Roman Catholic Pope may be likened to the Twelver *Shī'ite Imāms*. To *Shī'ites*, 'Alī is the rightful successor to the Prophet Muhammad by Divine order. That is because God (Allāh) is beneficent: He never leaves the faithful without a living guide. 'Alī and the 11 *Imāms* who follow him are Divinely appointed leaders of the Twelver *Shī'ite* faith. Allāh chose them to be His representative on earth. In contrast to Popes, the *Shī'ite Imāms* are infallible and impeccable in all respects.<sup>136</sup> However, since the Twelfth *Imām* went into hiding (occultation), the *Shī'a* rely on their *mujtahidun* to interpret divine law. A *mujtahid* is part of the religious hierarchy, chosen by his colleagues, and, therefore, is not infallible or impeccable. They (and only they) are allowed and indeed expected to use independent reasoning (*ijtihad*). As Catholics are bound to believe the full teaching of the Church, *Shī'ites* are required to follow a *mujtahid* for guidance.<sup>137</sup> A *Shī'ite* who is not a *mujtahid* is called a "*mukallid*," meaning "follower."

Another striking similarity between the two faiths is their rise despite, and perhaps because of, the intense persecution and suffering of individuals and the community. Individually, Jesus and Hussein, are seminal figures in Christianity and Islam, respectively. They led by example and accepted their physical fates as redemptive suffering. The Crucifixion and the Martyrdom of Hussein were "cosmic" events in the two faiths, the first offering himself to redeem humanity, and the second being the final breaking point with the *Sunni* majority.<sup>138</sup> Notably, as Jesus asked the Father from the Cross to forgive his persecutors, Hussein similarly forgave the *Sunnis* who had pursued him.<sup>139</sup> Jesus lived a life of poverty and peace only to be crucified by those who feared his rising authority and misunderstood its nature. Hussein, grandson of the Prophet and Third *Imām*, accepted his disposition and lived a virtuous life, only to be slaughtered by those fearful of his return to power.<sup>140</sup>

As Jesus and Hussein are the supreme role models of virtue, sacrifice, and strength for their followers, a special place also is reserved for their mothers. Mary, Mother of Jesus, herself sinless and pure occupies a unique place in Catholic dogma. In fact, among the rare times Papal infallibility has been invoked are two dogmas concerning Mary: her Assumption into Heaven and her Immaculate Conception.<sup>141</sup> Indeed, the Assumption and Immaculate Conception are the only indisputable instances of Papal infallibility universally acknowledged by the Church. Mary is revered by Catholics for her purity and grace. She is the ultimate loving mother who sacrificed for her son, and endured the worst of events, the cruel death of her son. Fātimah, like Mary, is the perfect picture of a mother. Her modesty and

<sup>141</sup> See Papal Infallibility, *supra*.

compassion should be a model for every woman in the *Shī'ite* community. Both women are shining examples of femininity and are considered immaculate and impeccable.<sup>142</sup> Notably, both women are regarded as influential intercessors between the faithful and God.

Historically, Roman Catholicism and Twelver *Shī'ism* have played significant roles in politics and law. Catholicism intricately intertwined in the monarchies of old Europe. *Shī'ism* took hold in Persia with the *Safavid* Dynasty (1501-1694 A.D.). However, with the separation of Church and State in the non-Muslim world, the Church has little direct influence on politics and law. In contrast, there is no separation of Mosque and State in Iran. It is an avowedly *Shī'ite* theocracy.

Finally, both the Catholic Church and Twelver *Shī'ism* have shown an ability to adapt to changes in the cultural, economic, social, and political milieu without compromising their core precepts. However, historically, each faith has handled centralizing movements better than ones emphasizing individual freedom, though certainly both faiths adhere to the concept of free will.<sup>143</sup> Because the community is so important within each faith, the Catholic Church and Twelver *Shī'ism* sometimes have struggled to balance diversity within unity, that is, to affirm both Divinely-inspired common principles and God-given individual rights. For example, Catholics and *Shī'ites* consider impoverished people a special case, and charity a necessary virtue. Yet, historically, some parts of the Church and *Shī'ite* leadership have been less than eager to upset a *status quo* characterized by a wide wealth gap.<sup>144</sup> Examples of such controversies from the 1970s and 1980s are the Liberation Theology movement stirred by some Latin American clergy, and populist *Shī'ite* movements led by *Āyatollāh* Khomeini.

The first of these was the fact that the United States had a large and growing population. This was due to a number of factors, including immigration and a high birth rate.

Another factor was the fact that the United States had a large and growing economy. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A third factor was the fact that the United States had a large and growing military. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A fourth factor was the fact that the United States had a large and growing navy. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A fifth factor was the fact that the United States had a large and growing air force. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A sixth factor was the fact that the United States had a large and growing space program. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A seventh factor was the fact that the United States had a large and growing intelligence community. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

A eighth factor was the fact that the United States had a large and growing diplomatic corps. This was due to a number of factors, including the discovery of gold and silver, and the growth of industry.

## PART FOUR LAST GREAT ERA?

## Chapter 10

### OTTOMAN TURKISH EMPIRE (11th Century–1923 A.D.)

---

Oh, East is East, and West is West, and never the twain shall meet, Till Earth and Sky stand presently at God's great Judgment Seat; But there is neither East nor West, Border, nor Breed, nor Birth, When two strong men stand face to face, though they come from the ends of the earth!

Rudyard Kipling (1865-1936)

*The Ballad of East and West* (1889)

Winner of the 1907 Nobel Prize for Literature, the first English language writer to receive this honor, and its youngest recipient

#### SYNOPSIS

- § 10.01 BIRTH (11TH CENTURY TO 1362 A.D.)
- § 10.02 CONQUEST AND CONSOLIDATION (1362 TO 1590 A.D.)
- § 10.03 BEGINNING OF END (1595 TO 1789 A.D.)
- § 10.04 WESTERN INFLUENCE, NATIONHOOD, AND DECLINE (1789 TO 1920 A.D.)
- § 10.05 ATATÜRK AND BIRTH OF MODERN TURKISH REPUBLIC (1923 A.D.)
- § 10.06 SALIENT DEVELOPMENTS IN *SHARĪʿA*
  - [A] Organization of Political Units on Religious Lines and Jurisdiction of Islamic Judges (*Qāḍīs*)
  - [B] 1499 Ottoman Law Book (*Kanun*)
  - [C] 1877 Ottoman Civil Code (*Mejelle*)
  - [D] 19th Century Legal Reforms Contrary to *Sharīʿa*
- § 10.07 LAW OF PERSONAL STATUS, OTTOMAN *MILLET* (DENOMINATION) SYSTEM, AND ISRAEL AND PALESTINE

#### § 10.01 BIRTH (11th Century to 1362 A.D.)

Prior to the establishment of the Ottoman Empire, Anatolia (roughly, modern day Turkey) was ruled by the Byzantine Empire. In the middle of the 11th century A.D., the *Seljuk* Dynasty arose, having its capital in Baghdad.<sup>1</sup> With the *Seljuks*

---

conquering most of present-day Iran, came an influx of Turks from central Asia, forever altering the ethnic balance of the Middle East.<sup>2</sup> In 1071, they defeated the Byzantine army in eastern Anatolia, which began the decline of the Byzantine Empire.<sup>3</sup>

There were many Turks within the *Seljuk* Dynasty, but not in the ruling class.<sup>4</sup> Turks were semi-nomadic pastoralists, in contrast to the Persian-speaking, city-dwelling *Seljuk* rulers. Hence, the newly-conquered areas of Anatolia were a natural place to relocate.<sup>5</sup> In 1204, the Byzantines lost Constantinople, Greece and the Aegean archipelago to the Fourth Crusade,<sup>6</sup> leaving only Western Anatolia under control.<sup>7</sup>

In 1243, an invading Mongol army in 1243 defeated the *Seljuks*.<sup>8</sup> The Mongols traditionally also were pastoralists, so the *Seljuks* in Anatolia had to compete for land, which forced them to Western Anatolia. Byzantine Emperor Michael VIII was focused on the west after recapturing Constantinople in 1261.<sup>9</sup> Anatolia came to be populated mainly with Turks and “by 1300, Turkish rule had replaced Greek, with a series of Turkish principalities on the former territory of the Emperor.”<sup>10</sup>

The Emirate of Osman was one such principality. The rise of Osman to power resulted from his ability to rally support from Turks and Muslims in the area.<sup>11</sup> When he died in 1323 or 1324, his son, Orhan, succeeded him.<sup>12</sup> Orhan is credited with elevating the Turkish principalities with a penchant for raiding, thereby creating the start of the Ottoman Empire.<sup>13</sup> Table 10-1 summarizes the Ottoman Sultans and their major events.<sup>14</sup>

Table 10-1:  
Ottoman Sultans

Name	Life (A.D.)	Dates of Reign (A.D.)	Major Developments
Osman I	1258-1324	1299-1324	Declared independence of his <i>Seljuk</i> Turkish clan in Anatolia, founding the Ottoman Empire.
Orhan I	1281-1361	1324-1361	Elevated status of empire by raiding and consolidating territory. Occupied town of Lopadion, blocking Byzantine access to Constantinople, leading to the capture of 2 other cities. Married Theodora, daughter of a Byzantine heir, and received control of Gallipoli Fortress in exchange for aid.
Murad I	1326-1389	1362-1389	Gallipoli retaken by Byzantines. Other large territorial gains in Thrace and Macedonia. Rise of the Janissaries (highly skilled military guard). Died on the Serbian battlefield.
Bayezid I	1360-1402	1389-1402	Gained territory through diplomacy and marriage. Married Olivera, sister of Serbia's successor. Attacked by Timur Empire to the east, losing Ankara in 1402. Died in Timur captivity.
Interregnum — Civil War		1402-1413	Timur divided his new territory into 4 parts, giving one to each of his sons. All 4 brothers fought a bloody civil war, ending with Musa winning and ruling brutally until his death in 1413.
Mehmed I	1382-1421	1413-1421	Period of extreme instability and territory loss.

Name	Life (A.D.)	Dates of Reign (A.D.)	Major Developments
Murad II	1404-1452	1421-1444, 1447-1452	Recaptured lost land in 20 years of his reign. Saw opportunity for more land when King of Hungary died at Battle of Varna (10 November 1444) leaving an infant as heir. Abdicated when his favorite son, Alaeddin, died in battle against Hungarian Crusaders. Retook crown and control over territory that rebelled during the Crusades in 1447.
Mehmed II "The Conqueror"	1432-1481	1444-1447, 1452-1481	Conquered Constantinople (1453), converting Hagia Sophia into Islamic mosque. Made significant territorial gains (Europe, Asia Minor, Persia). Died 2 days after leaving Constantinople to conquer the <i>Mamluk</i> Empire.
Bayezid II	1447-1512	1481-1512	Comprehensively codified Ottoman customary law. Accepted Jews expelled from Spain into Ottoman territory. Attacked by <i>Mamluk</i> Empire to the east, and alliance of powers in the west (ending with a treaty with Ottoman land concessions).
Selim I (Yavuz)	1465-1520	1512-1520	First Sultan to take the title "Caliph of Islam." Obtained fatwā against <i>Shī'i Safavid</i> Empire to legitimize fighting other Muslims. Gained territory in Eastern Anatolia and the Levant. Failed to conquer Egypt due to lack of naval experience, so alliance with Tunis and Algerian pirates.

Name	Life (A.D.)	Dates of Reign (A.D.)	Major Developments
Suleyman I "The Magnificent"	1494-1566	1520-1566	Sweeping legislative, legal, social and economic reforms. Prominent monarch of 16th century, patron and practitioner of the arts and sciences. Huge territorial gains (Anatolia, Persia, Aegean Peninsula and Hungary). Allied with French against Charles V, Holy Roman Emperor, when he attacked Algiers.
Murad III	1546-1595	1574-1595	1590 peace treaty over the Azerbaijan region (height of Ottoman territorial expansion). Wars on either side of the Empire drained the treasury, beginning economic decline and institutional decay.
Mehmed III	1566-1603	1595-1603	Territorial standstill, army exhausted and completely surrounded by powerful forces.
Ahmed I	1590-1617	1603-1617	
Mustafa I	1592-1639	1617-18, 1622-23	
Murad IV	1612-1640	1623-1640	Restored some internal order, using harsh tactic for social control.
Ibrahim I	1615-1648	1640-1648	Assassinated by Janissaries.
Mehmed IV	1642-1693	1648-1687	In 1683, Austrians successfully defended Vienna.
Suleyman II	1642-1691	1687-1691	Rural depopulation lead to food shortages.
Ahmed II	1643-1695	1691-1695	
Mustafa II	1664-1703	1695-1703	In 1699, Ottomans signed Treaty of Carlowitz as a defeated army, not conquering power.
Ahmed III	1673-1736	1703-1730	In 1718, treaty ceding territory.
Mahmud I	1696-1754	1730-1754	Dichotomy between Muslims and non-Muslims became more contentious as non-Muslims began gathering status as merchants and traders.
Osman III	1699-1757	1754-1757	
Mustafa III	1717-1774	1757-1774	In 1774, treaty ceding territory.

Name	Life (A.D.)	Dates of Reign (A.D.)	Major Developments
Abdul Hamid I	1725-1789	1774-1789	Well regarded by the people after leading a fire brigade in Istanbul. Could not afford to pay the army causing great territorial loss.
Selim III	1761-1808	1789-1808	Tried to institute reforms to the Ottoman government. Recognized Napoleon as Emperor of France, leading to his assassination by the Janissaries.
Mustafa IV	1779-1808	1808	Ordered Selim III killed by janissaries, then Janissaries demanded he step down in favor of Mahmud II.
Mahmud II	1785-1839	1808-1839	Anti-Western sultan, consolidating all power to himself. Reformed military, tax system, <i>waqf</i> system, and established an Ottoman newspaper.
Abdul Mejid I	1823-1861	1839-1861	Enacted the Tanzimat Reforms (legal reforms). New penal code issued 1840, influenced by French Civil Code, guaranteed equality under the law, first time Sultan used legislating power. In 1847, mixed civil and criminal courts established, using European based evidence rules. In 1850, commercial code established, administered by new tribunals of commerce. Built Dolmabahçe Palace in Istanbul. Outlawed the turban in favor of the fez.

Name	Life (A.D.)	Dates of Reign (A.D.)	Major Developments
Abdulaziz	1830-1876	1861-1876	Continued reforms of his brother, Abdul Mejid I. Cultivated good relations with the European leaders. Organized public education system, founding University of Istanbul. Connected railway to Europe (known as the Orient Express). <i>Mejelle</i> codified.
Murad V	1840-1904	1876	Reigned for 39 days before being deposed.
Abdul Hamid II	1842-1918	1876-1909	In 1876, promulgated Constitution, masquerading as democratic reform, but really furthering sultan's power. Dissent and distrust at the universities grew. In 1908, Bulgaria declared independence, Crete unified with Greece, and Bosnia joined with the Austrian Habsburgs. Young Turks movement forced him into exile.
Mehmed V	1844-1918	1909-1918	Sultan in name only. Committee of Union and Progress controlled the government through the legislature. In 1914, Ottomans enter First World War on losing side, allying with Austria-Hungary and Germany. In 1915, Armenian genocide.
Mehmed VI	1861-1926	1918-1922	On 11 November 1918, Armistice Agreement signed with Allies ending First World War. External defeat of entire Ottoman Empire.
Abdul Mejid II	1868-1944	1922-1944	Sultanate abolished in 1922.

The birth of the Ottoman Empire hinged largely on two specific events. First, in 1328, and as a result of a famine in Bursa and a subsequent earthquake, the army

of Orhan occupied the Byzantine town of Lopadion.<sup>15</sup> As the Byzantine forces responded, Orhan was able to block their access to Constantinople, allowing Orhan to capture at least two other Byzantine cities.

Second, in 1346, Orhan aligned himself with another would-be emperor with a competing claim to the Byzantine throne.<sup>16</sup> To cement the connection, Orhan married Theodora, a daughter of one claimant to that throne. The strategic nuptials served their intended purpose. In 1352, the father of Theodora needed additional help, and he called on Orhan. In exchange for the help of Orhan, he was given control of a fortress on the Gallipoli peninsula, the first territory the Ottomans occupied in Europe.<sup>17</sup> Eventually, in 1353, the Ottomans used this outpost to invade Bulgaria and Greece.<sup>18</sup>

## § 10.02 CONQUEST AND CONSOLIDATION (1362 TO 1590 A.D.)

After the death of Orhan in 1362 A.D., his son, Murad I, made large territorial gains in Europe, although in 1366 the Byzantines retook the fortress on Gallipoli.<sup>19</sup> They hoped reclaiming it would block access to Europe. But, in 1369, the Ottomans conquered Adrianople, accessing central and eastern Bulgaria and western Thrace.<sup>20</sup> Shortly thereafter, two Serbian lords in Macedonia suffered a crushing defeat to the Ottomans, by Janissaries, a highly-skilled military organization (akin to the Praetorian Guard of Ancient Rome) instrumental to all of the conquests for the Empire by Murad.<sup>21</sup>

With the Janissaries, according to a Greek Short Chronicle, “from then on the Muslims began to overrun the Empire of the Christians.”<sup>22</sup> Even the attempt of Pope Gregory XI to rally Europe into an anti-Turkish alliance in 1372 failed.<sup>23</sup> In 1385, Murad I conquered Sofia, and then proceeded to subdue Serbia,<sup>24</sup> but died on the battlefield.<sup>25</sup>

Through diplomacy and marriage, Bayezid I, son of Murad I, was successful in Serbia. In 1392, Serbia aligned itself with the Ottomans against Hungary.<sup>26</sup> To solidify this deal, Bayezid I married Olivera, the sister of Serbia's then-successor.

<sup>26</sup> See IMBER, *supra*, at 14.

Emboldened by the alliance, Bayezid I tried to overthrow Byzantine-occupied Constantinople in 1394.<sup>27</sup>

However, the Timur Empire began expanding into Ottoman territory,<sup>28</sup> capturing Ankara in 1402, demanding the attention of Bayezid.<sup>29</sup> Prior to any response from Bayezid, the Timurids were able to sway the allegiance of a number of eastern Ottoman emirs, who switched sides on the battlefield. The army of Bayezid army was defeated swiftly; he was captured and died a year later in captivity.<sup>30</sup>

After the triumph of Timur (1336-1405), commonly known as Tamerlane, the Ottoman Empire was divided into four parts at his command. Timur gave his eldest son, Suleyman, reign of all European lands. In 1404, Suleyman waged war against two of his brothers and prevailed. In 1410, Musa, the fourth brother, defeated Suleyman. Despite solidifying control over the entire Ottoman Empire, Musa's reign was brief and violent, ending in his death in 1413. The period following the death of Musa was characterized by further instability, leading to additional loss of territory in the Ottoman Empire.

In 1421, Murad II took control of the Empire and recaptured land lost within the first 20 years of his leadership.<sup>31</sup> The death of the Hungarian King Sigismund in 1440, with only an infant successor, left that territory apparently vulnerable.<sup>32</sup> The conquest of this territory by Murad II, however, led to a later crisis for Ottoman rule.<sup>33</sup>

In 1439, Pope John VIII accepted a union with the Orthodox Christian Church in return for extending military aid to the Byzantines.<sup>34</sup> He also organized a Crusade against the Ottomans in 1444,<sup>35</sup> in which Hungarians were one of the main Crusading forces. Later that year, Murad II abdicated control after his favorite son, Alaeddin, was killed in a battle against the Crusaders, in favor of his other son, Mehmed.<sup>36</sup> This Crusade was the first time Europeans were able to capitalize on their more advanced technology, namely, cannons. However, in a battle at Varna on 10 November 1444, the King of Hungary was killed, causing the Hungarians to end the battle and ultimately cede the country to the Ottomans.<sup>37</sup> In 1447, Murad re-ascended to the Emperor's throne and regained control over provinces that had rebelled in the Crusades.<sup>38</sup>

Mehmed II officially regained the throne after the death of Murad II in 1451, and immediately laid siege to Constantinople.<sup>39</sup> When the city finally fell on 29 May 1453,<sup>40</sup> Mehmed “the Conqueror” solidified his place in Muslim history by converting the cathedral Hagia Sophia into an Islamic mosque.<sup>41</sup> In a series of strategic moves, Mehmed conquered Serbia up to the Danube River, Bosnia, Hercegovonia, and most of the Aegean Peninsula.<sup>42</sup> As a symbolic maneuver, the Ottomans also conquered Travzon, the last remaining stronghold of the Byzantine Empire.<sup>43</sup> In 1463, the Venetian Senate declared war against the Ottomans and created an alliance with Hungary, the Roman Catholic Church, Burgundy and, the Karamanids in the east.<sup>44</sup> This war ended in 1479 with the Ottomans relinquishing only the Aegean Peninsula.<sup>45</sup> The ever-militant Mehmed II then led an army in 1481, hoping to overthrow the Mamluk Empire, but died two days after departing Constantinople.<sup>46</sup> Overall, the reign of Mehmed II greatly expanded the territory of the Ottoman Empire into Europe, Asia Minor, and Persia.<sup>47</sup>

Bayezid II, the son of Mahmed, came to power after the death of his father. He did not immediately embark upon a conquest to expand the territory of the Ottoman Empire. Perhaps he was adversely affected by his absent father. Perhaps, too, Bayezid II realized the soldiers were exhausted from perpetually waging war. Additionally, domestic instability was increasing, because Mehmed II had both raised taxes and seized private property to finance his wars.<sup>48</sup> Due to this internal instability, Bayezid II was the first Emperor to attempt to codify comprehensively the customary law of the Ottomans. He was particularly concerned with law that “regulated the relationship between fief holders and the peasants on their land, and the military obligations of fief-holders and the peasants on their land, and the military obligations of fief-holders.”<sup>49</sup>

However, the peace of Bayezid II dissolved when the Mamluk Empire attacked the previously-annexed emirate of Karaman in the east.<sup>50</sup> Beginning in 1485, the war over the Taurus Mountains lasted 6 years with no material border changes.<sup>51</sup> In 1499, the Venetians declared war on the Ottomans, supported by the Papacy, Hungary, France, and Spain.<sup>52</sup> This war, provoked by Ottoman aggression, ended with a treaty in 1503 with minimal territorial gains, and “marked the beginning of

an Ottoman disengagement from Europe that was to last until 1521.”<sup>53</sup> Bayezid II was also timid in confronting the *Safavid* Empire (Iran, Iraq, and northern Syria) despite the Ottoman's aversion to *Shi'ism*.<sup>54</sup>

Selim II became Emperor in 1512, after the death of Bayezid II, facing a growing threat from the *Safavids*. To legitimize military action, Selim II obtained a *fatwa* labeling Shah Ismail (the *Shi'ite* leader of the *Safavid* Dynasty) a heretic to be eradicated.<sup>55</sup> Although, beginning in 1514, the Ottomans captured much of eastern Anatolia and northern Syria,<sup>56</sup> this expansion created a shared border with the Mamluk Empire. As a result, Shah Ismail formed an alliance with the Mamluks.<sup>57</sup> This alliance did not deter the Ottomans, who captured all of Syria (which included Damascus, Tripoli, Jerusalem, Mecca, Medina, Lebanon, and Palestine) because of their far superior military artillery.<sup>58</sup>

Emboldened by this success, Selim II attempted to overthrow Egypt, but failed due to the Ottoman's lack of naval expertise. To bolster this military deficiency, Selim II convinced two prominent Mediterranean pirates to aid him by establishing their territory, Tunis and Algiers, as provinces of the Empire.<sup>59</sup> Selim II died shortly thereafter in 1520.

Next, Suleyman I, considered one of the greatest Ottoman leaders for conquering vast amounts of territory, took the throne. During his 46-year rule, Suleyman I gained territory in eastern Anatolia, Iraq, land surrounding the Persian Gulf and Red Sea, almost all of the Aegean Peninsula, Moldavia, and Hungary.<sup>60</sup> When Spain attacked the Ottoman province of Algiers in 1535, Suleyman I allied with the French against the Spanish king, Charles V, who was also the then-ruler of the Holy Roman Empire.

In the late 1500s, the Ottomans took advantage of instability within the *Safavid* Empire.<sup>61</sup> After protracted fighting, a peace treaty was signed in 1590 giving the Ottomans control of present-day Azerbaijan, the Caucasus region, and western Iran,<sup>62</sup> marking the territorial height of the Ottoman Empire.<sup>63</sup> Murad III, the Emperor at the time, died on the western front in a losing conflict against the Austrians.

The Ottoman Empire, though far from homogeneous, functioned without serious sectarian disputes.<sup>64</sup> Islam was the dominant religion, but there were Greek and

<sup>39</sup> See GOODWIN, *supra*, at 29–43.

Armenian Orthodox Churches, and a large number of Jews whose number increased dramatically in 1492 after their wholesale expulsion from Spain, and reception by Bayezid II.<sup>65</sup>

Rather, it was a dynastic Empire in which the only loyalty demanded of all its multifarious inhabitants was allegiance to the sultan. The loyalty demanded of those who did not hold office consisted in no more than not rebelling and paying taxes in cash, kind or services. Even these were often negotiable. It was in the end the person of the sultan and not religions, ethnic or other identity that held the Empire together.<sup>66</sup>

Reflecting the religion of the Ottoman founders and rulers, the Empire followed *Sunni* Islam and applied the *Şeriat* in accordance with *Hanafi* School jurisprudence. (In Turkish, "*Şar'at*" is expressed as *Şeriat*.)

In respect of religious diversity of the populace, the Empire allowed Christians and Jews considerable latitude to practice their religion, and to establish local courts that applied legal rules required by their religion.<sup>67</sup> Jurisdiction of these courts was limited to disputes in which both parties were of the religious group in question. However, any member of a religious group could petition an Islamic court.<sup>68</sup> This Middle Age forum shopping was possible because, if ever in conflict, the ruling of a Muslim court would have precedence over a Jewish or Christian court.<sup>69</sup>

### § 10.03 BEGINNING OF END (1595 TO 1789 A.D.)

After the 1590 treaty, the Ottoman Empire found itself in a territorial standstill, which persisted into the 17th century. Eastward expansion into Iran was blocked by a resurgent *Safavid* Empire and, by harsh terrain.<sup>70</sup> A superior Portuguese navy blocked any Ottoman advances from the Red or Arabian Seas, preventing access to the riches from south Asian spice trading.<sup>71</sup> Russians began to conquer areas around the Black Sea and north Caucasus region.<sup>72</sup> In Europe, the Habsburgs, with their far superior weaponry, successfully defended Vienna in 1683.<sup>73</sup> Finally, on 26 January 1699, the Ottomans signed the Treaty of Carlowitz<sup>74</sup> as the defeated power, not conquering victor.<sup>75</sup> Subsequent treaties in 1718 and 1774 ceded

<sup>75</sup> See Lewis, *supra*, at 36.

additional territories to Ottoman foes.<sup>76</sup>

Internal pressure, too, led to the eventual decline of the Ottoman Empire:

The Ottoman systems of military organization, civil administration, taxation, and land tenure were all geared to the needs of a society expanding by conquest and colonization into the lands of the infidel. They ceased to correspond to the different stresses of a frontier that was stationary or in retreat.<sup>77</sup>

There are at least four specific internal factors. First, the army, citing exhaustion, refused to simply bow to the whim of the Emperor's colonial proclivities. While the military was still active during this time, it seems as if the soldiers had less interest in merely protecting already acquired land, as opposed to the glory of conquering something new.

Second, a rural depopulation had begun to take place in the mid-17th century. Largely because of a poor quality of life, the rise of wealthy landowners, and tax burdens, farmers began to move to the city — a stark contrast from the agrarian roots that had sustained it up to this point<sup>78</sup> — resulting in food shortages throughout the Empire.<sup>79</sup>

Third, internal instability had also been exacerbated by traditional divisions of labor between Muslims and non-Muslims. Muslims traditionally only worked in four professions: government, war, religion, and agriculture.<sup>80</sup> Non-Muslims, therefore, were left occupying increasingly lucrative vocations within industry and trade.<sup>81</sup> Even though the history of the Ottoman Empire was more accepting of a multi-religious, multi-ethnic Empire, the ruling Muslim class did not approve of this development. However, the non-Muslims were able to block most attempts to confiscate their businesses and thereby protect themselves because their success was sustaining the Empire at this time.<sup>82</sup>

Fourth, the Ottoman Emperors who ruled in this period left faced difficulties. They ascended to the throne amidst uncertainty in their status, probably due to a premature death of the previous ruler and the early age of his likely successor.<sup>83</sup> Two Emperors, Osman and Ibrahim, were assassinated. Notably, Osman was killed in 1618 by the Janissaries, who were instrumental in all previous military campaigns.<sup>84</sup> Murad IV managed to restore internal order during his rule from 1623

<sup>84</sup> See Imber, *supra*, at 78.

to 1640.<sup>85</sup> But, perhaps an ominous harbinger, his tactics for doing so were harsh, including the death penalty for enjoying coffee or tobacco.

#### § 10.04 WESTERN INFLUENCE, NATIONHOOD, AND DECLINE (1789 TO 1920 A.D.)

Throughout Ottoman Imperial history, there was considerable contact with the West. Western ideals failed to take root among the Ottomans, unlike European military weaponry.<sup>86</sup> The Ottoman Muslims saw their Christian adversaries as inferior, uncivilized and unintelligent.<sup>87</sup> The Doctrine of Successive Revelations buoyed this belief, stating:

the final mission of Muhammad . . . enabled the Muslim to reject Christianity as an earlier and imperfect form of something that he alone possessed in its entirety. . . .<sup>88</sup>

Despite this mantra, ripples from the French Revolution (1789–1799 A.D.) could be felt and Muslims in the Ottoman Empire during this period were beginning to have doubts about their place in the world. Culturally, there were two reasons for this fact.

First, because of territorial contraction and internal instability, Muslims began to question whether they still were in the favor of God.<sup>89</sup> Second, the French Revolution was explicitly secular in character, disconnecting Western ideals from Christendom. Ottoman curiosity was piqued, as “the Muslim world . . . hope[d] to find the elusive secret of Western Power without compromising its own religious beliefs and traditions.”<sup>90</sup>

The Ottoman ruling elite realized the destabilizing potential of the French Revolution, but then-current Selim III did not immediately share this concern. Most likely out of delight for the French defeat of Austria and Russia, Selim III recognized Napoleon as the French emperor.<sup>91</sup> This act ultimately led to his disposition in 1807 by the staunchly anti-Western Janissaries and Chief *Mufti*.<sup>92</sup> The ruling elite and Mahmud II, the next emperor, embarked on a campaign to publicly discredit the ideas of the “atheistic” French Revolution by disseminating letters denouncing it.<sup>93</sup>

<sup>93</sup> See LEWIS, *supra*, at 66–69.

Mahmud II transformed the role of the emperor by consolidating all of the power of the Ottoman Empire into himself.<sup>94</sup> Previously, provinces were semi-autonomous, allowing local authority to govern that vast majority of its own affairs. Mahmud II used this heightened power in at least four significant ways. First, in 1826 he sought to reform the Ottoman military and, specifically, to eliminate the Janissaries.<sup>95</sup> This reformation was to begin a more rigorous education for military officers.<sup>96</sup> Second, in 1831, Mahmud eliminated the *timar*,<sup>97</sup> a grant of land given to soldiers as payment for their military service, and upon which no taxes were due.<sup>98</sup> While the motivation for this was undoubtedly to increase the Ottoman tax base, the net effect of this was to “liquidate . . . the last vestige of feudalism.”<sup>99</sup> Third, Mahmud II also dramatically altered the *waqf*, or Islamic trust in 1826,<sup>100</sup> placing a government agency over the administration, or *evkaf*, of all *waqf*. As a result, all funds accruing to these trusts were filtered through the government, eventually amounting to one-third of the Ottoman Empire’s revenue.<sup>101</sup> And fourth, the first official Ottoman newspaper was established.<sup>102</sup> Mahmud II died in 1839.

Sultan Abdul Majid instigated even wider sweeping reforms than Mahmud II, known as the Tanzimat reforms. The Sultan felt that *Shariat* law failed to address international and business concerns as well as criminal issues and enforcement.<sup>103</sup> In May 1840, a new penal code was issued.<sup>104</sup> Although it did not seem to be revolutionary, it marked a beginning of radical changes in Ottoman law for three reasons.

First, it was highly influenced by the French code. Second, it required that all Ottoman citizens are equal before the law. Third, it was the first appearance of the Sultanate acting in a legislative manner.<sup>105</sup> In 1847, mixed civil and criminal courts were established.<sup>106</sup> Cases in this court were adjudicated by European and Ottoman judges with rules of evidence and procedure based upon European law. A commercial code was established in 1850 to be administered by newly created tribunals of commerce.<sup>107</sup>

The promulgation of this Code was the first formal recognition in Turkey of a system of law and of judicature independent of the *ulema*, dealing with matters outside the scope of the *Şeriat*. . . . [This was a] radical departure from previous Ottoman practice, and the harbinger of a complete legal and social revolution.<sup>108</sup>

Between 1858 and 1863 new land, penal, commercial, and maritime codes were established, all of which were based on the French model.<sup>109</sup>

These codes, with the *Mejelle* as the most important, adopted by the Ottomans highlighted a serious problem emerging within the Empire and its complicated, tumultuous relationship with the West. In particular, a bifurcated legal system developed; one applying the substantive provisions of the Western codes, the other applying the traditional *Şeriat*.<sup>110</sup> Exacerbating this dual system was the inability of courts and lawyers to apply these provisions. *Şeriat* courts were neither trained, nor had the authority to apply these Western codes.<sup>111</sup> Lawyers also had difficulties representing clients in this time due to their training. Western-trained lawyers could not apply the disparate, Arabic texts that *Şeriat* courts applied.<sup>112</sup> Arabic courts were unfamiliar with Western legal concepts upon which these newly promulgated legal codes were based.<sup>113</sup>

Promulgation of these laws did not sit well with the autocratic power of the Sultan that Mahmud II had gathered. The law required equal treatment of all Ottomans, but the Sultan failed to enforce impartially these laws. Thus, the grand legal reformation was meaningless to most Ottoman citizens, as the men entrusted with enforcement were inept and half-hearted.<sup>114</sup> Also, no group or force existed "among the different classes of the population which might, in its own interest, have impelled their effective application."<sup>115</sup>

In the 1860s and 1870s, Turkish literary figures, influenced by Western ideals, publishing many works domestically.<sup>116</sup> They were not a unified voice, but they were a key first step to breed popular support for the impending Revolution. Similarly, the press helped change popular opinion on abuses by the autocratic Sultanate.<sup>117</sup> Collectively, writers and journalists authored "an unmistakable liberal critique of government action, and a programme of constitutional reform."<sup>118</sup>

<sup>118</sup> See Lewis, *supra*, at 152.

The Young Turks was one group of writers that would become important in the Revolution. In 1868, it established a paper named *Hürriyet*, meaning "freedom."<sup>119</sup> Traditionally, this term referred only to being free of a master as in the converse of slavery. As testament to the influence of the French Revolution, the term began to connote a political, democratic meaning.<sup>120</sup> This journal was used to advocate their central message: to advocate "a return to the true spirit of early Islam, which recognized the sovereignty of the people and the principle of government by consultation."<sup>121</sup> It must be noted there were two factions within the Young Turk movement. One was nationalistic, wanting to restore the glory of the Ottoman Empire. The other was liberal, preferring a federal state with limited central authority and equality for minorities.<sup>122</sup>

In the 1870s, conditions within the Ottoman Empire deteriorated rapidly:<sup>123</sup>

The army and navy . . . had cost vast sums. The sultan's extravagance and the reckless borrowing of his ministers threw the state finances into chaos. Crop failures brought hardship and discontent; anti-European feeling became general and intense.<sup>124</sup>

To quell the mounting tension, Sultan Abdulhamid II promulgated a Constitution in 1876.<sup>125</sup> The Constitution, however, masqueraded as a step toward democratic reforms. It only further secured the sultan's rule. A legislative assembly was elected in 1877. But, it was merely a "façade of liberal and democratic government."<sup>126</sup> Additionally, the constitution turned out to be a significant setback for the Young Turks. Some of its members abandoned their ideals and took government positions. Most of those who did not begin working for the government either were imprisoned or banished.<sup>127</sup>

Distrust among Turkish university students grew. The first opposition group was formed in 1889 by four medical students. Outside the Ottoman Empire, opposition groups gained prominence. By 1906, opposition in the universities spread to officers in the Ottoman military,<sup>128</sup> but due to the poor financing of the army, a military *coup d'état* was not an option. Upon hearing of the growing opposition, the Sultan summoned two revolutionaries, Enver Bey and Ahmed Niyazi, to Istanbul to "explain the situation and receive a promotion."<sup>129</sup> Both recipients knew the request was a snare, and fled. After executing a fellow revolutionary, dissension spread. The

<sup>129</sup> See Lewis, *supra*, at 207.

masses began forcefully demanding restoration of the Constitution.<sup>130</sup> The sultan capitulated on 23 July 1908.<sup>131</sup>

In October of 1908, Bulgaria's King Ferdinand proclaimed independence from the Ottoman Empire. That same week Crete voted for union with Greece, and Bosnia-Herzegovina joined the Austrian Habsburgs.<sup>132</sup>

Put another way, Bulgarian-financed guerrillas in Macedonia had triggered a revolution among young Turkish officers stationed there, which then fanned throughout the Ottoman Empire; this development, in turn, encouraged Austria-Hungary to annex Bosnia, inflicting on its Serbian population a tyranny so great that a Bosnian Serb would later assassinate the Habsburg Archduke and ignite World War I.<sup>133</sup>

Within Turkey, Ottoman disintegration abroad enraged and emboldened the Young Turks against then-Sultan Abdul Hamid, who was forced into exile in April 1909.

At this point the nationalist Young Turks gained control of the government under the party name of the Committee of Union and Progress (CUP). Amid the instability of the time, CUP formed an unlikely alliance with Bulgaria, Serbia and Greece. In October 1912, this alliance declared war on the Ottoman Empire.<sup>134</sup> On 17 October as the Balkan armies approached Istanbul, Enver Bey led a group of ultra-nationalists and killed two of the top CUP officials.<sup>135</sup> At that point Turkey fell into the harshest of military dictatorships, culminating in the genocide of 1.5 million Armenians in 1915.<sup>136</sup> Professor Lewis summarizes the disappointment of the Turkish Revolution:

The high hopes of the Revolution were swiftly disappointed, and the orderly progress of constitutional government was ended in the wretched cycle of plot and counterplot, repression and sedition, tyranny, humiliation, and defeat.<sup>137</sup>

In 1914, the Ottoman Empire officially entered the First World War as an ally of Imperial Germany and the Austro-Hungarian Empire. That alliance proved catastrophic for the Ottoman Empire. A few years later, in 1918, the Armistice agreement was officially signed, marking the final external defeat for the former-glorious Empire.<sup>138</sup>

## § 10.05 ATATÜRK AND BIRTH OF MODERN TURKISH REPUBLIC (1923 A.D.)

With a sense of assured defeat, the Turks allowed the victorious Allied forces (specifically those from the United Kingdom and France) to occupy Istanbul in November 1918.<sup>139</sup> The Ottoman Empire lay dormant until provoked by a Greek army incursion on 15 May 1919.<sup>140</sup> The intention of the Greeks was to annex Western Anatolia, and thereby control both shores of the Aegean. On 19 May 1919, Mustafa Kemal landed at Samsun and immediately organized an army against the Greeks.<sup>141</sup> The Treaty of Sevres was signed on 10 August 1920 by the Sultan that fled just prior to the Allied incursion two years prior.<sup>142</sup> This Treaty, however, never was implemented.

As the defunct Sultan Vahideddin was signing it, a Turkish state was emerging in Anatolia.<sup>143</sup> Kemal called for elections to establish a parliament under the Ottoman Constitution, and it commenced on 12 January 1920.<sup>144</sup> The last act of this parliament was to demand territorial integrity and Turkish national independence.<sup>145</sup> Kemal led the formation of the new Grand National Assembly, and with it the nation of Turkey.<sup>146</sup>

Kemal, appropriately called "Atatürk" (translated literally to mean "Father Turk") led this new Republic. However, Atatürk and Turkey vowed not to forget their long, tumultuous history as Ottomans. Atatürk himself said:

The Ottoman Empire has disappeared into history. A new Turkey has not been born. The countries may differ but civilization is one and the same. . . . The decline of the Ottoman Empire started on the day when, very proud of its triumphs over the West, it cut its ties with the European nations. This was a mistake which we will not repeat.<sup>147</sup>

The words of Atatürk proved prophetic, as modern Turkey struggles not only for greater understanding and acceptance in the non-Muslim west, but in particular for membership in the European Union (EU).

§ 10.06 SALIENT DEVELOPMENTS IN *SHARĪʿA*[A] Organization of Political Units on Religious Lines and Jurisdiction of Islamic Judges (*Qādis*)

Ottoman rulers organized the Empire into administrative units on religious lines, much like the organization of the Catholic world when the Vatican controlled religious and political matters. The basic unit for civil government was the *kada*. A *kada* was a district in which a particular *qādi* had jurisdiction. In that jurisdiction, the *qādi* was both the principle judge, and the supervisor of public morals.

The local police chief, the “*subashi*,” was answerable to the *qādi*. The supervisor of the marketplace (home of business and commerce) was the “*muh̄tasib*.” Like the *subashi*, the *muh̄tasib* was answerable to the *qādi*. Ottoman rulers ensured the *qādis* and religious scholars were trained, and organized them into a professional hierarchy.

[B] 1499 Ottoman Law Book (*Kanun*)• History of the *Kanun*

Several important legal developments took place during the rule of Bayezid II, who ruled from 1481 to 1512 A.D. While the *Ṣeriat* had been applied since at least the 15th century, *Kanun* was also an important, secular source of law.<sup>148</sup> As the administrative law of the Ottoman Empire, the “*Kanun*” consisted of legislative pronouncements, regulations, directives, and orders of the Sultans.

Primarily, the *Kanun* served as a gap-filler, typically concerning Criminal Law, land tenure and taxation.<sup>149</sup> The origin and legitimacy of *Kanun* likely predated the Ottoman Empire. Bayezid II contributed to its development by directing an official to compile a bound volume of all such laws, culminating in the Law Book of 1499.<sup>150</sup> Bayezid II, however, provided more than a recitation of customary law. In this Law Book the *Kanun* was developed to clarify the relationship between the Emperor’s tax-paying subjection and those soldiers and government officials who did not have to pay taxes.<sup>151</sup>

Following Bayezid II, two of the Ottoman Sultans, Selim I (1512–1520) and Suleyman I (1520–1560), as well as their successors, were keen to be pious rulers.<sup>152</sup> Accordingly, they based the administration of justice on the *Sharīʿa*. During the reign of Suleyman I, in the mid 1500s, the *Kanun* was brought into harmony with the *Sharīʿa*. To illustrate their piety, in producing and applying the *Kanun*, a Sultan typically referred to Islamic Law, and made use of its concepts.

<sup>148</sup> See IMBER, *supra*, at 244.

<sup>152</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 89–90 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter SCHACHT.]

• The Grand *Mufti*; Abul-Suʿud and Consistency between *Kanun* and *Sharīʿa*

The Grand *Mufti*, who was the *mufti* of Istanbul, sat at the top of the professional hierarchy, and was called the “*Shaykh al-Islam*.” That is to say, the Grand *Mufti* was a high-ranking official both in the religious and governmental order. The essential obligations of the Grand *Mufti* were to (1) ensure compliance with the *Sharīʿa* by the government in its prospective actions, and (2) supervising the *qādis*.

One Grand *Mufti*, Abul-Suʿud, was especially influential.<sup>153</sup> Abul-Suʿud was the Grand *Mufti* from 1545–1574 under the regime of Suleyman I. With the support of Suleyman I, Abul-Suʿud brought consistency between the *Kanun* and *Sharīʿa*. For example, he amended the Property Law of the European provinces of the Ottoman Empire to ensure that law implemented the principles of the *Sharīʿa*.

Abul-Suʿud also harmonized operation of the *qādis* and *Sharīʿa*. He did not accept unconditionally the idea that the authority of a *qādi* came solely by virtue of appointment by a Sultan, and consequently that a *qādi* must follow the orders of a Sultan. Rather, he narrowed the subject matter jurisdiction of the *qādis*, and simultaneously instructed that *qādis* must apply the doctrines accepted by the *Hanafi* School.

• *Siyāsa* Still Existed — Example of *Taʿzīr* Punishments

Despite these efforts to ensure consistency between the *Kanun* and *Sharīʿa*, there were instances when the *Kanun* did more than supplement Sacred Law. One example where it exceeded that Law is in the field of Penal Law. The Sultans assumed that the *ḥadd* (limit) punishment (those associated with offences against God (Allāh), known as “*ḥaqq Allāh*” crimes) were obsolete.<sup>154</sup> So, they replaced them with *taʿzīr* punishments.

A *taʿzīr* (discretionary) punishment is one not specified in the Qurʾān, but rather decided upon by a *qādi*. Examples include beatings and fines, and the judge might choose to base the severity of the punishment on aggravating or mitigating circumstances, such as the socioeconomic status of the defendant found guilty. Clearly, calling for the use of *taʿzīr* punishments is an example of *siyāsa* — the policy of a Sultan.

For now, it is worth noting that in the Ottoman Empire, at least, many of these punishments were (by the standards of today) inhumane.<sup>155</sup> Emasculation could be a punishment for seducers, hanging for arsonists, burglars, and certain types of thieves, amputation of the hands could be a punishment for forgers (and, like the *ḥadd* punishment, for certain thieves). The Sultans also permitted torture in cases of theft or receipt of stolen goods, if the only available evidence was circumstantial.

### [C] 1877 Ottoman Civil Code (*Mejelle*)

More significant than previous codes, the first section of the *Mejelle*, the Turkish Civil Code, was completed in 1870.<sup>156</sup> In 1876, the entire Civil Code was finished. Then, the entire *Mejelle* was submitted to the Sultan for approval, which he gave:

According to Muslim doctrines, in a controversial matter the opinion held by the Sultan is the one to be obeyed; therefore, if the opinions expressed in this book are found acceptable it should be submitted to the Sultan for approval.<sup>157</sup>

Highlighting the Islamic character of the *Mejelle*, the drafting committee considered this approval necessary.

Ahmed Cevdet Pasha is credited, aided significantly by the drafting committee, with authoring the *Mejelle*. Pasha was a highly revered Islamic legal scholar who was appointed Divan of Judicial Ordinances in 1868.<sup>158</sup> This appointment was a disappointment to Pasha. Although he had previously been a notable Tanzimat reformer, he had also been a high-ranking cleric.<sup>159</sup> Pasha had hoped to be appointed to the highly revered, religious position of *sheikhulislam*.<sup>160</sup> This personal setback, however, did not curtail his ambition or success at continued legal reform of the Ottoman Empire.

The immediate concern that Pasha and his committee had to consider was the extent to which Western ideals were to shape the *Mejelle*. "Reform as [Pasha] understood it was a process that enabled Islam to incorporate western scientific and technical concepts."<sup>161</sup> Earlier codes adopted by the Ottoman Empire had heavily incorporated both the form and substance of the corresponding French codes. In stark contrast from these previous codes, the *Mejelle* only incorporated the form of the French Civil Code, allowing the *Şariat* to determine its substance.<sup>162</sup>

Determining substance was no easy task. The *Mejelle* itself editorializes the vastness of such a project by describing Islamic law as "an ocean without shores."<sup>163</sup> Professor Finkel elaborates that "the corpus [of Islamic law] that had served the Ottomans for so long had come to seem amorphous and unfathomable, and out of keeping with the spirit of modernization blowing through government circles."<sup>164</sup> To curtail what had become an amorphous, unpredictable *Şariat*, the *Mejelle* codified *Hanafi* School jurisprudence.<sup>165</sup> The implication was to eliminate the ability of

Muslim Ottomans to act, or for individual judges to rule, on individual interpretation of the Qur'ān.<sup>166</sup>

However, [the *Mejelle*] was not a code in the strict European sense, because it was not a complete and exclusive statement of the law as it existed at the time of codification, but rather a nonexclusive digest of existing rules of Islamic law.<sup>167</sup>

The *Mejelle*, however, is reminiscent of Western codes insofar as it applied to all Ottoman subjects regardless of their individual religion.<sup>168</sup> This universal applicability was a departure from previous, religious-based Ottoman laws.

The *Mejelle* itself spans 1,851 total articles contained in an introductory section and sixteen books, each dealing with a separate subject. The subjects concern contracts, property, torts, wrongful appropriation, and procedure.<sup>169</sup> The introductory section contains general principles and canons of interpretation to all substantive provisions in the sixteen books. For instance, Articles 3 and 4 state that if there is a dispute in which there is a written agreement, the intent of the parties, not the text of the agreement, prevails if in conflict.<sup>170</sup> Additionally, the *Mejelle* ensures the primacy of morality in Article 30 when it states that "[r]epelling an evil is preferable to securing a benefit."<sup>171</sup> Thus, a court could rule in a matter contrary to what a substantive provision dictated if ruling in such a manner was an affront to morality.

The legitimacy of custom as a source of law was codified in the introductory section of the *Mejelle* in Articles 36 and 45.<sup>172</sup> Intending to enhance the adaptability of the *Mejelle*, Articles 39 and 40 allow custom to modify the meaning of law as time passes.<sup>173</sup> This stated fluidity, however, is substantially mitigated, if not altogether halted, in practice. Because it is the codification of *Hanafi* jurisprudence, the *Mejelle* is restricted to the unbending principles of Islam.<sup>174</sup>

Generally, the *Mejelle* intended to comprehensively regulate all matters that may affect the language, conclusion, and enforcement of a contract.<sup>175</sup> Article 449 states, for instance, in a contract for lease, "the subject matter . . . must be specified."<sup>176</sup> If a contract does fail to do so, it is altogether void. The rationale for this harsh conclusion is that "no judicial interpretation or inquiry into the intent of the parties is possible" in such circumstance.<sup>177</sup> Additionally, the *Mejelle* seriously restricts the

<sup>156</sup> See LEWIS, *supra*, at 122.

<sup>157</sup> See ONAR, *supra*, at 295.

<sup>177</sup> See ONAR, *supra*, at 300.

freedom to contract, by listing the specific types of contracts that may be concluded.<sup>178</sup>

In 1888, Pasha and the drafting committee were finally dissolved.<sup>179</sup> In this interim period, a code of civil procedure had been completed. Although the *Mejelle* remained in force until 1926 in Turkey, all legal reforms came to an abrupt halt due to increasing autocracy and repression, compromising the search for justice.<sup>180</sup>

### [D] 19th Century Legal Reforms Contrary to *Shari'a*

Incongruities and even open conflict between legal developments and the *Shari'a* emerged by the 19th century Sultan Mahmud II (who ruled from 1808 to 1839) and his successor, 'Abdulmejid (who ruled from 1839 to 1861), sought to modernize the Ottoman legal system. For the first time Muslim and non-Muslim persons were called by the same term — “subjects.”<sup>181</sup> Inspired by European examples, legislation such as the Ottoman Code of Commerce was passed (enacted in 1850). Substantively, the Sultans took more and more out of the “orbit of Islamic law.”<sup>182</sup>

In sum, the reforms of the late Ottoman Sultans were not always viewed as consistent with the *Shari'a*, and indeed they were not. That is not to suggest the Sultans abandoned the *Shari'a*. They did not:

Ottoman Turkey is the only Islamic country to have tried to codify and to have enacted as a law of the state parts of the religious law of Islam. This is the *Mejelle* . . . , which covers the law of contracts and obligations and of civil procedure in the form of articles, and was promulgated as the Ottoman Civil Code in 1877. . . . [I]ts purpose was to provide the recently created (secular) tribunals with an authoritative statement of the doctrine of Islamic law and to obviate (without forbidding it) recourse to the works of Islamic jurisprudence which had proved difficult and impracticable.<sup>183</sup>

In 1926, 8 years after the First World War and demise of the Ottoman Empire, the Turkish government eliminated the *Mejelle*, and the *Shari'a*, as sources of Turkish law.

Still, the achievement of the *Mejelle* — codifying the *Shari'a* for application in the contemporary world — was remarkable, and has not been equaled since:

Strict Islamic law is by its nature not suitable for codification because it possesses authoritative character only in so far as it is taught in the traditional way by one of the recognized schools. The experiment of the *Mejelle* was undertaken under the influence of European ideas, and it is, strictly speaking, not an Islamic but a secular code. It was not intended for the tribunals of the *qadis*, and was in fact not used in them as long as they

<sup>178</sup> See ÖNAR, *supra*, at 299.

<sup>179</sup> See LEWIS, *supra*, at 184.

<sup>180</sup> See LEWIS, *supra*, at 184.

<sup>181</sup> See SCHACHT, *supra*, at 92.

<sup>182</sup> See SCHACHT, *supra*, at 92.

<sup>183</sup> See SCHACHT, *supra*, at 92.

existed in Turkey, and it contains certain modifications of the strict doctrine of Islamic law, particularly in the rules concerning evidence. [Articles 1684 ff. of the *Mejelle* retained all of the Qur'anic qualifications for a witness, except that the person be a Muslim.] Nevertheless, the *Mejelle* was one of the official codes of the Ottoman Empire; it remained in force (subject to subsequent legislation) in the territories, and later states, which were detached from the Ottoman Empire after 1918, where it was applied as the “civil law” by modern secular tribunals, until it was replaced by new civil codes in Lebanon (1932), Syria (1949), and Iraq (1953), and it is still the basis of the “civil law” of Cyprus (detached already in 1878), Israel, and Jordan.<sup>184</sup>

In other words, the *Mejelle* was a remarkable effort at a very difficult task, and its influence far outlived the Ottoman Empire.

### § 10.07 LAW OF PERSONAL STATUS, OTTOMAN MILLET (DENOMINATION) SYSTEM, AND ISRAEL AND PALESTINE

The lingering influence of the Ottoman Empire is evident in part through the Law of Personal Status in the Middle East.<sup>185</sup> The basis of Personal Status Law in that region is known as the “*Millet*” system, which comes from the Ottoman Empire. Loosely translated, the word “*Millet*” means “denomination.” It is a Turkish word, derived from the Arabic term “*millah*,” which literally means “nation.”

The key point about the term is it has nothing to do with what a person actually believes in, *i.e.*, whether the person actually believes in Islam, Christianity, or Judaism. Rather, “*Millet*” refers to the religion and community (sometimes called a confessional community) into which a person is born and dies. For example, a person baptized Catholic is part of the Catholic community, and dies as part of that community, regardless of the deep-seated belief of that person during his or her life. Likewise, a person born to a Jewish mother is part of the Jewish community, even if that person subsequently converts to another faith. The same is true in respect of Islam. Manifestly, then, “*Millet*” concerns categories of religious communities over which a person has little control.

Why were wooden categories established? The Ottoman Sultans gave autonomy to each religious community over matters of Personal Status. Such matters include:

- Marriage
- Divorce
- Child custody
- Inheritance

<sup>184</sup> See SCHACHT, *supra*, at 92–93. See also *id.* fn. 1 at 93 (on witness qualifications).

<sup>185</sup> This discussion draws on a lecture by Jonathan Kattah, Esq., *Personal Status Law*, delivered at the University of Kansas School of Law on 23 October 2006.

- Education (to a certain level)

The Sultans had a vast political and commercial empire to run. They did not want to deal with Personal Status matters. Conversely, the heads of the respective religious communities were keenly interested in preserving their autonomy, and that of their followers, from meddling by an Islamic Sultan sitting in Istanbul. Those leaders were the Bishop for Catholic Christians, Patriarch for Orthodox Christians, Rabbi for Jews, and Imām for Muslims. Thus, a pragmatic deal emerged: the leaders of the religious communities could maintain their preserve over matters of Personal Status, but they had to accept that they were accountable to the Ottoman Sultan.

Accordingly, Catholic and Orthodox Christians remained free to adjudicate disputes on Personal Status topics in Ecclesiastical (i.e., Church) courts. (To this day, the Ecclesiastical courts recognize 12 denominations as "Christian.") Jews remained free to adjudicate these matters in Rabbinical courts. Muslims were able to deal with them in *Shari'a* courts. In effect, the Ottoman Sultan sub-contracted the adjudication of Personal Status issues to religious courts. All four religious faiths could rely on the Ottoman ruler to enforce decisions of the respective courts. After all, the religious leaders accepted the sovereignty of the Ottoman Sultan, who did not want to sub-contract enforcement of law, even of religious law, as doing so would undermine his political and legal authority.

In its day, the *Millet* System was progressive. It was a legal manifestation of religious pluralism in a Muslim majority jurisdiction, and it safeguarded the rights of religious minorities. The System continues to the present day in parts of the Middle East, most notably, Israel and Palestine. But, the *Millet* system is challenged by ideas sourced in the European Enlightenment. Such ideas include:

- Separation of church and state (or synagogue and state, or mosque and state), meaning that religion belongs to God, but the homeland belongs to all persons living in it.
- Secularism, that is, the trend to remove religion from the public sphere, and confine it to individuals as a private matter.
- Social welfare systems, providing assistance to women and children and safeguarding their rights, which are a legitimate function of the state, not the exclusive province of a religious community.

Moreover, the *Millet* system is under pressure from challenges posed by the recent wave of globalization. Religious ideas travel across communities via information technologies, people leave one faith and join another, and men and women interact across communal lines, and enter into inter-faith marriages. These trends mean the traditional cohesiveness of religious communities has broken down. Put directly, people do not live in small, closed religious lines — bubbles, as it were — anymore.

The *Millet* System in Israel owes its origin in part to concessions granted by David Ben-Gurion (1886-1973), the founding Prime Minister (1949-1954, 1955-1963), to Orthodox Jews. Many Orthodox Jews at the time were anti-Zionist, refused to fly the Israeli flag, and rejected Israeli currency. ("Zionism" was a political movement to re-establish, and now to maintain, a Jewish homeland in the historic area of the

Jewish people, Israel.) To win their support for the fledgling Jewish state, Prime Minister Ben-Gurion agreed to a three-part deal:

(1) *Orthodox Monopoly* —

The Orthodox Jewish community obtained a monopoly on Personal Status affairs of Jews in Israel and Palestine. That is, the Orthodox leaders were given complete control over such matters. Members of the other two broad denominations in Judaism, Conservative and Reformed, were not part of this overall bargain. Consequently, Conservative and Reformed Jews were not given any such control. (Of course, the latter two groups contest this arrangement.) Thus, for example, they could define qualifications for who counts as a "Jew."

(2) *Military Exemption* —

Any male who studied the Torah, and any female who claimed to be religious, was given an exemption from service in the Israeli Defense Force (IDF).

(3) *Special Funding* —

Jewish religious schools, charities, and orphanages belonging to the Orthodox community were provided with special funding.

In return for these three concessions from Prime Minister Ben-Gurion, the Orthodox community dropped its anti-Zionism, and agreed that the Israeli Knesset could speak for it. This bargain remains in place, including the right of the Orthodox leaders to decide "Who is a Jew?" That is true even though many Israeli Jews describe themselves as secular, and many American Jews are Reformed.

Recently, Israeli courts have endeavored to erode, slowly, the authority of Orthodox courts. Likewise, they gradually have encroached on the authority of Christian and *Shari'a* courts. Generally, the prevailing legal philosophy in Israel is positivism. Civil courts look to the black-letter law as passed by the Knesset, though some judges try to incorporate references to the Talmud in their decisions. As a result, on Personal Status matters such as alimony and child support in the event of a divorce, conflicts arise. There is at times a race to the courts, with litigants seeking to get to an Israeli civil court, or a religious court, first depending on what suits their interests. Yet, the religious courts still have significant jurisdiction, and there is no such thing as a "civil" marriage or a "civil" divorce in Israel, Palestine, or Jordan. Likewise, the Ecclesiastical courts do not recognize the concept of a will, in the ordinary civil sense of the term, and require a decedent to comply with relevant religious-based inheritance rules.

Under the *Millet* System, as it operated during the Ottoman Empire and to the present day, the religious courts respect the jurisdiction and decisions of one another. They do so according to a "Principle of Amity." For example, a marriage is valid where it is celebrated, and respected by the other religious tribunals. Likewise, a divorce is valid where it occurs, and accepted by the other courts. An interesting illustration of the Amity Principle arose with respect to a former Chief Judge of the Israeli Supreme Court, Chaim Cohen. He wanted to re-marry a divorcee. His Jewish last name, "Cohen," marked him as a member of the Jewish

religious community, specifically a member of a group of the Chief Priests and Rabbis. As such, the Orthodox Jewish Rabbinical court had jurisdiction over his re-marriage request. That court denied his request, on the ground that an Orthodox Jew cannot remarry a divorced woman. Mr. Cohen got around the ruling by remarrying in New York, and then invoking the Principle of Amity, in an international sense, to ensure Israeli recognition of his American marriage.

In Israel, the importance of the Orthodox monopoly control over defining “Who is a Jew?” cannot be over-stated. First, if a person is non-Jewish, and seeks to convert to Judaism, that person must do so under Orthodox, not Conservative or Reformed, Jewish Law. Second, that control operates as a gatekeeper to obtain items associated with normal, everyday life. Whether a person obtains a mortgage, national insurance, or preference for a job, a visa depends on the status of the person as a “Jew.” Third, the Orthodox control has deleterious unintended consequences. Certain groups, such as “Jews for Jesus,” fight a battle to prove they really are “Jews,” and ironically, at times such groups stake out positions that are more stridently anti-Arab or anti-Palestine than right-wing Israeli groups, simply to prove they are “Jewish.”

Arguably, the *Millet* System, and the arrangement under it with the Orthodox Jewish community in Israel, is incongruous with demographic realities in modern-day Israel. Though no recent population censuses have been taken, it is generally accepted that about 20 percent of the Israeli population is Arab, the vast majority of which is Muslim, with a small number of Christians. Israel does not have a Constitution, but rather a small number of “Basic Laws.” These Laws have a superior status, i.e., a Constitution-like status, and have to be passed by 80 percent of the Knesset (not just the usual 50 percent plus majority). Many Israelis prefer not to have a formal Constitution, because negotiating and drafting one would require directly confronting two fundamental issues:

- (1) Arab and Jews: Should they clearly and openly be equal citizens, as would be expected in a democracy?
- (2) Secular and Religious Persons: Should governance, including on matters like Personal Status, be secular, with religious institutions separated formally from the state?

These two questions are existential ones for Israel. That is, they go to the heart of what modern-day Israel should be.

Should Israel be a religious state, namely, a special Jewish homeland, the only one of which exists in the world, and thus retain arrangements like the *Millet* System? Or, should it be a secular democracy, and do away with such arrangements and adopt American- or European-style mechanisms of governance? In respect of the *Millet* System, does its very continuance, by slotting Jews, Christians, and Muslims into religious communities whether they like it or not, impede effect dealing with these existential questions?

## Chapter 11

### MOGHUL INDIAN EMPIRE (1504–1857 A.D.)

There is neither Hindu nor Mussulman, so whose path shall I follow? I shall follow God's path. God is neither Hindu nor Mussulman, and the path which I follow is God's.

Guru Nanak (1469–1539, 1st of the 10 Sikh Gurus and founder of Sikhism, following an experience of enlightenment at age 30, quoted in W. OWEN COLE & PIARA SINGH GAMBHI, *THE SIKHS — THEIR RELIGIOUS PRACTICES AND BELIEFS* (London, England: Routledge, 1978)

#### SYNOPSIS

- § 11.01 ARRIVAL OF MUSLIMS ON INDIAN SUBCONTINENT AND ORIGINS OF MOGHUL RULE
- § 11.02 ACHIEVEMENTS OF GREAT MOGHUL EMPERORS
- § 11.03 BRITISH RAJ
- § 11.04 DEVELOPMENT OF ANGLO-MUHAMMADAN LAW
- § 11.05 EVOLUTION OF ANGLO-MUHAMMADAN LAW
- § 11.06 ENDURING IMPACT OF ANGLO-MUHAMMADAN LAW
- § 11.01 ARRIVAL OF MUSLIMS ON INDIAN SUBCONTINENT AND ORIGINS OF MOGHUL RULE

Although, the Indian subcontinent has long been ruled by Hindus, it has been vulnerable to incursion by outside forces. For instance, Alexander the Great (reign 356–323 B.C.) conquered northern India in 326 B.C., followed by Buddhist Emperor Ashoka (304–232 B.C.), of the Indian *Maurya* Dynasty, 50 years later.<sup>1</sup> After the death of Ashoka, the *Maurya* Dynasty fractured and a variety of regional Hindu rulers governed the Subcontinent until 712 A.D., when the first Muslim colonialists arrived.<sup>2</sup> Turkish and Afghan invaders conquered portions of Northern India, with little enduring impact. Despite conquering parts of India, Muslim sultans did not

<sup>1</sup> DIANA PRESTON & MICHAEL PRESTON, *TAJ MAHAL: PASSION AND GENIUS AT THE HEART OF THE MOGHUL EMPIRE* 16 (2007). [Hereinafter, PRESTON.]

<sup>2</sup> Asaf A.A. Fyzee, *Muhammadan Law in India*, 5 *COMPARATIVE STUDIES IN SOCIETY AND HISTORY* 401, 401 (July 1963). [Hereinafter, Fyzee, *Muhammadan*.]

successfully implement the *Shari'a* until 1206.<sup>3</sup> Prior to that point, sultans choose to apply the *Shari'a* regardless of the religion of persons upon whom it was enforced.<sup>4</sup>

In 1398, Timur (1336–1405) captured Delhi, pillaging the city and leaving it a pile of embers.<sup>5</sup> However, having no interest in governing Delhi, Timur returned to Samarkand, leaving the *Sayyid* Dynasty to rule.<sup>6</sup> *Sayyid* rule quickly collapsed under pressure from multiple local kingdoms, and the unitary control Timur gained was lost.

The Moghul Empire rose out of these local kingdoms. Ferghana, a small one located on the present-day India-Pakistan border,<sup>7</sup> was once controlled by both Genghis Khan and Timur. As a direct descendant of both rulers, Babur (1483–1530), founder of the Empire, took the throne at age 12.<sup>8</sup> Table 11-1 lists the Moghul Emperors and their significant achievements. The first major colonial conquest of Moghul rule occurred when Babur invaded Kabul in 1504.<sup>9</sup> Just over twenty years later, Babur invaded Hindustan, eventually capturing Delhi, its capital.<sup>10</sup> Although significantly outnumbered, the Moghuls won with superior weaponry acquired from the Ottomans. Shortly before his death in 1530, Babur clearly named his son, Humayan (1508–1556), as his successor.<sup>11</sup>

## § 11.02 ACHIEVEMENTS OF GREAT MOGHUL EMPERORS

Succession was not straightforward. Within 4 hours of the death of Babur, Sher Shah, the local competing ruler of Hindustan, ejected Humayan.<sup>12</sup> Humayan returned to Lahore, but was forced to leave as Sher Shah invaded it shortly thereafter. Humayan fled, finding a welcome reception in Persia in 1544 A.D.<sup>13</sup> In return for safe quarters, the Persian *Safavid* Emperor demanded Humayan convert from *Sunni* to *Shi'i*.<sup>14</sup> Humayan acquiesced, but likely only nominally. In return for his conversion, Humayan received a Persian army, with which he captured Kandahar and Kabul in 1554.<sup>15</sup> Each conquered city was ruled by a brother of Humayan. Akbar, the son of Humayan was being fostered nearby. Upon his triumphal return, Humayan was reunited Akbar. Humayan retook Hindustan in 1555, preying on internal instability, with a multi-faceted siege and the aid of his

Persian army. Soon after the victory, Humayan died, leaving the Empire to Akbar.

Shortly after acceding as Emperor, Akbar laid siege to Chitor, a mountain fortress held by a *Rajput* ruler.<sup>16</sup> Once in control, he ordered all people in the fortress be put to death to prevent distress messages going out to other *Rajput* leaders. “By 1570 all the major *Rajput* princes but one . . . had acknowledged Mogul suzerainty.”<sup>17</sup> But this did not satisfy Akbar’s desires to expand. In 1573, Akbar captured Gujarat, a major trading hub with Arabia.<sup>18</sup> Additionally, he extended Moghul rule into substantial portions of present-day Bangladesh, Afghanistan and Pakistan, including Kashmir.<sup>19</sup> With these territorial gains, Akbar increased the population under Moghul control to 100 million.<sup>20</sup>

Akbar realized his power would not hold for long if he only exerted control through military means. As a result, Akbar married a number of *Rajput* princesses,<sup>21</sup> banned the desecration of Hindu temples,<sup>22</sup> and forbid local Moghul officials from charging Hindus a pilgrimage tax on trips to the holy site of Mathura.<sup>23</sup> Additionally, Akbar banned *jizyah*, a poll tax on “infidels” prescribed in the Qur’ān.<sup>24</sup>

Although these measures were imposed as a method of consolidating and increasing authority, they were also motivated by his personal beliefs regarding religious tolerance. In the 1,000th year of the Muslim *Hijra* calendar, Akbar officially recognized individual freedom by issuing an edict commanding tolerance and prohibiting forced conversions.<sup>25</sup> Showcasing the mystical facets of his personal beliefs, Akbar even attempted to found his own religion (a hybrid of Islamic and Hindu thought, and astrology),<sup>26</sup> appointing himself as this religion’s only conduit with the divine.<sup>27</sup>

Table 11-1:  
Moghul Emperors

Name	Lifespan (A.D.)	Years of Reign (A.D.)	Key Events of Reign
Babur	1483-1531	1526-1530	Founder of the Moghul Empire. Captured Hindustan, including its capital, Delhi.
Humayan	1508-1556	1530-1556	Lost all territory upon access- sion to throne. Regained all lost territory, in- cluding Delhi, through use of Persian Army given in exchange for his nominal conversion to <i>Shi'ism</i> .
Akbar	1542-1605	1556-1605	Vastly expanded the territorial reach of the Moghul Empire. Commanded religious tolerance and non-discrimination, espe- cially by Muslims against Hin- dus.
Jahangir (Salim)	1569-1627	1605-1627	Allowed British East India Company to set up factories in exchange for passage of Mus- lims to Mecca. As a result of his addition to opium and alcohol, delegated all ruling functions to members of his family.
Shah Jahan	1592-1666	1627-1658	Tried to regain the prestige of the Moghul Empire through constructing grand buildings, including the Taj Mahal. Became increasingly intolerant of non-Muslims later in life.
Aurangzeb	1618-1707	1658-1707	Intolerant of non-Muslims, es- pecially Hindus and Sikhs. Spent last portion of reign at- tempting to conquer regional kingdoms on the Deccan plateau.

Following his death in 1605, Akbar was succeeded by his son, Salim (1569-1627). Salim took the name "Jahangir," which literally means "Seizer of the World."<sup>28</sup> By 1608, European visitors frequented the Moghul Empire. The Portuguese established a naval base and centralized trading activities in Goa. The British did likewise in Surat. Given British naval superiority, Jahangir used English ships to secure passage for pilgrims to Mecca. In return, he allowed the British East India

<sup>28</sup> See PRESTON, *supra*, at 53.

Company to set up small factories.<sup>29</sup>

By 1616, Jahangir was so addicted to opium and alcohol he effectively ceded all governing control to his wife, Sur, and sons,<sup>30</sup> resulting in premature succession contests between each child to succeed Jahangir. Eventually, Shah Jahan (1592-1666), one son with great military responsibilities, rebelled against his father. Jahangir defeated his son in battle, forcing Shah Jahan and his wife, Mumtaz, to flee.<sup>31</sup> Through this roving period, Shah Jahan aligned himself with other rulers, some of whom acknowledged Moghul suzerainty, and allowed him to take the throne upon Jahangir's death in 1627.

The rule of Shah Jahan is notable for the use of architecture to reinforce his status as Emperor. He constructed buildings "to distinguish him[self] from his predecessors and inspire awe at his majesty."<sup>32</sup> Today, the Taj Majal, built as a memorial to his wife, Mumtaz, who died in 1631, is his most well-known project. Shah Jahan, similar to Louis XIV of France, conducted his reign in the eyes of the public, never allowing his subjects to forget that he was their emperor.<sup>33</sup>

Shah Jahan became increasingly intolerant of other religions after his wife, Mumtaz, died. This change may be attributed to the loss of her tempering influence, but it also was fueled by rebellions within the Empire. Shah Jahan banned construction of new Hindu temples.<sup>34</sup> He ordered an attack on a Portuguese Christian trading settlement near present-day Calcutta, including the explicit instruction to destroy all Christian churches.<sup>35</sup> This harsh, intolerant view of other religions was adopted by his son, Aurangzeb.

Delegating military authority to Aurangzeb and his three other sons, Shah Jahan set the stage for another violent succession. The capture of Samarkand by the Uzbeks and Kandahar by the Persians accelerated the posturing of his sons.<sup>36</sup> Through a succession of rapidly shifting alliances, Aurangzeb, who had co-opted the army of his brother Murad, confronted his father and eldest brother, Dara. Aurangzeb prevailed, blockading their exit from Agra and diverting the only water source of the city, and declared himself emperor on 21 July 1658.<sup>37</sup> Shah Jahan lived out the rest of his life, a prisoner in the Agra Fort thanks to Aurangzeb. He imprisoned his father in part out of concern Shah Jahan would bankrupt the Moghul Empire by building another Taj Mahal, in black marble, as a mausoleum for himself across the Yamuna River from that of Mumtaz. Till his death in 1666, from his prison chamber he could see in the distance the Taj Mahal.

A strict and rather fanatical *Sunni*, Aurangzeb magnified the discriminatory acts of Shah Jahan against other religions, particularly Hindus. Aurangzeb built mosques at major Hindu pilgrimage sites.<sup>38</sup> Additionally, He reversed the abolition of *jizyah* in 1679, financially penalizing non-believers.<sup>39</sup> Exacerbating tensions with Hindus (and Sikhs), Aurangzeb spent the remainder of his reign attempting to expand his empire into the Deccan, the interior plateau covering a large swath of central and southern India. Although modest territorial gains were made, the cost of these campaigns outstripped the added resources and tax revenue gained financially and socially:

Aurangzeb's treatment of his Hindu subjects in the Deccan, in Rajasthan and elsewhere had also changed the character of Moghul rule. It was no longer the inclusive, tolerant empire bound together by mutual trust and interdependence established by Akbar. Instead the Moghuls were once again, as in the time of Babur, an occupying power.<sup>40</sup>

After Aurangzeb died in 1707, the influence of the Moghul Empire quickly disintegrated. His three surviving sons battled for succession among themselves and against local kingdoms asserting their own power. The chaos culminated in the sack of Delhi in 1739 by the Persians, who snatched the Peacock Throne upon which Moghul Emperors sat.<sup>41</sup>

Although a Moghul Emperor technically ruled until 1862, all that followed Aurangzeb are of small consequence. The reign of these emperors is marked by significant concessions made to the British or local rulers. More often than not, the legacy of these emperors was mired in ineptitude, and strong questions about legitimacy.

### § 11.03 BRITISH RAJ

From the initial charter of the British East India Company in 1600,<sup>42</sup> the British sought, in the words of Sir Thomas Roe, to “seek profit in quiet trade.”<sup>43</sup> Sir Roe, however, failed to acknowledge the rich diversity and long history on the subcontinent, stating that India was a place of “religions infinite; laws none. In that confusion what can be expected?”<sup>44</sup> His Majesty's grant of the charter, however, was not all that was required; approval by the Moghul emperor was also necessary.

Initially just a trading post, the power to apply British law to resolve disputes was first granted in 1661 by Charles II.<sup>45</sup> This charter restricted the application of

British law to the confines of its factories. This increased power was necessary given the increased demand for Indian products that the East India Company exported. “When English merchants began to buy Indian silks and calicoes and bring them back home, the result was nothing less than a national makeover.”<sup>46</sup>

Until 1698, Moghul approval of the East India Company was forthcoming. At this point, Aurangzeb embargoed all European goods, any violation punishable by arrest.<sup>47</sup> Although this embargo should have had the effect of abruptly ceasing all trading activities of the East India Company, the rapidly waning power of the Moghul Empire gave the embargo few teeth. The British simply continued to operate as they had before.

Instability in the wake of the death of Aurangzeb in 1707, however, forced Britain to increase involvement beyond commercial matters, especially when the French backed a province asserting its independence from Moghul sovereignty. To safeguard its activities, the East India Company began hiring local security personnel, or *sepoys*, the traditional caste of Indian warriors.<sup>48</sup> Although the hiring of *sepoys* was intended to be temporary, it had an important, long-lasting role in Britain's imperial power in India.

Realizing the lack of a regional, governing power, Britain began to assert itself in local conflicts to increase its power. Typically, this was done through aligning itself with one side, in exchange for a promise to expand their trade. Supporting the Moghuls in 1764 in the Battle of Buxar, the East India Company was given the civil administration of Bengal, Bihar and Orissa.<sup>49</sup> In this grant, the British gained tax authority over 20 million people, netting two to three million pounds per year of revenue.<sup>50</sup> This additional revenue eclipsed the amount of money generated from its trade. This development likely focused the British upon the profitable venture of governing in combination with trading.

Despite the increased British meddling in the internal affairs that exceeded its prior mercantilist aims, it was not until the East India Company's charter changed in 1813 that the Episcopal chaplains serving within the “factories” were allowed to evangelize to Indians.<sup>51</sup> In fact, even attempted conversion to Christianity was expressly forbidden in all prior charters. Coupling this newfound religious zeal with a rapidly expanding territory by military conquest, something had to give. In 1857 Hindu and Muslim *sepoys* rebelled. The flashpoint for the rebellion began with a rumor that rifle cartridges, which had to be bitten off to properly load, had been sealed with pork lard or beef tallow — both of which are forbidden to these *sepoys*. Emperor Bahadur Shah, was named the leader of the rebellion, although he had no formative role in the mutiny.<sup>52</sup>

The British quelled the uprising and banished Bahadur Shah to Burma. Through forcible suppression, the British laid claim to governing authority over India, with independent kings or rajas that held 40 percent of the territory acknowledging British suzerainty individually.<sup>53</sup> In 1858 Queen Victoria put an abrupt halt to the exportation of religion and culture into India.<sup>54</sup> Correspondingly, the governing authority of the British changed. The Viceroy now assumed local direction of activities in the subcontinent, rather than the Governor-General, although the previous Governor-General usually became the Viceroy.<sup>55</sup> In 1872, Queen Victoria was formally declared the ruler of India.<sup>56</sup>

Despite the litany of criticism against colonial rule, the British made critical and beneficial contributions. Most notably, these were the Indian form of government (e.g., democracy), highly structured bureaucracy (e.g., the Indian civil service), and education (e.g., the elite schools and universities founded on British models). Furthermore, British investments in the Indian infrastructure had advantages:

By the 1880s the British had invested £270 million in India, not much less than one-fifth of their entire investment overseas. By 1914 the figure had reached £400 million. The British increased the area of irrigated land by a factor of eight, so that by the end of the Raj a quarter of all land was irrigated, compared with just 5 per cent of it under the Mughals. They created an Indian coal industry from scratch which by 1914 produced nearly 16 million tons a year. There were also marked improvements in public health, which increased Indian average life expectancy by eleven years. It was the British who introduced quinine as an anti-malarial prophylactic, carried out public programmes of vaccination against small-pox — often in the face of local resistance — and laboured to improve the urban water supplies that were so often the bearers of cholera and other diseases.<sup>57</sup>

These advantages, however, were not transferred to the majority of India's population.

For instance, Britain's *per capita* gross domestic product (GDP) rose 347 percent between 1757 and 1947, compared to India's rise of 14 percent over the same time span.<sup>58</sup> Despite an abundance of capable Indian entrepreneurs and managers, lucrative contracts were only awarded to British business people. Discrimination in the selection of applicants to the Indian civil service occurred when qualified Indians were denied employment and the jobs were given to lesser-qualified British citizens. This, among other discriminatory acts, led to the formation of the Indian Nationalists. In 1908, the group organized a boycott of all British goods, calling for

<sup>53</sup> See PRESTON, *supra*, at 257.

<sup>58</sup> See FERGUSON, *supra*, at 216.

self-sufficiency (or *swadeshi*).<sup>59</sup> On 30 April 1908, British investigators found large caches of weapons in homes of Bengal's Brahmin elite after a bomb killed two British women in Calcutta.<sup>60</sup> In response, Britain sought to disenfranchise the Nationalists by moving the capital of Bengal from Calcutta to Delhi, the former Moghul capital city.

In spite of these hardships, the Indian *sepoys* continued to make significant contributions during the British campaign in the First World War. In return, the Secretary of State for India, Edwin Montagu, vaguely promised "the progressive realization of responsible government."<sup>61</sup> However, this commitment rang hollow as the British extended martial law restrictions on political freedoms for an additional three years after the end of the war under the *Rowlatt Acts*.

This situation precipitated the rise Mahatma Gandhi to prominence. Calling on his fellow Indians to harness their soul force for truth and firmness, or *satyagraha*, tens of thousands followed suit. Shortly after his appointment as Brigadier-General, Rex Dyer attempted to deal with peaceful demonstrations, which were increasing both in frequency and size, by force. At Jallianwala Bagh, in Amritsar, Punjab, on 13 April 1919 he commanded British troops to open fire on around 20,000 people, killing 379 and wounding more than 1,500.<sup>62</sup> Additionally, high-caste organizers of this demonstration were publicly flogged. Recognizing the mounting tide of public opinion and the tenuous grip on control, Winston S. Churchill denounced the reaction as "monstrous."<sup>63</sup>

The opposition of Gandhi to British rule heightened in 1930 when he organized the Salt *Satyagraha*, or Salt March, to protest a tax on salt. Britain had little choice but to relinquish slowly governing control and prepare India for self-rule. The *Government of India Act of 1935* allowed all provinces of India elected representative to the National Assembly, as well as equality for Muslims. Yet, power gained through voting was lost when, in the Second World War, the British declared war on Nazi Germany on behalf of India. In 1942, Gandhi initiated the "Quit India" campaign, with more massive, disruptive civil disobedience than before. Gandhi was imprisoned, but the British announced their intention to leave India in 1948. Viceroy Mountbatten accelerated the exit, relinquishing control with the Partition of India into India and Pakistan on 15 August 1947.<sup>64</sup>

## § 11.04 DEVELOPMENT OF ANGLO-MUHAMMADAN LAW

Moghul rule on the Indian Subcontinent was influenced by its Muslim predecessors, but perhaps more so by their failures than successes. Previous invading Sultans strictly applied the *Shari'a* to all subjects, regardless of their religion.<sup>65</sup> The

<sup>59</sup> See FERGUSON, *supra*, at 210.

<sup>60</sup> See FERGUSON, *supra*, at 212.

<sup>61</sup> See FERGUSON, *supra*, at 325.

<sup>62</sup> See FERGUSON, *supra*, at 326.

<sup>63</sup> See FERGUSON, *supra*, at 327–28.

<sup>64</sup> See FERGUSON, *supra*, at 348–49.

<sup>65</sup> See Fyzee, *Muhammadan*, *supra*, at 402.

Moghuls, likely out of recognition of their delicate hold on power, changed that practice:

The Muslim Sultans who ruled India brought with them a system of jurisprudence; but they had not come to a rude and barbarous land. They therefore saw that they had to deal with a mature body of native laws, known as the *dharma*. And it is they, the Muslims, who formulated the well-known rule of Indian law that Muhammadan law would govern the Muslims and Hindu law, the Hindus; and this was accepted by the East India Company, confirmed later by the British Government and is now firmly established in the Union of India.<sup>66</sup>

Instead, they applied the law of the religion, if that religion was common among the disputing parties. In addition, courts also considered imbedded customs as a relevant modification of *Shari'a* or *dharma*.

Moghul tolerance for religious freedom must not be overlooked, especially in contrast to concurrent events in Europe. But, it must not be glamorized. As long as the tolerance they showed kept them in power, the Moghuls respected this freedom. Even the *Hedaya* (an authoritative text on *Hanafi* jurisprudence) stated this practical reality.

"It is true, this statement rather accords with the spirit of the Mohamedan laws, than with the practice of them; for it too frequently happened that too little regard was paid either to judicial ordinance or natural equity. — Where avarice and bigotry are united with despotic power, such a combination will occasion abuses, and corrupt the streams of justice."<sup>67</sup>

If the non-Muslim population turned against the ruling Moghuls, the tolerance and freedom the government extended would no longer be beneficial.

The first major issue the Moghul Empire faced was how to deal with the large number formerly-Hindu Muslims. Would these converts apply Hindu Law (*dharma*) because it was so culturally entrenched, even if it conflicted with Islamic Law? As a result, Hindus — or more accurately, Hindu males — selected to continue certain cultural norms of Hindu origin despite of the demands of their newfound religion. Primarily, this occurred in inheritance law, where Hindu legal tradition precluded married female heirs from inheriting any land. However, the *Shari'a* provides such heirs a share of the estate. The Moghuls and their respective legal administrators allowed the converts to apply their customary, Hindu rules, explaining: "[t]hese and similar notions based on self-interest are too deep-rooted to be destroyed by the magic wand of God — Prophet — Koran."<sup>68</sup>

A legal system recognizing the validity of the different religious rules was not without controversy, especially among fundamentalist Muslims. The Qur'an, so it was argued, does not allow the selective incorporation of *Shari'a* — an Islamic legal system must abide by all of its demands:

<sup>66</sup> See Fyzee, *Muhammadan*, *supra*, at 403.

<sup>67</sup> See Fyzee, *Muhammadan*, *supra*, at 403 (quoting Hamilton, *Hedaya*, Preliminary Discourse, xiv.)

<sup>68</sup> See Fyzee, *Muhammadan*, *supra*, at 404-05.

This, from a systematic point of view, was an important departure, of much greater importance than the silent ignoring of the relevant sections of Islamic law which had taken place in most Islamic countries from the early Middle Ages onwards. It showed that the idea of a secular law had for the first time been accepted by the leaders of an important community of Muslims.<sup>69</sup>

This fusion lasted over a century and saw some of the greatest Moghul achievements.

Application of the *dharma* as a valid source of law for Hindus ended under the rule of Aurangzeb. This intolerant development was a "part of the orthodox reaction against the ephemeral religious experiment of the emperor Akbar."<sup>70</sup> In line with his more fundamentalist beliefs, Aurangzeb sought to implement a stricter version of the *Shari'a* to all of his subjects. To accomplish this feat, Aurangzeb commissioned a comprehensive compilation of *Hanafi* jurisprudence.<sup>71</sup>

Another layer of complexity was added as the British began to exert legal authority over India. In 1772, the East India Company claimed sovereign rights and, therefore, attendant legal jurisdiction outside of its factories for the first time. This assertion of legal authority, though, did not radically change the content of law in the subcontinent, even though this change led to the almost immediate replacement of Muslim judges, or *qadis*, by British magistrates.<sup>72</sup>

Prior to the British expansion of jurisdiction, Charles II importantly modified the rights available to Hindus and Muslims within the judicial systems of the factories. In 1753, the East India Company's charter allowed Muslim and Hindus to obtain an exemption from common law rules in favor of the rules of their respective religion:<sup>73</sup>

To implement this policy effectively, an important rule was laid down in 1772, whereby *maulanas* [Islamic jurists] and *pandits* [Hindu jurists] were to attend the Courts as jurisconsults and assist the judge in discovering the exact rule applicable.<sup>74</sup>

Sir Erskine Perry, a magistrate judge, explained the adjudicatory task as follows:

A jurist *qua* jurist has only to deal with human laws: he recognizes the existence of divine laws, and their validity *in foro conscientiae*<sup>75</sup> with those

<sup>69</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 89-90 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). (Hereinafter, SCHACHT.)

<sup>70</sup> See SCHACHT, *supra*, at 94.

<sup>71</sup> See SCHACHT, *supra*, at 94.

<sup>72</sup> See SCHACHT, *supra*, at 95. (Islamic judges (*qadis*) were not totally eliminated, though. They were reduced to a position with more ministerial functions, like recording marriages. See *id.*)

<sup>73</sup> See Fyzee, *Muhammadan*, *supra*, at 412.

<sup>74</sup> See Fyzee, *Muhammadan*, *supra*, at 412. See also SCHACHT, *supra*, at 95 (observing that British magistrates were assisted by *maulanas* "whose duty it was to state the correct doctrine of Islamic law for the benefit of the magistrate.")

<sup>75</sup> Literally meaning "common knowledge of the court." "*In*" is a dative preposition paired with the feminine singular dative "*foro*" (court, forum or space), and "*conscientiae*" (common knowledge, conscience).

to whom they are addressed, or who believe in the revelation containing them; but he does not recognize them as enforceable in Courts of Justice any further than the secular power has ordained.<sup>76</sup>

British judges, therefore, had to take Hindu and Muslim law into account as an equitable factor in their decisions.

Recognizing the validity of religious laws, especially those concerned with "personal" aspects like Family Law, the British never seriously questioned them. Perhaps they were motivated by a desire for a smooth transition from Moghul to British rule, so as not to disrupt profitable commercial activities. Yet, there also is evidence of a liberal tolerance. Sir William Jones, a judge on the Calcutta bench, stated:

Nothing could be more obviously just than to determine private contexts according to those laws which the parties themselves had ever considered as the results of their conduct and engagements in civil life; nor could any thing be wiser than, by a legislative act, to assure the Hindu and Muselman subjects of Great Britain that the private laws which they severally hold sacred, and a violation of which they would have thought the most grievous oppression, should not be superseded by a new system, of which they could have no knowledge, and which they must have considered as imposed on them by a spirit of rigour and intolerance.<sup>77</sup>

In effect, imposing British common law on Hindu or Muslim factory workers could have disastrous social consequences.

The immediate problem was magistrates were not bound to accept advice of the *mamlawi* or *pandit*.<sup>78</sup> The extent to which magistrates used this advice in their decision-making is unclear, but it was not invariably followed. In 1780, a formal regulation was promulgated requiring absolute adherence to disputes regarding certain matters:

That in all suits regarding inheritance, marriage and caste, and other religious usages or institutions, the laws of the Koran with respect to be Mohamedans, and those of the Shaster with respect to the Gentoos, and where only one of the parties shall be a Mohamedan or Gento, the laws and usages of the defendant shall be invariably adhered to.<sup>79</sup>

<sup>76</sup> C.J. PERRY, in *Kojas' and Memors' Case*, PERRY'S ORIENTAL CASES (London, 1853) 110, 112 (quoted in ASAF A.A. FYZEE, CASES IN THE MUHAMMADAN LAW OF INDIA AND PAKISTAN XVIII (Oxford, England: Clarendon Press, 1965). [Hereinafter, FYZEE, CASES.]

<sup>77</sup> W.H. MORLEY, ADMINISTRATION OF JUSTICE IN BRITISH INDIA 193 (London, 1858) (quoted in ASAF A.A. FYZEE, OUTLINES OF MUHAMMADAN LAW 55 (Oxford, England: Oxford University Press, 4th ed. 1974). [Hereinafter, FYZEE, OUTLINES.]

<sup>78</sup> See SCHACHT, *supra*, at 95.

<sup>79</sup> See FYZEE, *Muhammadan*, *supra*, at 412. (It is unclear from the article who issued this regulation. Although the British government always had a hand in legal administration, issuance came directly or indirectly via the East India Company.)

Furthermore, determining that if the parties' religions conflicted, then the defendants prevailed was also the Moghul practice. See FYZEE, CASES, *supra*, at xix.

Now enshrined in law, British judges were now compelled to incorporate religious law into their secular court, depending on the beliefs of the parties involved.

## § 11.05 EVOLUTION OF ANGLO-MUHAMMADAN LAW

Despite this regulation, the law as applied in India was altered over time, through the accretion of case law, among other things. Table 11-2 provides a synopsis of legal cases in the development of Algo-Muhammadan Law. The tempering influence of English Common Law and equity had a great impact, although ways in which it may conflict or fail to address a situation had been explicitly allowed, if not required, as early as 1726.<sup>80</sup> This principle, however, had little effect on the adjudication of these cases at the trial level. The Privy Council, the highest appellate court in India, most radically altered the content of, and therefore application, of Islamic rules.<sup>81</sup> Later in 1861, the British established three intermediate appellate courts in each of the three provinces where Islamic content of legal rules was further reformed.<sup>82</sup>

Out of this law there has grown a new Anglo-Muhammadan jurisprudence, the aim of which, in contrast with Islamic jurisprudence during the formative period of Islamic law, is not to evaluate a given body of legal raw material from the Islamic angle, but to apply, inspired by modern English jurisprudence, autonomous juridical principles to Anglo-Muhammadan law. This law, and the jurisprudence based on it, is a unique and a most successful and viable result of the symbiosis of Islamic and of English legal thought in British India.<sup>83</sup>

More honestly, this evaluative process often had a foregone conclusion.

That is, when a court decided an issue where there was either conflict between British Common Law and Muslim or Hindu Law, or if there was no law on point, the judge would fashion a rule "according to equity, justice and good conscience."<sup>84</sup> This expression was "generally interpreted to mean the rules of English law if found applicable to Indian society and circumstances."<sup>85</sup> In a report of the Law Commission in 1871, the reality judges would apply English law candidly admitted: "Practically speaking these attractive words mean little more than an imperfect understanding of imperfect collections of not very recent editions of English text-books."<sup>86</sup>

In 1883, the indigenous functioning of the Indian justice system gained new heights when local judges, or *Mofussils*, in all areas (except the cities of Bombay,

<sup>80</sup> See FYZEE, *Muhammadan*, *supra*, at 412.

<sup>81</sup> See SCHACHT, *supra*, at 95.

<sup>82</sup> See FYZEE, CASES, *supra*, at xvii.

<sup>83</sup> See SCHACHT, *supra*, at 96.

<sup>84</sup> See FYZEE, *Muhammadan*, *supra*, at 412.

<sup>85</sup> *Waghela v. Sheikh Mashudin* (quoted in FYZEE, *Muhammadan*, *supra*, at 412-13).

<sup>86</sup> SETALVAD, THE COMMON LAW IN INDIA 12 (London: 1960) (quoted in FYZEE, *Muhammadan*, *supra*, at 413).

Calcutta and Madras) gained equality with their British counterparts.<sup>87</sup> This equality resulted in giving *Mofussils* the ability to preside over criminal proceedings in which the defendant was of European origin. The British reaction to this — dubbed the “White Mutiny” — was outspoken and occasionally violent, but largely confined to Calcutta, where the city contained the headquarters of the major silk, indigo and tea exporters. These goods were produced in the countryside where the white business owners now could not rely on the beneficial application of law by their fellow judges.<sup>88</sup>

Another issue plaguing Indian courts was how to decide who is a Muslim. This issue was first determined by a court in 1863 in *Abraham v. Abraham*.<sup>89</sup> This court held that someone who converts to Islam is afforded no different treatment than a person born Muslim. Later, in *Narantakath v. Parakkal*, in 1922, two judges — one British and the other an Indian Hindu — determined that the essential doctrine of the Muslim faith contained two components: “(i) that there is but one God, and (ii) that Muhammad is his Prophet.”<sup>90</sup> “This is the indispensable minimum; a belief short of this is not Islam; a belief in excess of this is, for the law courts at least, a redundancy.”<sup>91</sup>

This determination was poignantly applied in *Jiwan Khan v. Habib*.<sup>92</sup> In this case, *Sunni* Muslims sued to keep certain *Shi'ites* from praying in a Lahore *Sunni* mosque. On one previous occasion, the *Shi'ites* named as defendants spoke harshly about the first three caliphs. Despite this difference in belief, the court here ruled that *Shi'ites* are Muslims because they pass the *Narantakath* two-prong test. And, according to other well-settled rules, no sect of Islam has an exclusive claim on any mosque. Therefore, these *Shi'ites* could not be prevented from praying in this mosque.

Table 11-2:  
Ten Important Cases in the Development of Anglo-Muhammadan Law

Case Name (Year)	Facts	Issue	Holding
<i>Abul Fata v. Russomoy Dhur Chowdhury</i> (1894) <sup>93</sup>	In a <i>waqf</i> established by two brothers, “the poor” were listed as the beneficiary. A “hundred and more” defendants who were its beneficiaries claimed that this was a legitimate grant.	Whether a <i>waqf</i> specifying its beneficiary as the poor was justifiable under Islamic Law?	No. Specification of the poor was illusory and, as a result, must be treated as “simple gifts of inalienable life-interests to remote unborn generations of descendants,” which are forbidden under <i>Shari'a</i> .
<i>Nawab Sultan Marian Begum v. Nawab Saheb Mirza</i> (1889) <sup>94</sup>	A King of Oudh made an endowment to his wife and descendants that was not allowed under <i>Shi'ite</i> law.	Whether Islamic Law trumps an international agreement between sovereigns?	No. “[A] treaty between two sovereigns may have the effect of abrogating the Qur'anic law of succession and establishing a mode of succession <i>dehors</i> the Muhammadan law.” <sup>95</sup>
<i>Hamira Bibi v. Zubaida Bibi</i> (1916) <sup>96</sup>	A Muslim widow sued for payment of a past due dowry debt with interest.	Whether interest on this dowry debt can be collected, despite the Islamic prohibition on <i>riba</i> ?	Yes. As remuneration for forbearance, the widow is owed the principal debt plus an equitable rate of interest. <i>Riba</i> is not discussed.
<i>Ghasiti v. Umrao Jan</i> (1893) <sup>97</sup>	Ghasiti was the adopted daughter of the deceased father who ran a brothel. This family was Kanchans, a small ethnic group living in Punjab where prostitution was not uncommon.	Whether Ghasiti — the adopted, prostitute daughter — was entitled to inheritance rights as prescribed in the Qur'an?	No. Ghasiti is not entitled to inheritance rights under the Qur'an, because her adoption was for the purpose of prostitution, and prostitution is forbidden under both Islam and Christian traditions.

<sup>93</sup> See FYZEE, CASES, *supra*, at 379-88 (quoting 22 Indian Appeals 76).

<sup>94</sup> 16 INDIAN APPEALS 175 (quoted in FYZEE, CASES, *supra*, at 504-49).

<sup>95</sup> See FYZEE, CASES, *supra*, at xxvii.

<sup>96</sup> 43 INDIAN APPEALS 294 (quoted in FYZEE, CASES, *supra*, at 145-51).

<sup>97</sup> 20 INDIAN APPEALS 193 (quoted in FYZEE, CASES, *supra*, at 90-94).

Case Name (Year)	Facts	Issue	Holding
<i>Vidya Varuth v. Balusami Ayyar</i> (1921) <sup>98</sup>	In Mysore, Varuth was granted a permanent lease by the administrator of a <i>math</i> (a Hindu charitable endowment). The administrator of the <i>math</i> died shortly after this grant. Later on, the person in possession of this land sub-leased it to two further parties. The subsequent administrator of the <i>math</i> sought an injunction to void the previous transfers.	Whether the permanent lease was a valid grant of a <i>math</i> administrator that cannot be rescinded?	Yes. A <i>math</i> or <i>waqf</i> is distinct from a trust. While if this act was by a trustee, the court would acknowledge the validity of the trustee's transfers of property, this is not the case here. The pious origin of a <i>math</i> or <i>waqf</i> limits the validity of its administrator's acts to those that are consistent with the founding, religious purpose.

<sup>98</sup> 48 INDIAN APPEALS 302 (quoted in FYZEE, CASES, *supra*, at 379-88). In articulating the need to delineate between *waqfs* and trusts, the court states the following:

[T]here are two systems of law in force in India, both self-contained and both wholly independent of each other, and wholly independent of foreign and outside legal conceptions. In each there are well-recognized rules relating to their religious and charitable institutions. From the year 1774 the Legislature, British and Indian, has affirmed time after time the absolute enjoyment of their laws and customs so far as they are not in conflict with the statutory laws, but Hindus and Mahomedans. It would, in chief Lordships' opinion, be a serious invasion into their rights if the rules of the Hindu and Mahomedan laws were to be construed with the light of legal conceptions borrowed from abroad, unless perhaps where they are absolutely, so to speak, *in pari materia*.

*Id.* at 382-83.

Literally the Latin translates to mean "on the same substance." *Pari* (equal to, the same) is feminine singular dative, while *materia* (matter, substance) is ablative.

Case Name (Year)	Facts	Issue	Holding
<i>Farid-un-Nisa v. Mukhtar Ahmad</i> (1925) <sup>99</sup>	"An illiterate <i>pardanashin</i> woman executed a deed whereby she settled the whole of her property by way of <i>waqf</i> , reserving a small monthly stipend to herself and her husband who was an invalid, and also the right for her life to use a house." <sup>100</sup> Generally, <i>pardanashin</i> women were secluded from normal life and, as a result, were in need of protection by the courts. In this case, Farid-un-Nisa sought to rescind the creation of the <i>waqf</i> claiming that she was coerced by her husband to create it.	Whether Farid-un-Nisa may cancel the <i>waqf</i> , thereby receiving full possession of the property? (The <i>mutawallis</i> are the defendants arguing she lacks the power to terminate.)	Yes. In this case, the <i>mutawallis</i> have the burden to prove that Farid-un-Nisa intended to grant away her rights through the <i>waqf</i> . The <i>mutawallis</i> could not prove this. As a result, Farid-un-Nisa can rescind the previous establishment of this <i>waqf</i> .

<sup>99</sup> 52 INDIAN APPEALS 342 (quoted in FYZEE, CASES, *supra*, at 325-36).

<sup>100</sup> See FYZEE, CASES, *supra*, at xxvi.

Case Name (Year)	Facts	Issue	Holding
<i>Moonshee Buzul-ul-Raheem v. Luteefut-oon-Nissa</i> (1861) <sup>101</sup>	Moonshee (husband) and Luteefut (wife) married. Both Muslims, Moonshee later married another wife. Favoring this latter wife, he treated Moonshee incredibly harshly. Moonshee's mother (the plaintiff) filed a complaint seeking protection of her daughter.	Whether the mother must return the marriage settlement to the husband?	No. This divorce is a <i>taluk</i> ( <i>talāk</i> ) or unilateral choice to divorce by the husband. Because it was not consensual, the mother did not have to return the settlement.
<i>Skinner v. Orde</i> (1871) <sup>102</sup>	Generally, it is presumed that a child is of its father's religion. Here, a child born in India to a Christian, British father died later and instructed the child's mother to bring up the child as a Christian. The mother later converted to Islam. When the child turned 14, she chose to become Muslim. The child's relatives then petitioned to remove the child into the custody of a Christian guardian.	Whether the deceased father's instruction to raise his daughter Christian is enforceable, and whether the daughter may convert to Islam?	Yes, and Not Yet. Although the daughter has expressed a desire to convert to Islam, the mother was incapable of fulfilling her deceased's husband's wishes. Therefore, a guardian will be appointed who can better effectuate the father's desire, at least until the daughter can make a more fully informed, adult decision.

<sup>101</sup> 8 MOORE'S INDIAN APPEALS 379 (quoted in FYZEE, CASES, *supra*, at 159-169).

<sup>102</sup> 14 MOORE'S INDIAN APPEALS 309 (quoted in FYZEE, CASES, *supra*, at 254-60). This court explains the applicability of the religious laws as follows:

Case Name (Year)	Facts	Issue	Holding
<i>Rajah Deedar Hossein v. Rane</i> <i>Zuhoor-oon Nissa</i> (1841) <sup>103</sup>	Akbar had an interest in the <i>Zemindary</i> , along with his brother, Rajah. After the death of Akbar, his wife, Rane, and three children took possession. Akbar sued claiming superior succession rights over Akbar's wife and children.	Whether <i>Shi'ite</i> or <i>Sunnite</i> succession rules apply?	Because all parties are <i>Shi'ites</i> , <i>Shi'ite</i> law applies, even though the majority of Indian Muslims are <i>Sunnis</i> . Under <i>Shi'ite</i> law, the brother of a deceased has no rights in succession and the widow and children rightfully took possession, and may retain possession of, the subject interest.
<i>Mitar Sen v. Maqbul Hasan</i> (1930) <sup>104</sup>	Jaragedeo Singh converted from Hindu to Muslim in 1843. He died the following year. In the present case, the property of the estate is claimed by descendants where the plaintiff is a Hindu and the defendants Muslims.	Under the <i>Caste Disabilities Act of 1850</i> , whether "a Hindu . . . has a right to inherit according to Hindu law the estate of a <i>Shi'ite</i> who was descended from a <i>Shi'ite</i> , but had become a convert to Islam in 1843[?]" <sup>105</sup>	No. Under this <i>Act</i> , succession is determined by the religion of the decedent at the time of his or her death. Islamic Inheritance Law applies. To hold otherwise would render Jaragedeo Singh's conversion inutile and deprive his female heirs of inheritance rights.

Not only did court decisions have a modifying effect on the applied rules of the *Shari'a*, but statutes too had an equally, if not greater, modifying effect. For

In India, however, all, or almost all, the real religious communities of the world exist, side by side, under the impartial rule of the British Government. While Brahmin, Buddhist, Christian, Mahomedan, Parsee, and Sikh are one nation, enjoying equal political rights and having perfect equality before the Tribunals, they co-exist as separate and very distinct communities, having distinct laws affecting every relation of life. The law of husband and wife, parent and child, the descent, devolution, and disposition of property are all different, depending, in each case, on the body to which the individual is deemed to belong; and the difference of religion pervades and governs all domestic usages and social relations.

*Id.* at 256 (emphasis original).

<sup>103</sup> 2 MOORE'S INDIAN APPEALS 441 (quoted in FYZEE, CASES, *supra*, at 490-92).

<sup>104</sup> 57 INDIAN APPEALS 313 (quoted in FYZEE, CASES, *supra*, at 499-503).

<sup>105</sup> See FYZEE, CASES, *supra*, at 499 (quoting *Mitar Sen v. Maqbul Hasan*, 57 INDIAN APPEALS 313 (1930)).

instance, in 1862 *Shari'a*-based criminal law was replaced by British common law.<sup>106</sup> Similarly in 1872, Islamic rules of evidence were replaced by their British analog.<sup>107</sup> Although these are instances where the British clearly sought to alter Islamic law, there are other instances where legislation sought to uphold the unique blend of Anglo-Muhammadan law. Following *Abul Fata v. Russomoy Dhur Chowdhury*, which prohibited *waqfs* that specified the poor as its beneficiary, the *Mussalman Wakf Validating Act of 1913* expressly overruled this decision.<sup>108</sup> By statute, this exact type of beneficiary was permitted, as it had been prior to this court decision.

Perhaps the most interesting statutory development was one that was antithetical to Anglo-Muhammadan by its letter, but perhaps not in its spirit. By the 1930s, legislators in India had recognized that severe injustice had developed precluding women from receiving significant inheritance rights.<sup>109</sup> Muslim men took advantage of the settled rule that custom may deviate from *Shari'a*, and applied less generous customary inheritance rights for women, some of which originated in Hinduism. The *Shariat Act of 1937* removed these “cultural incrustations.”<sup>110</sup> The resulting statute precluded Muslims from appealing to custom to modify the *Shari'a*. Although criticized as “an act of deliberate archaism and purism,”<sup>111</sup> this statute can more charitably be interpreted as “[t]he British continuation of non-interference in the personal laws of respective religious communities . . . throughout . . . India.”<sup>112</sup>

## § 11.06 ENDURING IMPACT OF ANGLO-MUHAMMADAN LAW

The legacy of religious tolerance found in the Moghul Empire is evident in the Indian Constitution enacted after independence, and remains to the present. Article 25 entitles Indians to freedom of conscience and the right to practice religion.<sup>113</sup> Article 26 allows every religious denomination “to manage its own affairs in matters of religion” and “to administer such property in accordance with law,” among other things.<sup>114</sup>

The recognition of the validity of the *Shari'a* by secular authorities, or the recognition by an Islamic authority of secular laws or laws required of another religion, is possible. Currently, Canada and Britain have both experimented with the implementation of the *Shari'a* in certain disputes. In 1991, an Ontario provincial arbitration law allowed certain faiths — namely, Muslims, Catholics, and Jews — to

enter into arbitration to resolve these disputes.<sup>115</sup> Although successful in resolving mainly custody and divorce proceedings, and easing the backlog of cases in the Ontario courts, which was this law's main motivation, this law was later repealed.<sup>116</sup>

More recently, Dr. Rowan Williams, the Archbishop of Canterbury, has argued that the British government should allow Muslims to settle disputes regarding marital disputes and financial matters in *Shari'a*-based arbitration.<sup>117</sup> Although unpopular according to public opinion polls, this possibility is still being discussed in the United Kingdom, especially as it continues to consider improving internal relations with Muslims and non-Muslims after the 7 July 2005 terrorist attacks in London.

## PART FIVE

THEORY — CLASSICAL SOURCES OF  
JURISPRUDENCE (*UŞÛL AL-FIQH*)

## Chapter 12

### FUNDAMENTAL SOURCES: HOLY QUR'ĀN AND *SUNNAH*

---

One may well ask: "How can you advocate breaking some laws and obeying others?" The answer lies in the fact that there are two types of laws: just and unjust. I would be the first to advocate obeying just laws. One has not only a legal but a moral responsibility to obey just laws. Conversely, one has a moral responsibility to disobey unjust laws. I would agree with St. Augustine that "an unjust law is no law at all."

Now, what is the difference between the two? How does one determine whether a law is just or unjust? A just law is a man-made code that squares with the moral law or the law of God. An unjust law is a code that is out of harmony with the moral law. To put it in the terms of St. Thomas Aquinas: An unjust law is a human law that is not rooted in eternal law and natural law. Any law that uplifts human personality is just. Any law that degrades human personality is unjust.

Reverend Dr. Martin Luther King,  
*Letter from a Birmingham Jail*, 13 April 1963

#### SYNOPSIS

##### § 12.01 OVERVIEW OF FOUR SOURCES

- [A] Sources and Their Philosophical and Practical Dimensions
- [B] Defining "*Uṣūl al-Fiqh*"
- [C] Two Primary and Two Secondary Sources, and Term "Fundamentalist"

##### § 12.02 AMBIGUITY, VAGUENESS, INTERPRETATION, AND CONSTRUCTION

##### § 12.03 QUR'ĀN AND APPROACHES TO READING IT

- [A] Meaning of "Qur'ān"
- [B] Biblical Parallel
- [C] Easy, Simplistic Dichotomies
- [D] Ramadan's Categorization of Six Approaches

##### § 12.04 ISSUES IN QUR'ĀNIC INTERPRETATION

- [A] Translations of Qur'ān and Formal versus Dynamic Equivalence
- [B] Theory of Repeal (*Naskh*)

##### § 12.05 *SUNNAH* OF PROPHET

[A] Question of Authenticity

[B] *Isnād* (Chain of Transmission)

[C] Summary and Evaluation of *Hadith* Compilations

### § 12.01 OVERVIEW OF FOUR SOURCES

#### [A] Sources and Their Philosophical and Practical Dimensions

It is a predictable question for a lawyer to ask about the sources of law in a legal regime. Indeed, it would be shocking if a lawyer did not inquire into the roots from which rules in the regime emanate. Likewise, it would be surprising not to inquire about sources of teachings in a religion. From where does the religion derive its central precepts?

In both the legal and religious contexts, the question of sources has two dimensions: philosophical and practical. The first dimension reveals the authority on which the law or religion relies. Certain authorities will be deemed authentic, while others will be dismissed as unreliable. Further, the criteria for delineating between "good" and "bad" authority is also part of the question of sources. The authority may be a person, a text, a tradition or collections or combinations thereof. It also may be a rigorous methodology for discerning appropriate from inappropriate understandings, elaborations, and extensions of the messages conveyed by the person, text, or tradition.

The second dimension explains where the rules of a legal regime, or precepts of a religion, may be found. Lawyers studying a legal or religious system need to know where in their libraries to "find" the law or "find" the religion. Today, that task is faster and cheaper than ever before: information technology, specifically, the internet, makes the search for sources efficient. But, it creates a problem: information overload. With so much legal and religious material posted on the web, how is a lawyer to group the materials into categories, let alone filter out unreliable websites? The answer is that the lawyer must have a sense of the sources of the law or religion as they have been defined through the ages by the scholars and practitioners of law and religion.

Before turning to the sources of Islamic Law, consider the sources, and their philosophical and practical dimensions, of United States law and Catholic Christianity. When a lawyer asks "what are the sources of American law?" the general answer is:

- For Federal law, the sources are, in rank order:

(1) The Federal Constitution

(2) Federal Statutes, Case Law, and Treaties

(3) Federal Administrative Agency regulations and rulings

- For State law, which because of the Supremacy Clause of the Federal Constitution is subordinate to Federal law, the sources are, in rank order:

(1) The State Constitution

(2) State Statutes, Case Law, and Treaties

(3) State Administrative Agency regulations and rulings

These sources reflect the outcome of debates by the Founding Fathers who wrote the Federal Constitution, and advocated for it in *The Federalist Papers*. In turn, the Founding Fathers not only were well-schooled in Classical Greek and Roman Philosophy, but also in Judeo-Christian precepts. Finding United States Federal or State law is a matter of accessing the books, publications, and websites that contain the above-listed primary sources, along with a prodigious volume of secondary source material, such as treatises, textbooks, and law review articles, which discuss and critique the primary sources.

As for Catholic Christianity, its precepts and practices emanate from three sources:

- Sacred Scripture, that is, the Bible, with an understanding that the New Testament contains the Word of Jesus Christ, as well as accounts of the works Christ performed in his ministry.
- Sacred Tradition, that is, the practices of Christians through the 2,000 year history of the Church, with a special regard for the Apostles of Jesus and the early Christian communities (*i.e.*, the ones in the first few centuries A.D.).
- The *Magisterium*, that is, the teachings of the Church as written down, preached, and practiced by its supreme leader, the Holy Father (or "Pontiff" or "Pope"), Cardinals, Bishops, Priests, and Nuns.

As to where to "find" Catholic Christianity, there are two essential documents: the Bible, and the *Catechism of the Catholic Church* ("*Catechism*," or "*CCC*"). The Bible is the most widely read and translated book in human history. There are many Catholic editions of the Bible, including ones that contain helpful historical background material, charts, maps, and tables.<sup>1</sup> The *Catechism* encapsulates and summarizes all three sources, and is divided into four parts, which correspond to faith (*Part One: The Profession of Faith*), sacraments (*Part Two: The Celebration of the Christian Mystery*), morality (*Part Three: Life in Christ*), and prayer (*Part Four: Christian Prayer*).<sup>2</sup>

<sup>1</sup> See, e.g., *THE CATHOLIC STUDY BIBLE* (New York, New York: Oxford University Press, 1990, New American Bible trans.). [Hereinafter, *BIBLE*.]

<sup>2</sup> See, e.g., *CATECHISM OF THE CATHOLIC CHURCH* (United States Catholic Conference, Inc., Washington, D.C.: Libreria Editrice Vaticana, 2nd ed. 1997).

## [B] Defining "Uṣūl al-Fiqh"

The Arabic term "*fiqh*," commonly used in Islamic Law, literally means "understanding." It is derived from the verb "*faqaḥa*," which means "to understand." Used in the context of the *Shari'a*, *fiqh* refers to the totality of human comprehension of the perfect, immutable, and Divine law as revealed in the Qur'ān and *Sunnah*, and as explained, elaborated, and interpreted by Islamic legal scholars (*fukahā*). This reference begins to convey the sense of reverence Muslims have for the *Shari'a*. The *fiqh* is the science of the *Shari'a*, or more generally, the science of Islamic jurisprudence.

The full term is "*uṣūl al-fiqh*," which refers to the roots of jurisprudence, or roots of the law. The word "roots" is appropriate, because it connotes the focus on the sources of legal rules. To explore the roots is to ask the question a basic question relevant in any legal system: whence does the law come? Because of its Divine origin, and because of the 1,400 years of scholarship about it, the *fiqh* occupies a special place in the minds of Muslims. It is not like any secular legal system in which rules are the outcome of give-and-take in a politically-charged legislative process. Rather, the *fiqh* is one of the greatest gifts of God (Allāh) and products of research in human history. Succinctly put, there are four roots of Islamic jurisprudence, that is, four sources of Islamic Law:

The primary sources of law in *Sunni* orthodoxy are: 1) the *Qur'ān* (the divine word of Allah), 2) the *sunnah* (the practices, examples, dicta, and decisions of the Prophet Mohammed), 3) *ijmā* (consensus, most particularly the consensus of the community of scholars), and 4) *qiyās* (analogical deductions and reasoning). *Hadith* are the textual records of the Prophet's *sunnah*, as determined by skilled juristic scholars.<sup>3</sup>

More precisely, the *Qur'ān* and *Sunnah* are "primary" sources of the *Shari'a*, pre-eminent in their importance, while *ijmā* and *qiyās* are secondary sources. Note the breadth and depth of these roots, and their origin and elaboration: they are in part Divine, in part from the example of an extraordinary human being, and in part the product of human reason. Therefore, it should come as no surprise that Islamic jurisprudence — that is, courses in the *uṣūl al-fiqh* — are required parts of the curriculum in every Islamic Law school. Once these roots are understood, they are then applied to all aspects of the human experience, from simple individual prayers to complex financial transactions.

## [C] Two Primary and Two Secondary Sources, and Term "Fundamentalist"

It was not always the case that Islamic religious and legal scholars (*ulema* and *fukahā*, respectively), much less the average Muslim, clearly understood that there were four sources of Islamic Law. The identification and enumeration of four

roots of jurisprudence (*uṣūl al-fiqh*) came about through careful research and thought by *Imāms* Mālik ibn Annas (710-795 A.D.) and Muhammad Shāfi'i (768-820).<sup>4</sup>

*Imām* Mālik presented the first definitive work on *fiqh* (jurisprudence). In it, he recognized the *Qur'ān* and *Sunnah*, but also allowed for opinion (*ra'y*) and public interest (*maṣlahah*), and saw the importance of consensus (*ijmā*) in Medina among the Companions of the Prophet (*Ṣaḥābah*) and the Ancient School at Medina. *Imām* Shāfi'i proposed the theory of the *uṣūl al-fiqh*. He formalized the interpretation of the *Shari'a* by listing four sources that could be considered legitimate. Thus was born the Classical Theory of Islamic Law. Interestingly, *ijmā* was a key point of disagreement between these two great scholars. *Imām* Shāfi'i felt *Imām* Mālik over-emphasized the consensus of Medina, and feared doing so would lead to stasis in the *Shari'a*. *Imām* Shāfi'i argued that an interpretation can and should be changed if it gets closer to the Truth, hence he advocated a broader and more evolutionary approach to *ijmā*.

According to the Classical Theory, there are four sources of the *Shari'a*. The first two are by far the most important, and are considered the primary sources. They are:

- (1) The *Qur'ān*.
- (2) The *Sunnah* of the Prophet Muhammad, as collected in compilations of his non-prophetic sayings and actions, i.e., the *ḥadīths*.

Note the order: the *Qur'ān* is supreme, and no other source, even *Sunnah* of Muhammad, can overrule it. Muslims regard the *Qur'ān* as the Word of God (Allāh) revealed to the Prophet through the Archangel Gabriel over a period of 22 years (610-632).

Also notice the connection between the two primary sources and the term "fundamentalist." The two primary sources are fundamental, in the sense of being the more important than the two secondary sources. The contemporary mainstream media is wont to toss around and apply casually the label "fundamentalist" to a broad array of Muslims, particularly ones who do or appear to oppose American interests. In truth, such persons are more accurately labeled "extremists." In contrast, the proper use of the epithet "fundamentalist" is for one who seeks to return Islamic Law to its fundamental sources. That is, a "fundamentalist" prefers, even demands, that the *Shari'a* be based exclusively, or as much as possible, on the *Qur'ān* and *Sunnah*.

The third and fourth sources are considered secondary, or dependent:

- (3) Analogical reasoning, or "*qiyās*," and
- (4) Consensus, or "*ijmā*."

Through the ages, Muslim scholars (*ulema* and *fukahā*) in the Four *Sunni* Schools, and in the *Shi'ite* tradition, have debated the appropriate weight to be

<sup>3</sup> Michael J.T. McMillen, *International Legal Developments in Review: 2007 — Islamic Law Forum*, 42 THE INTERNATIONAL LAWYER 1017, 1018 (Summer 2008) (emphasis original). See generally JOHN MAKDISI, ISLAMIC PROPERTY LAW ch. 1A-B (Durham, North Carolina: Carolina Academic Press, 2005) (concerning the four sources of the *Shari'a*, and more generally the sources of law.)

<sup>4</sup> See JOHN L. ESPOSITO ED., THE OXFORD HISTORY OF ISLAM 126-128 (Hong Kong: Oxford University Press, 1999).

given to *qiyās* and *ijma'*. They do not all agree. "Fundamentalists" take a strict, traditionalist line, and downplay their role. One of their champions was the great *Ḥanbali* School Scholar, Ibn Taymiyya (1263-1328).<sup>5</sup> They are akin to advocates for a strict constructionist approach to understanding the constitution of a country. The Traditionists emphasize the original intent and plain meaning of the Qur'ān and *ḥadīths*. They fear *qiyās* and *ijma'* can introduce distortions to the *Sharī'a* that reflect personal biases. Regrettably, their misguided followers sometimes turn to extreme, violent measures to promulgate their ideas. Hence, mainstream media conflates the terms "fundamentalist" and "extremist."

Other *ulema* and *fukahā'* dispute the Traditionist project, just as many American Supreme Court justices disagree with an original intent approach to the Constitution. The "moderates" counsel that even the Qur'ān and *Sunnah* do not answer all questions. They find recourse to *qiyās* and *ijma'* is ineluctable. Over time, this moderate position has become the majority one in the Islamic World, meaning the conventional understanding of the Classical Theory of the *Sharī'a* includes all four sources.

There is one point on which all Muslim scholars, and indeed all Muslims, agree: they share a respect, indeed reverence, for the *Sharī'a*, and in particular the "*uṣūl al-fiqh*" or roots (or science) of the jurisprudence. In most American law schools, Jurisprudence is a course that a minority of law students take, and is typically regarded as marginally important. That is unfortunate, and happily the course occupies a prominent place in many British law schools. In Islamic law schools, jurisprudence — the science of knowing where the *Sharī'a* comes from — is a central part of the curriculum.

## § 12.02 AMBIGUITY, VAGUENESS, INTERPRETATION, AND CONSTRUCTION

Every religious or legal text contains terms that are ambiguous or vague, and every such text requires interpretation and construction. "Ambiguity" and "vagueness" are not synonyms, nor are "interpret" and "construct." An "ambiguous" word is one that has two or more meanings. Consider the word "light." It can refer to a light color, a light weight, light by which sight is possible, or the light of God. A "vague" word is one that has penumbral meanings. That is, it is difficult to define what is included within the word, and what is excluded. Again take the word "light," but in reference to a weight. A one kilogram weight is "light." A 100 kilogram weight is not "light." Is a 35 kilogram weight "light" or not "light"?

As for "interpretation," this term refers to the process by which the meaning of a word in a text is decided. To "interpret" a text is to develop an understanding of what the words in it mean. There are different methods of "interpretation," one of the most famous and controversial of which is known as originalism. This method seeks to discern the original public meaning of a text — what did the drafters of the text intend as to how to understand its provisions? In the American Constitutional

Law context, this approach is championed by Supreme Court Justice Antonin Scalia. However, the approach long pre-dates the birth of the United States Supreme Court. In Islamic Law, Ibn Taymiyya insisted on defining the *Sharī'a* according to the text of the Qur'ān and authentic *ḥadīths*.

A radically different method of interpretation from originalism is to regard a text as flexible, and breathe meaning into it based on contemporary circumstances. This approach allows wide latitude for additional sources, beyond the traditional four roots, such as independent reasoning (*ijtihād*) and public policy (*maṣlaḥah*). It is associated with the American Supreme Court Justice William O. Douglas, and long before him, with a variety of *Sharī'a* scholars.

In contrast, "construction" is about deciding what to do with words in a text. In particular, how should those words, once their meaning or meanings is understood, be applied to specific fact patterns? Additionally, "construction" involves filling in gaps when the meaning of a term is unclear. For example, if the originally intended meaning of a term is uncertain, then the issue at hand is under-determined. "Construction" is necessary for the purpose of interstitial law-making. However, "construction" always requires an independent normative defense. That is because construction involves gap-filling. Without a defense, construction devolves into "making it up" based on personal, subjective preferences. A range of defenses are available, from strict positions that read texts as narrowly as possible to liberal positions that import theories or perspectives such as law and economics or law and philosophy.

Obviously, the focus of both "interpretation" and "construction" is on ambiguous and vague terms. Clear words do not need much interpretation or construction. The identification of ambiguous and vague terms, and their interpretation and construction, is a familiar task of Anglo-American lawyers and legal scholars. It also is required of clergy and scholars of the Bible. Catholic priests, Protestant ministers, and theologians analyze, discuss, and debate words used in the Old and New Testament the way lawyers and legal scholars do for contracts, wills, court decisions, statutes, constitutions, and treaties.

The Qur'ān is no exception — it, too, not only is susceptible to, but also demands, identification, interpretation, and construction of ambiguous and vague terms. Indeed, it is an arrogance of the modern American legal mind to think these processes were generated and mastered in the Common Law tradition of the United States and England. As indicated, Islamic legal scholars wrestled with these problems long before there was a Common Law, or even an England.

As the Qur'ān is both a supreme religious and legal text, this demand is heightened in comparison to a contract, case, constitution, or treaty. Islamic *ulema* and *fukahā'* are aware of this demand. Ever since the canonical text of the Qur'ān was set, they appreciated the need to discern meanings of ambiguous and vague terms, and to apply them to real-world issues. They understood it as the Qur'ān was being revealed, as is adduced by the fact they asked many questions of the Prophet about the revelations.

This give-and-take led to the *ḥadīth*. The Qur'ān as the "Guide," was (and is) not unambiguous on all points, hence there was (and remains) a need for a "guide to the

<sup>5</sup> Born in Harran, in Turkey, near the Syrian border, to a family of theologians, he died in Damascus. His full name was Taqī ad-Dīn Ahmad ibn Taymiyya (sometimes spelled "Taymiyyah").

Guide," which is the *Sunnah* of the Prophet as recorded in compilations of the *hadith*. (To be sure, even the *hadith* contains ambiguities, vagaries, and needs interpreting and constructing, as the *ulema* and *fukahā'* also appreciate.) Those words need interpreting, i.e., their meaning or meanings must be discerned. And, critically, those words need to be constructed, which is to say they need to be applied to real-world contexts.

## § 12.03 QUR'ĀN AND APPROACHES TO READING IT

### [A] Meaning of "Qur'ān"

In Arabic grammar, the word "*qur'ān*" is a noun derived from the verb "*qara'a*" which means "to read" or "to recite." In this sense, the word "*qur'ān*" conveys the idea of diligent reading. That connotation is accurate, as Muslims are called to read the Qur'ān in an assiduous, conscientious, and earnest manner.

Scholars debate whether the word "*qur'ān*" was formed within Arabic language from the root verb "*qara'a*," or whether it was borrowed separately from another language. One scholar, F. Schwally, along with other western researchers, suggests that the word "*qur'ān*" originally derived from the Syriac word "*keryana*," which means a religious scripture or book that must be read regularly.<sup>6</sup> Other scholars argue that "[t]he Arab[s] derived [this word] from the Arami [i.e., the Arabic word came from Aramaic, a Semitic language used in Syria and the Near East starting in the 6th century B.C.] and the Arabs 'had begun to use this word for the meaning of recitation before Islam.'"<sup>7</sup>

From the earliest days of Islam, the word "*qur'ān*" gained more than a linguistic weight. The first verse of the Qur'ān itself is one of the root words of the Arabic word "*qur'ān*." The first word that was revealed from Allāh (God) to Muhammad verbally through the Archangel Jabreel (Gabriel) is the word "*iqra'*," a verb in the imperative (command) tense means "Recite!" or "Read!"

Within the Qur'ān, the word "Qur'ān" itself is used several times. For instance, *surah* 12, *ayyah* 2 describes the Holy text as an "Arabic Qur'ān." There are Arabic words that are used as synonyms for "Qur'ān" elsewhere in the book. Examples include *Al Kitab* (the Book), *Al Furqan* (concerning distinctions between right and wrong), *Al Dhikr* (the Remembrance). All told, within the Holy text itself, there are seventy instances in which the text refers to itself, either expressly by using the word "Qur'ān," or impliedly, by using a synonym.

Within Islamic culture, the word "Qur'ān" is a generic reference to the central religious text of the Muslim faith. In this sense, Muslims consider the Qur'ān as the final revelation of Allāh (God) for guidance and direction of mankind. The Qur'ān follows in time other earlier revelations, such as *Suhuf Ibrahim* (Scrolls of Abraham), the *Zabur* (Book of Psalms), the *Torah* (Old Testament), and the *Injeel*

<sup>6</sup> Farhat Aziz, *Word of "Qur'an" (Its Origin and Synonymous)*, At. Atwa at 5 (2007) posted at [www.pu.edu.pk/site/journal/previousissue.htm](http://www.pu.edu.pk/site/journal/previousissue.htm). [Hereinafter, Aziz.] The author is an Assistant Professor at the Department of Islamic Studies, F.C. College, Lahore, Pakistan.

<sup>7</sup> Aziz, *supra*, at 7-8.

(the Bible, or specifically the New Testament). Interestingly, in contemporary Muslim literature, the word also is used as an adjective to describe scholarly works or theories that emerge from studying the Holy text, whether in the context of the *Shar'ia*, science, or ethics.

### [B] Biblical Parallel

So, then, how do the *ulema* and *fukahā'* go about interpreting and constructing the Qur'ān? That is, how do they decide what ambiguous and vague words in this sacred text mean, and how do they make use of those meanings to help shape the lives of Muslims?

These questions are not unfamiliar in the Catholic Christian context. Is the Bible to be taken literally? The general answer in Catholic Christianity is "no." The Bible contains the Word of God. Indeed, some passages in this sacred scripture are to be understood literally. The Two Great Commandments of Christ — two love God with all one's heart, mind, and soul, and to love one's neighbor as oneself — would be an example.

But, many are not, and require interpretation in light of other passages, their context, and the other sources of Catholic Christianity, namely, Sacred Tradition and the *Magisterium*. For example, there are many historical events recorded in the Old Testament. Did they happen? Yes. Did they happen in exactly the way the Old Testament says they did? No. In other words, there is broad factual accuracy to the events, in the sense of their occurrence, but each and every fact is not literally accurate, in the sense of precisely how and when certain aspects of the events occurred.

### [C] Easy, Simplistic Dichotomies

As in Catholic Christianity with respect to the Bible, in Islam with respect to the Qur'ān, the easy approach answer is to divide interpretation methodologies into "literal" and "liberal," and construction methodologies into "strict" and "flexible." Following this answer, a word is interpreted either literally according to its lexicographic meaning, or liberally, extending that meaning beyond the narrow confines of a dictionary. The word then is applied strictly, whereby it is applied in a manner that it was around the time of the Prophet Muhammad, or perhaps during the era of the *Rashidun*. Or, the word is applied flexibly, in that its use is updated to suit modern times.

Like many easy answers, this one is not entirely wrong — it just is simplistic. If the question had been posed in the context of American Constitutional Law, then many lawyers and legal scholars would realize that the "literal — liberal" and "strict — flexible" dichotomies do not capture the full range of methodologies used with respect to the United States Constitution. In truth, these dichotomies are not binary opposites, but rather are poles at ends of a continuum. Along that continuum are gradations, thus there are a plethora of methodologies. That is true in respect of the Qur'ān, too. Over the centuries since it was first revealed, the *ulema* and *fukahā'* have developed a variety of techniques to interpret and construct ambiguous and vague terms.

### [D] Ramadan's Categorization of Six Approaches

In his 2004 book, *Western Muslims and the Future of Islam*, Professor Tariq Ramadan surveys the range of techniques.<sup>8</sup> He classifies the diversity of methodologies, arguing there are six basic approaches to interpreting the Qur'ān:

#### (1) Scholastic Traditionalism —

Scholastic Traditionalists reject *ijtihād*. They rely solely on the text, and nothing but the text. They insist on the distinction between *dār al-harb* (or *dar-kufr*) and *dār al-Islām* (or *dār al-salam*). They are comprised of adherents to any of the Four Major *Sunni* Schools — *Hanafi*, *Māliki*, *Shāfi'i*, and *Hanbali*, and — as well as the *Jāfari* and *Zaydi Shī'ite* Schools.

#### (2) Salafi Literalism —

The word "Salafi" refers to:

one who ascribes her/himself to the *Salaf* of Islam, based on its meaning in the Arabic language. Amongst contemporary historians, it denotes a follower of a *Sunni* Islamic movement that takes the pious predecessors, the *Salaf* of the patristic period of early Islam, as exemplary models. The word *Salaf* is an Arabic noun which translates to "predecessor," or "forefather" and who are collectively referred to as the "*Salaf as-Saaleh*," or Pious Predecessors, namely the first three Muslim generations. In Islamic terminology, it is generally used to refer to the first three generations of Muslims: the *Sahaba* ("Companions"), the *Tabi'un* ("Followers"), and the *Tabi' al Tabi'in* ("Those after the Followers"). These three generations and their understanding of the texts and tenets of Islam are looked upon as the Islamic orthodoxy, and a model for how Islam should be practiced. *Salafism* is not considered a sect foreign to orthodox Islam, rather a term usually used by *Sunni* theologians since the fifth Muslim generation or earlier to differentiate the creed of the first three generations from subsequent variations in creed and methodology. Landmarks in the history of *Salafi* revival are the three scholars commonly titled with the honorary "*Shaikh al-Islam*," namely, Ahmad ibn Hanbal (d. 855), Taqi ad-Deen ibn Taimiyyah (d. 1328), and Muhammad ibn Abd al-Wahhab (d. 1792), all considered to be revivers of the *Sunnah* and of the *Salafi* creed and methodology in their respective generations.<sup>9</sup>

Like Scholastic Traditionalists, *Salafi* Literalists rely squarely on the text of the Qur'ān and forbid any interpretative reading, i.e., any *ijtihād*. Thus, *Salafism* is regarded as a puritanical approach to Islam. But, *Salafi* Literalists allow for some flexibility in reading the Qur'ān.

#### (3) Political Literalist Salafism —

In this approach, the text of the Qur'ān is read literally. Thus, Political

Literalist *Salafists* also reject *ijtihād*. But, Political Literalist *Salafists* read the Qur'ān literally in combination with specific, political aspirations. The aim of those aspirations — their political agenda — is to overthrow existing powers and implement an Islamic Caliphate.

#### (4) Sufism —

*Sufis* are a mystical Islamic group — indeed, the word "*Sufi*" sometimes is used synonymously with Islamic mystics. *Sufis* believe the texts have a Gnostic meaning. They say this special meaning may be appreciated through meditation, as distinct from the application of independent reasoning (*ijtihād*). Thus, *Sufis*, too reject *ijtihād* as a way of understanding the text of the Qur'ān.

#### (5) Salafi Reformism —

*Salafi* Reformists agree with *Salafi* Literalists in that both groups seek to circumvent the juridical schools of the Traditionists. But, they are different from the *Salafi* Literalists in that they (the *Salafi* Reformists) accept *ijtihād*, believing its practice is an objective, necessary, and constant factor in applying the *fiqh* (Islamic jurisprudence), at every time, and in every place.

#### (6) Liberal Reformism —

This group is the opposite end of the spectrum from Scholastic Traditionalists and *Salafi* Literalists. Whereas they are the most conservative, Liberal Reformists are the most liberal. Liberal Reformists do not insist on the daily practice of religion. Rather, they focus on the spiritual dimension of religion, and on the individual, private practice of religion. That is, religion is — or ought to be — an individual, private matter. Liberal Reformists also see religion as a matter of maintaining culture of origin. Obviously, Liberal Reformists support the use of *ijtihād*.

The thesis Tariq Ramadan argues is that the inevitable consequence of the rejection of *ijtihād* is the ghetto-ization of Muslims who live in the west. That is because rejecting *ijtihād* means disengaging, detaching, and withdrawing from mainstream society.

At the same time, Ramadan cautions against the opposite extreme — namely, reading the text of the Qur'ān as if it were susceptible to free, undisciplined interpretation. To do that is to disengage from the very sources of Islam. Ramadan is a mainstream moderate. Islam and its sources must be a point of reference, even an anchor, but there is a history, and social and cultural context, in which to read the Qur'ān.

Manifestly, these approaches are not in accord with one another anymore than original intent-minded Supreme Court Justices like Antonin Scalia are with liberal activists like former Justice William Brennan. Much of the battle within the Islamic world today is over ideas, and a key issue is how best to interpret and apply the Qur'ān.

<sup>8</sup> See TARIQ RAMADAN, *WESTERN MUSLIMS AND THE FUTURE OF ISLAM* (Oxford, England: Oxford University Press 2004).

<sup>9</sup> *Salafi*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Salafi>.

In the true spirit of Islam, the struggle (*jihād*) to understand the Will of God (Allāh) and follow it, perhaps it does not matter whether one methodology is proven better than all others. Indeed, perhaps such proof is impossible. The struggle is one that necessarily lasts until the end of time. Over time, some methodologies for interpreting the United States Constitution, or the Bible, are discarded as weak, others shown to be persuasive, and yet new ones develop. So it may be with the Qur'ān. What matters is to take up the struggle, to exert oneself in a sincere — and, critically, non-violent — way to discern more deeply what Allāh has revealed, and to practice it in one's own life.

In this struggle, one point is clear to all Muslims, regardless of the method of interpretation or construction chosen. Law — specifically, the *Shari'a* — matters. It is common (though by no means universal) among professors at certain ostensibly elite American law schools to believe that law is just politics, and that legal argumentation and rules are nothing more than the products of expediency. That approach, which has crystallized in movements such as Critical Legal Studies, is an intellectual cul-de-sac, the end circle being one of hopeless and cynicism. It is orthogonal to much of the intellectual history of humankind, during which Natural Law Theory prevails, and during which questions of the relationship among law, morality, and religion are taken seriously. This approach certainly is at variance with Islamic Law.

To the Islamic legal mind, law matters. Invocation of the *Shari'a* to bolster an argument is important only if Islamic Law has a substantive content independent of the intentions or motives of an interested party. (Indeed, this precept is true in any legal system.) In the *Shari'a*, there is such content: it is revealed in the Qur'ān by God (Allāh).

## § 12.04 ISSUES IN QUR'ĀNIC INTERPRETATION

### [A] Translations of Qur'ān and Formal versus Dynamic Equivalence

The Qur'ān was sent by God (Allāh) through the Archangel Gabriel (Jabreel) to the Messenger, the Prophet Muhammad in Arabic. For that reason, the only truly authentic version of the Qur'ān is one in Arabic. Muslims the world over endeavor to learn Arabic, in part so they can read, recite, and hear passages from the Qur'ān in Arabic. Yet, of the 1.57 billion Muslims in the world, only about 300 million are Arabs and native speakers of Arabic. The vast majority of Muslims certainly have not mastered Classical Qur'ānic Arabic, and many of them do not have the time, resources, or even interest to do so. Thus, like most non-Muslims, who are not schooled in Arabic, most Muslims rely on a translation of the Qur'ān into the vernacular.

While the Bible is the most widely translated and read book in human history, there certainly is no shortage of translations and avid readers of the Qur'ān. Translation is a special field unto itself, requiring considerable effort, skill, experience, and judgment. But, as any international or comparative lawyer knows, there is a single, ineluctable trade-off for every translation. On the one hand, a

translator can stick as closely as possible to the original language (Classical Arabic) and thereby provide a literal rendition of the original text. This method is known as "formal equivalence." On the other hand, a translator can seek to discern the intended meaning of the original text, and translate it into modern parlance. This method is known as "dynamic equivalence."

Both methods have strengths and weaknesses. "Formal equivalence" was the same method used to translate the famous King James Version of the Bible from Latin into English in 1611 A.D. Yet, today that English appears artistic and flowery to some readers, but awkward and abstruse to other readers. Thus, other translations of the Bible adopt contemporary English grammar and vocabulary to facilitate comprehension for the widest possible audience. The choice between formal and dynamic equivalence is not exclusive. These methods define ends of a continuum, and depending on the translator, the end-result may be somewhere in between.

Consider the observations of Dr. Laleh Bakhtiar. She is an American convert to *Shi'ism*, and the first American Muslim woman to translate the Qur'ān:

This translation [entitled *The Sublime Quran*, by Dr. Bakhtiar], then, is one of *formal equivalence* in order to be as close to the original as possible. This is the most objective type of translation, as compared to a translation using *dynamic equivalence*, where the translator attempts to translate the ideas or thoughts of a text, rather than the words, which results in a much more subjective translation.

[In respect of not providing commentary on each *surah* and *ayah*,] [i]ntroducing the non-Arabic speaker to the words of the revelation without any commentary is as formal equivalence dictates. Related to the *eternality* of the Quran, each reader of the translation would then be able to ask: As this is the eternal Word of God, what does it mean to me today? What does it say to me? How can I self-identify with it? How do I feel when I read it? Do I accept the arguments that the Quran presents for the Oneness of God?

In writing about the Quran, al-Ghazzali [*i.e.*, Abū Hamid Muḥammad al-Ghazālī, a Persian scholar who lived from 1058-1111 A.D. and is regarded as one of the most important figures in Sunni thought, who is credited with changing the course of Islamic philosophy away from metaphysics based on Ancient Greek philosophy and toward Islam based on cause-and-effect ultimately determined by Allāh, and who attempted a grand synthesis that incorporated Sufi mysticism] says each person should read or recite it, not as a historical document, because then it loses its eternal quality, but as it relates to the person reading or reciting it. He asks: "How can one suppose otherwise when the Quran was revealed to the Messenger not only for him particularly but as a spiritual cure, guidance, mercy and light for all the worlds?" As the Quran says: "We send down in the Quran what is a healing and a mercy for the ones who believe." (16:126).

*The Quran is not an historic text, frozen in the time period of its revelation.* To this end, there are no parenthetical phrases further inter-

preting and elaborating a verse, thus allowing the translation, as the Quran itself is, to be free of any transient political, economic, denominational or doctrinal bias.<sup>10</sup>

Dr. Bakhtiar uses the method of formal equivalence, but argues it enhances the contemporary relevance, and reinforces the eternal nature of the message, of the Qur'an.

This argument is contrary to the conventional wisdom. It is commonly thought the conversion of an old text into modern parlance breathes new life into that text and gives it enduring value. There are analogs to both arguments in respect of the Catholic Mass. On the one hand, the permission to celebrate Mass in the vernacular, granted by the Second Vatican Council, follows the logic of making the Mass as widely understood as possible. On the other hand, the use of Latin for some elements of the Mass, and the continuation of the tradition of the Tridentine Mass, supported by Pope Benedict XVI among others, is an effort to adhere to 2,000 years of tradition that, in effect, is timeless.

The point here is not to resolve the debate as to whether a translation of the Qur'an using formal or dynamic equivalence, or some intermediate approach, is the "best." Rather, the point is to highlight the spectrum of possibilities. In the library of an international or comparative lawyer, it is useful to have multiple renditions of the Qur'an, using different methodologies. For the most part, the lawyer becomes comfortable with one reliable translation, and makes greatest use of it, which provides a degree of consistency and continuity. For instance, throughout the present work, the frequently quoted and cited translation of the Qur'an is by Professor Abdel Haleem.<sup>11</sup> The methodology of this acclaimed 2003 translation tends toward dynamic interpretation, without misrepresenting the Arabic meaning. Professor Abdel Haleem explains:

This translation is intended to go further than previous works in accuracy, clarity, flow, and currency of language. *It is written in a modern, easy style, avoiding where possible the use of cryptic language or archaisms that tend to obscure meaning. The intention is to make the Qur'an accessible to everyone who speaks English*, Muslims or otherwise, including the millions of people all over the world for whom the English language has become a *lingua franca*. The message of the Qur'an was, after all, directly addressed to all people without distinction as to class, gender, or age: it does not rely on archaisms or pompous language for effect. Although the language of the present translation is simple and straightforward, it is hoped that it does not descent to an inappropriate level.<sup>12</sup>

Yet, the utility of having on hand multiple translations comes when it is time to discern the meaning of a particularly knotty or controversial passage. For example, the translation by Dr. Bakhtiar is quoted, along with others, in a subsequent

<sup>10</sup> LALEH BAKHTIAR, THE SUBLINE QUR'AN — ENGLISH TRANSLATION Preface, x-xi (www.sublinequran.org; Laleh Bakhtiar, trans., revised 6th ed., 2009) (emphasis added).

<sup>11</sup> See THE QUR'AN — A New Translation by M.A.S. Abdel Haleem (Oxford, England: Oxford University Press, 2004). [Hereinafter, Qur'an.]

<sup>12</sup> M.A.S. Abdel Haleem, Introduction, in Qur'an, supra, at xxix.

Chapter on Family Law in respect of the highly contentious Qur'ānic passage concerning wife beating (*surah* 4, *ayah* 34). To put the point simply, the student, scholar, or practitioner of Islamic Law, like that of Christianity, surely will appreciate the need for both a "favorite" text of the Qur'an or Bible, and for additional renditions.

## [B] Theory of Repeal (*Naskh*)

The Arabic word "*naskh*" means "repeal." An alternative, complementary, translation is "abrogation." There is a theory of repeal of one verse of the Qur'an by another, or of one *Sunnah* of the Prophet (specifically, a *hadith*) by another.<sup>13</sup> The passage that effects (*i.e.*, causes or brings about) the repeal is the "*nāsikh*." The repealed passage is the "*mansūkh*."

This theory is not part of the Classical Theory of the *Shari'a*, meaning that under an orthodox approach, invoking the theory of *naskh* is not accepted as a mode of interpretation or reasoning. The logic for the orthodoxy is simple enough. If the Qur'an is the literal Word of God, then how can He contradict Himself?

But, the rebuttal also is plain: the Qur'an itself envisions *naskh*. The key passage is *surah* 2, *ayah* 106:

Any revelation We cause to be superseded or forgotten, We replace with something better or similar. Do you [Prophet] not know that God has power over everything?<sup>14</sup>

Based on this passage, the majority of Muslim scholars accept the theory of *naskh*, and thus hold one *ayah* can repeal another, and likewise, one *hadith* can repeal another. According to Professor Burton, the Qur'ānic basis for *naskh* extends beyond this passage, because the doctrine also figures prominently in *surah* 13, *ayah* 39, *surah* 16, *ayah* 101, and *surah* 87, *ayah* 6-7.<sup>15</sup>

As evidence in favor of the theory of *naskh*, just how strong is *surah* 2, *ayah* 106? Arguably, the reference to "any revelation" is not to the Qur'an itself, but to previous Prophetic messages from God — namely, the Old and New Testaments. Interpreted thusly, the passage does nothing more than affirm the veracity of the Qur'an against earlier revelations. This approach favors the minority position, namely, repeal is not possible.

As an example of the abrogation of a Qur'ānic rule by a subsequent *ayah*, two instances come from Islamic Criminal Law. First, consider the punishment for *kadhif* (false accusation of adultery). Suppose the accusation is levied against a woman, but the accuser fails to provide four witnesses. The Qur'ānic punishment of

<sup>13</sup> See JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 115 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982).

<sup>14</sup> Qur'an, supra, 2:106 at 13.

<sup>15</sup> See John Burton, *The Exegesis of Q. 2: 106 And the Islamic Theories of Naskh: Mā (Long A) Nāṣikh Min āya (first A is capitalized and long) Aw Nāṣahā (last a long) Na'ī bi Khairin Minhā (last a long) aw Mithlīhā (last a long)*, 48 BULLETIN OF THE SCHOOL OF ORIENTAL AND AFRICAN STUDIES, UNIVERSITY OF LONDON 30, 3 at 468 (1985) (Cambridge, United Kingdom: Cambridge University Press). [Hereinafter Burton.]

80 lashes (*surah* 24, *ayah* 4) for the accuser is abrogated by the following exception that a husband need only swear four times to God that "he is telling the truth" (*surah* 24, *ayah* 6).<sup>16</sup> Second, consider the gradual banning of *shurb al-khamr* (drinking alcohol) pursuant to *surah* 2, *ayah* 219, then *surah* 4, *ayah* 43, and finally *surah* 5, *ayah* 90. The repealed *ayah*, in this case *surah* 2, *ayah* 219, is one that was revealed to Muhammad chronologically earlier than the replacing *ayah*, in this case *surah* 5, *ayah* 90.<sup>17</sup> Note that when discussing *naskh*, it is assumed the current religious rule is known. Therefore, when *ayah* that contradict current law are found, it is assumed those *ayah* have been repealed (at least when the observer is one who acknowledges the validity of *naskh*).<sup>18</sup>

What is the theory supporting *naskh*? One justification is that as the circumstances of Muhammad and the early Muslim community changed, so too did their religious rules. Professor Burton cites the repealing of *surah* 2, *ayah* 180 by *surah* 4, *ayah* 10–11:

Many verses counsel patience in the face of the mockery of the unbelievers, while other verses incite to warfare against the unbelievers. The former are linked to the Meccan phase of the mission when the Muslims were too few and weak to do other than endure insult; the latter are linked to Medina where the Prophet had acquired the numbers and the strength to hit back at his enemies.<sup>19</sup>

The altered circumstances in Medina led to altered religious rules about battle.

But, how is it possible to justify the Qur'ān as the literal Word of God, on the one hand, with the theory of *naskh*, on the other hand? That is, how can repeal happen without vitiating the integrity of the holy text or impugning God? There are three responses. First, material revealed to Muhammad might have been omitted from the collection of the *Mushaf* (the loose leaf collection of written revelations eventually used to compile the Qur'ān).<sup>20</sup> If the *mansūkh* had been affected in this first way, the revelation would not have been included in the Qur'ān.<sup>21</sup>

This first type of *naskh* also might be accomplished through "divinely controlled forgetting."<sup>22</sup> This theory suggests some material was erased from the memory of Muhammad, and therefore omitted from the compilation of revelations into the

Qur'ān. This definition of *naskh* finds its basis within *surah* 2, *ayah* 160 and *surah* 22, *ayah* 52.<sup>23</sup>

The second way to effectuate the *mansūkh* is by "supersession" (*naskh al-hukm dāna al-tilāwa*).<sup>24</sup> Here, the religious rulings found within a certain *ayah* (or *ayah*) or the *Sunnah* are repealed and replaced by another. When supersession occurs, the wording of the original religious rule remains in the text of the Qur'ān or in the *Sunnah*. However, the rule itself is no longer valid, having been replaced by a textual rule that is also part of the Qur'ān or by a practice found as part of the *Sunnah*.<sup>25</sup>

Lastly, *nāsikh* might bring about the *mansūkh* where the text of a religious rule had been erased, but the rule itself remains valid (*naskh al-tilāwa dāna al-hukm*). This definition of *naskh* was not popular among early exegetes, but was followed by a minority of early Muslim scholars. For instance, of the Four *Sunnite* Schools of law, the Shāfi'i School sometimes acknowledge this definition of *naskh*. This School believes the Islamic penalty for adultery (stoning) originally existed in the Qur'ān, but that the text of the rule was removed, while the rule itself remains valid.<sup>26</sup>

*Naskh* applies to the *Sunnah* of the Prophet, whereby one practice repeals an unlike one. Abū 'Abdullah Al Qurtabi (a 13th century Muslim scholar) observes the punishment Muhammad advocated for adulterers.<sup>27</sup> The Qur'ānic punishment, in *surah* 24, *ayah* 2, for adultery (*zinā*) is 100 lashes. The *Sunnah* holds that adulterers are to be stoned to death. For a time, both punishments were inflicted on adulterers, the striking before the stoning. But, Muhammad did not long require adulterers be whipped before stoned. The practice of striking an adulterer before execution was allowed to "lapse."<sup>28</sup> In sum, the *Sunnah* of flogging and stoning was replaced by the *Sunnah* of stoning.<sup>29</sup>

Can the *nāsikh* or *mansūkh* be an *ayah* or a *Sunnah*? This question provokes some controversy. The majority of scholars accept that a Qur'ānic passage can negate a *hadith*. (To be sure, the Prophet would not be expected to say something intentionally that is contradictory to, and requiring repeal by, the Qur'ān, so the issue arises in the context of an earlier-in-time *hadith* versus a later-in-time *ayah*.) Consider the change in *qibla* (the ritual direction Muslims face to pray) that took place 2 years after the *Hijra*. It appears the specific direction Muslims originally faced (towards Jerusalem) was not conveyed in *surah* 2, *ayah* 142–144, but rather was a matter of the personal practice of Muhammad, i.e. it was a *Sunnah*, not in an *ayah*. But, this Qur'ānic passage conveys the direction they should face during prayer, namely, the *Ka'ba*. Therefore, the change in *qibla* can be thought of as an

instance when an *ayah* changed a *Sunnah*.<sup>30</sup>

But, among scholars who accept the theory of *naskh*, some do not agree a Qur'ānic verse can repeal a practice of Muhammad. *Imām Shāfi'ī*, founder of the *Shāfi'ī* School, originally believed that only an *ayah* could repeal an *ayah*, and only a *Sunnah* could repeal a *Sunnah*. Yet, his belief gave way to one — held by some, not all, scholars — in which any *Sunnah* is not only equal to any *ayah*, but even can be superior to it. For these scholars, then, an *ayah* can repeal an *ayah*, and a *Sunnah* can repeal an *ayah*, but an *ayah* can never repeal *Sunnah*.<sup>31</sup> Thus, Scholars disagree as to whether a *hadith* can repeal a Qur'ānic passage.

## § 12.05 SUNNAH OF PROPHET

### [A] Definition and Relation to “*Hadith*”

The literal meaning of “*sunnah*” is way or path that others will follow. In the normative sense, this method can be a good *sunnah*, or it can be a bad *sunnah*. Indeed, in Arabic, “*sunnah*,” without any religious context, means a way or method that can have two states, either good or bad. The word is derived from the word “*sanān*,” which is Arabic for: a road or a path.<sup>32</sup>

The religious definition of “*Sunnah*” refers to the life of the Prophet. It encompasses whatever the Prophet said or did. All of his utterances (other than his recitations of Qur'ānic verses), including decisions and *dicta*, plus his actions are reported as *Sunnah*. Further, his way of life — the example he provided — also is called “*sunnah*.” Not surprisingly, the Prophet is a model for all Muslims and his method and manner are defined as *Sunnah*:

*Sunna* means the path that is trodden (*al-tariq al-mastūk*), which entails holding fast to whatever the Prophet and his rightly-guided successors held of doctrines, deeds, and sayings.<sup>33</sup>

This definition illustrates the key point that “*Sunnah*” is a broad term that covers many aspects of Islam. It could be the way the Prophet showed people by example, as well as by word. *Sunnah* also could be different things came from his successors, companions, or any well known scholars. In contrast, *hadith* is a narrower term than *Sunnah*. “*Hadith*” is limited to the Prophet's teaching, in effect, his non-Prophetic statements (i.e., his utterances other than recitals of Qur'ānic verses). But, critically, the existence of a *hadith* implies a written, textual record of that teaching. Such textual records are researched, debated, and verified by *ulema* and *fukahā*.

Thus, a *hadith* is a teaching of the Prophet. Literally, it means “speech, report, or account.”<sup>34</sup> Specifically, it is what is narrated from the Prophet, but it could be a

narration not only of something he said, but also of what he did (his actions, such as his approval or disapproval of certain conduct) in some situations. Thus, *hadith* is defined as follows:

*Hadith* implies the narration of a saying, or of an act, or of an approval (*taswib*) of the Prophet, irrespective of whether the matter is authenticated or still disputed.<sup>35</sup>

Manifestly, the terms “*Sunnah*” and “*hadith*” overlap in some places, and are separate in other places. However, the two terms (*Sunnah* and *hadith*) are different words that have different meanings:

*Hadith* and *sunnah* are generally taken as synonymous terms. This is not a correct impression. The words *hadith* and *sunnah* have entirely different connotations, and each one holds a different status in the *Shari'a*. If we assign the same meaning to both the terms, it would create a lot of complications. For a proper understanding of the science of *hadith*, therefore, it is necessary to know precisely the difference between *hadith* and *sunnah*.<sup>36</sup>

In brief, the two terms are closely related to one another, but not synonymous.

In what way do the two terms overlap? One example is what is narrated from the Prophet Muhammad, whether a saying or action, in a matter of teaching. The saying or action recounted is called a *hadith*, but also may be called a *Sunnah*. Another illustration of overlap relates to the people who follow the Prophet's teaching. They are called the people of the *Sunnah*, but also people of the *hadith*. They have come to be known as “*Sunnites*” or “*Sunnis*.” Finally, books devoted to the collection of *hadiths* also are called books of the *Sunnah* or collections of the *Sunnah*.

In what way do the two terms differ from each other? One example concerns the manner, method, and path of the Prophet. That manner, method, and path is called *Sunnah*, but it is not called a *hadith*. The difference here is technical. It is not what the Prophet says or teaches, but how the Prophet lived, that is at issue. Following the way of life established by the Prophet can be called only *Sunnah*. A *hadith* is merely the recorded account of the Prophet, literally, words written on a page. Therefore, *hadiths* may be a source of the *Sunnah* of the Prophet.<sup>37</sup>

### [B] Codification of *Shari'a*

The death of the Prophet in 632 A.D. left a void in the social and legal fabric of the emerging Arab-Islamic Empire. Faced with internal crisis and dissension over succession, the leaders needed a formula to govern newly conquered territory and

<sup>30</sup> See BOSWORTH, *supra*, at 129–30, 1009–12.

peoples in it. This realization triggered the arduous process of trying to codify the *Shari'a*.

During the time between 662 and 692 (40–60 years after the death of the Prophet), a consensus emerged among Muslims believing it necessary to define a specific code of behavior, practices and beliefs. Such a code would allow any Muslim to know exactly what he or she was supposed to do to lead a life in accordance with God's Will, no matter where he was located (geographically or socially) in the Muslim community (*ummah*).

Due in part to an expanding empire, the undirected Muslim world was threatening to tear itself apart. Leaders argued over the definition, codification, and establishment of a *Shari'a*. It must be a universally accepted, but specific, code of what a Muslim must and must not do, believe and not believe, in order to submit to the Will of God. It must be written down and disseminated to the legal and religious leaders to ensure compliance.

To be sure, this movement is not synonymous with codification in the Anglo-American sense, or the civil law sense, of a single book that has all the rules. There have been efforts at that type codification in Islamic legal history, but it has never been achieved to the same degree. Rather, it is a written "code" in a more loose sense of the development of a body of law. The *Shari'a* is a human interpretation of Divine Will of God (Allāh), coming as close to the ideal pattern of behavior as possible.

It was apparent a uniform body of law was desirable, but achieving consensus among everyone (including civil, political and religious leaders) was difficult. The traditional sources of *Shari'a* are the Qur'ān and *Sunnah* of the Prophet. The Qur'ān is the most important source, being the unimpeachable word of God (Allāh). But, the second source, the words and deeds of the Prophet (*Sunnah*), is essential to understand it. By acknowledging the *Sunnah* as the most authoritative guide to the application of the Qur'ān in daily life, the Islamic community could rely, and cite to, the words and actions of the Prophet. The key was to collect, compile, elucidate, and codify the *Sunnah* of the Prophet, everything he said and did that could be authenticated through careful research.

Additionally, the *Sunnah* of the first Islamic community became regarded as authoritative in its own right. It was not as authoritative as the *Sunnah* of the Prophet himself, but it was authoritative nonetheless. Muslims looked to what the first Islamic community did, and they argued all Islamic communities ought to strive to achieve that communal behavior. Thus, the *Sunnah* of the Prophet may be regarded as a "guide to the Guide (Qur'ān)" for Muslims, and the *Sunnah* of the first Islamic Community may be a further guide to interpret the actions of the Prophet.

The weight given to the *Sunnah* of the first Islamic Community was, and still is, a point of contention among religious leaders. Those religious scholars (*ulema*) who began the process of collecting and sifting through accounts of the Prophet and his first followers played a significant role in shaping the *Shari'a*. Compilations of the *hadith* that were collected had to be checked to ensure the account was in sync with the Will of Allāh (God) and would not misdirect the faithful.

### [C] Authority of Ulema

For Westerns, codification of law may bring to mind political institutions such as a legislature or parliament. These institutions, thereby, draw the power to make law from a mandate from the people by whom they are elected. The *ulema*, however, after the death of the Prophet, did not form a single body, nor were they elected by people at large, nor were most specifically chosen by the political leadership.

All this begs the question: where did the *ulema* get the power to codify the *Shari'a*? It is an authority granted to them by the Muslim community, in recognition of the scholarship and study of the two fundamental sources (Qur'ān and *Sunnah*). Thus, the *ulema* hold a powerful position, albeit typically with informal authority.

Between the 8th and 11th centuries, the *ulema* engaged in two highly significant processes: identification and codification of the *Sunnah*, and codification of the *Shari'a*. First, the *ulema* gathered, comprehended, and authenticated the *Sunnah* of the Prophet, and the *Sunnah* of the first Islamic community. This process required study of the non-prophetic words of the Prophet, i.e., of the *hadith*, and of biographies and history. The *ulema* spent an enormous amount of time writing biographies of the Prophet, his companions of the Prophet, and of the first Islamic Community. Once the *ulema* had codified the *Sunnah*, the *ulema* looked at both the Qur'ān and the *Sunnah* to develop and write down codes of *Shari'a*. The Qur'ān and *Sunnah* were the bases from which the *ulema* uncovered precisely what Muslims were supposed to do, and not to do.

### [D] Achievement and Tension

The creation of the *Shari'a* is an incredible achievement of Islam because most Muslims do not have the time or energy to devote a prodigious amount of time to the study of the Qur'ān and the *Sunnah*, any more than most Christians do of the Bible and the life of Jesus. In codifying the *Sunnah* and creating the *Shari'a*, Muslims have a guide — in addition to the Qur'ān itself — as to how to live in the will of God.

But a certain tension still holds the strings of this great achievement: it is not God, but the *ulema*, that have defined the *Shari'a*. It is incumbent upon every Muslim that he or she read, interpret, and apply the Qur'ān in a manner consistent with the Will of God (Allāh). But how is a regular (non-*ulema*) Muslim to know which interpretation to obey? In other words, how does a Muslim on the one hand, approach the Qur'ān and thereby approach God directly on his (her) own terms, and on the other hand, adhere to the *Shari'a*, which is based on reference to the Qur'ān and *Sunnah* and codified by the *ulema* for the entire Muslim community?

All told, it took 300–400 years after the death of the Prophet to finish the codification of the *Shari'a*. To most Muslims in the world — 85 percent of them, the *Sunnites* — believe that by the end of the 11th century, the basic parameters (or framework) of the *Shari'a* had been clearly identified and elucidated.

By and during the 12th, 13th, and 14th centuries, Muslim scholars spoke of the "closing of the door of interpretation." They did not mean discussions of the Qur'ān and *Sunnah* would cease. Rather, they meant the basic framework that made up the *Shari'a*, and the basic issues with which the *Shari'a* dealt, had been authoritatively defined. Thus, since this time the *Sunni* Muslim scholars have focused on explaining (1) the *Shari'a*, (2) the application of the *Shari'a* to the present, and (3) how the application of the *Shari'a* in the present relates to the application of the *Shari'a* in the past.

It is important to realize this process of codification has not stopped. It still is going on today. The codes of Islamic Law — the *Shari'a* — still are being produced, codes of what a Muslim is supposed to do, and what a Muslim is not supposed to do. These codes are very detailed and very broad in scope. The codes cover matters like how to engage in ritual purification, how to pray properly, and how to carry out the Five Pillars and other major obligations. In addition, the codes deal with the minor obligations, and they instruct as to how to strike a balance among obligations. They are based on 1,400 years of scholarship by the *ulema*, a tradition that continues to the present.

## § 12.06 COMPILATIONS OF HADĪTH

### [A] Question of Authenticity

The importance of authenticity in respect of an account of the sayings and deeds of a religious leader is not a question unique to Islam. Once the leader has passed away, efforts to collect his (or her) teachings are made, particularly if those teachings were wholly or partly through the spoken word. Rigor and scrutiny are required to ensure the teachings have been properly recorded and transmitted. After all, memories grow dim, and eyewitnesses die. Written compilation must accurately reflect what the leader said and did, and distortions must not be introduced with re-publications and translations through the ages. Otherwise, followers in subsequent generations may be led astray.

The critical issue, therefore, is: how is it known that what is written down is an accurate account of what a religious leader said and did, and thus a reliable basis on which to shape behavior? The question is familiar to Catholic Christianity. Saint Luke deals it at the start of his *Gospel*:

<sup>38</sup>Since many have undertaken to compile a narrative of the events that have been fulfilled among us, <sup>39</sup>just as those who were eyewitnesses from the beginning and ministers of the word have handed them down to us, <sup>40</sup>I too have decided, after investigating everything accurately anew, to write it down in an orderly sequence for you, most excellent Theophilus [literally, "friend of God"], <sup>41</sup>so that you may realize the certainty of the teachings you have received.<sup>38</sup>

In other words, the whole purpose for which Saint Luke writes is to provide:

Theophilus and others like him with certainty — assurance — about earlier instruction they have received (1, 4). To accomplish this purpose, Luke shows that the preaching and teachings of the representatives of the early church are grounded in the preaching and teaching of Jesus, who during his historical ministry (Acts, 1, 21-22) prepared his specially chosen followers and commissioned them to be witnesses to his resurrection and all else that he did (Acts 10, 37-42). This continuity between the historical ministry of Jesus and the ministry of the apostles is Luke's way of guaranteeing the fidelity of the church's teaching to the teaching of Jesus.<sup>39</sup>

Saint Luke uses the methodology of documenting continuity, in thorough and organized manner, to provide the necessary assurance of authenticity as to what Jesus said and did. He is a second- or third-generation Christian, and he acknowledges his debt to the testimony of eyewitnesses who came before him.<sup>40</sup> To be sure, it may be suggested that he, the writer, is accrediting his work. That is why corroborating evidence is important, namely, to verify and buttress his work. Such evidence, for Catholic Christians, is found (*inter alia*) in other passages of the Bible.

Islam, too, considers the question of authenticity in respect of what the Prophet Muhammad said, apart from his revelations set out in the Qur'ān. The phrase "apart from his revelations" refers to his non-prophetic utterances — what he did not repeat as a *rasūl* (messenger) directly from what the Archangel Gabriel conveyed to him from God (Allāh), but rather what he said and did as a leader of a religious movement. These sayings and doings are known as the "*Sunnah*" of the Prophet. The Arabic term "*Sunnah*" means "tradition." The traditions of the Prophet are compiled in multi-volume collections called the "*hadīth*" (singular), or "*hadīths*" or "*ahādīth*" (plural). The word "*hadīth*" refers both to the prophetic tradition of Muhammad, and to the collection of what he said and did, aside from what was revealed to him and is set out in the Qur'ān.

Note that there is an important sub-category of *hadīths* known as "*hadīth qudsi*." This term literally means "sacred *hadīth*." Muslims regard a *hadīth qudsi* as the Word of God (Allāh) repeated by the Prophet Muhammad, but in his (Muhammad's) own words. As repeated by the Prophet, the statement was recorded, transmitted through the process of *isnād*, and ultimately authenticated. Muslims believe Allāh revealed to the Prophet the *hadīth qudsi*, on some occasions through a dream. But, in contrast to a passage from the Qur'ān, a *hadīth qudsi* is not the direct word of Allāh. A loose and imperfect analogy might be that a *hadīth qudsi* is an accurate and close paraphrasing, but not an exact quote, of what God said to the Prophet. As such, it may well carry greater weight than a regular *hadīth*, but less weight than a Qur'ānic passage.

### [B] Isnād (Chain of Transmission)

For several centuries following the death of Muhammad in 632 A.D., Muslim religious scholars (*ulema*) worked tirelessly to collect the *hadīths*, and to check their accuracy. In his epic *The Decline and Fall of the Roman Empire* (1776),

<sup>38</sup> Introductory Note to *The Gospel According to Luke*, in BIBLE, *supra*, at 96 (emphasis added).

<sup>40</sup> See *The Gospel According to Luke*, in BIBLE, *supra*, fn. to 1, 1-4 at 97.

<sup>38</sup> *The Gospel According to Luke*, in BIBLE, *supra*, at 97 (emphasis added).

British historian and Member of Parliament Edward Gibbon (1737-1794) writes:

In all religions the life of the founder supplies the silence of his written revelation: the sayings of Mohammed were so many lessons of truth, his actions so many examples of virtue, and the public and private memorials were preserved by his wives and companions. At the end of two hundred years the *Sonna*, or oral law, was fixed and consecrated by the labours of Al Bochari [Imām Bukhārī], who discriminated seven thousand two hundred and seventy-five genuine traditions from a mass of three hundred thousand reports of a more doubtful or spurious character.<sup>41</sup>

However, the effort to collect the non-prophetic utterances of the Prophet began earlier than Gibbon intimates. Beginning under the Caliph Omar, Muhammad ibn Muslim ibn Shihab az-Zurhi (died 742), began to not only gather *ḥadīths*, but also created a standard for their authentication.<sup>42</sup>

"*Isnād*" is the "chain of transmission" for *ḥadīths*. In order to be considered authentic, a *ḥadīth* must be related back to the Prophet in a reliable manner. Az-Zurhi formulated a scale to grade the *ḥadīths* he collected. A *ḥadīth* may be distinguished according to whether it was "heard," "reported," "disclosed," "found," or recorded in other circumstances.<sup>43</sup> When recording a *ḥadīth*, it is recognized that the collector or transmitter (*raṣī*) of the information may edit the transmission itself (*riwayah*) for style. This explains why the same *ḥadīth* may be found in different collections with slight variations in the wording.<sup>44</sup>

Az-Zurhi died before he finished his collection *ḥadīth* for Caliph Omar, but he had students who continued his work and promulgated his methods. *Isnād* quickly became important for grading collections of *ḥadīths* and their sources. There are four such gradations, in descending order of authenticity:

- (1) *Mutawatir*, or *ṣaḥīḥ* — reliable because of high corroboration.
- (2) *Hasan* — good.
- (3) *Da'if* — weak.
- (4) *Mawdu'a* — fabricated.

These gradations are based on the number of people (*ruwat*) who transmit the *ḥadīth*, their reputation for accuracy and honesty, and the degree of consistency in the wording of the *ḥadīth* in different transmissions.

The highest rating for a *ḥadīth*, "*mutawatir*," means that particular *ḥadīth* is reported by many different sources. "*Mutawatir*" signifies the highest level of authenticity a *ḥadīth* can have. In effect, this denomination signifies the *ḥadīth* has been highly corroborated. Thus, a *ḥadīth* that is "*mutawatir*" also is known as

"*ṣaḥīḥ*," which means reliable. In contrast, "*hasan*" is good, and "*da'if*" is weak. "*Hasan*" connotes the second highest level of authenticity that a *ḥadīth* can have, meaning that the *ḥadīth* has been corroborated, but not as extensively as is the case with a *ḥadīth* that is "*ṣaḥīḥ*," and there are some discrepancies in the wording of the versions of the *ḥadīth*. The third highest levels of authenticity, *da'if*, signifies a *ḥadīth* that is weak. Such a *ḥadīth* is not widely corroborated, and contains some uncertainty or flaw, such as an interruption in the chain of transmission (*isnād*) or a transmitter in it (*raṣī*) is unknown. Finally, a *ḥadīth* considered "*mawdu'a*" is fabricated.<sup>45</sup> Indeed, it is not erroneous to call the statement a *ḥadīth*, because it is not accepted as and authentic, reliable utterance of Muhammad. Rather, it is fabricated, perhaps for reasons of politics, religion, or self-interest.

Even today, collections of *ḥadīths* are judged by their authenticity. The compilations of Al Bukhārī and Ṣaḥīḥ Muslim are now and were then considered to be two of the most accurate renditions of the words and deeds of the Prophet.<sup>46</sup> Their method of *isnād* is based on the recollections of the pious. Because it is unthinkable God-fearing men would lie about sacred matters, each person in the chain of transmission could vouch for the others. If, however, the *ḥadīth* was passed through a person of dubious integrity, the authenticity of the *ḥadīth* was called into question. Therefore, biographies of the Prophet's Companions were scrupulously researched as well.<sup>47</sup>

### [C] Summary and Evaluation of Ḥadīth Compilations

Beginning after the death of the Prophet (632), many different versions of *ḥadīth* were collected. The Islamic scholars of the time did not all agree on which *ḥadīth* were authentic. The "tightest," i.e., strictest, version was recorded by 'Isa'at. His tough standards for authenticity meant only 3,956 *ḥadīths* could be authenticated. On the other hand, Imām Hanbal lists 22,199 *ḥadīths*. Generally speaking, Bukhārī and Ṣaḥīḥ Muslim, are regarded as the most famous and reliable.

Imāms Bukhari and Muslim were also very strict on which *ḥadīth* they want to add to their collections. According to a report about Bukhārī:

I selected [the content of] this book — meaning the *Ṣaḥīḥ* book — from about 600,000 *ḥadīths*. Abu Sa'd al-Malini informed us that 'Abdullah Ibn 'Udayy informed us: I heard al-Hasan Ibn al-Husayn al-Bukhārī say: "I have not included in my book *al-Jami'* but what is authentic, and I left out among the authentic what I could not get hold of."<sup>48</sup>

Imām Muslim, also known for his selective collection, tried to focus only on clearly authenticated *ḥadīths*. He once said:

<sup>45</sup> See GLASSE, *supra*, at 160.

<sup>46</sup> See GLASSE, *supra*, at 160.

<sup>47</sup> See GLASSE, *supra*, at 160.

<sup>48</sup> Khalid al-Khazraji, Muhammad Ghoniem & M.S.M. Saifullah, On The Nature Of Hadith Collections Of Imam Al-Bukhari & Muslim, posted at [www.islamic-awareness.org/Hadith/bukhari.html](http://www.islamic-awareness.org/Hadith/bukhari.html) (emphasis added). [Hereinafter, KHAZRAJI.]

<sup>41</sup> EDWARD GIBBON, THE DECLINE AND FALL OF THE ROMAN EMPIRE 658 (1776) (New York, New York: Penguin Books, abridged version, 1980). [Hereinafter, GIBBON.] The 6 volumes of this work originally were published between 1776 and 1788.

<sup>42</sup> See GLASSE, *supra*, at 160.

<sup>43</sup> See GLASSE, *supra*, at 160.

<sup>44</sup> See GLASSE, *supra*, at 160.

I have not included in my present book anything but with proof [regarding authenticity], and I have not left out anything but with proof. . . . I did not include everything that I judge authentic (*ṣaḥīḥ*), I only included what received a unanimous agreement, i.e., what fulfilled all the criteria of authenticity agreed upon.<sup>49</sup>

Therefore, Muslim scholars consider Bukhārī and Muslim's collections as the most authenticated collections among all other *ḥadīth* collections. The selective work of both *Imāms* distinguishes them from other compilations.

Table 12-1 shows the most famous compilations, the Islamic scholars who compiled them, and the year(s) in which they lived. The Table also shows the number of acts and sayings of the Prophet in each *ḥadīth* compilation. Not all *ḥadīth* compilations contain the same number of acts and sayings. The listings are in chronological order.

Table 12-1:  
Compilations of *Ḥadīths*

Years	Compiler	Biography	Name of Compilation	Number of <i>Ḥadīth</i>
<i>Life of Compiler (A.D. and A.H.)</i>	<i>Name of Islamic Scholar Doing the Compilation</i>	<i>Brief Biographical Information about Compiler</i>	<i>Ḥadīth Title</i>	<i>Number of Sayings or Acts in the Compilation</i>
780-855 (164-241 A.H.)	Ahmed Ibn Ḥanbal	Ahmad bin Muhammad bin Hanbal Abu 'Abd Allah Al Shaybani. Born in Bagdad, famous Islamic scholar, founder of <i>Ḥanbalī</i> School.	Mosnad <i>Imām</i> Ahmed	22,199

Years	Compiler	Biography	Name of Compilation	Number of <i>Ḥadīth</i>
<i>Life of Compiler (A.D. and A.H.)</i>	<i>Name of Islamic Scholar Doing the Compilation</i>	<i>Brief Biographical Information about Compiler</i>	<i>Ḥadīth Title</i>	<i>Number of Sayings or Acts in the Compilation</i>
810-870 (194-256A.H.)	Muhammad Ibn Ismail Al Bukhārī	Muhammad Ibn Ismail Ibn Ibrahim Ibn Al Mughīrah Ibn Bardizbah Al Bukhari ( <i>Imām</i> Bukhārī). Born in Bukhara (Uzbekistan), raised by his mother who encouraged him to attend school and learn from scholars.	Saḥīḥ Bukhārī ( <i>Imām</i> Bukhārī)	7,275 <i>ḥadīths</i> total  2,712 non-duplicated <i>ḥadīths</i>
817-888 (202-275 A.H.)	Sulaiman Bin Al-Aash'ath Al-Azdi	Abu Dawood Sulayman ibn As-h'ath al-Azadi al-Sijistani. Born in Sijistan (Afghanistan), traveled extensively (Iraq, Egypt, Syria, Arabian Peninsula, Khurasan) to collect <i>ḥadīths</i> .	Sunan Abū Dawood	4,800
821-875 (206-261 A.H.)	Muslim Ibn Al-Hajjaj Al-Nisaburi	Abul Husayn Muslim ibn al-Hajjaj Qushayri al-Nishapuri. Born in Nishapure (Iran), son of local scholar, student of <i>Imām</i> Bukhārī, traveled through Arabian Peninsula, Egypt, Iraq, and Syria to collect <i>ḥadīths</i> .	Saḥīḥ Muslim ( <i>Imām</i> Muslim)	9,200

<sup>49</sup> See Khazraji, *supra* (emphasis added).

## Chapter 13

### SECONDARY SOURCES: *ĪJMA'* AND *QIYĀS*

I charged your judges at the time, "Listen to complaints among your kinsmen, and administer true justice to both parties even if one of them is an alien. In rendering judgment, do not consider who a person is; give ear to the lowly and the great alike, fearing no man, for judgment is God's."

DEUTERONOMY 1:16-17a

#### SYNOPSIS

#### § 13.01 *ĪJMA'* (CONSENSUS OF ISLAMIC SCHOLARS)

- [A] Definition
- [B] Historical Background
- [C] Modern Perspectives

#### § 13.02 *QIYĀS* (ANALOGICAL REASONING)

- [A] Definition
- [B] Historical Background
- [C] Modern Perspectives

#### § 13.03 DESIRABILITY: SCALE OF RELIGIOUS AND LEGAL QUALIFICATIONS (*AL AḤKĀM AL KHAMSA*)

#### § 13.04 VALIDITY: SCALE OF VALIDITY

#### § 13.05 RELATIONSHIP BETWEEN SCALES

#### § 13.01 *ĪJMA'* (CONSENSUS OF ISLAMIC SCHOLARS)

##### [A] Definition

*Ījma'* is the first of the four sources of Islamic law considered a dependent source.<sup>1</sup> If the Qur'ān or *Sunnah* do not directly address a question, legal professionals may turn to *ijma'* for the answer to that question. *Ījma'* means "consensus." If a rule or interpretation has been agreed upon, it becomes definite and binding law in Islamic jurisprudence, so long as it does not conflict with either

<sup>1</sup> C.G. WEERAMANTRY, *ISLAMIC JURISPRUDENCE — AN INTERNATIONAL PERSPECTIVE* 39 (1988) (Kuala Lumpur, Malaysia: The Other Press, 2001 ed.) (emphasis added). [Hereinafter, WEERAMANTRY] See generally JOHN MAKDISI, *ISLAMIC PROPERTY LAW* ch. 1F (Durham, North Carolina: Carolina Academic Press, 2005) (concerning consensus and precedent) [Hereinafter, MAKDISI.]

the Qur'an or *Sunnah*.<sup>2</sup> Thus, *ijma'* is a methodology or tool, that is, an intellectual process, the application of which produces a legal conclusion.

But, what amount of consensus is needed and from whom? Justice Weeramantry defines *ijma'* as:

[T]he general consensus among Islamic scholars of a particular age in relation to the legal rule correctly applicable to the situation.<sup>3</sup>

Professor Kamali requires the unanimous agreement of the *mujtahidun* of the Muslim community of any period following the death of the Prophet Mohammed on any matter for a proper consensus.<sup>4</sup> He writes:

*Ijma'* is defined as the unanimous agreement of the *mujtahidun* of the Muslim community of any period following the demise of the Prophet Muhammad on any matter. In this definition, the reference to the *mujtahidun* precludes the agreement of laymen from the purview of *ijma'*. Similarly, the phrase "the *mujtahidun* of any period," refers to period in which there exists a number of *mujtahidun* at the time an incident occurs. Hence it would be of no account if a *mujtahid* or a number of *mujtahidun* become available only after the occurrence of an incident. The reference in the definition to "any matter" implies that *ijma'* applies to all juridical (*shari'i*), intellectual (*'aqli*), customary (*'urfi*) and linguistic (*lughawi*) matters. . . . Some *ulema* have confined *ijma'* to religious and other to *shari'i* matters, but the majority of *ulema* do not restrict *ijma'* to either.<sup>5</sup>

These two definitions, from Justice Weeramantry and Professor Kamali, attribute important decisions to the educated legal elite, not the Muslim community (*ummah*).

Note the term "*mujtahidun*" (plural). A "*mujtahid*" (singular) is any educated Muslim competent to interpret Islamic Law in practical contexts, possibly through the use of *ijtihad* (independent reasoning), and arrive at rulings that are binding, but only on himself. What are the qualifications for becoming a "*mujtahid*"? One answer is:

The qualifications for a *mujtahid* were set out by Abū'l Husayn al-Basri (died 467 A.H./1083 C.E.) in "*al Mu'tamad fi Usul al-Fiqh*" and accepted by later *Sunni* scholars, including al-Ghazali. These qualifications can be summed up as (i) an understanding of the objectives of the *Shari'a* and (ii) a knowledge of its sources and methods of deduction. They include:

- A competence in the Arabic language which allows him to have a correct understanding of the Qur'an. That is, he must appreciate the subtleties of the language so as to be able to draw accurate

deductions from the "clear and un-crooked Arabic" of this infallible source, and that of the *sunnah*.

- An adequate knowledge of the Meccan and Medinese contents of the Qur'an, the events surrounding their revelation and the incidences of abrogation (suspending or repealing a ruling) revealed therein. He must be fully acquainted with its legal contents (the *ayat al-ahkam*) — some 500 verses, according to al-Ghazali. He need not have a detailed knowledge the narratives and parables, nor of the sections relating to the hereafter, but he must be able to use these to infer a legal rule. He needs to be acquainted with all the classical commentaries on the *ayat al-ahkam*, especially the views of the Companions of the Prophet [*Ṣaḥābah*].
- An adequate knowledge of the *sunnah*, especially those related to his specialisation. He needs to know the relative reliability of the narrators of the *hadith*, and be able to distinguish between the reliable from the weak. He needs to have a thorough knowledge of incidences of abrogation, distinguish between the general and specific, the absolute and the qualified. One estimate (by Ahmad ibn Hanbal) suggests that 400,000 *hadith* need to be known.
- He should be able to verify the consensus *ijma'* of the Companions of the Prophet, the successors and the leading *imāms* and *mujtahideen* of the past, especially with regard to his specialization. Complementary to this, he should be familiar with the issues on which there is no consensus.
- He should have a thorough knowledge of the rules and procedures for reasoning by analogy (*qiyās*) so he can apply revealed law to an unprecedented case.
- He should understand the revealed purposes of [the] *Shari'a*, which relate to "considerations of public interest," including the Five Pillars protection of "life, religion, intellect, lineage" and property. He should also understand the general maxims for the interpretation of *Shari'a*, which include the "removal of hardship," that "certainty must prevail over doubt," and the achievement of a balance between unnecessary rigidity and too free an interpretation.
- He must practice what he preaches, that is he must be an upright person whose judgment people can trust.<sup>6</sup>

There is a distinction between the terms "*mujtahidun*" and "*fukahā*" (or "*mujtahid*" and "*faqih*," singular). But, it is subtle and not entirely clear-cut. "*Fukahā*" refers to Islamic jurists, which suggests this class of persons have had formal training in the *Shari'a*. They would all qualify as "*mujtahidun*," but they are more than that because of their training. The converse would not be true — not all "*mujtahidun*" would qualify as "*fukahā*." A loose analogy might be between an American lawyer, who holds a *Juris Doctor* (J.D.) degree and is licensed by a state

<sup>6</sup> *Ijtihad*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Ijtihad>.

bar, and an educated American who is knowledgeable about the law, but neither holds a J.D. degree nor has passed a bar exam.

Arguments are made that *ijma'* is not binding unless the entire Muslim community agrees to a particular interpretation after extensive discussion.<sup>7</sup> After Islam began to spread, true community discussion became more difficult to achieve, making universal consensus nigh impossible. *Ījma'* may still develop regionally or by School, but it may not be considered immutable until it is accepted by the entire Muslim community.<sup>8</sup> Only topics that are universally accepted cannot be subject to error.<sup>9</sup>

The manner of acceptance may differ depending on the issue at hand. *Ījma'* may be accepted actively by verbal consensus or action, or passively by staying silent and failing to object.<sup>10</sup> Establishing *ijma'* for transactional matters may be easier than for issues concerning proper worship.<sup>11</sup> For example, consensus for an acceptable business transaction may be manifest through silence, whereas the cleanliness of the body for prayer requires actual discussion before a final decision can be reached.<sup>12</sup>

The need for true consensus, rather than majority rule, is a notable feature of *ijma'*. Getting most *ulema* to agree on a particular interpretation is not enough to make it binding; everyone must agree.<sup>13</sup> This need stems from an innate distrust of the individual, and faith that good decisions will be made on behalf of the *ummah*. This notion is based on a *ḥadīth* of the Prophet: "My nation will not unanimously agree in error."<sup>14</sup>

If *ijma'* is determined by a consensus of legal scholars (*ulema* or *mujtahidun*?), several elements must be present when the issue arises. First, there must be a number of *mujtahidun* at that time (in order for there to be a plurality for a consensus). Next, there must be unanimity among the *mujtahidun* no matter where they are or who they are. Third, the consent must be expressly given. Finally, there must be complete agreement; majority voting is not enough.<sup>15</sup>

The *mujtahidun* who give their consent must meet certain standards. First, they must be in good moral standing, evidenced by their ability to give testimony in open court. Second, the *mujtahidun* must be Muslim. Third, the *mujtahidun* must be

qualified to make an informed decision on the issue at hand, especially if it is a specialized one.<sup>16</sup>

Once the scholars reach a consensus, the *ijma'* becomes binding on the entire Muslim community. Later *mujtahidun* cannot break the *ijma'* once it is formed. It would take the consensus of the entire body of *mujtahidun* to override *ijma'* of the past.<sup>17</sup>

The Four *Sunni* Schools recognize *ijma'* as a legitimate source of law, but not all equally so, and they vary in their use of the doctrine. The *Hanafi* School uses *ijma'* to achieve equity in disputes and accept the consensus of jurists of any age. The *Māliki* School premises its interpretation on the public interest and accepts only the *ijma'* of scholars from Medina. The *Shāfi'i* School is open, recognizing *qiyās* that has been accepted as a form of *ijma'*. Finally, the *Hanbali* School holds the narrowest view, acknowledge only the *ijma'* of the Companions of the Prophet (*Ṣaḥābah*).<sup>18</sup>

## [B] Historical Background

*Ījma'* only became necessary after the death of the Prophet. While Mohammed lived, any problems concerning the interpretation of the Will of God (Allāh) could be brought to him. Ultimately, failure to achieve consensus may have fueled the *Sunni* — *Shī'ite* schism when Abū Bakr was chosen to succeed Mohammed instead of 'Alī before a discussion could be held among all of Mohammed's Companions.

Michael Mumisa identifies four phases of *ijma'* development. Each one presupposes the consensus needed comes from an elite group, not the *ummah*. By examining history, Mumisa categorizes the need for interpretation and accumulation of legitimate power through the spread of Islam into distinct stages.<sup>19</sup>

First, immediately after Mohammed's death, the Companions become the authority for interpretation. Because they lived with Mohammed and learned directly from him, *ijma'* of the Companions (*ijma' al-shābah*) is seen by some as a superior interpretation in relation to *ijma'* from later scholars who may not be able to divine the 'illa of the rule as readily.<sup>20</sup> The emphasis on proximity to the Prophet led the *Māliki* School to regard the *ijma'* of the Companions as the only infallible source of *ijma'*.<sup>21</sup>

A generation later, *ijma' al-tabi'in*, consensus of the successors, still was relatively close in time to the Prophet. But, the scholars residing in Medina with Mohammed and the *Ṣaḥābah* began to disperse, and render their own

<sup>21</sup> WEERAMANTHY, *supra*, at 39.

interpretations. The dispersal of the *ulema* meant *bona fide*, universal consensus gained through discussion became all but impossible.<sup>22</sup> Notably, it is possible again through modern communications technologies, like the internet. Moreover, with the scholars scattered geographically, *ijtihād* became necessary, despite being unpalatable.

By this time, the Four Schools began to gather followers and cement philosophies. The Schools do not share the same perspective on what to do about the waning consensus and rise of *ijtihād*. *Imām* Mālik favored the *ijma'* of the original scholars of Medina, whereas *Imām* Hanifa preferred the consensus of the scholars at the Ancient School of Kufah (Iraq). Taking the strictest route, *Imām* Hanbal accepted *ijma'* only from the *Ṣaḥābah* and *Rashidun* Era.<sup>23</sup>

Finally, Mumisa argues Islamic law passed into the phase of *taklīd*, or blind following of the Four Schools. *Īma'*, he says, is accepted as a source of law during this period, instead of being seen as a tool of mere interpretation. Relying on the principle that the Muslim community cannot agree in error, a true consensus must be right.<sup>24</sup>

### [C] Modern Perspectives

*Īma'* in the modern world can be used to develop Islamic law to meet the needs of the rapidly changing world. Its very nature allows it to adapt ancient interpretations and apply them to current events. Because it is not the Word of God or his Prophet it is variable so long as it holds with the concepts embodied in the Qur'ān and *Sunnah*. *Īma'* is able to evolve where fixed, un-amendable text cannot. A consensus of scholars may change the way the holy text is interpreted if they have a very good reason to do it.<sup>25</sup>

While *ijma'* has the power to move the *Shari'a* forward, it also has the capacity to hold it back. Part of its legitimacy is based on the consensus of the Companions of Prophet (*Ṣaḥābah*). In that sense, *ijma'* is tradition. It is consensus on how things have been done since the time of Mohammed. Conservatives hold to the notion that past interpretations remain valid simply because they have stood for so long. Under this view, *ijma'* can be a force of stagnation, rather than evolution.<sup>26</sup>

Notably, the idea of consensus is not unique to Islamic law. In fact, it is a recognized component legal decision making on the grandest scale. Article 38 (1) of the Statute of the International Court of Justice (ICJ) lists the materials the court may use to render its judgments. Treaties and other written and signed international contracts are first in the hierarchy, but customary international law, "as evidenced of a general practice accepted as law," follows closely behind.<sup>27</sup>

<sup>22</sup> MUMISA, *supra*, at 79.

<sup>23</sup> MUMISA, *supra*, at 80.

<sup>24</sup> MUMISA, *supra*, at 80.

<sup>25</sup> SCHRAGT, *supra*, at 30.

<sup>26</sup> KARALI, *supra*, at 232.

<sup>27</sup> ICJ Statute, Article 38(1), posted at [www.icj-cij.org](http://www.icj-cij.org).

Customary international law may be ascertained by affirmation, when a nation adopts a national statute concerning the treatment of foreign nationals, or passively, indicated by how a nation typically treats foreign nationals, for example. This process is similar to the acceptance of *ijma'* by Islamic scholars verbally, by their actions, or by their silence. Note, however, that while international customary law is very influential and highly probative upon the ICJ, it, unlike *ijma'* on Islamic courts, is not binding.

Like customary international law, *ijma'* can be hard to pin-point, and even once it is identified, hard to find. *Īma'* is not a statute that is codified in a library in Medina, it is the practice and the common, consistent application of Islamic norms to problems. Evidence of *ijma'* is found in rulings and possibly rationales of some courts, much like American case law. However, that is still merely evidence that *ijma'* exists, not the *ijma'* itself. For non-*Shari'a* trained practitioners, *ijma'* is best gleaned through treatises on a particular subject matter. Islamic scholars who have authored these treatises are part of a long history of legal philosophy, and their intellectual exercises have been of high value.

### § 13.02 QIYĀS (ANALOGICAL REASONING)

#### [A] Definition

The fourth and final universally accepted source of law in Islamic jurisprudence is *qiyās*. "*Qiyās*" literally means "measurement" in Arabic.<sup>28</sup> It is the practice of "measuring" a rule given in the Qur'ān or *Sunnah* and applying it analogically to new, yet similar, set of facts. Like *ijma'*, it is a dependent source of law, casting back to the higher authority of the Qur'ān or *Sunnah* for its own legitimacy.<sup>29</sup> *Qiyās* may be used if all other sources of law fail to speak directly to a particular legal issue.<sup>30</sup> Also like *ijma'* *qiyās* is a methodology or tool, i.e., an intellectual process, the application of which produces a legal result.

*Qiyās* is said to be a tool used to compare cases and reach logical conclusions.<sup>31</sup> In this way, *qiyās* does not create law — the law already exists — but it is a useful tool to interpret that law.<sup>32</sup> Analogical reasoning relies on two kinds of similarities between cases. The original case must be factually similar to the new situation. The legal reasoning (*'illa*) underlying each must also correspond.<sup>33</sup> Thus, the *'illa* of the original case must be determined before *qiyās* may be applied.<sup>34</sup>

<sup>28</sup> MAWLEZZI DIEN, *ISLAMIC LAW: FROM HISTORICAL FOUNDATIONS TO CONTEMPORARY PRACTICE* 51 (Notre Dame, Indiana: University of Notre Dame Press, 2004). (Hereinafter, DIEN)

<sup>29</sup> See DIEN, *supra*, at 52. See generally MAKHSHI, *supra*, ch. LC-D (concerning reasoning by analogy and distinction).

<sup>30</sup> See WEERAMANTRY, *supra*, at 40.

<sup>31</sup> See DIEN, *supra*, at 51.

<sup>32</sup> See DIEN, *supra*, at 53.

<sup>33</sup> See DIEN, *supra*, at 53.

<sup>34</sup> See DIEN, *supra*, at 53.

'*illa*, the legal rationale behind a rule or injunction, is crucial to understanding and applying *qiyās* correctly. There are four steps for the identification and use of '*illa* in any given situation. First, there must be a clear attribute in the initial case, such as the prohibition on wine from grapes is for the prevention of intoxication. Second, the rationale must be ascertainable, i.e., it needs to be precise and invariable for individual situations. For example, intoxication is bad because it negatively affects the human mind no matter who you are or how intoxicated you become. Therefore, any sort of intoxicating beverage is bad.<sup>35</sup>

Third, the '*illa* must be commensurate to the injunction, meaning that the goal (prevention of intoxication) will be achieved through the imposition of the rule (ban on alcoholic beverages). Fourth, the legal rationale must be extendable to the new situation — a ban on all alcoholic beverages, not just wine made from grapes.<sup>36</sup> This last step is important because the broad injunction can only occur if the specifics of the initial case are not important to the rule.<sup>37</sup> If the '*illa* banning the drinking of wine from grapes was due to grapes being bad, not intoxication being bad, a ban on all alcoholic beverages could not be gleaned from this case.

In practice, it is individual reasoning directed at achieving systematic consistency and guided by precedent.<sup>38</sup> The individual doing the reasoning matters. Only a *mujtahid* (and educated Muslim competent to understand and apply the *Shari'a*) may issue valid decisions.<sup>39</sup> Such a decision binds the participants and may be relied on by later *mujtahid*. However, a decision based on *qiyās* is not binding on anyone else until it is accepted by the community at large as *ijma'*.<sup>40</sup> Conversely, *qiyās* may be a good method to discover the best practical application of *ijma'*.<sup>41</sup> *Qiyās* based solely on *ijma'* may not be water tight as *ijma'* is not law from God, but law from man and therefore may be disputed.<sup>42</sup>

## [B] Historical Background

The practice of *qiyās* became necessary shortly after the death of the Prophet. The Companions used it themselves.<sup>43</sup> The Caliph 'Umar, second of the *Rashidun*, validated analogical reasoning to solve new problems.<sup>44</sup> Reportedly, he gave the direction:

know the similarities and weigh the cases against them using analogical reasoning.<sup>45</sup>

<sup>35</sup> See DIEN, *supra*, at 55.

<sup>36</sup> See DIEN, *supra*, at 55.

<sup>37</sup> See DIEN, *supra*, at 55.

<sup>38</sup> See SCHACHT, *supra*, at 37.

<sup>39</sup> See WEERAMANTHY, *supra*, at 40.

<sup>40</sup> See MUMBA, *supra*, at 92.

<sup>41</sup> See MUMBA, *supra*, at 92.

<sup>42</sup> See DIEN, *supra*, at 53.

<sup>43</sup> See MUMBA, *supra*, at 95.

<sup>44</sup> See MUMBA, *supra*, at 96.

<sup>45</sup> MUMBA, *supra*, at 96.

Nevertheless, since that time, the validity of *qiyās* has been questioned by many critics.

*Qiyās* is accepted as a valid source of law by all Four *Sunni* Schools,<sup>46</sup> though the degree to which each uses and restricts it differs.<sup>47</sup> The inclusion of *qiyās* among the four sources of law was not without controversy. And, while it may be included, it is subject to very tough restrictions.<sup>48</sup>

The *Hanafi* School uses the most liberal approach to *qiyās* that is not based on strict analogy. Rather, *qiyās* is an "extension of the law from the original text to which the process is applied to a particular case by means of a common '*illa* (legal reasoning) which cannot be found by mere interpretation of the language of the text."<sup>49</sup> Followers of the Maliki school regard *qiyās* as "the accord of a deduction with the original text in respect of the '*illa* or effective cause of its law."<sup>50</sup> Here, the requirements are heightened in that the new case must have similar facts and causes in order for *qiyās* to apply.

The *Shāfi'i* School considers *qiyās* as "the accord of a known thing with a known thing by reason of the equality of the one with the other in respect of the effective cause of its law."<sup>51</sup> This definition equates *qiyās* to *ijtihād*.<sup>52</sup> *Imām* Shāfi'i may be responsible for the recognition of *qiyās* as a separate source of law. His philosophy is that every order from God has a reason behind it and *qiyās* seeks to apply that reason to similar situations.<sup>53</sup> However, he was very careful to impose strict logical bounds on this new tool. *Qiyās* may only be triggered by similar facts or issues under very refined logical rules. He was careful to prohibit teleological reasoning from the practice of *qiyās*. Only God may know the reasons behind the rule, and it is up to man to obey those rules, not to seek to ask why they are imposed.<sup>54</sup>

Finally, the *Hanbali* School was the last to accept *qiyās* into the fold. *Imām* Hanbal tried to take a very strict Traditionist path in his interpretation of the law and the problems it sought to solve. Using just the Qur'an and *Sunnah* of the Prophet worked for a while, but was ultimately unsatisfactory and the *Hanbalis* were forced to adopt their own form of *qiyās*.<sup>55</sup> The language of the primary sources is read very strictly and the '*illa* is very narrow. Conclusions made through *qiyās* should be supported in some way by text that is closer to the source than today's modern scholars. Even weak *hadiths* are preferred as support than purely individual rationale.<sup>56</sup>

<sup>56</sup> See MUMBA, *supra*, at 96.

### [C] Modern Perspectives

*Qiyās*, like *ijma'*, may be used as a tool to deal with problems facing the modern Islamic world. It can be used as a practical tool to handle issues brought on by technological advance and globalization. Whereas it may take years to develop a clear consensus in any particular school, *qiyās* can be applied on a case-by-case basis and the reasoning may be adopted or amended as necessary depending on the facts of each case. For example, *qiyās* has allowed the practice of *hiyal* (legal fictions) to be used to circumvent prohibitions on modern financial practices.<sup>57</sup>

Individual schools are using other rationales to adapt a strict analogical approach to *qiyās*. The *Hanbali* School uses *istihsān* (juristic preference, approval, that is, discretionary reasoning not based strictly on *qiyās*) to mitigate the harshness of strict *qiyās* when questions of equity arise.<sup>58</sup> The *Hanafi* School employs *qiyās* to meet the demands of the modern world when addressing new issues like technological advances in transportation and communication.<sup>59</sup> While the *Shāfi'i* School promulgated the idea of *qiyās*, they recognize that it can be truth to the one applying it, but not to the larger legal scholar community at large.<sup>60</sup> Therefore, it can be used to start a movement to make an interpretation *ijma'*, but is not binding on others until then.

While *qiyās* may be used to move Islamic society forward locally and globally, it may also be used as a tool for individual, personal gain, or lead to stagnation for society overall. Traditional *qiyās* requires both textual specificity and rational basis for the application of a rule or injunction.<sup>61</sup> The addition of *maṣlaḥah* (public interest) as a valid *'illa* could be the basis for a greater emphasis on human rights and individual equity. However, if *maṣlaḥah* is allowed into the *qiyās* decision making process, it could be hijacked by a corrupt government and passed off to the people as legitimate.<sup>62</sup>

### § 13.03 DESIRABILITY: SCALE OF RELIGIOUS AND LEGAL QUALIFICATIONS (*AL AḤKĀM AL KHAMSA*)

When can an act or omission be deemed desirable? That is, when is an act or omission required or not, or forbidden or not? To the American legal mind, the answer is in a binary paradigm: either an act or omission is desirable or undesirable, required or voluntary, forbidden or permitted. To the Islamic legal mind, this paradigm is too simplistic. It is too legalistic and discounts the importance of religious considerations.

<sup>57</sup> See WEERAMANTRY, *supra*, at 40.

<sup>58</sup> See WEERAMANTRY, *supra*, at 28.

<sup>59</sup> See DIEN, *supra*, at 56.

<sup>60</sup> See DIEN, *supra*, at 56.

<sup>61</sup> See DIEN, *supra*, at 54.

<sup>62</sup> See DIEN, *supra*, at 55.

The paradigm in Islamic jurisprudence (*fiqh*) as to desirability is a continuum.<sup>63</sup> This continuum is known in Arabic as *Al Aḥkām Al Khamṣa*, or the Scale of Five Qualifications. (*Al Aḥkām* means "provisions," "qualifications," or "sanctions," and "*Al Khamṣa*" means "five.") More fully, it is the Scale of Five Legal and Religious Qualifications. It is a theoretical continuum with enormous practical importance. The Scale appears to have been derived from Greek Stoic philosophy.<sup>64</sup> In the early days of the *Sharī'a*, there were non-Arab converts to Islam who were familiar with Greek Rhetoric and, therefore, acquainted with law and trained in oratory. Many of them lived in the Fertile Crescent, which Arab Muslims had conquered and assimilated into the great Arab-Islamic Empire. These non-Arab Muslim converts likely imported a similar kind of jurisprudential scale from Ancient Greek Stoicism and Islamicized it.

Whatever its origin, the *Al Aḥkām Al Khamṣa* is perhaps the single best example of the inextricability of law and religion in Islam, as Professor Schacht explains:

The central feature that makes Islamic religious law what it is, that guarantees its unity in all its diversity, is the assessing of all human acts and relationships, including those which we call legal, from the point of view of the concepts of obligatory / recommended / indifferent / reprehensible / forbidden. Law proper has been thoroughly incorporated in the system of religious duties. . . .<sup>65</sup>

Thus, in the Five Qualifications the fundamental character of Islamic Law as a sacred legal system is obvious, because this Scale incorporates religious duties.

Diagram 13-1 presents the *Al Aḥkām Al Khamṣa*. It is a sliding scale, or continuum. It has five points, making it more subtle than the American scale of justice with two sides. In Islamic *fiqh*, all actions or omissions may be put into one of the five categories of *aḥkām*. That is, the desirability of any past, present, or potential future act or omission is evaluated according to whether it is in one of the following five categories.<sup>66</sup> The act or omission could involve a matter of public legal behavior, such as negotiating and concluding a contract. As Professor Schacht puts it, "the legal subject-matter is subjected to religious scrutiny."<sup>67</sup> Or, the act or omission could pertain to a private religious matter, such as prayer and worship.

Overall, the evaluation is from both a legal and religious perspective. Both Muslim religious and legal scholars (*ulema* and *fukahā'*, respectively) are the evaluators. Thus, the *Al Aḥkām Al Khamṣa* is not strictly legal or religious. It is both, because of the subject matter to which it applies, and because of the scholars engaged in its application. Not surprisingly, in practice, applying the *Al Aḥkām Al Khamṣa*, requires recourse to all the sources of Islamic Law: *Qur'ān*, *Sunnah*, *ijma'*, and *qiyās*:

<sup>63</sup> See generally MAKDISI, *supra*, ch. 1.G (concerning legal terminology).

<sup>64</sup> See SCHACHT, *supra*, at 20.

<sup>65</sup> SCHACHT, *supra*, at 200.

<sup>66</sup> See SCHACHT, *supra*, at 121.

<sup>67</sup> SCHACHT, *supra*, at 122.

(1) *Ḥarām* (forbidden) —

*Ḥarām* acts are forbidden — that is, strictly prohibited. Technically, all other acts or omissions on the continuum are permissible, or “*ḥalāl*,” in the sense that they are not forbidden. The quintessential examples of *ḥarām* acts are consuming alcohol, pork, or pork products, and viewing pornography. However, in extreme (and largely theoretical) cases of necessity (*ḍarūrāh*), even certain *ḥarām* acts may become *ḥalāl*, but by no means recommended (*mandub*) much less obligatory (*wājib*), such as where only alcohol is available to stave off death or serious injury from dehydration.

During the *Umayyad* Caliphate, Traditionists emphasized the importance of relying on authentic words and deeds of the Prophet (*Sunnah*). Part of the Traditionist project was to identify, define, and elaborate, based on the *Sunnah*, “forbidden” (*ḥarām*) behaviors.

(2) *Makrūh* (reprehensible) —

An act or omission that is reprehensible, or *makrūh*, is not strictly prohibited. But, from a religious or legal standpoint, it is strongly discouraged.

(3) *Mubāh* (neutral, or permissible) —

An act or omission that is “*mubāh*” is one that is not objectionable. The religious and legal standpoint is one of indifference. Accordingly, the action is permitted, or allowed — “*jā’iz*.” The term “*jā’iz*” encompasses every act or omission that, “does not provoke a religious objection.”<sup>68</sup>

(4) *Mandub* or *Mustahabb* (recommended) —

A recommended act or omission sometimes is called “*sunnah*,” but this word is not used in the sense of the “*Sunnah* of the Prophet” or “*Sunnah* of the First Islamic Community.” That is, “*sunnah*” in this context is not referring to a source of law; rather, merely the permissibility of a proposed course. “*Mandub*” or “*mustahabb*,” then, are perhaps less confusing expressions.

For example, in Islamic Criminal Law, the next of kin of a murder victim has the right to take retaliation against the murderer. However, it is recommended that he waive this right, and instead accept payment of blood money (*diyyah*). As another example, in Islamic Inheritance Law, it is recommended, but not required, that heirs of a deceased person pay off the debts of the decedent.

(5) *Wājib* or *Farḍ* (obligatory) —

Some duties are obligatory for an individual, such as daily prayer (*ṣalah*) or the *Ramaḍān* fast. Other acts are required for the larger community, such as a funeral prayer or holy war (*jihād*).

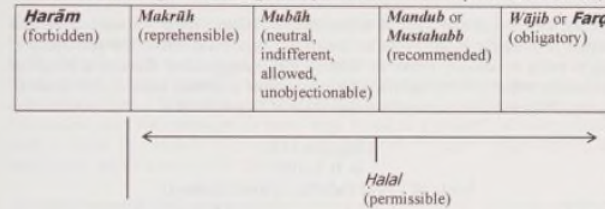

Can the same act or omission appear in more than one category on the continuum? Yes and no. From a strictly religious perspective, an act or omission can

<sup>68</sup> See SCHACHT, *supra*, at 122.

fit within only one category. That also is true from a strictly legal perspective. Perhaps in theory the two appraisals need not always produce the same classification. For example, an act could be considered *makrūh* from a religious perspective, but *mubāh* from a legal perspective. In practice, though, the religious and legal analyses are integrated together, and they yield one “bottom line” result: a single classification on this Scale. However, different *Sunni* Schools can and do differ on that bottom line, and there also can be majority and minority views within a single School.

Diagram 13-1:  
Is It Desirable?

Scale of Five Legal and Religious Qualifications (*Al Ahkām Al Khamsa*)

Manifestly, the *Al Ahkām Al Khamsa* is two scales in one: it is a gauge using religious criteria, familiar to the *ulema*, and a gauge using legal criteria, familiar to the *fukahā*. The religious dimension of the scale is somewhat theoretical, whereas the legal dimension is practical. Indeed, evaluation of an act or omission from a legal perspective focuses on legal validity, or *mashrū*’ (recognized by law).

## § 13.04 VALIDITY: SCALE OF VALIDITY

When can an act or omission be deemed legally valid? To the American legal mind, the answer is in a binary paradigm: either an act or omission is legally valid, in which case it has legal effect, or it is legally invalid, in which case it has no legal effect. To the Islamic legal mind, this paradigm is too simplistic, too legalistic, and not imbued with religious overtones.

How do Islamic legal scholars decide whether a transaction is valid under the *Shari’a*, and thus deem it legally valid (*mashrū*’)? They dissect the transaction into two constituent parts:<sup>69</sup>

(1) *Aṣl* (nature):

“*Aṣl*” refers to the nature of a transaction, *i.e.*, the essential element or elements of the transaction, or the act or actions, or omission or omissions, which make up a transaction. For example, daily prayer (*ṣalah*) consists of a series of physical

<sup>69</sup> See SCHACHT, *supra*, at 118.

movements (*ruk'ah*), involving standing, bowing, prostrating, and standing up again, along with reading a Qur'anic passage while standing.

## (2) *Waşf* (circumstances):

"*Waşf*" refers to the circumstances of a transaction, i.e., the conditions implied in the nature of the transaction, or intimately connected with it. They are conditions that must exist if a transaction is to be legally valid. A condition, prerequisite, or stipulation for legal validity is called *şarṭ* (plural, *şhārṭ*).

For example, for prayer, a Muslim must have purified herself through ablutions, and face in the direction of the *Ka'ba*. The ablutions and orientation are the circumstances under which the prayer is offered.

Based on the *aşl* and *waşf* of a transaction, Islamic legal scholars determine whether it is legally valid. From an American legal perspective, the possibility is binary: valid, or invalid. From an Islamic legal perspective, there is a range of possibilities with four key points, which generates a second scale — the Scale of Validity. Diagram 13-2 summarizes the Scale of Legal Validity.

Diagram 13-2:  
Is It Valid?  
Scale of Legal Validity (*Ḥanafī* School)

As with the *Al Ahkām Al Khamsa* and the issue of desirability, the Scale of Validity contains no clear separation between legal and religious matter. The Scale of Validity is an admixture of law and religion, thus illustrating their inseparability in the *Shari'a*. The subject matter to which the Scale of Validity applies may be public legal behavior, like contracting, or personal religious behavior, like prayer. Scholars involved in ascertaining legal effect may be *ulema* or *fukahā'*, and taken into account legal or religious considerations, or both. As with the *Al Ahkām Al Khamsa*, the Scale of Validity requires recourse to all the sources of Islamic Law: Qur'ān, *Sunnah*, *ijma'*, and *qiyās*.

## (1) *Şahih* (valid) —

If both the *aşl* and *waşf* of a transaction are consistent with the *Shari'a*, then the transaction is *şahih*, or legally valid. That is, the transaction has legal effect, is operative, and creates binding rights and obligations.

## (2) *Makrūh* (reprehensible) —

From a legal perspective, a transaction may be reprehensible, or disapproved. Note the term *makrūh* is used in this sense, as well as in the religious context in the Scale

of Five Qualifications. Suppose from a legal perspective, both the nature and circumstances of a transaction comport with the *Shari'a*. But, from a religious perspective, the transaction is *harām*. From a legal perspective, the forbidden religious association renders the transaction *makrūh*, i.e., the transaction is strongly discouraged from a legal perspective, because it is forbidden from a religious viewpoint. But, from the strictly legal perspective, because its nature and circumstances are valid, the transaction has legal effect. By some accounts, *makrūh* is not a separate point on the continuum of the Scale of Validity, and exists only on the Scale of Five Qualifications, because a transaction that is considered reprehensible on the latter Scale still has legal effect on the former Scale.

## (3) *Fāsid* (defective, voidable) —

The *aşl* of a particular transaction may correspond with Islamic Law, but the *waşf* may be inconsistent with it, or vice versa. Such transactions are defective, or *fāsid*. A *fāsid* transaction is not legally invalid. However, the transaction is voidable.<sup>70</sup> Thus, a *fāsid* contract would be legally effective, but voidable at the discretion of the appropriate party. Moreover, depending on the defect, the legal effect of the transaction may be restricted in some way. *Fāsid* is a concept of categorization distinct from the Islamic Contract Law rights of rescission, cancellation, and ratification within a stipulated time.

## (4) *Bātil* (invalid, null and void) —

A transaction is *bātil*, or invalid, i.e., it has no legal effect and is null and void, if neither its *aşl* nor *waşf* is consistent with Islamic legal principles. During the *Umayyad* Caliphate, along with highlighting transactions that are *harām*, Traditionists sought to define and elaborate what might cause a transaction to be invalid, and thereby identify invalid transactions.

An important caveat about the Scale of Validity concerns a distinction among the Four *Sunni* Schools on the points. Only the *Ḥanafī* School distinguishes between *fāsid* and *bātil*. The *Māliki*, *Şāfi'i*, and *Hanbali* Schools do not treat *fāsid* and *bātil* as separate categories. For them, both categories connote a transaction is null and void.

# § 13.05 RELATIONSHIP BETWEEN SCALES

An obvious question is how the Scale of Five Qualifications relates to the Scale of Validity. The short answer is the two Scales are related, and overlap. The legal and religious analyses they entail are performed simultaneously or contemporaneously to the same fact pattern. Thus, the analyses are blended together: they entail "[t]he fusion of valid and invalid [legal concepts] with allowed and forbidden, respectively [religious concepts]."<sup>71</sup> They both pertain to legal and religious matters, and involve legal and religious considerations, as applied by legal and religious experts. They address different but connected questions: is the behavior desirable (the first scale),

<sup>70</sup> See SCHACHT, *supra*, at 121.

<sup>71</sup> SCHACHT, *supra*, at 122.

and is the behavior valid (the second scale)?

Of course, to the American legal mind, these questions are not connected. Whether a behavior is desirable triggers more of a moral or religious analysis than a legal review, for priests and philosophers; whether it is valid is distinctly a legal problem for lawyers and judges. To the Muslim legal mind, separating these two analyses is not only puzzling, but also unnatural, and can result in outcomes that are not merely unwise, but also unjust. Hence, the two Scales must be used in conjunction with one another. The American lawyer is trained to segregate and compartmentalize what the Muslim lawyer knows to be fused.

At the risk of syncretism, if the subtle, inter-disciplinary analysis among gradations under the two Scales must be reduced to an algorithm form, then perhaps the following is a rough guide:

*Step 1: Desirability —*

Under the Scale of Religious and Legal Qualifications (*Al Ahkām Al Khamsa*), what is the appropriate categorization of the behavior or transaction at issue?

*Step 2: Validity —*

Under the Scale of Validity, does the behavior or transaction have legal effect?

*Step 3: Nature of Rights and Duties —*

Assuming the behavior or transaction is not *ḥarām* under Step 1, and not *bātil* under Step 2, then it creates legal rights and obligations for the parties concerned. What is the appropriate category under the *Al Ahkām Al Khamsa* of these rights and obligations?

Sometimes, the analysis under the *Al Ahkām Al Khamsa* predominates. This phenomenon is evident when the categories of forbidden (*ḥarām*) and allowed (*mubāh*) are emphasized at the expense of invalid (*bātil*) and valid (*ṣaḥīḥ*), respectively. Other times, especially when a case goes to court raising the issue of the validity of a transaction, and whether it creates binding rights and obligations on the relevant parties, the analysis under the Scale of Validity is pre-eminent.

In normal circumstances, there is no violation under either Scale. The behavior in question raises no religious or legal objections, and thus is neither undesirable nor invalid. For example, a woman is not supposed to pray during her menstrual cycle. She is deemed unclean, and to do so is *ḥarām* on the Scale of Religious and Legal Qualifications, and any such prayer is *bātil* on the Scale of Validity. This example shows the application of both Scales to a matter of private worship.

Three other examples concerning acts during *ṣalāh* that are *ḥarām* and *bātil* act also illustrate the point that both Scales apply to religious behavior. First, suppose a worshipper laughs during prayer — does the prayer have any effect? No, regardless of whether the prayer is congregational and obligatory (like the five daily prayers) or in private and personal. The source of this response is *qiyās*, specifically, reasoning by analogy to the *Sunnah*. There are traditions concerning disrespectful behavior during prayer. Though none singles out laughter, by analogy laughing is

considered disrespectful. Second, prayers led by a woman have no legal effect. Here, too, the source is the *Sunnah* — by tradition, prayers are led by men. Third, drinking any beverage during prayer renders the act of worship null and void. All three instances are *ḥarām* under the *Al Ahkām Al Khamsa*. However, an exception exists for an *imām*: it is *ḥalāl* for him to sip water to clear his throat so he is audible, when reading from the Qurʾān during prayer.<sup>72</sup>

As still another illustration, consider a public, legal matter: a business deal, such as formation of a partnership (*sharikah*), issuance of Islamic bonds (*sukūk*), or simply entering into a contract (*ʿaqd*). Assume the deal is unobjectionable on the Scale of Five Qualifications. Accordingly, on this Scale, the deal is *mubāh*, i.e., the religious and legal standpoint is one of neutrality or indifference, so the deal is *jāʾiz* (allowed). Assume further that both the nature (*asl*) and circumstances (*wasf*) of the business deal comport with the *Shariʿa*. Then, on the Scale of Validity, the deal is *ṣaḥīḥ*. The deal creates binding rights and duties for the relevant parties. In turn, on the *Al Ahkām Al Khamsa*, these rights and duties are obligatory — they are *wājib*, and must be followed. Clearly, then, the analysis under the two Scales is an interactive one, involving a back-and-forth between the Scales.

But what about abnormal cases? Can a transaction be reprehensible (*makrāh*), even forbidden (*ḥarām*), on the Scale of Religious and Legal Qualifications, yet have legal effect on the Scale of Validity? The answer is “yes. Consider a contract of sale concluded at the time of the call to Friday (*Jumʿa*) prayers (*ṣalat*).<sup>73</sup> What is the legal effect of the sale?

On the *Al Ahkām Al Khamsa*, the transaction is forbidden. That is, from a religious and legal standpoint on this Scale, it is *ḥarām*. In particular, as a religious matter, it is the duty of a Muslim to heed the call of prayer on Friday (as it is the duty of a Catholic Christian to attend Sunday Mass) and not to engage in commerce at that time. But, on the Scale of Validity, the transaction is *fāsid*; it is defective and voidable. Therefore, it is legally effective, and binds the buyer and seller. Why is the deal not *bātil* on this Scale? The answer is the *asl* of the sale comports with the Islamic Law of Contracts. By assumption, the constituent elements of a contract exist, such as an offer (*ijāb*) and acceptance (*kabūl*). But, the *wasf* are troublesome: there is a problematic connection between time and transaction, i.e., timing of the transaction, renders it religiously objectionable. Therefore, the transaction is *fāsid*.

In sum, the majority view among the Four *Sunnite* Schools is that a contract concluded at the time of the call to prayer is *ḥarām* on the Scale of Five Qualifications, and *fāsid* on the Scale of Validity. To the American legal mind, these sorts of outcomes are unfamiliar. If a transaction is forbidden under United States law, then it cannot be valid. Some Muslim scholars who do not agree with this

<sup>72</sup> Contrasts may be drawn with the first two examples, and a comparison with the third one. While disrespectful behavior during a liturgical service is not acceptable, in Catholic Christianity, Tibetan Buddhism, and other faiths, humor is cherished, and it is sometimes observed that God has a sense of humor. Likewise, while gender-specific roles exist in several religions, women play important roles in liturgical services in many of them, including Catholic Christianity. And, while fasting for a proscribed period, such as one hour before taking Holy Communion at a Catholic Mass, is part of practice in many religions, it is understood in them that drinking water to alleviate a throat ailment is permissible.

<sup>73</sup> See SCHACHT, *supra*, at 122.

majority position, and argue the transaction is *bātil* on the second Scale precisely because it is *ḥarām* on the first Scale.

Another example concerns appointment of an Islamic judge (*qāḍī*) by a government ministry.<sup>74</sup> The *qāḍī* happens not to be "*ʿadl*," i.e., he is not of good character. Yet, being *ʿadl* is a pre-requisite for an Islamic judge. Appointment of a *qāḍī* who is not of good character is *ḥarām* on the Scale of Five Qualifications. Is the appointment valid on the Scale of Validity? Yes. On this Scale, the appointment is regarded as reprehensible (*makrūh*), and as Professor Schacht explains, "[t]he quality as *makrūh* does not prevent the legal effects from taking place."<sup>75</sup> Similarly, suppose there is no controversy surrounding the character of the judge, but the *qāḍī* accepts the testimony of a witness who is not *ʿadl*.<sup>76</sup> Based on that testimony, the *qāḍī* renders a judgment. On the Scale of Five Qualifications, founding a judgment on the testimony of a witness who is not of good character is *ḥarām*. On the Scale of Validity it is *makrūh*, meaning the judgment is deserving of censure, yet retains legal effect.

A provocative example concerns the sale of grapes to a buyer where the seller knows the buyer will use the grapes to make wine. Under the *Al Ahkām Al Khamsa*, the sale is *ḥarām*, which follows logically from the Criminal Law rule that consumption of alcohol (*shurb al-khamr*) is a claim of God (*ḥaqq Allāh*), triggering the severest of sanctions, a *ḥadd* (limit) punishment. On the Scale of Validity, the *Shāfiʿi* School regards the sale of grapes with knowledge the buyer is a winemaker as *ṣāḥih*. That is because the *Shāfiʿi* School emphasizes the transactional form of a contract, and holds there is no defect in its *ʿaql* or *waṣf*. That is, to this School, neither the knowledge nor intent of the seller matters, as long as they have respected the formal requisites for contracting. The *Hanafi*, *Mālikī*, and *Hanbali* Schools disagree. They hold the deal is invalid. For them, knowledge of the seller that the buyer will use grapes to make wine, or intent of the seller for the buyer to do so, renders the transaction *bātil*. Such knowledge or intent are *waṣf* justifying this categorization, or put differently, they do not exalt form over substance.

The illustration of selling wines to a vintner extends to selling a sword or gun. If the seller knows the buyer will use the weapon to kill someone, then does the sale have legal effect? "Yes," says the *Shāfiʿi* School, as long as the form of the transaction is proper. "No," say the other three Schools, because the knowledge or intention of the seller are *waṣf* making the bargain *bātil*.

<sup>74</sup> See SCHACHT, *supra*, at 122.

<sup>75</sup> See SCHACHT, *supra*, at 122.

<sup>76</sup> See SCHACHT, *supra*, at 122.

## Chapter 14

### CONTROVERSIAL ADDITIONAL SOURCES

Distinguished friends, today I wish to refer to a task . . . which I firmly believe Christians and Muslims can embrace. . . . That task is the challenge to cultivate for the good, in the context of faith and truth, the vast potential of human reason. . . . And as believers in the one God we know that human reason is itself God's gift and that it soars to its highest plane when suffused with the light of God's truth. In fact, when human reason humbly allows itself to be purified by faith, it is far from weakened; rather, it is strengthened to resist presumption and to reach beyond its own limitations. . . . Genuine adherence to religion — far from narrowing our minds — widens the horizon of human understanding. It protects civil society from the excesses of the unbridled ego which tend to absolutize the finite and eclipse the infinite; it ensures that freedom is exercised hand in hand with truth, and it adorns culture with insights concerning all that is true, good and beautiful.

*This understanding of reason, which continually draws the human mind beyond itself in the quest for the Absolute, poses a challenge; it contains a sense of both hope and caution. Together, Christians and Muslims are impelled to seek all that is just and right.*

Address of His Holiness Pope Benedict XVI, Meeting with Muslim Religious Leaders, Members of the Diplomatic Corps, and Rectors of Universities in Jordan, Mosque Al Hussein bin Talal, Amman, Jordan, 9 May 2009 (emphasis added)

## [A] Doctrinal Development and Methodology

Under the Classical Theory of the *Shar'ā*, there are Four Sources of Islamic Law:

- (1) The Qur'ān.
- (2) The Traditions of the Prophet (*Sunnah*), in particular, the *ḥadīths*, which are the non-prophetic sayings of the Prophet Muhammad.
- (3) Analogical reasoning (*qiyās*), but not any other form of reasoning, such as deductive (reasoning from the general to the specific) or inductive (reasoning from the specific to the general) reasoning.
- (4) Consensus (*ijma'*).

Of the Four Sources, the most important are the first two. These are the most traditional of sources, what God (Allāh) through the Archangel Gabriel (Jibreel) revealed to the Prophet, and what Muhammad himself said and did. So important are these primary sources that Professor Schacht concludes his book speaking about the Closing of the Gate to independent reasoning (*ijtihād*), implicitly referring to them:

The traditionalism of Islamic law, which is perhaps its most essential feature, is typical of "sacred law."<sup>1</sup>

In sum, in the Classical Theory, Islamic Law is derived from these four roots: they comprise the *uṣūl al-fiqh* (roots of the jurisprudence).

Consequently, interpretation and independent reasoning — *ijtihād* — is not one of the roots. Likewise, approval, or juristic preference (*istiḥsān*) is excluded from the Classical Theory of the *uṣūl al-fiqh*. So, too, excluded is taking into account the public interest, or what modern American lawyers call public interest reasoning (*istiṣlāḥ*). And, *ra'y* (individual opinion), certainly is excluded.

Such exclusions raise a serious difficulty: how does doctrine develop over time and in new circumstances? Consider the observations of Saint Vincent of Lérins (died circa 445 A.D.):

<sup>1</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 211 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982) (emphasis added). [Hereinafter, SCHACHT.]

Is there to be no development of religion in the Church of Christ? Certainly, there is to be development, and on the largest scale.

Who can be so grudging of men, so full of hate for God, as to try to prevent it? But it must truly be development of the faith, not alteration of the faith. Development means that each thing expands to be itself, while alteration means that a thing is changed from one thing into another.

The understanding, knowledge, and wisdom of one and all, of individuals as well as of the whole Church, ought then to make great and vigorous progress with the passing of the ages and the centuries, but only along its own line of development, that is, with the same doctrine, the same meaning, and the same import.

The religion of souls should follow the law of development of bodies. Though bodies develop and unfold their component parts with the passing of the years, they always remain what they were. There is a great difference between the flower of childhood and the maturity of age, but those who become old are the very same people who were once young. Though the condition and appearance of one and the same individual may change, it is one and the same nature, one and the same person.

. . . Whatever develops at a later age was already present in seminal form; there is nothing new in old age that was not already latent in childhood.

There is no doubt, then, that the legitimate and correct rule of development, the established and wonderful order of growth, is this: in older people the fullness of years always brings to completion those members and forms that the wisdom of the Creator fashioned beforehand in their earlier years.<sup>2</sup>

Saint Vincent raises two issues, one substantive, and the other methodological. First, should a religion develop? The answer is "yes." It ought not to remain forever in the same state in which it originally was established. But, it must not develop into something that is fundamentally different from what it was at the beginning. Second, because it should develop, by what means should it do so? The two questions are related. The larger the number of intellectual tools that may be used to shape the development of the religion, the greater the risk the religion may take on features that were not latent in it when it was founded. Conversely, the greater the discipline on the types of permissible reasoning, the less likely the essence of the religion will be lost.

As time passes, these issues exist in all faiths. In Islam and the *Shar'ā*, there is little if any debate as to whether there ought to be evolution. The nub of the problem is the second issue: What means are acceptable to assist in the development of rules and practices? To use the metaphor of Saint Vincent, in Islam, as in Christianity, the

<sup>2</sup> The First Instruction by Saint Vincent of Lérins, Priest, Cap. 23: PL 50, 667-668, *The Development of Doctrine*, quoted in THE DIVINE OFFICE — THE LITURGY OF THE HOURS, vol. IV at 363-364 (Second Reading for Friday, Twenty-Seventh Week in Ordinary Time) (New York, New York: Catholic Book Publishing Corp., Inc., 1975) (emphasis added).

concern is that the child grow into an adult, *i.e.*, that the religion and law expand fully to be themselves, but not to lose themselves entirely. Beyond the four Classical *uṣūl al-fiqh*, *ijtihād* and certain other methodological tools are controversial. They hold the potential not only for positive development, but also for taking Islam and the *Shari'a* off track.

### [B] Definition

What exactly is *ijtihād*? How does it relate to the term "*ra'y*"? How does *ijtihād* differ from *istiḥsān* and *istiṣlāḥ*? To begin, like *ijma'* and *qiyās*, each of them is a methodology or tool. Hence, each of them is a root or source of jurisprudence (*uṣūl al-fiqh*) in a dualistic sense of being an intellectual process the application of which leads to a legal result. In contrast, the Qur'an and *Sunnah* are memorialized in writings, to which these tools are applied.

"*Ra'y*" is a generic term that means individual or personal opinion. The term may be used in a legal or non-legal context. Under the Classical Theory of the *Shari'a*, *ra'y* is not supposed to form the basis for a legal rule, which is to say that the personal views of a judge (*qāḍī*), religious or legal scholar (*alem* or *faqih*, respectively), or legislator ought not to enter into the formulation and rationale for a legal rule. In contrast, "*ijtihād*" is used specifically in a legal context, and refers to the use of independent reasoning in an effort to draw a valid conclusion from the Qur'an, *Sunnah* of the Prophet, *qiyās*, or *ijma'*.

"*Ijtihād*" literally means "effort." The word comes from a *ḥadīth* in which the Prophet asks one of his followers by what criteria he would settle disputes:

"The Qur'an," the man replied.

"And then what?" the Prophet asked.

"The *Sunnah*."

"And then what?"

"Then I will make a personal effort [*ijtihād*] and act according to that."

And this the Prophet approved.<sup>3</sup>

As suggested by the text, *ijtihād* may be used when the Qur'an and *Sunnah* do not directly answer a question at hand. Thus, "*ijtihād*":

means exerting oneself to form an opinion (*zann*) in a case (*kadiyya*) or as to a rule (*ḥukm*) or law (*lisan*) . . . by applying analogy to the *Kur'an* and the *sunnah*.<sup>4</sup>

<sup>3</sup> CYRIL GLASSE, THE NEW ENCYCLOPEDIA OF ISLAM: REVISED EDITION OF THE CONCISE ENCYCLOPEDIA OF ISLAM 209 (New York, New York: AltaMira Press, 2002) [Hereinafter, GLASSE.]

<sup>4</sup> J. SCHACHT & D.B. MACDONALD, *Idjtihad*, ENCYCLOPEDIA OF ISLAM, (P. Bearman, Th. Bianquis, C.E. Bosworth, E. van Dorstel & W.P. Heinrichs, eds., 2nd ed., 2008), posted at Brill Online, University of Kansas Libraries, [http://www.brillonline.nl/www2.lib.ku.edu/2048/subscriber/entry?entry=islam\\_COM-0351](http://www.brillonline.nl/www2.lib.ku.edu/2048/subscriber/entry?entry=islam_COM-0351).

*Ijtihād* is a process of independent legal reasoning. It is an inference derived from the holy sources that has a probability of being correct.<sup>5</sup> If such a decision is accepted by the *umma*, then the conclusion reached by *ijtihād* becomes binding through *ijma'*.

Only specially educated religious and legal scholars (*ulema* and *fukahā'*, respectively) may practice *ijtihād*. The term "*ijtihād*" is related to "*jihād*," which means "struggle." "*Ijtihād*" connotes a personal struggle to find the Truth through study of the sacred sources and *Shari'a*. The struggle is to interpret the Will of God (Allāh) and how best to submit to it. A "*mujtahid*," literally "one who strives," must be a learned individual who knows the *Shari'a* and is able to exercise authority to make original decisions on canon law.<sup>6</sup> For *Sunnis*, the Gate to *Ijtihād* has been shut, and the last men to qualify as *mujtahidūn* (plural of *mujtahid*) were the founders of the Four Schools.

### [B] Closing of Gate to *Ijtihād* Around 900 A.D.

Up until the middle of the 9th century (850s), Islamic religious and legal scholars (*ulema* and *fukahā'*, respectively) never doubted the right of each individual scholar to develop his own resolutions to legal issues.<sup>7</sup> Poorly reasoned conclusions simply would be, and indeed were, rejected by the scholars. The constraint on the use of individual reasoning was disapproval, and thereby the preclusion of a proposition from gaining support to achieve the status of a consensus (*ijma'*).

Over time, the problem of who ought to be able to exercise this right, and whether there was such a right in the first place, was considered. Maybe contemporary scholars did not have the same freedom to exercise their own reasoning as those who had preceded them. The first to raise these matters — who ought to be able to exercise the right, and whether there was such a right, to interpret the text of the Qur'an — appears to have been *Imām* Muhammad Shāfi'i, namesake of the *Shāfi'i* School. Starting in the middle of the 9th century, Islamic scholars increasingly accepted the idea that their great predecessors could not possibly be equaled. Only these Classical giants had the right to independent reasoning. As Professor Schacht puts it, the contemporary *ulema* were "epigones," meaning they were of a later and less distinguished generation.<sup>8</sup>

Thus, as Professor Schacht observes, by 900:

the point had been reached when the scholars of all schools felt that *all essential questions had been thoroughly discussed and finally settled*, and a consensus gradually established itself to the effect that *from that time onwards no one might be deemed to have the necessary qualifications for independent reasoning in law*, and that all future activity would have to be

<sup>5</sup> MOHAMMAD HASHIM KAMALI, PRINCIPLES OF ISLAMIC JURISPRUDENCE 469 (1989) (Cambridge, England: The Islamic Texts Society, 2003). [Hereinafter, KAMALI.]

<sup>6</sup> GLASSE, *supra*, at 327.

<sup>7</sup> See SCHACHT, *supra*, at 70.

<sup>8</sup> SCHACHT, *supra*, at 70.

confined to the explanation, application, and, at the most, interpretation of the doctrine as it had been laid down *once and for all*.<sup>9</sup>

Thus, the "Closing of the Gate," or "Closing of the Door," to *ijtihād* occurred.<sup>10</sup> Independent reasoning no longer could be accepted as a source of Islamic Law. All the grand questions had been answered, and no future scholar possibly could rival the great ones of the past. All that was left for future scholars was to describe and elaborate the rules of the *Shari'a* using the Four Sources under the Classical Theory.

This Closing would have been impossible were it not for the "Seal of the Prophet." That is, suppose it were part of Islamic religious belief that Muhammad was not the final instrument for the revelation of God (Allāh). It then would be impossible to draw a line and declare that all problems have been solved and resolutions provided. There would be, by definition, an expectation of future revelations. Moreover, the Closing would be impossible if it were held that even though Muhammad is the final Prophet, understanding the message he recited from God is a continuous process. People never can fully comprehend this message while on this earth. But, through study, prayer, meditation, and complemented by advancements in technology, people come to a closer approximation of the whole Truth. If this approach is taken, which indeed is the one of Catholic Christianity — i.e., that over time, the people of God come to understand His message better — then it is impossible to declare the message finally and fully comprehended. Notably, this approach also is one held by many Muslims.

In any event, the Closing of the Gate marks the end of the formative period of the *Shari'a*. At that point, the Classical Theory of the *uṣūl al-fiqh* was worked out, and, as Professor Schacht observes:

The whole sphere of law had been permeated with the religious and ethical standards proper to Islam; Islamic law had been elaborated in detail; the principle of the infallibility of the consensus of the scholars worked in favour of a progressive narrowing and hardening of doctrine; and, a little later, the doctrine which denied the further possibility of "independent reasoning" (*ijtihād*) sanctioned officially a state of things which had come to prevail in fact.<sup>11</sup>

This closing occurred in the late 900s, at the end of the *Abbasid* Caliphate, when the Four *Sunni* Schools of Law developed. As a result of the closing, the *Shari'a* became more rigid, and thereby less in tune with actual practice.<sup>12</sup> Put simply, the process of ossification began, leading to ever-greater "disconnects" as the centuries progressed.

<sup>9</sup> SCHACHT, *supra*, at 71 (emphasis added).

<sup>10</sup> See, e.g., the title of Chapter 10 of Schacht's book ("The 'Closing of the Gate of Independent Reasoning' and the Further Development of Doctrine").

<sup>11</sup> SCHACHT, *supra*, at 69.

<sup>12</sup> See SCHACHT, *supra*, at 69.

## [C] Was the Gate Really Closed?

Can independent reasoning be completely stopped? Can every case be decided purely on precedent established a millennia ago? The answer to these questions is clearly "no," because there are always variations in each case. Many Islamic scholars assert that if indeed the Gate to *Ijtihād* was closed, then it was closed only in respect of established rules, i.e., rules set down centuries ago and set out in respected treaties. But, as to new issues, for which there are no established rules, they embrace the use of *ijtihād* in the search for conclusions.

Nevertheless, the ossification of Islamic legal thought, because of the Closing of the Gate to *Ijtihād*, is a major hurdle for the advancement of the law itself and has had sweeping implications worldwide. For example, despite the equity and tolerance Islam teaches, some interpretations of religious and legal doctrine are anything but equitable and just. Women cannot marry outside the Muslim faith, whereas men can. Also, in some Muslim countries marital rape is not considered a crime, or at least not enforced as such. Some reports get worse: a young woman in Nigeria, forced to have premarital sex with three of her father's associates, received 180 lashes after giving birth to a child conceived during the incident.<sup>13</sup>

Additionally, the rigidity of interpretation is alarming for non-Muslims supposedly living outside the scope of application of the *Shari'a*. Islamic extremists, and certain Fundamentalist sects, are unable to accept the existence of other views within Islam, much less outside of it, which they regard as heretical. In consequence, many people outside the Islamic world have died or live in fear of harm. For Americans, the 9/11 terrorist attacks are the most horrific, but not the only, example. After the 1988 publication of *The Satanic Verses*, the official policy response of Iran was to issue a *fatwā* in February 1989 against author Salman Rushdie calling for his life.

The decision to close the Gate to *Ijtihād* created enormous consternation within the Islamic world as well. It is a factious point splitting *Shi'ites* and *Sunnis*. *Shi'ites* do not believe the Gate ever was closed, because God (Allāh) never leaves His people without guidance. Within the *Sunni* tradition, the Four Schools hold a monopoly on interpretation.

Through the centuries, prominent Muslim legal scholars have called for the official re-opening of the Gate to deal with new challenges Muslims face. Ibn Taymiyya fought against the closure in the 14th century.<sup>14</sup> His fight is noteworthy because he was a Traditionist, meaning he stressed the importance of the first two of the Four Sources: the Qur'an and *hadith*. Yet, given the above-quoted *hadith*, Taymiyya presumably would argue it is an obligation to practice *ijtihād*. At the turn of the 20th century, renowned Egyptian jurist Muhammad Abduh lifted the torch for *ijtihād*.<sup>15</sup> Impressively, in 1983, King Fahd of Saudi Arabia, in an address

<sup>13</sup> IRSHAD MANJI, *THE TROUBLE WITH ISLAM* 123–24, 26 (New York, New York: St. Martin's Griffin, 2003).

<sup>14</sup> See C.G. WEERAMANTRY, *ISLAMIC JURISPRUDENCE: AN INTERNATIONAL PERSPECTIVE* 42 (Kuala Lumpur, Malaysia: The Other Press, 2001). (Hereinafter, WEERAMANTRY.)

<sup>15</sup> See WEERAMANTRY, *supra*, at 42.

to a congress of theologians in Mecca, called for a re-emergence of *ijtihād* by a group of Islamic scholars, rather than on an individual level. From his words, it is important note the King recognized there are problems in need of solutions and that only a spirited discussion of these matters can solve them.<sup>16</sup> Since the King's address, scholars and leaders alike have called for reform. For instance, in his 1997 book, *A History of Islamic Legal Theories*, Wael B. Hallaq, argues the Gate to *Ijtihād* never fully closed. He says it is still practiced today, in a limited way.<sup>17</sup>

#### [D] Does the Gate Need Re-Opening?

Without doubt, there are contemporary scholars who argue strenuously that *ijtihād* must be re-introduced into Islamic legal thinking. That is, they argue that even if the Gate to *Ijtihād* was closed — a dubious proposition in itself, many submit — that Gate must be re-opened. For example, in his 2004 book, *Western Muslims and the Future of Islam*, Tariq Ramadan urges:

[In the Qur'ān,] everything is permitted except that which is explicitly forbidden by a text. Thus, the scope for the exercise of reason and creativity is huge . . . and people have complete discretion to experiment, progress, and reform as long as they avoid what is forbidden. So the fact that the fundamental principles of Islam, and its prohibitions, are stated can never allow Muslims to dispense with a study of the context and the societies in which they live.<sup>18</sup>

Further, he states:

[Islam] requires that our minds find solutions that allow [Muslims in the western world] to remain consistent with the essential axis of being . . . and to live in step with our times and our societies.

...

Muslims who want to remain faithful to their Islamic terms of reference and who, as members of Western societies, are set completely apart, are called to develop civic awareness founded on their sense of moral responsibility.<sup>19</sup>

In brief, Ramadan argues in favor of Muslims actively engaging in the pluralistic western societies in which they live, and to use *ijtihād* in applying the *Shari'a* to contemporary problems. He does not want to see Muslims segregate themselves and thereby contribute both to their own ghetto-ization and the ossification of Islamic Law.

### § 14.02 IMITATION (TAKLĪD)

#### [A] Importance and Evolution of Taklīd

*Taklīd* (imitation) also is excluded from the Four Classical Sources of Islamic Law. The old meaning of the term used by the Ancient Schools of Law is a reference to the Companions of the Prophet (*Ṣaḥābah*). The more recent meaning of the term implicates the works of one of the founders of the Four Schools. *Imām* Shāfi'i rejected the connection of the term "*taklīd*" with the *Ṣaḥābah*, as advocated by the Ancient Schools. The Closing of the Gate to *Ijtihād* brought about this change in the meaning of the word "*taklīd*."<sup>20</sup> With the Gate closed, "*taklīd*" meant reference to, and indeed acceptance of, the doctrines of one of the Four Schools.

The grand masters who had been entitled to *ijtihād* were referred to as "*mujtahid*." A distinction was drawn according to different levels of expertise in Islamic Law, which there always have been, of course, as there are in any legal system:

- The highest level of *faqīh* (Islamic legal scholar) is known as an Unrestricted Jurist-Scholar, or "*Mujtahid Mutlaq*." Among Sunnites, it is believed that there are few, if any, such scholars at this level today. A *mujtahid mutlaq* has satisfied all the conditions for independent reasoning (*ijtihād*). Among *Shī'ites*, it is believed that the most prominent scholars meet these conditions.
- Below this level is a Restricted Jurist-Scholar, or "*Mujtahid Muqayyad*." This type of scholar has mastered the methodology of his School of Law (*madhhab*), and can apply it to reach the traditional rulings of that School, and to pass new rulings within that School or within his area of legal specialty.

With this distinction, all of those legal scholars who are short of the highest level — which essentially is everyone — are bound to practice *taklīd*. They are called "*mukallid*."

Practicing *taklīd* is a kind of intellectual abstinence. A religious scholar is not to derive independently a legal doctrine from the Qur'ān, *Sunnah*, or *ijma'*, but rather concern himself only with doctrines that are promulgated by one of the Four Schools. Where are these doctrines found? The logical place would be in the works of the grand masters to whom *ijtihād* had been allowed. In fact, it is in books that a School has acknowledged to be an authoritative compilation of legal doctrine. In brief, the doctrines are in treatises, many of which date from the late Middle Ages.

It must be emphasized that these books are treatises, or handbooks, not legal codes. Thus, Professor Schacht concludes "Islamic law is not a corpus of legislation, but the living result of legal science."<sup>21</sup> This conclusion is pregnant with meaning.

<sup>20</sup> See SCHACHT, *supra*, at 71.

<sup>21</sup> SCHACHT, *supra*, at 71.

- 1st: It reminds us that there was a gradual transition from *ijtihād* to *taklīd* around 900 A.D.
- 2nd: Islamic Law is not all contained in one book, or a series of books. That makes it different from the Civil Law, which emphasizes Codes.
- 3rd: Treatises occupy a place of special importance in Islamic Law, particularly those treatises accepted as authoritative by a School of Law. It is to those treatises that a scholar would turn to "find" the law.
- 4th: Ultimately, the legal doctrines discussed in a treatise are based on one of the Four Sources of Islamic Law agreed upon under the Classical Theory.
- 5th: Islamic law is a "result" of legal science, including *ijtihād*, practiced centuries ago. That suggests (rightly) ossification. It also is a "living" result, in that it is applicable to everyday life today.

### [B] Rejection of Custom ('Urf)

Further, all Four Sunni Schools of Islamic Law reject custom, or what American lawyers would call "law merchant" (*lex mercatoria*), as a source of law.<sup>22</sup> In Arabic, "custom" is called "*urf*" or "*aada*." This rejection makes sense.

The roots of Islamic jurisprudence (*uṣūl al-fiqh*) are — to switch metaphors — supposed to give the *Sharī'a* a systematic foundation. Custom is not always (perhaps not usually) systematic. It can vary from place to place, and one period to the next. However, it is misleading to say custom never enters into legal decision-making. It does. For example, a custom may help interpret a declaration, disposition, or contract.

### § 14.03 JURISTIC PREFERENCE (*ISTIḤSĀN*)

"*Istiḥsān*," literally "seeking the good" or "aiming for the best," is a debated source of Islamic Law. Still grounded in the teachings of the Qur'ān and *Sunnah*, *istiḥsān* expresses the idea that equity and justice, as defined by God (Allāh), must factor into the formulation and interpretation of law.<sup>23</sup> It is closely related to the American (indeed, non-Muslim Western) legal concept of equity derived from Natural Law. However, where American-style equity recognizes the validity of Natural Law over positive law, *istiḥsān* judges what is equitable by the standards laid out in the highest source of law, the holy texts.<sup>24</sup>

*Istiḥsān* is a flexible method of interpretation related to the principles of analogical reasoning (*qiyās*) and independent reasoning (*ijtihād*). *Istiḥsān* allows a judge to use his or her personal opinion to rule in an equitable way that might avoid unfairness caused by literal enforcement of an existing law.<sup>25</sup> As Professor Kamali

<sup>22</sup> See, e.g., U.C.C. Section 1-103.

<sup>23</sup> GLASSE, *supra*, at 231.

<sup>24</sup> KAMALI, *supra*, at 323.

<sup>25</sup> KAMALI, *supra*, at 325.

puts it:

Juristic preference is a fitting description of *istiḥsān*, as it involves setting aside an established analogy (*qiyās*) in favor of an alternative ruling that serves the ideals of justice and public interest (*maṣlahah*) in a better way.<sup>26</sup>

In this way, *istiḥsān* uses *maṣlahah* to trump *qiyās*, though Qur'ānic principles must be observed.

There is some debate among the Four Schools as to whether *istiḥsān* is a valid source of law. Three of the Four Schools — the *Hanafi*, *Māliki* and *Hanbali* Schools — officially accept it as a legitimate form of interpretation. The *Shāfi'i* School, however, completely rejects *istiḥsān* in its formulation of the *uṣūl al-fiqh*.<sup>27</sup>

### § 14.04 PUBLIC INTEREST REASONING (*ISTIḤSĀN*)

"*Istiḥsān*" is a term closely related to *istiḥsān*. Literally, it means "seeking what is correct or wholesome."<sup>28</sup> This term has come to mean what is good for society overall. In turn, what is in the common good (to use a Catholic Christian expression) justifies policies that benefit the public interest. While the Qur'ān and *Sunnah* provide general principles to follow, methods like *istiḥsān* and *istiḥsān* provide a specific framework for the application of the principles.<sup>29</sup> Though the two concepts are similar, there is one striking difference. *Istiḥsān* may be used when there is no indication of right or wrong in the sources already. It can start from scratch, using *maṣlahah* as a basis. In contrast, *istiḥsān* relies on analogies already drawn using *qiyās*, although it may overrule them.<sup>30</sup>

The idea of *maṣlahah* is at the heart of *istiḥsān*. In this context, "*maṣlahah*" means "benefit" or "interest" to the public.<sup>31</sup> Ultimately, a lawgiver is supposed to use *istiḥsān* to create a set of considerations that not only prevents harm, but also secures benefits for society that are consistent with the objectives of the *Sharī'a* (i.e., religion, life, intellect, lineage and property).<sup>32</sup> *Istiḥsān* cannot overcome specific requirements, injunctions, or punishments meted out by the Qur'ān. But, it can shape the way they are implemented. For example, the Qur'ān requires that men and women dress modestly, but it does not define exactly what "modestly" entails. Thanks to *istiḥsān*, this particular issue has been interpreted in a variety of ways across time and place.

To be recognized as valid, the use of *istiḥsān* must meet three conditions:

- (1) The *maṣlahah* must be genuine, as opposed to just plausible. Speculation that a measure will be beneficial without ascertaining the balance between

<sup>26</sup> KAMALI, *supra*, at 325.

<sup>27</sup> KAMALI, *supra*, at 324.

<sup>28</sup> GLASSE, *supra*, at 232.

<sup>29</sup> GLASSE, *supra*, at 232.

<sup>30</sup> KAMALI, *supra*, at 361.

<sup>31</sup> KAMALI, *supra*, at 351. See generally JOHN MAKDISI, *ISLAMIC PROPERTY LAW* ch. 1.E (Durham, North Carolina: Carolina Academic Press, 2005) (concerning public policy).

<sup>32</sup> KAMALI, *supra*, at 351.

its possible benefits and harms is not sufficient.

- (2) The proposed policy must be generally beneficial. It should confer a benefit or prevent a harm to people as a whole, not to a specific group of people.
- (3) The policy must not conflict with a principle that is already part of the explicit text of the Qur'an or *Sunnah*, or established by consensus (*ijma'*).<sup>33</sup>

If a proposed policy meets these conditions, then a legislature may enact that policy through an appropriate measure, thereby making the policy a valid part of state law.

*Istislāh* is not accepted by all Four Schools to the same degree. The *Hanafi* and *Shāfi'i* Schools have adopted a flexible view of it. The *Māliki* School rejects its use. Because the *Shāfi'i* School does not accept *istihsān* as a valid source of law, it recognizes *istislāh* within the context of *qiyās*, rather than as an independent proof. The *Hanbali* School has received *istislāh* as a type of *istihsān* and therefore a valid source of law.<sup>34</sup>

## § 14.05 CREATIVITY, MUFTIS, AND FATWĀS

### [A] *Mujtahid* in Every Generation?

Has every member of the *ulama* accepted the Closing of the Gate to *ijtihād* since it was closed? The answer clearly is "no."<sup>35</sup> There have been scholars who urged every generation has a *mujtahid*. Moreover, Islamic jurisprudence has not simply stagnated since the purported Gate Closing to individual reasoning. The *ulema* have been creative in their responses to new facts, though this creativity sometimes is subtle. ore generally, does it follow that with the closing of the door to *ijtihād*, Islamic Law has been a stagnant pool? The answer is "absolutely not."

To be sure, there is rigidity to Islamic legal doctrine. But, as Professor Schacht points out:

[t]his essential rigidity of Islamic law helped it to maintain its stability over the centuries which saw the decay of the political institutions of Islam.<sup>36</sup>

Furthermore, rigid does not mean immutable. There have been developments. For example, decisions regarded as authoritative, called *fatwās* (technically in Arabic, "*fatawā*") which are issued by *muftis*, have nudged along theory and doctrine.

### [B] Nature of *Muftis* and *Fatwās*

*Muftis* are specialists in Islamic Law who can give an authoritative opinion on an issue of doctrine. They have been creative in applying the *Shari'a* to modern problems. An opinion of a *mufti* is called a "*fatwā*." (A *mufti* is not the only authority entitled to issue a *fatwā*.) The technical definition of a "*fatwā*" is a

published opinion or decision regarding religious doctrine or law made by a recognized authority.<sup>37</sup>

That authority is the *mufti* in the *Sunni* world, or an *Ayatollah* in the *Shi'ite* world.

The Islamic legal world has had *muftis* since its earliest days. An example offered by Professor Schacht is Ibrahim Nakha'i.<sup>38</sup> After all, Muslims have sought specialist guidance on how to behave in accordance with the *Shari'a*. That is especially so given that the *Shari'a* concerns "dos" and "don'ts" in all walks of life, from the Penal Law to religious duties, from Family Law to dress etiquette. Through their *fatwās*, *muftis* help fill the need for guidance. Indeed, just as some Americans find with their own law, some Muslims find the *Shari'a* a difficult to access and follow. The presentation of that law by *muftis* through their *fatwās* is far more digestible.

Accordingly, Professor Schacht points out:

[t]he doctrinal development of Islamic law owes much to the activity of the *muftis*.<sup>39</sup>

Indeed, he contends this debt is a far greater one than is owed to the judgments issued by the tribunals of the *qādi* (as their influence waned after the formative period closed in the *Abbasid* Caliphate). The *fatwās* of *muftis* often are collected in handbooks of the relevant School of Law. The process is essentially one in which a *mufti* studies a matter, reaches a decision, and the *ulema* acknowledge by consensus (*ijma'*) that the decision is correct. Then, the *fatwā* is incorporated into a treatise on law from that School.

It is important to appreciate a *mufti* is a private citizen, not a government official. Also, a *mufti* is not a *qādi*. Rather, a *qādi* may consult a religious scholar about difficult questions, and included among the circle of persons the *qādi* may consult are *muftis*. Indeed, *muftis* often are attached to the tribunals of *qādis*.

The authority of a *mufti* is based solely on his reputation as an Islamic legal scholar *par excellence*. Given his status, a *fatwā* issued by him has no official standing. It is not enforced by a government sanction. Thus, for example, each side in a case will cite to as many *fatwās* in support of their arguments as it can. The *qādi* is not bound by the *fatwās*, but perhaps is unlikely to entirely disregard the authoritative ones.

While *muftis* are not government agents, governments are not been insensitive to the need of Muslims for specialist guidance on *Shari'a* matters. Thus, nearly ever since the Four *Sunni* Schools were established, governments in Islamic states have appointed the most outstanding scholars in their jurisdictions as *muftis*. Typically, the government designates one *mufti* as the "Chief *Mufti*" or "Grand

<sup>33</sup> KAMALI, *supra*, at 358-59.

<sup>34</sup> KAMALI, *supra*, at 363.

<sup>35</sup> See SCHACHT, *supra*, at 72-73.

<sup>36</sup> See SCHACHT, *supra*, at 75.

<sup>37</sup> Anthony Chase, *Legal Guardians: Islamic Law, International Law, Human Rights Law, and the Salman Rushdie Affair*, 11 AMERICAN UNIVERSITY JOURNAL OF INTERNATIONAL LAW AND POLICY 375, fn. 1 at 375 (1996) (quoting GLASSE, *supra*.) Probably the most infamous *fatwā* in the western world is that of the *Ayatollah Khomeini* in the *Salman Rushdie* affair over Rushdie's novel, *The Satanic Verses* (1988).

<sup>38</sup> See SCHACHT, *supra*, at 73.

<sup>39</sup> See SCHACHT, *supra*, at 74-75.

*Mufti*," who in Arabic is called the "*Shaykh Al Islam*." But, appointment of a religious scholar as a *mufti*, or for that matter, as the *Shaykh Al Islam*, i.e., government imprimatur, is not the source of authority of that scholar. As Professor Schacht writes, the governmental appointment "does not add to the intrinsic value of their opinions."<sup>40</sup>

## § 14.06 SHĪ'ITE DISTINCTIONS

### [A] Five Roots

The *Shari'a* according to *Shi'a* scholars consists of the following elements. These sources of law — the *usūl al-fiqh* for *Shi'ites* — are listed in order of importance:

- (1) The literal word of God as found in the Qur'an.
- (2) The *Sunnah* of the Prophet Muhammad.
- (3) Consensus, in particular, the *ijma'* of the community (*ummah*).
- (4) The opinion of the Prophet Muhammad, or the opinion of one of the *Shi'ite Imāms*.
- (5) Human reason, or in effect, *ijtihad* (independent reasoning).

Manifestly, only the first two are the same as those as for *Sunnites*. Even with respect to the Qur'an, at least one source suggests the sacred text used by *Shi'a* is longer than that used by *Sunni* Muslims.<sup>41</sup> It is said to contain statements concerning 'Ali. However, no such text has appeared, or at least is widely available.

### [B] *Ijma'* and Consistency with *Imām*

There are three key differences in the *Shi'ite* versus *Sunni* *usūl*. First, concerning *ijma'*, the consensus for *Shi'a* may be of the full *ummah*, at least at a particular time and place. It is not necessarily a consensus restricted to a narrow group of scholars. However, any consensus must be consistent with the opinion of a *Shi'ite Imām*, which puts the *Imām* essentially in a position of wielding a veto over a proposed *ijma'*.

One scholar who influenced greatly *Ja'fari usūl al-fiqh* was Muhammad ibn Muhammad ibn Al Nu'mān Al Hārithi.<sup>42</sup> Known as "the Learned Shaykh," or Al Shaykh Al Mufid, he lived from 948 to 1022 A.D., and taught in Baghdad.<sup>43</sup> Among his many contributions to *Shi'a* legal thought, Al Mufid redefined the use of community consensus:

<sup>42</sup> HEINE HALM, *SHI'ISM* 49 (Janet Watson & Marian Hill trans., New York, New York: Columbia University Press, 2nd ed., 2004). [Hereinafter, HALM.]

<sup>43</sup> See HALM, *supra*, at 49; www.babylon.com/definition/al\_Mufid/.

The consensus of the community is only right when it corresponds to the opinion of the *Imām*, and thus the opinion of the *Imām* is always decisive and for all practical purposes replaces the consensus which can only ever be established with great difficulty.<sup>44</sup>

Obviously, there is no figure among *Sunnites* comparable to a *Shi'ite Imām*, hence the power to forge a consensus remains (at least in theory) decentralized. However, perhaps it is debatable whether this distinction makes *ijma'* more difficult to forge among *Shi'ites*. Arguably, if the *ummah* knows the views and predilections of an *Imām*, then they become known parameters within which the *ummah* can formulate its proposed consensus. Conversely, with no single figure exerting such influence on *Sunni* scholars, arguably they have greater range of possibilities for a consensus, and such a range can mean more, and more serious, disagreements than otherwise would occur.

### [C] *Hadith* of *Imām* Qualify

Second, in *Shi'ism*, the opinions of an *Imām*, as well as those of Muhammad, are a source of law. To be sure, the opinions of the Prophet matter to *Sunnites*, too, but such opinions — if authentic — are manifest in a *hadith*. For *Shi'a*, the number of persons whose opinions "count" extends to their *Imāms*, whose opinions are recorded in places other than a standard compilation of *hadiths*.

More specifically, among *Ja'fari* (Twelver) *Shi'ites*, a *hadith* that is traceable to Muhammad and a *hadith* of any one of the Twelve *Imāms* are given equal weight. Obviously, *Sunnites* do not recognize any statements of these *Imāms* as *hadiths*. Moreover, *Shi'ites* reject *hadith* "related on the authority of the enemies of the *Imāms* such as 'Umar, 'A'isha, and 'Uthman are rejected in Twelver law."<sup>45</sup> In other words, if a figure in Islamic history opposed 'Ali and his partisans, and also happened to be the source of a *hadith*, then that *hadith* that is rejected by *Shi'ites*. After all, the logic goes, the transmitter was not objective. This exclusion means a substantial number of *hadiths* accepted by *Sunnites* are rejected by *Shi'ites*. 'A'isha accounts for roughly 2,210 *hadiths* (of which *Imāms* Bukhari and Muslim — *Sunni* compilers — recount 316), none of which is a root of *Shi'ite* jurisprudence (unless, perhaps, it is independently transmitted and authenticated).

### [D] Lesser Role for *Qiyās*

A prominent student of Al Mufid, Al Murtaḍā 'Alī ibn Tāhīr, was a proponent of the use of human reason. To Al Murtaḍā, a saying attributed to Muhammad or a *Shi'ite Imām* is to be rejected as "unauthentic" if it does not conform to human reason. Al Murtaḍā believed reliance on the authority of others "would inevitably lead to unbelief."<sup>46</sup> But, the role for reason Al Murtaḍā advocates is similar to that advocated by his teacher, Al Murtaḍā: reason is relevant only in "side issues," and

<sup>44</sup> HALM, *supra*, at 50. Al Mufid also refused to accept a belief in pre-destination, which characterizes some *Sunni* thinking, instead arguing in favor of the existence of free will. These beliefs are a part of *Shi'a* jurisprudence. See *id.*, *supra*, at 50.

<sup>45</sup> BILL, *supra*, at 21.

<sup>46</sup> HALM, *supra*, at 51.

is not to be used to resolve problems that had been or could be dealt with using traditional sources.<sup>47</sup>

In *Shī'ism*, the use of analogical reasoning (*qiyās*) may have been spurred by the need to explain the occultation of the Twelfth *Imām*, the *Al Māhdi*, and its length. This belief has been summarized as follows:

The arguments with which Shaykh al-Mufid, Sharif al-Murtadā and even Shaykh al-Tūsī sought to substantiate the *ghayba* [concealment] of the twelfth *Imām* by rational argument (*dalīl 'aqlī*) stem from the old Mu'tazilite principles that God is just and that man is responsible for his own actions. Since man is fallible and consequently in need of guidance, divine grace (*lutf*) cannot but grant mankind the benefit of rightful guidance at all times by an *Imām* who is immune (*ma'jūm*) from sin and error. Since the ruling Caliphs are notoriously sinful and fallible and act tyrannically, there must be a Hidden *Imām*; without the latter's existence mankind would be forsaken by God, man would indubitably go astray and could not be called to account by a just God . . . So long as usurpers reign and true believers continue to be persecuted, the True *Imām* is prevented from exercising his rights and is threatened in life and limb; he not only may but must therefore remove himself from the clutches of the tyrannical false *Imām*.<sup>48</sup>

On balance, the role of human reasoning by analogy, i.e., *qiyās*, does not play as large a part in *Shī'ite* as in *Sunni* jurisprudence. For *Jafari Shī'ites*, analogical reasoning plays a distinctly subsidiary, if any, role in making legal determinations. Al Mufid argued it is necessary to follow a directly relevant text, if one existed, and his argument is accepted as doctrine, and practiced by *mujtahidān* (the plural of *mujtahid*; literally, persons who strives, in the sense of educated Muslim competent to interpret Islamic Law in practical contexts, possibly through the use of *ijtihād*).<sup>49</sup>

## [E] Greater Role for *Ijtihād*

While the *uṣūl al-fiqh* of Twelver *Shī'ism* excludes analogical reasoning (*qiyās*), it includes human reason (*aql*). Put differently, the *Jafaris* replace the narrow category of *qiyās* with the broader category of reasoning. In the *Shī'ite* approach to the *uṣūl*, if a *mujtahid* can resolve a problem through reason, then the solution is deemed to be in agreement with revelation.<sup>50</sup> This approach is redolent of the Catholic Christian view that faith and reason cannot conflict.

In turn, independent reasoning (*ijtihād*) plays an explicit, and therefore larger, role as a recognized source of law in *Shī'ite* than in *Sunni* jurisprudence. The nature and practice of *ijtihād* in *Shī'ite fiqh* was outlined, elaborated, and mainstreamed by Al Ḥasan ibn Yūsuf 'Alī ibn Al Muṭahhar Al Ḥillī (known as Al 'Allāma; "the most learned one"), who was born in 1250 A.D. (648 A.H.).<sup>51</sup> He did so

in his book *Mabādi' Al-Wuṣāl ilā 'Ilm Al-Uṣūl* (*The Points of Departure from which Knowledge of the Principles is Attained*).<sup>52</sup> As a result of the work of *Shī'ite* scholars like 'Allāma, *Jafari fiqh* allows for the use of *ijtihād* to interpret Islamic Law.<sup>53</sup> *Shī'ite* scholars rely not only a conventional approach to the *Sharī'a*, but also emphasize a dynamic *fiqh*, which contemplates an evolutionary, contextual approach to understanding Qur'anic commandments.<sup>54</sup> Thus, in *Shī'ism*, to the present day, the Gate to *Ijtihād* remains open, and only *Shī'a* unambiguously recognize *ijtihād* as a valid source of law.<sup>55</sup> *Shī'ites* believe there always is someone who may correctly interpret the Qur'ān, namely, the Twelve *Imāms*, and their deputies (as it were), who are the highest religious authorities who await the Hidden *Imām* to be revealed.<sup>56</sup>

But, until the occultation of the 12th *Imām* is over, who among *Shī'ites* is authorized to practice *ijtihād*? *Shī'a* Muslims are required to have one or more teachers whom they follow in the absence of communication with the 12th and Hidden *Imām*, the *Al Māhdi*. These men (and they are invariably men) attempt to live virtuously and make legal judgments through the "exertion" of intellectual effort, human reason, and tradition.<sup>57</sup> This intellectual exertion is known, of course, as *ijtihād*, and the men who practice *ijtihād* are known as "*mujtahid*."<sup>58</sup> *Shī'ites* accept that the practice of *ijtihād* is fallible, and therefore was not used by Muhammad or the *Imāms* who *Shī'ites* believe are infallible.<sup>59</sup> But, *mujtahid* are well educated in Islamic studies, and able to use reason in conjunction with tradition to solve contemporary problems.<sup>60</sup> That is, *mujtahid* have "studied sufficiently and achieved a level of competence necessary to obtain permission (*ijāza*) to practice *ijtihād*."<sup>61</sup> *Mujtahid* interpret religious law for *Shī'ites*, and are allowed to do so through the concession of other *mujtahidān*.<sup>62</sup> A renowned *mujtahid* can attain the title of *Āyatollah* (sign of God).<sup>63</sup>

This claim undoubtedly is a broad one, and some skepticism is in order. It is found in various sources, but never seems to be discussed in great detail or specificity. As a result, there is some suspicion, perhaps, that this claim is (put diplomatically) an uncharitable characterization of *Shī'a* theology by a *Sunni* author.

<sup>51</sup> HALM, *supra*, at 64-65.

Thus, it is permissible for a *mujtahid* to apply reasoning to work out a legal issue, including a complex problem encountered in the modern world. A maxim *Shī'a* scholars accept is: "In the absence of the Imam, reason is the best guide."<sup>64</sup> Moreover, *mujtahidān* do more than interpret religious law for faithful *Shī'a*. They also lead Friday prayers, as do *Sunni imāms*, and collect taxes such as the *khuums*.<sup>65</sup> Significantly, their teachings only hold authority as long as they are alive. Once they die, their teachings hold no precedent.<sup>66</sup> That is not to say the teachings of a deceased *mujtahid* are irrelevant; they may have some persuasive force, but they are not binding in any authoritative sense.

There is a further interesting point relating to the *Shī'ite* view of *ijtihad* as a source of the *Sharī'a*. *Shī'ites* believe the process of revelation through *ijtihad* applied to *hadiths* is continual. In *Usuli Shī'ism*, which is a dominant form of Twelver *Shī'ism* and is based in Najaf, Iraq, the content of the *Sharī'a* is determined by the *majā'yya*.<sup>67</sup> This rule-making authority has been delegated from the Al Māhdi, a lineal descendant of the Prophet.<sup>68</sup> Because of this mandate, *Shī'a* have an opportunity to develop interpretations unconfined by the purportedly objective, neutral interpretations of *Sunni* legal scholars.<sup>69</sup> This liberty permits *Shī'a* to re-define, with justification, prominent legal issues, and solutions thereto.

More extremely, this liberty allowed a prominent Iraqi *Usuli Shī'ite* scholar and cleric, Muhammad Bāqir Al Sadr (1935-1980), to doubt certain *hadiths*.<sup>70</sup> Sadr distinguishes the adjudicatory rulings (*quadhā'*) of the Prophet from his religious rulings (*nahī*).<sup>71</sup> If a *hadith* is a mere adjudicatory ruling, like the prohibition of the sale of uncaught fish, then it potentially can be dismissed as addressing a specific temporal concern before or during the life of Muhammad. In contrast, a religious ruling from Muhammad cannot be set aside casually on such grounds.<sup>72</sup>

<sup>66</sup> See BOLL, *supra*, at 24.

<sup>67</sup> Haider Ala Hamoudi, *You Say You Want a Revolution: Interpretive Communities and the Origins of Islamic Finance*, 48 VIRGINIA JOURNAL OF INTERNATIONAL LAW 249, 254-55 (Winter 2008). [Hereinafter, Hamoudi.]

<sup>68</sup> Hamoudi, *supra*, at 254-55.

<sup>69</sup> Hamoudi, *supra*, at 254-55.

<sup>70</sup> The most notable accomplishment by Sadr is *Iqtisāduna* ("Our Economics"), written in 1977. In this book, and throughout his life, he advocated the *Sharī'a* should be:

a means through which to reformulate the entire practice of Islamic finance in a manner that realizes more completely the aspirations of the broader Muslim community in its call for uniquely Islamic forms of human association in Muslim societies.

Quoted in Hamoudi, *supra*, at 249-250. Concerned about the development of *Shī'ite* Islamic finance as a response to growing Marxist influence, Professor Hamoudi proposes to use the influential work of Sadr to re-orient Islamic finance to render it subservient to social justice concerns.

Sadr also was the founder of the Islamic Dawa political party, and was commissioned by the Kuwaiti government in 1980 on how to use their oil proceeds appropriately. He was the father of Moqtada Al Sadr, who led a *Shī'ite* militia in Iraq that often clashed violently with United States forces following the American-led invasion of that country in March 2003.

<sup>71</sup> Hamoudi, *supra*, at 279.

<sup>72</sup> Hamoudi, *supra*, at 279.

Notwithstanding this distinction, it may be inquired whether applying *ijtihad* to *hadiths* could yield jurisprudence antithetical to the foundations of *Shī'ism*, or whether there are sufficient checks to ensure the stability of those foundations.

## PART SIX

### PRACTICE

#### Chapter 10

#### PROBLEM 10.1

Reaction of 1,2-dibromocyclohexane with sodium hydroxide in dimethyl sulfoxide (DMSO) at 100°C yields cyclohexene. Propose a mechanism for this reaction.

**Solution:** The reaction of 1,2-dibromocyclohexane with sodium hydroxide in DMSO at 100°C yields cyclohexene. The mechanism involves the formation of a cyclic alkoxide intermediate.

**Step 1:** Deprotonation of 1,2-dibromocyclohexane by sodium hydroxide to form a cyclic alkoxide intermediate.

**Step 2:** Elimination of bromide ion from the intermediate to form cyclohexene.

**Step 3:** Protonation of the intermediate to form cyclohexene.

**Step 4:** Elimination of bromide ion from the intermediate to form cyclohexene.

**Step 5:** Protonation of the intermediate to form cyclohexene.

**Step 6:** Elimination of bromide ion from the intermediate to form cyclohexene.

## Chapter 15

### FIVE PILLARS OF ISLAM

---

... [W]e cannot fail to be concerned that today, with increasing insistency, some maintain that religion fails in its claim to be, by nature, a builder of unity and harmony, an expression of communion between persons and with God. Indeed some assert that religion is necessarily a cause of division in our world; and so they argue that the less attention given to religion in the public sphere the better. Certainly, the contradiction of tensions and divisions between the followers of different religious traditions, sadly, cannot be denied.

Address of His Holiness Pope Benedict XVI, Meeting with Muslim Religious Leaders, Members of the Diplomatic Corps, and Rectors of Universities in Jordan, Mosque Al-Hussein bin Talal, Amman, Jordan, 9 May 2009 (emphasis added)

#### SYNOPSIS

##### § 15.01 FIRST PILLAR: BEARING WITNESS (*SHAHĀDA*)

##### § 15.02 SECOND PILLAR: PRAYER (*SALAḤ*)

- [A] Five-Fold Daily Prayer
- [B] Comparison with Catholic *Liturgy of the Hours*
- [C] First Call (*Adhān*) and Second Call (*Iqāma*) to Prayer
- [D] Commerce and Prayer
- [E] Direction of Prayer (*Qibla*)
- [F] Women and Prayer

##### § 15.03 THIRD PILLAR: ALMSGIVING (*ZAKĀT*)

- [A] Virtues of Charity and Community
- [B] Distinction with *Zakāt al Fitr*
- [C] Effects and Beneficiaries
- [D] Formula and Administration
- [E] Does Intent (*Niyah*) Matter?
- [F] *Shīʿite* Distinction: *Khums* (Wealth Tax)

##### § 15.04 FOURTH PILLAR: FASTING (*SAWĪM*) AND *RAMAḌĀN*

##### § 15.05 FIFTH PILLAR: PILGRIMAGE (*ḤAJJ*)

- [A] *Miqat* (Six Starting Points)
- [B] Muslims Only
- [C] Female Pilgrims

- [D] Preparation at *Meqaat*
- [E] Steps in 'Umrah
- [F] Three Types of Hajj and Steps

## § 15.01 FIRST PILLAR: BEARING WITNESS (SHAHĀDA)

Bearing witness through public proclamation, private prayer, and most of all, example, is a concept familiar to persons of faith. In respect of the first two methods, Catholic Christians do so through their public and private recitation of the Nicene Creed and Apostle's Creed. Islam, too, has its succinct summary of the faith, to which all Muslims are called to declare. Known as the "*Shahāda*," it is the First Pillar of Islam.

"*Shahāda*" is a noun that means witness, specifically, know and believe without doubt or suspicion, as if witnessed. "*Shahāda*" comes from the verb (infinitive) "*yashadu*," which means "to witness," and "*shahida*," which means (past tense) "he witnessed." The entire declaration of the *Shahāda* sometimes — particularly on the Indian Subcontinent — is called the "*Kalimah*," which literally translated means the "word." In Romanized Arabic, the *Shahāda* states:

"*Lā ilāha illa Allāh, Muhammadu rasūl Allāh.*"

This testimony means:

There is no deity but God (Allāh), and Mohammed is the Messenger of God (Allāh).

The first clause is theological, because it translates literally as "No God but (except) God." The connotation is that there is nothing in the universe that is worthy of worship but God. The connotation is not that there is nothing in the universe but God, because there are things in the universe that are not good, indeed that are evil, which are not God. Moreover, to declare that the entire universe is God would wrongly impart to Islam the belief that God is immanent (i.e., indwelling, inherent, and permanently pervading the universe) that it does not have, but which is a part of some Asian faiths and philosophies, such as Hinduism and Shintoism.<sup>1</sup> Like Catholic Christianity, Islam holds that everything that is created is created by God, and belongs to God, i.e., the universe is God's creation. But, neither of these faiths believes that God is everywhere and resonating in all things, and neither is pantheistic. Rather, to both faiths, God is transcendent.

A related point is both faiths would agree in a Catholic adage: "We do not see in order to believe, but rather believe in order to see." That is, both faiths accept there is plenty of empirical evidence for the existence of God, if only we are open-minded enough to examine that evidence, which includes testimonial and documentary evidence. But, neither faith needs scientific proof for the existence of God to believe in God. That is the wrong way around. Belief in God opens the eyes of the believer to the reality of God.

<sup>1</sup> OXFORD AMERICAN DICTIONARY AND THESAURUS (New York, New York: Oxford University Press, 2003) at 783 (entry for "immanent").

The words of the *Shahāda* do not come directly from any *surah* (chapter) or *ayah* (verse) in the Qur'ān. Rather, the declaration is sourced in various *hadiths*, the principal one being one in which the Prophet Muhammad said that Islam is built on Five Pillars. *Imām* Bukhari recounts as follows:

Allāh's Apostle . . . said: Islam is based on (the following) five (principles):

1. To testify that none has the right to be worshipped but Allāh and Muhammad is Allāh's Apostle.
2. To offer the (compulsory congregational) prayers dutifully and perfectly.
3. To pay *Zakāt* (i.e., obligatory charity).
4. To perform *Hajj* (i.e., Pilgrimage to Mecca).
5. To observe fast during the month of *Ramādān*.<sup>2</sup>

Similarly, *Imām* Muslim explains that the second of the Four Rightly Guided Caliphs (*Rashidun*) was sitting with the Prophet and said "Muhammad, inform me about Al-Islam." In reply:

The Messenger of Allāh . . . said: Al Islam implies that you testify that there is no god but Allāh and that Muhammad is the Messenger of Allāh, that you pray, pay *Zakāt*, fast [during the month of] *Ramādān*, and perform pilgrimage to the (House) . . . [assuming] you are solvent enough (to bear the expense of the journey).<sup>3</sup>

Notably, the words of the *Shahāda* are not identical for *Sunnīs* and *Shī'ites*.

Typically, *Shī'ites* add the following clause at the end of the *Shahāda*: "*Aliun wali Allāh*." This add-on means: "Ali is the friend of [close to] God (Allāh)." Manifestly, it bespeaks the importance of 'Ali in *Shī'ism*, namely, 'Ali is the most important human figure in Islam after the Prophet. The term "*wali*" refers to a guardian, and is commonly used in the *Shari'a*, particularly in Family Law. When *Shī'ites* use the term "*wali*" in respect of 'Ali, they mean to indicate that 'Ali (and by extension, his successors as *Imāms*) rightly have guardianship over the Muslim community

<sup>2</sup> THE TRANSLATION OF THE MEANINGS OF SAHIH AL-BUKHARI, ARABIC-ENGLISH by Dr. Muhammad Muhsin Khan vol. I, book II (The Book of Belief (Faith)), p. 17, *hadith* no. 7 (Islamic University, Medina, Kingdom of Saudi Arabia; Dar Ahya Us-Sunnah, Al Nabawiya, March 1978). (Hereinafter, *BUKHARI*) This *hadith* is recounted in the compilations of *Imāms* Bukhari and Muslim. Another version of this *hadith* is as follows:

On the authority of Abū 'Abd al-Rahman 'Abdullah bin 'Umar bin al-Khattab, . . . who said: I heard the Messenger of Allāh, . . . say: "Islam has been built upon five things — on testifying that there is no other god but Allāh, and that Muhammad is His Messenger; on performing *salah*; on giving the *zakah*; on *Hajj* to the House; and on fasting during *Ramādān*."

See [http://en.wikipedia.org/wiki/Five\\_Pillars\\_of\\_Islam#cite\\_note-practices-21](http://en.wikipedia.org/wiki/Five_Pillars_of_Islam#cite_note-practices-21).

<sup>3</sup> SAHIH MUSLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM'-'US-SAHIH BY IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDEL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASAN UL LA, book 1 (The Book of Faith), p. 5, *hadith* no. 8 (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990).

(ummah). This point, of course, is a key source of debate between *Sunnīs* and *Shī'ites*.

Also noteworthy is the fact *Shī'ites* do not regard the *Shahāda* as a separate Pillar of Islam. Rather, they link it to the "*Aqidah*," essentially meaning "Islamic theology." *Shī'ites* regard the *Shahāda* as part of the beliefs concerning Islam to be studied.

The *Shahāda* not only is the First of the Five Pillars of Islam, but also the most important of them. Two points underscore its significance. First, the *Shahāda* is the route to conversion. Any non-Muslim seeking to convert to Islam need only recite the *Shahāda* publicly, preferably in front of an *imām*. However, "publicly" is not interpreted too strictly. There need not be a crowd of thousands. A declaration in front of a few family members, and even perhaps simply in front of God, suffices.

Second, it occasionally has been suggested by Islamic religious scholars (*ulema*) a Muslim could lead a religiously and morally execrable life. But, if upon his or her death, before God (Allāh) on the Day of Judgment, that person honestly and sincerely proclaims the *Shahāda*, his or her sins would be forgiven. That likely is an overstatement; entry into Paradise perhaps is not so easy, and this view is not accepted by the majority of the *ulema*. Yet, the suggestion illustrates the importance of bearing witness.

## § 15.02 SECOND PILLAR: PRAYER (SALAH)

### [A] Five-Fold Daily Prayer

"Liturgy" is a term associated with Catholic Christianity, not Islam. Yet, there is a "Muslim liturgy." The Cistercian Abbot, Dom Jean-Baptiste Chautard (1858-1935), explains this term in his spiritual classic, *The Soul of the Apostolate*:

... Liturgy ... [is] the public, social, official worship given by the Church of God, or, the whole complex of means which the Church uses especially in the Missal, Ritual, and Breviary, and by which she expresses her religion to the adorable Trinity, as well as instructs and sanctifies souls.<sup>4</sup>

In Islam, a great deal of worship is "public," as it is conducted in a mosque, "social," as it is performed with one or more other persons, and "official," as it follows a process laid out by religious scholars (*ulema*) and leaders of prayer (*imāms*). While Muslims, like Catholics, certainly can and do pray privately, and seek a direct relationship with the Creator, community and communal forms of praise, thanksgiving, and petition are essential. Both faiths rely for their worship on sacred texts and compliments to them. Through liturgy, both of them express their religion to God. And, through liturgy, Islam and Catholicism seek to teach and make holy their

<sup>4</sup> DOM JEAN-BAPTISTE CHAUTARD, *THE SOUL OF THE APOSTOLATE* 212 (Trappist, Kentucky: the Abbey of Gethsemani, Inc., 1946, A Monk of Our Lady of Gethsemani, trans.) 212 (emphasis original). The book, published posthumously, was based in a 1907 pamphlet, *L'Apostolat des Catechismes et de la Vie Interieure*, (*The Apostolate of Catechism and the Interior Life*), which grew into book-length form after the First World War.

adherents. Islamic liturgy is manifest not only in daily prayer, but also in the great pilgrimage, the *Hajj*.

That daily prayer is an obligation incumbent on all Muslims is evident from *surah* 17, *ayat* 78-79, of the Qur'an:

<sup>78</sup>So perform the regular prayers in the period from the time the sun is past its zenith till the darkness of the night, and [recite] the Qur'an at dawn — dawn recitation is always witnessed — <sup>79</sup>and during the night wake up and pray, as an extra offering of your own, so that your Lord may elevate you to a [highly] praised status.<sup>5</sup>

This passage does not, however, indicate that prayer is required five times per day. Indeed, no passage in the Qur'an clearly identifies this Pillar of Islam.

Rather, the origin of this Pillar is amusing. It is the *Sunnah* of the Prophet. By tradition, Muslims believe a negotiation took place involving the Prophet Muhammad, Moses, and God (Allāh) during the *Isra'* and *Miraj*, with "*Isra'*" meaning moving from one place to another, in this instance the Prophet moving from Mecca to Jerusalem, and "*Miraj*" referring to going up, in this instance, the Prophet going up to Heaven from Jerusalem. At issue was how many times a Muslim should pray each day. Allāh advised 50 times. Moses advised Muhammad that many ordinary people would find such a large number too difficult, and counseled Muhammad to ask Allāh again. Muhammad did so, seeking a reduced figure. Allāh obliged, and the deal was set at five.

Table 15-1 summarizes the five daily prayers and their approximate times. The precise times are published in newspapers, mosque bulletins, and on the Internet. The Table also summarizes the similarities and differences among the prayers in terms of the number of *rak'ah* (*rak'at*, plural). A single, complete *rak'ah* involves standing, bowing, prostrating (i.e., on the floor, on one's knees, touching one's forehead to the floor), and standing up again. Each *rak'ah* also involves reading a passage from the Qur'an while in the standing position.

Praying on multiple occasions during the day is a crucial manifestation of a devout belief that God (Allāh) comes before all other activities and events of the day. To be sure, there are some tasks that cannot be abandoned — a surgeon in the middle of an operation, a professor in the middle of a lecture, a mother in the middle of nursing her child. It is, therefore, permissible under the doctrine of necessity (*ḍarūrāh*) to postpone the prayer until it is safe and convenient to do so.

Table 15-1:  
Summary of Five Daily Muslim Prayers

Name of Prayer	Approximate Time of Day	General Outline
<i>Fajr</i>	Early morning just before sunrise. e.g., 5:30 a.m.	<i>Fajr</i> is the shortest of the 5 prayers, involving just 2 <i>rak'at</i> .

<sup>5</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem 17:78 at 180 (Oxford, England: Oxford University Press, 2004). [Hereinafter, QUR'AN.]

Name of Prayer	Approximate Time of Day	General Outline
<i>Duhur</i>	Noon. e.g., 12 noon.	<i>Duhur</i> involves 4 <i>rak'at</i> .
<i>'Aṣur</i>	Late afternoon. e.g., 4:00 p.m.	Same as <i>Duhur</i> .
<i>Maghrib</i>	Just after sunset. e.g., 6:30 p.m.	<i>Maghrib</i> involves 3 <i>rak'at</i> .
<i>Isha'</i>	One hour after sunset. e.g., 8 p.m.	Same as <i>Duhur</i> .

### [B] Comparison with Catholic *Liturgy of the Hours*

Devout belief, manifest through frequent prayer, is shared by Catholic Christianity. All Priests are required, and the laity is invited, to practice the Divine Office. Doing so involves praying seven times each day, and such prayer may be communally in a Church, or individually in a home or office. Known as the *Liturgy of the Hours*, the regular daily prayer dates from the earliest days of Christianity, and thus technically is not unique to Catholicism.

The number of times practicing Muslims versus Catholics pray every day is not what matters, though perhaps there is no harm in adherents of different faiths competing in a friendly manner to out-do each other in prayer and good works. Rather, the salient point is both Islam and Catholic Christianity propose to their adherents that continuous prayer throughout the day — in effect, having God on one's mind regularly — is ideal.

Table 15-2 summarizes the Liturgy of the Hours. The format of the prayers, coupled with the readings from the Old and New Testaments of the Bible, are set forth in a book titled *Liturgy of the Hours*, sometimes called the *Breviary*, which is available in hard copy and on the Internet. Briefly, most of the prayers involve reading or singing an introductory hymn, thereafter reading two Psalms and a Canticle (based on the Old Testament), or 3 Psalms, and a passage from the New Testament, and concluding with a brief prayer. The prayers are organized according to the Liturgical Season — Advent, Christmas, Ordinary Time, and Easter — and generally follow a four-week cycle. Recitation of the Psalms is particularly significant, as they are the prayers that Jesus would have learned and said as a child and young adult in the synagogue.

### [C] First Call (*Adhān*) and Second Call (*Iqāma*) to Prayer

Each of the five daily Islamic prayers is initiated by a call to prayer, invariably delivered in Arabic. Technically, there are two calls. The first one, which is *adhān*, announces that it is time to pray. The second call, known as "*iqāma*," which means "to set up," states that it is time to line up for the beginning of the prayer. It is issued immediately before the prayer starts. In essence, both the *adhān* and *iqāma* summarize Islamic belief, proclaiming that God is Great, that there is no God but Allāh, Muhammad is the Messenger of God, salvation is found through obedience to the Will of God, and prayer is an important expression of this obedience.

Table 15-2:  
Summary of Catholic *Liturgy of the Hours*

Name of Prayer (English)	Name of Prayer (Latin)	Approximate Time of Day	General Outline
Office of Readings		Early in the morning, upon rising.	Invitatory Psalm (typically Psalm 95), followed by a hymn, 3 Psalms, 2 Readings, and Responsory Prayer. The 1st Reading typically is from the Old Testament, and the 2nd Reading typically is from an early Christian writer, Catholic Saint, Second Vatican Council, or other renowned source.
Morning Prayer	<i>Lauds</i>	Before 9:00 a.m.	Introduction, Hymn, Psalm, Canticle, another Psalm, Reading from New Testament, Responsory Prayer, Canticle, and final Prayers and Intercessions.
Mid-Morning Prayer	<i>Terce</i>	Between 10:00 and 11:00 a.m.	Introduction, Hymn, 1 of 3 Psalms of the Day, Reading from Old or New Testament, Concluding Prayer.
Midday Prayer	<i>Sext</i>	Around 12:00 noon.	Introduction, Hymn, 1 of 3 Psalms of the Day, Reading from Old or New Testament, Concluding Prayer.
Afternoon Prayer	<i>None</i>	Between 2:00 and 5:00 p.m.	Introduction, Hymn, 1 of 3 Psalms of the Day, Reading from Old or New Testament, Concluding Prayer.

Name of Prayer (English)	Name of Prayer (Latin)	Approximate Time of Day	General Outline
Evening Prayer	<i>Vespers</i>	Between 8:00 and 10:00 p.m.	Introduction, Hymn, 2 Psalms and Canticle or 3 Psalms, Reading from New Testa- ment, Responsory Prayer, Canticle, and final Prayers and Intercessions.
Night Prayer	<i>Compline</i>	Before bedtime.	Introduction, Hymn, 2 Psalms, Reading from New Testament, Short Responsory Prayer, and Con- cluding Prayer.

The *adhān* is issued by a *muezzin* from a minaret of a mosque, often via a recording through a loudspeaker. The *adhān* has 8 lines, invariably delivered in Arabic:

- (1) God (Allāh) is the Greatest.
- (2) I bear witness that there is no god but God.
- (3) I bear witness that Muhammad is the Messenger (*Rasāl*) of God.
- (4) Make haste towards worship.
- (5) Come to the true success.
- (6) Prayer is better than sleep.
- (7) God is the Greatest.
- (8) There is no god but God.

The sixth line is used only for prayers at dawn (*fajr salat*). The first line is repeated four times (except for the *Mālikī* School, which repeats it twice). The second through seventh lines are repeated twice. The last line is stated once.

For *Shī'ites*, There are minor differences in the first line of the *adhān*, which is God is greater than any description, and in the fourth through seventh lines, those lines being, respectively, "Hasten to prayers, Hasten to deliverance, Hasten to the best act, God is greater than any description." *Shī'ites* repeat the first line four times, and the other lines twice. Some *Shī'ite* scholars recommend adding "I bear witness that 'Alī is the Vice-Regent of Allāh," though it is not formally part of the *adhān* (or *iqāma*, explained below). This recommendation bespeaks the importance of 'Alī in *Shī'ism*.

The *iqāma*, also proclaimed by a *muezzin*, is nearly the same as the *adhān*, but it is delivered more quickly, in a monotone fashion, and differs as to the sixth line of the call. Accordingly, the *iqāma* is:

- (1) God (Allāh) is Greatest, God is Greatest.
- (2) I assert that there is no god but God.
- (3) I assert that Muhammad is the Messenger (*Rasāl*) of God.
- (4) Come to the prayer.
- (5) Come to salvation.
- (6) Stand for prayer.
- (7) God is Greatest, God is Greatest.
- (8) There is no god but God.

Each of the first six lines is repeated twice (with minor variations in the *Ḥanafī* and *Mālikī* Schools, and the *Shī'ites*).

*Sunnis* and *Shī'ites* disagree as to the origin of the *adhān*. *Shī'a* say it was developed by the Prophet Muhammad alone on the command of Allāh. *Sunnis* say it came to one of the Companions of the Prophet (*Ṣaḥābah*), and later one of the Four Rightly Guided Caliphs (*Rashidun*), Omar, in a dream. That is, Allāh revealed the *adhān* to Omar in a dream. Muhammad liked it, in preference to bells (used by Christians) or a horn (used by Jews). In turn, Muhammad had Bilal ibn Ribāh, a freed slave, issue the call because of his beautiful voice. *Shī'ites* agree that Bilal was the first to issue this call.

## [D] Commerce and Prayer

One illustration of the importance of the Five Pillars of Islam, that is, how they are indeed foundational obligations that are supposed to take priority over day-to-day secular matters, concerns their relationship to commerce. When the call to prayer is issued, are Muslims supposed to cease all trading activity? That is, is it appropriate to negotiate, conclude, and perform contractual obligations at the time of prayer? The issue is not unfamiliar to observant Jews or Christians, nor even to non-religious practitioners old enough to recall laws in the United States and Europe forbidding trading on Sundays. Most such laws have long been repealed, but the issue is a ripe one under the *Shar'ia*.

The general answer, subject to qualifications, is that a contract concluded at the time of prayer is voidable. Practically speaking, that means either side could cancel the contract. This answer is particularly true if the contract is formed at the time of the Friday (*Jum'a*) prayer. As that is the single most important congregational observance during the week, attention should be given to it. Engaging in commercial transactions at that time is akin to doing deals on Sunday when it is time for Mass at a Catholic Church. *Surah* 62, *āyat* 9-11 of the Qur'ān states:

"Believers! When the call to prayer is made on the day of congregation, go quickly to the prayer and leave off your trading — that is better for you, if only you knew — <sup>10</sup>then when the prayer has ended, disperse in the land and seek out God's bounty. Remember God often so that you may prosper. <sup>11</sup>Yet they scatter towards trade or entertainment whenever they observe it, and leave you [Prophet Muhammad] standing there. Say [to them],

"God's gift is better than any entertainment or trade: God is the best provider."<sup>6</sup>

Simply put, all trading activities must cease while *Jum'a* prayers are occurring.<sup>7</sup> God (*Allāh*) is more important, and offers more, than any worldly activity. Or, to put the point in familiar Christian terms found in *The Gospel According to Matthew* (chapter 4, verse 4) and *The Gospel According to Luke* (chapter 4, verse 4), man does not live by bread alone, but by every word that comes from God.

Yet, the analogy to Christianity bespeaks the qualification to the rule under the *Shar'ia*. In practice, in many markets and in many Muslim countries, all trading activity does not cease at the time of Friday congregational prayer. All over America, on Sunday morning, many vendors — from small liquor stores to major retail chains — are open. Business continues on, uninterrupted, as if the market participants were ignoring their religious duties. In truth, how those participants feel about their duties varies from one person to another, and cannot be judged by another. Also in truth, many of them simply cannot pull away from their commercial obligations. Taxi cab drivers must continue to ensure the safe and efficient journey of their passengers. Surgeons must continue to perform their operations for the betterment of their patients. Thus, business continues. Of course, it is advisable for, and indeed incumbent on, one who misses prayers to make them up at the earliest possible convenience.

### [E] Direction of Prayer (*Qibla*)

It is commonly thought that Muslims must face "east" when praying. The truth is that the direction a Muslim faces for prayer does matter. But, whether the proper direction is east depends on the location from which a Muslim prays. The key point is to face the direction of Mecca, specifically, the *Ka'ba*.

The Arabic term "*qibla*" refers to the proper direction for prayer. This direction is indicated in a mosque, and in certain buildings (such as hotels), by a niche or marking in the wall or on the ceiling. The *qibla* matters for two reasons beyond prayer. First, it is the correct direction in which a Muslim should be buried (specifically, with his or her face in that direction) after death. (Consequently, archaeologists or other researchers can identify a Muslim burial ground via the direction of remains.) Second, the *qibla* is the direction in which the head of an animal being slaughtered to make *halal* meat should point.

<sup>6</sup> Qur'an, *supra*, 62:9-11 at 372-73.

As the translator observes in a footnote to 62:11, the reference to Muhammad "standing there" is to two occurrences that happened during his life. First, during congregational prayers, when a famine had struck, some worshippers rushed out in pursuit of a caravan. Second, also during congregational prayers, some worshippers left hurriedly to follow a musical band playing for a wedding. At both instances, the Prophet was left at the pulpit (*minbar*), and 62:11 is what God (*Allāh*) instructs Muhammad to say to Muslims when such temptations and distractions happen. See *id.*, fn. A at 373.

<sup>7</sup> See JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 159 (Annandale, New South Wales, Australia: The Federation Press, 1990).

Interestingly, the *Ka'ba* in Mecca was not the original direction of the *qibla*.<sup>8</sup> Rather, the *qibla* pointed toward Jerusalem, specifically, the shrine Muslims call the "Noble Sanctuary" and Jews dub the "Temple Mount." At least as 200 A.D. (i.e., early 1st to early 3rd centuries A.D.), Jews have faced the Temple Mount when praying, and that practice is referred to in the Old Testament of the Bible, specifically, in *The First Book of Kings* (chapter 8, verse 35). During prayer, Muslims faced this direction from 610-623. Consequently, Muslims sometimes refer to the Noble Sanctuary as the "First of the Two *Qiblas*." Based on accounts from the Companions of the Prophet Muhammad, the direction changed to the second *Qibla* — the *Ka'ba* — suddenly, during a noon prayer in Medina in 623. That prayer occurred in what is now called the Mosque of the Two *Qiblas* (*Masjid al Qiblatain*). The Prophet led that prayer, facing Jerusalem, but he received a revelation from God (*Allāh*) in which he was instructed to re-orient the *qibla* to the *Ka'ba* — to "turn your face towards the *Masjid al Haram*." Immediately, he followed the revelation, as did the other worshippers. Henceforth, from any point in the world, the *qibla* became the direction of the *Ka'ba*.

It is important to appreciate that facing the direction of the *Ka'ba* does not mean worshipping the *Ka'ba* (or the contents thereof). Rather, it is God (*Allāh*) who is worshipped. The *Ka'ba* is the focal point for prayer, but the target of the prayer is the One God. It also is worth emphasizing that Christianity, along with the other two Abrahmic faiths, Judaism and Islam, shares a tradition of prayer in a particular direction. In the Latin rite Mass of the Catholic Church, i.e., the Tridentine Mass, prayer was offered *ad orientum* — to the east. The logic is the east is the direction from which the sun rises. In turn, the sun symbolically reminds worshippers of the Son of God, Jesus Christ, to whom prayer is directed.

### [F] Women and Prayer

The idea of gender-specific roles is not unique to Islam. Catholic Christianity has an all-male priesthood, and only a priest can celebrate a Mass. Buddhist services often are presided over by male-only monks. However, nuns and female laity perform important roles in Masses, including serving as Eucharistic ministers, and there certainly are female Buddhist monks. In contrast, when watching a mixed-congregational prayer at virtually any mosque in the world, non-Muslim observers often are struck by two points. First, the entire prayer is male orchestrated. Likewise, men deliver the sermon. Second, women typically are accorded inferior physical positions in which to sit or stand. That position is in the back, and often is behind a grill or screen.

As to the first point, traditionally, and continuing to the present day, a woman is forbidden from leading a public, mixed-congregational Muslim prayer. Throughout the ages, the "*imām*," or leader of prayer, almost invariably has been a man. Likewise, the first and second calls to prayer (*adhān* and *iqāma*, respectively), issued by a *muezzin* (the caller to prayer), are from a male voice. The sermon (*khuṭba*) itself is delivered by a male cleric, the *khatib*. The consensus opinion (*ijma'*) among all Four *Sunni* Schools, and among *Shi'ite* scholars, is that a

<sup>8</sup> See *Qibla*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Qibla>.

woman cannot lead a mixed group in prayer. This *ijma'* is not based on any Qur'anic injunction; rather, it is grounded in the *hadith*. However, assuming she is well-versed in the Qur'an, some *Sunni* and *Shi'ite* scholars agree she is permitted to lead other women in prayer, and possibly her own family, both males and females, in private prayer. The exception is justified on the ground with an all-female group, or with men who are close family members (*mahram*), there is no opportunity to be distracted from prayer by impure sexual thoughts.

As yet, there is no strong movement in the Islamic World to alter these traditions. However, in recent decades, on occasion, women have led prayers for both men and women. Examples of female *imams* include:

- 1995, South Africa<sup>9</sup>

The earliest reported case of a woman leading a public, mixed congregational Islamic prayer, at least in the non-Muslim western world, occurred in 1995 in Johannesburg, South Africa, in a building owned by the Muslim Youth Movement of South Africa. Indeed, the congregation met every Friday for the *Jum'a* (Friday) *salah* (prayer), and every night during *Ramaḍān* for the special *tarāwīḥ* prayer. The *imams* were female as well as male. Moreover, the *khatibs*, i.e., the persons delivering the *khutba* (sermon), were females as well as males.

Further, in 1994, Amina Wadud delivered the Friday sermon (*khutbatul Jum'a*) at the Claremont Main Road Mosque in Cape Town — the first woman to do so in South Africa. Ms. Wadud is an African-American Muslim and Professor of Islamic Studies at Virginia Commonwealth University in Richmond, Virginia. Since 1994-1995, women have often delivered the *khutbatul Jum'a* at this Mosque, as well as the Masjidul Islam in Johannesburg. The practice has expanded to Durban, where since 2003 at an open-air venue on the North Beach, on the Indian Ocean, two *khutbas* are delivered in connection with *Eid* prayer, one by a man and one by a woman. The event, designed by families, is organized by Taking Islam to the People.

- 2004, Canada<sup>10</sup>

In 2004, Yasmin Shadeer led prayer (*salah*) for a public, mixed-congregation organized by the United Muslim Association at a mosque in Toronto — the first time such an event occurred in Canada. Also that year, at the Etobicoke Mosque in Toronto, which is run by the United Muslim Association, a 20-year-old woman, Maryam Mirza, delivered the second half of the *khutba* on *Eid al-Fitr*. The following year, Raheel Raza led a Friday service in Toronto, leading the prayer and delivering the *khutba* to celebrate Earth Day. The event, organized by the Muslim Canadian Congress, was in the backyard of the home of an activist, Tarek Fatah.

Pamela Taylor, who converted to Islam in 1986, led a mixed congregational prayer in Toronto on 8 March 2007 organized by the Canadian Muslim Union. She did so in conjunction with International Women's Day, and observed that Islam accords equal status to women and men. Ms. Taylor is a co-founder of Muslims for

<sup>9</sup> See *Women as Imams*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Women\\_as\\_imams#Mixed-gender\\_congregations](http://en.wikipedia.org/wiki/Women_as_imams#Mixed-gender_congregations). [Hereinafter, *Women as Imams*.]

<sup>10</sup> See [www.wlum.org/node/3949](http://www.wlum.org/node/3949).

Progressive Values, which is based in Los Angeles, California. The following year, at the invitation of the Muslim Canadian Congress, delivered the *khutbatul Jum'a*, and led mixed-gender *salah*, in Toronto at the UMA Mosque on Canada Day.

Since 2008, the Noor Cultural Centre in Toronto has included women on their Board of *Khatibs*. Women deliver a full-length sermon before the second call to prayer (*adhān*), followed by a male *khatib*, who delivers a sermon in Arabic after the second *adhān*. Women and men alternate issuing the call to prayer. At the El-Tawhid Juma Circle in Toronto, founded by a lawyer-activist, El-Farouk Khaki and an academic, Laury Silvers, all Muslims — whether male or female, heterosexual or homosexual — are welcome to lead prayers and deliver a sermon.

- 2005, United States<sup>11</sup>

On 18 March 2005, Professor Amina Wadud led public, mixed congregational Friday prayers (*salat al Jum'a*). Professor Wadud declared:

I don't want to change Muslim mosques. I want to encourage the hearts of Muslims, both in their public, private and ritual affairs, to believe they are one and equal.<sup>12</sup>

The service, in New York sponsored by the Muslim Women's Freedom Tour, Progressive Muslim Union, and website "Muslim WakeUp!," gained world-wide notoriety. Because three mosques refused to host the event, the venue selected was an art gallery in Soho. A bomb threat forced a change of venue, to Synod House, which is located on the Upper West Side and owned by the adjacent Episcopal Cathedral of Saint John the Divine. The approximately 60 women and 40 men were seated together, with no segregation by gender. The *adhān* was issued by another woman, Suheyla El-Attar. With less fanfare, women have led prayers in other mosques in the United States, for example, as Nakia Jackson did at *Eid* in 2006 and 2007.

- 2005, Spain<sup>13</sup>

In October 2005, Professor Amina Wadud led a public, mixed gender congregational prayer in Barcelona.

- 2008, United Kingdom<sup>14</sup>

Professor Amina Wadud again led a public, mixed-gender Muslim prayer service on Friday, 17 October 2008, the first time for such an event in the United Kingdom. The venue was Wolfson College, Oxford University.

Obviously, all the examples are from non-Muslim western, democratic countries. In no Muslim-majority country has a woman led a mixed congregational prayer — at least not one that has attracted any media attention. In one instance, in 2004 on the last Friday of *Ramaḍān*, a 40-year old woman attempted to do so at one of the

<sup>11</sup> See *Women as Imams*, *supra*.

<sup>12</sup> Quoted in *Women as Imams*, *supra*.

<sup>13</sup> See *Women as Imams*, *supra*.

<sup>14</sup> See *Women as Imams*, *supra*.

largest mosques in Bahrain filled with 7,000 worshippers.<sup>15</sup> She donned male clothes and an artificial beard and moustache. However, as she was about to being the sermon, some of the worshippers realized she was a female, and they along with the *imām* of the mosque (Sheikh Adnan Al Qattan) seized her and turned her over to the police.

As to the second commonly observed phenomenon, it hardly is the case every mosque in the world could be described as “women friendly.” Non-Muslim women are asked — as at the *Umayyad* Mosque in Damascus, *Jama Masjid* in New Delhi, and National Mosque in Brunei — to cover themselves with garments that often are smelly, if not dirty, and hot, even if they otherwise have their heads, arms, and legs covered. Muslim women are relegated to separate, unequal parts of a mosque to prayer, which seems to bespeak a sense of male power, privilege, and entitlement. The reason is an admixture of Islamic Law and tradition. There is no Qur’anic passage that forbids women from praying in a mosque. During the time of the Prophet, many of them indeed did pray in mosques. However, under the *Shari’a*, women are not required to pray in a mosque.

The logic is women are responsible for taking care of the home and family. To obligate them to go to mosque once, never mind five times a day, would turn prayer from an act of loving submission to a burdensome chore. Thus, they are free to pray at home. A corollary rationale sometimes heard, and articulated by men, is it would be distracting to both sexes if either were present in the mosque, seated next to each other. This rationale is nonsense. It exalts the immaturity of some persons into a rule segregating the genders. Moreover, throughout history mixed congregations of Buddhists, Christians, Hindus, and Sikhs have prayed together, in the same physical space and conditions, with no apparent consistent, widespread distraction from spiritual matters.

Nothing in the Qur’an expressly states that women, should they choose to come to a mosque to pray, must be confined to the back, or to a confined space. Accordingly, in some mosques, such as at the *Jama Masjid* in New Delhi, India, women and men mix more-or-less freely at Friday prayers. However, in most mosques, including the famous ones of Istanbul, women are segregated in the back, behind a screen with a grill-like pattern with small holes and a modest door. There is a *hadith* whereby it is stated that if women and men pray together in a mosque, it is better that they sit in separate rows, such as men on the right and women on the left, or men in the front and women in the back. This *hadith* appears to be the strongest basis for the practice of segregating women. However, strictly interpreted, it does not seem to require separate physical spaces, and it certainly does not countenance according to women an inferior space.

<sup>15</sup> See *Women as Imams*, *supra*.

## § 15.03 THIRD PILLAR: ALMSGIVING (ZAKĀT)

### [A] Virtues of Charity and Community

Giving the legally obligatory alms is evidence of an attitude of moderation toward wealth. By paying alms, a person avoids the extremes of niggardliness and extravagance. The Caliph ‘Umar, the second of the Four Rightly Guided Caliphs (*Rashidun*) explained:

Whoever pays the *zakāh* (legal alms), honours his guest (with hospitality), and gives in order to alleviate misfortune, is free of niggardliness.<sup>16</sup>

The Qur’an itself establishes *zakāt* as a “right of the poor to a share of the wealthy.”<sup>17</sup> *Surah* 51 tells the story of Abraham and his aged wife Sarah, and in so doing recounts the generosity of Abraham to strangers:

<sup>24</sup>[Muhammad], have you heard the story of the honoured guests of Abraham? <sup>25</sup>They went in to see him and said, “Peace.” “Peace,” he [Abraham] said, [adding to himself] “These people are strangers.” <sup>26</sup>He turned quickly to his household, brought out a fat calf, <sup>27</sup>and placed it before them. “Will you not eat?” he said, <sup>28</sup>beginning to be afraid, but they said, “Do not be afraid.” They gave him good news of a son who would be gifted with knowledge. <sup>29</sup>His wife then entered with a loud cry, struck her face [in incredulity and embarrassment], and said, “A barren old woman?” <sup>30</sup>but they said, “It will be so. These are your Lord’s words, and He is the Wise, the All Knowing.”<sup>18</sup>

Abraham and Sarah were, of course, blessed with a son as the well-treated strangers said. As the passage intimates, it is easy to give to persons we know and like, but harder — and a greater service to God — to give to persons we do not know, and perhaps if we did might not like. In Catholic Christian terms, we are called to love everyone, even if we do not necessarily like everyone.

To love others is to want for them what is objectively and truly good (a definition offered by Aristotle, among others).<sup>19</sup> Certainly, to Muslims and Christians alike, the ultimate good end is eternal life in the presence of God. Almsgiving is a physical manifestation of love toward that ultimate goal. Almsgiving helps alleviate the suffering of the less fortunate, which at the very least is an objective and truly good end for them on this earth, and bespeaks a sense of gratitude as to the source of wealth, and detachment from that wealth, or at least its worst excesses.

<sup>16</sup> Quoted in MOHAMMAD HASHIM KAMALI, *THE RIGHT TO LIFE, SECURITY, PRIVACY AND OWNERSHIP IN ISLAM* 247 (Cambridge, England: Islamic Texts Society, 2008). [Hereinafter, KAMALI.]

<sup>17</sup> KAMALI, *supra*, at 277.

<sup>18</sup> Qur’an, *supra*, 51:24-30 at 343-344.

<sup>19</sup> For example, in *Nicomachean Ethics*, Book VIII, § 3, ¶ 3, Aristotle states:

Perfect friendship is the friendship of men who are good, and alike in virtue; for these wish well alike to each other *qua* good, and they are good themselves.

ARISTOTLE, *THE NICOMACHEAN ETHICS* 145 (Oxford, England: Oxford University Press, 2009, David Ross & Lesley Brown eds.).

Charity, of course, is a practice the Qur'an encourages, for example in *surah* 57, *ayah* 7:

Believe in God and His Messenger, and give out of what He has made pass down to you: those of you who believe and give will have a great reward.

Accordingly, one of the Five Pillars of Islam is the religious obligation to give alms (*zakāt*). In brief:

The Qur'an has objectively proclaimed *zakāh* as the right of the poor to a part of the property of the rich (51:4) [which speaks of "1. . . those [winds] that scatter far and wide, 2and those that are heavily laden, 3that speed freely, 4that distribute [rain] as ordained!"] This manner of reference to *zakāh* also features in the Prophet's instruction to Mu'adh b. Jabal, who was told, upon his departure to become the judge and governor of the Yemen, to "1. . . take it from the wealthy and give it to the poor among them". . .<sup>20</sup>

Thus, every able Muslim (*i.e.*, who has property above a minimal or quorum amount, the *nisāb*), and able Muslim business (*i.e.*, with property above a *de minimis* threshold), is required to give annually to charity an amount equal to 2 ½ percent of his or her gross assets (less necessary expenses).<sup>21</sup> The amount given comes from productive assets.

The central theoretical purpose of *zakāt* is to promote a sense of community among Muslims (sometimes called "fraternity," or "*ukhuwwah*"), bonding through empathetic love the advantaged with the disadvantaged. Bluntly put, *zakāt* reminds all Muslims that God is the source of material blessings, and the rich ought not to think they are self-reliant and in control. Precisely because they are rich, they have a religious and legal obligation to share. In Catholic Christian terms, *zakāt* manifests the solidarity of the rich with the poor. Giving alms to them is an exercise of charity and generosity in favor of the least advantaged by persons to whom God has given much.

## [B] Distinction with *Zakāt al Fitr*

It is important not to confuse the third pillar, *zakāt*, with a related but distinct practice, "*zakāt al fīr*" (literally, "fast-breaking alms"). This practice is linked to the fourth pillar, the *Ramādān* fast (*sawm*). *Zakāt al fīr* is based on *surah* 9, *ayah* 34-35 of the Qur'an. It also is sourced in the *hadīth*, as Dr. Muhammad Ahmad Al-Musayyar explains:

The evidence of the above is the *hadīth* recorded in the two authentic books of *hadīth* (namely Al-Bukhari and Muslim), and reported by Ibn 'Umar . . . : "The Messenger of Allah . . . prescribed *zakāt al fīr* as one *saa'* (an old measurement) of dates or wheat on every person whether male or

<sup>20</sup> Kamali, *supra*, at 252.

<sup>21</sup> The rate of 2 ½ percent applies to all asset categories, including currency, precious metals (*e.g.*, gold and silver), livestock, and merchandise. However, some *fukuhā* indicate the percentage is higher on agricultural products and natural resources. See Kamali, *supra*, at 252.

female from among the Muslims." In another authentic *hadīth*, the Messenger of Allah is reported to have ordered that *zakāt al fīr* be paid out before going to the *Eid* Prayer. This is done with a view to make all Muslims feel happy in that day.<sup>22</sup>

Essentially, then, during the month of *Ramādān*, on the eve of *Eid al Fitr* the head of a household gives alms to the poor, wholly apart from and in addition to payment of *zakāt*, on behalf of the family in that household. The amount payable for *zakāt al fīr* is the equivalent of the old measurement indicated in the above-quoted passage, in the form of food customary to the area. To distinguish the two practices, *zakāt* is sometimes called "*zakāt al māl*," vis-à-vis *zakāt al fīr*.

Significantly, unlike the *zakāt al māl*, there is no minimum threshold (*nisāb*) for offering *zakāt al fīr*, other than that payment is made if the person making it has food for one day worth of meals. Thus, unlike *zakāt al māl*, *zakāt al fīr* is paid by rich and not-so-rich alike. For the rich, the payment expresses gratitude for their wealth. For the not-so-rich, offering *zakāt al fīr* serves three purposes: it expresses gratitude for receiving *zakāt al māl*; gives them equal standing, along with the rich, with God (Allāh); and bolsters their dignity by proving they are empowered to give as well as receive.

## [C] Effects and Beneficiaries

From a practical standpoint, *zakāt al māl* has two effects. First, it helps shield the poor from even more dreadful material circumstances than they presently endure. That is, while *zakāt* does not wholly alleviate their suffering, to some degree it mitigates their misery. Second, *zakāt* accomplishes a modest degree of peaceable redistribution of wealth. It is a kind of taxation of the rich, calculated in a way (a fixed percentage of gross assets less necessary expenses) that the greater the ability to give, the greater the obligation. In that sense, in Catholic Christian terms, *zakāt* is akin to an exercise of the preferential option for the poor.

Who are the precise beneficiaries of *zakāt*? The Qur'an identifies eight classes of underprivileged persons who hold a legal right to receive almsgiving:

Alms are meant only for the poor, the needy, those who administer them [*i.e.*, the officials responsible for collecting and distributing the *zakāt*], those whose hearts need winning over, to free slaves and help those in debt, for God's cause, and for travelers in need. This is ordained by God; God is all knowing and wise.<sup>23</sup>

Two points about this passage are worth observing.

First, this list of the beneficiaries is not exclusive. The government of a Muslim country may add a new category, especially if one mentioned in the Qur'an no longer exists. Thus, Professor Kamali suggests in a country in which slavery has long since

<sup>22</sup> Posted at [www.islamonline.net/serveit/Satellite?cid=1119503547630&pagename=IslamOnline-English-Ask\\_Scholar%2FFatwaE%2FFatwaE.AskTheScholar%ixzz13VoWLh3j](http://www.islamonline.net/serveit/Satellite?cid=1119503547630&pagename=IslamOnline-English-Ask_Scholar%2FFatwaE%2FFatwaE.AskTheScholar%ixzz13VoWLh3j). The author is Professor of Islamic Creed, Faculty of Theology, Al Azhar University, Cairo, Egypt.

<sup>23</sup> Qur'an, *supra*, 9:60 at 121.

disappeared, it would be appropriate to give *zakāt* to ex-convicts who have served their prison sentences and seek to re-integrate into society.<sup>24</sup> Similarly, a government has the discretion to allocate *zakāt* disproportionately to a category of poor people with a present, exigent need relative to other categories.

Second, upon receiving a *zakāt* distribution, the poor acquire ownership over the funds or property distributed. It would be incongruous with the purposes of *zakāt*, as well as its status as a legal right of the poor, if the rich retained title to their funds or property, and allowed the poor temporary possession and enjoyment of the assets.

### [D] Formula and Administration

As for how *zakāt* is calculated, the basic formula is simple enough.<sup>25</sup> Every Muslim, individual or business, is to pay an amount equal to 2 ½ percent of his, her, or its gross assets, less a deduction for necessary expenses. Necessary expenses would include food, clothing, shelter, and medical care. Payment is on an annual basis, typically occurring at the end of the lunar calendar year, or at the end of *Ramādān*.<sup>26</sup> *Zakāt* is owed on an asset only if it has been owned for a full lunar calendar year.

The gross asset base includes:

- Agricultural produce, i.e., harvests, such as cereals, grains, pulses, and other primary commodities.
- Livestock, such as camels, cattle, goats, and sheep.
- Natural resources, such as minerals from mines, as well as buried treasure.
- Wealth, such as manifest in savings in the form of bank balances, cash in hand, financial instruments (e.g., stocks and bonds).
- Precious metals and jewelry (particularly, gold and silver).
- Traded goods, such as inventories of goods used in trading.<sup>27</sup>

Most of these asset categories have associated with them a minimum limit, or *de minimis* threshold. Below this “*nisāb*,” no *zakāt* is owed. For example, the *de minimis* threshold is roughly 653 kilograms (1,440 pounds) of crops in total. The *nisāb* for gold and silver is ounces (85 grams) and 21 ounces (595 grams), respectively.

Notably, real property, specifically, the personal residence of a Muslim, is excluded from the gross asset base, unless the property owner is selling the

<sup>24</sup> See KAMALI, *supra*, at 247.

<sup>25</sup> There are computer software programs and internet-based resources available for calculating *zakāt*, akin to TurboTax and other devices many Americans use to assist them in preparing their income taxes. See, e.g., Hidaya Foundation Zakāt Calculator, posted at [www.hidaya.org/zakat-calculator.html](http://www.hidaya.org/zakat-calculator.html).

<sup>26</sup> See, e.g., QU’AN, *supra*, ¶141 at 91 (relating to “paying what is due on the day of harvest” in respect of “cultivated and wild gardens,” i.e., “palms, crops of diverse flavors, the olive, the pomegranate, . . .”).

<sup>27</sup> The *jizyah* (the per capita tax levied by a Muslim state on its non-Muslim residents) sometimes is included in the asset base.

property. Among other justifications for this exclusion may be liquidity. Real property is not a liquid asset, but the obligation to pay *zakāt* is manifest in cash, the most liquid of all instruments. A property owner holding a large amount of valuable land (e.g., worth U.S. \$2 million) may lack current funds to pay *zakāt* on that land (e.g., U.S. \$50,000, assuming no expense deduction), unless he or she sells it to raise cash. Likewise, vehicles (or animals) used for transportation are excluded from the asset base.

The figure of 2.5 percent, or 1/40, is not set out in the Qur’ān. Rather, its source is the *ḥadīth*, in compilations by *Imāms* Al Bukhari and Muslim in their books on minimums and amounts. Indeed, as the Qur’ān establishes no specific figure, there are actually different tax rates depending on the type of asset at issue. Table 15-3 summarizes these rates, as well as the applicable *de minimis* thresholds.

Table 15-3  
Zakāt Tax Rates and Nisāb for Different Asset Classes<sup>28</sup>

Asset Category	Nisāb (De Minimis Threshold above which Zakāt applies)	Zakāt Tax Rate (percentage of value of asset or head of livestock)
Agricultural production	653 kilograms (1,440 pounds)	5 percent for crops from irrigated land 10 percent for crops from non-irrigated (i.e., rain-fed) land
Bank balances, cash in hand, and financial instruments	Equivalent value of 21 ounces (595 grams) of silver	2.5 percent
Natural resources (mined products)	No nisāb	2.5 percent
Livestock: Cattle and Buffalo	30 head	First 59 head: 1 Up to 89 head: 2 Up to 150 head: 3 Plus — First 39 head: 1 1-year old Up to 59 head: 1 2-year old Up to 69 head: 2 1-year old
Livestock: Goats and Sheep	40 head	First 40 head: 1 Up to 120: 2 More than 200: 3 Plus — 1 for every additional 100 head

<sup>28</sup> This Table is adapted from *Zakat*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Zakat>.

Asset Category	Nisāb (De Minimis Threshold above which Zakāt applies)	Zakāt Tax Rate (percentage of value of asset or head of livestock)
Livestock: Camels	5	5-24 camels: 1 sheep or goat for every 5 camels 25-35 camels: 1 1-year old female camel 36-45 camels: 1 2-year old female camel 46-60 camels: 1 3-year old female camel 61-75 camels: 1 4-year old female camel 76-90 camels: 2 2-year old female camels 91-120 camels: 2 3-year old female camels 121 or more camels: 1 2-year old camel for each additional 40 camels, or 1 3-year old camel for each additional 50 camels, plus donation of food and other items to persons in need
Precious Metals and Jewelry (Gold and Silver)	3 ounces (85 grams) of gold 21 ounces (595 grams) of silver	2.5 percent
Traded Goods	Equivalent value of 21 ounces (595 grams) of silver	2.5 percent

To be sure, other than the *nisāb*, there are exceptions to the *zakāt* obligation. Most importantly, a Muslim is not required to give alms if doing so would impose severe financial hardship on him, her, or the business. Thus, as per the previous example, an owner is not expected to sell real property to obtain the necessary liquidity to cover the obligation. This exception comes under the general doctrine of necessity (*ḍarūrāh*).

The *zakāt* is administered in different ways in different Islamic countries. At one extreme, collection and distribution is centralized in a government ministry, such as a Ministry of Finance or Ministry for Religious Affairs. The relevant authority may directly engage in the necessary activities, or supervise it as done by others it charges with these responsibilities. At the other extreme, administration is decentralized, being left to local mosques. Each is free to establish its own *modus operandi* (method of procedure or operation). In some Muslim countries, the government has the authority penalize property owners for non-compliance with the *zakāt* obligation.

As indicated, both Muslim individuals and businesses are liable for *zakāt*. The two different *zakāt* administrative methods are practiced in Saudi Arabia, depending on the nature of the payor. For Muslim individuals in the Kingdom, the decentralized methodology is used: they pay through their mosques. For Muslim businesses, the centralized approach is used: the Department of *Zakāt* and Taxes in the Ministry of Finance collects the *zakāt* from these enterprises.<sup>29</sup>

### [E] Does Intent (*Niyyah*) Matter?

Does the obligation to pay *zakāt* depend on legal intent (*niyyah*)? That is, assuming a property owner is sufficiently wealthy to contribute the requisite alms, but is either mentally incompetent, or a minor, is the contribution required? The majority opinion among *Sunnite* Scholars is that status, in the sense of ability or lack thereof to form intent to give alms, is irrelevant.

That is because the nature of *zakāt* is dualist: it is both an act of both worship (*ʿibādah*) and social obligation (*muʿānah*). The former may require intent, but the latter is about the interest of the community in the prudent management of property. In turn, the goal of *zakāt* is to achieve a fair distribution of wealth in society (or, at least, one fairer than the *status quo*). If paying *zakāt* were contingent on the ability to form the intent to do so, then this "*niyyah*" exception would be so large as to defeat the goal. Thus, ability is without regard to the status of a property owner as mentally incompetent or a minor. Even from an incapacitated person who is incapable of forming a legally valid intent (*niyyah*), *zakāt* is obligatory. In practice, the payment may be arranged by the appropriate guardian for the property owner. The majority opinion strikes some *Shariʿa* scholars as startling, and there is a different, minority, view. One Companion of the Prophet, ʿAbd Allāh bin Masʿūd, stressed that *zakāt* is an act of worship (*ʿibādah*), at least that dimension of it outweighs the social obligation (*muʿānah*). Any prayer depends on intent. Hence, as prayerful behavior, *zakāt* depends on *niyyah*.

### [F] Shiʿite Distinction: *Khums* (Wealth Tax)

*Shiʿites* adhere to the same practice of *zakāt* as do *Sunnis*. But, *Shiʿites* bear an additional obligation relating to the virtues of charity and community: *khums*, which in loose terms is a tax on wealth. Imposed annually, *khums* is a levy of one-fifth (1/5) on the net increase in wealth during the preceding year.<sup>30</sup>

Specifically, *khums* is an annual tax of 20 percent levied on net income (i.e., gross revenues less expenses), net increases in real estate holdings, precious metals and jewelry, and war booty:

<sup>29</sup> Interestingly, the differential levy (or potential therefore) of imposing *zakāt* on Muslim and non-Muslim businesses was an issue during the negotiations for the accession of Saudi Arabia to the World Trade Organization (WTO). See Raj Bhala, *Saudi Arabia, the WTO, and American Trade Law and Policy*, 38 THE INTERNATIONAL LAWYER 741-812 (Fall 2004).

<sup>30</sup> See JAMES A. BILL & JOHN ALDEN WILLIAMS, *ROMAN CATHOLIC & SHIʿI MUSLIMS: PRAYER, PARISON AND POLITICS* 21 (Chapel Hill, North Carolina: The University of North Carolina Press, 2002); MOJIB MOJIB, *AN INTRODUCTION TO SHIʿI ISLAM: THE HISTORY AND DOCTRINES OF TWELVE SHIʿISM* 179-80 (London, United Kingdom: Yale University Press, 1985) (Hereinafter, *MOJIB*).

[The *khums*] is levied by Shi'is on net income (after paying all expenses), net increase in land holdings, stored gold, silver and jewelry, mined products, items taken from the sea and war booty.<sup>31</sup>

The tax also is levied on net increases in livestock holdings (e.g., sheep). Accordingly, *khums* is not precisely a tax on wealth or net worth, but on accumulated increases thereto.

To what ends do funds collected as *khums* go? Money that is collected as *khums* is a gift given to God (Allāh), the Prophet Muhammad and his family, orphans, travelers, and other needy persons:

This tax is to be spent on the Prophet, his family, orphans, the needy and travelers.

Among Shi'is, half of the *khums* (i.e., a one-tenth tax or a tithe) is considered to be the share of the Imam (*sahl al-Imām*), being the Imam's inheritance from the Prophet. This share of the Imam is paid by the believers to their *marja'at-taqlid* [source of emulation] in his capacity as the representative (*nā'ib al-ām*) of the Imam.<sup>32</sup>

Note that half of the *khums* is deemed the share of the *Imām* (*sahl al-Imām*), as it is the inheritance of the *Imām* from the Prophet. Yet, because the 12th or Hidden *Imām*, Al Mahdi, is in the Greater Occultation, and not visible to mankind, *khums* funds are spent on the needy, and on any cause deemed to be in accordance with the Will of Allāh.<sup>33</sup>

Shi'ites cite *surah* 8, *ayah* 41, of the Qur'ān as the legal source for *khums*:

Know that one-fifth of your battle gains belongs to God and the Messenger, to close relatives and orphans, to the needy and travelers, if you believe in God and the revelation We send down to Our servant on the decisive day, the day when the two forces met in battle. God has power over all things.<sup>34</sup>

However, *Sunnis* do not regard *khums* as a distinct tax from the obligation to pay *zakāt*. Rather, they regard this passage as restricted to the context of spoils from battle, and interpret it to mean that the one-fifth collection is divided into the five beneficiary groups it identifies (God and the Prophet, close relatives, orphans, needy, and travelers). Thus, for *Sunnites*, the 2 ½ percent collection of *zakāt* is what matters, and only in the event of war booty is a separate, 20 percent collection taken up. Moreover, in certain *Sunni* Schools and under particular interpretations, the *khums* is payable only on a narrow range of items, such as property (movable and immovable), treasure troves and war booty.<sup>35</sup>

## § 15.04 FOURTH PILLAR: FASTING (SAWM) AND RAMADĀN

Fasting is hardly an unusual religious practice. For Catholic Christians, every Friday during the Season of Lent (40 days before Easter) is a day of fasting. The faithful are to consume only one meal, and two smaller meals that in sum should not exceed the main meal. For Jews, fasting is prescribed for particular occasions by the Torah. For Buddhists, particularly monks, the last meal of the day should be noon. Thereafter, until breakfast the following day, attention should be on meditation. Among Hindus, a caste of holy persons known as "*sādhus*," live on a simple diet, such as chapattis (bread) and milk. Despite many ritualistic variations, the common denominator across all these faiths is that fasting is a spiritually cleansing process. The devout humbles herself, subordinating her sensual desires for physical satisfaction and pleasure to a more powerful and transcendent reality, and a more important and eternal goal.

For Muslims, the lunar month of *Ramādān* is the most spiritually cleansing period of the year. During that month, Muslims fast from the first to the last light of day. Because the Qur'ān was revealed by God (Allāh) to the Prophet Muhammad during the month of *Ramādān*, the fasting occurs then. *Surah* 2 explains:

<sup>183</sup>You who believe, fasting is prescribed for you, as it was prescribed for those before you, so that you may be mindful of God. <sup>184</sup>Fast for a specific number of days, but if one of you is ill, or on a journey, he should fast on other days later. For those who can fast only with extreme difficulty, there is a way to compensate — feed a needy person. But if anyone does good of his own accord, it is better for him, and fasting is better for you, if only you knew. <sup>185</sup>It was in the month of Ramadan that the Qur'ān was revealed as guidance for mankind, clear messages giving guidance and distinguishing between right and wrong. So any one of you who is present that month should fast, and anyone who is ill or on a journey should make up for the lost days by fasting on other days later. God wants ease for you, not hardship. He wants you to complete the prescribed period and to glorify Him for having guided you, so that you may be thankful. <sup>186</sup>[Prophet], if My servants ask you about Me, I am near. I respond to those who call Me, so let them respond to Me, and believe in Me, so that they may be guided.<sup>36</sup>

Additionally, the *Sunnah* refers to the fast. *Imām* Bukhari records the following *hadith*:

When you see the crescent (of the month of *Ramādān*), start fasting, and when you see the crescent (of the month of *Shawwāl*), stop fasting; and if the sky is overcast (and you can't see it) then regard the month of *Ramādān* as of 30 days.<sup>37</sup>

<sup>36</sup> QUR'AN, *supra*, 2:183-186 at 20.

<sup>37</sup> BUKHARI, *supra*, vol. III, book XXXI (The Book of Fasting), p. 69, *hadith* no. 124. Similarly, in another *hadith*, the Prophet said:

"The month [of fasting] is like this and this," (at the same time he showed the fingers of both his hands thrice) and left out one thumb on the third time.

(*Shawwāl* is the 10th month of the Islamic lunar calendar, which immediately follows *Ramādān*.)

Fasting from sunrise to sunset is no easy task. No beverages, even water, not to mention food, are to pass the lips of a fasting Muslim. Oddly, a small minority of Muslims — in rural Bangladesh, for example — spit out their saliva, believing the rules of the fast preclude swallowing it. The fast also covers sexual intercourse during the daylight hours, as *surah* 2, *ayah* 187 indicates:

*You [believers] are permitted to lie with your wives during the night of the fast: they are [close] as garments to you, as you are to them. God was aware that you were betraying yourselves, so He turned to you in mercy and pardoned you: now you can lie with them — seek what God has ordained for you — eat and drink until the white thread of dawn becomes distinct from the black. Then fast until nightfall. Do not lie with them during the nights of your devotional retreat in the mosques: these are the bounds set by God, so do not go near them. In this way God makes His messages clear to people, that they may guard themselves against doing wrong.<sup>38</sup>*

The reference to “devotional retreat” (known in Arabic as “*ʾitikāf*”) concerns a voluntary act whereby a Muslim, male or female, voluntarily secludes himself or herself in a mosque for an extended period (such as a full day, or even 2 or 3 days) for the exclusive purpose of prayer. During this retreat, the Muslim may choose to return home briefly for a necessity, such as taking a shower (or, if at night, to eat or drink) or attending a funeral, but must abstain from intimate relations with his or her spouse. Note that despite the reference to “wives” in the passage, suggesting only men may do the devotional retreat, a woman, too, may engage in it, albeit with permission of her husband or guardian. That is confirmed by a *ḥadīth* from the Prophet Muhammad, recorded by *Imām* Bukhari.<sup>39</sup>

*Id.*, vol. III, book XXXI (The Book of Fasting), p. 73, *ḥadīth* no. 132.

<sup>38</sup> *Qurʾān*, *supra*, 2:187 at 21 (emphasis added).

<sup>39</sup> *One ḥadīth states:*

243. Narrated ʾĀisha [a wife of the Prophet] . . . [May Allah be Pleased with her]: The Prophet . . . used to practise *ʾitikāf* in the last ten days of *Ramādān* till he died and then his wives used to practise *ʾitikāf* after him.

BUKHARI, *supra*, vol. III, book XXXIII (Chapters of *ʾitikāf*), p. 135, *ḥadīth* no. 243. Note that ʾĀisha is famous for her knowledge of Islamic jurisprudence. She responded to many questions for male and female Muslims about Islamic law, and taught the subject after the death of the Prophet. She thus stands as a role model for professional women and men alike.

Another *ḥadīth* also lends support to the proposition that women can do *ʾitikāf*, as follows:

ʾĀisha . . . said, “The Prophet . . . used to practice *ʾitikāf* in the last ten days of *Ramādān* and I used to pitch a tent for him, and after offering the morning prayer, he used to enter the tent.” Hafsa [another wife of the Prophet] asked the permission of ʾĀisha to pitch a tent for her and she allowed her and she pitched her tent. When Zainab bint Jahsh [another wife of the Prophet] saw it, she pitched another tent. In the morning the Prophet . . . noticed the tents. He said, “What is this?” He was told of the whole situation. Then the Prophet . . . said, “Do you think that they intended to do righteousness by doing this?” He therefore abandoned the *ʾitikāf* in that month and practiced *ʾitikāf* for ten days in the month of *Shawwāl* [the month immediately after *Ramādān*].”

BUKHARI, *supra*, vol. III, book XXXIII (Chapters of *ʾitikāf*), pp. 138–139, *ḥadīth* no. 249. The inference

In brief, fasting is a comprehensive obligation. Moreover, as the Islamic calendar is a lunar one, *Ramādān* does not always fall during the same season every year. The physical difficulty of fasting is exacerbated when *Ramādān* occurs during the long days of summer, as opposed to short days of winter. But, three questions must be examined.

First, why endure the hardship? That is, what is the purpose of the *Ramādān* fast? Simply put, it is to remember God — as the *surah* 2, *ayah* 185 says, to glorify God by showing thanks to Him for providing the *Qurʾān* as a guide to discern right from wrong. By abstaining from food, beverages, and intimacy from dawn to dusk, the mind of the Muslim is focused (or supposed to be) on Allāh. Hence, abstinence is spiritually cleansing, in that it clears out thoughts of worldly pleasures. There is, additionally, the benefit that *Ramādān* causes the rich to humble themselves and empathize with the poor. The rich, whose needs and wants are taken care of in abundance, do not have to worry about quenching their thirst, feeding their bellies, or finding time for relationships with the opposite sex. Not so with the poor, whose lot in life is hard and filled with uncertainty. Thus, during the daylight hours of *Ramādān*, the rich live a slice of the life that is the year-round existence of hundreds of millions of poor around the world. In so doing, the entire world-wide Muslim community (*ummah*), for all its diversity, is unified.

Notably, at sundown of each day, the *Ramādān* fast traditionally is broken with a date. Following the breaking of the fast, there is a call to the fourth of the five daily prayers (*maghrib*). After the prayers comes a large, and typically scrumptious, assortment of foods known as the *Iftar* Buffet. (“*Iftar*” literally means “breakfast,” and is used on normal days throughout the year.) The fifth and final prayer (*isha*) follows the Buffet. The last day of *Ramādān*, which marks the end of the fasting month, is *Eid al Fitr*, which literally means “Festival to Break Fast.” The celebration begins on the following morning, which is the first day of the 10th month in the Islamic (*Hijri*) calendar, *Shawwāl*. On that morning, a fantastic array of delicacies is served buffet-style. Analogies in the American holiday calendar are the Thanksgiving or Christmas dinner. It is a great honor for a guest — particularly a non-Muslim — to be invited by a Muslim family to share in either an *Iftar* Buffet or the *Eid al Fitr* celebration. The invitation should be treated as such, and as a gastronomic matter, it would be a sin to reject it.

Second, is God deliberately trying to make the life of Muslims burdensome by calling them to a month of fasting? The answer is “no.” As *surah* 2, *ayah* 184–185 (quoted above) explains, God grants an exception to the ill and the traveler. Here, again, the general *Shariʿa* doctrine of necessity (*ḍarūrāh*) is applied. No one should fast if it would endanger their health or journey. Rather, they should await their recovery, or the end of their journey, and then make up the skipped fasting days. And, what if a person must take medication everyday, for his or her whole life (e.g., to control blood pressure)? The *Qurʾān* offers this response: feed someone else. Thus, such a person can give to charity so that a poor person can enjoy a meal

as women may engage in *ʾitikāf*, as three of the wives of the Prophet did. But, the Prophet apparently was displeased by the use of tents in the mosque, or at least by the congestion caused by the tents. What is interesting about both *ḥadīths* there is no indication in either of them that a woman needs the permission of her husband, or male guardian, to perform *ʾitikāf*.

everyday for a month. By doing that, a Muslim who cannot fast has an opportunity to reflect on his or her gifts from, and spiritual connection to, God. *Surah 2, ayah 186* adds a note of comfort for the Muslim who finds fasting difficult: God is not far away, and ready for him or her to call for help.

Third, do Muslims work during *Ramaḍān*? The answer is very definitely “yes.” While offices may open a bit later, or close a bit earlier, than usual, and the pace of work may be a bit less frenetic than normal, they are to fulfill their normal professional, as well as family, obligations. Indeed, Islamic history boasts notable achievements during the month of *Ramaḍān*. For example, during *Ramaḍān*, a general, Tariq bin Ziyad established the Muslim Caliphate called “Al Andalus,” which is Andalusia, in Southern Spain, with its first Caliph being Al Walid I, who ruled from 711-750 A.D. He and his Moorish forces brought Islam to the European continent, at a time when Europe was in the Dark Ages. By Islamic accounts, at least, the influence of the Moors helped push Europe out of the Dark Ages, and eventually into the Enlightenment. Only in 1492, following a defeat at Granada, were the Moors forcibly expelled from Spain, by Christian forces. That would prove to be the only lasting victory of Christian forces in the Crusades. As another example, during the month of *Ramaḍān* in 1260, Muslim forces fought against Mongols in the Great Battle of Ain Jalut. Their victory in that battle ended the threat and reality of Mongol destruction of cities in the Middle East.

A final point about *Ramaḍān* is important to appreciate. Muslims believe — spiritually if not literally — that during the month of *Ramaḍān*, the gates of Heaven are open, and the gates of hell are closed. That is not to say that any Muslim who dies during the month of *Ramaḍān* is assured of going to Heaven. Rather, it means that any bad acts committed by a Muslim during *Ramaḍān* are clearly committed by him or her, out of free will. The devil is locked inside hell during that month. Therefore, no Muslim can blame the devil for a bad act. With the devil behind the gates, the excuse that “the devil made me do it” will not be accepted on the Day of Judgment.<sup>40</sup>

## § 15.05 FIFTH PILLAR: PILGRIMAGE (HAJJ)

The Fifth and final Pillar of Islam is one of the most amazing religious spectacles on earth. It is a pilgrimage known as the “*Hajj*.” Physically, the journey is to Mecca and Medina, the two holiest sites of Islam, where that faith was born. These sites lie in the western Kingdom of Saudi Arabia, in the Hejaz province, near the Red Sea coast and the sprawling trading center of Jeddah. Spiritually, many Muslims who have completed it say it is the most moving experience of their lives. Every year, the *Hajj* attracts roughly 2-3 million Muslims. Pilgrims who have completed it are called “*Hajjis*,” and some — for example, in Malaysia and Pakistan — even put this appellation on their business sign or card, though doing so out of pride surely must be a dubious practice.

*Surah 2, ayah 189* of the Qur’ān speaks about the *Hajj*:

<sup>40</sup> See *Ramadan*, BBC News, 9 July 2009, posted at [www.bbc.co.uk/religion/religions/islam/practices/ramadan\\_1.shtml](http://www.bbc.co.uk/religion/religions/islam/practices/ramadan_1.shtml).

They ask you [Prophet] about crescent moons. Say, “They show the times appointed for people, and for the pilgrimage.”<sup>41</sup>

The *Hajj* occurs two months following *Ramaḍān*, that is, in the twelfth month, called “*Dhi Al-Hijja*,” of the Islamic lunar calendar. That is, performing the pilgrimage during the appointed month is referred to as the “*Bigger*” or “*Higher*” *Hajj*. To be sure, Muslims are welcome and indeed encouraged to perform a pilgrimage to Mecca and Medina at any time of the year when they can do so. Such a journey, which may be done in any of the other 11 months, is known as the “*Smaller*” or “*Lower*” *Hajj*, or “*Umrāh*.”

The general *Shari’a* doctrine of necessity (*darārah*) is relevant to this Pillar of Islam, as it is to the others. A Muslim is not required to undertake the *Hajj* if doing so would cause serious physical or financial hardship. That said, doing the pilgrimage is invariably regarded by pilgrims as one of the, if not the, spiritually highest and most joyous occasions of their lives.

### [A] *Meqaat* (Six Starting Points)

To begin, there are six cities in the Kingdom of Saudi Arabia from which either the *Hajj*, or “*Umrāh*” commence. Collectively, they are called the “*Meqaat*.” Except for the last one listed below, these cities are around Mecca, of varying distances of approximately 75-150 miles. A pilgrim is free to choose to start from any of the six cities.

- Tha Al-Holifa

This starting point is for pilgrims from Medina and the surrounding area.

- Al Johffah

Located in the western part of the Kingdom, near the Red Sea, this location used to be a mosque, but now a large city — Rābigh — is built up around the mosque. Al Johffah is the starting point for pilgrims from the Levant (Jordan, Lebanon, Palestine, and Syria) and North Africa (Algeria, Egypt, Libya, Mauritania, Morocco, and Tunisia).

- Qarn Al Menazel

This starting point is used by pilgrims from most of the Gulf region, namely, Bahrain, Kuwait, Oman, Qatar, and United Arab Emirates (UAE), and from the central and eastern parts of the Kingdom itself.

- Yellumlam

This starting point is for pilgrims from Yemen, as well as some Somali pilgrims (though most of them travel via sea and begin in Jeddah). Some Omani pilgrims also use this starting point, which (like their other options) avoids driving through the *Rub Al Khali* (Empty Quarter).

<sup>41</sup> QUR’AN, *supra*, 2:189 at 21.

- That 'Irq

This starting point is used by pilgrims from Iraq. It also is used by pilgrims transiting through Iraq from countries such as Afghanistan and Pakistan (or, in earlier days when travel via camel caravan was common, Iran).

- At Tan'im

This starting point is for people living in Mecca. At the time of the Prophet, At Tan'im was located just outside the city limits of Mecca, though nowadays with the urban growth, the city has spread around it. At Tan'im is convenient for Meccans, as they can avoid travelling a long distance outside the city limits to start their pilgrimage.

Medina, while important in Islamic history as part of the *Hijra*, is not a part of the *Hajj* or '*Umrāh*. Still, many pilgrims go there to visit the holy mosque and grave of the Prophet.

### [B] Muslims Only

Of critical importance is that only Muslims are able to perform either the *Hajj* or '*Umrāh*. That means Mecca and its surroundings constitute a restricted zone to which, and in which, non-Muslims may not travel. All pilgrims who are not Saudi citizens require a visa to enter the Kingdom, unless they are citizens of the Gulf Cooperation Council (GCC) countries (*i.e.*, in addition to Saudi Arabia, Bahrain, Kuwait, Oman, Qatar, and the UAE). The Kingdom offers *Hajj* and '*Umrāh* visas for such foreigners. This visa functions as the permit for them to perform the pilgrimage, and thereby to enter Mecca and its surrounding area. All other pilgrims, that is, citizens of Saudi Arabia or another GCC country, need a permit to travel to Mecca to perform the *Hajj*, but not for '*Umrāh*. The permit allows for one *Hajj* in a five-year period.

The reason for not requiring a permit for Saudi and GCC citizens to perform an '*Umrāh* relates to the tremendous pressure on Saudi officials to organize pilgrimages and ensure the safety of pilgrims. An '*Umrāh* can be performed anytime during the year, whereas there is limited time (less than a month) for the *Hajj* season. In any given year, there are 2-3 million Muslims descending on Mecca and the surrounding area during this season. In some past years, particularly during 1987-2006, there have been debacles in organization and safety, and even violence and death. These sad occurrences, summarized in Table 15-4, prompted the Saudi authorities to make major structural changes, including the provision of tents, and the building of bridges around the areas in which the devil is ritually stoned. In this respect, it must be noted that the House of Saud, that is, the Saudi Royal Family, derives not only enormous prestige, but also political and even religious legitimacy, from properly securing events and pilgrims at the *Hajj*. The very title of the Saudi King includes the phrase "Custodian of the Two Holy Mosques," referring to the Mosques at Mecca and Medina.

Table 15-4:  
Deaths of Pilgrims During Recent *Hajj* Seasons<sup>42</sup>

Year	Number of Deaths	Cause
2006	345	Crushed during ritualistic stoning of the devil.
2004	251	Trampled in stampede.
2003	14	Crushed.
2001	35	Trampled in stampede.
1998	118 (possibly more)	Trampled in stampede.
1997	343 (1,500 injured)	Fire.
1994	270	Trampled in stampede.
1990	1,426	Killed in tunnel leading to holy sites.
1987	400	Saudi authorities compelled to put down forcefully pro-Iranian militants and demonstrators

Accordingly, as a pilgrim is driving along the route from any of the *Meqat* locations to Mecca, there are security checkpoints. They are staffed by the Saudi military and police, not the religious police (*mutawin*). Every car is stopped and each pilgrim is asked to produce the relevant documentation, *i.e.*, passport, visa, and/or permit.

By some accounts, until the time of the Ottoman Empire, non-Muslims could go to Mecca and observe the *Hajj* and '*Umrāh*. After all, during the time of the *Rashidun*, and in the *Umayyad* and *Abbasid* Caliphs, Christians and Jews lived in Mecca and the Mecca area. Moreover, there is no Qur'anic passage or *hadith* explicitly forbidding non-Muslims from Mecca. Reputedly, the Ottomans restricted travel to Mecca to Muslims out of concern about the growing numbers of pilgrims and the potential for disturbances.

### [C] Female Pilgrims

Note also that a male pilgrim may perform the *Hajj* and '*Umrāh* alone, or of course with family members or friends. A female pilgrim must be accompanied by her guardian (*wali*), such as her father, husband, or eldest brother, or by another male relative, including her adult son, step-son, grandson, uncle, or nephew. Consequently, the accompanying person will need to have the requisite documentation to perform the *Hajj* and '*Umrāh*. Under one circumstance, a woman could perform the pilgrimage alone, namely, if she has no family. In that event, she would join a group, say of fellow pilgrims from her home country. The group could be all-female, though in all likelihood such a group would be guided by a male travel agent.

What is the logic behind the practice of women being accompanied by a male guide? Traditionally, the logic is to help and support a woman to meet the physical demands of the pilgrimage. The ritualistic stoning of the devil is the most physically challenging of the practices. Of course, this logic is regarded as

<sup>42</sup> See *Hajj Approaches Spiritual Climax*, BBC News, 4 January 2007, posted at [bbc.news.co.uk](http://bbc.news.co.uk).

paternalistic by many male and female Muslims, who appreciate the fact there are plenty of instances of women being stronger than men. Accordingly, an explanation for the practice simply is tradition.

### [D] Preparation at *Meqaat*

Technically, each starting point among the six *Meqaat* is a mosque. There, or in close proximity, are shower and bathroom facilities. Accordingly, at the chosen *Meqaat* city, a pilgrim showers, which qualifies as the ablution before prayer. Then, the pilgrim changes clothes from their normal attire to a white, two-piece garment for men (one piece covering the shoulder, and the other on the bottom), and a single-piece gown for women which may be of varying colors. Pilgrims sometimes can be identified by the color of their garments they choose. For example, women from Southeast Asia often sport bright colors (such as yellow), women from the Gulf tend to wear black, and women from Sub-Saharan Africa display white. The general term for clothes worn by men or women for the 'Umrah or Hajj is "*ihram*." To the degree the traditional religious garb is similar, if not identical, its symbolism is clear: to be clad the same way shows all persons are equal before God (Allāh), and each stands before Him on the Day of Judgment.

Having changed clothes, the pilgrim prays in the mosque once (standing, bowing, prostrating on the ground, and standing up again, done twice, i.e., two "*rak'ah*"), and then declares an intention (*niyya*) to do the Hajj, or 'Umrah, or both. The declaration is said orally, in a normal-level and tone of voice: "I intend to do the Hajj," or "I intend to do the 'Umrah." Note that many pilgrims fly to the Kingdom for their pilgrimage. There is no airport in Mecca, but Jeddah — about a 45 minute drive from Mecca — has an international airport. When an aircraft carrying passengers flies over one of the six *Meqaat* cities, the Captain announces the location and invites any would-be pilgrims to declare their *niyya*. Because taking a shower in the plane is not possible, the pilgrims do so before boarding (e.g., at their homes), and perform the necessary prayer in advance.

### [E] Steps in 'Umrah

The term "*Umrah*" connotes visiting Mecca, walking around the *Ka'ba* seven times (called "*tawaf*"), and walking between the Mountains of *Safa* and *Marwa* seven times (called "*sa'i*"). Theoretically, a pilgrim can perform the 'Umrah in a few hours. Practically, however, because of crowds and physical exertion, it takes several hours or a full day, depending on the starting point (*meqaat*).

Why do pilgrims walk around the *Ka'ba* seven times? The answer is the Prophet Abraham did so, and all pilgrims regard themselves as following this practice. As for the distance between the two Mountains, it is roughly one-half mile. Why walk between these peaks? The answer is Hagar (in Arabic, "*Hajar*"), wife of Abraham, did so. Why she did so is a fascinating bit of Ancient history and Muslim belief. In brief, some 'Umrah and Hajj practices are re-enactments of the trials of Abraham and Hagar.

Hagar walked between these Mountains seven times searching for a caravan that might have water to share with her and her child, Ishmael. (Abraham had

returned to Palestine, to his other wife, Sarah.) Recall that God ordered Abraham to leave Palestine take Hagar and Ishmael to the place where the *Ka'ba* is located and leave them there. (At the time, the *Ka'ba* did not exist. There is historical debate as to whether the *Ka'ba* existed before Abraham and had been destroyed.) Abraham did so, and Hagar eventually ran out of water. As she traversed between the Mountains to look for the caravans, she saw water appear from the ground. The Archangel Gabriel (Jibreel) had appeared, unbeknownst to her, and struck that spot with a staff, from which water sprang — known as "*Zamzam*" water. Hagar tried to collect the water, uttering "*zamzam*," which in Arabic means "to collect," or "to gather." Thereafter, a caravan arrived, and seeing the water, settled there. The city of Mecca was built, and when Abraham returned, he rebuilt the *Ka'ba*. All wells around the *Ka'ba* have dried out, save for one — the well started by the Archangel. Thus, to this day, it is possible to obtain "*Zamzam*" water.

Following the seven-fold walk between the *Safa* and *Marwa* Mountains, male pilgrims must cut their hair to a shorter length, or shave their heads bald. The choice is theirs. Women must cut their hair, but a tiny cut, even removal of a strand or small lock, suffices. Typically, pilgrims conclude the 'Umrah by returning to the *Ka'ba* to pray.

### [F] Three Types of Hajj and Steps

As for the Hajj, it involves more practices than an 'Umrah. There are three types of "Hajj":

#### Type #1: *Timatto'*

This type of pilgrimage is intermediate, between *Qiran* and *Ifrad*, in terms of difficulty. With the *Timatto'*, a pilgrim intends to do the 'Umrah (outlined above), followed by the Hajj. Certainly, a pilgrim may perform 'Umrah as the Smaller Hajj at any time of the Muslim year (*Hijri* calendar). In contrast, when a pilgrim does 'Umrah as part of the *Timatto'*, he or she must pay close attention to the starting and ending dates.

Specifically, a pilgrim must commence the 'Umrah following the month of *Ramadan*, namely, starting on Day 1 of the 10th month (*Shawwal*), or on any day thereafter into the 11th month (*Dhu Al-Q'ada*) and the first 8 days of the 12th month (*Dhu Al-Hijja*). *Dhu Al-Hijja*, the third month after *Ramadan* and the final one in the Islamic calendar year, is the month prescribed for the Hajj. Moreover, the pilgrim must be finished with the 'Umrah by Day 8 of the 12th month (*Dhu Al-Hijja*). Thus, the pilgrim has some flexibility as to when to start the 'Umrah in connection with the *Timatto'*, but the limit is Day 8 of *Dhu Al-Hijja*.

Put differently, to perform the 'Umrah first, a pilgrim starts no earlier than on Day 1 of the 10th month in Mecca, but no later than Day 8 of the 12th month. What is the reason for this window of opportunity to perform the 'Umrah? The answer concerns events on Day 9 of the 12th month. On Day 9 of that month, the pilgrim must be in 'Arafat, a neighboring town of Mecca.

To commence the 'Umrah in connection with the *Timatto'*, a pilgrim declares an intent at the *Meqaat* to perform that *Timatto'*. The pilgrim then performs the

'*Umrah* (as outlined above), but male pilgrims only cut their hair, rather than shaving their heads. Upon completion of the '*Umrah*, the pilgrim changes clothes back to regular attire, and waits until Day 9 in Mecca. On Day 9, the pilgrim changes back into customary religious clothes ('*ihram*'), and goes to Mount 'Arafat. This spot is where the Prophet delivered his last sermon (*khuṭba*). There is a large mosque at Mount 'Arafat, as well as the town of 'Arafat, which is roughly 10-15 miles from Mecca. During the *Hajj* season, a new *khuṭba* is presented each year at the grand mosque in Arafat by an *imām*, who usually is the Grand Mufti of Saudi Arabia. Having listened to this sermon, the pilgrim stays at Mount Arafat until the sun sets, typically praying and asking for forgiveness for sins.

Once the sun sets, the pilgrim goes to Muzdalifah, which like 'Arafat is a small town around Mecca, close to Muzdalifah. The pilgrim overnights in Muzdalifah. Sunrise marks the beginning of the 10th day, which is "*Eid al-Adha*," or the Festival of Sacrifice for all Muslims not on *Hajj*. For pilgrims, Day 10 is *Yom Al-Nahr*, meaning "Day of Sacrifice." On Day 10, the pilgrim goes to Minā, which is the third of the three small towns along with Arafat and Muzdalifah around Mecca that are relevant to the *Hajj*.

At Minā, a pilgrim who performs four practices is free to remove his ritual garments ('*ihram*'), and sport his normal attire. The four practices are:

(1) Sacrifice of an Animal

As Day 10 is *Yom Al-Nahr* for a pilgrim, he or she must sacrifice an animal, typically a camel, cow, sheep. Each pilgrim, whether male or female, must do so. However, the pilgrim need not kill the animal with his or her own hand. Rather, they can go to a butcher shop, and need not watch the actual killing. Note that for non-pilgrims celebrating *Eid al-Adha*, the sacrifice is per family.

(2) *Jamrah Al 'Aqaba*, or *Jamrah Al Kubrā*:

"*Jamrah*" is a noun that means "coal," and "*kubrā*" is an adjective meaning "large." There are three large pillars, not technically made of coal. They look like large rectangular walls, and are off-white in color. Though *Jamrah Al Kubrā* refers to the "Large Pillar," the three pillars are of roughly equal size. They are differentiated by name, but the key point, is they represent the devil. It is *Jamrah Al Kubrā* that is to be stoned on Day 10. On that Day, a pilgrim throws seven stones at this pillar. This stoning keeps with the tradition of Abraham. Muslims appreciate that the devil tried to tempt Abraham away from sacrificing his son, Isaac, to God, and Abraham responded by throwing stones at the devil. Men and women are not segregated from one another while performing the stoning.

(3) Shortening or Shaving

Male pilgrims must shorten their hair, or preferably shave their heads. Female pilgrims may cut a small portion of their hair, as they would for an '*Umrah*.

(4) *Tawaf Al Hajj*

This practice is done in Mecca, of course, as it refers to walking around the *Ka'ba* seven times, as would be done in connection with '*Umrah*. Thus, a pilgrim must return from Minā to Mecca to satisfy this obligation.

A pilgrim who performs all four practices on Day 10 may resume wearing regular clothes, *i.e.*, is free from the '*ihram*. Male pilgrims also may resume shaving their faces, and to clip their nails, both of which they must abstain from doing from Day 1 through Day 10. However, the pilgrim must remain in Minā to participate in the stoning of the devil on Days 11, 12, and 13. The pilgrim throws seven stones at each of the three pillars. In addition to the *Jamrah Al Kubrā*, the other two pillars are named *Jamrah Al Woostā* (meaning the Medium Pillar), and *Jamrah Al Sughrā* (referring to the Small Pillar).

Why would a pilgrim choose not to perform all four of these practices, especially given the incentive to change back to his or her normal clothes? There is no single answer, but practical realities are important to keep in mind. In any given year, there are roughly 2-3 million people performing the *Hajj* (not counting pilgrims from Mecca). Engaging in all four practices on the same day is logistically difficult, not to mention tiring. Thus, many pilgrims perform these practices across 3-4 days, *i.e.*, Days 10-14. On Day 13, having cast the final stones at the symbolic devil, a pilgrim is free to return to Mecca. That is, the pilgrim could spend an extra day in Minā, at his or her discretion. Once in Mecca, the pilgrim performs the *tawaf al wadda'*, which refers to the last seven-fold circulation of the *Ka'ba*. The pilgrim need not perform this last step of the *Timatto'* on Day 13, but could do so a day or a few days thereafter.

Note that there are no hotels in Arafat, Muzdalifah, or Minā, and while in the latter two towns, pilgrims spend the night there. That means they sleep in tents, some of which are modernized to include air-conditioning, bathroom facilities, and other modern amenities (even internet, though televisions are discouraged, which could be a time-consuming distraction from religious affairs). There are no private tents, partly because in the past (up to the late 1990s) when there were such tents, there were accidents and casualties from campfires. The tents are built by the government, which rents them to travel agents, and the agents in turn sell *Hajj* travel packages to Saudi and non-Saudi pilgrims alike. Thus, the only time pilgrims stay overnight in Mecca is before Day 9, before going to Arafat, and after Day 13, when returning from Minā. Pilgrims going to Mecca to perform *Tawaf Al Hajj* do not spend the night in Mecca, but return to Minā.

Type #2: *Qiran*

The Prophet himself performed the *Qiran*, though declared if he lived another year, he would do the *Timatto'*. The *Qiran* form of the *Hajj* is quite similar to, but harder than, that of the *Timatto'*. The pilgrim performs both '*Umrah* and *Hajj*. Thus, for example, pilgrims performing *Qiran*, like pilgrims performing the *Timatto'*, are required to offer a sacrifice of an animal. However, the precise order of the practices done in connection with *Qiran* differ slightly from the order associated with *Timatto'*.

Also, among the differences is that a pilgrim is not allowed to change clothes, i.e., the pilgrim must wear ritual garments ('*ihram*') for the entire *Qirān* Hajj — both while awake and asleep. (In practice, a pilgrim takes two or three sets of identical '*ihram*', and washes and changes them as appropriate.) Here, then, is why the *Timatto*' is regarded as easier than the *Qiran*. With the *Timatto*', a pilgrim does the '*Umrah*' in customary clothes ('*ihram*'), changes to regular apparel until Day 8 of the 12th month (*Dhu Al-Hijja*), then changes back to the '*ihram*', and then does the Hajj. In other words, with *Timatto*', the pilgrim can select a starting date for the '*Umrah*' so as to enjoy some time in his or her normal clothes. For example, if the pilgrim starts and finishes the '*Umrah*' on Day 1 of the 12th month, then the pilgrim has 8 free days, until Day 9 when he or she has to be in 'Arafat, to rest in normal clothes. In contrast, this luxury is not possible with the *Qiran*.

#### Type #3: '*Ifrād*'

This form of the Hajj is the simplest of the three. No '*Umrah*' is performed, only the Hajj itself. Thus, pilgrims can start an '*ifrad*' as late as Day 9 of the 12th month (*Dhu Al-Hijja*). Further, a pilgrim on '*Ifrād*' is not required on Day 10, *Yom Al-Nahr*, to make a sacrifice of an animal. However, the pilgrim does sport religious garb ('*ihram*').

## Chapter 16

### FOUR SUNNITE SCHOOLS OF ISLAMIC LAW

... In the very outset, at the first meeting with them [Arabic speaking tribesmen and townsmen], was found a universal clearness or hardness of belief, almost mathematical in its limitation, and repellent in its unsympathetic form, Semites had no half-tones in their register of vision. They were a people of primary colours, or rather of black and white, who saw the world always in contour. They were a dogmatic people, despising doubt, our modern crown of thorns. They did not understand our metaphysical difficulties, our introspective questionings. They knew only truth and untruth, belief and unbelief, without our hesitating retinue of finer shades.

T.E. Lawrence (Lawrence of Arabia) (1888-1935)

## § 16.01 HISTORICAL BASIS FOR FOUR SCHOOLS

*Shari'a*, as properly understood within the different sects of Islam, defines the content of the law. Literally meaning the "way" or "path to the water source," it regulates more than conduct that impinges upon the rights of others. It concerns the personal religious duties of each Muslim. Determining the content of the *Shari'a* is more than mere law-making. It is interpreting correctly the Message of God (Allāh), as revealed through the Prophet Muhammad, to live in communion with God and prepare for Final Judgment. Methodologically, the content is determined by *fiqh*, or jurisprudence:

The aim of *fiqh* was to regulate all man's relations to God, to establish the right way to live according to the Islamic sources. *Fiqh*, then, is much more than law, it is a way of life. It gives regulations on religious duties such as prayer, fasting, almsgiving and pilgrimage. It also details criminal law and civil law. Every act that man performs is divided into what it permitted (*halal*) and what is forbidden (*haram*) with several gradations in between.<sup>1</sup>

*Sunnis*, who account for roughly 85 percent of all Muslims, have varying interpretations what is the appropriate *fiqh*.<sup>2</sup> The Four Schools all start from the same premise, so the differences among the Schools are not great. In fact, each School recognizes the validity of the other three, and any *Sunni* can choose to change Schools.

It is important to appreciate the historical context in which the Schools emerge, namely, a dispute about the primacy of *ray* (personal opinion) or *hadiths*. In the mid-8th century, scholars began to write down *hadith*, rather than relying on oral tradition.<sup>3</sup> Differences of interpretation grew as more *hadiths* were formalized and disseminated. At first, the sides in this conflict were determined more by geography than theological reasoning. Meccan and Median jurists emphasized "tradition as their standard for legal decisions,"<sup>4</sup> whereas the Ancient Schools in Basra and Kufa relied on *ray*.<sup>5</sup> Their rationale for *ray* grew over time, because the primary sources (Qur'an and *hadith*) did not account for all situations that Muslims encountered, to be a valid source of law allowing for changes in the environment. But, as *hadith* compilations were shown to be more authoritative and became increasingly accessible, many Muslims found the use of *ray* less compelling. Moreover, the argument Traditionists levied in trumpeting the primacy of *hadith* stressed that human reasoning could not be a source of law because of its fallibility.

Amidst this debate, the ruling Caliphates factored into the development of the Four Schools:

the practices of the *Umayyad* courts had failed properly to implement the spirit of the original laws of Islam propounded in the Qur'an. Pious scholars

began to give voice to their ideas of standards of conduct which would represent the fulfillment of the true Islamic religious ethic.<sup>6</sup>

As a result, these standards of conduct began to yield intellectual currents, a few developing into the major Schools. In brief, the failure of the *Umayyad* Caliphate to rule within Islamic precepts led to the development of the Schools outside the governing authority.<sup>7</sup>

As the *Umayyad* and *Abbasid* Caliphates rose and fell, the separation between political and religious authorities grew:

To allow one of these sultans — even a *Sunni* sultan — any determining role in the development of the law that was now being formulated would mean that the law was only valid within the area that this particular sultan controlled. That would mean splitting the law up along the borders of petty states that were ever changing and short-lived.

Thus the process of establishing an authority to legitimize the actual detailed law of Islam fell to the class of scholars, as a natural result of the political state of affairs in what we may call the Islamic Middle Ages, the "sultanic period" from the fall of the caliphate in the mid-tenth century to the rise of the Ottomans in the early sixteenth. . . . As political unity disappeared, ideological unity became paramount.<sup>8</sup>

Constructing a unified *Shari'a* applicable to all Muslims served as an important motivation to each of the founders of the Four *Sunni* Schools.

Table 16-1 summarizes basic information and teachings of the Four Schools. The Table is a simplified, and on some points simplistic, rendition of a complex reality. For example, it is misleading to suggest the *Shāfi'i* School accepts *ijma'* as a source of the *Shari'a* in the same manner as the *Hanafi* School.

Table 16-1:

## § 16.02 FIVE COMPARATIVE POINTS

In studying the Four *Sunnite* Schools, five points are important to keep in mind. First, they are Schools of jurisprudence (*fiqh*). It is tempting, and sometimes fruitful, to draw analogies between them and denominations of other religions, such as Christianity. Technically, however, the stronger analogy is to schools of jurisprudence in the American legal system, such as law and economics, critical legal studies, and so forth. In other words, the Schools focus more on matters of law than faith, just as do jurisprudential movements in the United States. To round out the point, an apt comparison would be between different religious strands in Islam, namely *Sunnite* and *Shi'ite*, on the one hand, and different parts of the Christian world, such as Catholicism and Protestantism, on the other hand.

Second, all Four Schools agree on the core principles of Islam and the *Sharī'a*, such as the Five Pillars. In this respect, they are a testament to the unity within the diversity of Islam. That is also true of the different denomination within Christianity: all Christians, for example, accept Jesus as the Son of God and their personal savior.

Third, the Four Schools differ on a variety of matters that are of less than "mega" significance. That, too, is true of different Christian denominations. Thus, the Schools are a testament to the diversity within the unity of Islam, as are the denominations within Christianity.

Fourth, a Muslim is free to adopt the teachings of any one of the Four Schools, even if she happens to live in a jurisdiction in which that School is not predominant. She can study the precepts of each School, decide which she prefers, follow them, and as appropriate go to the nearest mosque associated with that School. Ideally, she should not select precepts in a cafeteria-plan like manner based on what is expedient for her. Rather, she should embrace the entirety of the teachings of a School as a result of a sincere belief in its precepts. However, on minor matters, she may depart from the teachings of her School, and follow the practice of an alternative School.

Fifth, there are Muslims who are unaffiliated with a School, just as there are non-denominational Christians. They choose precepts from different Schools, and develop their own practices through synthesis of these precepts. Such Muslims are not necessarily prominent, and indeed may seek a quiet, unassuming life — possibly, depending on their environment, for reasons of personal security.

## § 16.03 HANAFI SCHOOL

Following the Ancient Schools, the *Hanafi School* was the first official school, as distinct from a trend within Islam.<sup>9</sup> After the first four Caliphs, and in the wake of the hegemony of the *Umayyad* dynasty, a uniform *Sharī'a*, preserving fundamental Islamic beliefs, became necessary.<sup>10</sup> As a result, *Imām* Hanifa developed a theory of law, as a result of an incomplete and obscure collection of *ḥadīths* at the time,

<sup>9</sup> See VIRON, *supra*, at 97.

<sup>10</sup> See JACKSON, *supra*, at 26.

emphasizing "rational systems . . . as an independent basis for legal discussion."<sup>11</sup>

This focus on rationalism in the *uṣūl al-fiqh* (roots of jurisprudence) is still prevalent within this School. Due to its dominance in the *Abbasid* Caliphate and Ottoman Empire, the *Hanafi* School remains the leading legal authority in their successor states, claiming one-third of all Muslims.<sup>12</sup> As a result, *Hanafi* Muslims prevail in Turkey, Syria, Jordan, Lebanon, Pakistan, Afghanistan, and India.<sup>13</sup> Generally, the *Hanafi* School is the most liberal of the Four Schools,<sup>14</sup> because it grew out of the Ancient Schools of Basra and Kufa, located in the commercial cross-roads of Iraq.

### [A] Life of Abū Ḥanifa and Other Key Figures

Abū Ḥanifa, a Persian, was born in Kufa in 699 A.D.<sup>15</sup> Neither a lawyer nor judge (*qāḍī*), he was a silk manufacturer and merchant.<sup>16</sup> Ḥanifa rose to prominence as a scholar through his role as a teacher. As a scholar, Ḥanifa was less concerned with technical legal problems than with broader, deeper, theoretical issues.

The ideas of Ḥanifa about the *fiqh* competed with the *Khārijite* and *Murji'ite*. *Khārijites* were a fundamentalist group emphasizing a literal interpretation of the Qur'ān with a puritanical zeal.<sup>17</sup> In response, the *Murji'ites* advocated the rational, contemplative aspect of faith, encouraging faith over works.<sup>18</sup> Ḥanifa preferred the latter movement, and his teachings reacted against the rigidity of *Khārijite* fundamentalism.

As a result, Ḥanifa stressed the freedom of belief and the inability of fellow Muslims to judge the heart of their fellow Muslims. For instance, during his lifetime, the Muslim faith collectively struggled with whether humans could comprehend the manner in which Allāh is just.<sup>19</sup> The Caliph Ma'mun officially answered "no." But, Ḥanifa refused to take a single position: because neither the Qur'ān nor *Sunnah* were clear, other opinions should be respected.<sup>20</sup> This preference to individual liberty and intra-Muslim diversity of belief is evident in throughout his *fiqh*:

<sup>11</sup> See VIDOR, *supra*, at 96.

<sup>12</sup> See OXFORD, *supra*, at 107.

<sup>13</sup> See KAMALI, *supra*, at 73.

<sup>14</sup> See JACKSON, *supra*, at 30; KAMALI, *supra*, at 70; OXFORD, *supra*, at 107.

<sup>15</sup> See KAMALI, *supra*, at 70.

<sup>16</sup> See JACKSON, *supra*, at 27. The influence of Ḥanifa's vocation should not be lost when considering the formation of his ideas. For instance, the *Hanafi* School was the first to articulate comprehensive rules on contracts. See also OXFORD, *supra*, at 107.

<sup>17</sup> See JACKSON, *supra*, at 28.

<sup>18</sup> See JACKSON, *supra*, at 27.

<sup>19</sup> See VIDOR, *supra*, at 96.

<sup>20</sup> See VIDOR, *supra*, at 96.

[Ḥanifa] thus maintained the view that neither the community nor the government have the authority to interfere in the personal liberty of the individual so long as the latter has not violated the law.<sup>21</sup>

For example, Ḥanifa believed an adult female may conclude a marriage contract without a legal guardian present, a result different from the other Schools.<sup>22</sup>

Despite his influence, Ḥanifa is credited with only one work, *Al Fiqh Al Akbar* (*The Greater Understanding*).<sup>23</sup> Due to its brevity, the impact of the book was inconsequential, and the jurisprudential ideas of Ḥanifa were compiled by his students. Two students had the greatest impact on the *Hanafi* School: Abū Yūsuf and Shaybānī.<sup>24</sup> Indeed, they were more than students; along with Ḥanifa, they have an equal claim to be the founder of this School.<sup>25</sup>

Abū Yūsuf was a lawyer by trade. Because the *Abbasid* Caliphate favored the *Hanafi* School, Yūsuf was appointed as Chief Justice by Caliph Harūn Al Rashid.<sup>26</sup> His jurisprudential beliefs were eminently practical, and he also was aware of the reaction of the Caliphate to such beliefs.<sup>27</sup> This vocational approach may have influenced his criticism that the doctrines of Ḥanifa were insufficiently grounded in the *Sunnah* of the Prophet, articulated in the treatise Abū Yūsuf published at the request of Harūn Al Rashid.

Similarly, Shaybānī criticized a lack of emphasis he perceived by Ḥanifa on the Qur'ān and *Sunnah* to a greater extent than Abū Yūsuf. These criticisms, as well as the beliefs of Ḥanifa and Yūsuf, were chronicled by Shaybānī in voluminous detail.<sup>28</sup> The writings resulted in the "compilation of] the *corpus juris* of the *Hanafi* School."<sup>29</sup> In 787, Ḥanifa died while in a Baghdad prison,<sup>30</sup> perhaps there because he refused to accept an appointment as a *qāḍī*, or because he supported a moderate, rationalist *Shi'ite* revolt.<sup>31</sup>

### [B] Jurisprudential Foundations and Evolution

Ḥanifa wished to provide a rational basis for a unified *Shari'a* applicable to all believers. After all:

<sup>21</sup> See KAMALI, *supra*, at 71.

<sup>22</sup> See KAMALI, *supra*, at 71.

<sup>23</sup> See KAMALI, *supra*, at 70.

<sup>24</sup> See JACKSON, *supra*, at 27.

<sup>25</sup> See VIDOR, *supra*, at 96.

<sup>26</sup> See KAMALI, *supra*, at 70. At the request of Harūn Al Rashid, Abū Yūsuf published a treatise on fiscal and public law. *Id.*

<sup>27</sup> See COULSON, *supra*, at 51.

<sup>28</sup> See COULSON, *supra*, at 51.

<sup>29</sup> See KAMALI, *supra*, at 70.

<sup>30</sup> See JACKSON, *supra*, at 29.

<sup>31</sup> See JACKSON, *supra*, at 29.

if all Muslims were subject to God's law, then there should not be any difference in law between one Muslim and another, regardless of where they might reside.<sup>32</sup>

Interpreters should begin with examining the Qur'ān. If the Qur'ān speaks definitively to an issue, then its Divine revelation is final.<sup>33</sup> In the hierarchy of *Hanafi* law, the *Sunnah* ranks next, because the intention of the Prophet must be imputed as to his acts.

Flexibility in the law was important to Hanifa. To allow the *Shari'a* to adapt to changing social circumstances, he included the *ijtihad* (independent reasoning) of a judge, based on *uṣūl al-fiqh*, as a source of law.<sup>34</sup> Hanifa also allowed for the use of *qiyās* (analogical reasoning), *istihsān* (juristic preference), and *r'ay* (subjective opinion).<sup>35</sup> These principles gave judges considerable discretion which resulted in unpredictable results. After all, there were no rules for determining which form of *ijtihad* to prefer if they yielded conflicting conclusions.<sup>36</sup>

The emphasis Hanifa placed on *qiyās*, *istihsān*, and *r'ay* as sources of the *Shari'a* is not surprising in light of the fact that when he lived, there were few reliable compilations of *hadith*. He was a man of his times, working with the sources available to him. But, over time, following his death, more compilations of the non-Prophetic utterances of Muhammad were available. Thus, by the 10th century, the sources of law recognized by the *Hanafi* School were different from the ones championed by Hanifa. Thus, the School internalized the "post-Shāfi'i compromise."<sup>37</sup>

[T]he process of "Traditionalization" was at an end and it was generally accepted that rules that had earlier been based on practice must be grounded, as far as possible, in *hadith* and Koran.<sup>38</sup>

Thus, the School held the view that if the Qur'ān or *hadith* does not expressly address an issue, then reasoning by *qiyās* is preferable. But, a conclusion based on *qiyās* may be set aside by *istihsān* if it yields an undesirable result. Although *r'ay* is a valid source of law, it ranks as the least important. And, with the accretion of *Hanafi* School jurisprudence and deference owed to prior interpretations, instances in which a judge had the opportunity to use *r'ay* diminished.

### [C] Hierarchy within *Hanafi* School

The hierarchy of authority within the *Hanafi* School is not seriously disputed. Abū Hanifa holds the legitimate claim to be the founder of the School. Abū Yūsuf and Shaybānī were his leading students. They did not hold the same view as their

teacher on every controversy.<sup>39</sup> But, they resolutely adopted his methodology for resolving legal issues, and indeed developed that methodology.

How is a conflict among the views of these three great figures of the *Hanafi* School resolved? Some scholars suggest if all three considered an issue and two of them agreed, then the School should follow the majority, even if leaves out the views of Hanifa.<sup>40</sup> Others suggest a hierarchical preference, prioritizing Hanifa, Abū Yūsuf, and then Shaybānī.<sup>41</sup> In practice, it is up to an Islamic judge (*qāḍī*) in a particular case. In following the methodology of the *Hanafi* School, the *qāḍī* has discretion to reach an outcome different from that of the founder (or different from what the founder might have reached).

It is unlikely Hanifa believed he or his students should merit great esteem. Hanifa is attributed with saying:

No one may issue a *fatwā* on the basis of what we have said unless he ascertains the source of our statement.<sup>42</sup> Hanifa meant to support independent inquiry and *ijtihad* into the sources of law for a particular rule. The School did take his statement in that manner. Rather, the School held to the view that scholars should familiarize themselves with the sources of the *Shari'a* used by Hanifa to support a rule, but they should regard themselves as imitators of previously established rulings. They are not competent to inquire further into the evidence used by Hanifa, and indeed do not rank equally as scholars with Hanifa. In brief, the successors of Hanifa came to regard themselves as followers practicing *taqlid* (imitation), however hard Hanifa himself sought to downplay his importance and encourage independent thought.<sup>43</sup>

This prior-in-time deference was predictable. Hanifa once stated: "when you are faced with evidence, then speak for it and apply it."<sup>44</sup> Junior *qāḍīs* used this reasoning as an invitation to challenge their superiors, claiming the prior ruling did not have all of the evidence.<sup>45</sup> This limited independent inquiry was further restricted with the Closing of the Gate to *Ijtihad*.<sup>46</sup>

### § 16.04 MĀLIKĪ SCHOOL

Growing from the Ancient School of Medina, the *Mālikī* School was founded in the 8th century A.D. in Medina on the Arabian Peninsula.<sup>47</sup> In the *Mālikī* School, the traditional practices and *hadith* recorded in and around the city receive special

<sup>47</sup> See OXFORD, *supra*, at 190.

attention. Compared with *Hanafi* interpretation, the *Māliki* School dealt with the primary business of Medina, agriculture, rather than business and trade at large. Inspired by the Traditionists, Mālik wished to preserve the primacy of the Qur'ān and *Sunnah*, while allowing *ra'y* as a supplement when necessary:

Malik's legal reasoning is a synthesis of practical expediency and the infusion of Islamic religious and ethical principles, and he relied to a considerable extent on *Ijmaa* (the consensus of the *ulema*) and living tradition.<sup>48</sup>

Currently, there are significant followers of the *Māliki* School in Morocco, Algeria, Tunisia, Upper Egypt, the Sudan, Bahrain, and Kuwait.<sup>49</sup>

### [A] Life of Mālik ibn Anas Al Asbahi

A contemporary of Hanifa and a teacher of Al Shāfi'i,<sup>50</sup> Mālik may be the most influential of all scholars in the development of *Sunni* beliefs. His research, rooted in compilation of *ḥadīths*, likely followed the work of his father and grandfather, from whom he learned respect for their importance. Born in Medina in 710, Mālik lived in the midst of the rush to chronicle *ḥadīths* before they fade from the memories of their transmitters.<sup>51</sup>

Throughout his life, Mālik remained independent of any governing authority, never taking a position in the *Abbasid* administration or as a judge.<sup>52</sup> Mālik died in 795, living his last few years secluded for devotion to spiritual reflection.<sup>53</sup> As with all Schools, except the *Shāfi'i* School, the *Māliki* School was grounded by his pupils,<sup>54</sup> located primarily in Egypt.<sup>55</sup> Ibn Al Qasim had the greatest impact systematizing the foundations of the *Māliki* School.<sup>56</sup>

### [B] Transplantation of Māliki School

Mālik lived his entire life in Medina, and his School initially flourished in Egypt, but by 850 it atrophied in both places.<sup>57</sup> *Māliki* ideology was exported to the *Abbasid* provinces in the Maghreb (North Africa) and Spain, where it finally coalesced into a formal School.<sup>58</sup> To the east in Iraq, the movement lasted though

<sup>58</sup> See VIKOR, *supra*, at 99.

the early 11th century, before dying out.<sup>59</sup> To the south, *Māliki* ideas flowed to Sub-Saharan Africa.

Crucial differences between Spain and the Maghreb influenced how the *Māliki* School developed in each locale. In Spain, the government left Muslims within its borders unfettered.<sup>60</sup> Combined with the isolation from Muslims of other Schools and sects, this autonomy allowed the School to develop doctrine without external influence.<sup>61</sup>

*Māliki* School development in the Maghreb, however, had a politically divisive nature, resulting in confrontation.<sup>62</sup> Writings of *Māliki* scholars from the Maghreb contrasted with those of the *Hanafi* School, which has the backing of governments in its formative years. *Māliki* scholars could not merely assert a proposition as authoritative. Rather, they had to be transparent about their methodology and logic.<sup>63</sup> As the Sevens *Shi'ite* *Fatimid* Empire took control of Tunisia in 909, *Māliki* scholars concentrated on withstanding government pressure.<sup>64</sup>

In Northern Nigeria, the British formally protected the *Fulanis* during the Colonial Era. The *Fulanis* asserted the exclusiveness of the *Shari'a* in theory and practice, and forbade accommodation with local customary law. *Fulani* *qādis* applying the law were *Māliki* jurists, and their exclusive approach led to fundamentalist interpretations and rulings.

### [C] Māliki School Sources of Law

The Qur'ān is the binding, starting point in determining the contours of the *Shari'a* as understood by the *Māliki* School.<sup>65</sup> After the Qur'ān, *ijma'* has the next highest level of priority.<sup>66</sup> To Mālik, this type of *ijma'* was not consensus of all Muslims or of *Māliki* scholars. Rather, he gave the *ijma' ahl al-Madinah*, a Median consensus, priority.<sup>67</sup>

[s]ince the Madinese followed each generation immediately preceding them, the process would have gone back to the generation that was in contact with the teachings and actions of the Prophet. In Malik's opinion, the practice of the Madinese thus constitutes basic legal evidence.<sup>68</sup>

*Imām* Mālik is not careless about quoting *ḥadīth*, but he presumes the *isnād* (chain of transmission back to the Prophet), is served by the prevailing beliefs in Medina. Thus, Professor Doi observes:

<sup>59</sup> See VIKOR, *supra*, at 99.

<sup>60</sup> See VIKOR, *supra*, at 99.

<sup>61</sup> See VIKOR, *supra*, at 99.

<sup>62</sup> See VIKOR, *supra*, at 99.

<sup>63</sup> See VIKOR, *supra*, at 99.

<sup>64</sup> See VIKOR, *supra*, at 100.

<sup>65</sup> See JACKSON, *supra*, at 34.

<sup>66</sup> See JACKSON, *supra*, at 34.

<sup>67</sup> See OXFORD, *supra*, at 109; COULSON, *supra*, at 46-47; KAMALI, *supra*, at 73.

<sup>68</sup> See KAMALI, *supra*, at 73.

The *Muwatta'* [the classic treatise of Mālik, discussed below] . . . shows that Imām Mālik always quotes a *ḥadīth* or a precedent of the *Khulafā' ar-Rāshidūn* . . . or very prominent Companions. Many Muslim scholars of the past have considered the *Muwatta'* as a book that has rendered a great service to the cause of collection of *ḥadīth* long before Imām al-Bukhārī and Imām Muslim and other scholars of *ḥadīth* began to produce their systematic compilations of *ḥadīth*. . . . [G]reat scholars like Imām ash-Shāfi'i [i.e., Imām Shāfi] have rated the *Muwatta'* as "the most authentic book after the Book of Allāh."

. . . [I]t is typical of the Mālikī School that the '*amal ahl al Madīnah*' (the practice of the People of Madīnah) is very much relied upon. The practice of the People of Madīnah . . . was based on the Sunnah of the Prophet . . . . It was the learned and right-acting Imām's view that Madīnah was the birthplace of Islam and the place to which the Prophet . . . emigrated; the nerve centre of the Ummah, the centre where important legal verdicts were given by the Prophet . . . and the *Khulafā' ar-Rāshidūn* . . . , the place where the Companions and their Followers lived and taught according to the Book of Allāh and the Sunnah of the Messenger of Allāh . . . . Hence, the practice of the people of Madīnah could not be contrary to the Sunnah of the Prophet . . . , especially during the early period in which Imām Mālik lived and taught.<sup>69</sup>

This pragmatic approach gives weight to local customs and conditions, prioritizing the practice of the Companions of Muhammad, and more specifically the '*amal ahl al Madīnah*' (the practice of the People of Medina) over *ḥadīth*.<sup>70</sup> But the Mālikī accords this priority only if, and to the extent, there is a true conflict between these two sources.<sup>71</sup> In theory, they should not conflict, but in practice, that is not always true.

For instance, under the doctrine of *khiyār al-majlis*, a *ḥadīth* allows for the option to cancel completed contracts as long as the parties have "not separated — nor left the meeting of the contract."<sup>72</sup> The prevailing Medinan practice regarding a contract is it is final upon agreement, whether or not the parties remained together or separated.<sup>73</sup> To some early scholars, there is a true conflict between practice and *ḥadīth*. If priority is given to practice, then the doctrine is invalid. Other early scholars point out there is no definition "separation," nor any set practice as to it.<sup>74</sup> Still other early scholars see no contradiction between the

<sup>69</sup> 'ABD AL-RAHMAN I. DOL SRARFAH: ISLAMIC LAW 561 (London, England: Ta-Ha Publishers Ltd., 2nd rev'd ed., 2008) (emphasis added). [Hereinafter, Dol.]

<sup>70</sup> See KAMALI, *supra*, at 73.

<sup>71</sup> See KAMALI, *supra*, at 74.

<sup>72</sup> See KAMALI, *supra*, at 74.

<sup>73</sup> See KAMALI, *supra*, at 74. Two other examples where a Madinese consensus prevailed as a preeminent source of law are as follows. First, the testimony of children in cases of injury amongst only children is acceptable when no one has left the scene of the incident. *Id.* at 75. Second, the wife of a missing person may seek judicial separation after completing a 4-year waiting period, and seek divorce on the ground of injurious treatment by her husband. *Id.* at 76.

<sup>74</sup> See DOL, *supra*, at 560-561.

doctrine and the practice of the people of Medina. The upshot is that some jurists (*fukahā'*) of the Mālikī School, and other Schools, question the validity of the doctrine, but overall, the doctrine is accepted.

The dictates of *ḥadīth* are third in priority. Mālik compiled the *Kitāb al-Muwatta'* (The Trodden Path), the first organized attempt to create a collection of *Shari'a* law<sup>75</sup> according to the topics of *fiqh*.<sup>76</sup> Generally, each *ḥadīth* must include:

the actual content of the *ḥadīth* (*matn*), and the list of its chain of transmitters (*isnad*) going back to the original source which, ideally, should be the Prophet himself and, if not, to the *Companions* (those who lived at the same time as Muhammad) or the *Successors* (the next generation after Muhammad's death).<sup>77</sup>

Historically, the *Muwatta'* is a window into the internal debate between *ḥadīth* and *r'ay* at the time of its writing. The *Muwatta'* reflects an uneasy compromise between the liberal, practical outlook of the earliest scholars and the inflexible approach of Traditionists.<sup>78</sup>

If none of these sources speak to an issue, then a *qādi* may use one of three types of *r'ay*.<sup>79</sup> First, and least controversially, *qiyās* may be used to analogize rules established within the first three sources to apply it to a new situation.<sup>80</sup> Second, a *qādi* may use *istiṣlāh* (consideration of public interest) as a valid source of law, when reasoning by *qiyās* produces a harsh result found to be objectionable. But Mālik himself issued *fatwās* solely on the ground of *istiṣlāh*, not simply as *istiḥsān* to disregard the conclusion of *qiyās*.<sup>81</sup> Third, the last source of *r'ay* is *sadd al-dhara'* (closing or blocking off the means that can lead to evil),<sup>82</sup> which involves categorizing actions that lead to *ḥarām* or *ḥalāl* consequences as forbidden or permitted.<sup>83</sup> Mālikī School scholars applied this distinctly consequential reasoning to prohibit the sale of grapes to a known wine-maker, and to bar contracts whose terms include *ribā*.<sup>84</sup>

Mālik himself did not propose a systematic theory of the *uṣūl al-fiqh*. Rather:

[his] chosen method of composing his treatise was first to report such precedents as were known, and then to consider them, interpret them, and accept them or otherwise in the light of his own reasoning and the legal tradition of Medina.<sup>85</sup>

<sup>75</sup> See JACKSON, *supra*, at 33.

<sup>76</sup> See KAMALI, *supra*, at 74.

<sup>77</sup> See JACKSON, *supra*, at 32.

<sup>78</sup> See COULSON, *supra*, at 44.

<sup>79</sup> See JACKSON, *supra*, at 34.

<sup>80</sup> See OXFORD, *supra*, at 109.

<sup>81</sup> See KAMALI, *supra*, at 75.

<sup>82</sup> See KAMALI, *supra*, at 75.

<sup>83</sup> See KAMALI, *supra*, at 76.

<sup>84</sup> See KAMALI, *supra*, at 76.

<sup>85</sup> See COULSON, *supra*, at 46.

However, through the *Muwatta'*, the hierarchy of *Mālikī* law could be inferred, as Shāfi'i later articulated.<sup>96</sup> Mālik, like the other founders, forbade his students from accepting his teachings *carte blanche*, saying:

I am only a human. May be [sic] I am wrong and may be [sic] I am right. So look into my opinions; if they are in agreement with the Qur'an and *Sunnah*, accept them, otherwise reject them.<sup>97</sup>

### § 16.05 SHĀFI'Ī SCHOOL

The *Shāfi'ī* School was the first "to crystallize around the personality of a great legal scholar," rather than rely on students for clear articulation of the ideology.<sup>98</sup>

Without doubt the single greatest Islamic legal scholar, his supreme contribution was to put Islamic law on a more solid and scientific footing, especially in his strict approach to the authentication of the sayings (*hadith*) of the Prophet Muhammad as a source for law. More than any other figure of his time he restored the unity to an Islamic community that was seemingly on the verge of breaking up.<sup>99</sup>

Shāfi'i spent much time traveling, so his geographic influence is wide. His teachings focus on *hadith* interpretation, with less attention to business associations and commercial matters.

#### [A] Life of Muhammad Al Shāfi'ī and Development of *Shāfi'ī* School

Born in Gaza in 768 A.D., Shāfi'ī was taken at an early age by his mother to Mecca for a better education.<sup>100</sup> Additionally, he also spent 10 years living with a Bedouin tribe, developing essential pure Arabic language skills, like Muhammad.<sup>101</sup> Reading Mālik's *Muwatta'*, and memorizing its over 2,000 *hadiths* was a turning point in his life. After studying with Mālik, he was arrested in Yemen for treason, but was spared execution because he was from the same tribe as the Prophet.<sup>102</sup> He wound up incarcerated in Baghdad, but there was able to study under Abū Hanīfa.<sup>103</sup> After Baghdad, he moved to Mecca, enjoying an academic life of teaching and writing for 9 years, where Ibn Hanbal was his student.<sup>104</sup> Returning to the intellectual richness of Baghdad, he wrote *Al Risalah (The Epistle)*, "which is regarded as the first scientific treatment of Islamic law, and this helped to spread

<sup>96</sup> See KAMALI, *supra*, at 74.

<sup>97</sup> Quoted in KAMALI, *supra*, at 77 (citing Al-Shawkānī, *Al-Qawl Al-Mufid* at 44).

<sup>98</sup> See SCHACHT, *supra*, at 58.

<sup>99</sup> See JACKSON, *supra*, at 39-40.

<sup>100</sup> See JACKSON, *supra*, at 40.

<sup>101</sup> See JACKSON, *supra*, at 40.

<sup>102</sup> See JACKSON, *supra*, at 40.

<sup>103</sup> See JACKSON, *supra*, at 40.

<sup>104</sup> See JACKSON, *supra*, at 40-41.

his scholarly reputation."<sup>95</sup>

In 815, Shāfi'ī relocated to Egypt, where he was designated as a *mukhtahid* (a well-qualified scholar or renewer of the faith).<sup>106</sup> While in Egypt, the dominant *Mālikī* current influenced him, though legend has it Shāfi'ī was murdered in 820 by a zealous bunch of *Mālikīs*.<sup>107</sup> Although intriguing, this tale lacks clear proof, and is orthogonal to common sense. Given the date of his death, it is unlikely the allegiances of the two Schools were so extreme.

Throughout his life, Shāfi'ī was a renegade scholar, as evinced by his many relocations. He did not accumulate a following of students who would promulgate his life work after his death.<sup>108</sup> Further, though Shāfi'ī spent a lifetime studying the *uṣāl al-fiqh*, he refused to ally himself within any of the extant Schools.<sup>109</sup> He considered himself a member of the Ancient School of Medina.

About 100 years after Shāfi'ī died, his thought began to influence a critical mass of scholars.<sup>100</sup> Centered in Iraq, these scholars formulated rules and requirements of the *Shari'a* under the *uṣāl al-fiqh* of Shāfi'ī.<sup>101</sup> *Shāfi'ī* jurisprudence was the official School of the *Ayyubid* Dynasty in Egypt (1171-1341), as well as being prominent in the ensuing *Mamluk* Sultanate (1250-1517), but was displaced by the *Hanafi* School when the Ottomans occupied Egypt in 1517.<sup>102</sup> The *Shāfi'ī* School prevailed in Iran through the Middle Ages, until displaced by Twelver *Shi'ism*. Today, it is prevalent in Lower Egypt, Southern Arabia, East Africa, Indonesia, Malaysia, Brunei, and has many followers in Palestine, Jordan, and Syria.<sup>103</sup>

#### [B] *Shāfi'ī* School Sources of Law

There are four recognized sources of law in the *Shāfi'ī* School: Qur'an, *Sunnah*, *ijma'*, and *qiyās*.<sup>104</sup> As Divine revelation, the Qur'an is the primary source of law.<sup>105</sup> The *Sunnah* is inferior to the Qur'an, only serving as an explanatory tool.<sup>106</sup> Theoretically, both must agree in all things. If there is a conflict between the Qur'an and *Sunnah*, then the discrepancy must be due to an error in transmission or a deviant act by a transmitter.

<sup>95</sup> See JACKSON, *supra*, at 41.

<sup>96</sup> See JACKSON, *supra*, at 41. The basis for this designation at this time is that a *hadith* states: "at the beginning of each century a great man will come to restore and revitalise the Muslim community, to renew (*tajdid*) Islam and return Muslims to the straight path." *Id.*

<sup>97</sup> See VIKOR, *supra*, at 98.

<sup>98</sup> See VIKOR, *supra*, at 100.

<sup>99</sup> See COULSON, *supra*, at 53.

<sup>100</sup> See VIKOR, *supra*, at 100.

<sup>101</sup> See VIKOR, *supra*, at 100-01.

<sup>102</sup> See OXFORD, *supra*, at 285.

<sup>103</sup> See KAMALI, *supra*, at 74.

<sup>104</sup> See JACKSON, *supra*, at 41-43; KAMALI, *supra*, at 78-82; COULSON, *supra*, at 55-61.

<sup>105</sup> See COULSON, *supra*, at 55.

<sup>106</sup> See KAMALI, *supra*, at 78-79.

The *Sunnah* is a vital tool of interpretation. To reject it would be to leave a gaping hole in the essential knowledge of Islam.<sup>107</sup> But, not all *Sunnah* deserve this exalted second-tier status. Shāfi'i differentiates between *Sunnah* based upon an act of the Prophet himself versus based upon a Companion or Successor. Shāfi'i criticized the Ancient Schools for relying on the latter categories. They wrongly assumed the Companions (*ṣaḥābah*) or Successors knew what the Prophet intended and had no view incongruous with the Prophet.<sup>108</sup> Additionally, allowing *ḥadīth* with such sources is a pretext to justify local customs that run afoul of Muslim beliefs.<sup>109</sup> In clarifying the centrality of the Prophet, Shāfi'i rejected the belief of Mālik that prioritized the acts of Companions and Successors through preferring Medinan custom over *ḥadīth*.<sup>110</sup>

*Ījma'* is third in priority, but Shāfi'i criticized the prior interpretation about whose consensus is required for *ijma* to be a valid source of law. Hanifa and Mālik believed *ijma'* was defined only by a consensus of scholars.<sup>111</sup> In contrast, Shāfi'i demanded consensus among the entire Muslim population (*ummah*) — lawyers and laity alike — for such belief to be a source of law.<sup>112</sup> *Ījma'* had been used to justify local or cultural norms, many of which existed before the advent of Islam.<sup>113</sup> Shāfi'i believed the consensus of all Muslims would ferret out these narrow, corruptible interpretations from the *Shari'a*. If all Muslims agree on a certain proposition, it is impossible, according to the Qur'an and *Sunnah*, for them to be in error because not all Muslims could be deceived in such an identical manner.<sup>114</sup> At the same time, Shāfi'i did not regard consensus as an important source of the *Shari'a*, finding its scope restricted largely to personal matters, such as performance of daily prayer. Moreover, as Islam spread far beyond the Hejaz, Shāfi'i appreciated that it was increasingly difficult to obtain a universal Islamic *ijma'*. Thus, Professor Coulson remarks that the doctrine of Shāfi'i on *ijma'* is "essentially negative," as it rejects the authority of a localized or limited consensus, and thus eliminates the diversity of rules in the *Shari'a* that results from these more modest consensuses.<sup>115</sup>

The final source of law acceptable within the Shāfi'i School is *qiyās*. If a sound analogy derives from a principle in the Qur'an, *Sunnah*, or *ijma'*, and the

<sup>107</sup> See KAMALI, *supra*, at 79.

<sup>108</sup> See SCHACHT, *supra*, at 47.

<sup>109</sup> See KAMALI, *supra*, at 77.

<sup>110</sup> See KAMALI, *supra*, at 79.

<sup>111</sup> See KAMALI, *supra*, at 78.

<sup>112</sup> See BERNARD G. WEISS, *THE SPIRIT OF ISLAMIC LAW* 123 (1998); Coulson, *supra*, at 59.

<sup>113</sup> See JACKSON, *supra*, at 42.

<sup>114</sup> See SCHACHT, *supra*, at 47. An interesting parallel to the idea consensus by the entire Muslim community cannot be in error is the work of Condorcet on voting systems. Generally, Condorcet said the choice between options by a greater number of people (assuming each chooser had adequate information to make a decision) is epistemically superior to the choice of the minority. Applied here, one could argue this strict requirement of *ijma'* ensures that choice reached by everyone is probabilistically guaranteed to be the correct choice. While "probabilistically guaranteed" is an odd phrase, if Condorcet's premises are accepted, then there might be a 100 percent chance the choice is correct.

<sup>115</sup> See COULSON, *supra*, at 59.

conclusion does not contradict another rule within those three sources, then it has a valid source in the *fiqh*.<sup>116</sup> Traditionists, who preferred a weak tradition to a strong analogy, criticized Shāfi'i for allowing the use of *qiyās*.<sup>117</sup> However, utilizing *ijtihād* in such a limited fashion allows the *Shari'a* to evolve to facts not encountered by the Prophet. In circumscribing the use of *ijtihād* to *qiyās*, Shāfi'i rejected all other types of forms of *ijtihād* and considered any opinion based on a form of *ijtihād* other than a valid *qiyās* "arbitrary and excessive."<sup>118</sup>

To be sure, the intricacies of the *fiqh* Shāfi'i originally proposed were modified over time. But, his belief in the supremacy of the Qur'an and *Sunnah* of the Prophet, followed by *qiyās*, never was seriously challenged.<sup>119</sup>

## § 16.06 HANBALI SCHOOL

The groundwork of the Hanbali School was laid at least 50 years after the other three Schools by those carrying the banner of the Ancient Traditionists.<sup>120</sup> The Hanbali School is the strictest on matters of faith, perhaps as a reaction to the rising currents of *Shi'ism* and *Sufism*, but more liberal on commercial matters because it originated in trade-wealthy Iraq. Currently, the Hanbali School is the official and only formally recognized school in Saudi Arabia, with many adherents also in Qatar, Palestine, Syria, and Iraq.<sup>121</sup>

### [A] Founders (Ibn Ḥanbal, Ibn Taymiyya, and Ibn Abd Al Wahhāb) and Development of Hanbali School

In 780 A.D., Ḥanbal was born in Baghdad into a family of nobility.<sup>122</sup> He accumulated knowledge of *fiqh* and the various Schools, studying under Shāfi'i, until the age of 40, when he began lecturing at a mosque in Baghdad.<sup>123</sup> In 832, a rationalist Chief *Qāḍī* (*Qāḍī Al Quḍhat*) was appointed by the Abbasid Caliph to the Baghdad court.<sup>124</sup> Refusing to adopt the beliefs of the *Qāḍī Al Quḍhat*, Ḥanbal was brought before a *mikna* (an inquisition-like trial), where he refused to reform his beliefs and was imprisoned.<sup>125</sup> Ḥanbal remained in prison for 10 years, until a more Traditionist Caliph came to power and ordered his release.<sup>126</sup> While in prison, his notoriety spread throughout the Muslim world due to his vast compilation of *ḥadīth*

<sup>116</sup> See COULSON, *supra*, at 60.

entitled "*Musnad*."<sup>127</sup> As such:

[Hanbal] was a rallying figure for the Traditionists, those who wanted to build only on *hadith* and who had become a religio-political party supported by the majority of the people of Baghdad and normally in opposition to the caliph.<sup>128</sup>

Eventually earning the popular title of the "*Imām* of Baghdad," Hanbal died in 855.<sup>129</sup>

The work of Abū Bakr Al Khallāl (who died in 923), compiling the *fiqh* of Hanbal through his teachings and the manner in which he compiled *hadith*, was crucial to the development of the *Hanbali* School.<sup>130</sup> Traditionists, however, were not uncritical. They did not support the claim of Abū Bakr that Hanbal used Shāfi'i-inspired *ijtihād* to supplement lacunae within *hadith*.<sup>131</sup> The Traditionists prevailed, precluding the valid use of reasoning that is not analogically derived from within the Qur'ān or *Sunnah*.<sup>132</sup> Accordingly, although Abū Bakr concluded the seminal groundwork shortly after the life of Hanbal, it was not until the end of the 11th century that the views of Hanbal coalesced into a School.<sup>133</sup>

The *Hanbali* School had many followers until the 14th century, when it lost almost all of its adherents.<sup>134</sup> Despite the dim following, the *fiqh* of the *Hanbali* School progressed due to the work of Ibn Taymiyya (1263-1328), who lived and worked in Damascus. Along with the Qur'ān and *Sunnah*, Ibn Taymiyya accepted the use of *qiyās* as a valid, but inferior, source of law. One focus of his work was to improve the quality of reasoning within a *qiyās*. Additionally, for the same reasons as Shāfi'i, he rejected *ijma'* as the consensus of the *ulema* as a source of law. In rejecting *taklid* (knowledge of previous scholars within the School), he advanced a similar argument as against *ijma'*. That is, the acknowledged doctrines of a School are not above reproach, because the consensus necessary for that acknowledged status lacks a validating effect.

Until the 18th century, the *Hanbali* School failed to gain any prominence vis-à-vis other Schools or via official recognition by a governing authority. However, Muhammad ibn Abd Al Wahhāb soon led a revival of the *Hanbali* School, as interpreted by Ibn Taymiyya.<sup>135</sup> While Al Wahhāb was born into a family of

<sup>127</sup> See Vikor, *supra*, at 101; Coulson, *supra*, at 71. Although all agree the amount of *hadiths* within the *Musnad* is vast, there is disagreement as to how vast. Vikor places the figure at 30,000, while Coulson states it is 80,000.

<sup>128</sup> See Vikor, *supra*, at 102.

<sup>129</sup> See Jackson, *supra*, at 44.

<sup>130</sup> See Vikor, *supra*, at 102.

<sup>131</sup> See Vikor, *supra*, at 102.

<sup>132</sup> See Vikor, *supra*, at 102.

<sup>134</sup> See Kamali, *supra*, at 84.

<sup>135</sup> See Kamali, *supra*, at 84.

distinguished *Hanbali* jurists,<sup>136</sup> the recovery of this School has its roots in a greater renewal of Islam. Generally, there had been a large-scale decline of piety in the Muslim world.<sup>137</sup> Seemingly a result of colonialism, many Muslims began to recognize the Western dichotomy between their public and private lives. Al Wahhāb soundly rejected this secularist division as an affront to *tawhid* (absolute monotheism), wishing to place God at the center of politics and the governing structure.<sup>138</sup>

As a result, Al Wahhāb ushered in an era of renewed attention to the Qur'ān and *Sunnah*.<sup>139</sup>

He rejected imitation of the past (*taklid*) in favor of fresh and direct interpretation (*ijtihād*) of the scriptures and Islamic law by contextualizing them and studying their content.<sup>140</sup>

This revival took a more official form within Saudi Arabia, as King Ibn Saud officially adopted the *Hanbali* School with the insights of Al Wahhāb, in 1927 as the official School of the Kingdom. This adoption was part of a bargain: support from clerics for the political authority of the House of Saud, in exchange for support from that House for the religious authority of the *Wahhābi* clerics. Consequently, Saudi Arabia typically is characterized as a "*Wahhābi*" nation.

That is true, and it is an alliance that served the Saudi Royal Family and *Wahhābi* clerics well for many decades. But, their interests no longer are exactly aligned, if they ever were. Some Royal Family members would like to see the Kingdom modernize, in the sense of westernize. They are opposed not only by other members of the House of Saud, but also by many clerics, who seek to keep the Kingdom as Islamicized as possible. The King himself (whoever it is) sometimes must walk a fine line between the two sides, regardless of his own policy preferences. Notably, on 14 February 2009, the reformist-minded King Abdullah announced changes in government regarding the primacy of the *Hanbali* School.<sup>141</sup> The King allowed scholars on his 21-man advisory council to include *Sunnites* from non-*Hanbali* Schools.<sup>142</sup> Although these reforms do not come close to a denunciation of *Hanbalism* or *Wahhābism* as the official School, collectively they have yielded a more tolerant view of Muslims who are not partisan to the same beliefs or predilections of some members of the House of Saud (i.e., the Saudi royal family).

After the terrorist attacks of 11 September 2001, the official endorsement by Saudi Arabia of the *Hanbali* School was portrayed by mainstream Western media outlets as an extremist, violent sect of Islam. They characterized the perpetrators of the attacks, and other terrorists, as *Wahhābis*, and implicitly assumed all *Hanbali*

<sup>142</sup> *Tiptoeing*, *supra*, at 48.

adherents were *Wahhābis*. There are problems with this journalism.

Al Wahhāb was a prominent figure in the history and rejuvenation of the *Hanbali* School, and the life of the 18th century Persian Gulf. But, it is incorrect to characterize *Hanbalis* generally as followers of Al Wahhāb. It is no more accurate to characterize an American Protestant Christian as a follower of the early Puritan Jonathan Edwards because the faith of that person could be historically explained by the Great Awakening than it is to say the faith of a *Hanbali* *Sunnite* may be explained by reference to Al Wahhāb:

The reality is that *Wahhabism* has become such a blanket term for any Islamic movement that has an apparent tendency toward misogyny, militantism, extremism, or strict and literal interpretation of the Qur'an and *hadith* that the designation of a regime or movements as Wahhabi or Wahhabi-like tells us little about its actual nature.<sup>143</sup>

All *Hanbalis* can be linked historically to Al Wahhāb, as American Protestants can be to Jonathan Edwards. But, there are extremist groups that label themselves as "*Wahhābis*," with which the vast majority of *Hanbalis*, and indeed all Muslims, want nothing to do. These groups trumpet the argument of Al Wahhāb harkening back to Traditionists and their emphasis on the Qur'an and *hadith* as justification for violence. But neither the Prophet nor Al Wahhāb held such beliefs. Al Wahhāb strongly denounced the use of *jihād*, except in strict, limited circumstances,<sup>144</sup> and promoted evangelism through *da'wah*, or an educational process.<sup>145</sup>

Furthermore, there is diversity of belief within the *Hanbali* School, as evidenced by the manner in which it and the other Schools developed. At the outset, the appropriate *fiqh* was determined, and then the *Shari'a* was extrapolated within those parameters. Differences, some greater than others, are inevitable, when only fundamental principles are articulated upon which individual rules are to be based. Differences in law and social expectations within the *Hanbali* School between Saudi Arabia and Qatar are a case in point. Women can drive in Qatar, but not (yet) in Saudi Arabia. Additionally, alcohol may be served in hotels in Qatar, but its importation is banned in Saudi Arabia, which in its 2005 terms of accession to join the World Trade Organization (WTO) invoked Article XX(a) of the General Agreement on Tariffs and Trade (GATT). This provision allows a WTO Member to ban importation of merchandise, if that ban is necessary to protect public morality (and also satisfies the legal criteria in the *chapeau* to Article XX). Hence, it is both inaccurate and improper to associate *Hanbali* *Sunnites* with monolithic extremist movements that purport to pay lip service to the School.

## [B] *Hanbali* Sources of Law

Generally considered the most traditional of the four Schools, the *Hanbali* School places primary emphasis on the Qur'an and *Sunnah*. As with all other Schools, the Qur'an, as the Divinely revealed will of God (Allāh), is paramount. The

*Sunnah* is second in priority, but the *Hanbali* School delineates between a weak *hadith* traced back to the Prophet versus a *fatwa* issued by a Companion (*Ṣahābah*) or Successor.<sup>146</sup> Although the *Māliki* line of reasoning influenced the *Hanbali* School on this point, the argument that carried the day reflected historical context. At the time of founding of the three previous Schools, extensive and credible compilations of *hadith* were not readily available, hence the science and art of applying the sayings and doings of the Prophet was in its early stages.<sup>147</sup> By the time of the *Hanbali* School, such compilations were widely available, and that science and art began to flourish. Interestingly, today some Saudi scholars debate as to whether the *Sunnah* of the Peoples of the Book (*ahl al kitāb*) before Islam, i.e., of Jews and Christians, might be a source of the *Shari'a*.

Suppose a situation arises that the Qur'an and *Sunnah* does not address. Then, a *qādi* may use a properly derived *qiyās* to fashion a rule. However, a *hadith* whose transmission is weak is strongly preferred to a logically rigorous *qiyās*.<sup>148</sup>

The *Hanbali* School strictly forbids the use of *ijtihād* as a source of law, though there are instances when Hanbal himself used it to issue a *fatwa*.<sup>149</sup> But, the School promotes *ijtihād* as a collective obligation of all *Hanbalis* to examine continually the Qur'an and *Sunnah* as a check on prevailing thought within the School.<sup>150</sup> Hanbal stated the point best: "Do not imitate me, nor Mālik, nor Thawri, nor Awza'i, but take from where we have taken."<sup>151</sup>

*Hanbali* School *fiqh* has led to a widespread characterization that it is the most conservative of the *Sunnite* Schools. What is forgotten is it is the most liberal regarding commercial matters.<sup>152</sup> For instance, the School takes the position that any sort of contract is permitted unless expressly prohibited by the *Shari'a*.<sup>153</sup> Hanbal himself seems to have had the opposite view, as he is rumored to have never eaten watermelon, because he was unable to locate a Prophetic precedent expressly allowing it.<sup>154</sup> Relatedly, *Hanbali* doctrine allows (*ibahah*) a person to obligate herself unilaterally in a manner not contrary to the *Shari'a*.<sup>155</sup> For instance, a husband could add a personal commitment to his wife not to marry another wife, and this pledge would be binding because polygamy is a permissive, not obligatory, right.<sup>156</sup> As another example, Saudi Arabia boasts a dual banking system, with both Islamic and non-Islamic financial products and institutions.

<sup>146</sup> See KAMALI, *supra*, at 84.

<sup>147</sup> See KAMALI, *supra*, at 84.

<sup>148</sup> See JACKSON, *supra*, at 46-47.

<sup>149</sup> See KAMALI, *supra*, at 84.

<sup>150</sup> See KAMALI, *supra*, at 84.

<sup>151</sup> See KAMALI, *supra*, at 84.

## Chapter 17

### ISLAM AND CAPITALIST ECONOMIC GROWTH

---

. . . In 1950, Bangladesh, Egypt, Indonesia, Nigeria, Pakistan, and Turkey had a combined population of 242 million. By 2009, those six countries were the world's most populous Muslim-majority countries and had a combined population of 886 million. Their populations are continuing to grow and indeed are expected to increase by 475 million between now and 2050 — during which time, by comparison, the six most populous developed countries are projected to gain only 44 million inhabitants. Worldwide, of the 48 fastest-growing countries today — those with annual population growth of two percent or more — 28 are majority Muslim or have Muslim minorities of 33 percent or more.

It is therefore imperative to improve relations between Muslim and Western societies. *This will be difficult given that many Muslims live in poor communities vulnerable to radical appeals and many see the West as antagonistic and militaristic.*

Jack A. Goldstone, *The New Population Bomb — The Four Megatrends That Will Change the World*, 89 FOREIGN AFFAIRS 31, 37 (January/February 2010) (emphasis added)

#### SYNOPSIS

##### § 17.01 STEREOTYPES

##### § 17.02 CONVENTIONAL ECONOMIC INDICATORS

##### § 17.03 HUMAN DEVELOPMENT AND FREEDOM

##### § 17.04 WHY THE POOR PERFORMANCE?

##### § 17.01 STEREOTYPES

One of the stereotypes about Islam and its legal system is that they are incompatible with, or at least not supportive of, modern capitalist economic growth. Indeed, just 15 days after the 9/11 terrorist attacks, Martin Wolf, a prominent *Financial Times* journalist and former World Bank economist, wrote in a provocatively titled article that:

western ideas of democracy, liberalism . . . and a law-governed state conflict with *Islam's* traditional practice.<sup>1</sup>

---

<sup>1</sup> Martin Wolf, *The Economic Failure of Islam*, FINANCIAL TIMES (London), 26 September 2001, at 17 (emphasis added).

The title of his article bespeaks the stereotype he perpetuates: "The Economic Failure of Islam."

According to the stereotype, Islam is to blame for the poverty of Muslims. Put crassly, if Muslim countries are poor, then it is because they are Muslim. By inference, the more devout a Muslim individual, community, or society is, then the greater the economic backwardness suffered. The remedy — again, following the stereotype — is secularism, *i.e.*, the abandonment of religious belief, in this instance because it retards material progress.

Conforming to this stereotype is the thesis put forth by Turkish-American economist Timur Kuran in his 2011 book, *The Long Divergence — How Islamic Law Held Back the Middle East*. The Economist summarizes the argument thusly:

... Angus Maddison [a British economic historian who lived from 1926-2010 and authored *Contours of the World Economy, 1-2030 A.D. — Essays in Macroeconomic History* (Oxford, England: Oxford University Press, 2007), *Growth and Interaction in the World Economy* (Washington, D.C.: The AEI Press, 2005), and *The World Economy: A Millennial Perspective/Historical Statistics* (Paris, France: OECD, 2007)] has calculated that in the year 1000, the Middle East's share of the world's gross domestic product was larger than Europe's — 10% compared with 9%. By 1700 the Middle East's share had fallen to just 2% and Europe's had risen to 22%.

The standard explanations for this decline are all unsatisfactory. One is that the spirit of Islam is hostile to commerce. But if anything, Islamic scripture is more pro-business than Christian texts. Muhammad was a merchant, and the Koran is full of praise for commerce. A second explanation is that Islam bans usury. But so do the Torah and Bible. A third — popular in the Islamic world — is that Muslims were victims of Western imperialism. But why did a once-mighty civilization succumb to the West?

In *The Long Divergence*, Mr. Kuran advances a more plausible reason. *The Middle East fell behind the West because it failed to produce commercial institutions — most notably joint-stock companies — that were capable of mobilizing large quantities of productive resources and enduring over time.*

Europeans inherited the idea of the corporation from Roman law. Using it as a base, they also experimented with ever more complicated partnerships. By 1470, the House of the Medicis had a permanent staff of 57 spread across eight European cities. *The Islamic world failed to produce similar innovations. Under the prevailing "law of partnerships," businesses could be dissolved at the whim of a single partner. The combination of generous inheritance laws and the practice of polygamy meant that wealth was dispersed among claimants.*

None of this mattered when business was simple. But the West's advantage grew as it became more complicated. Whereas business institutions in the Islamic world remained atomized, the West developed ever more resilient corporations — limited-liability became widely available in

the mid-19th century — as well as a penumbra of technologies such as double-entry book-keeping.

... Today the Islamic world boasts muscular companies and hectic stock markets. . .

Yet, the "long divergence" continues to shape the region's business climate. Most obviously, the Middle East has a lot of catching up to do. Income per head is still only 28% of the European and American average.<sup>2</sup>

The *Shari'a* is an easy target, but blaming it misses the mark. In truth, Islamic Business Associations Law contains an array of partnership structures with diverse conditions for termination. Limited liability is possible. Islamic Inheritance Law helps ensure many family relatives of a decedent are not entirely disinherited and thereby potentially impoverished. Polygamy can be criticized on many grounds, but retarding Islamic economic performance is not one of them. Simply put, while misinterpretation or misapplication of Islamic legal doctrine may be causal factors, the doctrine itself should not be scapegoated, nor should its salubrious influences be ignored. For instance, the doctrine condemns improper moral or ethical conduct in business, as well as greed, and looks askance at aristocracies and plutocracies — all scourges of capitalism in the non-Muslim West.

Complementing the stereotype is the perception the incompatibility of the Islamic faith with modern economic growth fuels frustration — particularly among restive, poor, young under- or un-employed people yearning to put their education, skills, and talents to work. Their frustration renders them susceptible to extremist Islamic ideas, which are manifest in the violence of war and terrorism. Conversely, if Islam and the *Shari'a* provide the framework for growth, and indeed for broad, sustainable development, then extremism is a relatively less attractive path than working within the status quo to a brighter future. Consider the doctrine of "securing development" propounded by (*inter alia*) World Bank President Robert Zoellick:

The most fundamental prerequisite for sustainable development is an effective rule of law, including respect for property rights. Yet, the international security and development communities have let the task of building justice and law enforcement systems fall between the cracks.

...

Only by securing development can we put down roots deep enough to break the cycle of fragility and violence. . . . Soldiers and aid workers need to cooperate to help the people in these countries shift from being victims to becoming the principal agents of recovery. Without this cooperation, efforts to save fragile states are likely to fail and we will all pay the consequences.<sup>2</sup>

<sup>2</sup> *The Crescent and the Company*, THE ECONOMIST, 29 January 2011, at 67 (reviewing Timur Kuran, *The Long Divergence* (Princeton, New Jersey: Princeton University Press, 2011)) (emphasis added).

<sup>2</sup> Robert B Zoellick, Speech to International Institute for Strategic Studies, Geneva, Switzerland, quoted in Daniel Dombey, *World Bank Chief Calls for Rethink Over Fragile States*, FINANCIAL TIMES, 12 September 2008, at 3 (emphasis added).

To be sure, the World Bank President does not confine this doctrine to the Muslim World. The link between a legal system and growth or development, and the consequences for national security, is important for all countries. So, too, is the emphasis on the integral role property rights and their protection play in this linkage. But, what about the stereotype itself — is it true?

In short, the answer is “no.” Islam and the *Shari’a* are not only compatible with growth, but even more impressively, they contain — long before the development of the Common Law in England and the United States — the rule of law elements, including property rights, needed to support that growth. Indeed, the stereotype referenced above is manifestly flawed. Much of the accompanying Chapters explain and probe those elements in property law, contracts, business associations, and banking. Taken together, the thrust of these Chapters is clear: the stereotype is wrong, and insofar as Muslim countries have performed poorly in the economic league tables in comparison with non-Muslim nations, the reason is not Islam or the *Shari’a*.

## § 17.02 CONVENTIONAL ECONOMIC INDICATORS

The conventional economic measure of growth is a sustained increase in Gross Domestic Product (GDP), and better yet, *per capita* GDP. On the measure of *per capita* GDP — both absolute values and growth rates — many Islamic countries, particularly in the Arab Middle East, fare poorly. That is particularly true for Arab countries that are not members of the Organization of Petroleum Exporting Countries (OPEC). Their lackluster performance following the Second World War pales in comparison to East Asia, particularly the Tigers, Hong Kong, Korea, Singapore, and Taiwan. With the exceptions of Indonesia and Malaysia, East Asia is populated not by Muslims, but largely Buddhists, Christians (both Catholic and Protestant), Hindus, and Sikhs. Thus, goes the stereotype, surely religion, and the culture associated with it, must have something to do with differential performance between the Arab Muslim World and East Asia.

After reviewing Table 17-1, a few questions and observations may come to mind. First, how is it possible that three oil-rich Arab League countries — Iraq, Kuwait, and Qatar — have had a negative growth rate in *per capita* GDP over the past 56 years? Given overall growth trends in the world economy, it is astonishing that citizens of those countries are actually poorer today than they were in 1950. Second, what happened between 1990 and 2006 in East Asia that did not happen in Arab countries? While East Asian countries innovated, took advantage of global changes, and consequently experienced unprecedented growth during the 1990s and early 2000s, five Arab League countries actually saw a decrease in their *per capita* GDP. Finally, note the drastic difference in aggregate average growth from 1950-2006 of the Arab League countries (278 percent) and the East Asian countries (1,588 percent). While certain factors (*e.g.*, geography) may impose unavoidable economic effects, surely there should not be a 1,310 percentage difference between the growth rates of these two regions. What, then, explains the enormous divide?

## § 17.03 HUMAN DEVELOPMENT AND FREEDOM

A more inclusive measure of economic growth than GDP or *per capita* GDP emphasizes human development and freedom. At least three broad categories are relevant: Education, Health, and Gender Equality. In each category, several variables are measured. Variables like education (literacy rates, along with primary, secondary, tertiary, and adult level enrollment rates) and health (infant mortality, life expectancy, number of health care professionals) are studied to provide a comparative picture of the relative economic performance of countries. On several of these variables, such as enrollment rates, the existence and extent of differences between males and females must be scrutinized.

On these broader measures, too, many Islamic countries — especially in the Arab Middle East — fare poorly. The comparison with the Tigers specifically, and East Asia generally, is striking. Furthermore, the contrast is remarkable on gender issues. School enrollment rates for girls versus boys are dreadfully disparate in some Muslim countries, but wonderfully equal in non-Muslim East Asia. Thus, the stereotype seems reinforced: is Islam itself retarding development and the progress of women?

Table 17-1:  
Income Comparisons (Geary-Khamis dollars) — Middle East versus Far East<sup>3</sup>

Coun- try (al- pha- beti- cally, OPEC Mem- bers de- noted by as- terisk )	1950 Per Capita GDP	1960 Per Capita GDP	1970 Per Capita GDP	1980 Per Capita GDP	1990 Per Capita GDP	2000 Per Capita GDP	2006 Per Capita GDP	Per- cent- age Rate of Growth of Per Capita GDP be- tween 1950 and 2006
Arab League								
Alge- ria*	1,365	2,088	2,249	3,143	2,918	2,792	3,456	253%
Bahr- ain	2,104	2,843	3,788	4,388	4,104	5,065	6,635	315%

<sup>3</sup> All data are obtained from ANGUS MADISON, *THE WORLD ECONOMY: HISTORICAL STATISTICS* (Organisation for Economic Co-operation and Development (OECD)) (2007). Note: The figures are measured in 1990 Geary-Khamis dollars. The Geary-Khamis dollar, also known as the “international dollar,” is a hypothetical unit of currency with the same purchasing power the U.S. dollar had at a given point in time. For comparisons through a historical time period, the year 1990 is often used as a benchmark. The estimation is based on aggregation of data on (1) international average prices of commodities and (2) purchasing power parities (PPP) of various country currencies. The benefit of the Geary-Khamis system is that it provides a reliable overall measure of the real value of output produced by an economy relative to other economies.

Note the importance of tertiary education in the global economy. Educated people are efficient at tasks, and are innovative (that is, creative) in developing and implementing new ideas. To paraphrase the French Rationalist philosopher René Descartes (1596-1650), it is not enough to have a good mind; the key is to use it well. The training of a good mind, and learning to use it well, comes from higher education, which in turn is built on the bedrock of sound primary and secondary school training. So, enrollment rates in colleges and universities, for men and women, are critical. Yet, even robust enrollment rates are not enough. What goes on in the classroom, the curriculum taught and tested, is a key factor not captured by the statistics.

While it is encouraging to see illiteracy rates have fallen significantly in all of the countries listed above, a few questions merit attention. First, why were illiteracy rates in Islamic countries so high to begin with? Conventional wisdom says the educational system of a country correlates closely and positively with its economic conditions. Table 17-1 reveals *per capita* GDP in Islamic countries was roughly comparable to that of East Asian countries back in 1950.

Thus, two questions come into focus. First, what other explanation would Islamic countries offer for their high illiteracy rates? Second, what does an average illiteracy rate of 23 percent among Arab League countries foreshadow about the future of those countries in a world that not only is increasingly globalized, but also demanding of human capital for success?

Perhaps the most troublesome data are the 2007 primary enrollment rates for Arab League countries. Many are under 90 percent, and some well below 80 percent. To be sure, extreme poverty and a paucity of schools may account, in part, for the numbers. Still, are these enrollment rates unacceptable in the modern age? Additionally, note the enormous drop-off from primary to secondary to tertiary rates. How can Islamic countries compete in the global economy if so few of the bright young minds in them have the chance to study at a university?

As with the illiteracy data, trends in Islamic countries are encouraging. Infant mortality has steadily declined while life expectancy has steadily increased. However, is there a good reason why life expectancy is 68.4 years in Arab League countries, and 78.8 years in East Asia?

An interesting observation involves the starting points for the above countries. In contrast to the economic and education data, showing Muslim and non-Muslim countries mostly on the same playing field in the 1960s and 1970s, here the divide seems to have begun further back in time. For example, the average age at first marriage for females in Arab League countries from 1973-1982 was 20.5, whereas the same figure for East Asian countries was 24.2.

Thus, it was not strictly the economic success of East Asia that triggered a gradual increase in average marriage age. Marriage rates in East Asia were already higher than in Muslim countries. Note also that, with the exception of Qatar, the only Arab countries that have seen a significant increase in female marriage ages are Algeria and Libya — two North African countries. Removing those two countries and Israel, the average age of female marriage in the Middle East is 22.8. That figure is well below the worldwide average of about 26.2. Why are Muslim women getting married at such a relatively young age?

Fertility rates in Muslim countries gradually have fallen, but not to the same degree as in other parts of the world. Again, as with the average female age of marriage, Muslim and East Asian countries have long had different fertility rates. While the average Middle Eastern woman had 7 children in the 1960s, the average East Asian woman had 4. Today, the majority of females in East Asia have one child,

but the typical Middle Eastern woman has 3. Fertility rates in some Muslim countries are more akin to those in African developing countries than to the advanced economies of East Asia and Western Europe. To what extent do high fertility rates create a drag on economic growth, and what are the causal linkages between the two variables?

Compared with statistics in Tables 17-1 through 17-6, the data in Table 17-7 suggest the Gender Parity Index (GPI) in Muslim countries do not fare as badly against those of East Asia as anticipated. Indeed, 6 Arab League countries actually had GPIs over 1.0 in 2006, meaning there were more girls than boys enrolled in primary and secondary school in those countries. Such figures are encouraging. Yet, this pattern is not uniform in the Muslim World. Gulf Arab countries, and some countries in the Levant, stand out unfavorably. Significant concern ought to be given to Oman, Qatar, Saudi Arabia, Syria, and Yemen, where there remains a substantial gap in enrollment rates between genders. What accounts for the gender divide in these countries?

## § 17.04 WHY THE POOR PERFORMANCE?

As a theoretical matter, the stereotype referenced at the outset of this Chapter confuses correlation with causation. The irrefutable fact that Islamic countries are outperformed on so many variables by non-Muslim countries does not mean Islam is the cause, or the only cause, of the gap. There are many causes of economic growth in a narrow sense, and of development in a broad sense. (The topic obviously is beyond the present scope.) Hence, the temptation to “blame” religion as a negative causal factor must be avoided.

As a practical matter, there are plenty of candidates to explain the poor economic performance of Arab Muslim countries. Four leading causes are war, poor governance, corruption, and discrimination against women.

War is a costly drag on economic growth. Sri Lanka is a case in point. Its conflict cost the country about 1 percentage point annually on its GDP growth rate. Between 1976 and 2009, there was an on-and-off civil war between the government

and the Liberation Tigers of Tamil Eelam (known as the "Tamil Tigers"). It is estimated (as of 2004) 400,000 were killed, and there were more than 200,000 internally displaced persons (IDPs) in the country.<sup>11</sup> Since the birth of Israel in 1948 via United Nations agreement, most Arab countries have been obsessed with its destruction. Arab nations warred with Israel in 1948, 1956, 1967, and 1973, launching the attacks in June 1967, on *Yom Kippur* (the Day of Atonement), 1973, and (arguably) 1948. They lost each one. Yet, many continue to devote large percentages of their government budgets or GDP on defense, justifying those expenditures by a perceived continued threat from Israel.<sup>12</sup>

Not until 1976 did an Arab country, Egypt, break ranks and sign the Camp David Peace Accords, brokered by President Jimmy Carter.<sup>13</sup> In contrast, for most of the 1950s through 1970s, East Asia eschewed war. True, some countries put down Communist insurgencies, as in the Malayan Federation during the 1948-1960 Emergency. Some countries fought low-grade border wars, notably, Malaysia and Indonesia from 1962 to 1966. And, in Indochina, after independence from French colonialism, Cambodia, Laos, and Vietnam fell to Communism. But, for much of the post-Second World War era, East Asian countries were obsessed with their economies, a fixation true in Indochina since roughly the early 1990s. By contrast, while Jordan made peace with Israel in 1993, the rest of the Arab League dwelled on the tiny Jewish state, as their own populations grew larger and more restive in a quest for a better life.

As for poor governance, many leaders in the Arab Middle East made foolish economic choices in the post-Second World War era. Some of them, in Egypt, Libya, and Syria, aligned with the Communist bloc led by the former Soviet Union. They nationalized industries, thereby building up a bloated, inefficient public sector, and thwarting private sector entrepreneurship. They expropriated foreign assets, thus discouraging foreign investment and international trade.

Corruption made the effects of bad decisions worse. Transparency International (TI), a credible source ranking countries on the extent to which their regimes are corrupt, consistently gives Islamic countries low marks for clean governance. In TI's 2008 *Corruption Perceptions Index (CPI)*, which ranks countries from 1 to 180 on their perceived levels of corruption, only 5 Islamic countries ranked in the top 50.<sup>14</sup> Over half of Arab League countries ranked in the bottom 50 percent, placing

<sup>11</sup> Sirimal Abeyaratne, *Economic Roots of Political Conflict: The Case of Sri Lanka*, 27:8 THE WORLD ECONOMY 1295-1314 (2004).

<sup>12</sup> The following Arab countries spend the following amounts of their GDP on defense: Saudi Arabia, 10 percent; Iraq and Jordan, 8.6 percent; Syria, 6 percent; Lebanon, 3.1 percent. Iran allegedly spends 2.5 percent of its GDP on defense, though that data may be unreliable and inaccurate. See CIA, *supra*.

<sup>13</sup> The Camp David Accords, signed at the famous retreat of the President of the United States on 17 September 1978, included two agreements: *A Framework for Peace in the Middle East* and *A Framework for the Conclusion of a Peace Treaty between Egypt and Israel*. The latter led toward the *Israel-Egypt Peace Treaty*, signed on 26 March 1979, which established mutual recognition of each country by the other, cessation of the state of war which had existed since the 1948 Arab-Israeli War, the complete withdrawal by Israel of its armed forces from the Sinai Peninsula, and provided for the free passage of Israeli ships through the Suez Canal.

<sup>14</sup> These were Qatar at No. 28, United Arab Emirates (UAE) at No. 35, Oman at No. 41, Bahrain at No. 43, and Jordan at No. 47.

them alongside notoriously corrupt regimes in Sub-Saharan Africa. Eight Islamic countries (Indonesia, Libya, Comoros, Pakistan, Iran, Yemen, Syria, and Iraq) ranked near the bottom, next to countries with the most despotic regimes of the world.<sup>15</sup>

Monstrous as corruption and its effects are, again, Islam is not to blame. Nothing in the *Shari'a* commands, or even suggests, that leaders plunder their people. To the contrary, they are to rule with justice and compassion. The Qur'an has passages instructing all Muslims, especially political leaders, to act with integrity and empathy. For example, *surah* 4, *ayah* 58 provides:

God commands you [people] to return things entrusted to you to their rightful owners, and, if you judge between people, to do so with justice. . . .<sup>16</sup>

*Surah* 4, *ayah* 135 instructs followers:

You who believe, uphold justice and bear witness to God, even if it is against yourselves, your parents, or your close relatives. Whether the person is rich or poor, God can best take care of both. Refrain from following your own desire, so that you can act justly — if you distort or neglect justice, God is fully aware of what you do.<sup>17</sup>

*Surah* 16, *ayah* 90 teaches:

God commands justice, doing good, and generosity towards relatives and He forbids what is shameful, blameworthy, and oppressive.<sup>18</sup>

The corrupt behavior of a leader is anything but "Islamic," in the same way corrupt actions of an American politician hardly would be considered "Christian."

Finally, concerning women and discrimination in many Islamic countries against them, the data speak loudly. Too many women are married off too early, which means they bear a large number of children (well above the replacement rate of 2.1), because they go through several fertility cycles during their marriage, and they do not enter the labor force until later in life, if at all. Too few women are given even a decent education, much less encouraged to go to college or graduate. This sorry state is a sharp contrast with the treatment of women in East Asia. No country has modernized by systematically leaving its women in a degraded state. Japan comes closest in East Asia to being the exception, but even Arab countries that perform "best" on women's issues are a rather distant cry from Japan's record on those issues. The logic is simple: women are half the population of any country, and if the country invests in their human capital, then they can contribute significantly to GDP, and to broader measures of development.

<sup>15</sup> These countries were ranked No. 126 (tie), 134 (tie), 141 (tie), 147, and 178, respectively.

<sup>16</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem 4:58, at 56 (Oxford, England: Oxford University Press, 2004). [Hereinafter, QUR'AN.]

<sup>17</sup> QUR'AN, *supra*, 4:135, at 63.

<sup>18</sup> QUR'AN, *supra*, 16:90 at 172.

Here again, Islam is not to blame. The *Shari'a* does not mandate discrimination against women. As Muslim women often say, it may be that interpretations of Islamic Law rendered by men centuries ago, and clung to by some men today, counsel for unequal treatment. But, an understanding of the *Shari'a* that is authentic, open-minded, and open-hearted does not support systematic discrimination. Besides, as Muslims, Christians, and Jews, as well as Buddhists, Hindus, and Sikhs, know, the soul of a human being has no sex, and all human beings are created in the image and likeness of God.<sup>19</sup> As incapable of understanding the true nature of God as we are, and as imperfect as our language is to describe God (often using "He," "Him," and "His"), we all share a common understanding that God does not have a gender.

Thus, underlying these theoretical and practical observations is the critical point that blaming Islam for the economic woes of the Muslim World, or the Arab Middle East, is misguided. Islamic countries are identified as such by having a population that is more than 50 percent Muslim. The adherence to Islam of over half the population does not mean the legal system governing the people is the *Shari'a*. While that certainly is so in Saudi Arabia, the role of Islamic law is greater or lesser depending on the country in question. Egypt, Iraq (under Saddam Hussein), Morocco, Syria, and Tunisia are examples of Arab Muslim countries the leaders of which scrupulously try to avoid imposition of the *Shari'a*, at least in a traditional sense. Indeed, many such leaders have felt threatened by Islamic political parties, and look in horror at the experience of Algeria.<sup>20</sup> In that country, the military regime surprised many by introducing a series of democratic reforms, the most notable of which was a new constitution in 1989 that granted the right to form political associations. Soon thereafter, multiparty local and parliamentary elections took place for the first time in Algeria's history, and the *Front Islamique du Salut (FIS)* won a majority in both. This prompted the army to impose martial law and imprison *FIS* leadership, and later stage a *coup d'état* to "save the country" from Islamic rule. From there, Algeria gradually descended into chaos and a six-year (1992-1998) "Dirty War."

Likewise, the style of Islamic law varies. Indonesia, operating under "*Pancasila*," has a relatively secularized version. In that country — the most populous Muslim-majority state of the world — there is no specific reference to Islam in the constitution. Rather, Indonesia functions according to the philosophical foundations of *Pancasila*, which promotes five core principles:

- (1) Belief in the one and only God;
- (2) Just and civilized humanity;
- (3) The unity of Indonesia;
- (4) Democracy; and

<sup>19</sup> This comment elides the point that Tibetan Buddhists do not believe in a "soul," but rather in "mind."

<sup>20</sup> See generally Laura Scully, Note, *Neither Justice, Nor Oases: Algeria's Amnesty Law*, 33 BROOKLYN JOURNAL OF INTERNATIONAL LAW 975-1035 (2008) (discussing amnesty laws in post-civil war Algeria in light of the customary obligation — in public international law as well as international human rights law — to prosecute perpetrators of war crimes and crimes against humanity).

- (5) Social justice for the whole of the people of Indonesia.

(The word "*Pancasila*" consists of two Sanskrit words: "*panca*," meaning five, and "*sila*," meaning principles.) *Pancasila* originally was promulgated by Indonesia's first President, Sukarno (1901-1970), in 1945, partly to resolve conflict between Muslims, nationalists, and Christians. The philosophy was solidified in Indonesian political culture by Suharto (1921-2008), who served as President for over 30 years (1967-1998).<sup>21</sup>

The logical question is whether Islamic Law contains rights and obligations to support modern capitalist economic growth and development. Those rights and obligations involve property, contracts, business associations, and banking. The renowned Peruvian economist, Hernando De Soto (1941-), explains respect for private property is essential for growth and development.<sup>22</sup> De Soto articulately argues one of the critical components of capitalism is functioning state protection of property rights where ownership and transactions are clearly recorded. De Soto points to the economic success of the United States and Japan, noting how each country benefited from a transparent system of property rights, created during the "frontier" period in America and after the post-Second World War in Japan. In countries lacking a transparent system of property rights, poor citizens cannot leverage their informal ownerships into capital (as collateral for credit), thereby inhibiting entrepreneurship and individual social mobility. Consequently, overall economic growth and development stagnates.

Writing before De Soto was economist John R. Commons (1862-1945) of the University of Wisconsin. In his 1924 classic, *The Legal Foundations of Capitalism*, Commons argued markets are a function of the institutions and power structures that form and operate through them.<sup>23</sup> As such, economic growth and development depends not just on market forces, but also on the legal system imposed by the state. Collective decisions — ultimately those of the courts — must be made as to what constitutes a "good" economy, and those decisions must be used to create practical working rules that govern economic activity. Does the *Shari'a* contain the essential ingredients that scholars like De Soto and Commons find indispensable?

If the answer is "no," then there might be a kernel of truth to the stereotype "something in the religion is a drag on growth." But, the answer is "yes." The next several Chapters cover Islamic Law on Property, Contracts, Business Associations (Partnership), and Banking. Their goal is to set out the foundational *Shari'a* concepts in each field. The theme unifying them is the *Shari'a* indeed does contain the essential ingredients. Put simply, if Islamic countries perform poorly economically, then the reason is not the *Shari'a* lacks respect for contracts, property, business associations, and finance. Islamic Law contains the doctrines to support

## Chapter 18

### PROPERTY LAW: OWNERSHIP AND PROPERTY

The Buddha's life story provides further clues about the Middle Path. First he discovered that "too much" wasn't satisfactory; then he discovered that "too little" was equally problematic. . . . According to Buddhist psychology, humans have a deeply ingrained habitual pattern never to be satisfied and to always grasp for more. That is the nature of *samsara* [literally, "wandering on," i.e., the Wheel of Suffering, or Wheel of Reincarnation — the eternal cycle of birth, suffering, death, and re-birth], the ultimately unsatisfying way of dealing with life, which the path of Buddhist practice seeks to remedy.

Rita M. Gross, *Form and Elegance with Just Enough*, in *HOOKED! BUDDHIST WRITINGS ON GREED, DESIRE, AND THE URGE TO CONSUME* 152, 158 (Boston, Massachusetts: Shambhala Publications, Stephanie Kaza, ed., 2005)

#### SYNOPSIS

##### § 18.01 GOD AND WEALTH

- [A] Regency and Vice-Regency
- [B] Freedom and Right to Private Ownership
- [C] Proper Attitude to Private Wealth

##### § 18.02 PROPERTY

- [A] What is "Property"?
- [B] Certain Rights as Property
- [C] Validity: Void (Bātil) versus Voidable (Fāsid)
- [D] Objects of Commerce (Māl)

##### § 18.03 OWNERSHIP

- [A] What is "Ownership"?
- [B] Is Ownership Possible?
- [C] Complete versus Deficient Ownership
- [D] Ownership by Women

##### § 18.01 GOD AND WEALTH

###### [A] Regency and Vice-Regency

Property ownership and wealth accumulation by men and women is a topic that transcends technical *Shari'a* rules. It rises to the level of the creative power of God (Allāh), and the relationship of the Almighty to people in respect of real and

personal assets. Simply put, it is Allāh who is the Most High Creator that made everything in the universe, including property. Hence, He is the true owner of all property.

Private ownership of property rightfully acquitted by men and women is supported and protected by the rules of the *Shari'a*. But, this ownership, by which an individual or jointly-acting persons control an asset, occurs in the widest of all possible contexts — namely, recognition that God (Allāh) built the edifice in which there is property to own and people to own it. A man or woman is a trustee (i.e., custodian) appointed by God, a Vice-Regent where God is the Regent, in respect of property. The large, indeed cosmological, point about ownership is expressed as the Vice-Regency Theory. This Theory emerges from no less than five different passages of the Qur'an:

- [Prophet], when your Lord told the angels, "I am putting a successor on earth," they said "How can You put someone there who will cause damage and bloodshed when we celebrate Your praise and proclaim Your holiness?" but He said, "I know things you do not."<sup>1</sup>

In the Arabic version of this passage, *surah* 2, *ayah* 30, the term "*khalifa*" is used. This word means "Vice-Regent," or "Deputy," or at bottom, a successor in the sense of some one to whom (or group to which) a responsibility is given, as in a trustee.<sup>2</sup>

- . . . Control of the heavens and earth and all that is between them belongs to God: He creates whatever He will and has power of everything.<sup>3</sup>

This passage, a portion of *surah* 5, *ayah* 17, makes explicit the identity of the Regent.

- God has control of the heavens and the earth; He creates whatever He will . . .<sup>4</sup>

This passage, from *surah* 42, *ayah* 49, echoes *surah* 5, *ayah* 17, both of which state unambiguously that control over real or personal property exercised by an individual is second to the control of the Creator Himself.

- Say, "To whom belongs all that is in the heavens and earth?" Say, "To God. He has taken it upon Himself to be merciful." . . .<sup>5</sup>

Here, in *surah* 6, *ayah* 12, it is again made clear that God is the ultimate owner of everything, both what is seen on earth and what is unseen in heaven.

- <sup>71</sup>Can they [the disbelievers] not see how, among the things made by Our hands, We have created livestock they control, <sup>72</sup>and made them obedient, so that some can be used for riding, some for food, <sup>73</sup>some

<sup>1</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem (Oxford, England: Oxford University Press, 2004), 2:30 at 7. [Hereinafter, QUR'AN.]

<sup>2</sup> See QUR'AN, *supra*, 2:30, fn. a at 7.

<sup>3</sup> QUR'AN, *supra*, 5:17 at 69.

<sup>4</sup> QUR'AN, *supra*, 42:49 at 314.

<sup>5</sup> QUR'AN, *supra*, 6:12, at 81.

for other benefits, and some for drink? Will they not give thanks?  
<sup>74</sup>Yet they have taken other gods beside God to help them, <sup>75</sup>though these could not do so even if they called a whole army of them together!<sup>76</sup>

This passage, from *surah* 36, of course, applies to more than merely agricultural property.

The point is clear enough: men and women are not absolute owners of real or personal property. Theirs is a trusteeship (known in Arabic as "*istikhlāf*"). It is a contingent ownership, with two contingencies. First, they must exercise their control with the realization that God is the original and true owner. Second, they must be competent stewards of their property, that is, they must manage their property in accordance with the will of God as revealed in the Qur'an. This point applies not only to private individual or joint ownership, but also to community property over which the government exercises ownership and control. In sum, an owner — whether a person or governmental authority — is nothing more or less than a Vice-Regent of God.

It is important to appreciate the Vice-Regency Theory does not weaken the basic, resolute support of the *Shari'a* for private property ownership. Professor Kamali rebuts the notion that Vice-Regency negates private ownership:

. . . since it could be taken to imply that the community as a whole had the right to overrule private ownership [on the ground that the Regency of God is a respectful metaphor, but in practice real authority lies with the government over its territory], which would be manifestly erroneous. The absolute sovereignty of God is an article of the Muslim faith on which there is no disagreement . . . Man is therefore both an owner of property and also the bearer of a trust, and there is no inherent conflict between the two.<sup>7</sup>

In brief, the in respect of property ownership, as in all other aspects of life, God is supreme, and not in just a symbolic way. People are called to discern and submit to God's will, including in the manner and extent to which they accumulate private property, and the way in which they exercise their ownership of it.

Finally, it is important to remark that there is an inter-temporal implication of the Vice-Regency Theory. The status of an individual as a trustee in respect of his or her property obviously raises an obvious question: who are the beneficiaries of that trust? The obvious answer is the property owner, for in utilizing his or her property in accordance with the will of God, the owner is pleasing God, mindful of the Day of Final Judgment when the owner will be called to account for all of his or her actions. Beyond that owner, however, there are other beneficiaries — children, grandchildren, and anyone who might inherit the property, or anyone who might

<sup>7</sup> MOHAMMAD HASHIM KAMALI, THE RIGHT TO LIFE, SECURITY, PRIVACY AND OWNERSHIP IN ISLAM 257-258 (Cambridge, England: Islamic Texts Society, 2008). [Hereinafter, KAMALI.]

Dr. Kamali, Dean of the International Institute of Islamic thought and Civilization (ISTAC), and Professor of Law at the International Islamic University in Kuala Lumpur, Malaysia since 1985, is a renowned scholar of the *Shari'a* who has published many fine works in English.

later purchase the property, and heirs of the purchaser. In other words, the trusteeship is on behalf of future generations. This implication of the Vice-Regency Theory suggests a congruity between that Theory and the modern economic and environmental concept of "sustainable development." In both approaches, property ought to be used so that it may be handed down to future generations in the same, or preferably enhanced, condition so that they may enjoy it, too.

### [B] Freedom and Right to Private Ownership

There is no doubt Islam, both in a purely religious sense, and in the sense of the rules of the *Shari'a*, unequivocally recognizes, approves, and even cherishes the right to own property.<sup>8</sup> That is plain enough from the Vice-Regency doctrine (explained above). It also is evident from an array of scholarship, including that produced in 1964 by the Academy of Islamic Research, which is based in Cairo, Egypt.<sup>9</sup> Moreover, not only is ownership a right (*haqq*) of each person, but also a freedom (*hurriyyah*) that each person may enjoy. The freedom to own logically precedes the right to ownership, in that each person is at liberty to acquire ownership of property. This freedom is found not only in Islam and the *Shari'a*, but also in the Constitutions of most Muslim countries.

The principle sources of Islamic Law — the Qur'an and *Sunnah* of the Prophet — provide the essential bulwark for private ownership. For example, at least two *hadiths* recorded in the *Sahih Muslim* compilation are relevant:

- Your lives and your properties are forbidden to one another until you meet your Lord.<sup>10</sup>
- All that belongs to a Muslim is forbidden to his fellow Muslim, his life, his property and his honour.<sup>11</sup>

A further *hadith*, also recorded in both *Sahih Muslim*, expressly implicates protection of the private property interests of a woman, as Professor Kamali explains and quotes:

- [A] dispute is reported to have arisen in which a woman, Arwah bint

<sup>8</sup> See, e.g., JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 136 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, SCHACHT.]

<sup>9</sup> The work of the Academy is noted in KAMALI, *supra*, at 258.

<sup>10</sup> Quoted in KAMALI, *supra*, at (citing Muslim, *Mukhtasar Sahih Muslim*, 186, *hadith* no. 707). See also SAHIH MUSLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM' US-SAHIH BY IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDEL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASSAN (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990). [Hereinafter, MUSLIM.]

This *hadith* also is recorded by Imam Bukhari, albeit with slightly modified wording. See THE TRANSLATION OF THE MEANINGS OF SAHIH AL-BUKHARI, ARABIC-ENGLISH BY DR. MUHAMMAD MUHSIN KHAN VOL. II, book XXVI (The Book of *Hajj*), p. 460, *hadith* no. 795, and p. 461, *hadith* no. 797 (Islamic University, Medina, Kingdom of Saudi Arabia: Dar Ahya Us-Sunnah, Al Nabawiya, March 1978). [Hereinafter, BUKHARI.]

<sup>11</sup> Quoted in KAMALI, *supra*, at 250 (citing *Mukhtasar Sahih Muslim*, 473, *hadith* no. 1775). See also MUSLIM, *supra*.

Uways, told the Umayyad ruler, Marwan b. al-Hakam, that one Sa'id b. Zayd had usurped some of her land. Sa'id was summoned and in defending his case he said: "How could I take her land after hearing what I heard from the Prophet, peace be on him?" Marwan asked: "What did you hear?" and Sa'id replied: The Prophet, peace be on him, said "Whoever takes (even) one span of land unjustly from another, it will become a yoke over his neck to the extent of seven earths." Marwan responded by saying "I shall not ask you to bring evidence after this."<sup>12</sup>

Two additional *hadiths*, from other compilations, state:

- It is unlawful to take the property of a Muslim without his consent.<sup>13</sup>
- Every person is entitled to his own property more than his father, his son, and the whole of mankind.<sup>14</sup>

Read carefully, all five *hadiths* actually go further than simply upholding the private property as an institutional or legal matter. Private ownership is a matter of sanctity, that is, it is a sacrosanct principle. Respect for this principle is a manifestation of good relationships among Muslims, male and female.

Acquisition of private ownership is an exercise of the liberty to own, and may occur by one of three principal means: purchase, inheritance, or gift. Once acquisition occurs, the abstract freedom is manifest in a practical right over the property, such as an immovable object (e.g., a plot of land), a movable object (e.g., a car), or even an intangible object (e.g., intellectual property, such as a patent, trademark, or copyright). Exclusiveness is a (perhaps the) key attribute of private ownership, and the right of ownership in Islam and the *Shari'a* indeed is exclusive to the owner. That is, the owner enjoys the right to exclude all others from the use or disposition of the acquired property.

At the same time, the right is not unqualified. The *Shari'a* subjects the right of private ownership to five categories of conditions:

- Public interest, known in Arabic as "*maslahah*."
- The rights of others affected by the manner and extent of use of private property, and in terms of access and water flow.
- Taxes levied on private property to support the public interest.

<sup>12</sup> KAMALI, *supra*, at 250. See also BUKHARI, *supra*, vol. III, book XLII (The Book of *Luqata* (A Well-Tied Pouch or Purse or Lost Things Picked Up By Somebody)), p. 379, *hadith* no.632. In the subsequent *hadith* recounted by Al Bukhari, the wife of Mohammed, 'Aisha, foretells the dreadful fate on the Day of Judgment of anyone who takes wrongly the private property of another:

Abu Salama narrated that there was a dispute between him and some people (about a piece of land). When he told 'Aisha . . . about it, she said, "O Abu Salama! Avoid taking the land unjustly, for the Prophet . . . said, 'Whoever usurps even one span of the land of somebody, his neck will be encircled with it down the seven earths.'"

*Id.*, vol. III, p. 379, *hadith* no.633.

<sup>13</sup> Compiled in AL-SHAWKANI, NAYL AL-AWTAR, vol. V, p. 355, and quoted in KAMALI, *supra*, at 250.

<sup>14</sup> Compiled in AL-BAYHAQI, AL-SUNAN AL-KUBRA, KITAB AL-NAFQAAT, BAB NAFQAAT AL-ABAWAYN; MAJMA-SANI, ARKAN, p. 207, quoted in KAMALI, *supra*, at 243-244.

- Charitable donations from the wealth associated with private property.
- Inheritance of private property.

Under the public interest (*maṣlahah*), a governmental authority may expropriate property for purposes of an infrastructure project (e.g., to build a fire station, police station, port, power station, road, or school), hospital, or even a mosque. The latter illustration — expropriation of private property to build a mosque — is inconceivable in the American context, where First Amendment separation of church and state would bar the government from acquiring land to build a place of worship. But, that authority must pay fair compensation to the owner of the expropriated property.

The condition that private ownership stops where the rights of others start is a precept of European Utilitarian Philosophy as the “Harm Principle.” It is expressed by John Stuart Mill in *On Liberty* (1859), and earlier by John Locke in *Second Treatise of Government* (1689). Mill writes famously:

The object of this Essay is to assert one very simple principle, as entitled to govern absolutely the dealings of society with the individual in the way of compulsion and control, whether the means used be physical force in the form of legal penalties, or the moral coercion of public opinion. That principle is, that the sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number, is self-protection. That the only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not sufficient warrant. He cannot rightfully be compelled to do or forbear because it will be better for him to do so, because it will make him happier, because, in the opinion of others, to do so would be wise, or even right . . . The only part of the conduct of anyone, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.<sup>15</sup>

In brief, an owner is free to enjoy his or her property as he or she pleases, unless that enjoyment harms another person, such as an adjacent property owner.

Taxes are a restriction on private ownership in every society and legal system. The final two limitations, charitable donations and inheritance, are not relevant in each case of private ownership. They are implicated when property is that of a charitable foundation (*waqf*), or acquired by inheritance. The legal instrument donating the property to charity, or creating the bequest, may specify restrictions on the use of the property.

Is it correct to speak of freedom to own as a “right” in the same vein as a “right” to acquire ownership? “Yes,” says Professor Kamali, but they are theoretically distinct:

<sup>15</sup> JOHN STUART MILL, *ON LIBERTY IN ON LIBERTY AND OTHER ESSAYS* 21–22 (1859, New York: Oxford University Press, 2008 ed.) (John Gray, ed.).

. . . [T]he liberty to acquire ownership is also a right, a type of right which is known in Arabic as *al-haqq al-mubāh*, or a permissive right, which is different from a personal right (*al-haqq al-shakhsī*). A personal right is stronger than a permissive right in that it is exclusive and can be the subject of sale and inheritance, whereas a permissive right, although protected by law, is not an exclusive right, and can neither be sold nor inherited. This may also be said to be one of the main differences between a freedom and a right generally in that the former is a permissive right and everyone is entitled to utilise it and benefit by it, but no one is entitled to lay an exclusive claim to it. In this way, freedom to own property resembles other civil liberties such as freedom of speech and freedom of movement, yet these can also be referred to as rights, in the sense of permissive rights. They may all be said to be liberties, which are however, like ownership, i.e., all capable of being converted to rights. To write a book is an exercise of one's freedom of expression, but then once it is written the author owns it and also has an exclusive right (copyright) over it [depending, of course, on the terms of the publication contract!]. Similarly, to travel to a certain destination is an exercise of one's freedom of movement, but when one acquires a visa and buys a plane ticket to go there, that freedom has been exercised as a right.<sup>16</sup>

In brief, the liberty to own is a permissive right that all persons enjoy in a non-exclusive manner, but which any one of the may or may not choose to exercise. Acquisition of ownership is a “personal” right, which yields exclusive control over a property.

### [C] Proper Attitude to Private Wealth

Nothing in Islam as a religion or legal system discourages the acquisition of wealth, nor places a restriction — a quantitative limit — on the amount of wealth that may be acquired through lawful means. That is, proscribing only unlawful acquisition, the *Shari'a* does not regulate how much property an individual may accumulate. It leaves to the free will of the individual — the sphere of “*mubāh*,” an adjective that literally means “permissible” — the response to “How much is enough?” That is true for any kind of property, whether real or movable, and for intellectual property.

Indeed, at a number of points (e.g., *surah* 9, *ayah* 75, *surah* 24, *ayah* 22, and *surah* 62, *ayah* 10), the Qur'an refers in Arabic to wealth, or property, as “*fadl Allāh*,” which means the bounty or favor of God. It also calls wealth “*khayar*,” that is, a benefit or blessing, in contexts such as (in *surah* 2, *ayah* 180) assets of a decedent inherited by the family of the decedent. In such passages, Muslims are encouraged to gain wealth. Self-exertion to earn income and acquire assets lawfully so one can support oneself and one's family is a form of service to God, called “*ibādah*,” a noun meaning “worship.”

Moreover, wealth is distinctly preferable to poverty. Professor Hussain explains:

<sup>16</sup> KAMALI, *supra*, at 243–244.

There are many verses in the Qur'an which encourage trade and commerce. . . .

Not surprisingly, the attitude of Islam is that there is no impediment to honest and legitimate trade and business, so that people may earn a living, support their families, and give charity to those less fortunate. *Islam does not expect believers to give away all their possessions and live the life of ascetics.*<sup>17</sup>

At one level, the expectation in italics also is true of Catholic Christians. Excessive generosity that turns one's family into paupers is to turn a virtue into a vice.

Yet, at a deeper level perhaps, the reverse expectation is suggested in New Testament passages. Consider the Beatitudes, which Jesus Christ delivers in the Sermon on the Mount. Poverty is preferable to wealth, in the sense that wealth can be a grave encumbrance to entry into the Kingdom of Heaven. The poignant metaphor of trying to fit a camel through the eye of a needle illustrates the expectation to disavow attractions of the world. Further, Christ, when asked by a man of means what was necessary to be a disciple and find God, responded with clear counsel to give away or sell all possessions.

In contrast, a statement of the Prophet found in all six compilations of the *hadith*, including *Imām* Bukhari, and recounted by as Professor Kamali, is noteworthy. The statement is a response to a question from Sa'd Ibn Abi Waqās, a Companion of the Prophet whom the Prophet visited in Mecca, during the Farewell (i.e., last and only) Pilgrimage of the Prophet, when this Companion was ill, perturbed that he had remained in Mecca after the *Hijra*, and worried about whether to leave two-thirds or one-half of his entire estate to charity for fear his family might fall into poverty:

No, one third [of your money and all your other assets], and one third is more than enough [to bequeath to charity]. For *it is better you leave your heirs in easy conditions rather than penniless, for that might prompt them to beg others for help.*<sup>18</sup>

Put in generic terms, wealth is not an end in itself, but rather a means to ensure a person or family does not become dependent for sustenance on the community.

Additionally, the Prophet prayed for Anas bin Mālik, and other Companions, as follows:

<sup>17</sup> JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 158-159 (Annandale, New South Wales, Australia: The Federation Press, 1999) (emphasis added). [Hereinafter, HUSSAIN.]

Professor Hussain is a Lecturer in Law at the University of Technology Sydney (UTS) in Sydney, Australia.

<sup>18</sup> Quoted in KAMALI, *supra*, at 245 (emphasis added). See also BUKHARI, *supra*, vol. VIII, book LXXX (The Book of *Furūd* (1) (The Laws of Inheritance)), pp. 477-478, *hadith* no. 725 (quoting the same *hadith*).

This *hadith* later would become the official rule in the *Umayyad* Caliphate, namely, a limit on legacies as directed by a decedent of one-third of the entire estate of the decedent, with two-thirds of the estate automatically flowing to the family and distributed among the family members in accordance with prescribed shares (*farā'id*).

O My Lord, increase his wealth and his offspring.<sup>19</sup>

The Prophet also prayed that he himself would not be poor:

O My Lord, grant me guidance (*hudā*), piety (*taqwā*), purity (*'iffah*) and affluence.<sup>20</sup>

Certainly, nowhere in the New Testament does Christ pray for his own material wealth, and nothing in His life or ministry remotely suggests he either had or pursued affluence.

At the same time, a common denominator in both faiths is self-reliance, at least to the extent possible, coupled with an appreciation that wealth ultimately is a gift from God. Saint Paul writes in *The Second Letter to the Thessalonians* that there is a closely related element of not taking this gift for granted, of not being indolent or officious, but rather of earning one's keep:

<sup>10</sup>. . . [W]e instructed you that if anyone was unwilling to work, neither should that one eat. <sup>11</sup>We hear that some are conducting themselves among you in a disorderly way, by not keeping busy but minding the business of others. <sup>12</sup>Such people we instruct and urge in the Lord Jesus Christ to work quietly and to eat their own food. <sup>13</sup>But you, brothers, do not be remiss in doing good.<sup>21</sup>

In sum, put in secular terms, neither Islam nor Catholic Christianity equate with Marxism or other non-religious philosophies that aim at an equality of economic result.

Despite the strong religious basis for the freedom and right to ownership, and prayerful exhortations to acquire wealth, neither Islam generally, nor particular rules in the *Shari'a*, condone greed or gluttony. Quite the opposite is true. Unbridled wealth accumulation, and its attendants — selfishness, extravagance, wastefulness, ingratitude, and corruption — are evil. The Qur'an (in *surah* 17, *ayah* 27) dubs whoever wealth on sensual pleasures "brothers of Satan," and warns (in *surah* 7, *ayah* 31) that "God does not like wasteful people" (called in Arabic "*musrifin*").

The proper understanding of wealth begins with an appreciation that all of it comes from God with a purpose. His purpose in bestowing wealth is to create a testing ground for righteous conduct, as *surah* 18, *ayah* 7-8 articulate:

We have adorned the earth with attractive things so that We may test people to find out which of them do best, but We shall reduce all this to barren dust.

In other words, wealth is a Divine testing methodology, an opportunity to reject the temptation to materialistic excess and practice the virtue of restraint. Like the majestic and intricate Buddhist Mandala, which monks deliberately blow or sweep away to symbolize impermanence and recall the importance of detachment, wealth

<sup>19</sup> Quoted in KAMALI, *supra*, at 246 (emphasis added).

<sup>20</sup> Quoted in KAMALI, *supra*, at 245 (emphasis added).

<sup>21</sup> *The Second Letter to the Thessalonians*, 3:10-13, in THE CATHOLIC STUDY BIBLE 332 (New York, New York: Oxford University Press, 1990, New American Bible trans.). [Hereinafter, BIBLE.]

calls upon each Muslim to remember it has no enduring or intrinsic value. Each Muslim is to ask how he or she may best use the wealth from Allāh in service of His will.

That service is neither miserly nor spendthrift behavior. Thus, in a poignant metaphor, the Qur'an, in *surah* 17, *ayah* 29, calls for avoidance of the extremes:

And do not tie your hand to your neck, nor stretch it forth to its utmost reach, so that you are then left with destitution and regret.<sup>22</sup>

Less the metaphor be ambiguous, *surah* 25, *ayah* 63-67 spells out the precept:

<sup>63</sup>The servants of the Lord of Mercy are those who walk humbly on the earth, and who, when the foolish address them, reply, "Peace"; <sup>64</sup>those who spend the night bowed down or standing, worshipping their Lord, <sup>65</sup>who plead "Our Lord, turn away from us the suffering of Hell, for it is a dreadful torment to suffer — <sup>66</sup>it is an evil home, a foul resting place." <sup>67</sup>They are those who are neither wasteful nor niggardly when they spend, but keep to a just balance. . . .<sup>23</sup>

On this point — moderation — the similarity with Catholic Christianity is clear.

In Catholic theology, moderation is one of the Four Cardinal Virtues (along with prudence, justice, and courage). Conversely, greed and gluttony are two of the Seven Deadly Sins. (The list may be remembered by the acronym "PLACES + G" — Pride, Lust, Anger, Covetousness (which essentially is gluttony), Envy (i.e., jealousy), Sloth, and Greed.) Thus, for example, in a September 2008 homily with 260,000 gathered for Mass in Paris at the Esplanade des Invalides, Pope Benedict XVI:

condemned unbridled "pagan" passion for power, possessions and money as a modern-day plague. . . .

. . .

"Has not our modern world created its own idols?" Benedict said in his homily, and wondered aloud whether people have "imitated, perhaps inadvertently, the pagans of antiquity.

This is a question that all people, if they are honest with themselves, cannot help but ask," the pontiff said.

. . .

Paraphrasing from the New Testament, Benedict decried "insatiable greed" and said "the love of money is the root of all evil."

Have not money, the thirst for possessions, for power, and even knowledge, diverted man from his true destiny?" the pope asked.

<sup>22</sup> Quoted in KAMALI, *supra*, at 247. A different translation, which also focuses on the hand, states: Do not be tight-fisted, nor so open-handed that you end up blamed and overwhelmed with regret.

QUR'AN, *supra*, 17:29 at 177.

<sup>23</sup> QUR'AN, *supra*, 25:63-67 at 230 (emphasis added).

The pope urged the faithful to "shun the worship of idols. Do not tire of doing good!"<sup>24</sup>

In sum, as in Catholicism, in Islam and the *Shari'a*, nothing justifies relentless accumulation of wealth through property acquisition. All counsel is for balance.

From a legal position, excessive, self-indulgent materialism, indolence, and use of property in an oppressive way are, according to the Qur'an, lawless behaviors. From a moral view, they are sins (in Arabic, "*ithm wa baghy*") and indecencies (*al fawāhish*). *Surah* 7, *ayah* 33 teaches such behaviors must be avoided, not just in a perfunctory way when others are watching, but also out of a heart-felt belief they are truly wrong:

Say [Prophet], "My Lord only forbids disgraceful deeds — *whether they be open or hidden* — and sin and unjustified aggression, and that you, without His sanction, associate things with Him, and that you say things about Him without knowledge."<sup>25</sup>

Specific examples of the lawless, sinful use of property are hoarding and a lack of generosity. *Surah* 9, *ayah* 24 of the Qur'an admonishes:

Those who hoard gold and silver and refuse to spend them in the way of God [i.e., in a worthy cause], warn them of a painful punishment.<sup>26</sup>

This statement, while comparatively more severe in tone, is redolent of a Biblical passage from *The First Letter of John*:

<sup>17</sup>If someone who has worldly means sees a brother in need and refuses him compassion, how can the love of God remain in him? <sup>18</sup>Children, let us love not in word or speech but in deed and truth.<sup>27</sup>

Sadly, what is preached in both the Muslim and Catholic Christian worlds is not always practiced.

Many in Muslim and Catholic communities live in poor — sometimes desperately impoverished — conditions, while materialistic excesses of a small minority persist. The juxtaposition in major urban areas — Cairo and Chicago, for example — is stark. As Muslim and Catholic countries increasingly intersect and are intertwined in the global capitalist economy, the inequities in wealth distribution seem ever-more serious. Numerous statistics on income inequality, including Gini coefficients, bear out this reality.<sup>28</sup> Is the *Shari'a* a Third Way, a middle ground between American-style laissez-fair capitalism and oppressive, inhumane communism?

<sup>24</sup> Jenny Barchfield, *Pope in Paris Condemns Love of Money, Power*, *SIoux CITY JOURNAL*, 13 September 2008, posted at [www.siouxcityjournal.com](http://www.siouxcityjournal.com) (quoting Pope Benedict XVI).

<sup>25</sup> QUR'AN, *supra*, 7:33 at 96 (emphasis added).

<sup>26</sup> QUR'AN, *supra*, 9:24 at 118.

<sup>27</sup> *The First Letter of John*, 3:17-18, in *BIBLE*, *supra*, at 390.

<sup>28</sup> For a summary of ways to measure income inequality, see Raj Bhalla, *Dictionary of International Trade Law* (LexisNexis, 2008) (entries for "Absolute Poverty," "Gini coefficient," and "Top/Bottom Ratio").

calls upon each Muslim to remember it has no enduring or intrinsic value. Each Muslim is to ask how he or she may best use the wealth from Allāh in service of His will.

That service is neither miserly nor spendthrift behavior. Thus, in a poignant metaphor, the Qur'an, in *surah* 17, *ayah* 29, calls for avoidance of the extremes:

And do not tie your hand to your neck, nor stretch it forth to its utmost reach, so that you are then left with destitution and regret.<sup>22</sup>

Least the metaphor be ambiguous, *surah* 25, *ayah* 63-67 spells out the precept:

<sup>63</sup>The servants of the Lord of Mercy are those who walk humbly on the earth, and who, when the foolish address them, reply, "Peace"; <sup>64</sup>those who spend the night bowed down or standing, worshipping their Lord, <sup>65</sup>who plead "Our Lord, turn away from us the suffering of Hell, for it is a dreadful torment to suffer — <sup>66</sup>it is an evil home, a foul resting place." <sup>67</sup>They are those who are neither wasteful nor niggardly when they spend, but keep to a just balance. . . .<sup>23</sup>

On this point — moderation — the similarity with Catholic Christianity is clear.

In Catholic theology, moderation is one of the Four Cardinal Virtues (along with prudence, justice, and courage). Conversely, greed and gluttony are two of the Seven Deadly Sins. (The list may be remembered by the acronym "PLACES + G" — Pride, Lust, Anger, Covetousness (which essentially is gluttony), Envy (i.e., jealousy), Sloth, and Greed.) Thus, for example, in a September 2008 homily with 260,000 gathered for Mass in Paris at the Esplanade des Invalides, Pope Benedict XVI:

condemned unbridled "pagan" passion for power, possessions and money as a modern-day plague. . . .

. . .

"Has not our modern world created its own idols?" Benedict said in his homily, and wondered aloud whether people have "imitated, perhaps inadvertently, the pagans of antiquity."

This is a question that all people, if they are honest with themselves, cannot help but ask," the pontiff said.

. . .

Paraphrasing from the New Testament, Benedict decried "insatiable greed" and said "the love of money is the root of all evil."

Have not money, the thirst for possessions, for power, and even knowledge, diverted man from his true destiny?" the pope asked.

<sup>22</sup> Quoted in KAMALI, *supra*, at 247. A different translation, which also focuses on the hand, states: Do not be tight-fisted, nor so open-handed that you end up blamed and overwhelmed with regret.

QUR'AN, *supra*, 17:29 at 177.

<sup>23</sup> QUR'AN, *supra*, 25:63-67 at 230 (emphasis added).

The pope urged the faithful to "shun the worship of idols. Do not tire of doing good!"<sup>24</sup>

In sum, as in Catholicism, in Islam and the *Shari'a*, nothing justifies relentless accumulation of wealth through property acquisition. All counsel is for balance.

From a legal position, excessive, self-indulgent materialism, indolence, and use of property in an oppressive way are, according to the Qur'an, lawless behaviors. From a moral view, they are sins (in Arabic, "*ithm wa baghy*") and indecencies (*al fawāhish*). *Surah* 7, *ayah* 33 teaches such behaviors must be avoided, not just in a perfunctory way when others are watching, but also out of a heart-felt belief they are truly wrong:

Say [Prophet], "My Lord only forbids disgraceful deeds — *whether they be open or hidden* — and sin and unjustified aggression, and that you, without His sanction, associate things with Him, and that you say things about Him without knowledge."<sup>25</sup>

Specific examples of the lawless, sinful use of property are hoarding and a lack of generosity. *Surah* 9, *ayah* 24 of the Qur'an admonishes:

Those who hoard gold and silver and refuse to spend them in the way of God [i.e., in a worthy cause], warn them of a painful punishment.<sup>26</sup>

This statement, while comparatively more severe in tone, is redolent of a Biblical passage from *The First Letter of John*:

<sup>17</sup>If someone who has worldly means sees a brother in need and refuses him compassion, how can the love of God remain in him? <sup>18</sup>Children, let us love not in word or speech but in deed and truth.<sup>27</sup>

Sadly, what is preached in both the Muslim and Catholic Christian worlds is not always practiced.

Many in Muslim and Catholic communities live in poor — sometimes desperately impoverished — conditions, while materialistic excesses of a small minority persist. The juxtaposition in major urban areas — Cairo and Chicago, for example — is stark. Professor Kamali argues in the affirmative, viewing Islamic Law, particularly its rules on property ownership, as eschewing the excesses of the two systems.<sup>29</sup> He finds the rules of the *Shari'ā* affirm private property, but sensitize wealthy property owners to the needs of the poor. That is true enough. But, it also is true of American Property Law and the Catholic Christian tradition. The starting premise for both systems — Islamic and American — is distinctly capitalist, namely, freedom of ownership of private property. Both systems contain rules to reign in abusive, oppressive, or unconscionable practices by property owners. Both systems admit the importance of the public interest, that property owners have social responsibilities. Both systems seek to obviate harms to neighbors without toppling entirely the meaning of freedom of ownership.

Distressingly, neither system vigorously enforces all of its property law rules to help the poor or vulnerable. Perhaps the American regime learned to balance individual and communal interests in part from the *Shari'ā*, in which case Islamic Property Law is not a Third Way. Rather, the relationship between Islamic and American Property Law is that of a parent to child, with the child bearing semblances to the parent, yet having its own distinct features, some of which arise from the environment in which it develops.

## § 18.02 PROPERTY

### [A] What is "Property"?

"Ownership" in Arabic is "*milk*." The term connotes (as discussed below) a right to complete, exclusive disposal of a thing. In Arabic, the word for a "thing" is "*ayn*."<sup>30</sup> Just as is connoted by the English word "thing," the Arabic word "*ayn*" has a broad meaning, covering both movable property and immovable (*i.e.*, real) property (land), and tangible as well as intangible objects. Of course, of relevance to Property Law, be it Islamic or American, is a thing that is property, *i.e.*, a thing capable of being owned.

The Arabic term for "property" is "*māl*." Obviously, "*māl*" is the subject matter of "*milk*." The owner is called "*mālik*" or "*rabb*." In the parlance of American Property Law, the terms "*milk*" (ownership) and "*mālik*" (owner) are used in the *Shari'ā* in the context of *in rem* property rights. Notably, the terms "*milk*" and "*mālik*" are used in the *Shari'ā* not only in the context of real and personal property, and usufruct (discussed below), but also in the context of the right to sexual intercourse in marriage.

But, what is "*māl*"? That is, what is the Islamic legal conception of "property"? Without a practical answer to this question, discussion of ownership is quixotic. There is no one definition of "property" used across all Four *Sunni* Schools, and among *Shi'ites*. That said, the majority of Islamic legal scholars (*fukahā*) would

agree with Professor Kamali that "property" is:

anything that has a saleable value, and destroying which could entail compensation, even if a small amount, yet not so small that people would not consider it to be of any value [*i.e.*, of no value], such as a grain of wheat or a handful of grass.<sup>31</sup>

This definition, which emphasizes the value of a thing, accords with the views of *Imām Shāfi'i*. However, the *Hanafi* School focuses on enjoyment, defining "*māl*" as:

anything that people naturally like to own and which can be stored for future use.<sup>32</sup>

What is the difference between the majority, and *Shāfi'i* School, definition, on the one hand, and the *Hanafi* School definition, on the other hand?

The short answer is "usufruct" (in Arabic, "*manfa'a*"), which as the *New Shorter Oxford English Dictionary* explains, is a noun meaning

1 . . . The right of enjoying the use of and income from another's property without destroying, damaging, or diminishing the property. . . . 2 . . . Use, enjoyment, or profitable possession . . .<sup>33</sup>

Examples of "usufruct" are (1) rent derived but not yet collected from real property, (2) profits anticipated but not yet realized from the use of, or extractions of resources from, real property, and (3) certain abstract rights, possibly including a yet-to-be-conferred intellectual property right. Simply put, "usufruct" is the right to use another's property, and enjoy that use, short of wasting or destroying the property.

The majority approach, and the *Shāfi'i* School, includes not only usufruct, but also intangible assets, in the category of things that can be owned, *i.e.*, of "*māl*," and says all of them may be inherited. In contrast, the *Hanafi* School definition excludes usufruct, because it "cannot be stored for future use,"<sup>34</sup> and thus would not consider it to be inheritable. However, the *Hanafi* School rationale seems parlous.

Even a rudimentary understanding of business and accounting is enough background to appreciate that rents and sales revenues not yet collected may be booked on a balance sheet under a category such as "Accounts Receivable." This account is an asset with value that can be pledged as collateral in further transactions. In other words, what is to be collected — rents or sales revenues — is stored in this account, and available for future use. Perhaps the accurate, and stronger, defense of the *Hanafi* School position lies in the definition of "usufruct" from the *New Shorter Oxford English Dictionary*. The first definition speaks of one person enjoying use and income from property of another person. The second definition envisions profitable possession of property of another. For the *Hanafi*

<sup>29</sup> Kamali, *supra*, at 259.

<sup>30</sup> Kamali, *supra*, at 259.

<sup>31</sup> *NEW SHORTER OXFORD ENGLISH DICTIONARY* vol. 2 at 3533 (Oxford, England: Oxford University Press, 1993).

<sup>32</sup> Kamali, *supra*, at 259.

<sup>29</sup> See Kamali, *supra*, at 295-96.

<sup>30</sup> Sometimes, a "thing" is called "*nakaba*," which means "substance." See generally JOHN MAKDISI, *ISLAMIC PROPERTY LAW* ch. 11.A (Durham, North Carolina: Carolina Academic Press, 2005) (concerning the nature of property).

School, the question is whether a thing can be the subject matter of ownership, if another person owns that same thing. The question contains the answer: aside from joint or common ownership, a thing possessed by one person and owned by another person cannot be owned by the first person. Ownership is exclusive.

## [B] Certain Rights as Property

Under the *Shari'a*, the concept of "*māl*" includes rights as well as property. Certain rights may be owned, akin to real and personal property. For example:<sup>35</sup>

- Credit Claims:

Consider the distinction between two Arabic terms: (1) "*ayn*" (a "thing," such as movable property or immovable property (land), and (2) a debt, or a claim arising from a credit loan, called a "*dayn*." This term can apply to money or fungible things, and the debt or claim may have matured, or may be due at some future date. It is possible under the *Shari'a* to own a right, namely, a *dayn*. A lender is the owner of a right to claim repayment from a borrower. This right is associated with the status of an individual as a creditor.

- Further Rights Associated with Legal Status:

There are additional rights an individual may acquire and own by virtue of his or her status. One illustration is the right to maintenance (*nafaka*). A woman enjoys this right because of her status as a wife, and her husband owes the correlative obligation. Another illustration is the right of a worker to be paid for work he or she performs. The right is associated with the status of being a worker.

Interestingly, three of the Four *Sunni* Schools — the *Māliki*, *Shāfi'i*, and *Hanbali* Schools — agree these status-based rights are *māl*, and may be the object of complete ownership. *Hanafi* School *fukahā'* take a different approach. These jurists argue that rights associated with status are putative rights susceptible to deficient, but not complete, ownership. (The distinction between complete and deficient ownership is discussed below. In brief, "complete" ownership covers both a thing and its possession; "deficient" ownership occurs where an individual owns the thing but does not possess it, or does not own the thing, but owns the usufruct associated with that thing, i.e., the right to possess and enjoy the thing.) A "putative" right, called in Arabic "*māl hukmi*," is a supposed right, a right that is reputed or to be believed. From the *Hanafi* perspective, it is not certain that the right-holder actually will possess and use the right. A creditor might not demand full repayment, a wife might be self-sufficient and not need maintenance from her husband, or a worker might provide some goods or services gratis. Consequently, their ownership of the status-based rights is best characterized as deficient.

- Rights Associated Based on Possession or Use:

It is possible for an ownership interest to exist in an ancillary right associated with real property, such as an easement, right of abode in a rented property, or right of transport (e.g., of animals or machines). These rights are over a thing, based on actual possession or use of that thing.

However, there are three major categories of rights that do not qualify as *māl*. Thus, such rights are not valid objects of ownership.

- Rights With No Financial Value

Rights of custody, guardianship (by one person of another), paternity, or visitation — all of which arise in the context of Islamic Family Law — may not be owned. While they have high emotional value to the holder, they carry no intrinsic financial value, nor can they be bought or sold in a marketplace. Thus, they are not considered as *māl*. That also is true of the right to inflict a just retaliation (*qisās*), which arises under Islamic Criminal Law. This right does have a financial value, because it can be converted into a payment of blood money (*diyyah*). But, the right cannot be sold or exchanged by its holder.

- Liberties

Under the *Shari'a*, all persons hold what are called "permissible rights," or "*ibāhāt*." In effect, they are liberties. Examples are the right to use public recreation facilities and road, to buy real or personal property, and to conclude contracts. To be sure, they are attached to *māl*. Yet, they are deemed not to be *māl*. That is because they may not be the target of exclusive possession by a single person, nor may one person exchange them for value.

- Rights Contingent on Another Person:

Some rights may not be exercised unless another person assents. That is, their enjoyment by the right-holder depends on the will of the obligor. An Example is a right of a seller to receive the unpaid price of an object made from gold, where the seller of the object delivered it to the buyer before procuring full payment. The right of the seller depends on the will of the buyer to make the seller whole. Thus, while the *Māliki* School *fukahā'* classify the seller's right as a form of *māl*, the other *Sunni* Schools — *Hanafi*, *Shāfi'i*, and *Hanbali* — do not. Their rationale is the uncertainty surrounding the performance of the buyer (i.e., whether he or she actually will pay the balance due in the future) means the right of the seller contingent on the will of the buyer. However, all Four Schools agree that if there is a third-party guarantee backing the duty of the buyer to pay, then the right of the seller qualifies as *māl*.

From the vantage point of contemporary finance, it could be argued *Māliki* School has the correct view. Financial markets regularly price uncertainty. If there is doubt as to payment of (for example) dividends on stock of United Airlines, bonds issued by Argentina, mortgage loans extended to sub-prime borrowers, or asset-backed securities where the underlying pool of assets consists of sub-prime mortgages, then markets discount the price

<sup>35</sup> See KAMALI, *supra*, at 259.

of those financial instruments. The price drops, possibly precipitously, until an investor believes the uncertainty of obtaining any gain (payment) is justified by the discounted price. At all times, save for insolvency of the entity issuing the instrument, that instrument has value, and is tradeable. Thus, as the *Māliki* School urges, the right of the holder of United Airline stock, Argentine debt, mortgage loan, or mortgage-backed security, has value and is *māl*. Likewise, a seller who delivers gold without full payment holds an asset — an account receivable — which he or she may sell, at a reduced price from the face value of the obligation if necessary, to incorporate uncertainty that the buyer of the gold might not pay at all, or in a timely fashion.

By way of summary, two remarks are worth making.

First, the discourse about what ought or ought not to be considered property, and thus a valid object of ownership, occurs among Islamic legal scholars many centuries, indeed, roughly a thousand years, ago, and continues to the present. That is a long and distinguished history that easily antedates American Property Law. Second, the general disposition of the *Sharī'a* is to include a right as kind of property that may be owned and freely alienated. That disposition is consistent with modern global capitalism, and supports free enterprise. Third, the exceptions to that tendency are justifiable from a moral perspective. It would be an inhumane religious law that condoned buying and selling of (for example) custody rights, or rights to use public facilities.

### [C] Validity: Void (*Bātil*) versus Voidable (*Fāsid*)

A key concern in the *Sharī'a* is validity. In Islamic Property Law, an issue is whether a property transaction is valid. The *Sharī'a* has two alternatives to answer this question, which have exact analogs in American jurisprudence — void, and voidable.

A transaction may be null and void, in Arabic, "*bātil*." Such a transaction is invalid. It never has legal effect, as from inception it is flawed. In contrast, a transaction may be voidable, in Arabic, "*fāsid*." This transaction also is defective, but the defect is not so serious to vitiate from inception the deal. Neither the Qur'ān nor *Sunnah* resolves the issue of validity for every imaginable transaction in real or personal property. Thus, the legal effect often must be decided by an Islamic judge (*qāḍī*), or other means. The concepts of *bātil* and *fāsid* are applied to purchases and sales of various items.

### [D] Objects of Commerce (*Māl*)

Not every corporeal object or thing (*ayn*) is a legitimate object of commerce. This point holds true under both Islamic Property Law and Contract Law. To be a legitimate object of commerce, or *māl*, and thus to be susceptible to ownership, it must be permissible (*halāl*) to own the object. The *Sharī'a* concept of "*māl*" is akin to the Roman Law concept of "*res in commercio*." Both refer to an object of a lawful transaction.

The following objects are considered forbidden (*harām*) under the *Sharī'a*, and thus cannot be the object of commerce or become owned:

- A free person (*i.e.*, a person who is not a slave).
- Blood.
- An animal that has been slaughtered, but not in accordance with the proper religious ritual.
- Dead carcasses.
- Alcohol.
- Pork (swine) or pork products.

These items cannot be bought or sold. They are excluded from legal transactions. That is, any effort to transact in them would be *bātil* (null and void).

Distinct from forbidden (*harām*) things (*ayn*) is a second category of objects that are regulated. That is, they may be the subject of a valid transaction, but their use in commerce is regulated in some way. Leading examples are:

- A thing with no market value. The sale of such a thing is *fāsid*.
- A thing that is not in the actual possession of its purported owner, and which is unlikely to be possessed, namely, a thing that has been lost, usurped, or confiscated. The sale of such a thing also is *fāsid*.
- A holy thing, like the soil of Mecca. The sale of a holy thing is considered reprehensible (*makrāh*), hence a transaction in it would be *fāsid*.

Not surprisingly, given the desert climate of much of the Middle East, water is another object whose use is regulated.

Only a small water course is considered private property, and then, too, of the individuals whose property that adjoins the water course. Large waterways are public property. The only instance in which water is wholly-owned by one person is when it is in a container. Otherwise, water has some co-ownership or public ownership dimension to it. Consider a stream or canal.<sup>36</sup> Even the owners of the adjoining land exercise joint ownership of the water course, and these owners have duties to the public. They must maintain the stream or canal by dredging it. As they draw water from it, they cannot make unilateral changes to the stream or canal. They cannot exclude anyone from drinking from the stream or canal, or from performing the ritual ablutions in connection with Muslim prayers. (On the latter point, note the interaction of the sacred and profane.) To be sure, except in a case of necessity (*ḍarūrāh*), the public does not have a right to trespass on the land of the owners to get to the stream or canal. An outsider must get the permission of the landowners.<sup>37</sup> (Note the important related topics of public interest (*maṣlahah*), necessity, and regulation of items like water.)

<sup>36</sup> See SCHACHT, *supra*, at 143.

<sup>37</sup> See MARDISI, *supra*, ch. II.G-H (concerning license and trespass).

Additionally, there are some things that are legitimate objects of commerce, but which an individual may not own. Hence, the *Shari'a* prohibition on private ownership of them is unsurprising:

- Natural goods, such as air and large bodies of water.
- Community property, i.e., assets for the benefit of the common good, such as bridges, mosques, and roads.
- Property that is not known, or not in actual possession, such as certain kinds of natural wildlife, like birds.
- Property dedicated to a charitable foundation (*waqf*).

These items are what American trained lawyers would call "public goods." No single individual can exclusively own or dispose of them. All persons may use them, as long as their use does not adversely affect the use of them by others. However, the fourth category, property in a *waqf*, is less easily characterized as a public good than the first three categories. Some *ulema* justify the prohibition against private ownership of property in a *waqf* by arguing property does not belong to any individual, but to God (Allāh).

A final and important prerequisite for a thing to be a legitimate object of commerce and capable of being owned is a kind of *de minimis* rule. An object is not *māl* if it has no value. The *Shari'a* sets a minimum value of such objects (*nāl*): 1 dirham. That is, only a valuable asset is a legitimate object of commerce, with the *de minimis* threshold being very low indeed.

Assuming a thing (*'ayn*) is an object of a legal transaction, then it may be classified further. That is, there are different categories of *māl*:

- Immovable objects, which in Arabic are called "*akār*" An example would be land.
- Movable objects, which are referred to as "*māl mankūl*" (or, synonymously, "*māl nakl*"). An example would be a car.
- Fungible (homogeneous) objects, which are dubbed "*mithli*," such as bulk cargo, or the same species of apples or of oranges.
- Non-fungible (heterogeneous) objects, known as "*kimī*," such as artwork.

For most objects, placement into one of the above categories is based on custom, which in turn is based on the nature of the object. The above categories are not entirely mutually exclusive. For example, certain objects can be movable and fungible (such as commodities like rice), or even immovable and fungible (such as identical tracts of adjacent land). Certain objects could be movable and non-fungible (such as custom-made apparel or jewelry), or immovable and non-fungible (such as the Taj Mahal).

The categorization of certain things is based on the *Sunnah*. Specifically, following the *Sunnah*, fungible objects are further divided into the these sub-categories:

- Fungible objects that can be measured, called "*makīl*" (or, synonymously, *kaylī*), such as barley, dates, salt, and wheat.
- Fungible objects that can be weighed, known as "*maẓnūn*" (or, synonymously, *waẓnī*), such as gold and silver.
- Fungible objects that can be counted, referred to as "*ma'dūd mutakārib*" (or, synonymously, "*dadī*").

Illustrations of countable items include camels, cows, and horses, though the extent to which they are fungible is debatable and may depend on the context. These sub-categories are especially relevant in Banking Law, to rules prohibiting *ribā* (loosely translated as "interest"). These sub-categories are found in specific *ḥadīths* that elaborate on the basic prohibition of interest in debtor-creditor relationships. The examples of items in the each sub-category are based on *ḥadīths*, but are not exclusive. Overall, the sub-categories facilitate the understanding and application of the prohibition on *ribā*.

## § 18.03 OWNERSHIP

### [A] What is "Ownership"?

"Ownership" ("*milk*") is defined by the great 13<sup>th</sup> century A.D. *Māliki* School legal scholar Al Qarāfi as follows:

A ruling of *Shari'ah* (*ḥukm sharī*), or a juridical attribute (*ḥaṣṣ sharī*), which is specified in a real object (*'ayn*) or usufruct (*manfa'a*), and enables a person to control, dispose, or exchange it in any manner he wishes provided that there is no legal impediment against it.<sup>38</sup>

The definition bears much in common with the conception of "ownership" in American Property Law. The second clause emphasizes control and free alienability, subject only to certain legal provisos, which in turn are based on moral principles concerning the common good, or the defect of the owner (such as minority or insanity). The first clause indicates that "ownership" is made possible because of a legal regime that protects it.

To this definition, Professor Kamali adds four corollary points about ownership under the *Shari'a*:

- First, a private owner has exclusive control and rights of use and disposition over his or her property. No other person may lawfully sell or otherwise

<sup>38</sup> AL-QARĀFI, AL-FURUQ, *fayr* no. 180, vol. 3, p. 208, quoted in KAMALI, *supra*, at 259.

Al Qarāfi's full name is "Shihāb al-Dīn al Qarāfi." He was born in 1228 A.D., in Upper Egypt (the Bahnasa district), lived in Egypt during largely during the reign of the Mamluks, and died there in 1285 A.D. (684 A.H.). He was a *Māliki* School *fukahā* (jurist). He wrote about the public interest and the common good (*maslahah*), and his famous books are: *Al Dhakirah* (The Stored Treasure), *Al Furuq* (The Differences), *Nafais al Uyal* (Gems of Legal Theory), and *Kitab al Iḥkam fī Tamyiz al Fatāwa* on al Ḥkam wa Tasarrufat al Qadī wa'l-imam (Book of Perfecting the Distinction Between Legal Opinions, Judicial Decisions, and the Discretionary Actions of Judges and Caliphs).

alienate the property, or interfere with the right of the owner to enjoy the property.

- Second, nothing in this definition (and other definitions of “ownership” by various *Shari’a* scholars) restricts *māl* to tangible real or personal property. That is, as Professor Schacht also points out, under the *Shari’a*, there is no definition of “property” strictly limiting the term to a tangible thing — a “*res*.”<sup>39</sup> Rather, there are several distinctions made, *i.e.*, to a tangible thing (in Latin, “*res*”). Intellectual property — patents, trademarks, and copyrights — are legitimate subjects of ownership.
- Third, property that is common, or that is a public amenity, has no tradable value for the individual. A public highway or park has no monetary value to a particular individual that he or she can offer in exchange for a good or service. Hence, he or she cannot own that highway or park.
- Fourth, certain rights are off limits to trade, by operation of law, which again is based on ethical precepts. The custody of a child or guardianship of a dependent, are not *māl* that can be owned, bought, or sold. The underlying precept here would seem to be human dignity. The inherent dignity of the human person is compromised if a market exists for his or her rights. That also is true, of course, of human beings themselves, notwithstanding the numerous references in the Qur’ān itself to slaves.

In sum, “ownership” is a special relationship between a person and an acceptable object of commerce — property, tangible or not — that has an exchangeable value to a private party, and that confers on the owner exclusive control and rights.

## [B] Is Ownership Possible?

Islamic Law distinguishes a thing (*‘ayn*) owned separately by an individual from a thing in which separate ownership is not possible, or which does not yet exist. Consider bulk cargo (*i.e.*, a large volume of a fungible commodity), like a shipment of cacao beans. This cargo — the individual beans — are not and cannot be specifically appropriated to owners. The *Shari’a* treats the cargo as a thing in which separate ownership is not possible. Consider milk inside a cow. The milk is a thing not yet materialized. Islamic Law considers separate ownership impossible, at least until the cow is milked.

What property law rules apply to a thing that is not yet, or cannot ever be, separately owned? The *Shari’a* response is straightforward: apply the same rules as to the principal object to which the thing is attached. For example, the property law rules governing bulk cargo would apply to the cacao beans. Likewise, the rules governing ownership of the cow would apply to her milk.

## [C] Complete versus Deficient Ownership

There are several categories of ownership, and distinctions among them, under the *Shari’a*.<sup>40</sup> Perhaps the most fundamental distinction is between a “thing” and a “debt.”

A basic distinction is between “complete” and “deficient” ownership.<sup>41</sup> Of the two varieties, complete ownership is the most common. Complete ownership is ownership of both a corporeal object — a thing (“*‘ayn*”), which may be real property, such as agricultural land, or personal property, such as a car, horse, or money — and its usufruct. The ownership is “complete,” because exclusive, full capacity to control the property, and possess and enjoy it, lies in the owner. It also is “complete” in the sense of permanence. Time passage neither enervates nor exhausts the ownership. The complete owner may pass ownership through inheritance to a designated beneficiary.

“Deficient” ownership exists when there is ownership of an object, or its usufruct, but not both. The ownership is “deficient” in the sense that control and possessory enjoyment are separate for at least a brief period. Deficient ownership can be, and typically is, subject to limits, namely, limits on the duration, place, and conditions of possession and enjoyment of property. An obvious condition, or duty, concerns care. The deficient owner of the usufruct, *i.e.*, the individual in temporary possession of the object in question, is responsible for its safe keeping. The responsibility is to the owner of the object, and the potential liability for breach of the duty is compensation to that owner. These contingencies, usually imposed by or negotiated with the owner of the thing that is the subject of the usufruct, clearly connote the deficient nature of ownership. There would be no need for them if the object and its usufruct were not being separated.

A common example of the distinction between “complete” and “deficient” ownership are certain nominate contracts, such as a lease contract. “Nominate contract” is a Civil Law term referring to a contract with a particular name.<sup>42</sup> Merely by using that name, some of the rules of the contract are established, thereby setting the rights and duties of the parties without the need for explicit or special terms. Examples of nominate contracts are sale contracts, insurance contracts, and lease contracts. In Arabic, a lease contract is known as an “*ijāra*” agreement. In such an accord, there is a party with complete ownership, both over the thing, or *‘ayn*, such as real or personal property, and in possession of it, and another party seeking to borrow that thing. The owner-lessor transfers usufruct (the possession and enjoyment right) of that thing to the borrower-lessee, as per the terms of the *ijāra* contract. During the operation of the contract, the borrower-lessee has deficient ownership: he or she owns the usufruct, but not the object itself. Likewise, but inversely, the owner-lessor has deficient ownership, namely, over the object but not the usufruct. The same situation occurs with respect to another kind of nominate contract, a loan agreement, or contract of lending (known

<sup>40</sup> See SCHACHT, *supra*, at 134-135, 144-145.

<sup>41</sup> See KAMALI, *supra*, at 260-261.

<sup>42</sup> See BRYAN A. GARNER, ED., BLACK’S LAW DICTIONARY 371 (St. Paul, Minnesota: West, 9th ed. 2009) (entry for “contract” — “nominate contract”).

<sup>39</sup> See SCHACHT, *supra*, at 134-135, 144-145.

in Arabic as “*i‘ārah*” or “*‘āriya*”). The owner of funds transfers usufruct but not ownership of the funds to a borrower, who enjoys possession and use of the funds during the tenor of the loan.

Table 18-1 sets out yet another hypothetical example. Suppose the property in question is a house owned by Khadyja, who as testator (*i.e.*, the legator, who is bequeathing her legacy) elects to make a bequest (*i.e.*, give by will) of it to Abdullah, the legatee (*i.e.*, the person named in the will to receive the bequest), for 10 years. Under the terms of the will, Amal, the daughter of Khadyja, inherits the house. For as long as Khadyja is alive, she remains the owner of the house. Assuming she lives in the house until her passing, she enjoys complete ownership. To be sure, Abdullah has a contingent interest in the usufruct, but the contingency — Khadyja’s death — has not yet occurred. After Khadyja dies, and for the first decade after her death, Abdullah enjoys possession and enjoyment of the house. If Amal were in the house, then she would have no legal right to exclude Abdullah from it, and indeed would be obliged to make the property available to him, which may mean vacating it herself. Nevertheless, when Khadyja dies, ownership of the house shifts directly from Khadyja to Amal. This ownership — Amal’s during the first decade — is deficient. That is because for the 10-year period, Amal owns the property, but not the usufruct. It is Abdullah, who for a decade, has the right to use and enjoy the house owned by another person, namely, Amal. Then, after the 10-year period, Abdullah must vacate the house, and possession and enjoyment of it goes to Amal. At that point, Amal has complete ownership of the house, both the property and usufruct. Abdullah has no right to the house, nor to inherit it (unless Amal, upon her writing a will, decides to bequeath it to him).

Table 18-1:  
Hypothetical Will of Khadyja

Period → Person and Ownership Interest ↓	Before Khadyja Dies	First 10 Years After the Death of Khadyja	After the First Decade following the Death of Khadyja (Years 11 and following)
Khadyja (testator, legator)	Complete ownership	No right or interest	No right or interest
Amal (heir)	Contingent deficient and contingent complete ownership interest	Deficient ownership covering only property, not usufruct	Complete ownership over both property and usufruct
Abdullah (legatee)	Contingent usufruct interest	Deficient ownership, covering only usufruct, not property	No right or interest

This kind of arrangement might be suitable where Abdullah is a senior citizen, and Amal a teenager or young adult bound for college. Khadyja seeks to provide for Abdullah in his old age, and preserve the property for Amal when she becomes a mature woman.

More generally, this case illustrates why the *Hanafi* School draws two conclusions about complete versus deficient ownership. First, ownership of an object (*‘ayn*) leads, sooner or later, to complete ownership. For Amal, owning the house via a bequest from her mother resulted in complete ownership 10 years after her mother died. Second, ownership of a usufruct is temporary. Abdullah held the usufruct for a decade, and thereafter that possessory right shifted to Amal via the will of Khadyja.

Note one variation (of many possible) on the above hypothetical. Suppose Khadyja as testator chooses to bequeath the house to her daughter, Amal, but retain ownership of the usufruct, for as long as Khadyja is alive. Khadyja might do so in order that she can live in the property for her remaining years, but have her daughter take on the benefits and burdens of ownership of the property. In this instance, Khadyja would have deficient ownership — she would hold the usufruct, but not the object (*‘ayn*). Likewise, albeit conversely, Amal would have deficient ownership — she would not hold the usufruct, but would hold the object (*‘ayn*). When Khadyja dies, the complete ownership she had before making the bequest passes to Amal. This kind of arrangement is common when a property owner with complete ownership seeks to dedicate property to a charitable foundation (*waqf*), but the dedicator (*waqif*) also seeks to enjoy possession and use of the property for as long as the owner is alive. When the dedicator passes, complete ownership shifts to the foundation. In turn, the foundation may well elect to retain ownership over the property, but confer ownership over the usufruct to one or more less fortunate persons, such as widows or orphans, who are the beneficiaries of properties held in trust by the foundation.

Interestingly, observe “deficient” ownership transcends the distinction between a personal right (*in personam*) and a right attached to a thing (*in rem*). In some cases, the transfer of usufruct from an owner to another party is a transfer of an *in personam* right. That occurs with respect to a right to use and enjoy real property given to an individual, like Abdullah in the above hypothetical. In other cases, such as a right of passage or a right of flow, the usufruct involves an *in rem* right, *i.e.*, it is attached to the property, not to any specific person. Yet, the distinction between *in personam* and *in rem* is relevant to the question of whether deficient ownership is inheritable.

The *Hanafi* School, which is the minority approach on the topic, says deficient ownership cannot be inherited. That is because ownership of a usufruct ends when the deficient owner dies. This rationale presumes the deficient ownership is an *in personam* right. The *Hanafi* School recognizes some rights, such as easements and flow rights, are a usufruct involving an *in rem* right. In these cases where the usufruct attaches to property, not to a person, the *Hanafi* School agrees the right may be inherited. In practice, that means that if the owner of the property dies, and the property passes to a new owner such as an heir of the decedent, *in rem* rights continue. Neighbors and strangers still enjoy the easement or flow right, as they did before the death of the previous owner.

The other three *Sunni* Schools take a more generous approach to the question of inheritability of deficient ownership than does the *Hanafi* School. The *Māliki*, *Shāfi‘i*, and *Hanbali* School all agree that deficient ownership may be inherited. This

majority rule holds true regardless of whether the usufruct in question involves an *in personam* or *in rem* right. If the right is *in rem*, then it follows the object through successive generations of owners, as it does for the *Hanafi* School. If the right is *in personam*, then the legal heirs of the deficient owner are entitled to possess and enjoy the object for the remaining duration of the deficient ownership. For instance, heirs of a tenant may stay on the real property that is the subject of a tenancy agreement after the tenant dies, and until the agreement expires. Likewise, heirs of a loan contract (*i'āra*) or lease agreement (*ijāra*) continue to enjoy the benefit of the loaned funds, or leased goods or services, respectively, after the death of the original deficient owner-contractor, and until the contract expires. Observe this rule applies even to a lease agreement for employment services, for instance, where the decedent contracted for housekeeping or nanny services.

#### [D] Ownership by Women

The *Shari'a* supports ownership by an individual, to or more individuals acting jointly, or the community. That is, both private and public ownership are permitted, as are individual and joint private ownership. Notably, this right of ownership, and the protection of the right, extends to women equally with men.

Emphatically, women are entitled to own property via purchase or inheritance, to keep what they earn from that property, and to have their property rights enforced in a substantively meaningful way. There is no better example of the practical manifestation of this right by a woman than the wife of the Prophet Muhammad, Khadyja. A wealthy and successful businesswoman, she acquired, used, loaned, and sold various assets.

To be sure, in contemporary times, this theory is practiced unevenly, and sometimes not at all, depending on the Muslim country or part thereof in which a woman happens to reside. (Moreover, Qur'anic inheritance shares are not always equal as between women and men.) Still, practiced or not, the Islamic legal precept is clear enough: female or male property owners enjoy the freedom — the permissive right — to use and enjoy their property, and to alienate it via sale, gift, or bequest.

## Chapter 19

### PROPERTY LAW: PUBLIC PROPERTY, PRIVATE PROPERTY, AND POSSESSION

In short, human history has been propelled in great part by the pursuit of three basic desires: the desire to possess, the desire to know, and the desire for thrill and sustained pleasure. Each of these plays a significant role in today's runaway consumeristic culture.

Ruben L.F. Habito, *The Inner Pursuit of Happiness, in* HOOKED! BUDDHIST WRITINGS ON GREED, DESIRE, AND THE URGE TO CONSUME 34-35 (Boston, Massachusetts: Shambhala Publications, Stephanie Kaza, ed., 2005)

#### SYNOPSIS

##### § 19.01 PUBLIC (COMMUNITY) PROPERTY

- [A] Principle of Original Permissibility (*Ibāḥa*)
- [B] Public Ownership and Nature
- [C] Four Categories of Publicly Owned Property
- [D] Governmental Assignment (*Iqtā'*) of Public Property and Oil Concession Contracts

##### § 19.02 PRIVATE PROPERTY

- [A] Lawful versus Unlawful Acquisition
- [B] Lawful Acquisition of Un-Owned Land
- [C] Lawful Acquisition of Un-Owned Land
- [D] Finding Treasure (*Luqta*)
- [E] Individual versus Joint Ownership
- [F] Termination of Ownership

##### §19.03 POSSESSION

- [A] Right to Possess
- [B] Legitimate versus Illegitimate Possession
- [C] Adverse Possession
- [D] Deposits (*Amāna*), Pledges (*Rahn*), and Liens (*Habs*)

## § 19.01 PUBLIC (COMMUNITY) PROPERTY

[A] Principle of Original Permissibility (*Ibāḥa*)

Almost all kinds of property are susceptible to private ownership — unimproved or improved land, livestock, vehicles, consumer durable goods (sometimes called “white” goods like microwave ovens, dishwashers, refrigerators, washer/dryers, etc.), consumer non-durable goods (*i.e.*, goods with a short- or medium-term lifespan, such as food), and intellectual property (*i.e.*, patents, trademarks, and copyrights).<sup>1</sup> That also is true for items from the natural world, such as minerals and forests. But, in respect of some items — particularly those provided by Mother Nature, as it were — there is a community interest in ownership. The original state of the world, as created by God (Allāh), was one in which all persons owned all things, as Qur’anic passages indicate. *Surah* 2, *ayah* 29 says:

It was He [Allāh] who created all that is on the earth for you; . . .<sup>2</sup>

*Surah* 45, *ayah* 13 reads:

He has subjected all that is in the heavens and the earth for your benefit,  
as a gift from Him. . . .<sup>3</sup>

The first passage uses the second person pronoun (“you”), and the second passage uses the second person possessive (“your”), and both refer to “all” things on earth. The use of the second person is not restricted to any one ethnicity, gender, race, or religion. God puts all things are put on earth for the benefit of all people.

This precept is known in Islamic Law as the Principle Original Permissibility, or *ibāḥa*. It means, as Professor Kamali writes:

all things were originally permissible (*mubāḥ*) to all people, and this was the natural state of things until the emergence of private ownership.<sup>4</sup>

Thus, while the *Shari’a* easily supports private ownership and thereby modern capitalist economic growth, it does not view such ownership as the starting point. Rather, over the ages, including in pre-Islamic times, the existence of private ownership, and its distinctiveness from public ownership, evolved.

Pre-Islamic times saw three kinds of ownership of land in Arabian society: (1) community land, such as pastures used for livestock grazing, (2) land owned by individuals, such as wealthy persons from Mecca, who owned land in the Arabian cities of Mecca and Ta’if, and in Syria, and (3) tribal land, owned by tribal chiefs (*i.e.*, a royal possession) used for their own livestock. The evolution of private ownership occurred alongside, and in part because of, development of societies and social

<sup>4</sup> MUHAMMAD HASHIM KAMALI, *THE RIGHT TO LIFE, SECURITY, PRIVACY AND OWNERSHIP IN ISLAM* 265 (Cambridge, England: Islamic Texts Society, 2008). [Hereinafter, *KAMALI*.]

organizations, and agricultural and industrial progress. In Arabia, Islam played an role in this evolution:

When the Prophet migrated to Madina [Medina, *i.e.*, the *Hijra*], he not only confirmed the private ownership of land by Muslims and non-Muslims, but also set a precedent by allocating land to individuals for the purposes of housing and farming, often on the basis of need or as an appreciation of meritorious service.<sup>5</sup>

Notably, private ownership was not a right reserved for Muslims. After the death of Muhammad, the Four Rightly Guided Caliphs (*Rashidun*) tended to respect this right. There also was a metamorphosis from the concept of tribal land to state property. The Caliph ‘Umar bin Al Khattāb, took over land owned since pre-Islamic times by the Emperor of Persia and his family, treating it as state property.<sup>6</sup> As for land (whether arable or waste, barren or cultivated) in subjugated territories, *i.e.*, areas conquered by Muslim forces, he and the other Caliphs treated it either as (1) state property, if conquest was by force, or (2) property the disposition of which was governed according to a treaty, which could include private ownership, if conquest occurred without war.

Such developments produced a two-pronged outcome. On the one hand, the default rule in the *Shari’a* is private ownership. It is the “default rule” in the sense:

- (1) the normal expectation is property is privately owned,
- (2) private ownership is the predominant kind of ownership in Muslim countries, and
- (3) Islamic Law contains protections for such ownership.

On the other hand, the Principle of Original Permissibility intimates private ownership is not unbridled, *i.e.*, there must be limits to protect the common good. Thus, restrictions not only are permissible, but plenty exist, on the right of private owners to enjoy, use, and alienate their property. On balance, then, private ownership is respected, even cherished, but yields to communal interests in the event of a conflict between the two.

## [B] Public Ownership and Nature

Aside from a thoroughly communist regime, or certain religious communities, in any legal system there is a basic distinction between private and public property. The *Shari’a* is no exception. It is apparent from the above explanation that the *Shari’a* respects the institution of private property. Public property is the focus of the present discussion. (There is a third delineation in Islamic Law, namely, property placed in a *waqf*, which is a pious foundation.)

<sup>5</sup> KAMALI, *supra*, at 265.

<sup>6</sup> The Caliph ‘Umar, sometimes called “Umar the Great,” lived from 581/83 to 644 A.D., and reigned as the second of the *Rashidun* from 634 to 644, after the death of the first such Caliph, Abū Bakr. He was a member of the same tribe as Muhammad — the *Quraysh* tribe — and specifically from the Banu Adī clan, and was a Companion of Muhammad (*Sahābah*).

Also common to legal systems, including the *Shari'a*, is the touchstone of private ownership, whether individual or joint: exclusivity. Only one identified individual, or an identified group of them, are entitled to enjoy, use, and alienate privately owned property. Non-exclusivity distinguishes property that is owned by the public, i.e., community or collective property. No single person or persons has the right to the benefits of the property, nor may any one person or persons deprive another or others of the enjoyment of collective property. The Principle of Original Permissibility is the foundation for the recognition by the *Shari'a* of public ownership.

Examples of public property are a highway or major road, or a major river like the Tigris, Euphrates, or Nile Rivers. In contrast, a blind alley, or a small river or canal, is the joint property of the owners whose buildings or land adjoin the alley or river. By definition, public property may be used freely by everyone, so long as each person's use does not cause prejudice to the rest of the public. Thus, Professor Schacht gives the example of a person erecting a booth on public property — say, to sell dates. That use is permissible, if it does not adversely affect the use of the property by others. If it does, then the others can sue for removal of the booth.

In Arabic, "public property" is called "*al-milkiyyah al-'ammah*," or simply "*milki al-'ammah*." Following from the Principle of Original Ownership, all persons share an interest in certain items from the natural world. Even if trees, fuel, or water fall into the hands of a private owner, the community is the true owner of the wealth they furnish. This *Shari'a* precept is a logical outgrowth of the Principle of Original Permissibility. Moreover, it is supported by a *hadith* recorded by Al Shawka'ni, which states:

People are partners in three things: water, grass and fire.<sup>9</sup>

These three things are defined broadly.

"Grass" encompasses grazing land and animal feed from un-owned land. "Fire" refers to fuel of any kind, such as wood and by extension, trees and forests whence wood comes. "Water" refers to that resource wherever found, and in whatever state, says *Imam* Malik. The water could be above or below the surface of the earth, and in liquid state in rain, springs, streams, rivers, lakes, seas, and oceans, or in solid form (e.g., presumably the ice of the North and South Poles). Professor Kamali remarks there is a different version of the same *hadith* that adds a fourth thing, namely, salt that is easily obtained (without desalination of salt water).<sup>10</sup> In sum, the *Shari'a* singles out three and arguably four kinds of property to be of community interest. They are necessary for human life.

What specifically are the ramifications of the *Shari'a* precept that even if these four things — grass, fire, water, and salt — are in private hands, the wealth from them is owned by the community? First, the public interest in these special items renders them subject to legal restrictions. Notwithstanding private ownership of a forest, or a source of fuel, water, or salt, the state can take action to ensure the private owner is not acting at variance with community interests. For example,

selfish depletion of these assets to the detriment of the community can trigger intervention to protect them for the community.

This protection addresses what in American legal scholarship is known as the "Tragedy of the Commons." The Tragedy, in brief, is that when each individual property owner acts in accordance with self-interest, the wealth from the property in which the community has an interest is depleted.<sup>11</sup> Put differently, no individual property owner internalizes the social costs of his or her enjoyment of that property. Over-fishing of a body of water by water-front property owners is an illustration.<sup>12</sup> Some *Shari'a* scholars, such as Mustafa Al Sib'ani, argue the above-quoted *hadith* provides legal justification for nationalization (called "*ta'min*" in Arabic) of sources of energy (e.g., electricity), certain food (particularly salt), and water.<sup>13</sup> So, the first implication of the *Shari'a* precept is as long as both a public interest exists in property privately owned, and the property provides a thing necessary for the community, then governmental action to protect that interest against otherwise lawful use of the property by the private owner is valid.

Second, the ownership of property by an individual does not extend below the surface all the way to the core of the earth. By inference, it would appear that *Shari'a* does not confer individual ownership rights above a parcel of real property infinitely into the sky and outer space. Instead, an owner of land owns its surface, and the part of the land below the surface (and, presumably, above it) that he or she normally is able to use. The uses include agriculture and industry, and entail improvement of the land through, for example, adding fixtures such as buildings to it. This customary use does not require the owner to use sub-surface property that is out of reach, as it were. In other words, as a practical matter ownership extends to reach. Thus, Professor Kamali concludes:

minerals buried deep down are not "owned" by anyone and may be owned and utilised by the community as a whole.<sup>14</sup> This conclusion is potentially

<sup>11</sup> See GEORGE CAMERON COGGINS & ROBERT L. GLUCKSMAN, *PUBLIC NATURAL RESOURCES LAW* § 31.52 (2nd ed., 2010); Kara L. Phillips & Amy L. Sommers, *A Tragedy of the Commons: Property Rights Issues in Shanghai Historic Residences*, 28 PENN STATE INTERNATIONAL LAW REVIEW 137-175 (2009).

<sup>12</sup> Interestingly, the 2009 Nobel Prize in Economics was awarded to Professor Elinor Ostrom (the first woman to win the award) for her work that criticizes the tragedy of the commons approach, and shows how private sector groups can cooperate, in the absence of government regulation, to achieve socially beneficial outcomes.

<sup>13</sup> See KAMALI, *supra*, fn. 17 at 297.

Mustafa Al Sib'ani (1915-1964) was a Syrian political leader. He was born in Syria and educated in Egypt, where by some accounts he was influenced by the Muslim Brotherhood, which at the time was focused on fighting colonialism and advancing Arab nationalism. During the Second World War, he fought against British and French armies in the Middle East (as did the Brotherhood), and was twice arrested by Allied forces for these activities. Also by some accounts, he participated in the establishment of the Syrian Brotherhood. In 1960, he became a Professor of Law at the University of Syria. In 1965, Professor Al Sib'ani co-founded the *Shari'a* School in Damascus, and was appointed its first Dean. He stands as one of the 100 most influential recent figures in the Muslim world, ranking at number 17 on the list of educational and social reformers, ahead of Sayyid Quth (1906-1966) of Egypt, a leading intellectual figure in the Muslim Brotherhood (ranking at 19), which was founded by Hassan Al Banna (1906-1949). See Z.M. KHAN, A.R. MOHIN, MANZOR AHMED, SHAUKAT ULLAH KHAN & Z.A. NIJAMI EDS., 100 GREAT MUSLIM LEADERS OF THE 20TH CENTURY xxxviii (New Delhi, India: Institute of Objective Studies, 2005).

<sup>14</sup> KAMALI, *supra*, at 254.

<sup>9</sup> AL-SHAWKANI, *NAYL AL-ABTAR*, vol. V, p. 303, quoted in KAMALI, *supra*, at 253.

<sup>10</sup> See KAMALI, *supra*, at 253.

dramatic for Arab Muslim countries in which oil wealth is considered the personal property of a royal family. Assume oil qualifies as a "mineral." On the one hand, if oil reserves are held by royalty and wealth from its extraction and sale is deposited in personal accounts, then the public interest of a necessary item (fuel) is not protected. On the other hand, if those reserves are held by royalty as trustees for the community, and all proceeds from oil sale are channeled into accounts for the benefit of the community, then the arrangement appears consistent with the *Shari'a*.

Third, a governmental authority or religious leader has no authority to take property in which the community has an interest and assign it to a private owner for the benefit of that owner. If the authority or leader controls such property, then the control must be exercised on behalf of the public. This point is made by *Imāms* Shāfi'i and Mālik, but seems to be accepted by the majority of *Hanafi* and *Hanbali* jurists, too. By way of example, suppose a plot of land boasts a large spring of water. If the plot is un-owned, then ensuring that the water is used with the public interest in mind ought to be straightforward. The relevant government authority can itself perform the essential functions of containing, bottling, and distributing water, and safeguarding the cleanliness and security of the spring. Or, the government can assign the right to do so to a private business association, with the discipline on it that the private body act in the public interest. What the government cannot do is assign all or part of the water rights to a private party for that party to own and exploit for its personal benefit.

### [C] Four Categories of Publicly Owned Property

Of course, the traditional categories of "grass," "water," and "fire" have been superseded in modern times. That is not to say the traditional categories are only of historical significance. Manifestly, certain kinds of property are (directly or indirectly) akin to "grass," "water," or "fire." Rather, the point is that in Muslim countries, public property tends to fall into one of four categories.<sup>15</sup>

- Property for the Benefit of the Community:

Examples of publicly owned property in this category are hospitals, infrastructure such as bridges and roads, educational facilities (specifically, public schools), natural resources including lakes, rivers, and mountains, and property placed in a charitable endowment or trust (*waqf*). These properties are owned and operated by the state, or appropriate governmental authority. But, the state acts as a trustee for the community.

Accordingly, the state lacks the legal authority to sell, transfer, or assign the property to a private party, though it may assign rights limited in scope and duration to a private party to help improve and use the property. An illustration is land with a large, fresh water lake, which is enjoyable for boating, fishing, and swimming. The government assigns the rights to a private business association to control access to the lake,

keep the water and surrounding area clean, and provide amenities like a café and restrooms, so as to preserve the lake for present and future generations in a manner consistent with sustainable development. In return, the government permits the partnership to charge a fee to users, but regulates the amount and any increases in such fee.

- Easily Exploitable Property and Barren Land:

Certain kinds of property may be exploited cheaply by an individual (or group of individuals acting separately), indicating the value of the property to that person (or persons) is lower than the value to the community. This scenario is like the Tragedy of the Commons, in which one person (or several acting on their own) extracts and enjoys benefits from a property, depleting the property of its true, higher, value to the collective. Under the *Shari'a*, easily exploitable property is considered public property. Typical examples are un-owned barren land, forests, and land from which mineral wealth (*e.g.*, land containing salt or a spring) may be captured and used without much expenditure of labor. Such examples are akin to public pasture, or "*himā*," which is defined as:

the consecration of land and preventing private ownership and development (*ihyā'*) thereof, in an attempt to reserve it for pasture and the grazing of livestock.<sup>16</sup>

Not surprisingly, easily exploitable property is owned and operated by the state, or appropriate governmental authority, for the community.

That is, the state manages the property as a trustee for the public. The state may assign certain rights, limited in scope and duration, rights to this property to a private party. One recorded *hadith*, recorded by Māwardī and Abū Dāwūd, ostensibly indicates that only the Prophet Muhammad held the right to make this kind of assignment: There is no *himā* but for God and his Messenger.<sup>17</sup> However, Māwardī considered this inference erroneous, because of the context in which Muhammad assigned the property. He assigned land in Medina (the land of al-Baqi') as public pasture for horses owned by the Ansār and Muhājirīn.<sup>18</sup> In other words, Muhammad acted on behalf of the community. The Four Rightly Guided Caliphs, in particular Abū Bakr and 'Umar, adopted this interpretation, and thereby assigned public pasture in ways they believed benefited the community. Since the *Rashidun* Era, the *Shari'a* has recognized as valid the authority of the government to assign limited rights to an easily exploitable property, if the assignment serves an over-arching public purpose.

<sup>16</sup> KAMALI, *supra*, at 267.

<sup>17</sup> Quoted in KAMALI, *supra*, at 267 (quoting MAWARDI, AL-AHKAM, 185, and referencing a slight variation of this *hadith* in ABU DAWUD, SUNAN ABI DAWUD ED., AL-BUGHIA' at 444, *hadiths* nos. 3083, 3084).

<sup>18</sup> "Al Baqi'" is the name of an area in Medina, Saudi Arabia, near the Holy Mosque. Part of the Al Baqi' area has been a cemetery since the time of Muhammad.

The Ansār (which means "helper") are the people from Medina who helped the Prophet and his Companions who emigrated from Mecca. The Muhājirīn are the people who emigrated from Mecca to Medina before, with, or after the Prophet at the beginning of Islam. Their name is derived from "*Hijra*," which means "immigration" or "migration," is the name of the Islamic calendar.

<sup>15</sup> See KAMALI, *supra*, at 266-68.

In specific, the purpose of assignment must be to facilitate development of the property in a manner that benefits the public. An illustration is land that can be used as a quarry for valuable rocks, which in turn may be used in construction of public facilities like hospitals and schools. The state may assign rights to the quarry to a construction partnership, which can extract the rock. The government pays the partnership a fee for its quarry work, and the community benefits from the use of the rock in public buildings.

Finally in respect of easily exploitable property, un-owned barren land has been the subject of some controversy among the Four *Sunnite* Schools. At issue is whether such land, when located outside a residential area, can fall into private hands without state action. That is, is it legally permissible for a private party to acquire ownership over barren land without the intervention of the state? The majority view across all Four Schools is "no." Their answer is based on a *ḥadīth*, recorded by Tabrizi, which states: Anyone who reclaims barren land may own it.<sup>19</sup> Two renowned students of Abū Ḥanīfah, namely, *Imām* Abū Yūsuf and Al Shaybānī, agree this *ḥadīth* provides the requisite authorization. Hence, they argue no further permission from a government authority is needed.

Nevertheless, two of the great scholars around whose work two of the Schools were founded, *Imāms* Abū Ḥanīfah and Mālik, gave a different response. They were concerned that a private party might catalyze conflict with other prospective claimants to barren land, if he or she simply proclaimed ownership over it. Thus, they urged prior government permission should be a prerequisite for valid acquisition of ownership over barren land. This view — that advance authorization from a governmental authority is needed before claiming ownership to un-owned, barren land outside of a city, town, or village, remains the *Hanafi* School position, but not the majority view.

• Conquered Lands:

The first two categories of public property reference state ownership and control over land. When Muslim forces capture a territory, land in it is a spoil of war. Are conquered lands considered public property of the victorious Muslim state? That question generates debate among Islamic legal scholars. The bottom line conclusion, based on the *Sunnah* of the Prophet and historical precedent, is that it depends on the discretion of that state. *Imām* Abū Yūsuf argues each of the two positions laid out below is valid.<sup>20</sup>

The first position answers the question posed in the affirmative. Conquered land may become public property, i.e., the collective property of the people in the victorious Muslim state, and may be owned and controlled by their government on their behalf. In Arabic, conquered land is known as "*kharāj*" land, and it may

include arable land that is, or is not, being farmed. The word "*kharāj*" actually refers to a land tax. That is for good reason. The conquering Muslim state has the option of distributing this spoil of war to private owners, in which case collective ownership would cease, as would the existing pattern of ownership among the conquered peoples. This kind of occurred episodically in the earliest years of the Great Arab Islamic Empire, during the Four Rightly Guided Caliphs. 'Umar bin Al Khattāb appears to have levied this tax. He applied it to conquered lands, but only if they were fertile. 'Umar and his successors permitted owners of those lands to retain their properties, but they had to pay the *kharāj* tax.

For example, the state could distribute the land among its soldiers, and oblige them to pay a tax of 10 percent of the yield they earn from that land to the state treasury, known in Arabic as "*bayt al-māl*." *Imām* Abū Ḥanīfah adds that in the event of disease or natural disaster, which wipes out the crop, the *kharāj* obligation would be lifted. Alternatively, the state could transfer usufruct to the existing inhabitants. That is, having captured the territory, the state could claim itself as the new owner of the property. It could argue it retains this ownership on behalf of the community. That community would consist not only of the people in the previous boundaries of the state, but also the persons in the newly conquered territory. The state could allow the conquered peoples to remain in possession of, use, and enjoy the land. These occupants would be obliged to pay the land tax (*kharāj*) to the state treasury (*bayt al-māl*), except in the case of crop failure.

The second position answers the question posed in the negative. Early on in the *Rashidun* Era, specifically under the Caliph 'Umar bin al-Khattāb, the question of what to do with agricultural land conquered in Iraq arose. 'Umar permitted the conquered people not only to remain on their land, but also left them free to mortgage their property, and sell, gift, or pass it by inheritance. All that the Caliph required of them was they pay the land tax (*kharāj*). Unsurprisingly, the conquered peoples came to believe they retained not only usufruct interest in the property, but also ownership of it — i.e., complete, not deficient, ownership — and were liable only for the *kharāj* tax. Muslim scholars at the time justified this pattern as true to the *Sunnah* of the Muhammad: When the Prophet conquered the lands of Khaybar, he left them in the hands of their Jewish owners and occupants on condition that they paid one half of their yield to the Muslim community. Ownership of this one-half [of the yield from the land, but presumably not the land itself] thus belonged to the community as a whole.<sup>21</sup>

In sum, with this *Sunnah*, plus the experience under the Caliph 'Umar, the *Shari'a* rule is as follows. Conquest may or may not change the pattern of ownership. The victorious Muslim state has the discretion over whether conquered peoples retain both possession (usufruct) and ownership of their land now within Muslim territory. But, whoever occupies the land — whether the original owners, or persons such as

<sup>19</sup> Quoted in KAMALI, *supra*, at 267 (quoting TABRIZI, *MUSHAQAT*, vol. II, *ḥadīth* no. 2944).

<sup>20</sup> The full name of Abū Yūsuf is: Yaḡub ibn Ibrahim al-Ansari. *Imām* Abū Yūsuf was the first *Qādi* Al Qadhat in the Islamic world. Based in Baghdad, he served under the 'Abbāsid Caliph Harun Al Rashid, who reigned from 786-809 A.D. Yūsuf died in 798. Not only was he a member of the *Hanafi* School, but also he was a renowned student of *Imām* Abū Ḥanīfah, founder of that School, and helped spread the influence of the School.

<sup>21</sup> KAMALI, *supra*, at 268.

"Khaybar" is a name of a town 100 miles north of Medina, Saudi Arabia. It is renowned for its date farms. In the times of Muhammad, Khaybar was home to a large Jewish community. Several Islamic legal precepts are based historically in events that occurred in and around Khaybar.

soldiers to whom the state distributes the land — will be liable for a *kḥaraj* tax, except when there is a crop failure due to disease or natural disaster. The amount of the tax may be as low as 10 percent, and as high as 50 percent, of the yield from the land in question.

- Religious Facilities:

The key illustration of public property in this category obviously is a mosque. The Qur'an, in *surah* 72, *ayah* 18, states:

Places of worship are for God alone — so do not pray to anyone other than God — . . .<sup>22</sup>

This passage has a dual meaning. First, as property, a mosque belongs to Allāh. Second, the purpose of a mosque is solely to give praise and thanksgiving to Allāh. Both meanings — the first in a direct way, and the second in an indirect manner — support the *Shari'a* rule that private ownership of a mosque is impermissible. Rather, the mosque is public property, and even then in the sense of the public holding Vice-Regency, with God as the Regent, over the property.

In theory, any property in the above-four categories can be put in private hands. A public highway can become a privately owned and operated toll road. A forest, or farm land, can be transferred from public to private hands. A place of worship could be owned and managed by a private party. But, the *Shari'a* does not permit such conversion.

#### [D] Governmental Assignment (*Iqtā'*) of Public Property and Oil Concession Contracts

The government — and only the government, or more technically, the senior religious authority in a country, such as an Imam — has the right to assign property to an individual or group of individuals. In Arabic, this power of a government to assign to an individual or group rights to a property in which the government holds title is called "*iqtā'*." In effect, *iqtā'* is a prerogative of a government to interfere with public property by conferring an ownership or possessory interest of some kind in that property to a private party. The analogous concept in American Property Law is a land grant. Typically, the property that is the subject of assignment is barren land with the potential to generate wealth because of natural resources on it, or because of its strategic location.<sup>23</sup>

This right is not unbounded. There are five key limits. First, *iqtā'* covers only property that has no private owner, and which the government holds valid ownership. Second, this right must be for a specific purpose, typically relating to

<sup>22</sup> Qur'an, *supra*, 72:18 at 394.

<sup>23</sup> Whether an asset in the public treasury (*bayt al-māl*) may be the subject of *iqtā'* is disputed. The majority of the Four Sunni Schools approving of this assignment, but the *Māliki* School and Al Shaybāni (a celebrated student of Abū Hanīfa) disapprove, precisely because the asset is in the public treasury and should remain there for the benefit of the community, and not be given away. The *Shāfi'i* School takes a middle position, permitting profit from an asset in the public treasury, but not the asset itself, to be assigned. See KAMALI, *supra*, at 275. The discussion above focuses on *iqtā'* in respect of real property, and presumes the property is not considered part of the public treasury.

the benefit of the community (*maṣlahah*). Third, the rights assigned must be proportionate with the capacity of the assignee. If the assignment is to develop resources and put them in service of the community, then the assignee must have the technical and logistical ability to carry out this project. Fourth, if the assignee fails to adhere to the terms of the *iqtā'*, then the government must revise the terms of the assignment, or even re-assign the property to another party. Revision or re-assignment is not an option, but a mandate, so as to ensure the government acts on behalf of the public interest in a case in which the assignee is incompetent, lazy, or even corrupt. Fifth, the assigned right is for a defined period.

The historical origins of *iqtā'* are intellectually interesting and help explain its nature and purpose. As Professor Kamali explains:

The basic authority for *iqtā'* is found in the *Sunnah* [tradition] of the Prophet, who is reported to have given land grants to some of his Companions, including Bilāl b. al-Hārith, Zubayr b. al-Awām, 'Umar b. al-Khaṭṭāb, 'Abd al-Rahmān b. 'Awf and others. When the Prophet established a state in Madina [Medina], there were three types of land in the city: privately-owned, unowned barren land, and grazing land for animals. The Prophet then announced, as in the *ḥadith* . . . [recorded by Tabrizi, which states: "Anyone who reclaims barren land may own it."<sup>24</sup>], that anyone who reclaimed barren land could become its owner. Some individuals came forward and were consequently given grants of land for development, and the land so assigned became known as *iqtā'*. A similar situation arose after the Muslim conquest of the Persian and Roman empires, where the state had areas of land on its hands, without owners either due to the owner's demise, or his dislocation or escape. It was consequently deemed necessary to assign land to people who could utilise it.

. . . [T]he first caliph Abū Bakr authorised a land grant to Zubayr, and then Abū Bakr's successor, 'Umar b. al-Khaṭṭāb, assigned some land on a similar basis to 'Alī b. Abī Tālib [the fourth Caliph] and others. The caliph 'Umar practiced *iqtā'* on a wider scale in the newly conquered territories. Some of the land grants made by the Pious Caliphs are known to have been to people who had rendered services to Islam and rendered distinguished service to the community, though this was practiced on a fairly limited scale. In principle, the Imam may not use *iqtā'* as a means of showing personal favour to anyone, or for reasons other than the benefit and *maṣlahah* of the community, and making the land available for productive purposes.<sup>25</sup>

Evidently, *iqtā'* presents an opportunity for abuse of public property. That is all the more true because of the centralization of power associated with *iqtā'*. Only the government, or more technically, the chief religious authority (Imām), has the right to make land grants. Governments rise and fall, but public property is supposed to endure. The temptation exists for a government to dole out assignments based on the extent to which prospective assignees loyally support it, including through their

<sup>24</sup> TABRIZI, *MISHKAT*, vol. II, *ḥadith* no. 2944, quoted in KAMALI, *supra*, at 267.

<sup>25</sup> KAMALI, *supra*, at 274-275.

financial, political, or military assistance. The safeguard against succumbing to this temptation is the *Shari'a*, grounded on the *Sunnah* of Muhammad, and the practice of the early Caliphs. Only if an assignment serves the public interest (*maṣlahah*), or in rare cases if it is made for outstanding service to the public, or to the religion of Islam, is it legally valid.

Practically speaking, there are three categories of *iqṭā'*. First, through a proprietary land grant, a government may assign rights to public property that establish ownership. The Arabic term for this grant is "*iqṭā' tamlik*." ("*Tamlik*" is the feminine form of the verb "to own," and is derived from the noun "*milk*," which is "ownership.") Under it, the assignee becomes the owner of the granted property. However, a proprietary *iqṭā'* cannot be made for public property that is, or has on it, public facilities. Examples of excluded property would be grazing land for livestock, or a park — all livestock farmers, and the community at large, respectively, would not be keen to see the property owned privately for fear their enjoyment of it would be circumscribed. Another example would be property that has mineral resources on it that are easily exploitable.

The second category covers the quintessential purpose of *iqṭā'*. Through a developmental land grant, a government assigns rights to public property for the purpose of advancing the value of the property, or extracting wealth from it. The Arabic term for this category is "*iqṭā' istighlāl*." ("*Istighlāl*" is a verb meaning "to use" or "to advance," and is derived from "*istaghalla*," a noun meaning "use" or "advance.") In all three categories of land grants, the assignee must not use the property so as to cause harm to another person. In this category, that restriction is poignant. Suppose a private party is assigned the rights to barren land to develop oil or natural gas thought to exist beneath its surface. The private party must not exploit the land in such a way that only it profits from oil and natural gas sales. The wealth from the land is to be shared with the community — indeed, it belongs to the community. Presumably, this "harm principle" also constrains a private party from environmental degradation, such as dumping hazardous materials on the property, failing to clean up waste, or destroying precious animal and plant life.

The third category of *iqṭā'* is commonly observed in modern metropolises throughout the Muslim world. It is a usufruct land grant, called in Arabic "*iqṭā' irfāq*." ("*Irfāq*," is derived from "*arfaqa*." They can be used as nouns or verbs. "*Irfāq*" is the past tense, "attached," "*arfaqa*" is the present tense, "attach.") This grant assigns to an individual temporary possession of public property to assist that individual in providing goods or services to the community, or accessing private property. An example would be allowing a small retail vendor (such as a hawker stand selling *falafel* sandwiches) to use public property for his or her stall. Another example would be a right of passage over public property for an individual to ingress and egress private land.

While helpful, the classification terminology — proprietary, development, and usufruct assignments — is flawed in two respects. First, the proprietary land grant category confers ownership, but in what sense? Is the ownership complete, covering both title and possession? Undoubtedly, the private party assignee has the right to possess and derive benefits from the property. Yet, does title to the property remain with the government? In brief, is the assignment of a usufruct interest in what

remains public property? The answer is not clear from the rubric "proprietary." Second, are the terms "development" and "usufruct" sufficiently precise? Both a development and usufruct assignment involve temporary transfer of possession, but not ownership of public land. That is, they — like the first category — confer a usufruct interest to a private party, namely, a right of that party to use and enjoy public land for a defined period. Might it be more accurate to re-characterize the third category as a non-development assignment?

Least it be thought that *iqṭā'* (assignment, or land grant) is unrelated to commerce, it is important to note that one of the most important applications of this right concerns energy concession contracts. Various Arab Muslim governments (e.g., Saudi authorities) are in the position of assigning contracts to a foreign multinational energy corporation. Under such concession agreements, the foreign company has the rights to a parcel of land for the company to develop in terms of oil or natural gas resources.

The Saudi government reportedly has used a variation of *iqṭā'* in concession agreements with major American petroleum companies. Citing a 1987 article by Israeli legal scholar Professor Aharon Layish entitled *Saudi Arabian Legal Reform as a Mechanism to Moderate Wahhabi Doctrine*, Professor Kamali observes a:

combination of *Shari'ah* principles pertaining to mineral resources, such as *iqṭā'*, *ijāra* (lease) and *ihyā' al-mawāt* (the reclamation of waste land) have been relied upon [by the Saudi government] in various parts of the concession agreements. This is in order to obtain the necessary legal devices that could respond to some of the new developments pertaining to the grant of concessions to foreign companies. . . . [The] concession agreements provide that disputes between the parties [are to] be settled by arbitration. The Saudi authorities have "recently decided" that the arbitration agreements "shall not be contrary to Islamic law" and that the proceedings shall take place in Saudi Arabia in order for the award to be enforceable. . . . [T]he idea of deriving a combined formula from the joining-up of different contract types would fall under the notion of *tafiq* (patching-up) which is a well-recognized formula in conventional Islamic jurisprudence. One would have thought that the element of novelty here was that *iqṭā'* was being used for commercial purposes, and hence the need for recourse to *tafiq*.<sup>26</sup>

It is worth concluding that *tafiq* is another example of the existence in the *Shari'a* of concepts that permit adaptation of existing rules to new commercial realities.

<sup>26</sup> KAMALI, *supra*, at 274-275. The article by Professor Layish appears in 107 *The American Journal of Oriental Studies* issue 2, 272-293 (1987).

## § 19.02 PRIVATE PROPERTY

## [A] Lawful versus Unlawful Acquisition

In any territory, regardless of the governing legal system, property (*māl*) may be owned or un-owned. Owned property, that is, property owned by a person, in Arabic is called "*māl mamlūk*," whereas un-owned property is known as "*māl muḥāl*," which literally means "permissible property." ("*Mamlūk*" means "owned," and is used as an adjective or the past tense of the verb "*tamlūk*," which means "to own" (feminine).) In any society, and under any legal system, there are only two ways to acquire property — legally, or illegally. By definition, all cultures that exalt the rule of law favor lawful and condemn unlawful acquisition. Islamic culture is no exception, as the Qur'ān states:

You who believe, do not wrongfully consume each other's wealth but trade by mutual consent.<sup>27</sup>

This passage, *surah* 4, *ayah* 29, indicates that under the *Shari'a*, the touchstone of lawful acquisition is "consent," not the command of government. That indication is one illustration of the consistency of Islamic property law with basic tenets of capitalism. Moreover, the words "each other's" connote that "wealth" is privately owned. That private ownership is legitimate is apparent from what follows, namely, trading based on consent. Even more generally, the passage can be read as at least indirect support for global free trade based on mutual consent and just terms and conditions.

To focus, however, with the practical point about lawful acquisition, the key precept is nearly intuitive. Under the *Shari'a*, property acquired in an unlawful manner may be confiscated by the appropriate governmental or religious authority. Unlawful acquisition methodologies include bribery, fraud, oppression, robbery, theft, and usurpation (*ghaṣb*).<sup>28</sup> (A usurper is known as a "*ghaṣīb*.".) Conversely, property acquired by sale, bequest (giving property by will), gift, or in some instances involving un-owned things, gathering, is lawfully acquired. As explained below, under the *Shari'a*, the ways lawful acquisition occur depend on the property.

Generally speaking, an owner (*mālīk*) may acquire ownership originally, or derivatively through another. Original ownership occurs where the owner is the first occupant or holder of a thing (*ayn*) that had no previous owner (in Latin, a "*res nullius*"). Derivative ownership occurs in one of three ways:

- Transfer of possession:

Derivative ownership is created when possession is transferred from the old to the new owner. The *Shari'a* disaggregates the process of transferring possession into two steps:

Step 1: Delivery, called "*taslīm*."

<sup>27</sup> Qur'AN, *supra*, 4:29 at 53. See generally MAKHDI, *supra*, ch. III (concerning property acquisition during life).

<sup>28</sup> See generally MAKHDI, *supra*, ch. VI (concerning attacks on property ownership, including robbery, theft, usurpation, and nuisance, and discussing causation and the defense of necessity).

Step 2: Taking possession, known as "*kaḥd*."

This step also is called "taking delivery" (*tasallum*), or "receiving" (*istifā*).

- Non-possessory transfer of ownership:

Derivative ownership can be created through certain transactions that do not lead to a transfer of possession, but which do create *in rem* rights in another person, the new owner. Ownership is transferred, even though possession is not.

An example is a legacy (a gift made through a will, *i.e.*, a bequest). The heirs have ownership to assets mentioned in the will, though those assets are not transferred until the death of the testator. Another common example is land. It is not necessary to take possession of land in order to transfer ownership of it. However, there are stricter rules of evidence in Islamic Law — and, indeed, in many legal systems — regarding proof of ownership of land than there are concerning other types of property.<sup>29</sup>

- Pledge:

Finally, derivative ownership may be transferred through a pledge of an object, followed by certain conditions. (Pledge arrangements are discussed below.) A pledge arrangement must be done by a contract. That means, both offer and acceptance are required. The contract is said to be binding (*lāzim*) when the creditor takes possession of the object that has been pledged.

Conversely, under the *Shari'a*, ownership cannot be acquired by finding a thing. Doing so would be a (*ghaṣb*) of the rights of the true owner (*mālīk*) by the usurper (*ghaṣīb*).

## [B] Lawful Acquisition of Un-Owned Land

If property is previously un-owned, *i.e.*, it is *māl muḥāl* (permissible property), then lawful acquisition of it occurs through domination. "Domination," called *istilā'*, is demonstrated through one or more of three behaviors:

- (1) Possession of property.
- (2) Occupation of property or
- (3) Activity in relation to the property that evinces an intention to own the property, such as work on the property

Domination may occur with respect to real property, or personal property, *i.e.*, as to immovable or movable objects. The acquirer may be an individual, group of persons, or governmental authority.

However, the consensus of Islamic *fukahā'* hold that it may not occur in respect of property of importance to a community. For example, land with mineral wealth

<sup>29</sup> See SCHACHT, *supra*, at 141.

— such as energy resources (natural gas or oil), or salt, would be excluded from un-owned land that can be acquired by domination. Likewise, land adjacent to a city, town, or village serves that population center, by way of providing space for cemeteries, forests (from which to gather wood for fuel), livestock pasture, public passage, or recreation. In all these instances, un-owned land is excluded from the category of permissible land, *i.e.*, it cannot be acquired by an individual through domination. Rather, it is treated as public (community) property to serve the needs of the community.

A governmental authority may assign rights to un-owned land in the excluded category to develop the property in service of the community, such as constructing housing, or rendering the land fertile for farming. (In effect, the assignment is a usufruct interest.) But, room for maneuver is limited. The government is not supposed to assign such rights, in respect of land near a town or village, to an outsider. A non-local party might not take the same degree of care of the community needs as a local assignee, or at least that is the presumption. Moreover, the period of assignment is restricted to 3 years, after which the government may re-assign the property to another local party if the first assignee failed to develop it for the benefit of the community. Overall, this exclusion is an important feature distinguishing the *Shar'ia* from other legal systems, in which private parties can acquire through domination land of valuable interest to the community.

The three forms of behavior articulated above that constitute domination may be distinct, or overlap. Consider a hypothetical parcel of un-owned barren land called "Amal Acre," located outside a city. Suppose Maryam puts a fence around this acre, or builds a home and workshop on it in which she lives and works, respectively. The first behavior would be possession, and the second behavior would be occupation. Her actions also seem to qualify in the third category of behavior, as they bespeak her intention to own Amal Acre. Other examples of behavior that would qualify under the *Shar'ia* as *istilā'* (domination) include extracting resources from the land, or reclaiming land (*e.g.*, from the sea, as Dubai has done for internationally renowned construction projects). Hunting on the land, too, would qualify. In *surah* 5, *ayah* 96, the Qur'ān states:

It is permitted for you to catch and eat seafood — an environment for you and the traveler — but hunting game is forbidden while you are in the state of consecration [for pilgrimage] [*i.e.*, the *Hajj*]. Be mindful of God to whom you will be gathered.<sup>30</sup>

Thus, if Maryam catches any land animals, birds, or fish, or finds a valuable treasure such as gold or pearls, on Amal Acre, then she acquires ownership of this property. Interestingly, she loses ownership if the game she catches escapes, unless she immediately tries to recapture it. If the recapture effort fails, then she would retain ownership, presumably by virtue of that effort. Suppose Maryam tames, but does not kill, wild animals, which for a period regularly visit Amal Acre, but thereafter migrate elsewhere. She retains ownership of Amal Acre because of having tamed the animals, though she loses ownership over the animals, once they stop frequenting Amal Acre, to anyone else who hunts or captures them.

<sup>30</sup> Qur'an, *supra*, 5:96 at 77.

Assume, however, Maryam only puts markers, such as stones or posts, around Amal Acre. That behavior would not qualify as behavior constituting domination, because she does not possess or develop the land. The only legal effect of the demarcation would be to give Maryam a priority in a claim to own the land *vis-à-vis* other claimants. But, the priority lasts only for three years from her demarcation of Amal Acre, after which it lapses. During the three years, another person could occupy and develop the land, though Islamic jurists would consider this action reprehensible.<sup>31</sup> Observe (as explained earlier in respect of easily exploitable property and barren land) that regardless of what Maryam does, under the majority of the Sunnite Schools, she does not need advance permission from a government body to lay claim to the un-owned land, but under the *Hanafi* School, she would need prior authorization.

Continuing the Amal Acre example, suppose Maryam finds treasure on this parcel. The "treasure" could be solid-state wealth, gold or pearls (as suggested earlier), or a mine with valuable resources like salt, or it could be liquid-state wealth, such as water (*e.g.*, a spring). Is Maryam the owner of that treasure? The answer is "it depends," specifically on the timing of her discovery. If her discovery pre-dates her ownership, that is, she has not exercised dominion over Amal Acre, then the treasure belongs to the community. That answer, upon which all Four *Sunnite* Schools agree, is logical. The property itself, while un-owned by any one party, belongs to the community. If her discovery post-dates her acquisition, then the answer still is "it depends." Two of the Schools, the *Hanafi* and *Shāfi'i* School, agree treasure found on privately owned property is itself property of the land owner. That is because the treasure is part of the property.

*Hanbali* School *fukahā'* agree with their counterparts in these two Schools, except in one key case: water. *Imām* Ibn Hanbal examined the *hadith*, recorded by Al-Shawkaani and quoted earlier, which states: "People are partners in three things: water, grass and fire."<sup>32</sup> Based on it, he argued water, or even liquids that

<sup>31</sup> See Kamali, *supra*, at 268.

<sup>32</sup> Al-Shawkaani, *Nayl al-Arṭah*, vol. V, p. 303, quoted in Kamali, *supra*, at 253.

Still another exception, in addition to the "water exception" of the *Hanbali* School and "mineral wealth" exception of the *Māliki* School, is for gold and silver. Some Islamic scholars argue they are special kinds of mineral wealth, and therefore belong to the community. The appropriate religious authority may manage this wealth in the public interest (*maslahah*).

At least one prominent scholar, Al Shishāni Shirāzi, argues that the nature of the mineral wealth should determine whether that wealth belongs to the community, or may be owned by an individual who acquires property. Al Shishāni Shirāzi establishes a test: is the mineral wealth an essential commodity, in the sense that the livelihood of people is dependent on it? If the answer is "yes," then the mineral wealth belongs to the community. If the answer is "no," then the mineral wealth should be treated as a treasure trove. (Islamic legal rules on treasure troves are discussed below.) The government may impose a tax of one-fifth of the value of the treasure (the "*khums*," or "one-fifth share," tax), and then give the remainder to the owner of land on which the treasure was discovered. Notably, Al Shishāni Shirāzi applies this test to mineral wealth regardless of whether it is found on owned or un-owned land.

As for Al Shishāni Shirāzi himself, his full name is: Abo Isḥaq Al-Shirāzi Ibrāhīm Ibn 'Alī Ibn Yūsuf Al Fairouz Abadi Al Shirāzi Al-Shāfi'i. He lived from 1003-1083 A.D. (393-476 A.H.). He was born in Fairouz Abad, a small village in Persia, and moved to Baghdad, and became an important *Shāfi'i* *imām*. He wrote *Al-Muḥaḥab* (The Politic), *Al-Lam' Fi Usul Al-Fiqh* (Shine in the Principles of Jurisprudence), *Al-Tanbih* (The Alert), *Al-Ma'ūsuh Fi Al-Jadal* (Aid in Controversy), and *Al-*

resemble water lying deep beneath the earth, are not the private property of the finder, but rather are to be shared by the community. As for the *Māliki* School, it draws an even broader exception than the *Ḥanbalī* School. Any mineral wealth found by a person such as Maryam belongs to the community. The *Māliki* School urges this conclusion regardless of when Maryam finds the treasure — before or after acquiring ownership by dominion. The *Māliki* School holds that any mineral wealth found on any land belongs to the community. Not even the highest governmental authority has the power to grant an assignment to it on a permanent basis. This authority may assign temporarily rights to develop the property on behalf of the community, but the assignment must not exceed the life of the assignee. Never does the assignee acquire ownership or the right to alienate the mineral wealth.

Notably, *Sharī'a* scholars view as “highly recommended” the acquisition of un-owned property through work. That is because work entails intellectual and physical exertion, and if done with sincere devotion to a worthy cause, “is often equated with worship (*ʿibāda*) that earns the pleasure of God.”<sup>33</sup> This approach is based on at least two *ḥadīths* recounted by Tabrizi:<sup>34</sup>

- No one has ever eaten food purer than that which is eaten through the labour of one's hands; the Prophet (*cum king*) David, peace be upon him, used to earn his living through the labour of his hands.
- God Most High loves His servant who occupies himself in sustained work. Equally well, these *ḥadīths* support the acquisition of un-owned land by occupation.

Once un-owned property is acquired through domination, then it never is acquired by that means again (with the arguable exception of adverse possession, discussed later). That is, all further lawful acquisition of the property by another person, subsequent to the original owner, occurs by the usual means such as sale, gift, or inheritance. This rule holds true even if owned property is abandoned by its owner, and appears unattended, even barren. Such property remains owned, and if the owner cannot be found, then the public treasury (*bayt al-māl*) may assert control and management of it. The treasury may treat it as property with no identifiable owner, and possibly assign rights to it, or sell it.

### [C] Lawful Acquisition of Owned Land

In modern times, the vast majority of cases of lawful acquisition concern land that is owned currently, or has been at one time. The *Sharī'a* rules on ways to acquire ownership of owned land are straightforward. If property already is owned, then a person may acquire ownership through any one of four methods.<sup>35</sup> Acquisition of property by any of these methods is acquisition based on mutual consent of the relevant parties.

*Molakaḥ Fi Uṣūl Al-Fiqh (The Summary of Jurisprudence).*

<sup>33</sup> KAMALI, *supra*, at 269.

<sup>34</sup> TABRIZI, *MISHKAT*, vol. II, *ḥadīth* no. 2759, quoted in KAMALI, *supra*, at 270.

<sup>35</sup> See KAMALI, *supra*, at 269-277.

#### • Sale

Owned property may be sold for value by its rightful owner, thereby conferring ownership to the buyer. Such transactions are by contract, and — as in the non-Muslim world — buying and selling real and personal property are commonplace events throughout Muslim countries.

#### • Work

Property may be acquired lawfully through personal effort, one's own labor, or the sweat of one's brow, as it were. It is worth stressing that self-exertion — work — to earn income and acquire assets in a lawful manner so that one can support oneself and one's family is a form of service to God, called *ʿibādah*. This category, of course, includes the purchase of real and personal property, *i.e.*, acquisition by contract. Presumably through self-exertion, an individual is in a position to contract for property. As explained earlier, “work” also includes acquiring possession, and thereafter ownership, of previously un-owned things, as where an individual collects (gathers), fishes, or hunts in the wild.

#### • Gift

Alternatively, property may be obtained by gift, which involves no self-exertion by the acquirer. Any owned property may be given as a gift, for free and with no expectation of anything in return, by its rightful owner, thereby conferring ownership to the beneficiary of the gift. In these respects, Islamic Law is no different from any other legal system, whether sacred or secular. It may be added that property obtained under the *zakāh* (almsgiving) is acquired and owned by the beneficiary, following the transfer. That is because *zakāt* is a right held by the poor to a portion of the wealth of the rich.

#### • Inheritance (Bequest)

Owned property may be lawfully acquired through a bequest, *i.e.*, an inheritance by a beneficiary from a testator-property owner upon his or her death. The beneficiary will be a legal heir of the testator. This method, while a gift, may be treated as a separate category, given the array of special rules that apply to it. That inheritance is a legally valid way of acquiring ownership is evident from the Qurʾān itself, as *surah* 4 states:

<sup>11</sup>Concerning your children, God commands you that a son should have the equivalent share of two daughters. If there are only daughters, two or more should share two-thirds of the inheritance, if one, she should have half. Parents inherit a sixth each if the deceased leaves children; if he leaves no children and his parents are his sole heirs, his mother has a third, unless he has brothers, in which case she has a sixth. [In all cases, the distribution comes] after payment of any bequests or debts. You cannot know which of your parents or your children is closer to you in benefit: this is a law from God, and He is all knowing, all wise. <sup>12</sup>You inherit half of what your wives leave, if they have no children; if they have children, you inherit a quarter. [In all cases, the distribution comes] after payment of any bequests or debts. If you have no children, your wives' share is a quarter; if you have children, your wives get an eighth. [In all cases, the distribution comes]

after payment of any bequests or debts. If a man or a woman dies leaving no children or parents, but a single brother or sister, he or she should take one-sixth of the inheritance; if there are more siblings, they share one-third between them. [In all cases, the distribution comes] after payment of any bequests or debts, with no harm done to anyone: this is a commandment from God, and He is all knowing and benign to all.<sup>136</sup> These are the bounds set by God: God will admit those who obey Him and His Messenger to Gardens graced with flowing streams, and there they will stay — that is the supreme triumph!<sup>136</sup>

This passage is not restricted to any particular kind of private property. It covers all asset categories, including movable and immovable objects, in the estate of a testator. The passage also lays out the shares in the estate to which each close relative is entitled. (Note there are inheritance shares prescribed in the Qur'an, and a general rule that a testator may direct a maximum of one-third of his estate to a person or institution that is not his or her legal heir, or to an heir with the agreement of the other heirs.)

At what moment in time does an heir acquire ownership by virtue of inheritance? The answer to this practical question is apparent from the above quoted Qur'anic passage. There are two claims to an estate given priority over the shares of the legal heirs of a decedent: first, funeral expenses must be covered; then, any unpaid debts of the decedent must be paid. Thereafter, the heirs acquire their respective interests in the estate. Consequently, the *Hanafi* School teaches ownership in inherited property vests in an heir only after the first two claims are addressed. So, an heir could take operational control over the property of a decedent to facilitate payment of funeral expenses and debts, but not to begin using and enjoying that property for himself or herself.

Significantly, in respect of all types of lawful acquisition, consent in and of itself is necessary, but not sufficient, for lawful acquisition. A second feature of a transaction in personal or real property is essential for a trade to be lawful. That feature is fair value, which is especially relevant when the acquisition is via work (e.g., purchase) as opposed to gift (e.g., inheritance). Property is wrongfully appropriated if it is obtained without paying fair value. Thus, Professor Kamali writes:

"Wrongful appropriation of the property of others (*akl al-māl bi'l-bātil*)" is a broad Qur'anic concept that comprises within its scope not just theft, robbery and fraud, which are usually committed by persons other than the owner himself, but also hoarding, gambling and usury in which the owner may be acting himself — but since they do not fall within the scope of trading by mutual consent, they are all forbidden. . . . Another instance of the wrongful appropriation of property specified in the Qur'an is bribery, which distorts the course of justice and leads to the sinful enrichment of some people at the expense of others ([*surah*] 2:[*ayah*] 188). It is therefore not the element of consent on its own, but this when it is combined with an

*exchange of values through fair-trading, that distinguishes a lawful transfer of ownership from a wrongful appropriation of the property of others. For consent may be present in bribery, but is lacking in a fair exchange of values.*<sup>37</sup>

To be sure, the Qur'an does not detail what constitutes "fair value" in every instance. Scholars and students of the modern law of expropriation know there are a variety of formulas to determine whether the owner of an asset seized by a government has been compensated fairly. Arguably the most sophisticated formula, in the *North American Free Trade Agreement* (NAFTA), is payment of the market value of the expropriated asset as of the time of the expropriation. Obviously not a technical free trade agreement (FTA) or bilateral investment treaty (BIT), the Qur'an lays out the general principle that both (1) consent and (2) exchange of fair value are required for property acquisition to be fair.

As for termination of ownership, that occurs through the same means — sale or other lawful manner of transfer. Notably, it is not possible for an owner to terminate his or her interest via abandoning property, absolving himself or herself of responsibility for the property, or renouncing the property.

## [D] Finding Treasure (*Luqta*)

In Arabic, a treasure trove is called "*luqta*." The treasure may consist of money, other valuable objects, or both. It may exist on the surface of the earth, or lie beneath the surface of the earth. Perhaps amusingly to most contemporary lawyers, for whom finding material treasure and keeping it is more of a dream-come-true than a pressing legal matter, Islamic jurists have spent considerable time on the disposition of treasure troves.

Generally speaking, when a person finds a thing, her right to dispose of it is limited to one transaction: making a charitable gift of the thing. But, she can do so only after she gives public notice of the find, and no other person has come forward to claim ownership of the found object. A notable exception exists if the finder is a poor person. Such a person can use the found object, whereas if the finder is a rich person, or at least not impoverished, then she cannot use the found object for herself. Rather, a well-off finder has only one choice: make a charitable gift, called "*ṣadaka*." Interestingly, a well-off finder could give the object to her parents or children, if they are poor. In that sense, it is not a complete *ṣadaka*, because her family could benefit from it.

Overall, the better practice is to hold the object in trust — as *amāna*.<sup>38</sup> That way, the finder conveys her clear intention to return the object to its true owner, rather than usurp the rights of the true owner. If a true owner does come forward, then the finder has a choice. She can seek return of the object, or she can leave it with the finder. In the former instance, the true owner can pay the finder for any increase in value the finder contributes to the object, or obtain payment from the finder for any decrease in value the finder caused to it. Where the true owner elects

<sup>36</sup> Qur'an, *supra*, 2:11-13 at 51-52. See generally MAKDISH, *supra*, ch. V (concerning property acquisition upon death).

<sup>37</sup> KAMALI, *supra*, at 248 (emphasis added).

<sup>38</sup> See SCHACHT, *supra*, at 137. See generally MAKDISH, *supra*, ch. IIF (concerning lost property).

to let the finder keep the object, she can claim from the finder a compensatory payment, in effect, a sale price. The *Shari'a* does not contain a principle like "finders keepers, losers weepers." But, it is possible to acquire ownership by finding an object, and then paying the original owner for its value.

To elaborate on these principles, consider the basic hypothetical problem: "suppose Jihan finds some treasure . . ." The question is how the treasure should be treated. Who owns it, and under what circumstances? Are taxes due to the government, and if so, then how much? Does the kind of land on which, or underneath which, the treasure is found, affect the disposition of the treasure? Does the nature of the treasure itself affect its disposition? To these questions, there is a consensus among the Four *Sunni* Schools as to what to do in the following scenarios:

- *A treasure trove is discovered on owned land*

The treasure trove belongs to the owner of the property on which it is found, not to the finder of the trove. There is no "finder's keepers" principle, unless the finder is the property owner

- *A treasure trove is discovered on owned land*

The "finder's keepers" principle applies. Hence, the finder of the treasure on un-owned property — whether it is barren land, a forest, or a mountain — becomes the lawful owner of the treasure.

- *A treasure trove is that has no identifiable owner:*

An attempt should be made to find the true owner. If a Muslim establishes a valid claim to the owner, then he or she may be given the treasure, and become the owner of it. No taxes are owed on the treasure. If a non-Muslim makes a valid claim, then he or she may receive the treasure and own it. However, a tax of one-fifth of the value of the treasure — the so called "one-fifths share," or "*khums*," tax — must be paid by the non-Muslim to the government. The non-Muslim keeps the remaining four-fifths of the treasure.

- *A treasure trove is discovered, with an Islamic mark, but no person lays claim to it:*

If a treasure trove is found that bears a sign or other indication that it is of Islamic origin (e.g., it belonged to a Muslim), then an effort to find the true owner should be made. If this attempt fails, and if no person establishes a valid claim to a treasure trove, then the benefits from the trove are to be put in service of the poor. The poor may include the finder of the treasure, thus the "finder's keepers" principle does not apply to wealthy finders. No *khums* (one-fifth share) tax is owed on the treasure.

- *A treasure trove is discovered, with a non-Islamic mark, but no person lays claim to it:*

If a treasure trove is found that bears a sign or other indication that it is of non-Islamic origin (e.g., it belonged to a Christian), then an effort to find the true owner should be made. If this attempt fails, and if no person

establishes a valid claim to a treasure trove, then two outcomes are possible, depending on whether the original owner of the land on which the treasure trove was discovered is identifiable. First, the government may impose a *khums* (one-fifth share) tax on its value, and give the remaining four-fifths of the trove to the original owner of the land on which the treasure was discovered. If the original owner is deceased, then his or her heirs may receive the remainder of the trove. Second, where neither the original land owner, nor his or her heirs, can be traced, the entire amount of the trove becomes the property of the government. In effect, it goes to the public treasury. Note, however, that *Imām* Abū Yūsuf disagrees with these outcomes, and argues for application of the finder's keepers principle in this scenario.

- *A treasure trove is discovered, with no marks whatsoever, and no person lays claim to it.*

An un-marked treasure trove is treated like a trove bearing Islamic marks. In essence, it is deemed to be of Islamic origin.

In summary, the general presumption of "finder's keeper" does not apply in most cases. Rather, the best solution is to find the true owner of the treasure trove. If the true owner is not identified, then the second-best solution is to use the treasure to serve the needs of the poor, or at least the public treasury.

These rules raise two problems. First, why is it permissible to discriminate against a non-Muslim with a valid claim to a treasure trove, by imposing the *khums* tax? Indeed, why should religious markings on the treasure matter? Second, are the rules, especially the second and third, entirely consistent? The second rule seems to champion the finder, but the third rule relegates the claim of a finder to a search for the owner.

### [E] Individual versus Joint Ownership

The *Shari'a* recognizes the possibility of joint ownership of property, an occurrence that is especially common with respect to land.<sup>39</sup> Often, joint ownership arises from inheritance, or from acquisition of proceeds by a partnership. Islamic Law identifies two kinds of joint property: (1) indivisible, and (2) divisible.

Most kinds of joint property can be divided. For example, joint ownership of a building could be divided among the joint owners, such that each person owns a separate part of the building. That is to say, separate ownership of different stories of a building, or different rooms in the building, is possible. The process of division of the property among the owners is called "*kisma*."

Joint ownership necessarily entails joint use by the owners, so long as the property remains undivided. However, the nature of the sharing varies from case to case.<sup>40</sup> For example, partners may share a building through simultaneous use of

<sup>39</sup> See generally MAKHDI, *supra*, ch. ILC (concerning joint ownership).

<sup>40</sup> See SCHACHT, *supra*, at 139.

different rooms in that building. Or, they may rotate use of the entire building, one at a time.

There are some instances in which divisible property that is jointly owned by partners can be divided without the consent of other partners. However, that division must not adversely affect the use of the resulting divided parcels. More likely, especially in the context of the sale of jointly-owned land, is the invocation of a right of pre-emption. This right is known in the *Shari'a* as "*shufa*."

Briefly, *shufa* is the right of a person to substitute herself for an outside buyer, and thus herself buy the real estate (or portion thereof). That is, if one joint owner offers her share in jointly owned property for sale, then the other joint owner has a priority of right to buy the share that is up for sale. (That is equally true if there are more than two joint owners.) *Shufa* vests in two and possibly three persons, in descending order of preference: (1) the co-owner, i.e., a co-owner is the first person entitled to exercise the right of pre-emption; (2) the owner of a servitude in the property (e.g., the owner of any encumbrance, such as an easement, on the property); and (3) depending on which of the Four Schools is applicable, the owner of adjoining property, that is, the neighbor.

As travelers to urban areas in the Middle East and Southeast Asia knows, increasing population density in the post-Second World War era has necessitated "building upwards." Some of the tallest buildings in the world are found in Dubai, United Arab Emirates (UAE) and Kuala Lumpur, Malaysia. An Islamic Property Law issue that arises because of this trend is who among owners or co-owners of a building has the right to build a new upper storey? The answer is the owner of the presently-existing upper storey.<sup>41</sup> That is, the right to construct a new story is not associated with the building itself, but with whoever owns the highest storey. Therefore, it is possible to sell the presently-existing upper storey, and with it the right to build a new storey. However, the two are not severable. It is not possible for the owner of the existing upper story to sell the right to build a new storey, without at the same time selling her storey.

## [F] Termination of Ownership

A practical everyday question is how is ownership terminated? In Islamic Law, as in other legal systems, the usual manner of termination is through voluntary transfer — the same kinds of transactions discussed above, such as sale, bequest, or inheritance. However, there are two other intriguing ways an ownership interest may be cut off: usurpation (*ghaṣīb*) or apostasy.

First, another person simply may have usurped the rights of the true owner (*mālik*). If that usurpation goes unchecked and unpunished, then the usurper (*ghaṣīb*) becomes the owner of the object in question — at least in a *de facto* sense. Second, an apostate, who in Arabic is called a "*murtadd*," stands to lose all her ownership interests in property. That cessation is not immediate.<sup>42</sup> Initially, ownership rights of an apostate are held in abeyance. Cessation occurs if the

<sup>41</sup> See SCHACHT, *supra*, at 142.

<sup>42</sup> See SCHACHT, *supra*, at 138.

*murtadd* dies, or if she leaves the territory of the Muslim state in which she resided and fails to return to the Islamic faith. This manner of termination of ownership interest illustrates the interaction of the sacred and profane in Islamic Law. Moreover, it poses a potentially significant barrier, depending on the individual involved, to conversion. That is, it is a restriction on freedom of conscience.

## §19.03 POSSESSION

### [A] Right to Possess

Possession is a necessary and commonplace feature of a contemporary capitalist free-enterprise system. Some tenants possess arable agricultural land. Others possess commercial office space, such as dental, medical, and legal aid clinics, restaurants, and stores. Still others possess apartments or homes, in which they and their families live. This wide array of examples pertains just to real property. Possession also occurs in respect of movable property. Cars and trucks, farm equipment, physical capital goods (i.e., machine tools), and party supplies (such as tables, chairs, and tents) are all examples in which possession of personal property is conveyed temporarily from its owner to a possessor. The common consequent appellations and legal relationships, respectively, are creditor (lender) and debtor (borrower). Still another instance is a deposit of collateral. For example, a securities firm extending credit to investors to purchase stocks or bonds may require (under applicable securities regulations) to require a borrower to maintain funds in a margin account equal to a fixed percentage of the value of the financial instruments purchased on margin (i.e., with borrowed funds).

In these and many other examples, a possessory relationship is designed to yield an economic gain to the owner, possessor, or both. Clearly established property rights in respect of possession not only are a manifestation of the freedom of an owner to use her property as she deems fit, but also bolster economic growth. Possession is well known to Islamic Law. As it has with the right to own property, the *Shari'a* always has recognized and provided for the right to possess.<sup>43</sup> Here is another instance in which it has a property concept relevant to modern capitalist economic growth.

In Arabic the right to possess property is called "*yad*." The possessor is called "*dhul yad*" (or "*dhul al yad*"). The terms "*yad*" and "*dhul yad*" are used in the context of *in rem* property rights. But, like "*milk*" (ownership) and "*mālik*" (owner), they also are found in other contexts. For example, "*yad*" can refer to the authority of a husband in a marriage, or of a father in a family. Thus, the term can arise in Islamic Family Law.

<sup>43</sup> See SCHACHT, *supra*, at 136. See generally MAKDISI, *supra*, ch. 11.B (concerning leasehold).

## [B] Legitimate versus Illegitimate Possession

In Islamic Property Law, there are two basic kinds of possession. Possession may be legitimate, known as "*yad muhikha*." Or, possession may be illegitimate, called "*yad multila*." These categories have analogs in American Property Law, namely, lawful and unlawful possession, and are mutually exclusive categories. A possessor (*dhul yad*) cannot at once be in legal and illegal possession of the same property.

Among the many instances of legitimate possession, there is fiduciary possession, called "*yad amana*." In contrast, illegitimate possession results from usurping property owned by another person. Usurpation of property is called "*ghashb*." A usurper is called a "*ghashib*." (Of course, illegitimate possession can result from theft or highway robbery, but these instances are covered by Islamic Criminal Law.)

From a religious perspective, *ghashb* is considered sinful.<sup>44</sup> A *ghashib* is liable for a discretionary punishment ("*ta'zir*"), and must return the property to its rightful owner. From a legal standpoint, Professor Schacht concludes usurpation results in "the highest degree of liability known to Islamic law."<sup>45</sup> That is because a *ghashib* bears what may be termed "treble liability."

First, a *ghashib* bears legal liability for any loss to, or diminution in the value of, the usurped object (e.g., a partial or total loss in value). After all, the *ghashib* may well have caused the loss, even if simply by exposing the object to danger that was not foreseeable (like adverse weather conditions, such as lightning or rain to an electronic gadget, or adverse environmental conditions, such as a snake bite to a camel, horse, goat, or cow that is being possessed). Indeed, the theory of imposing this liability on the *ghashib* is precisely that he or she exposed the object to a dangerous condition.

Second, a *ghashib* is liable for loss caused by the usurped object. That is, a usurper bears downstream, or consequential, liability, for injury to another person, animal, or object caused by the initial usurpation (*ghashb*) of property. If, for example, a *ghashib* usurps a horse, which then kicks and hurts a child, the *ghashib* is liable for the injury.

Third, a *ghashib* may be held legally liable for loss or damage to the usurped object even if that loss or damage occurs before the usurpation, or manifests itself after the object is returned to its rightful owner. At first glance, this result seems surprising, because it means legal liability can include a damage caused while a usurped object is in the possession of its rightful owner. However, the theory is that the *ghashib* broke the continuity — the chain of rightful possession — by his or her usurpation (*ghashb*). Professor Schacht outlines the example of an owner inflicting a wound on a slave, followed by usurpation of the slave by a *ghashib*, and thereafter followed by return of the slave to the owner, and finally by the death of the slave from the wound. The *ghashib* breaks the effect of wound inflicted by the owner, hence justifying liability on the *ghashib*.

<sup>44</sup> See SCHACHT, *supra*, at 160.

<sup>45</sup> SCHACHT, *supra*, at 160.

Nor surprisingly, a usurper is not entitled to any increase in value or other benefit accruing from usurpation. That is true in a religious and legal sense. Nor should a *ghashib* have that entitlement. It is a principal not only of the *Shari'a*, but indeed a universal legal norm, that a wrongdoer ought not to reap rewards from his or her wrongful behavior.

The liability scheme, opines Professor Schacht, partly grew out of harsh realities in the formative period of the *Shari'a*. Misappropriation of private property was common, and protecting owners by distinguishing between legitimate and illegitimate transfers of possession was necessary, during the early Caliphates. Be that as it may, the severe religious and legal liability triggered by illegitimate possession is further evidence of the respect the *Shari'a* accords to private property. Islamic Law seeks to protect the property of an owner, while allowing her to alienate it temporarily for productive use.

An obvious practical question concerns disputes about rights of possession, namely, how are they resolved? There is an adage in American Property Law that "possession is nine-tenths of the law." The *Shari'a* has a similar rebuttable presumption. As Professor Schacht writes: "[p]ossession confers a prejudice as to ownership."<sup>46</sup> Aside from this presumption, disputes to possessory rights are adjudicated on a case-by-case basis and are fact specific. As one simple example, suppose a plaintiff sues a possessor of an object, claiming the possession is illegitimate. One possible defense might be the possessor holds the object in deposit on behalf of a third party. If that is true, then a *qadi* will not entertain the suit. The *qadi* will rule the plaintiff's claim as invalid. On the other hand, if it is untrue, then the claim will be a valid one, namely, for usurpation (*ghashb*).

## [C] Adverse Possession

One of the most fascinating points about Islamic Property Law from a comparative legal standpoint concerns adverse possession. In standard first-year courses on Property Law in the United States and other countries in which that Law is sourced in English Common Law, the doctrine of adverse possession is encountered. What is rarely mentioned is that the *Shari'a* contains the doctrine of adverse possession, and did so nearly 1,000 years before the doctrine became firmly rooted in American jurisprudence.

Under the *Shari'a*, no claim of ownership to land can be made against the possessor of that land after the prescribed adverse possession period. This period varies. Professor Schacht identifies 30, 33, or 36 years being the most commonly used. If no ownership claim to the land in question is made during the period, then no claim can be lodged after it expires. Oddly, though, Professor Schacht observes that Islamic Law does not contain a more general doctrine than adverse possession to would protect possessory interests. That is, "the concept of protection of possession is absent from Islamic law."<sup>47</sup> The above discussion of legitimate versus illegitimate possession clearly is at odds with this observation, rendering it, perhaps, erroneous.

<sup>46</sup> SCHACHT, *supra*, at 139.

<sup>47</sup> SCHACHT, *supra*, at 139.

There are special rules in the *Shari'a* concerning possession of unoccupied, uncultivated waste land. They address the practical question of how waste land becomes possessed. The straightforward answer is cultivation. It is through the cultivation of waste land that such land becomes occupied and, thereby, possessed. Conversely, land that is not put to use is deemed under the *Shari'a* to have no owner. Logistically, except for digging a well or planting a tree, to cultivate unoccupied waste land, a prospective farmer — occupant first must obtain a license from an authority, such as an *imam*.<sup>48</sup> Assuming the license is granted, the occupant marks off the land with an enclosure. The occupant must cultivate it within 3 years of receiving the license in order to claim legitimate possession. If the land still is fallow after three years, then the license lapses.

### [D] Deposits (*Amāna*), Pledges (*Rahn*), and Liens (*Habs*)

"*Amāna*," meaning a "deposit," is a common example of possession, and one essential to the advancement of an economy.<sup>49</sup> An *amāna* also implies a relationship of trust, that is, a fiduciary relationship. A depositor of property literally entrusts that property with a depositary, which is a person or institution that holds possession of the deposit. The depositor is the owner of the property, yet voluntarily surrenders possession of the property for to the depositary for safekeeping and for a prescribed period. For instance, the deposit may be an escrow arrangement, whereby the depositor is purchasing real property or other substantial item, and the seller requires a percentage of the price (e.g., 20 percent) paid in escrow pending the closing of the deal.

The depositary is an "*amin*." The term connotes a person in a position of trust, but of course can refer to a bank or other commercial entity. Traditionally, an individual *amin* would give to the depositor a personal assurance, or transmit an assurance from a member of the family of the *amin*, that the property would be held in safe custody. In contemporary times, that assurance typically comes from an institution. Either way, the obligation of the *amin* is clear. It holds legitimate possession of the deposited property on behalf of the owner—depositor under terms and conditions to which they agree. The depositary must not use the deposited property, nor is it permitted to commingle that property with its own assets. Moreover, the depositary must not refuse to return the property, nor deny the existence of an *amāna* relationship. To engage in any of these behaviors would be to commit a transgression, or "*ta'addi*" — in effect, a tort.

Consequently, what the commercial banking community typically regards as an automatic right of set off appears not to be possible under the *Shari'a*. In American Banking Law, a bank usually enjoys some right of set off (offset), which varies in strength and degree. The bank can use funds deposited by a customer with it to satisfy an obligation owned by the customer to the bank. For example, if a customer has U.S. \$50,000 on deposit, but owes \$30,000 to the bank arising from a loan, the bank may be able to return only \$20,000 to the customer. To be sure, whether the bank has this right varies from one jurisdiction to another, and

depends on applicable banking regulations. Under Islamic Law, however, the basic *amāna* relationship appears not to permit the bank a set off right. Conceivably, the bank and customer may agree to such a right.

Closely related to a deposit (*amāna*) is a pledge arrangement. The Arabic term for pledge is "*rahn*." Pledge arrangements arise in routine property and contract transactions. They involve security — collateral — used to guarantee payment of a debt. Without such security, many commercial transactions would not occur, simply because sellers would be unwilling to take on the credit risk of the buyer. That is, pledging a valuable asset partly offsets the uncertainty a seller has about the ability or willingness of its counter-party to perform its obligations. The fact the *Shari'a* contains the concept of *rahn* is further evidence it can and does facilitate transactions, and is consistent with modern capitalist growth. Interestingly, Professor Schacht reports a pledge (*rahn*) corresponds to the Roman concept of *pignus*.<sup>50</sup> In other words, a pledge is an example of transmission of a Roman legal concept through educated non-Arab converts to Islam schooled in the liberal Hellenistic tradition, which including training in law and oratory.

Under the *Shari'a*, the purpose of the pledge is to serve as collateral security. As Professor Schacht puts it:

The pledge presupposes the existence of a debt.<sup>51</sup>

If there is no pre-existing debt relationship, then a pledge is impossible. Therefore, the *Shari'a* does not permit a suretyship arrangement (i.e., an arrangement under which one party assumes primary, direct liability to a creditor for the debt, default, or other kind of failure of another party) if the asset is pledged merely to secure a person, or a right of retaliation, with no antecedent debt.

Note the distinction between a surety and guarantor.<sup>52</sup> A surety bears primary liability, and the creditor can look to the surety for satisfaction even if the principal debtor does not default or otherwise fail in its obligations. The surety has accessorial liability, whereas a guarantor has secondary, conditional liability. That is because a guarantor is liable to a creditor only if the debtor fails in its duties to the creditor. The liability of a surety begins at the same time as that of the debtor, and the surety is a party to the principal obligation running between the debtor and creditor. The suretyship contract is executed at the same time as the contract through which the debt obligation arises. Typically, both are the same instrument. In effect, a surety is bound to the creditor as is the debtor, whereas a guarantor is liable under a separate, independent instrument executed before or after the primary debt obligation. Thus, a surety often does not receive compensation for giving a guarantee. The same consideration supporting the debt contract is associated with the suretyship. A guarantor does get some fee. A pledge can arise under a surety or guarantor situation. For example, the primary debtor may pledge an asset to the creditor, whether there is a surety or a guarantor also liable on the debt.

<sup>50</sup> See SCHACHT, *supra*, at 21.

<sup>51</sup> See SCHACHT, *supra*, at 140.

<sup>52</sup> See BRYAN A. GARNER, ED., BLACK'S LAW DICTIONARY 1579-1580 (St. Paul, Minnesota: West, 9th ed. 2009) (entry for "surety").

<sup>48</sup> See SCHACHT, *supra*, at 141.

<sup>49</sup> See generally MARICEL, *supra*, ch. II.D-E (concerning pledges and bailments).

How is a pledge arrangement made under the *Shari'a*? Not surprisingly, the answer is "like any other contract." That is, a pledge must be arranged contractually, with the essential constitutive elements of offer (*ijāb*) and acceptance (*kaḅūl*). The pledgor (i.e., the debtor seeking to provide an asset to secure its debt) makes an offer of a pledge arrangement to a pledgee (i.e., the creditor, the person to whom the pledge is given). If and when the pledgee accepts, then the pledge contract is formed. The contract becomes binding *lāzim* when the pledged object is possessed by the pledgee. Of course, in many transactions the pledge does not take actual possession of the object from the pledgor. Rather, the pledged object is deposited with a third party, such as a trustee. The trustee must be *'adl*, i.e., of good character. Then, the pledge contract is *lāzim* upon the depositing of the object with the trustee.

The typical terms of a pledge contract are as follows:

- Expenses associated with a pledge arrangement are divided between the pledgor (debtor) and pledgee (creditor). The pledgor is liable for any expenses associated with the making of the pledge arrangement. The pledgee is liable for expenses incurred in connection with retaining the pledged property. Neither the pledgor nor pledgee can use that property to cover these expenses.
- The pledgee must return the property as soon as the pledgor pays off the debt.
- If the debt is not paid when it matures, then the pledgee has the right to sell the property to satisfy the debt. If the sale proceeds exceed the amount of the debt, then the pledgee must hold them in trust (*amana*) for the pledgor.
- The debt continues to be outstanding until it is paid, or until the pledged property is sold and the proceeds cover the debt.
- During the pendency of the pledge, the pledgor cannot use or otherwise dispose of the pledged property in anyway. The rule is strict. The rule eliminates the possibility that the pledgor could demand return of the property to sell it, and thereby raise the proceeds to pay off the debt that the property secures. That kind of sale is for the creditor, not the debtor.
- The pledgee, or other depositary, of property is an *"amin"* (a person or institution in the position of trust). Hence, there is a fiduciary relationship between the pledgee and pledgor.
- The pledgee is liable for the object pledged. This liability is triggered by a transgression — a *"ta'addi,"* which is equivalent to the American concept of a "tort." For example, it would be a transgression for the pledgee to use the property. • The amount of the liability the pledgee bears equals the lesser of (1) the value of the object, or (2) the value of the debt secured by the object. The first valuation method is used if the pledgee loses the object and is at fault for the loss.
- However, the pledgee is not liable for an accidental loss to the pledged property.

In addition to these terms, an obviously important question in any pledge contract negotiations concerns the kind of assets that are acceptable as security.

That is, what kind of property can be pledged as security for a debt? To lawyers familiar with American Property Law, the answer is rather surprising. There is a wide range of choice, and for the most part, the answer is up to the pledgor and pledgee to negotiate. But, there is one highly important exception — land. Real property cannot be pledged to secure a debt. Consequently, Professor Schacht points out that "[t]he concept of mortgage is unknown in Islamic law."<sup>53</sup>

Related to the topics of deposits (*amāna*) and pledges (*rahn*) are liens. Like American Property Law, the *Shari'a* recognizes liens on property. They are called *"ḥabs,"* which technically refers to a right of retention. Conceptually, a lien differs from a pledge. A pledge is designed to secure repayment of a debt that is unrelated to the collateral security pledged by the debtor. A lien is designed to secure a claim associated with the object on which the lien exists. Thus, a lien is a property right, specifically, an *in rem* right of retention with respect to a thing, where the transaction being secured is related to that thing. One example is of a *ḥabs* covering an object to secure payment of wages for work done on that object.<sup>54</sup>

What liability does the lienor (i.e., the party holding the *ḥabs* on the object, in effect, the creditor) have as regards the object? Among the *ulema* (religious scholars) and *fukahā'* (legal scholars), there is disagreement. Some scholars say it is the same liability as that of a pledgee. Other scholars urge a lienor bears greater liability than a pledgee.

## Chapter 20

### PROPERTY LAW: PROTECTING AND RESTRICTING PRIVATE OWNERSHIP

---

In today's globalized world, it is increasingly evident that peace can be built only if everyone is assured the possibility of reasonable growth: sooner or later, the distortions produced by unjust systems have to be paid for by everyone. *It is utterly foolish to build a luxury home in the midst of desert or decay.*

Fighting Poverty to Build Peace, Message of His Holiness Pope Benedict XVI for the Celebration of the World Day of Peace, 1 January 2009, ¶ 14 (emphasis original)

#### SYNOPSIS

##### § 20.01 PROTECTING PRIVATE PROPERTY

- [A] Self-Defense
- [B] Protecting Private Property: Penal Law

##### § 20.02 RESTRICTIONS ON OWNERSHIP: GENERAL DOCTRINES

- [A] Good Neighborly Relations
- [B] Social Responsibilities of Private Owners
- [C] Four Categories of Restrictions

##### § 20.03 CATEGORY #1 RESTRICTIONS: PREVENTING HARM

- [A] Harm Principle, Intent, and Preemption
- [B] 1877 Ottoman *Mejelle* and Examples of Harm Principle
- [C] Women, Privacy, and Physical Barriers

##### § 20.04 CATEGORY #2 RESTRICTIONS: PUBLIC INTEREST

- [A] Encumbrances (Servitudes)
- [B] Takings: Expropriation (*Muṣādarah*), Nationalization (*Ta'mim*), and Their Contexts
- [C] Public Interest (*Maṣlaḥah*) and Other Restrictions on Takings
- [D] Taxation

##### § 20.05 CATEGORY #3 RESTRICTIONS: PROMOTING COOPERATION AND RIGHT OF PRE-EMPTION (*SHUF'AH*)

##### § 20.06 CATEGORY #4 RESTRICTIONS: EFFICIENCY AND BARREN LAND

## § 20.01 PROTECTING PRIVATE PROPERTY

## [A] Self-Defense

The firm basis for private ownership in Islamic Law would be meaningless in practice if the *Shari'a* lacked strong protections of that ownership. Such protections do exist, and no doubt have contributed to the tradition of private ownership through the centuries in Muslim societies. As long as ownership of property is acquired through lawful means, the *Shari'a* protects that ownership, i.e., it contains rules to safeguard the exclusive right of the lawful owner to that property. Indeed, the *Shari'a* protects ownership by an individual, two or more individuals acting jointly, or the community.

Prominent examples of this protection are in the *Mejelle*, the Civil Code of the Ottoman Empire between 1877 and 1926, which codified part of the *Hanafi fiqh*. It lays out the legal maxim on which protection mechanisms are based. Articles 96 and 97 state:

96. The dealing by one person with the property of another, without his leave, is not lawful. 97. Without legal cause it is not allowed for anyone to take the property of another.

97. Without legal cause it is not allowed for anyone to take the property of another.<sup>1</sup>

There are three categories of protection mechanism in the *Shari'a*: a right of lawful acquisition; a right of self defense; and claims under the Criminal (Penal) Law.

The most obvious way, and a way of everyday importance, in which the *Shari'a* protects property ownership concerns lawful acquisition. If a person makes a *bona fide* acquisition of property, then she can rest assured she is the legally recognized owner — the *malik*. What happens if an innocent purchaser buys property from a seller, but after the sale is complete, a third party (*istihkāk* or *istirdād*), claims that he is the true owner? The third party claim is the seller had no right to sell the property. In this kind of case, the seller is liable for the default in ownership, which in Arabic is called the "*darak*." The liability runs to the third party, and is in the amount of the price paid by the innocent purchaser. As for the *bona fide* purchaser, her acquisition of the property remains intact.

Perhaps the most rigorous manner in which the *Shari'a* protects property ownership is via self-defense. A property owner is legally entitled to defend his or her property, and doing so is spiritually beneficial. One *hadith*, compiled by Tabrizi, says:

He who dies in defence of his property is a martyr (*shahid*).<sup>2</sup>

<sup>1</sup> THE MEJELLE — BEING AN ENGLISH TRANSLATION OF MAJALLAH EL-AHKAM-I-ADLIYA AND A COMPLETE CODE OF ISLAMIC CIVIL LAW ARTICLES 96-97 at 15 (Petaling Jaya, Malaysia: The Other Press, January 2001) (translated by C.R. Tyser, B.A.L., D.G. Demetriades & Ismail Haqqi Effendi). [Hereinafter, MEJELLE.]

<sup>2</sup> TABRIZI, *MUSHA'AT*, VOL. II, *hadith* no. 3512, quoted in MUHAMMAD HASHIM KAMALI, THE RIGHT TO LIFE, SECURITY, PRIVACY AND OWNERSHIP IN ISLAM 251 (Cambridge, England: Islamic Texts Society, 2008). [Hereinafter, KAMALI.]

This right of self-defense is notable, because in non-Islamic legal systems it typically is thought of in the context of defending one's own person from bodily harm.

By contrast, under Islamic Law, at least, the right extends to any violation, such as encroachment, of one's real or personal assets. Professor Kamali explains:

The *Shari'ah* also extends the right of self-defence, *mutatis mutandis* [with the necessary changes made], to the protection of one's property. The jurists of the leading schools of law have thus drawn the conclusion that an attack on one's property entitles the victim to repel aggression *by the least violent means that can repel it*, but if he believes that it cannot be repelled in any other way than killing the assailant, then it is permissible for him to kill him in self-defence, in which case he will have acted within his rights.<sup>3</sup>

Certainly, the right is bounded by the proportionality principle. Still, the fact that in an extreme situation, defense of property is valued over the taking of a life is remarkable.

No less surprising is the broad scope of the *Shari'a* right of self-defense of property. The right extends even to the defense of third-party property, as the *Hanafi* School jurist Ibn Al Humām writes, reflecting the position of the *Shāfi'i* School as well:<sup>4</sup>

In the event where robbers take the property of others and the latter cry for help, and it is then given, and the robbers are confronted; it is lawful to fight and if necessary kill the robbers to retrieve the property from them.<sup>5</sup>

Professor Kamali summarizes the legal prerequisites thusly:

Islamic law recognizes the right of all individuals to defend the private party of others in the same way as their own property, provided that the following conditions are met: First, that there is a hostile attack which requires immediate action, and which leaves no room for other alternative courses of action. Second, that the defendant uses no more force than he believes is necessary in order to repel the aggression.<sup>6</sup>

Curiously, though, it is unclear whether a third — and arguably critical — prerequisite exists. Must the third-party property owner ask for help?

<sup>3</sup> KAMALI, *SUPRA*, at 251 (EMPHASIS ADDED).

<sup>4</sup> The full name of Ibn Al Humām is "Ibn Humām is Muhammad Ibn Abdul Wahid Ibn Abdul Hamid Ibn Masoud Ibn Humām Alciowy." He lived from 1388 to 1457 (790-861 A.H.) in Egypt. He is well known for the book *Ibn Humām Al-Hanafi*. He wrote many books on Islamic jurisprudence, such as: *Sharh Al-Hidaiah Fi Al-Fiqh* (Illustration and Guidance in Islamic Jurisprudence), *Al-Tahrir Fi Usul Al-Fiqh* (Liberalization in the Principles of Jurisprudence), and *Al-Mushtarak Fi Usul Al-Din* (Apposement in the Fundamentals of Islam). See ABDEL-HAI AL-HANBALI, *SHARHAT AL-TUHAJIR GOLD NOUGETS* (7/298).

<sup>5</sup> KAMALUDDIN BIN AL-HUMAM, *FATH AL-QADIR*, VOL. IV, p. 276 (Mathba'at al-Tijariyya al-Kubrā edition), quoted in WAFI, *HUQUQ AL-INSAN*, p. 304, in turn quoted in KAMALI, *SUPRA*, at 251.

<sup>6</sup> KAMALI, *SUPRA*, at 252.

Manifestly, the expansive Islamic legal right of self-defense raises religiously troubling and practically difficult questions. On religious terms, the *Shari'a* right — triggered by a cry for help — is a far cry from the famous Biblical Parable of the Good Samaritan. Violence in that Parable is unthinkable. Likewise, the *Shari'a* right is orthogonal to a “Turn-the-Other-Cheek” precept so central to Catholic Christianity. Is defending property, one’s own or that of another, from a threat on the ground that it is correct in God’s eyes an affront to human dignity, to the human person — who, even if a property violator, is created in the image and likeness of God?

On practical grounds, is there a risk of sliding down a slippery slope? For example, does the right extend to a bank or stock market account, and condone violence against bankers and stock brokers during a period of financial turbulence in which the value of the account tumbles? How does the right of self-defense relate to restrictions on ownership, and in certain situations spiral from a tit-for-tat situation to a blood feud? Does the *Shari'a* right allow for anticipatory self-defense (i.e., an attack against a would-be-violator from whom a property violation is expected), or even pre-emptive self-defense (i.e., an attack against a perceived threat to property to remove any chance of the threat manifesting itself)? In sum, is the reference in the quote from Professor Kamali to *mutatis mutandis* almost farcical, because the necessary changes cannot be made to a right to defend one’s body from physical harm to make that right appropriate when all that is at stake is a piece of land or inanimate object?

### [B] Protecting Private Property: Penal Law

Along with self-defense, a rigorous manner in which the *Shari'a* protects private ownership interests is through the Penal Law.<sup>7</sup> Two forms of property crimes are considered claims (rights) of God (*haqq Allah*), namely, theft (*sariqa*) and highway robbery (*kat' al-tarik*, with “*kat'*” meaning “robbery” and “*tarik*” meaning “highway”). Both types of non-consensual taking of property are punishable with extreme sanctions. Other forms of property offenses are dealt with by discretionary (*ta'zir*) punishments decided upon by an Islamic Law judge (*qadi*). In both instances, the underlying theory or justification for punishment is two-fold: deterrence and revenge. First, the offender is specifically deterred from committing another unlawful act against the property of another or others. There is, too, general deterrence, in that the threat of punishment discourages all others in the community from unlawfully taking or using property they do not own. Second, revenge as a punishment is meted out. The offender suffers harm in return for the injury the offender inflicted on the property of another. Whether this harm brings personal gratification to the property owner is perhaps less important than the perspective of the community. The harm avenges the offense, and is repayment for it.

To the Penal Law protections of ownership interests may be added rules in the *Shari'a* against business practices that involve the use of property, or more

<sup>7</sup> See generally JOHN MAKDISI, *ISLAMIC PROPERTY LAW* ch. VI (Durham, North Carolina: Carolina Academic Press, 2005) (concerning attacks on property ownership, including robbery, theft, usurpation, and nuisance, and discussing causation and the defense of necessity) [Hereinafter, MAKDISI].

generally the market power of a property owner, in a manner detrimental to the community. Profiteering and hoarding are leading instances, against which the Qur'an inveighs. So, too, is hoarding (discussed below). Such enjoinders dovetail with rules in the *Shari'a* against anti-competitive practices, such as against monopoly.

## § 20.02 RESTRICTIONS ON OWNERSHIP: GENERAL DOCTRINES

### [A] Good Neighborly Relations

While championed and protected by the *Shari'a*, the right of private ownership is not unbounded. That is clear enough from the Vice-Regency Theory and its implications. That also is clear from a general requirement incumbent on all Muslims to be good neighbors. Consider the following passage from *surah* 4:

<sup>36</sup>Worship God; join nothing with Him. Be good to your parents, to relatives, to orphans, to the needy, to neighbours near and far, to travelers in need, and to your slaves. God does not like arrogant, boastful people, <sup>37</sup>who are miserly and order other people to be the same, hiding the bounty God has given them. We have prepared a humiliating torment for such ungrateful people.<sup>8</sup>

This passage is redolent of the Two Great Commandments in Catholic Christianity, which Christ proclaims as recorded in Matthew's Gospel:

<sup>34</sup>When the Pharisees [literally in Hebrew, “separatist,” and referring to a group of observant Jews who helped establish elaborate oral laws to apply the written law of Moses after the destruction of the Temple in 70 A.D. and Roman conquest] heard that he [Jesus] had silenced the Sadducees [members of a religiously conservative high priestly family, granted by King Solomon control of the Temple, and one of the ruling families of the Jews until the Temple destruction, who opposed new interpretations of the Torah suggested by the Pharisees], they gathered together, <sup>35</sup>and one of them [a scholar of the law] tested him by asking, <sup>36</sup>“Teacher, which commandment in the law is the greatest?” <sup>37</sup>He said to him, “You shall love the Lord, your God, with all your heart, with all your soul, and with all your mind. <sup>38</sup>This is the greatest and the first commandment. <sup>39</sup>The second is like it: You shall love your neighbor as yourself. <sup>40</sup>The whole law and the prophets depend on these two commandments.”<sup>9</sup>

Consider, too, three *hadiths* recounted by Sahih Muslim:

<sup>8</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem (Oxford, England: Oxford University Press, 2004), 4:36-37 at 54 (emphasis added). [Hereinafter, QUR'AN.]

<sup>9</sup> The Gospel According to Matthew, 22:34-40, in, THE CATHOLIC STUDY BIBLE 82 (Oxford: Oxford Academic Press, 1990). See also pp. 433 (definition of “Pharisee”), 436 (definitions of “Sadducee” and “Second Temple”), 437 (definition of “Temple”).

- He will not enter Paradise whose neighbour is not secure from his wrongful conduct.<sup>10</sup>
- He who believes in Allah and the Last Day [i.e., the Day of Judgment] should either utter good words or better keep silent; and he who believes in Allah and the Last Day should treat his neighbour with kindness; and he who believes in Allah and the Last Day should show hospitality to his guest.<sup>11</sup>
- Gabriel kept impressing me ([about the importance of] kind treatment) towards the neighbour (so much) that I thought he would confer upon him the (right) of inheritance.<sup>12</sup>

The last *hadith* has a humorous feature to it. Muhammad is saying that the Archangel emphasized so strongly the principle of treating neighbors well that he, Muhammad, thought Gabriel would bestow on the neighbor the status of a family member and heir. That feature makes the point in a subtle yet powerful way. Notably, by their very terms, none of the above-quoted statement is confined to relations with fellow Muslims. The *Shari'a* obligates Muslim property owners to build and maintain good neighborly relations with Muslims and non-Muslims alike.

### [B] Social Responsibilities of Private Owners

Put directly, a private owner has a social responsibility (in Arabic, "*wazifah ijtima'iyyah*") with respect to his acquisition and enjoyment of property. Unsurprisingly, this responsibility is not stated in economic terms. That is, *Shari'a* scholars traditionally do not justify doctrines according to modern microeconomic theory. Nonetheless, the emphasis on the social responsibility of private owners can be understood through an economic prism, or at least be seen as consistent with a law-and-economics approach.

The *Shari'a* seeks to have private owners internalize the externalities — particularly the social costs — of the use of their property, and adjust their behavior accordingly. If they do, then extravagance and waste are avoided, the outcome is efficient, in that property is used in a manner that reflects a full benefit

<sup>10</sup> *Saheeh Muslim* — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM'-'US-SAHEEH BY IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDUL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASSAN VOL. I.A, book 1 (The Book of Faith), p. 38, *hadith* no. 46 (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990). [Hereinafter, *MUSLIM*.]

<sup>11</sup> *MUSLIM, supra*, vol. I.A, book 1 (The Book of Faith), p. 38, *hadith* no. 47. A variant of this *hadith* directly enjoins Muslims from harming their neighbors, thereby embodying the Harm Principle:

He who believes in Allah and the Last Day does not harm his neighbour, and he who believes in Allah and the Last Day should show hospitality to his guest, and he who believes in Allah and the Last Day let him speak good or remain silent.

*Id.*, vol. I.A, book 1 (The Book of Faith), p. 39, *hadith* no. 47R1 (emphasis added).

<sup>12</sup> *MUSLIM, supra*, vol. I.VA, book 45 (The Book of Virtue, Good Manners, and Joining of the Ties of Relationship), p. 200, *hadith* no. 2624.

— cost calculation.<sup>13</sup> If the private owners refuse to internalize the social costs of a particular use to which they have put their property, then official intervention is legitimate. Under the *Shari'a*, a governmental or even religious authority may take action, including ending the individual's ownership of the property in question, to rectify the problem.

Yet, official intervention against a private ownership interest is to be minimal, or (in modern American legal parlance) least intrusive. If an owner acquires property lawfully, then any intervention — whether to take the property entirely, or impose some kind of restriction on it — must involve compensation. Further, the compensation from the authority to the owner must be fair. Just as the right of the owner to enjoy his or her property is not absolute, so, too, is the remedial power of a government or religious authority to take action to protect the community interest associated with that property.

Interestingly, the Egyptian Supreme Constitutional Court has developed a contemporary doctrine that has its origins in Islamic jurisprudence. This doctrine is known in Arabic as "*al wazifah al ijtima'iyah lil uelkya*." The doctrine sets limits to the social responsibility associated with private property. The Court used the doctrine to strike down certain articles in the Agricultural Property Reform Acts that Egypt had enacted in the 1950s during a period of nationalization.

### [C] Four Categories of Restrictions

With its doctrine of good neighborly relations, it should not be surprising that Islamic Law, like American Property Law, contains restrictions on what an owner can do with his or her property. Those restrictions fall into one of four broad categories:<sup>14</sup>

- (1) Restrictions to prevent harm to others.
- (2) Restrictions to protect the public interest.
- (3) Restrictions to ensure efficient use of barren land.
- (4) Restrictions to promote cooperation.

These categories are discussed below. Conceptually, a fifth category exists — Inheritance and Bequest. The *Shari'a* restricts legacies to one-third of the size of the estate of a decedent, i.e., a testator can direct only up to one-third of his or her estate, as the remaining two-thirds is distributed in accordance with long-standing distributional principles to legal heirs. This cap on bequests, and minimum threshold on inheritance, is a clear limit on the free disposition of private property by an owner. They help ensure surviving heirs are cared for, and do not become wards of the community or state for support, and thus are entirely consistent with the public interest. However, the rules concerning inheritance and bequest are regarded as a distinct specialty of Islamic Law.

<sup>13</sup> See RICHARD A. POSNER, *ECONOMIC ANALYSIS OF LAW* ch. 3 (New York, New York: Wolters Kluwer Law & Business, 7th ed. 2007).

<sup>14</sup> See KAMALI, *supra*, at 278. See generally MAKDISI, *supra*, ch. IV (concerning rights and restrictions on property transfer).

Though diverse in detail, the four categories of restrictions on private ownership have a unifying nature. All of them are designed, directly or indirectly, to benefit (*maṣlahah*) the community (*ummah*). The second category is transcendent, and in a simple sense, all of the other categories could be collapsed into it. Preventing harm, of course, is a service to the community. Efficient use of land, plus cooperation on land use matters among co-owners, business partners, and neighbors, serve the community. The second category also is a large one, many contexts, and even embracing taxation. After all, land taxes (*kharāj*), if used properly by governmental authorities, advance community interests, and the religious tax (*zakāt*) helps mitigate the miserable lot of poor people.

Further, a key community benefit is fair, equitable distribution of property, both within a family and across a society. For instance, there are restrictions to prevent excessive concentration of wealth, such as through hoarding, and abusive use of property, such as profiteering, at both levels. There are obscene concentrations of wealth in some Muslim countries, notably in the Persian Gulf region. The culprit lies not with the *Sharī'a*, but with a political, economic, or cultural structures in which Islamic rules on restricting private property so as to serve the public interest are observed in the breach.

## § 20.03 CATEGORY #1 RESTRICTIONS: PREVENTING HARM (ḌARAR)

### [A] Harm Principle, Intent, and Preemption

The Arabic term for "harm" is "*ḍarar*," and "prevention of harm" is known as "*ḍaf' al-ḍarar*." The first Islamic legal category of restrictions on private ownership is the prevention of harm. An owner cannot enjoy his property in a way that causes exorbitant harm (known as "*ḍarar fāḥish*," where "*fāḥish*" means "excessive") to another person. Professor Kamali further explains the restriction:

the owner is entitled to the enjoyment of his property without restriction, provided that this does not lead to inflicting harm on others. In the event where a manifest harm is inflicted on the community or another individual through the exercise of proprietary rights, then the authorities must evaluate whether that harm is greater than the benefit that the owner seeks to realize by the use of his right. If the harm is negligible and does not warrant imposing restrictions on the exercise of the basic right of ownership, then it must be tolerated. But if the harm to others is greater by comparison, the owner's right of use may be limited to the extent needed to eliminate the harm, or, whenever possible, to reduce it to a tolerable level.

The general rule concerning neighbours, whether to the side, or on upper or lower levels, is that the owner is entitled to the use of his property in any way he wishes, provided that he does not inflict a manifest harm on his neighbour, for which he would be liable to pay damages for the harm

caused.<sup>15</sup>

Clearly, implementing such restrictions in practice involves a cost-benefit analysis, which necessarily means a careful review of facts specific to a particular case. Often, what may be acceptable in one community may be an excessive harm in another one. Noise, for instance, created by a property owner in downtown Cairo will have to be considerably louder to constitute a nuisance than in the small town of Maaloula, Syria.

Nonetheless, the basic idea is that the freedom of a private owner to enjoy his or her property extends is bounded by harm that enjoyment causes others. The key source for this idea is a *ḥadīth* reported by Abū Dāwūd:

... Samura bin Jundub had a palm tree, and its branches extended into a garden that belonged to a man from the Anṣār [the people from Medina who helped the Prophet and his Companions migrate from Mecca], who lived with his wife. Each time Samura tried to reach the branches, it made the owner uncomfortable. So the man asked Samura if he would like to sell his tree, to which Samura gave a negative response. Samura was subsequently asked to remove the tree and cut it off, but he still refused. The man then complained to the Prophet and the Prophet asked Samura once again to consider selling his tree, but he refused again. Samura also turned down the next suggestion, that he should make a gift of it to the plaintiff. The Prophet then told Samura "You are inflicting harm," and said to the plaintiff [the man from Anṣār] to "Go and cut down the palm tree."<sup>16</sup>

Unfortunately, the exact nature of the harm is not clear. Perhaps the neighbor did not like Samura reaching across the dividing line into his side of the property, finding it an invasion of the privacy he and his wife felt entitled to enjoy on their property. Perhaps the neighbor felt Samura's intrusions threatened his garden, or simply that the protruding branches blocked sunlight needed for his plants to grow.

A fascinating comparison exists between this *ḥadīth* and the *Mejelle*. Article 1196 of the *Mejelle* treats the same factual predicate — a tree branch protruding over to an adjacent property — as does the *ḥadīth*. But, it is more precise than the *ḥadīth* as to the injury, namely, both air flow and shade are at stake:

If the branches of a tree in someone's garden have extended over the garden or house of his neighbour, the neighbour has a right to cause his own air to be freed, by cutting those branches, or drawing them back and tying them.

But the tree cannot be cut down, for the reason that its shade does injury to what is sown in the neighbour's garden.<sup>17</sup>

Article 1196 calls for a less extreme remedy than the *ḥadīth*. Rather than chopping down the whole tree, why not prune protruding branches? Rather than the neighbor marching across the property line and exercising a self-help remedy, why not

<sup>15</sup> Kamali, *supra*, at 278, 283.

<sup>16</sup> Abū Dawūd, Susan Abū Dawūd, vol. II, p. 283, quoted in Kamali, *supra*, at 278-279 (emphasis added).

<sup>17</sup> *Mejelle*, *supra*, Article 1196 at 194-195 (emphasis added).

obligate the tree owner to clip back the excessive branches? These distinctions aside, both the *hadith* and the *Mejelle* are clear in tolerating, indeed, counseling, an interventionist response that limits unrestricted freedom of a property owner to do what she pleases on her property.

The chronology is worth noting. The *hadith* obviously long pre-dates the development of American Property Law, and the *Mejelle*, coming in the late 19th century, is broadly contemporaneous with that development. The idea arising in the *hadith* would take hold as a principle in Western philosophy through the writings of English philosophers John Locke (1632-1704) and John Stuart Mill (1806-1873), and come to be known as the "Harm Principle." Here, then, is another instance of a *Shari'a* precept that pre-dates a commonly accepted feature of American Property Law. That is, as in American Property Law, under the *Shari'a*, an owner of property does not have an absolute or limitless right to enjoy that property. His or her right stops where the injury of another begins. Thus, for example, an owner of real property cannot enjoy use of his or her land in a way that disturbs the exercise of the same right by a neighbor to use the neighbor's land. In practice, of course, controversies typically involve case-by-case balancing of competing interests, and a weighing of the nature and degree of the harm against the encroachment on freedom associated with an intervention.

Another noteworthy point about the Harm Principle as manifest in the *Shari'a* concerns intent (*niyaa*). To what extent, if any, does the intent of a property owner matter? That is, if an owner acts (or omits to act) on his or her property in a manner that causes harm, but the owner in no way intends to cause harm, then does the adjacent property owner still have a claim? Generally in Islamic Law, intent is a factor to be considered in determining the outcome of a case. The Penal Law, particularly the crimes of murder and infliction of bodily harm, are examples. The punishment meted out varies depending on the intent of the perpetrator. However, in Property Law, an exception to this pattern exists. Abū Yūsuf, a leading student of the founder of the *Hanafi* School, *Imām Abū Hanīfa*, argued intent is irrelevant in respect of harmful acts (or omissions) by a property owner. All that should matter is the result of the act (or omission).

This view is manifest in the *Mejelle*. That is unsurprising since it was the Civil Code of the Ottoman Empire between 1877 and 1926 and codified part of the *Hanafi*fiqh. Thus, the *Hanafi* School condones interference with the freedom of a property owner to enjoy his or her property when that owner causes harm to another, regardless of what that owner does or does not intend. There are Islamic scholars who take the opposite view. Al Shāṭibī argues intention should matter, because God envisages a purpose for a person when that person exercises a right (like ownership), and interference with that right is justified if the person does not adhere to the Divine purpose.<sup>18</sup> Still, the *Hanafi* School position seems to predominate in the *Shari'a*.

Finally, does the *Shari'a* version of the Harm Principle allow for preemptive action against a property owner to prevent occurrence of an anticipated harm that

would be caused by that owner exercising his or her proprietary rights? The question is relevant whether the potential victim is an individual with an adjacent property, or the community at large. The short answer is yes, depending on two factors — the probability and severity of the harm. Table 20-1 (on the next page) summarizes the doctrine of advanced intervention, and assumes the harm (*darar*) — if it were to occur — would be excessive.

Cases of near-certain or probable harm, at one extreme, and remote harm, at the other extreme, are easy. On them, all Four *Sunni* Schools agree on the propriety, or lack thereof, of intervention against a property owner to block an anticipated harm. Difficult cases are ones in which the probability of harm is moderate, *i.e.*, there is uncertainty. What the Table does not reveal, and what the *Shari'a* does not appear to answer in a definitive way, is how to gauge the probability and severity of harm. Should an objective test, such as a reasonable person, be used? Or, is the correct vantage the subjective impression of an adjacent property owner? As for any interference against an anticipated harm, the general rule of proportionality that pervades Islamic Law would seem to apply.

<sup>18</sup> Al Shāṭibī is a leading *Māliki* School scholar. He was born in Granada, Spain, and died in 1388 (790A.H.).

Table 20-1:

## Shari'a Doctrine on Anticipatory Intervention Against Property Rights

Anticipated Harm (Darar) to Another Property Owner, or to the Community, Caused by Exercise of Property Rights of First Property Owner	Almost Certain to Occur	Probable	Uncertain	Slight Chance
	Very High Probability of Harm Occurring	Harm is Likely to Occur	Doubt as to Whether Harm Will Occur	Unlikely or Low Probability that Harm Will Occur
Legal Result	Yes.	Yes.	Depends.	No.
Is Blockage of First Property Owner Permissible?	Interference with freedom of ownership is justified.	Interference with freedom of ownership is justified.	The <i>Mālikī</i> and <i>Ḥanbalī</i> Schools allow for preventive action. They give priority to prevention of harm over the benefit of a property owner to enjoy freely her property. They focus on the excessive nature of the harm, and take a precautionary approach. In contrast, the <i>Ḥanafī</i> and <i>Shāfi'ī</i> Schools do not approve of intervention. These Schools give priority to the proprietary rights of the owner over harm prevention. They argue the right of the owner is certain, but harm is uncertain.	Interference with freedom of ownership is not justified.

[B] 1877 Ottoman *Mejelle* and Examples of Harm Principle

Neither the Qur'an nor the *ḥadīth* provide the level of detail on restrictions on ownership to cover the myriad of real-world situations that arise in daily life. Thus, Islamic jurists (*fukahā*) have given shape to the generic Harm Principle over the centuries. The easy cases are ones in which a property owner uses his or her property in a way with no purpose other than to harm another person. There is no

benefit to the property owner (other than the perverse one of inflicting harm), who is nothing more than a transgressor. In these cases, the *Shari'a* unambiguously condones intervention to regulate the exercise of property rights by the owner, even if the harm is not yet manifest, and its occurrence is probable but not certain. Professor Kamali reports this result is:

based on the *ḥadīth* -cum-legal maxim, that "Harm may neither be inflicted nor reciprocated."<sup>19</sup>

A similarly easy set of cases involve exercise of property rights in a way that bring about a benefit to the owner, and cause a harm to another person or persons, but that harm can be avoided or mitigated if the owner revises his course of action. In other words, there is an alternative manner of enjoyment that is reasonably available to the owner. In such cases, the owner must pursue the alternative course.

The hard cases all involve balancing the free exercise of property rights against the adverse actual or threatened consequences to another from that exercise. There is no reasonably available alternative to the owner: her enjoyment spells harm to another.

. . . [W]here the owner cannot avoid inflicting harm to others, and he does need to do what he has to do, then two possibilities arise, one of which is that the anticipated harm is a general one, and the other that it is more limited or specific in its scope and effect. In the former case, the general harm must be avoided, and the owner's right of use is obstructed, but if the expected harm is specific, it is to be tolerated and may not stand in the way of the owner's right of use. This ruling is in accordance with the legal maxim that "A specific harm is tolerated in order to prevent a general one."<sup>20</sup>

Yet, this distinction between a general *darar* and specific *darar* is rather theoretical and vague. How, in practice, does the *Shari'a* differentiate the two kinds of harms?

The answer, not only in Islamic Law, but in most if not all legal systems, is case-specific. The facts and circumstances of each case must be probed to determine if a harm is "general" or "specific." Within Islamic legal circles, through the ages the debate has raged as to the appropriate balance between protecting the free exercise of ownership rights and safeguarding neighbors against harm.

In earlier times, the *Ḥanafī* and *Shāfi'ī* Schools championed the rights of owners over neighbors. For instance, they argued an owner is free to:

open windows whether or not they overlook the neighbour, or expose their women to unsolicited viewing; he is also entitled to build a high-rise that may overshadow the neighbour's house or even block the sun from it, or indeed build a shop or a factory, and dig a water well whether it harms the neighbour or not.<sup>21</sup>

<sup>19</sup> Kamali, *supra*, at 280.

<sup>20</sup> Kamali, *supra*, at 281.

<sup>21</sup> Shaykh 'Alī al-Khāfi, *al-Mukhtār fī'l-Shar' al-Islāmiyyah wa'l-Muqarānā bi'l-Shar' al-Wāḍiyyah* (Beirut: Dar al-Nahḍah al-Arabiyyah, 1990), quoted in Kamali, *supra*, at 283.

The full name of Shaykh 'Alī al-Khāfi is: 'Alī Muḥammad al-Khāfi. He lived from 1891-1978.

There were misgivings in the *Shāfi'i* and *Hanbali* Schools about unabashedly abhorring all restrictions on ownership, and the actions cited in the above-quoted paragraph, while valid (*sahih*) at law, were reprehensible (*makruh*) from a religious standpoint.

However, in recent times the *fukahā'* of the *Hanafi*, *Māliki*, and *Hanbali* have re-balanced matters in favor of neighbors. Actions by a property owner that cause harm that is outside the boundaries of local custom are neither fair nor considerate. Some cases pose obvious breaches, such as a property owner

opening a bakery next to a perfumery or drug store, or digging a well so close to his neighbour's house as to draw and divert the water from it, nor can he build a structure that overlooks and exposes the neighbour's household to unsolicited viewing, nor may the owner open a dumping yard for refuse disposal that is harmful to the neighbour. . . .<sup>22</sup>

The owner may be enjoined from such actions, or held liable for compensation to an aggrieved neighbor, for harm caused. In other cases, reference to local custom is important, as what is disturbing in a small town may be everyday life in an urban area.

Despite debates among and within the Four Schools, one of the most useful delineations of tolerable from unacceptable harms is the *Mejelle*. It is generally regarded as representing the majority view throughout the Schools. At the outset, the *Mejelle* articulates four general principles applicable in Property Law and other legal specialties:

26. To repeal a public damage (*Zarar*) a private damage is preferred . . .
27. Severe damage (*Zarar*) is made to disappear by a lighter damage. . . .
28. When two wrongful acts (*Fesad*) meet, the remedy of the greater is sought by the doing of the less. . . .
29. The smaller of two harms (*Sherr*) is chosen. . . .
30. The repelling of mischief (*Mufasid*) is preferred to the acquisition of benefits. . . .<sup>23</sup>

Article 26 explains it is preferable to have damage visited on a private party than spread across the community. Article 26 thereby provides the answer to a question of theoretical and practical significance: Who is protected by the Harm Principle? The answer is the protected circle includes not only neighbors, such as adjacent property owners, but also anyone in society, whether or not they are a property owner. Article 27 is a simple rule of proportionality, stating that lesser is preferable to greater damage. Articles 28 and 29 are the "lesser of two evils" rule, which directs the choice of the least bad alternative when there is no perfect option. Article 30 is

(1309-1398 A.H.) in the village of the Al Shuhada', Al Minufiyah, Egypt. He wrote *Al-Waqf Al-Ahli* — Its Inception, Legitimacy, Disadvantages, Resolution, and Reform, *The Impact of Death on Human Rights and Obligations*, and other books on Inheritance Law.

<sup>22</sup> KAMALI, *supra*, at 283.

<sup>23</sup> MEJELLE, *supra*, Articles 26-30 at 6-7.

another proportionality rule used when the trade off is repelling mischief or enjoying a benefit. This rule prefers the former alternative, *i.e.*, avoiding harm. In brief, the modern thrust of Articles 26-30 of the *Mejelle*, as applied to Property Law, is clear. Avoidance of *darar* matters more than protecting the benefit of free exercise of property rights. Injuring the owner (by constraining his or her freedom to do what he or she wants on his or her property) is a lesser evil than injuring a neighbor (by reducing or eliminating some fundamental benefit).

Subsequently, the *Mejelle* turns to the context of Property Law. While not precise in all respects, it lays out the basic freedom of ownership doctrine, subject to the Harm Principle, and then provides examples:

1192. Everyone makes such dispositions of his *mulk* [owned] property, as he wishes. But if the right of another is attached to it, it prevents the owner from making a disposition, as independent owner, in respect of his *mulk*. See Art. 1197.

For example. — In a building, in which the upper storey is the *mulk* property of one, and the lower storey the *mulk* property of the other, by reason of the owner of the upper storey having a right of support as regards the lower storey, and by reason of the owner of the lower storey having, as regards the upper storey a right to be roofed, that is to say, to be covered and protected from the sun and rain, one, unless he has leave from the other, cannot do anything, which will damage him, and he cannot pull down his own building.

1197. No one can be prevented for making such disposition as he likes in regard to his own *mulk*, unless there be excessive damage to another. In that case he can be prevented. As is set out in detail in Section 2.<sup>24</sup>

In terms of territory, what is the scope of the property rights of an owner? The *Mejelle* contemplates an invisible line, or plane, dividing one property from another, extending beneath and above the surface of the earth.

So, an owner has rights to the earth below and space above her property, but may not extend edifices across that imaginary plane. Articles 1194-1195 embody the rule:

1194. Whoever is *mulk* owner of a piece of land, is owner of what is above it and what is below it. That is to say, he is able to make what use of it he wishes; for instance, on building site which is his *mulk* property, to make what building he likes, and to raise it as high as he likes, and, by digging the ground, to make a cellar, and to sink a well as deep as he likes. Compare Art. 1197.

1195. A person cannot extend, over his neighbour's house, the eaves of a room made new on this house. If he does the quantity above that house is cut off. See Article 1224 [concerning rights of water flow].<sup>25</sup>

<sup>24</sup> MEJELLE, *supra*, Articles 1192, 1197 at 194-195 (emphasis added).

<sup>25</sup> MEJELLE, *supra*, Articles 1194-1195 at 194 (emphasis added).

There were misgivings in the *Shāfi'i* and *Hanbali* Schools about unabashedly abhorring all restrictions on ownership, and the actions cited in the above-quoted paragraph, while valid (*ṣaḥīḥ*) at law, were reprehensible (*makrūh*) from a religious standpoint.

However, in recent times the *fukahā'* of the *Hanafi*, *Māliki*, and *Hanbali* have re-balanced matters in favor of neighbors. Actions by a property owner that cause harm that is outside the boundaries of local custom are neither fair nor considerate. Some cases pose obvious breaches, such as a property owner

opening a bakery next to a perfumery or drug store, or digging a well so close to his neighbour's house as to draw and divert the water from it, nor can he build a structure that overlooks and exposes the neighbour's household to unsolicited viewing, nor may the owner open a dumping yard for refuse disposal that is harmful to the neighbour. . . .<sup>22</sup>

The owner may be enjoined from such actions, or held liable for compensation to an aggrieved neighbor, for harm caused. In other cases, reference to local custom is important, as what is disturbing in a small town may be everyday life in an urban area.

Despite debates among and within the Four Schools, one of the most useful delineations of tolerable from unacceptable harms is the *Mejelle*. It is generally regarded as representing the majority view throughout the Schools. At the outset, the *Mejelle* articulates four general principles applicable in Property Law and other legal specialties:

26. To repeal a public damage (*Zarar*) a private damage is preferred . . .
27. Severe damage (*Zarar*) is made to disappear by a lighter damage. . . .
28. When two wrongful acts (*Fesad*) meet, the remedy of the greater is sought by the doing of the less. . . .
29. The smaller of two harms (*Sherr*) is chosen. . . .
30. The repelling of mischief (*Mufasid*) is preferred to the acquisition of benefits. . . .<sup>23</sup>

Article 26 explains it is preferable to have damage visited on a private party than spread across the community. Article 26 thereby provides the answer to a question of theoretical and practical significance: Who is protected by the Harm Principle? The answer is the protected circle includes not only neighbors, such as adjacent property owners, but also anyone in society, whether or not they are a property owner. Article 27 is a simple rule of proportionality, stating that lesser is preferable to greater damage. Articles 28 and 29 are the "lesser of two evils" rule, which directs the choice of the least bad alternative when there is no perfect option. Article 30 is

(1309-1398 A.H.) in the village of the Al Shuhada', Al Minufiyah, Egypt. He wrote *Al-Waḥf Al-Ahli* — Its Inception, Legitimacy, Disadvantages, Resolution, and Reform, *The Impact of Death on Human Rights and Obligations*, and other books on Inheritance Law.

<sup>22</sup> KAMALI, *supra*, at 283.

<sup>23</sup> MEJELLE, *supra*, Articles 26-30 at 6-7.

another proportionality rule used when the trade off is repelling mischief or enjoying a benefit. This rule prefers the former alternative, *i.e.*, avoiding harm. In brief, the modern thrust of Articles 26-30 of the *Mejelle*, as applied to Property Law, is clear. Avoidance of *darar* matters more than protecting the benefit of free exercise of property rights. Injuring the owner (by constraining his or her freedom to do what he or she wants on his or her property) is a lesser evil than injuring a neighbor (by reducing or eliminating some fundamental benefit).

Subsequently, the *Mejelle* turns to the context of Property Law. While not precise in all respects, it lays out the basic freedom of ownership doctrine, subject to the Harm Principle, and then provides examples:

1192. Everyone makes such dispositions of his *mulk* [owned] property, as he wishes. But if the right of another is attached to it, it prevents the owner from making a disposition, as independent owner, in respect of his *mulk*. See Art. 1197.

For example. — In a building, in which the upper storey is the *mulk* property of one, and the lower storey the *mulk* property of the other, by reason of the owner of the upper storey having a right of support as regards the lower storey, and by reason of the owner of the lower storey having, as regards the upper storey a right to be roofed, that is to say, to be covered and protected from the sun and rain, one, unless he has leave from the other, cannot do anything, which will damage him, and he cannot pull down his own building.

1197. No one can be prevented for making such disposition as he likes in regard to his own *mulk*, unless there be excessive damage to another. In that case he can be prevented. As is set out in detail in Section 2.<sup>24</sup>

In terms of territory, what is the scope of the property rights of an owner? The *Mejelle* contemplates an invisible line, or plane, dividing one property from another, extending beneath and above the surface of the earth.

So, an owner has rights to the earth below and space above her property, but may not extend edifices across that imaginary plane. Articles 1194-1195 embody the rule:

1194. Whoever is *mulk* owner of a piece of land, is owner of what is above it and what is below it. That is to say, he is able to make what use of it he wishes; for instance, on building site which is his *mulk* property, to make what building he likes, and to raise it as high as he likes, and, by digging the ground, to make a cellar, and to sink a well as deep as he likes. Compare Art. 1197.

1195. A person cannot extend, over his neighbour's house, the eaves of a room made new on this house. If he does the quantity above that house is cut off. See Article 1224 [concerning rights of water flow].<sup>25</sup>

<sup>24</sup> MEJELLE, *supra*, Articles 1192, 1197 at 194-195 (emphasis added).

<sup>25</sup> MEJELLE, *supra*, Articles 1194-1195 at 194 (emphasis added).

The *Mejelle* then turns to a number of specific problems that arise in everyday life. Articles 1198 to 1201 are especially important in providing guidance. Taken together, Articles 1198-1201 accomplish more than elaborating on the Harm Principle in Islamic property law. They also indicate how remarkably well-developed this Principle had become by the late 19th century in the Ottoman Empire.

The first three of these Articles lay out key general points. Article 1198 deals with erecting structures on land, stating:

Every one can make an erection as high as he likes and can make what he likes on a wall which is his own *mulk* property, unless there has been excessive damage, his neighbour cannot prevent him.<sup>26</sup>

Article 1199 defines the term "excessive":

Things are excessive damage (*zarar fahish* [i.e., *ḍarar fāḥish*]) which damage a building, that is to say, which *weaken it and become the cause of its falling down, or, which interfere with the essential requirements*, that is to say, the *original benefit which is expected from the building*, like dwelling in it.<sup>27</sup>

This highly important definition contains two tests.

The first test is objective — does the damage weaken and become the cause of collapse? The second test is subjective. It equates "essential requirement" with an originally expected benefit, and asks whether damage nullifies or impairs (to borrow a phrase from international trade law, specifically, Article XXIII of the General Agreement on Tariffs and Trade (GATT)) the expectation of an adjacent property owner concerning a benefit that owner had in mind originally? Both tests, of course, are problematical. For instance, as to the first test, what standard of causation is required — must the damage be the direct, proximate cause, or would it suffice if the damage is an indirect, contributing cause? In other words, does "the" really mean "the only cause"? As to the second test, how much latitude is given to the diverse array of expectations among neighbors? How are expectations proven? Does "original" mean the benefit the neighbor intended when he or she first bought the property, thus disqualifying a subsequent benefit anticipated or enjoyed? Regarding both tests, surely local custom and practice matter? Different communities, even within the same Muslim country, and certainly across different Muslim countries, are certain to have different views on whether a common set of facts — jack-hammering next door at 8:00 a.m., for example — causes excessive damage.

Despite these ambiguities, the Ottoman effort to define criteria for "excessive damage" not only is intrinsically commendable, but also bespeaks the sophistication of Islamic Property Law in balancing freedom of ownership against rights of neighbors. Without a remedy against "excessive damage," of course, the balancing test would be pure theory. But, the *Mejelle* continues, in Article 1200, with a remedy:

Excessive damage in whatever way it may be caused is to be removed.<sup>28</sup>

Similarly, Article 1214 has a general doctrine about nuisances, demanding their removal:

Things which are excessive damage to a passer by, like projecting enclosures and balconies which are above a public road, even if they be ancient, are caused to be removed.<sup>29</sup>

The phrase "in whatever way" in Article 1200 seems to modify "removed," thus suggesting wide latitude for methods to deal with harm caused by the property of another. Of concern is the extent to which self-help is permissible by this phraseology.

Following these general points, Article 1200 of the *Mejelle* provides dramatic examples that the *Shar'ia* protects the interests of adjacent property owners not only from direct physical harm, but also from indirect and relatively less tangible damage. Noxious odors, fumes, particulate matter, blockage of air flow, or water or sewage spillage, can constitute "excessive" damage:

For example. — When a forge or mill is made touching a house, and weakness is caused to the building of the house by the striking of the iron or the turning of the mill, or, when it is not possible for the owner to live in his house from the bad smell, made by a new linseed oil factory, or, the excessive smoke made by a new oven, because these damages are excessive damage, they can be put a stop to in any way which is possible.

Again, if someone, on a building site touching the house of another, makes a new water channel, and weakens the wall of the house by the taking of the water to his mill, or if someone makes a dust heap at the foot of his neighbour's wall, and, by throwing his sweepings there the wall is decayed, the owner of the wall can cause the damage to be removed.

Likewise, when the owner of a house is annoyed, by the dust coming from a threshing floor newly made by someone else near his house, to such an extent that he cannot live in that house, the damage from it is put to an end.

So also, if someone cuts off the wind of the threshing floor of another, with a new high building near the place of the threshing floor, it can be put a stop to, by reason of its being excessive damage.

Likewise, if someone makes a new cook shop in the market of the cloth merchants, and its smoke causes excessive damage by falling on the goods of his neighbours, it can be put a stop to.

And likewise, on the sewer which is in a person's house being broken, if there is excessive damage by the flowing into the house of his neighbour, on

<sup>26</sup> MEJELLE, *supra*, Articles 96-97 at 15.

<sup>27</sup> MEJELLE, *supra*, Article 1199 at 195.

<sup>28</sup> MEJELLE, *supra*, Article 1200 at 195.

<sup>29</sup> MEJELLE, *supra*, Articles 1214 at 199.

action brought by the neighbour, the repairing and improving of that sewer becomes necessary.<sup>30</sup>

Critically important to appreciate is the fact that the Article 1200 illustrations are not exclusive. They are indicative examples, and an Islamic judge (*qāḍī*) is free to use analogical reasoning (*qiyās*) to rule on a particular claim that an alleged injury, while not fitting squarely within an Article 1200 illustration, is sufficiently akin to one of them to be actionable. As long as the legal trigger is met — proof of “excessive damage” as defined in Article 1199 — there is in principle no limit to the scope of behaviors by one property owner that could be condemned as causing harm to neighbors.

Article 1201 of the *Mejelle* elaborates on the meaning of “excessive damage.” It introduces the concept of “fundamental necessity” for the context of the second test from Article 1199, concerning “original benefit.” Only “damage” to a “fundamental necessity” would fall within the scope of “excessiveness”:

To interfere with *benefits* which are *not fundamental necessities*, like *interfering with the sun* coming in or *cutting off the view or air* of a house, is *not excessive damage* (*zarar fahish* [i.e., *ḍarar fāhish*]).

But to stop the light *altogether* is excessive damage.

Therefore, when someone, with a new building has blocked the window of a neighbour's room which has one window, *if it is so dark that writing cannot be read*, he can be made to remove it, by reason of their being *excessive damage*. It cannot be said “Let the light come through the door, because it is necessary to shut the door on account of the cold and for other causes.”

But if the room has *two windows*, and one of them is blocked with a new building in the manner above mentioned it is not considered excessive damage.<sup>31</sup>

Evidently, light, view, and air all are within the realm of “fundamental necessities” to which a property owner has a legitimate original expected benefit. They are not *per se* “original benefits” that are “fundamental necessities,” in that some blockage is permissible. Complete occlusion — at least of sunlight, and by extension, of a view and air flow — would constitute “excessive damage.” In effect, it is unreasonable for an adjacent property owner to expect as original benefits unrestricted sunlight, full view, and unobstructed air flow in perpetuity. If that expectation were legally enforceable, then property development would be all but impossible, particularly in urban areas. Thus, Article 1201 draws the line at full versus partial closing, which again involves an examination and weighing of facts and circumstances.

<sup>30</sup> MEJELLE, *supra*, Article 1200 at 195-196 (emphasis added).

<sup>31</sup> MEJELLE, *supra*, Article 1201 at 196 (emphasis added).

## [C] Women, Privacy, and Physical Barriers

Do women need the protection of physical barriers from damage inflicted by neighbors, particularly men, who might peep on them? Conversely, do men need this kind of protection from the temptation to ogle women? The questions test the outer limits of the Harm Principle and are controversial. The *Mejelle* responds with a clear “yes.”

Articles 1202-1206 of the *Mejelle* single out places frequented by women as needing protection from “excessive” damage:

1202. That the places which women frequent, like a kitchen, the head of a well and the courtyard of a house, should be seen, is considered excessive damage (*zarar fahish*).

Therefore, if from a window newly made in someone's house, or from the window of a house which has been newly built, the places which the women frequent of the adjoining neighbour, or of the person who is on the other side of the street, are seen, an order is made for the removal of this damage.

And that person is compelled to put a stop to that damage, by building a wall, or wooden partition in such a way that the women will not be able to be seen.

But in any case he is not compelled to block his window.

Likewise if through the gaps of a fence made of wood, his neighbour's places which the women frequent are seen, the owner of the fence is ordered to stop [i.e., plug] those gaps, but he is not compelled to pull down the fence and make a wall. . . .<sup>32</sup>

In other words, women are entitled to greater privacy than men. The threat is posed by the wandering eyes of men who are neighbors, or living across the street. The remedy is to confer on women a physical property right, namely, to structural coverage.

Articles 1203 through 1206 elaborate on the general privacy rule of Article 1202:

1203. When one's window as regards the ground is higher than the height of a man, his neighbour cannot block that window on the ground that there is a probability that by placing a ladder, he looks into the neighbour's place which the women frequent. See Article 74.

1204. A garden is not considered to be a place which women frequent.

Therefore, when from a person's house his neighbour's places which the women frequent are not seen, except by his garden being seen, his neighbour cannot say, “Shut off the view which there is into my garden,” by reason of the women being seen at the time only when they come into the garden.

<sup>32</sup> MEJELLE, *supra*, Article 1202 at 196.

action brought by the neighbour, the repairing and improving of that sewer becomes necessary.<sup>30</sup>

Critically important to appreciate is the fact that the Article 1200 illustrations are not exclusive. They are indicative examples, and an Islamic judge (*qāḍī*) is free to use analogical reasoning (*qiyās*) to rule on a particular claim that an alleged injury, while not fitting squarely within an Article 1200 illustration, is sufficiently akin to one of them to be actionable. As long as the legal trigger is met — proof of “excessive damage” as defined in Article 1199 — there is in principle no limit to the scope of behaviors by one property owner that could be condemned as causing harm to neighbors.

Article 1201 of the *Mejelle* elaborates on the meaning of “excessive damage.” It introduces the concept of “fundamental necessity” for the context of the second test from Article 1199, concerning “original benefit.” Only “damage” to a “fundamental necessity” would fall within the scope of “excessiveness”:

To interfere with *benefits* which are *not fundamental necessities*, like *interfering with the sun* coming in or *cutting off the view or air* of a house, is *not excessive damage* (*zarar fahish* [i.e., *darar fāḥish*]).

But to stop the light *altogether* is excessive damage.

Therefore, when someone, with a new building has blocked the window of a neighbour's room which has one window, *if it is so dark that writing cannot be read*, he can be made to remove it, by reason of their being *excessive damage*. It cannot be said “Let the light come through the door, because it is necessary to shut the door on account of the cold and for other causes.”

But if the room has *two windows*, and one of them is blocked with a new building in the manner above mentioned it is not considered excessive damage.<sup>31</sup>

Evidently, light, view, and air all are within the realm of “fundamental necessities” to which a property owner has a legitimate original expected benefit. They are not *per se* “original benefits” that are “fundamental necessities,” in that some blockage is permissible. Complete occlusion — at least of sunlight, and by extension, of a view and air flow — would constitute “excessive damage.” In effect, it is unreasonable for an adjacent property owner to expect as original benefits unrestricted sunlight, full view, and unobstructed air flow in perpetuity. If that expectation were legally enforceable, then property development would be all but impossible, particularly in urban areas. Thus, Article 1201 draws the line at full versus partial closing, which again involves an examination and weighing of facts and circumstances.

<sup>30</sup> MEJELLE, *supra*, Article 1200 at 195-196 (emphasis added).

<sup>31</sup> MEJELLE, *supra*, Article 1201 at 196 (emphasis added).

### [C] Women, Privacy, and Physical Barriers

Do women need the protection of physical barriers from damage inflicted by neighbors, particularly men, who might peep on them? Conversely, do men need this kind of protection from the temptation to ogle women? The questions test the outer limits of the Harm Principle and are controversial. The *Mejelle* responds with a clear “yes.”

Articles 1202-1206 of the *Mejelle* single out places frequented by women as needing protection from “excessive” damage:

1202. That the places which women frequent, like a kitchen, the head of a well and the courtyard of a house, should be seen, is considered excessive damage (*zarar fahish*).

Therefore, if from a window newly made in someone's house, or from the window of a house which has been newly built, the places which the women frequent of the adjoining neighbour, or of the person who is on the other side of the street, are seen, an order is made for the removal of this damage.

And that person is compelled to put a stop to that damage, by building a wall, or wooden partition in such a way that the women will not be able to be seen.

But in any case he is not compelled to block his window.

Likewise if through the gaps of a fence made of wood, his neighbour's places which the women frequent are seen, the owner of the fence is ordered to stop [i.e., plug] those gaps, but he is not compelled to pull down the fence and make a wall. . . .<sup>32</sup>

In other words, women are entitled to greater privacy than men. The threat is posed by the wandering eyes of men who are neighbors, or living across the street. The remedy is to confer on women a physical property right, namely, to structural coverage.

Articles 1203 through 1206 elaborate on the general privacy rule of Article 1202:

1203. When one's window as regards the ground is higher than the height of a man, his neighbour cannot block that window on the ground that there is a probability that by placing a ladder, he looks into the neighbour's place which the women frequent. See Article 74.

1204. A garden is not considered to be a place which women frequent.

Therefore, when from a person's house his neighbour's places which the women frequent are not seen, except by his garden being seen, his neighbour cannot say, “Shut off the view which there is into my garden,” by reason of the women being seen at the time only when they come into the garden.

<sup>32</sup> MEJELLE, *supra*, Article 1202 at 196.

1205. If, when someone goes up into a fruit tree which is in his garden, his neighbour's place which the women frequent is seen, when that person goes up into that tree, he must give notice for the women to cover.

If he has not given notice, the judge prevents him from going up into that tree without notice.

1206. When two persons have divided a house which they held jointly between them, and from the place which is assigned to the share of one of them, the part of the other which the women frequent is seen, an order is made for them to make a screen between them.<sup>33</sup>

Evidently, Article 1203 circumscribes the general impulse toward intervention to protect women, dealing with the peculiar case of a high window and the possibility a neighboring man might climb a ladder to peep through that window. The reference to Article 74 helps explain Article 1203, as Article 74 says that no evidentiary is given to imagination lacking a foundation in fact. In other words, it seems even if there scenario is probable, it is not sufficiently so to justify intervention in the form of blocking the window.

Article 1204 presents a counter-intuitive idea, namely, that a garden is not a women's place. The idea is counter-intuitive for an array of reasons, from the Biblical Garden of Eden story to the time-honored observation that women and men alike enjoy working and spending time in gardens. Nonetheless, Article 1204 says there is no need to block the view from one property into a neighboring garden, in which women occasionally are present, because women are not normally expected to be in the garden.

Article 1205 seems almost incongruous with the two previous Articles. Under Article 1205, climbing a tree — not any tree, but a fruit tree — that would allow for a glimpse of women in a neighboring garden requires prior notice from the climber to the neighbor, so that if women are present in the garden, they have the chance to cover themselves. The notice is required of anyone, whether or not the climber owns the property on which the fruit tree is located. Oddly, Article 1203 demands no prior notice of a ladder climber, nor does Article 1204 demand prior notice from a person next door. Article 1206 deals with a final scenario in which post-partition property owners must screen off the areas in their respective shares in which women inhabit.

Articles 1202-1206 of the *Mejelle* translate a right to privacy into a restriction on the free exercise of ownership. Yet, by contemporary standards in the non-Muslim world, and parts of the Muslim world, the regime created by these provisions is wrong-headed. Possible wandering eyes of men are put on par with excessive damage caused by dust, smoke, sewage, and structural deterioration as harm in need of a remedy. The regime undermines the dignity of women, paternalistically presuming they are incapable within their own homes and gardens from taking care of themselves — a notion at odds with the general Islamic cultural (if not religious) sentiment that women are in charge of the household. Equally troubling, there is a sinister sense the rules imprison women behind high barriers, diminishing their

<sup>33</sup> *MEJELLE*, *supra*, Articles 1203-1206 at 196-197.

human spirit by architectural closure, and punishing them because of the sin of a few men. That sense is confirmed by the cold walls, iron bars, and even wire barriers that ring fence many homes in the Arab Middle East.

## § 20.04 CATEGORY #2 RESTRICTIONS: PUBLIC INTEREST (MAṢLAHAH)

### [A] Encumbrances (Servitudes)

Associated with restrictions on ownership to prevent harm are encumbrances, or servitudes, as they are termed in American Property Law. They concern benefits other persons need or ought to have, particularly if private property is to be managed in a socially responsible manner. Thus, these limitations can equally well fall under the category of restrictions to serve the public interest (*maṣlahah*).

In practice, whether a restriction is oriented to that interest, or harm avoidance, depends on its nature and beneficiary. As in American Property Law, under the *Shari'a* there are a diverse array of instances in which a private property owner must yield to neighbors and strangers alike certain rights of passage and water flow.<sup>34</sup> If neighbors are the general public, then categorizing the limit as one serving the public interest is more accurate than calling it harm avoidance to serve a single neighboring individual.

In particular, permissible servitudes under Islamic Law include a right to pass over a portion of a parcel of land, which in American Property Law is well-known as an "easement." Also required of a private property owner is a right to let water flow, or to pour out water, in respect of water (such as a river) passing through her land or sourced on that land (such as a spring). Further, neighbors and strangers have the right to draw water, or water their animals, from water passing or sourced on land of a private owner.

The right of flow (in Arabic, "*haqq al-majrā*") is based on a precedent set in a case during the *Rashidun* Era, specifically, the Caliph 'Umar:

al-Dahhāk Ibn Khalifa extended a water stream within his property, which had to go through the land of Muhammad bin Maslama. When Dahhāk asked for Maslama's permission, he refused, but Dahhāk went on to say that it would be equally beneficial for both of them, and that Maslama was welcome to use all the water he needed for his land first. But Maslama still refused to give permission. Dahhāk then informed the caliph 'Umar, who also tried to persuade Maslama to agree to the proposed extension of the water stream, which would be of benefit to both. Once again, Maslama is said to have declined the suggestion without having any reasonable excuse. So the caliph compelled Maslama and issued an order that authorised Dahhāk to extend the canal.<sup>35</sup>

<sup>34</sup> See JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 142 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, SCHACHT.] See generally MARDISI, *supra*, ch. IV.F (concerning water rights).

<sup>35</sup> KAMALI, *supra*, at 279.

Note the three aspects of this interventionist response. First, it is state-sanctioned, suggesting self-help is not a first resort. Second, state support is given only after the complainant-neighbor (Maslama) has shown reasonableness (specifically, offering full water usage to the property owner, Ḍahhāk), and that owner has proven intransigent (by refusing permission without justification). Third, the response calls for the minimal amount of action needed to mitigate the harm.

The *Mejelle* also contains provisions tantamount to recognition of the existence of an encumbrance. For example, Article 1193 states:

When there is one street door for the lower and upper storey [of a building], the owners of the two storeys make use of that door as though it were owned in common. One cannot prevent the other from coming in and going out.<sup>36</sup>

Re-cast in terms of an encumbrance, the owner of the lower storey may be the single owner of the door. But, in practice the owner of the upper storey has a right of passage through the door.

### [B] Takings: Expropriation (*Muṣādarah*), Nationalization (*Ta'mīm*), and Their Contexts

"Takings" is a generic term referring to the expropriation — called "*muṣādarah*" in Arabic — of private property. An important kind of takings is an appropriation of private property into the hands of a government authority, whereby the government permanently acquires ownership. That event typically is called "nationalization," or "*ta'mīm*," and the term usually is applied when a government takes over an entire enterprise (e.g., a particular farm or commercial bank), industry (e.g., all dairy farms, or all commercial banks), or even sector of an economy (e.g., all farms, regardless of the kind of crop or livestock raised, or all financial services, including commercial banks, investment banks, and insurance companies). American Property Law has a long, deep jurisprudence on takings. The 5th Amendment to the United States Constitution concerns takings, and is the subject of a large volume of Supreme Court cases.

Professor Schacht reports that, by contrast, the *Shari'a* does not deal extensively with takings.<sup>37</sup> That observation is dubious, if not erroneous. There is a long history on the subject. Consider, for instance, a constraint on eminent domain arising in the *Abbasid* Caliphate, namely, that government assertion of a taking of a private interest must not be arbitrary or capricious, but rather premised on a legitimate basis:

. . . Chief Justice Abū Yūsuf . . . addressed the caliph Hārūn al-Rashid in the following terms: "No one may take away anything from anyone unless it is on the basis of a well-known and clearly established right."<sup>38</sup>

<sup>36</sup> MEJELLE, *supra*, Article 1193 at 194.

<sup>37</sup> SCHACHT, *supra*, at 142.

<sup>38</sup> KAMALI, *supra*, at 284.

Lest there be any doubt as to the existence of a robust takings doctrine in the *Shari'a*, the *Mejelle* resolves it.

Concerning expropriation, which in Arabic is called "*muṣādarah*," Article 1216 of the *Mejelle* says:

In time of necessity, by command of the Sultan, a man's *mulk* [owned] property can be taken for its value, and joined to the road. But until the price is paid his *mulk* cannot be taken out of his hands. . . .<sup>39</sup>

Other examples where a taking of private property may be appropriate include extension of a road, construction of a new road, dam, energy plant, park, or recreation ground, or circumscribing the operation of an agricultural or industrial enterprise (e.g., a farm or factory). Similarly, a property owner dumping refuse or sewage water onto a public thoroughfare, or one whose land is required to turn into a public pasture for the community, may necessitate a taking.<sup>40</sup>

Still another context in which expropriation is legitimate is compulsion by a government authority that an individual or business hoarding or stockpiling food must sell food (some or all of it) at a fair price, or even at a government-set price. (In egregious cases, a follow-on discretionary (*ta'zīr*) punishment may be applied against the hoarder.) The *Shari'a* forbids hoarding, which is called "*ihṭikār*." It is an abuse of ownership rights, and offends the public interest. Three *ḥadīths* speak directly to the point:

- Recorded by Ṣaḥīḥ Muslim —  
He who hoards is a sinner.<sup>41</sup>
- Recorded by Shawkānī —

The one who hoards with the intention of pushing prices higher for the

<sup>39</sup> MEJELLE, *supra*, Articles 1216 at 199.

<sup>40</sup> In respect of turning private property into public pasture, Professor Kamali quotes the following *ḥadīth*:

Pastures are only for God and His Messenger.

He alleges this *ḥadīth* is recounted not only by Abū Dāwūd, in *Sunan*, ed., Al-Bughṭā, 444, *ḥadīth* no. 3083, but also in Bukhārī, *Mukhtaṣar Ṣaḥīḥ Al-Bukhārī*, 95, *ḥadīth* no. 99. See KAMALI, *supra*, endnote 96 at 285, 300. However, a search of Dr. Muḥammad Muḥsin Khan, *The Translation of the Meanings of Ṣaḥīḥ Al-Bukhārī*, Arabic-English (Medina, Kingdom of Saudi Arabia: Dar Ahyā Us-Sunnah Al Nabawiya (House Revival of the Prophetic Teaching), March 1978), does not reveal the above-quoted *ḥadīth*. [Hereinafter, BUKHARĪ.] This *ḥadīth* is found in at least one edition of the *ḥadīths* as compiled by Al-Bukhārī, in the book *Musāqāh*, vol. II, *ḥadīth* no. 2241.

Regardless of the correct citation for this *ḥadīth*, precedents in favor of the proposition exist: Reports indicate that the Prophet turned al-Naqī' (a land area in Madina [Medina]) into a pasture to provide feeding grounds for horses owned by the people. This was equivalent to what Wahba al-Zuhayli calls "nationalization in contemporary terminology." The caliph 'Umar b. al-Khaṭṭāb also assigned two land areas, al-Rabḍa and al-Sharf, between Mecca and Madina, as pastures for the benefit of the community. The caliph expropriated that land from its private owners, about which the owners initially protested, but the caliph reasoned with them that the "horses of *jihād*" needed grazing land, and that the land would also be opened up for the use of the whole community, including the previous owners.

KAMALI, *supra*, at 288.

<sup>41</sup> MUSLIM, *supra*, vol. IIIA, book 22 (Book of Share Tenancy), p. 62, *ḥadīth* no. 1605.

*Mustims* is a transgressor.<sup>42</sup>

- Also recorded by Shawkāni —

The one who interferes with market prices in order to push them up, reserves for himself God's punishment of Hellfire on the Day of Resurrection.<sup>43</sup>

The logic for expropriation is a hoarder capitalizes on the need of common people for food. The hoarder advances his or her own self-interest by constricting the supply of an essential commodity, thereby causing the price of that commodity to rise. In consequence, the hoarder can charge prices above normal market equilibrium values, and earn super-normal profits. Consumers who can afford the elevated prices suffer by paying excessively. Consumers too poor to purchase the hoarded commodity are left wanting.

Observe, however, the three *hadīths* on hoarding are not identical. Because it is so brief, on its own without elaboration, the first one makes hoarding a strict liability transgression. In the second and third *hadīths*, the mere act of stockpiling foodstuffs does not suffice to justify an interference with private property. There also is a *mens rea* element. A hoarder must act with the intent to drive up prices and exploit disadvantaged prospective buyers. Otherwise, his or her property cannot be expropriated, indeed it would be counter-productive to do so. Stockpiling of essential commodities plays a constructive role in an economy, namely, a buffer against periods of low output.

Put simply, the second and third *hadīths* capture the true meaning of the first *hadīth*. That is apparent from the Explanatory Note of Dr. Hassan to the first *hadīth*:

All hoarders are not sinners. The hoarder in fact creates time utility and contributes to production and contributes to production, i.e., he stores goods in periods of plenty and sells them when there is comparatively more demand for them and as such he is entitled to a share in production, for he preserves goods for a certain period and helps in . . . maintaining the constant flow of their supply in the market. That hoarder is condemned as a sinner who withholds goods in the market from a genuine consumer for the purpose of creating artificial scarcity and then takes undue advantage of the helplessness of the people. Such a selfish hoarder who is devoid of humanly feelings deserves condemnation, but especially condemnable is the hoarder of foodstuff who is out to reap profits out of the helplessness of the poor people.<sup>44</sup>

Observe, too, that the second *hadīth* contains yet another element, which concerns Muslim buyers. But, the precise nature of this element is elusive from the *hadīth*

<sup>42</sup> YAHYA BIN 'ALI AL-SHAWKĀNI, *NAVĪ AL-AB'ŪT: SHARH MUNTAFĀ AL-AKHĪAR* vol. V at 249 (Cairo, Egypt: Muṣṭafā al-Bāḥi al-Halabī, undated) [hereinafter, AL-SHAWKĀNI], quoted in KAMALI, *supra*, at 289 (emphasis added).

<sup>43</sup> AL-SHAWKĀNI, *supra*, vol. V at 249, quoted in KAMALI, *supra*, at 290 (emphasis added).

<sup>44</sup> MUSELM, *supra*, vol. IIIA, book 22 (Book of Share Tenancy), pp. 62-63, Explanatory Note (4) to *hadīth* no. 1605 (emphasis added).

itself, and the Explanatory Note does not clear up the ambiguity.

One possibility is that a hoarder must act with the intent of charging Muslim buyers a higher price. In effect, the *mens rea* element is two-pronged: the hoarder must have (1) an intention to push up prices (2) for Muslims. As long as the hoarder intends to push up prices only for non-Muslims, then an expropriation is not justified. The other possibility is the hoarder simply seeks to drive up prices faced by every consumer, regardless of religious faith, but it so happens that Muslims are among the prospective buyers. That is, the hoarder acts with intent to push up prices generally, but Muslims are victimized by the higher prices. The difference between the two possibilities under the second *hadīth* concerns the evidence a government authority must adduce to justify an expropriation. Nevertheless, the broad point is clear enough — hoarding is a legitimate basis for expropriation of private property.

Enlargement of a mosque also qualifies as a reason for a valid expropriation. Precedents were set under the Four Rightly Guided Caliphs, specifically, 'Umar and 'Uthmān. Following these precedents, during the reign of King Fahd bin 'Abd al-Aziz, which spanned 1982-2005 the government of Saudi Arabia expropriated private property surrounding the Grand Mosque in Mecca to expand that Mosque, which of course houses the *Ka'ba*. The expropriations occurred from 1988-1995 and were controversial, despite their religious purpose. The Ottoman Empire had controlled Mecca, and many of the expropriated properties had been held by Turkish families since Ottoman period. Some of the contemporary Turkish owners donated the property willingly, motivated by the religious purpose to which their property would be put, and perhaps hoping for a corresponding religious reward. Other owners, however, were enraged at what they perceived as unfairly low compensation. Property around the Grand Mosque always has been some of the most prized, and pricey, real estate in the Muslim world.

These precedents are a point of contrast between the *Sharī'a*, a sacred legal system in which mosque and state are not officially separate, and the American legal system, where separation of church and state is a Constitutional principle. Taking private property by the government so it can expand a religious place of worship would be inconceivable in the United States, as well as many other non-Muslim countries.

### [C] Public Interest (*Maşlahah*) and Other Restrictions on Takings

The basic rule in the *Sharī'a* is expropriation (*muṣādarah*) is possible, if it is in the public interest (*maşlahah*). That is true whether the restriction on private property occurs after it is acquired by an owner or owners (the typical case), or before its acquisition. Significantly, this rule also applies to the nationalization (*ta'mīm*) of property. Indeed, in its first session, in 1964, the Academy of Islamic Research, which is headquartered in Cairo, stated that nationalization is permissible under Islamic Law, but only if it is in support of the public interest, and

then too, a compelling one, and done within reasonable bounds.<sup>45</sup> It cannot amount to usurpation (*ghaṣb*). By "public interest," the Academy focused on social and economic justice, specifically, the achievement of socioeconomic balance and the avoidance of gross inequities.

To be sure, the basic restriction on expropriation (*muṣāḍarah*) and nationalization (*ta'mim*) is generic. What specific legal parameters exist to delineate valid from invalid governmental takings? Aside from comporting with the general precepts of the Qur'an and *Sunnah*, there are four strict limits the public authority must respect in any expropriation or nationalization. The first two limits are procedural in nature, and the fourth limit concerns compensation once a decision in favor of expropriation or nationalization is taken. Substantively, the third discipline imposes the greatest rigor.

First, every effort to reach a compromise by reconciling the rights of a private owner to the interest of the public should be made. Expropriation (*muṣāḍarah*) or nationalization (*ta'mim*) of private property is a last resort. Recourse is made to it only when the conflict neither can be avoided nor resolved.

Second, the least restrictive intrusion should be exercised. In particular, an expropriation (*muṣāḍarah*) should not impose any greater burden on a private owner, or her property, than needed to accomplish the goal of the taking, namely, promoting the public interest. In no event should a property owner be made to suffer irreparable harm. To be sure, what kind of imposition on private interests is minimalist differs from one case to another, though nationalization (*ta'mim*) are almost invariably draconian.

Third, as intimated in the above-quoted counsel from Abū Yūsuf, there must be a *bona fide* public interest at stake. Obviously, partisan politics, corrupt self-interest of government officials, or even a moderate worry about public safety will not suffice. All such instances would fall under the well-known American legal rubric of being arbitrary and capricious, and considered wrongful. What criteria are used to identify a legitimate public interest? The key answer comes from Abū Hāmid Al Ghazālī, one of the greatest Islamic legal scholars, who lived from 1058-1111 A.D. in what is now Iran, Iraq, Syria, and Palestine, and who turned to Sufi mysticism.

In his treatise *Al Mustasfa min 'Ilm al Uṣūl* (*The Best from the Science of the Roots [of the Jurisprudence]*), Al Ghazali equates the public interest with necessity (*ḍarūrah*). As Professor Kamali explains:

*Maṣlaḥah* and necessity often co-exist, especially in the area of the five essential values of the *Shari'ah*. . . . The purpose of *maṣlaḥah* is to protect basic values of religion, life, intellect, family [sometimes referred to as "honor"], and property, which constitute the overriding goals of the *Shari'ah*. When *maṣlaḥah* works towards the protection of these values, and it concerns society at large, it is equated with necessity (*ḍarūrah*). *Maṣlaḥah* in this sense is, according to al-Ghazālī, equivalent to *ḍarūrah*, and the two tend to coincide in regard to the protection of these values. In

al-Ghazālī's phrase, "These five values represent the highest *maṣāliḥ* [the plural of *maṣlaḥah*, i.e., public interests], and they are in reality identical with necessities." When an owner's exercise of his [property] right threatens the safety of these values in such a way that one of them has to be given preference in order to protect the other, then the protection of the basic values takes priority over ownership rights. The authorities are therefore within their rights to take measures to ensure that private ownership does not jeopardize considerations of public interest.<sup>46</sup>

Note the rigor of Al Ghazālī's equation. A taking must be in the public interest, and public interest means defense of one of five supreme values in Islamic Law. Ostensibly, there is some circularity in listing property as one value in the context in which expropriation (*muṣāḍarah*) or nationalization (*ta'mim*) is at issue. Yet, the idea is one of rebuttable presumption: unless otherwise shown, private property interests are supreme.

These values are of utmost significance, because the social order is eroded progressively, and even could collapse quickly, when they are not practiced. They are the foundations on which the social order rests. Failure to observe them poses a grave threat to this order. There are plenty of potential uses for private property that a government can concoct to justify a taking. But, many of them amount to little else than desirability. Desirability is not the same as necessity. Desirability essentially is a preference of one or more powerful government officials, or a handful of well-connected elites. Necessity implicates concerns about the future of society itself.

Complementing the teach of Al Ghazālī is a point about probability. The benefits of the taking — defending core values — must not be hypothetical, improbable, speculative, or specious. They must be real, and affect the general community, not favor personal biases. How, then, might the third discipline be summarized? Significantly, Professor Kamali goes so far *maṣlaḥah* with a utilitarian calculation:

. . . the test here is that it [the taking or private property in support of *maṣlaḥah*] must bring the greatest benefit to the largest number of people.<sup>47</sup>

John Stuart Mill himself could not have put the point more clearly.

Conversely, in all instances in which the test is failed, it means essential benefits to religion, life, intellect, family (honor), or property are not in jeopardy. Then, private property and the rights of an owner must be championed over competing interests of the government or public at large. Otherwise, the taking would amount to nothing more than government usurpation (*ghaṣb*) of private property. Two *hadiths* recorded by *Imām* Bukhari in a Chapter bearing the rubric "The sin of him who usurps the land of others," clearly condemn usurpation:

- Allah's Apostle . . . said, "Whoever usurps the land of somebody unjustly, his neck will be encircled with it down the seven earths (on the Day of

<sup>46</sup> ABU HAMID AL GHAZALI, *AL MUSTASFA MIN 'ILM AL UṢUL* (Beirut, Lebanon: Dār Ihya' Tarīth al-'Arabī undated), quoted in KAMALI, *supra*, at 284.

<sup>47</sup> KAMALI, *supra*, at 286.

<sup>45</sup> See KAMALI, *supra*, at 288.

Resurrection [Judgment])."<sup>48</sup>

- Abū Salama narrated that there was a dispute between him and some people (about a piece of land). When he told 'Ā'isha . . . about it, she said, "O Abū Salama! Avoid taking the land unjustly, for the Prophet . . . said, Whoever usurps even one span of the land of somebody, his neck will be encircled down the seven earths."<sup>49</sup>

Neither *ḥadīth* is limited to a particular category of transgressor. Both apply equally to a disingenuous governmental takings or private party encroachments. In turn, the criterion established by Al Ghazālī, along with these *ḥadīths*, are further illustrations of a doctrine deeply rooted in the *Shari'a* that supports modern capitalist economic development.

Fourth, compensation must be paid to an owner suffering a loss, assuming she acquired the property lawfully. The general standard is a fair price for any expropriation (*muṣādarah*) or nationalization (*ta'mīm*), which as Professor Kamali explains:

is in harmony with the *Shari'ah* rules of justice and equality. . . . This is what the caliph 'Umar b. al-Khaṭṭāb did when he expropriated the private dwellings of some individuals for the expansion of the holy mosque of the *Ka'ba* after the payment of fair compensation to its owners.<sup>50</sup>

However, "fair" is hardly a precise directive. What is fair, and who judges?

Article 1216 of the *Mejelle*, quoted above, is not of much help, either. It states an owner whose property is condemned by eminent domain must be paid "value," and the payment must occur before the taking. But, the standard of valuation is unclear — historical book value on the date the asset was acquired, market value on the date of the taking, or some other benchmark? Suppose a nationalized asset subsequently is sold by the government owner to the public (e.g., via an auction of shares). Should the initial private owners of the asset be given the proceeds from the government sale? Since at least the Ottoman Empire, and continuing through the present, this question has provoked a plethora of disputes in Muslim countries — as it has and does in non-Muslim lands.

A wrenching situation arises when taking of private property is necessary to secure the public interest, yet the government contemplating the taking lacks sufficient funds to pay a fair price. The treasury (*bayt al-māl*) is low on funds, or possibly insolvent. Is the intrusion on private property permissible here? The answer is "yes." But, the test to ensure the taking is valid is rigorous. It must be clear the public interest can be protected only by expropriating the property without compensation.<sup>51</sup>

<sup>48</sup> BURKARL, *supra*, vol. III, book XLII (The Book of *Luqata* (A Well-Tied Pouch or Parse or Lost Things Picked Up By Somebody)), p. 379, *ḥadīth* no. 632.

<sup>49</sup> BURKARL, *supra*, vol. III, book XLII (The Book of *Luqata* (A Well-Tied Pouch or Parse or Lost Things Picked Up By Somebody)), p. 379, *ḥadīth* no. 633.

<sup>50</sup> KAMALI, *supra*, at 287.

<sup>51</sup> See KAMALI *supra*, at 289.

In practice, who applies the four disciplines — especially the third, *maṣlahah* — to a proposed expropriation (*muṣādarah*) or nationalization (*ta'mīm*)? This responsibility differs from one Muslim country to the next, depending on governmental structure. However, in theory, independent religious and legal experts are the ultimate authority. So, unless there is an urgent necessity (which is not typical in takings cases), where alacrity is demanded, consultation is required with *ulema* and *fukahā'* before deciding on a taking of private property. That is especially true if the taking is a nationalization, such as of an industry (e.g., steel) or service sector (e.g., banking).

## [D] Taxation

Taxation is a practical, everyday occurrence that is a restriction on private ownership designed to advance the public interest. One obvious kind of taxation is *zakāt*, though it is properly regarded as a religious obligation of almsgiving. To be sure, it is a legally enforceable obligation. That is because, as *surah* 51, *ayah* 19 puts it when describing the "righteous" who will go to Heaven, "the beggar and the deprived" have a claim on "a rightful share of their wealth," i.e., on *zakāt*.<sup>52</sup> Accordingly, a *Shari'a* court could order satisfaction of the obligation from the assets of a property owner who both refused to pay *zakāt* and was absent (possibly by fleeing the relevant jurisdiction). For present purposes, is *zakāt* property regarded as a restriction on private ownership designed to advance the public interest? Arguably, yes. Almsgiving helps ensure the underprivileged are cared for, and offsets tendencies toward socioeconomic stratification.

Similarly, is it appropriate to deem as a restriction on private ownership the obligation to provide maintenance (*nafaka*) to close relatives? As with *zakāt*, the answer, arguably, is "yes." The *Shari'a* requires a property owner to take care of his or her spouse, children, and parents. Protecting them is a preeminent obligation. The obligation, *nafaka* is enforceable at law. As with *zakāt*, an Islamic judge (*qāḍī*) can order payment of *nafaka* from assets of a recalcitrant and missing property owner.

Additionally, if they are in need, then children stay within the circle of closeness, even after they have matured into adulthood. Given the large family sizes in most Muslim countries, "close" should not be confused with "small." In fact, with fertility rates hovering near or even above 5 in some Gulf countries, the obligation to supporting close relatives applies to anything but a nuclear family. Just how large is the circle of close relatives? Would it include siblings, uncles, aunts, cousins, and so on?

There is a spectrum of possibilities among the Four *Sunni* Schools. At one end, *Mālikī* School *fukahā'* limit entitlement to *nafaqah* to parents and children of a property owner. Towards that end of the spectrum, the *Shāfi'i* School *fukahā'* say only a direct ascendant or descendant of a prospective obligor is entitled to maintenance. Grandparents and grandchildren, therefore, would be included by this School. Towards the other end of the spectrum, the *Ḥanbalī* School *fukahā'* urge that a relative is entitled to obligatory maintenance if that relative is entitled

<sup>52</sup> QUR'AN, *supra*, 51:19 at 343.

to an inheritance from the obligor, in accordance with distributional shares prescribed by the Qur'an. Consequently, siblings, and even half-brothers and half-sisters, are entitled to *nafaqah*. At the other end, *Hanafi* School *fukahā'* extend the maintenance obligation to collateral relatives without requiring they be entitled to a share of any inheritance. That means a property owner is obliged to assist persons who are not close relatives, and thus not legal heirs.

Of course, there are non-religious taxes that every Muslim government typically levies to fund its treasury (*bayt al-māl*) and thereby provide citizens with normal services. One example is a land tax (*kharāj*). Other examples are taxes levied on business or individual incomes, consumption (i.e., sales taxes, such as a Value Added Tax (VAT)), tariffs and other customs duties, and ports and cargo ships visiting ports. In all instances, four conditions must be satisfied for a tax to be considered legitimate.

First, it must serve the public interest (*maṣlaḥah*). Examples are defense, education, health care, infrastructure, and public safety. Second, it must be necessary (*darūrāh*). An illustration *Imām Mālik* suggests is when the treasury is depleted of funds. Third, the level of taxation must be the minimum necessary (i.e., represent the least possible intrusion on asset owners) to achieve its public purpose. *Abū Yūsuf*, student of *Imām Abū Hanīfa* and Chief *Qāḍī* of the *Abbasid* Caliphate, wrote in his book *Kitāb al-Kharāj*, that a government may not increase taxes if the *bayt al-māl* has sufficient funds to cover official operations and maintain public order. Fourth, no tax is to be levied on a person incapable of paying it. Underlying these conditions is respect for private property.

#### § 20.05 CATEGORY #3 RESTRICTIONS: PROMOTING COOPERATION AND RIGHT OF PRE-EMPTION (SHUF'AH)

A right of first refusal is a provision commonly found in commercial agreements in the non-Muslim world. For instance, a contract for the sale of a good may obligate the buyer to offer that good to the seller, before selling the good to a third party. Likewise, a partnership contract may state that in the event one partner leaves the association, the remaining partners must be given the opportunity to buy her shares in the association, before those shares are offered to an outsider. Rights of first refusal also are observed in the context of property transactions, where a buyer-owner must give the option to purchase the parcel of land in question to a defined person or group of persons, before offering that parcel on the open market.

What is distinct about Islamic Law, however, is that a right of first refusal is built into Property Law. A property owner has an obligation to offer property for sale to a co-owner, and possibly even to a neighbor, before selling the property to a third party. The right is not a matter of free contractual negotiation, i.e., property owners do not have the option to concede or reject this obligation. In the *Shari'a*, the term for this right is "shuf'ah," which translates as "pre-emption."<sup>53</sup> As just intimated,

<sup>53</sup> See generally Makdisi, *supra*, ch. IV.D (concerning preemption).

from the perspective of an owner, it is a restriction on her freedom to alienate her property as she pleases.

This restriction is justified, however, as a means to promote cooperation among people. By subordinating free alienation of property by one owner to the interests of others, *shuf'ah* (pre-emption) helps build a sense of community. Those interests are of a co-owner, or possibly a neighbor, in acquiring full title to the property for sale. The *Shar'i'a* seeks to promote confraternity between the prospective seller and people most closely related to the seller in terms of an interest in real property. One scholar explains:

The reason why this right is allowed is that the introduction of a stranger is likely to give rise to dissensions and inconveniences, and the principal on which it is based is that each co-sharer having a right in every particle of the property, one co-sharer selling his share would thereby affect the enjoyment of his by the other [new] co-owner, and this he [the would-be seller] cannot do without his consent, [and] rules are laid down in order to regulate competition among the three classes of pre-emptors [co-owners in the property itself, co-owners of an easement on the property, and neighbors]. The principal is that preference should be given to the strength of claim as measured by the closeness of connexion, hence the co-sharer in the property itself is preferred to the co-sharer in the easements connected with it, and the latter to the owner of adjoining premises.<sup>54</sup>

*Shuf'ah* also promotes responsible ownership. Any owner knows (or ought to) that maintaining good relations with her co-owners and neighbors helps shape their attitudes to the right of *shuf'ah*.

There is no debate among Islamic jurists (*fukahā'*) as to the nature of the property to which *shuf'ah* applies. *Shuf'ah* applies only to immovable property (i.e., real property), not to movable or personal property. It also applies only to sales transactions, not to gifts. That is clear enough from a *ḥadīth* recorded by *Imam Bukhari*:

There is pre-emption in everything which is shared, be it a land, or a dwelling, or a garden. It is not proper to sell it until he [the partner intending to sell his share] informs his partner; he [the other partner] may go in for that, or he may abandon it; and if he [the partner intending to sell his share] does not do that, then his partner has the greatest right to it until he permits him.<sup>55</sup>

But, there is a debate as to the beneficiaries. Obviously, there is a direct relationship between (1) the number of classes to whom a property owner owes a right of first refusal, and (2) the degree to which pre-emption restricts the right of that owner to sell her property to whom she pleases, on the terms she can negotiate.

<sup>54</sup> SIR ABDUR RAHIM, PRINCIPLES OF MUHAMMADAN JURISPRUDENCE ACCORDING TO THE HANAFI, MALIKI, AHAFA'I AND HANBALI SCHOOLS 273-274 (NEW YORK, N.Y.: HYPERION PRESS, 1981) [HEREINAFTER, RAHIM], QUOTED IN MUSLIM, *supra*, vol. IIIA, book 22 (BOOK OF SHARE TENANCY), p. 64, EXPLANATORY NOTE (1).

<sup>55</sup> MUSLIM, *supra*, vol. IIIA, book 22 (BOOK OF SHARE TENANCY), p. 64, *ḥadīth* no. 1608R2.

The scope of beneficiaries of preemption (*shuf'ah*) depends on the *Sunni* School concerned. The majority view, adopted by the *Mālikī*, *Shāfi'ī*, and *Hanbalī* School, is that only co-owners of an undivided property or partners in a property venture are beneficiaries of *shuf'ah*. The minority position, taken by the *Hanafi* School, draws the broadest line: pre-emption is right enjoyed by any co-owner of undivided real property, or partner in a real property venture, and also by any neighbor of real property. That is, an owner of a property that neighbors the parcel in question must be granted the first opportunity to buy that parcel. *Hanafi* School *fukahā'* agree that if there is a conflict between co-owners (or partners), on the one hand, and a neighbor (or neighbors), on the other hand, then the former category has priority.

The *Hanafi* School approach is the most "Catholic," in the sense of following the Great Commandment to love thy neighbor as set out in *The Gospel According to Matthew* at chapter 22, verses 34-40. This approach is based on passages in the *Qur'ān* and *hadiths* calling on Muslims to treat their neighbors well. It also is premised on the idea that preventing harm is an obligation that ought to be owed to more than just co-owners. As the Explanatory Note to the above-quoted *hadith* on *shuf'ah* states:

This right of pre-emption is recognized in favour of persons having interests connected with the property subject to sale. All the schools of law generally hold that the owner of an undivided share has such an interest, and the *Hanafis* concede it also to a person enjoying in common with the vendor certain immunities connected with property, such as private rights of way and water, and to a neighbour owning the adjacent property. These persons are called "pre-emptors," and their right consists in compelling the owner of the property to sell it to one of them in substitution for a stranger or a person who has no such interest.<sup>56</sup>

The *Hanafi* School approach is not limited to Muslim neighbors, which in practice means religion is irrelevant. Indeed, all Four Schools agree the *shuf'ah* right exists for Muslims and *dhimmīs* (i.e., non-Muslims protected under a treaty of surrender). Thus, for example, a Jewish or Christian co-owner (or neighbor) holds the right as would a Muslim.

Of course, the rationales beg a key question: exactly who is a "neighbor" according to the *Hanafi* School? The answer is evident with respect to adjacent land. It also is clear in respect of a multi-story building, such as apartment or office tower. An owner of a section of a floor (or the entire floor) above or below the floor on which property to be sold is located holds the right of *shuf'ah*. Suppose, however, a road, highway, stream, river, or lake separates the parcel for sale from the plot owned by a purported neighbor. Must the owner give a right of first refusal to the "neighbor"?

Among the Four Schools, there is no debate as to the indivisible nature of *shuf'ah*. Suppose an owner, Maryam, contemplating sale of her property has two co-owners, Abdullah and Benjamin, plus a neighbor, Faisal. Under all Four Schools, the co-owners are entitled to *shuf'ah*, and under the *Hanafi* School, Faisal is, too. Assume the real property is located in a *Hanafi* School jurisdiction, and all three

interested parties would like to exercise the right of pre-emption. Because this right is indivisible, Maryam cannot grant each of them a one-third interest in the property. Maryam is not obliged to — and indeed, cannot — satisfy each person's demand to exercise his or her valid *shuf'ah* right. Consequently, she cannot divide up the parcel into thirds and sell each a one-third portion. Rather, she has two options. First, Maryam can support a negotiated settlement among the three interested parties. Second, she can decide to assign *shuf'ah* to one of the parties. Effectively, that will mean Faisal loses out, because his status as a neighbor is a lower priority than that of Abdullah and Benjamin, who are co-owners with Maryam.

Procedurally, there are two rules on *shuf'ah* to which a property owner must adhere:

• *Advance Notice* —

The owner must give notice to his or her co-owners, and (under the *Hanafi* School) neighbors, of the intention of the owner to sell the property. That notice must be given before the sale to a third party (i.e., a non-co-owner, or, under the *Hanafi* School, non-neighbor).

• *Prior Permission* —

No sale is possible to a third party unless and until the co-owners and (under the *Hanafi* School) neighbors grant permission.

Obviously, these rules protect the right of *shuf'ah* vis-à-vis third parties. Giving notice as a *fait accompli* would vitiate that right. Likewise, not getting permission to sell to third parties would render the right meaningless. Indeed, if the owner sold the property without permission of a co-owner, the latter could bring a legal claim against the former.

Equally obvious are questions about the procedural rules. How must a property owner satisfy them? Are written notice and written permission required? Or, does oral communication suffice? How far in advance is notice needed? Are there extenuating circumstances in which the notice period may be shortened? If a legal action is brought against the owner following a sale to a third party, then is the preferred remedy rescission of the sale contract to restore the *status quo ante*, or damages to the aggrieved co-owner?

A holder of the right of *shuf'ah* is not without obligations. Most importantly, he or she cannot reasonably expect to hold the right for a protracted period. The longer the period during which a co-owner of property or (under the *Hanafi* School) neighbor takes to decide whether to buy the property, the greater the risk for the owner seeking to sell. Potentially interested third-party buyers may become frustrated at the dithering of the co-owner or neighbor. Property values may fall due to sudden adversities in domestic or international economic conditions. Banks may reign in property lending, or increase the fees and profit-sharing percentages they seek from real estate loans. There is no single time limit accepted throughout the *Shari'ā*. The *Shāfi'ī* School sets the limit at 3 days after the owner gives notice. It is unclear whether these are business days (i.e., whether weekends and holidays count towards the 3 days).

<sup>56</sup> RAHM, *supra*, at 273, quoted in MUSLIM, *supra*, vol. IIIA, book 22 (Book of Share Tenancy), p. 64, Explanatory Note (1).

## § 20.06 CATEGORY #4 RESTRICTIONS: EFFICIENCY AND BARREN LAND

One rationale in favor of encroaching on private ownership, and regulating the enjoyment and use of private property, is efficiency. All other factors being equal, private property ought to be deployed to its highest and best use. Efficiency is a rationale independent of harm (*ḍarar*) or public interest (*maṣlaḥah*) for circumscribing private ownership, and thus is worthy of its own category of restrictions. But, efficiency is not unrelated to the other categories. In particular, putting land to efficient use serves the interest of the community (*ummaḥ*), i.e., the productive allocation and deployment of land resources supports *maṣlaḥah*.

As a general principle, the *Sharī'a* authorizes a government authority to enact formal or informal measures that encourage private owners to use their land productively. A special onus is on owners of barren land. They must not let it remain in that state. They must do the necessary to reclaim and transform land from a desolate, infertile condition into arable, fruitful property. The reclamation process may include clearing away scrub brush, preparing soil, finding irrigation sources, and so forth. The *Sharī'a* does not direct the land owner as to what use she must put the land. It is up to the owner to decide whether planting an olive grove or building a camel race track, for instance, constitutes highest and best use. What is clear is leaving land in an unprofitable state is unacceptable.

The mechanism to enforce this restriction essentially is a taking and redistribution. The appropriate government authority can take barren land from its owner, and allocate it (title and possession) to a different private party the authority believes will put the property to productive use. The restriction and sanction are found in two *ḥadīths*:

- Recorded by Al Tabrizī —  
Anyone who reclaims barren land becomes its owner.<sup>57</sup>
- Recorded by Al Kāsānī —  
The one who appropriates land has no right to it after three years.<sup>58</sup>

Further, precedent from the Four Rightly Guided Caliphs supports this regime. As Professor Kamali explains:

[Concerning] the caliph 'Umar bin al-Khaṭṭāb . . . [and] a fellow Companion, Bilāl b. al-Hārith al-Muzanī, to whom the Prophet himself had assigned a certain amount of land. Years later, the caliph 'Umar told him [Bilāl] that the Prophet did not give the land to him so as to deprive others of it, but so that it could be reclaimed and developed. Bilāl refused and said that the Prophet himself had assigned (*aqṭa'ā*) the land to him. The caliph then ordered Bilāl to "take of the land what you can reclaim and return the

rest." The caliph then said, "The one who fails to develop the land he has occupied for three years is no longer entitled to it, and it may be given to anyone who wishes to develop it." This became a general ruling under the caliph 'Umar, but it is reported that Ziyād, the caliph 'Alī's (cousin and son-in-law of Muhammad) governor in Iraq, and later Mu'āwīya's [founder of the *Umayyad* dynasty and first *Umayyad* Caliph, who lived from 602-680 A.D. and ruled from 661-680 A.D., and who led a civil war against 'Alī for leadership of the *umma*] governor too, reduced this period of grace to two years.<sup>59</sup>

To be sure, taking and redistribution is not likely to be the first option. A government authority will informally encourage or cajole, and if need be, pass formal regulations, to change the behavior of a lazy, recalcitrant landowner. But, if these measures do not work, then the authority may resort to the greatest intrusion on private ownership, expropriation and reallocation, and these means will be considered reasonable.

To safeguard against arbitrary or capricious governmental behavior, there is a 3-year rule, intimated in the second of the above-quoted *ḥadīths*. An owner has 3 years to reclaim barren land, before her land is at risk of being taken and given to another party. Following the precedent from the Caliphate of 'Alī, and at the discretion of the government, that time may be reduced to two years. The decisional criteria as to the appropriate period are the public interest (*maṣlaḥah*) and *siyāsa shar'iyyah* (i.e., policy or administrative regulations that are within the boundaries of the *Sharī'a*).

Exactly when the 3 (or 2)-year period begins to run is not clear, certainly not from the Qur'ān itself. Presumably, the appropriate government authority must provide notice to an owner, before the period begins to tick. Again presumably, that is true regardless of whether the owner just purchased the parcel in question, or has held it for 50 years. Also unclear is whether an extensions of the period is permissible, and if so, for how long. Circumstances (e.g., a large barren tract that is difficult to tame) may justify an extension.

## Chapter 21

### CONTRACT LAW: GENERAL PRINCIPLES AND CONTRACT FORMATION

---

In a climate of mutual trust, the *market* is the economic institution that permits encounter between persons, inasmuch as they are economic subjects who make use of contracts to regulate their relations as they exchange goods and services of equivalent value between them, in order to satisfy their needs and desires. The market is subject to the principles of so-called *commutative justice*, which regulates the relations of giving and receiving between parties to a transaction. But the social doctrine of the Church has unceasingly highlighted the importance of *distributive justice* and *social justice* for the market economy, not only because it belongs within a broader social and political context, but also because of the wider network of relations within which it operates. In fact, if the market is governed solely by the principle of the equivalence in value of exchanged goods, it cannot produce the social cohesion that it requires in order to function well. *Without internal forms of solidarity and mutual trust, the market cannot completely fulfill its proper economic function.* And today it is this trust which has ceased to exist, and the loss of trust is a grave loss.

His Holiness Pope Benedict XVI, Encyclical Letter, *Caritas in Veritate* (*Charity in Truth*), 29 June 2009, ¶ 35, posted at [www.vatican.va](http://www.vatican.va) (emphasis original)

[F] Absence of Duress (*Ikrāh*)

## § 21.07 EVIDENCE AND LONGEST QUR'ĀNIC VERSE

### § 21.01 ROLE OF CUSTOM AND PRACTICE

In Islamic legal discourse, "Contract Law" sometimes is referred to by its traditional name, the "Law of Obligations." In one sense, it is not easy for the modern legal practitioner or scholar to keep abreast of developments in Islamic Contract Law. That also is true — even more so — of Islamic Banking Law and Islamic Finance.

The difficulty is business and the market are inherently dynamic. Commercial parties and financial market participants continually innovate to enhance the quantity, quality, efficiency, and profitability of their transactions. They do so, or they wither and die in a competitive, global environment. Developments — some evolutionary, and some revolutionary — in their markets are a constant. Prices of essential commodities, natural resources, and energy, which are essential inputs in agricultural or manufacturing operations, change. Labor market conditions, such as the supply of skilled professionals needed for service providers, change. Political circumstances change. Governments rise and fall, civil unrest accompanies challenges to authoritarian regimes leads, and so on.

In another sense, it is risky to opine that keeping up with the *Shari'a* in Contracts, Banking, and Finance is difficult. That presumes a dis-connect between Islamic Law, on the one hand, and markets and players, on the other hand, and that the former must be squared with the latter. That is a secular approach to a sacred legal system. As Divine law, it is not the *Shari'a* that must be continually updated. Rather, proposed new ways of doing business and finance must be considered in the light of the immutable *Shari'a* principles. The process is one of probing Islamic Law to see what business or financial transaction can and cannot be done on the Scale of Qualifications between permissible (*halal*) and forbidden (*haram*), and how and why, in accordance with the Qur'an, *sunnah* of the Prophet Muhammad as documented by reliable *hadiths*, *ijma'* (consensus), *qiyās* (analogical reasoning), and perhaps other sources including *ijtihad* (reasoning).

In this process, customs and practices of merchants and financiers are weighed against requirements of the *Shari'a*. But, as a sacred legal system, there is no provision in Islamic Law that is equivalent to the famed Section 1-103 of the Uniform Commercial Code (U.C.C.). This provision, entitled "Construction of [the U.C.C.] to Promote its Purposes and Policies: Applicability of Supplemental Principles of Law," states:

- (a) [The U.C.C.] must be liberally construed and applied to promote its underlying purposes and policies, which are: (1) to simplify, clarify, and modernize the law governing commercial transactions; (2) to permit the continued expansion of commercial practices through custom, usage, and agreement of the parties; and (3) to make uniform the law among the various jurisdictions.

- (b) Unless displaced by the particular provisions of [the U.C.C.], the principles of law and equity, including the law merchant and the law relative to capacity to contract, principal and agent, estoppel, fraud, misrepresentation, duress, coercion, mistake, bankruptcy, and other validating or invalidating cause supplement its provisions.

Put generally, Section 1-103 reflects the doctrine, and centuries-long history behind it, that the custom and practice of merchants, the "*lex mercatoria*" or "*law merchant*," is itself a source of commercial law. In the case of the U.C.C., it is a supplementary one.

Adherents to and advocates for the *Shari'a* never have acquiesced to the belief that Islamic Law is not exclusively theoretically valid, nor can they easily do so. That means they cannot accept as equally valid an independent customary law. To do so, to have a rule like U.C.C. Section 1-103 that pays such homage to the *law merchant*, would strike at the heart of what it means to be a Muslim, namely, to be one who submits to the will of God (Allāh). Nor have these advocates ever surrendered the point that the *ulema* — not government officials — are the sole persons qualified to interpret religious law.

Recall the hierarchy of established authorities, and the concomitant duty of obedience to them, set out in *surah* 4 of the Qur'an:

<sup>59</sup>You who believe, obey God and the Messenger [Muhammad], and those in authority among you. If you are in dispute over any matter, refer it to God and the Messenger, if you truly believe in God and the Last Day: that is better and fairer in the end.

. . .

<sup>60</sup>Will they not think about this Qur'an? If it had been from anyone other than God, they would have found much inconsistency in it. <sup>61</sup>Whenever news of any matter comes to them, whether concerning peace or war, they spread it about; if they referred it to the Messenger and those in authority among them, those seeking its meaning would have found it out from them. If it were not for God's bounty and mercy towards you, you would almost all have followed Satan.<sup>1</sup>

Translated into colloquial terms, these *ayat* do not say to commercial parties on the verge of, or in the midst of, a dispute, or to judges of that dispute: "refer to your long-standing customs and practices as a source of authoritative rules to apply to and resolve your dispute." Rather, these *ayat* guide the parties and judges to sacred scripture and non-prophetic utterances of Muhammad. Thus, Professor Schacht writes:

[The proposition that] *law must be ruled by religion* [is an idea widely accepted in the Muslim World, and even is an] essential assumption of the Modernists, who otherwise do not hesitate to interfere deeply with the

<sup>1</sup> THE QUR'AN — A New Translation by M.A.S. Abdel Haleem 4:59 at 56, 4:82-83 at 58 (Oxford, England: Oxford University Press, 2004). [Hereinafter, QUR'AN.]

traditional doctrine of Islamic law. *But the laws which rule the lives of the Muslim peoples have never been coextensive with pure Islamic law, although this last has always formed an important ingredient of them.* These conditions have prevailed in all parts of the Islamic world since the early Middle Ages.<sup>2</sup>

This proposition is a testament to the tremendous authority the *Shari'a* holds in the minds of Muslims, regardless of the precise degree of synchronization between it and the proverbial "law on the books" of the state in which they happen to reside.

For commercial parties and judges, no doubt the practical business experience, including service as an arbitrator (*hakam*) of Muhammad is relevant. When it becomes necessary to refer to one or more *hadiths*, the parties and judges can take comfort that the statements reflected not only the preeminence of religious precept, but also the empathy of reputable man of commerce. Still, not every commercial problem is readily answerable by recourse to the Qur'an or *Sunnah* of the Prophet. From air travel to the iPhone, from foreign exchange swap agreements among central banks to swapping music files through the internet, the substance and style of market transactions evolve. In part, that is because of new technologies, which in turn reflect profit motives of their inventors and purveyors. Such changes, some of which are revolutionary, are foreseeable to an omniscient God, but not to the average market participant or judge of a commercial dispute.

Thus, not surprisingly, through the ages, customary commercial practices and the *Shari'a* have interacted. They continue to do so, and always will. It is only natural for merchants to look to their own customs and practices, and to seek to persuade a judge in their case to recognize and apply them as *law merchant*. In any legal paradigm, sacred or secular, the interaction between the market and the rule makers is inevitable, and indeed, healthy. To purists, the risk of such interaction is that theory and practice diverge. And, so they do from time to time and place to place. The interaction between Islamic Law and pre-Islamic customary law, particularly in the area of contracts, is a good example.

Islamic Law has responded with a key strategy, as it were, to try to ensure consistency.<sup>3</sup> That strategy is for the *Shari'a* to leave as much as possible to custom and practice, while at the same time influencing that custom and practice with religious and moral precepts. After all, custom and practice evolves to suit the needs of the merchants, but why not guide the evolution by infusing customs with Islamic principles?

One example is conclusion of a contract at the time of the call to prayer, especially Friday (*Jum'a*) prayers. Religious authority holds all trading must cease, and contracts concluded during these prayers are voidable. In practice, in many Muslim markets, from Cairo to Kuala Lumpur, that does not always happen. Merchants carry out and complete their business, if need be, right through congregational prayer.

<sup>2</sup> JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 84-85 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, SCHACHT.]

<sup>3</sup> See SCHACHT, *supra*, at 77-78.

Another example is a contract for the sale of real property. This contract is known as a "*bay' al wafa*" agreement. Customary law allows for sale of real property with a right of redemption (i.e., a right to reclaim or regain ownership upon default by the buyer) in favor of the property owner-seller. The idea is to avoid irrevocable alienation of land. Under a strict approach, this contract is not permissible, either as a sale or as a pledge.<sup>4</sup> Yet, this type of contract is used to transfer property in many Muslim countries.

## § 21.02 SHI'ITE DISTINCTIONS

There do not appear to be major differences on basic Contract Law between *Sunni* and *Shi'ite* Islam. That said, one area in which a distinction can arise is gap-filling. That is, on an issue where the law does not provide an answer, upon what basis will a court supplement the law to resolve a dispute?

Consider Article 1 of the United Arab Emirates (UAE) Civil Code. It states:

In the absence of a text in this Code, the Courts shall resort to Moslem *Shari'a* and choose the most adequate solution amongst those taught by the *Hanbali* and *Maliki* doctrines. Failing them, they shall resort, as need may be, to the *Shafi'i* and *Hanafi* doctrines.<sup>5</sup>

The UAE is a *Sunni* nation, of course. In contrast, gap-filling in Iran, a *Shi'ite* country, could produce a contrary result. There does not appear to be a provision within the Iranian Commercial Code specifically referencing *Shi'a* principles, this result is only one step removed. Article 10 of the Iranian Civil Code states:

Private contracts shall be binding on those who have signed them, providing they are not contrary to the explicit Provisions of a law.<sup>6</sup>

Moreover, the Constitution of Iran makes clear *Shi'ism* is the foundation of the country, and Articles 12 and 72 of the Constitution Iran ensure rules promulgated by *Shi'a* hold absolute sway.<sup>7</sup> Therefore, all laws written or applied by an Iranian court must pass an initial litmus test under *Shi'ite Shari'a*. If a contract dispute is litigated and involves a point on which *Sunni* and *Shi'a* differ, then courts in the UAE and Iran possibly could reach different results.

## § 21.03 IMPORTANCE OF HONESTY AND FAIR DEALING

One of the unfortunate stereotypes of merchants in the Arab Muslim world, particularly of Persian carpet dealers or vendors of traditional items like Bedouin coffee pots, is that they are untrustworthy. Among other factors, Hollywood

<sup>4</sup> See SCHACHT, *supra*, at 78.

<sup>5</sup> Federal Code of Civil Procedure, Article 1, United Arab Emirates, quoted in Faisal Kutty, *The Shari'a Factor in International Commercial Arbitration*, 28 LOYOLA OF LOS ANGELES INTERNATIONAL & COMPARATIVE LAW REVIEW 565, 594 (SUMMER 2006).

<sup>6</sup> Civil Code of Iran, Article 10, posted at <http://hajipour.online.fr/wp-content/civilcode.pdf>.

<sup>7</sup> Constitution of Iran, Articles 12, 72, posted at [www.iranonline.com/iran/iran-info/Government/constitution.html](http://www.iranonline.com/iran/iran-info/Government/constitution.html).

depictions of an unscrupulous shopkeeper in a crowded bazaar only too eager to cheat a naïve customer are to blame for the stereotype. In fact, no culture has a monopoly on low-integrity sellers. They exist in the Muslim and non-Muslim world alike.

What is often lost amidst the stereotypes, however, is how strongly Islamic Law exhorts, and indeed enjoins, Muslims to be honest in their transactions, and deal fairly with counter-parties, in their commercial transactions. The *Shari'a* provisions are not limited to the negotiation, agreement, conclusion, and performance of contracts with other Muslims. Those provisions apply to Muslims in their commercial dealings with any human being, man or woman, regardless of his or her religion.

Thus, Professor Hussain explains:

There are many verses in the Qur'an which encourage trade and commerce. . . .

. . . .

However, just as Islam regulates and influences all other spheres of life, it also governs the conduct of business and commerce. Muslims should conduct their business activities in accordance with the requirements of their religion to be fair, honest, and just towards others.<sup>8</sup>

One such direct passage from the Qur'an is *surah* 5, *ayah* 1:

You who believe, fulfill your obligations.<sup>9</sup>

Likewise, *surah* 17, *ayah* 35 states:

Give full measure when you measure, and weigh with accurate scales: that is better and fairer in the end.<sup>10</sup>

There also are *hadiths* linking professional business integrity with personal salvation:

A trustworthy and an honest and truthful businessman will rise up with martyrs on the day of Resurrection [i.e., Day of Judgment].<sup>11</sup>

It cannot be over-emphasized that the stress on honesty and fair dealing is deeply embedded in Islamic Law, and this stress contrasts with American Contract Law.

There is no encouragement to cheat on contractual dealings in American Contract Law, and there are legal disincentives to engage in fraudulent behavior. But, those disincentives are a matter of secular law, not sacrosanct principle. They may well rest on Judeo-Christian foundations that, owing perhaps to ignorance, prejudice, or political correctness, or some combination thereof, are not recognized

<sup>8</sup> JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 158-159 (Annandale, New South Wales, Australia: The Federation Press, 1999). (Professor Hussain is a Lecturer in Law at the University of Technology Sydney (UTS) in Sydney, Australia.) [Hereinafter, HUSSAIN.]

<sup>10</sup> QUR'AN, *supra*, 17:35 at 177.

<sup>11</sup> BEN MAJAH, quoted in 'ABDUL RAHMAN I DOI, *WOMEN IN SHARI'AH* 350 (1990), quoted in HUSSAIN, *supra*, at 160.

as openly as they ought to be. The unscrupulous contractor may be at risk of civil or even criminal liability under secular law that is grounded (albeit not explicitly) in part on precepts found in the Bible, plus a yet worse punishment in the after life that is not part of the secular legal calculus.

In contrast, in the *Shari'a*, ethical and moral conduct in commerce is an explicit commandment from God (Allāh) through His Prophet (Muhammad), and from the non-prophetic utterances of that Prophet. They are set out in the Qur'an and *hadiths*, and indeed other sources as well. Consequently, to Muslims (and many non-Muslim observers), they have a profundity not present in a proscription set out in an avowedly secular commercial statute such as the U.C.C.

## § 21.04 BROAD DEFINITION OF "CONTRACT" ('AKD)

### [A] Inclusion of Gifts (*Hibat*)

Contracts were a part of human history long before the advent of Islam on the Arabian Peninsula. Early examples, written in cuneiform text, come from Ancient Mesopotamia. Contracts also have been part of the interaction between God and man. The Old Testament contains a series of special contracts — covenants — between the God of Abraham and the Jewish people. The New Testament recounts a New Covenant between the Son of God (Christ) and humanity. Muhammad, in his pre-Prophetic period, worked with his wife Khadyja in their commercial business, and knew well the process of buying and selling. In his Prophetic period, he gave many *hadiths* on contracts, distinguishing the acceptable from unacceptable.

To begin with the Islamic legal concept, "*akd*" is the Arabic word for a "contract." The word is a generic one, covering all types of agreements that give rise to legal rights and duties. However, in the *Shari'a*, the word "*akd*" has a broader meaning than the word "contract" in American Law. As Professor Hussain explains:

The definition of contract (*al-'akd*) is similar to that in the common law, but is wider in that it includes dispositions which are gratuitous as well as endowments and trusts.<sup>12</sup>

Thus, in particular, a gift, or donation — called "*hibah*" (singular) or "*hibat*" (plural) in Arabic — is considered a contractual arrangement. So long as a gift involved the absolute and unconditional transfer of ownership of an object, then the giving of that gift is considered a contractual transaction. In contrast, a considerable amount of time in any first-year American Contract Law course is spent differentiating a gift from a contract, with the "bottom line" conclusion being that only the latter is supported by consideration.

<sup>12</sup> HUSSAIN, *supra*, at 171.

### [B] When Gifts (*Hibat*) are Binding

Interestingly, Islamic legal scholars (*fukahā*) differ on an important question associated with gift contracts, namely, when does such a contract become binding and, therefore, legally effective?<sup>13</sup> The consensus is that a donation becomes complete (*tāmm*) only if the donee takes full possession of the object from the donor, or at least as full possession of the object as is possible given the nature (*asl*) and circumstances (*wasf*) of the transaction.<sup>14</sup> Taking possession necessitates permission of the donor. Until the donee takes possession, the donor may revoke (*rujā'*) the donation. Once the object is in the possession of the donee, i.e., once the donee has received the object from the donor, any revocation is considered, at a minimum, reprehensible (*makrūh*).

This minimum position, however, while articulated by Professor Schacht, does not appear to reflect the view of most *fukahā*. The majority view is a contract for a gift, or donation, is binding when the donee acquires from, and with the permission of, the donor, the fullest possible possession of the object. Two *hadiths* support this view:

- The Prophet . . . said, "He who takes back his present is like him who swallows his vomit."<sup>15</sup>
- 'Ubaida [a Companion of the Prophet] said, "If both the giver and the receiver have died but the present was set aside (i.e., separated) in the lifetime of the receiver, it will be given to his inheritors, and if it was not separated, it will go to the inheritors of the giver." Al-Hasan [eldest son of 'Ali, brother of Hussein who was martyred at the Battle of Karbala in 680 A.D., and grandson of the Prophet from his daughter Fātimah] said, "It will be given to the inheritors of the receiver (i.e., to whom the present was meant) no matter who died first, if the gift has been delivered to the messenger [of the receiver]."<sup>16</sup>

The first *hadith* is self-evidently strong in its metaphor. The second *hadith* is legalistic, covering three distinct possibilities — the donor and donee both predecease the transfer, but (1) the gift is allocated to the donee, (2) the gift is not

<sup>13</sup> See HUSSAIN, *supra*, at 173.

<sup>14</sup> See SCHACHT, *supra*, at 78, fn. 1 at 144.

III, book XLVII (The Book of Gifts and the Superiority of Giving Gifts and the Exhortation for Giving Gifts), p. 465, unnumbered *hadith* following *hadith* no. 769 and starting ch. 18 (Islamic University, Medina, Kingdom of Saudi Arabia: Dar Ahya Us-Sunnah, Al Nabawiya, March 1978). [Hereinafter, BUKHARI.]

<sup>16</sup> BUKHARI, *supra*, vol. III, book XLVII (The Book of Gifts and the Superiority of Giving Gifts and the Exhortation for Giving Gifts), p. 478, *hadith* no. 790. This *hadith* is particularly reliable, as the nearly identical version appears in SAHIH MUSLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM'US-SAHIH by IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDUL HAMID SHIBGI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HUSSAIN, vol. IIIA, book 24 (Book of Donation), p. 73, *hadith* no. 1622R4 (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990).

allocated to the donee, and (3) the gift is turned over to an agent for the donee.

Finally, there are two clear outright prohibitions on revocation. *Rujā'* is forbidden (*harām*) if the donee not only took possession, but also gave some counter-value to the donor. Likewise, it is *harām* to revoke a purely charitable gift (*ṣadaka*).

### § 21.05 FREEDOM OF CONTRACT WITHIN RELIGIOUS BOUNDARIES

Before turning to black-letter rules of Islamic Contract Law, it is important to appreciate the spirit of those rules. Consider a contrast. American Contract Law proceeds from the premise of freedom. Liberty of contract is the paradigm. All agreements between competent, consenting legal persons are presumed permissible, unless expressly prohibited by law. Freedom of contract is the cousin, as it were, of what is sometimes characterized in the American regime as the "sanctity" of contract. That characterization is apt insofar as it connotes a secular inviolability, unassailability, or indomitability of contract. Yet, "sanctity" — in the sense of its true connotation of "holiness," "sacredness," or "saintliness"<sup>17</sup> — is a term more closely tied to Islamic than American law.

The American freedom of contract paradigm has deep philosophical underpinnings, emanating from the Enlightenment. It also is a foundation of capitalism. In contrast, the reverse presumption — everything is prohibited unless expressly permitted by government — is a hallmark of a government-operated economy, i.e., of a communist system in which the government owns and controls the means of production, and makes all decisions about the allocation of factors of production (land, labor, human capital, physical capital, and technology). Indeed, Nobel Prize-winning economist Milton Friedman, in his classic 1962 book *Capitalism and Freedom*, suggests the link between contractual freedom and capitalism is connected to democracy itself. A free-enterprise economy is not truly possible without a relatively free political structure.

Notably, the 1980 United Nations Convention on Contracts for the International Sale of Goods (*CISG*) proceeds from a freedom-of-contract premise. The *CISG* has been acceded to by 74 countries (as of July 2009). Article 6 of the *CISG* is an opt-out clause:

The parties may exclude the application of this Convention or, subject to article 12, derogate from or vary the effect of any of its provisions.<sup>18</sup>

In other words, this provision allows parties that otherwise would be covered by the *CISG*, by virtue of Article 1:1, to elect not to be governed by the treaty. Article 6 is evidence not only of party autonomy to choose the law applicable to their contract, but more generally of freedom of contract.

<sup>17</sup> OXFORD AMERICAN DICTIONARY AND THESAURUS 1335 (New York: Oxford University Press, 2003) (entry for "sanctity").

<sup>18</sup> *CISG* Article 79, posted at Pace Law School (New York) Institute of International Commercial Law, [www.cisg.law.pace.edu/cisg/text/treaty.html](http://www.cisg.law.pace.edu/cisg/text/treaty.html). See also Article 95 (concerning contracting parties).

What, then, is the starting point in the *Shari'a* for Contract Law? The short answer is there is contingent freedom of contract, the contingency being religion. There is no general principle in Islamic Law concerning the freedom or liberty of contract.<sup>19</sup> The reason is that complete freedom of contract would be incongruous with the over-arching goal of infusing law with religious precepts. If Islamic Law is truly sacred, then it shall have to enjoin some types of secular bargains on religious grounds. Simply put, the starting point for Islamic Contract Law, like any other field of Islamic Law, is not secular freedom, but religious constraint. The constraint is set by God, as revealed to Muhammad and amplified by the *Sunnah* (tradition of the Prophet), *ijma'* (consensus of scholars in a School, at a particular time), and *qiyās* (analogical reasoning).

Lest it be thought this starting point inhibits development of a modern capitalist marketplace, however, Islamic religious and legal scholars (*ulema* and *fukahā'*, respectively) would reply it provides moral guidance to that development. They would agree with Catholic Christian teaching that there is no true freedom without limitation. Without some boundaries, "freedom" is anarchy and chaos. Boundaries allow for authentic expressions of economic and non-economic desires, with "authenticity" meaning respect for the dignity of the human person as a creature of God, and for the common good. Thus, *Shari'a* scholars would reject what they perceive as the unbridled, exploitative American-style capitalist marketplace, and counsel for contractual relationships that provide for genuine mutual gain in an ethically acceptable manner.

Moreover, as a practical matter, the *ulema* and *fukahā'* would point out that *Shari'a* is very flexible as to contracting. Private parties have a wide freedom to enter into mutually beneficial exchanges. Indeed, marketplaces were thriving in the eras of the *Rashidun*, and *Umayyad* and *Abbasid* Caliphates, while Europe plodded through its Dark Ages (or more precisely put, the Early Middle Ages, roughly from the fall of Rome in 476 to 1000 A.D.) and High Middle Ages (roughly from 1000, through the Fall of Constantinople in 1453, to 1517 and the Protestant Reformation).

Perhaps the most important religiously-inspired constraint is that a party to a contract should fulfill her obligations as called for in the contract. There is no single, all-encompassing term in Arabic for the concept of "obligation." However, the closest Arabic word strikes directly at the moral nature of the limitation. That word is "*dhimma*," which means "care as a duty of conscience." The obligation to perform a contract is not founded on a secular legal enactment or judgment. Rather, it springs from conscience. In turn, conscience is shaped by religious practice, namely, the effort to discern the will of God (Allāh) and submit to it. Here, then, is the intertwining of the sacred (Divinely-guided conscience) and the profane (worldly duties established by contract). Notably, in many Islamic law schools, Contract Law is referred to as the "Law of Obligations."

Critically, the religious boundary — that obligations must not be broken — protects contracts, and by extension supports the development of the commercial marketplace. Commercial relations become chaotic, and the economy anarchic, with

no certainty or predictability as to whether contracting parties will perform their duties. For instance, a party to a contract should return any deposit (*amāna*) to the owner of that deposit. An *amāna* is associated with a fiduciary relationship of trust between a property owner and the party with whom the property is deposited. An "*amin*" is the person in whose trust the property is placed. The obligation of the *amin* is to hold that property safely while in custody of it, and return it in good condition at the appropriate time to the proper owner.

Of course, this expectation exists for a depositary under American Contract Law. It is not that the *Shari'a* forbids usurpation of a pledged asset, while English and American Law encourages it. Rather, the point is that the ultimate source of the obligation is different in the two legal systems. Under the *Shari'a*, the *amin* has a duty of conscience to perform its obligations. It is a religiously-grounded expectation. Under American doctrine, the depositary may on an individual basis feel a moral compunction, but the legal basis for the duty is not (or at least not explicitly) Judeo-Christian teaching.

So, American Contract Law tends to focus on the form or effect of contracts. In contrast, the *Shari'a* tends to examine whether a religiously acceptable basis for business affairs exists. Its concern is about "moral norms under which certain transactions are allowed or forbidden."<sup>20</sup> Once those norms are set and applied, the specific form a deal takes is not of great concern. There is flexibility as to form within the parameters of the norms. The silence of the Qur'an as to direct linking of legal consequences to factual predicates is not surprising, as the *Shari'a* is a sacred legal system. More important than attaching specific consequences to every conceivable violation the legal mind can identify is imposing a behavioral standard fixed in religion and morality.

## § 21.06 CONTRACT FORMATION: ESSENTIAL CONSTITUTIVE ELEMENTS

For the most part, contracts are concluded in an informal manner under the *Shari'a*. That is, Islamic Law does not impose numerous or onerous formal requirements on parties seeking to establish a contract (*'uqd*). In that respect (and many others), the *Shari'a* provides a rule-of-law edifice for modern capitalist growth.

Islamic Law envisions a contract as a bilateral transaction, such as between individuals, businesses, a business and an individual, or groups (including families). The *Shari'a* has six technical prerequisites, all of which must be satisfied, for formation of a legally binding and enforceable contract.<sup>21</sup> They are:

- Offer (*ijāb*)
- Acceptance (*kabāl*)
- Consideration (*badal*)

<sup>20</sup> See SCHACHT, *supra*, at 12.

<sup>21</sup> See HUSSEIN, *supra*, at 171.

<sup>19</sup> See SCHACHT, *supra*, at 78, fn. 1 at 144.

- Capacity
- Legality
- Freedom, or Absence of Duress (*ikrah*)

These requirements are discussed in turn below. The adjective “bilateral” should not be emphasized too strongly. There is no injunction in the *Shari’a* against multiple parties (*i.e.*, more than two) to a contract. For example, in a routine contract for the sale of a good (*bay’*), there may be two buyers. Each buyer would be responsible for a specified portion of the purchase price, and entitled to a particular amount of the item in question.

Significantly, there is no disagreement among the Four Sunni Schools as to the essentiality of these elements. All Four Schools — *Hanafi*, *Maliki*, *Shafi’i*, and *Hanbali* — set out these six requirements. That also is true of the *Shi’ite* jurisprudence.

### [A] Offer (*Ijab*)

Professor Schacht speculates the element of offer (*ijab*), as well as acceptance (*qabul*), derived from ancient Near Eastern law, and came into the *Shari’a* through commercial practice in Iraq.<sup>22</sup> In contracts of lease and marriage written in cuneiform (*i.e.*, wedge-shaped writing or inscriptions, typically impressed in clay) from the 7th century to the 1st century B.C. in Babylonia (*i.e.*, the famed city in Mesopotamia, in what is now modern-day Iraq), the elements of offer and acceptance were present. In modern juridical parlance, the Babylonians engaged in a “bilateral construction” of contracts, at least for lease and marriage contracts.<sup>23</sup> The *Shari’a* has this same “bilateral construction of contracts,” which is to say under Islamic Law the juridical analysis of any commercial contract is bifurcated into offer and acceptance. That is true for all commercial contracts.

The possible Near Eastern origin of offer and acceptance should be both fascinating and humbling to legal scholars, students, and practitioners in the Common Law world. Contract Law is a required course in law schools in the United States, England, and elsewhere. Generations have seen or read of the Code of Hammurabi and other Ancient Mesopotamian documents, housed in the British Museum and Louvre. Yet, hardly if ever are the ancient Middle Eastern origins of the elements of contract formation, or their incorporation into the *Shari’a*, mentioned in the typical Contracts course. Despite the chronology, the course often leaves the misleading impression that the English invented the ideas of offer and acceptance, and the Americans perfected it. Quite the contrary, as the chronology indicates. The history of the concepts long predates the British Empire or the founding of the American Republic.

Interestingly, the technical bilateral construction of contractual relationships is not characteristic of Roman Law. There were no Roman legal terms for “offer” and

“acceptance.”<sup>24</sup> Rather, “offer” and “acceptance,” as expressed in Latin, connoted an agreement, or consensus, of the contracting parties. That connotation is less precise than a bilateral construction. The *Shari’a* does not conceive of a contractual relationship as a consensus, but rather as an offer followed by an acceptance. That sequential approach also is characteristic of American Contract Law.

Thus, Islamic Contract Law distinguishes between an *ijab* (offer), and a *qabul* (acceptance). Obviously, an offer is the first step in contract formation, aside from the willingness of parties to enter into a contract (*i.e.*, freedom). Both offer and acceptance are necessary for formation of a valid, binding contract (*’akd*). They are not sufficient in and of themselves, as there are other constituent elements. In many instances, the offer and acceptance are made during the same meeting. The general term for “meeting” is “*majlis*.” Frequently, contracting parties exchange *ijab* and *qabul* in a single *majlis*.

By what means must an offer be conveyed? The *Shari’a* is flexible on this question. Professor Doi identifies five possibilities:

... The offer can be made in a number of ways:

1. It can be made *verbally* (*bi’l-kalām*). This kind of offer is to be made in the same meeting.
2. It can be made in *writing* (*bi’l-kitābah*). This form of offer becomes effective as soon as the letter leaves the person offering and will remain valid until received by the recipient. The offer must be replied to immediately.
3. It can be made through a message sent with some person, a *messenger* (*rasūl*) whose honesty is not doubted and if the offer is accepted, it will be a good acceptance. *Maliki*, *Shafi’i*, and *Hanbali* jurists are of the opinion that the offer must be made by the owner of the property in return for a due consideration, but the *Hanafi* jurists say that it can come from either party.
4. It can be made through *signs and gestures*, particularly in those cases where the person offering is deaf or dumb (*i.e.*, a mute), or when the recipient does not understand the language of the person offering. The *Maliki* School regards as valid the well-known signs made by a person without any impediments, since the main idea is that the person offering should communicate the offer. Most jurists believe that the known signs of dumb persons made to constitute an offer are valid, but there are some jurists who consider signs and gestures invalid as modes of making an offer.
5. It can be made by *conduct* (*fi’l*). An offer made through the delivery of goods is valid according to the *Maliki* School.<sup>25</sup>

<sup>24</sup> See SCHACHT, *supra*, fn. 1 at 22.

<sup>25</sup> ‘ABD AR-RAHMAN I. DOI, *SHARIAH: ISLAMIC LAW* 551-552 (London, England: Ta-Ha Publishers Ltd., 2nd rev’d ed., 2008) (emphasis added). [Hereinafter, DOI.] (The author’s name is commonly transliterated as in the text above, and used on the copyright page and back of the treatise. But, the transliteration in this citation is more precise, and set out on the cover and title page of the treatise).

<sup>22</sup> See SCHACHT, *supra*, at 22.

<sup>23</sup> SCHACHT, *supra*, at 22.

There is only one manner in which an offer cannot be conveyed: silence. Any agreement purportedly reached through a silent offer is invalid. Normally, an offeror is expected to communicate actively via one of the aforementioned means.<sup>26</sup>

As the above quotation suggests, in Islamic Law an offer is effective upon dispatch. That is, as soon as an offer is made, it is legally valid. Notably, American Contract Law knows the same principle in the form of the "Mailbox Rule."

What does Islamic Law say about revocation of an offer? The general Islamic legal term for revocation, or withdrawal, is "*rujā'*." The general rule is that an offer is revocable until the moment it is accepted. At any point until acceptance, the offeror has the right to retract the offer. But, upon acceptance, a contract is concluded. At that moment, the offeror no longer has a right of *rujā'*.

A closely related query is for how long is an offer effective, i.e., valid? Professor Hussein states that as a general rule, if an offer is conveyed in writing, then it remains effective until the offeree receives the offer.<sup>27</sup> (The above quote from Professor Doi makes the same point.) Upon receipt, the offeree has a duty to reply promptly (or, in the account of Professor Doi, "immediately"). The reply takes the form of an acceptance, rejection, request for clarification, modification, or counter-offer. Presumably, if the offeror conveys the offer orally, or through non-verbal communication, then the same general rule applies. In many instances, such conveyance implies a face-to-face meeting, telephonic or e-mail link, or other real-time interaction between the parties.

Arguably, there is a sequencing problem with stating the general rule about the duration of an offer in terms of receipt, rather than acceptance, by the offeree. Receipt is followed by, not simultaneous with, acceptance. If an offeror has the right to revoke an offer up until the moment of receipt by the offeree, then an offeree might never have the opportunity to accept it. That would occur if the offeror revokes it at precisely the moment of receipt (or before). In that instance, the offeree has no time to contemplate the offer. Consequently, unless that outcome is intended, it appears better to characterize the general rule in terms of acceptance: an offer is valid until acceptance, but up until acceptance, the offeror has a right of revocation (*rujā'*).

This general rule is subject to a caveat. It is within the right of any offeror to condition the offer as to its duration (as well as other features). No offeror is required to keep an offer open in perpetuity. On the one hand, an offeror can expand the time an offeree has to reply, beyond mere receipt by the offeror. For instance, the offeror can indicate "this offer is open for 5 business days following receipt." On the other hand, the offeror could circumscribe that period, possibly giving a fixed deadline. For example, the offer could state it expires on 11 November. The offeree might get constructive receipt of the offer, but not obtain actual knowledge of it, as would be the case where the offer arrived in the mail on 10 November, but the

<sup>26</sup> There may be room for a silent offer that is legally valid if there is no such expectation, but that proposition, while intimated by Professor Doi, is not explained by him. See Doi, *supra*, at 552 (stating: "If the contracting person keeps silent while he is expected to express himself, it will be deemed and invalid contract").

<sup>27</sup> See HUSSEIN, *supra*, at 171.

offeree was on holiday until 12 November.

## [B] Acceptance (*Ḳabāl*)

Upon acceptance (*Ḳabāl*), a contract (*ʿakd*) becomes binding. The Arabic term for "binding" is "*lāzim*." At that point, both sides are legally obliged to carry out their duties under the contract.

The fact the *Sharīʿa* envisions that agreements, under certain circumstances, may be oral, intimates it is flexible as to the form of communication used during contract formation. Oral contract formation patently involves words. But, under Islamic Law, non-verbal communication also suffices to form a contract.<sup>28</sup> Like an offer (*ijāb*), an acceptance (*Ḳabāl*) may be conveyed by a variety of means. Signs, gestures, conduct, or use of a messenger — any or all of them — may be enough to communicate an acceptance, and thereby establish a contract. Simply put, the *Sharīʿa* does not impose formal requirements as to communication style, and permits both an offer (*ijāb*) and an acceptance (*Ḳabāl*) to be communicated through behavior.

An example of non-verbal communication is compliance with an order.<sup>29</sup> A written or verbal order from an offeror might be "Sell me \_\_\_\_\_." The acceptance is communicated through that means, namely a sale. In modern American Contract Law parlance, the legally cognizable communication is through performance by the offeree. This example illustrates a second basic, practical point. Unless conditioned by the offeror in the offer, the acceptance and offer need not take the same communication form.

Is acceptance required for every kind of contract? No. Certain contracts do not require one.<sup>30</sup> An example is a unilateral disposition (e.g., of an asset) with immediate legal effect. The effect could be repudiation of a contract, or release of a debtor from an obligation. The counter-party need not accept the disposition. Repudiation or release occurs automatically under the *Sharīʿa*, with no further action required.

Importantly, both offer and acceptance may be conveyed through a designated agent (*wakīl*). Indeed, use of agents in commercial matters is common in the Arab Middle East. The agents are designated as such by their principals, the contracting parties. Ideally, the designation — itself a contractual arrangement between principal and agent — will lay out carefully the scope, nature, and duration of the agency relationship, including the powers of the agent to bind the principal.

Technically, the topic of ratification (*imḍā*) of an agreement may be placed within a discussion of contract formation. However, the right to ratify (*imḍā*) a contract bears similarities to the right of rescission (*khīyār*).

<sup>28</sup> HUSSEIN, *supra*, at 171.

<sup>29</sup> See SCHACHT, *supra*, at 145.

<sup>30</sup> See SCHACHT, *supra*, at 145.

### [C] Consideration (*Badal*)

In the usual contract (*'akd*), specifically, the contract of sale (*bay'*) through which a good or property (*māl*) is exchanged for money or for a different good or property, two basic features are, or ought to be, readily apparent: price, and value. These two features are not always identical.

The price of an object is called "*thaman*" in Arabic. The price may be different from the value of the good, which is called "*kima*." Typically, price is denominated in a fungible item, like money, gold, or silver. In contrast, of course, the object may be non-fungible. The value (*kima*) of any one object is the counter-value (*'uwaḍ*) of the other object, and vice versa. For instance, in a sale of 1 kilogram of oranges for U.S. \$5, the price (*thaman*) is \$5. The value (*kima*) of the oranges is the counter-value (*'uwaḍ*) given by the buyer, namely, \$5. The value (*kima*) of the \$5 is the counter-value (*'uwaḍ*) handed over by the seller, namely, a kilo of oranges. At a metaphysical level, there always is the possibility of debate as to whether the price reflects the true value, and thus whether the reciprocal counter-values are equal.

Contemplating the price (*thaman*) and value (*kima*) associated with a contract of sale (*bay'*) leads to a topic familiar in American Contract Law, namely, consideration. It might be too strong to say that Professor Schacht (1) reports that the *Shari'a*, in contrast to American law, does not have the doctrine of consideration, and (2) suggests all that is needed to make a contract *lāzim* is *ijāb* (offer) and *kabūl* (acceptance). However, it is fair to say that he does not lay much emphasis on the doctrine of consideration, though he identifies the Arabic word for it — *badal*.<sup>31</sup> He identifies its relevance mainly, if not exclusively, in the context of amending contractual obligations. In that context, he notes that a contract, in the event of a dispute between the parties, can be amended by an amicable settlement, called "*sulh*" (as distinct from a cancellation, or "*faskh*"). The amendment may require supporting consideration, as when a creditor or other obligee waives a claim against a debtor or other obligor.

True enough, an existing obligation can be amended for *badal*. The result is a waiver of any claim arising from the original obligation that has been modified. But, consideration matters in any contractual situation. Indeed, as Professor Hussein states, it is "essential."<sup>32</sup> Other sources confirm her view. For example, Professor Doi writes:

In the *Shari'a*, a contract is made only when one party offers something to another party for some consideration and the other party accepts the offer. The offer and acceptance must be made in a free manner. The consideration must be lawful. The parties must also agree upon their rights and duties.

Consideration is an essential ingredient of a valid contract.<sup>33</sup>

<sup>31</sup> See SCHACHT, *supra*, at 144, 148, 154, 197.

<sup>32</sup> HUSSEIN, *supra*, at 171.

<sup>33</sup> DOI, *supra*, at 551, 553 (emphasis added). The fact Professor Doi cites three Islamic legal treatises

Thus, not only is consideration essential to contract formation in Islamic Law, but also it is fascinating, and humbling, to contemplate the possibility that the American Contract Law doctrine of consideration is derived, directly or indirectly, from the *Shari'a*.

As the above-quoted passage indicates, consideration must be "lawful." Legality is a separate element indispensable to contract formation. For present purposes, the quotation raises the following question: of what must consideration consist? That is, what qualifies as lawful consideration? The answer is whatever the parties agree, with the qualification their agreement does not take the form of something forbidden (*harām*).<sup>34</sup> They may agree on money, and in the vast majority of contracts, price (*thaman*) is the consideration that supports the contract. However, the theory of consideration in Islamic Contract Law tends to emphasize value more than price. Indeed, the value can be a moral one, and a moral value can constitute consideration. That is why transactions involving a gift (*al hibah*) or charitable property (*al waqf*) are considered contracts under the *Shari'a*.

But, a good (or goods), or a service (or services), also may be the form consideration takes. Any such good or service must not involve alcohol, pork, pork products, pornography, gambling, excessive risk (*gharar*), or interest (*ribā*). These prohibitions on the subject of a contract relate to the legality of purpose of a contract.

### [D] Capacity

Capacity is a familiar concept to scholars, students, and practitioners of the American legal system. Whether the context is formation of a contract, alienation of property, commission of a tort, or perpetration of a crime, a threshold question in any case is the competence of the relevant party or parties. Did that party have the ability, intelligence, understanding, sense, or judgment so it is fair to ascribe to the party legal rights and obligations? In each of these contexts, the same inquiry arises in Islamic Law.

Thus, as regards contract formation, all of the parties entering into an agreement must have the capacity to do so. As in American Contract Law, the inquiry revolves around the practical questions of age and soundness of mind. A minor does not have the legal capacity to contract, nor does a person of unsound mind. What is the precise threshold for age of majority, and what exactly are the tests for soundness of mind?

There is no single answer observed uniformly throughout the Muslim world. However, a reasonable general guide on age of majority is post-puberty.<sup>35</sup> Until the time a female has her first menstrual cycle, and until a male has experienced puberty, they are considered minors. Sexual maturity, in the biological sense of capacity to reproduce, is commonly used to delineate whether contractual maturity,

lends further support to the point that consideration is indispensable to contract formation under the *Shari'a*. See *id.*, fn. 14 at 577.

<sup>34</sup> See HUSSEIN, *supra*, at 171.

<sup>35</sup> See DOI, *supra*, at 553.

in a legal sense, exists. Until that time, a child may enter into a contract not on her own behalf, but rather only through a guardian (*wali*). The guardian, of course, bears special responsibilities not to abuse his position. Under certain circumstances, a contract entered into by the guardian to which a child, upon reaching adulthood, objects may be cancelled by the child at that time.

As for soundness of mind, the *Shari'a* sets out no single test. That also is true for American Criminal Law, with various tests for insanity having been proposed, applied, modified, and replaced over the centuries. The basic inquiry, however, is clear enough: did the party, at the time of the transaction, have sufficient mental competence to understand fully what she was doing? This inquiry involves an examination of the state of the party at the time, which may be one of permanent or long-term debilitation, or one of temporary incapacity. Some conditions obviously rule out legal capacity, such as mental retardation. Others, however, such as the alleged effects of prescription medication, may be dubious depending on the circumstances.

Importantly, under the *Shari'a*, minor age and unsound mind are not the only two factors that disqualify a party from having legal capacity to contract. There are four other factors.<sup>36</sup> First, an intoxicated person does not have capacity. Second, an insolvent person lacks capacity. *i.e.*, one who is unable to pay her debts, lacks capacity. Third, a person who is "legally declared prodigal" (in effect, recklessly wasteful, a spendthrift) is deemed not to have capacity.<sup>37</sup> Finally, anyone suffering from an illness that is terminal (*marad al-mawt*) (*i.e.*, a physical condition that leads to death) does not have capacity.

This final disqualifying factor can lead to disputes concerning the cause of death. Was it the illness that actually brought about death, or some other intervening factor? Did the illness really incapacitate the relevant party? Moreover, the longer the relevant party lives with a disease, the more arguable the point that the party lacked capacity may be. On the one hand, there is no room for argument if a party is in a coma. On the other hand, if the party lives with terminal cancer for a few years, and is not hospitalized in intensive care until the last few days of life, before which the party entered into a contract, the argument about incompetence may be joined.

### [E] Legality

The purpose of a contract must be lawful. A contract for alcohol, pork, pork products, or pornography, or a contract involving gambling, excessive risk (*gharr*), or interest (*riba*), is invalid.<sup>38</sup> That is, the contract is void — it has no legal effect, as distinct from a voidable contract, which may be voided at the option of either or both parties.

<sup>36</sup> There is a fifth such factor, namely, being a slave. See Doi, *supra*, at 553. However, as slavery is officially outlawed in all Muslim countries (even though it persists in a few of them in different manifestations), the condition is no longer relevant.

<sup>37</sup> See HUSSEIN, *supra*, at 171.

<sup>38</sup> See HUSSEIN, *supra*, at 171.

An interesting question arises if the contract of sale (*akd al-bay'*) is for grapes or dates that are to be used to make wine. Legal scholars (*fukahā'*) of the *Māliki* and *Hanbali* Schools hold such a contract is invalid. However, the extent to which knowledge and intent matter is unclear. If the seller has no knowledge of the use to which the grapes or dates will be put, or if the buyer, at the time of contracting, does not intend to use them to make wine, then is the contract still void? Insofar as the essential condition for valid contract formation is purpose, then knowledge and intent of the parties should be relevant. This issue of validity, and attendant questions, can be analogized to any contract of sale for ingredients that could be used in an alcoholic beverage. Logically speaking, all such contracts cannot be void. There are a large number of ingredients, including water, that are the subject of daily transactions in the Muslim World. Such ingredients are dual-use (to borrow a concept from Export Control Law, where the two possibilities are civilian or military use). They may be used for alcoholic or non-alcoholic purposes.

A final point about the legality of the purpose of a contract concerns law enforcement. Any contract for the sale of a weapon to a criminal or rebel is void.<sup>39</sup> That is not to say all arms sale contracts are legally invalid. A weapon can be the object of a contract, supported by money as consideration. Likewise, a contract could involve a barter of weapons. Rather, the contracting party — if it is a robber or rebel — creates the legal impediment. Once again the question of knowledge and intent could matter. The seller may not know the true nature of the buyer, or the buyer may not intend to rob or rebel at the time of contracting. These factors may alter the legal outcome as contract validity. And, to paraphrase a distinction President Ronald Reagan (1911–2004) made in the 1980s, there may be a political bias in identifying whether a buyer is a rebel or freedom fighter.

### [F] Absence of Duress (*ikrāh*)

The final indispensable constitutive element in contract formation is freedom. The contracting parties must be acting under their own free will in respect of their desire to enter into an agreement, the negotiation of the terms of the bargain, and their mutual and reciprocal acceptance of those terms. In brief, all aspects of the entry into the contract must be based on the free choice of the parties.

There are two ways to characterize this element. The first manner, freedom, is a positive or affirmative statement. The second manner is a negative, and is the mirror image of the first characterization. Like Islamic Criminal Law, Islamic Contract Law has the concept of "duress," which in Arabic is called "*ikrāh*." To require that parties enter into a contract freely is to require that they do not conclude the contract under duress. The consequence is severe if this element is missing. As Professor Hussein states, "a contract concluded under duress is null and void."<sup>40</sup>

As with the other essential ingredients for contract formation, duress (*ikrāh*) is not unfamiliar in American Contract Law. As with the other elements, too, it might be ventured that the *Shari'a* is a, if not the, direct or indirect source of what

<sup>39</sup> See Doi, *supra*, at 553.

<sup>40</sup> HUSSEIN, *supra*, at 171.

emerges in the Common Law of England centuries after the formative period of Islamic Law.

What constitutes duress (*ikrah*)? This question is of crucial practical import. The answer is that to constitute *ikrah*, there must be a threat, known in Arabic as "*tahdid*." But that answer only leads to another question, namely, how is an adjudicator to know if a threat exists? The test is two-pronged:<sup>41</sup>

- (1) The party making the threat must be in a position to carry out the threat.
- (2) The party to whom the threat is made must fear that the threat actually may be carried out.

Simply put, the threatening party must have the capacity to make good on the threat, and the threatened party must be frightened by what is a realistic prospect. If and when both prongs of the test are met, then the rationale for declaring a contract void becomes clear. Parties acting freely under their own volition declare, in one way or another, their intent (*niyya*) to conclude an agreement. But, when a party acts under duress (*ikrah*), any declaration by it of its intent is dubious as to its true, underlying aspiration. That is, duress invalidates intent (*niyya*). The legal consequence is that the duties of the threatened party under the contract are eliminated.

Depending on circumstances, if the duress is not egregious, the result may be not to declare the contract null and void, and eliminate all duties. Rather, it may be to reduce in some manner, proportionate with the adverse effects of the duress, the duties, and thereby preserve the key features of the bargain. Perhaps rather surprisingly, Professor Schacht indicates if the threat is of death, a severe beating, or a long imprisonment, then there is sufficient duress (*ikrah*) to render a declaration made by the threatened party voidable (*khiyār*), but not automatically null and void, as Professor Hussein suggests.<sup>42</sup>

What also is remarkable, which Professor Schacht observes, is even in these cases of extreme duress, there are exceptions for transactions that Islamic Law regards as desirable. He cites two instances: conversion to Islam, and the freeing of slaves.<sup>43</sup> An agreement to adopt the Islamic faith, or an agreement to free slaves, is preserved. The agreement is not rendered null and void, even though extreme duress is present. The rationale, says Professor Schacht, is that they are "desirable transactions," by which he means the outcomes are morally or ethically good from an Islamic vantage point.

However, this rationale is flawed in respect of conversion, and whether all Islamic legal and religious scholars (*fukahā'* and *ulema*, respectively) agree with the observation of Professor Schacht is dubious. A conversion made under duress hardly would be as pleasing to God as a free, loving embrace of faith. The Qur'an itself is clear that there must be no compulsion in religion:

- *Surah 2, ayah 256* states:

<sup>41</sup> SCHACHT, *supra*, at 117.

<sup>42</sup> See SCHACHT, *supra*, at 117-118.

<sup>43</sup> See SCHACHT, *supra*, 118.

*There is no compulsion in religion; true guidance has become distinct from error, so whoever rejects false gods and believes in God has grasped the firmest hand-hold, one that will never break. God is all hearing and all knowing.*<sup>44</sup>

- *Surah 10, ayat 99-100* say:

*"Had your Lord willed, all the people on earth would have believed. So can you [Prophet Muhammad] compel people to believe? <sup>100</sup>No soul can believe except by God's will, and He brings disgrace on those who do not use their reason.*"<sup>45</sup>

Finally, it may be myopic to view conversion on the level of a contract among persons, and subject to the same sorts of rules, rather than as a covenant with the Almighty, which is governed in a different paradigm.

## § 21.07 EVIDENCE AND LONGEST QUR'ĀNIC VERSE

A corollary to the emphasis on honesty and fair dealing in commercial matters concerns evidence of the terms to which parties purportedly have agreed. To minimize the likelihood of disputes, and to help resolve them efficiently and accurately when they do occur, Islamic Law strongly encourages that contracts be evidenced in writing. *Surah 2, ayah 282*, which is the longest verse in the Qur'an, states:

*You who believe, when you contract a debt for a stated term, put it down in writing: have a scribe write it down justly between you. No scribe should refuse to write: let him write as God has taught him, let the debtor dictate, and let him fear God, his Lord, and not diminish [the debt] at all. If the debtor is feeble-minded, weak, or unable to dictate, then let his guardian dictate justly. Call in two men as witnesses. If two men are not there, then call one man and two women out of those you approve as witnesses, so that if one of the two women should forget the other can remind her. Let the witnesses not refuse when they are summoned. Do not disdain to write the debt down, be it small or large, along with the time it falls due: this way is more equitable in God's eyes, more reliable as testimony, and more likely to prevent doubts arising between you. But if the merchandise is there and you hand it over, there is no blame on you if you do not write it down. Have witnesses present whenever you trade with one another, and let no harm be done to either scribe or witness, for if you did cause them harm, it would be a crime on your part. Be mindful of God, and He will teach you. He has full knowledge of everything.*<sup>46</sup>

There is a bit of irony, perhaps, in the fact that the longest verse concerns the writing down of contracts. That said, the verse is remarkable in at least four respects.

<sup>44</sup> QUR'AN, *supra*, 2:256 at 29 (emphasis added).

<sup>45</sup> QUR'AN, *supra*, 10:99-100 at 135 (emphasis added).

<sup>46</sup> QUR'AN, *supra*, 2:282 at 32 (emphasis added).

First, at first glance, *surah* 2, *ayah* 282 appears limited to debt contracts. However, it would be wrong to circumscribe the scope of the verse to loan transactions. Any contract involves mutual obligation. Each side owes a debt to the other, whether it is goods for goods, goods for money, services for goods, services for services, services for money, or some other alternative. That also is true when setting up or amending a partnership agreement. The advice in the *ayah* applies to all commercial dealings.

Second, the advice in it is not so strict as a statute of frauds in American Contract Law. The Qur'an does not mandate a contract be in writing for it to be valid. Indeed, there is an exception for spot (or on-the-spot) contracts. *Surah* 2, *ayah* 282 admonishes commercial parties to take witnesses. From this warning, it can be inferred there may be instances in which a contract is not reduced to a written document. Spot deals are an example, as suggested by the sentence "but if the merchandise is there and you hand it over, there is no blame on you if you do not write it down." Quintessential examples in everyday life are purchases of grocery items, particularly from street vendors.

Another instance is if no scribe exists to record an agreement. This situation, more common in yesteryear, is unlikely in an era of rising rates of literacy. It could occur while traveling, as *ayah* 283 indicates:

*If you are on a journey, and cannot find a scribe, something should be handed over as security, but if you decide to trust one another, then let the one who is trusted fulfill his trust; let him be mindful of God, his Lord.<sup>47</sup>*

Whenever a contract is not written down, the device to mitigate the risk of misunderstanding, and to help resolve disputes, is to rely on two male eyewitnesses. They would be available to testify orally as to the terms of an agreement and intentions of the parties. Posting collateral is a further device, which *ayah* 283 suggests for a contracting party or parties who are traveling. The text is unclear as to what, exactly, "journey" means. An expansive definition would be anytime a party is even a short distance from home. A narrower, and probably more realistic definition, would be when a party literally is en route from one destination to another, and has no access to a scribe.

Third, as to witnesses, gender matters. In the *Shari'a*, for almost all instances (the exceptions being matters pertaining distinctly to women, such as menstruation cycles and pregnancy), the witness or testimony provided by a woman has only half the evidentiary value of that of a man. Further, women are singled out as potentially being forgetful, yet in fact the problem can equally plague men. A justification occasionally given is expedience. In traditional Arabian societies (and in some contemporary ones, particularly in the Gulf region), women were largely excluded from commerce, notwithstanding, ironically, the example of Khadyja, the first wife of Muhammad. The traditional focus of women (not always by their free choice) was on family life, and men on business. When a business dispute arose, finding a witness or obtaining testimony of a man was easy, because men dominated the marketplace. In contrast, finding a female witness supposedly would be difficult, thereby delaying resolution of the dispute.

<sup>47</sup> QUR'AN, *supra*, 2:283 at 32-33 (emphasis added).

Of course, this justification is easily rebutted on three counts. First, as a practical matter, the fact that men may be easier to find does not mean women should be excluded as witnesses or testifiers. Excluding them only makes the task harder. Second, the justification is not a defense of the central problem — the lesser value of a woman's testimony. Third, the justification commits the Orientalist fallacy. That is, it attempts to defend an Islamic legal rule sourced in the Qur'an by referring to historical socioeconomic conditions. It is inconsistent to argue the Qur'an is the literal word of God (Allāh), on the one hand, but then defend some of the more controversial textual provisions on social, economic, political, or public policy grounds. God's law needs no such support, but rather is a matter to which believers are called to submit.

A second justification for the gender difference on evidentiary value concerns competence. It is ventured (episodically, and typically by a man with some embarrassment) that commerce is a sphere in which men boast distinct competence. Women, being less familiar with contractual dealings, ought not to be given the same weight when witnessing or testifying at law as to those dealings. This justification is not simply muddle-headed, but even nefarious. Khadyja, and countless devout female believers after her, are testaments to the business acumen of Muslim women in particular, and women in general. Moreover, the justification is hypocritical. On subjects that are supposedly ones in which women hold the comparative advantage (e.g., menstruation and pregnancy), the evidentiary value offered by a man is not reduced by half. That is, there is no circumstance under which the evidentiary value of a man is half that of a woman.

Fourth, and finally, the reference to "God's eyes," and the last part of *surah* 2, *ayah* 282, are clear reminders that God is omniscient. Only a fool or a knave would proclaim Allāh is unaware of an effort to cheat a counterparty in a business deal. Allāh knows all the evidence about the true terms of a contract, and the intentions of the parties. That also is clear from the last sentence of *ayah* 283:

... Do not conceal evidence: anyone who does so has a sinful heart, and God is fully aware of everything you do.<sup>48</sup>

Consequently, there is no point in not recording transactional terms accurately in writing if possible. Doing so is a deed that will be weighed positively on the Day of Judgment.

In brief, the general rule in Islamic Law may be summarized by saying that any contract should be reduced to a written document, and if that is not possible, then witnesses should be present at the time of contract formation. The emphasis on a written document should not come as a surprise. The Arabic term for a "document" is "*sakk*," and the plural (documents) is "*sukūk*." Use in the Near East of written documents for contracts obviously pre-dates Islam. It was part of pre-Islamic custom.

Thus, the emphasis is consistent with the over-arching proposition that the *law merchant* and *Shari'a* interact with one another. Consider the exception set out in *surah* 2 *ayah* 283 (quoted above) that if no scribe is available to put a contract in

<sup>48</sup> QUR'AN, *supra*, 2:283 at 33.

writing, then both parties should give security. This security, or pledge (*rahn*), serves two functions: a guarantee, and material proof of the contract. Yet, the same rule was part of pre-Islamic customary law of the Bedouins on the Arabian Peninsula. From a legal perspective, though edging toward the Orientalist fallacy, the Qur'ān endorses these practices.

The proposition holds true even in respect of the major rule, which is that a contract should be put in writing. Interestingly, though, interaction does not always translate into consistency. In support of the existence of a contract, pre-Islamic customary law held documentary evidence as valid, as does *surah* 2, *ayah* 282. In the hustle and bustle reality of markets, written contracts were — and remain — essential to ascertain clearly and transparently what has been agreed, and by whom. Yet, practice and theory diverged: in practice, merchants used written documents; in theory, Islamic religious and legal scholars (*ulema* and *fukahā'*, respectively) focused on testamentary evidence. Accordingly, the *Shar'ia* allows for valid legal proof to take the form of oral evidence from witnesses to a contract. As Professor Schacht puts it:

Theory continued to reason as if there were no documents but only the oral testimony of witnesses, possibly helped by private records of their own; practice continued to act as if the documents were almost essential and the "witnessing" only a formality to make them fully valid. . . . Finally, even strict theory deigned to recognize the existence of written documents and to admit them as valid evidence once they had been attested by qualified witnesses, the *Mālikis* to the widest extent, the *Hanāfis* and the *Hanbalis* with some hesitation, whereas the *Shāfi'is* continued to regard them strictly as accessories; but the actual use of written documents was equally extensive among the adherents of all schools.<sup>49</sup>

Significantly, in most modern Islamic states, under modern legislation or some other legal authority, written documents are considered valid proof of the existence of a contract and of its terms. But, again, witnesses will suffice.

Other than a written document or witnesses, there is a third kind of evidence of a contract accepted under Islamic Law? Acknowledgment by a party that she has created an obligation to which she is subject qualifies as evidence of a contract. In Arabic, "acknowledgment" is called "*ikrār*." However, *ikrār* is considered a weaker kind of proof than testimony, and certainly weaker than a document. That is because of an interesting link to Islamic Criminal Law. A contracting party can withdraw an acknowledgment in a criminal proceeding where the sanction for the crime charged is a *hadd* punishment.

<sup>49</sup> Schacht, *supra*, at 82.

## Chapter 22

### CONTRACT LAW: TYPES OF CONTRACTS

*To the Muslim world, we seek a new way forward, based on mutual interest and mutual respect. To those leaders around the globe who seek to sow conflict, or blame their society's ills on the West — know that your people will judge you on what you can build, not what you destroy. To those who cling to power through corruption and deceit and the silencing of dissent, know that you are on the wrong side of history; but that we will extend a hand if you are willing to unclench your fist.*

President Barack H. Obama, *Inaugural Address*, 20 January 2009, posted at <http://news.bbc.co.uk> (emphasis added)

#### SYNOPSIS

#### § 22.01 PROHIBITED (*HARĀM*) AND VOIDABLE (*FĀSID*) CONTRACTS

#### § 22.02 STANDARD TYPES OF PERMISSIBLE CONTRACTS

- [A] General Contracts of Sale (*Bay'*) for Goods or Property (*Māl*)
- [B] Prepayment (*Salam*) Contracts
- [C] Delay (*Nasi'a*) Contracts
- [D] Manufacturing Contracts (*Istisnā'*)

#### § 22.03 ADVANCED TYPES OF PERMISSIBLE CONTRACTS

- [A] Suretyship Contracts (*Kafāla*)
- [B] Hire and Lease Contracts for Goods or Services (*Ijāra*)
- [C] Cancellation (*Faskh*) of an *Ijāra* Contract
- [D] Mortgage or Pledge Contracts (*Bay' al Wafa'*)
- [E] Loan Contracts (*'Ariyya*)

#### § 22.04 UNCONSCIONABILITY AND THE PROBLEM OF SHORTAGE OR LACK (*GHABN*)

#### § 22.01 PROHIBITED (*HARĀM*) AND VOIDABLE (*FĀSID*) CONTRACTS

Religious boundaries on contracting are nowhere more evident than in respect of objects of commerce. Certain things (*aym*) are not acceptable as objects of purchase and sale. In addition to things forbidden (*harām*) as commercial objects, another class of things are permitted, but regulated, as transactional objects. A second prominent religious boundary on contracting concerns types of contracts that are strictly prohibited (*harām*). Yet a third boundary delineates contracts that are defective and thus voidable (*fāsīd*).

A general rule is that a contract concluded in violation of a prohibition is invalid. Among the two most important types of transactions prohibited, and considered forbidden (*ḥarām*) on religious and legal grounds, are ones involving (1) uncertainty (*gharar*) or (2) unjustified enrichment, or loosely, interest (*ribā*).<sup>1</sup> Issues of *gharar* and *ribā* arise in banking. The simple point for now is that Islamic *ulema* and *fukahā*<sup>2</sup> reject as *ḥarām* any contract bearing either of these elements.

The source of the general rule rendering invalid a prohibited contractual transaction is not the Qur'ān, but the *Sunnah* (traditions of the Prophet Muhammad). The Qur'ān contains almost no technical provisions about the legal consequences of failure to fulfill one or the other of the various contractual duties a Muslim might incur. Similarly, it says little about the legal ramifications of a factual predicate in which Contract Law has been breached. Several *āyat* in the Qur'ān cover the importance of honesty and integrity in commercial and non-commercial dimensions of life, but this sacred text is not, after all, a book about contractual breaches, events of default, remedies for seller's breach, or remedies for buyer's breach. Thus, the *Sunnah* is the source for legal effects of actions contrary to the Law of Obligations. In brief, the *Sunnah* provides much of the needed gap-filling where Qur'ānic legislation is incomplete.

There is the Scale of Religious and Legal Qualifications (*Al Ahkām Al Khamsa*). The vast majority of everyday contractual transactions pose no religious objection, meaning the transaction is *mubāh* (permissible). Moreover, the acts (*i.e.*, the nature of the transaction, or "*ʿaṣl*") and circumstances of the transaction (*wasf*) comport with the *Shari'a*, specifically, the Law of Obligations. Consequently, the transaction is *ṣāḥiḥ* (valid, *i.e.*, legally effective).

However, in some instances a transaction can be simultaneously *ḥarām* (forbidden) on the Scale, yet from a legal perspective only *makrūh* (reprehensible and disapproved). The latter categorization means the transaction, from a legal perspective, remains valid. There also are contracts that are reprehensible (*makrūh*), from a religious perspective, but *fāsid* (defective, voidable) from a legal perspective. One example is a contract for the sale of a good concluded at the time of the call to Friday prayers.<sup>3</sup>

In practice, what does it mean for a contract to be *fāsid*? In the context of a contract of sale (*bay'*), and specifically a sale or exchange of goods or property (*māl*), it means that the title conveyed is "bad ownership."<sup>4</sup> In Arabic, this "bad ownership" is called "*milk khabīth*." Specifically, even after the subject matter of the contract has been delivered, the new owner of that subject has "bad ownership" of it, or what American Contract Law characterizes as a "cloud on title." The practical importance of that status is that the *fāsid* sales contract could be cancelled, and the new owner would be deprived of possession of the good or property in question. The buyer herself would be unlikely to exercise the cancellation, but a third party

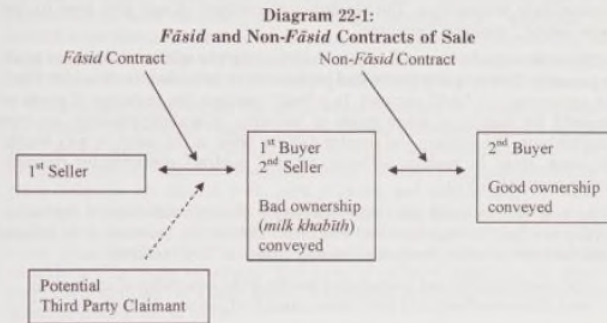

<sup>1</sup> See JOSEPH SCHACHT, AN INTRODUCTION TO ISLAMIC LAW 144 (Oxford, England: Oxford University Press (Clarendon Paperbacks) 1982). [Hereinafter, SCHACHT.]

<sup>2</sup> See SCHACHT, *supra*, at 152.

<sup>3</sup> See SCHACHT, *supra*, at 152.

claimant to the good or property might exist and directly, or through the seller, call for cancellation.

When would the possibility of cancellation of a *fāsid* sale end? The answer is when a contract of sale for the same article, a contract that is not *fāsid*, is completed. That is, until the subject matter is re-sold under a new, non-*fāsid* contract, the "cloud" of "bad ownership" looms. Essentially, the buyer in the second contract is treated as a bona fide purchaser acting in good faith, thus the condition that made the first contract voidable does not pass to the second buyer. Diagram 22-1 exhibits these points.

Interestingly, in December 2003, your author was party to such a transaction in the Old Souk in Riyadh, Saudi Arabia. The object of purchase was a lovely blue carpet, a Christmas present for your author's wife. As negotiations over price proceeded, the call to prayer resonated from a nearby mosque. There were two sellers assisting, one Saudi, and one Pakistani. The Saudi left for the prayer, and closed the door behind him. The Pakistani stayed to conclude the transaction. By appearances, one seller inferred the transaction must be suspended until after prayers, while the other realized the deal — though ill-advised — was not strictly *ḥarām*. At Christmas, the author's wife delighted in the carpet, and (along with the rest of the family and many friends) has so ever since. Happily, no contention of bad ownership, and no claim for cancellation, ever was raised.

## § 22.02 STANDARD TYPES OF PERMISSIBLE CONTRACTS

### [A] General Contracts of Sale (*Bay'*) for Goods or Property (*Māl*)

Given the history of trading in the Middle East, a history that long pre-dates Islam, it should not come as a surprise that there are many different kinds of contracts that occur within the framework of the *Shari'a*. Generally, that

A general rule is that a contract concluded in violation of a prohibition is invalid. Among the two most important types of transactions prohibited, and considered forbidden (*ḥarām*) on religious and legal grounds, are ones involving (1) uncertainty (*gharar*) or (2) unjustified enrichment, or loosely, interest (*ribā*).<sup>1</sup> Issues of *gharar* and *ribā* arise in banking. The simple point for now is that Islamic *ulema* and *fukahā*<sup>2</sup> reject as *ḥarām* any contract bearing either of these elements.

The source of the general rule rendering invalid a prohibited contractual transaction is not the Qur'ān, but the *Sunnah* (traditions of the Prophet Muhammad). The Qur'ān contains almost no technical provisions about the legal consequences of failure to fulfill one or the other of the various contractual duties a Muslim might incur. Similarly, it says little about the legal ramifications of a factual predicate in which Contract Law has been breached. Several *āyat* in the Qur'ān cover the importance of honesty and integrity in commercial and non-commercial dimensions of life, but this sacred text is not, after all, a book about contractual breaches, events of default, remedies for seller's breach, or remedies for buyer's breach. Thus, the *Sunnah* is the source for legal effects of actions contrary to the Law of Obligations. In brief, the *Sunnah* provides much of the needed gap-filling where Qur'ānic legislation is incomplete.

There is the Scale of Religious and Legal Qualifications (*Al Ahkām Al Khamsa*). The vast majority of everyday contractual transactions pose no religious objection, meaning the transaction is *mubāh* (permissible). Moreover, the acts (*i.e.*, the nature of the transaction, or "*ʿaṣl*") and circumstances of the transaction (*wasf*) comport with the *Shari'a*, specifically, the Law of Obligations. Consequently, the transaction is *ṣāḥiḥ* (valid, *i.e.*, legally effective).

However, in some instances a transaction can be simultaneously *ḥarām* (forbidden) on the Scale, yet from a legal perspective only *makrūh* (reprehensible and disapproved). The latter categorization means the transaction, from a legal perspective, remains valid. There also are contracts that are reprehensible (*makrūh*), from a religious perspective, but *fāsid* (defective, voidable) from a legal perspective. One example is a contract for the sale of a good concluded at the time of the call to Friday prayers.<sup>3</sup>

In practice, what does it mean for a contract to be *fāsid*? In the context of a contract of sale (*bay'*), and specifically a sale or exchange of goods or property (*māl*), it means that the title conveyed is "bad ownership."<sup>4</sup> In Arabic, this "bad ownership" is called "*milk khabīth*." Specifically, even after the subject matter of the contract has been delivered, the new owner of that subject has "bad ownership" of it, or what American Contract Law characterizes as a "cloud on title." The practical importance of that status is that the *fāsid* sales contract could be cancelled, and the new owner would be deprived of possession of the good or property in question. The buyer herself would be unlikely to exercise the cancellation, but a third party

By appearances, one seller inferred the transaction must be suspended until after prayers, while the other realized the deal — though ill-advised — was not strictly *ḥarām*. At Christmas, the author's wife delighted in the carpet, and (along with the rest of the family and many friends) has so ever since. Happily, no contention of bad ownership, and no claim for cancellation, ever was raised.

## § 22.02 STANDARD TYPES OF PERMISSIBLE CONTRACTS

### [A] General Contracts of Sale (*Bay'*) for Goods or Property (*Māl*)

Given the history of trading in the Middle East, a history that long pre-dates Islam, it should not come as a surprise that there are many different kinds of contracts that occur within the framework of the *Shari'a*. Generally, that

framework is a strong but light scaffolding that supports modern economic growth. The aim of Islamic Law is to suffuse commercial transactions with moral precepts, to regulate transactions as need be from a religious perspective, but not weigh down the development of the marketplace. In brief, the Islamic Law of Obligations is not a set of rigid nay-saying rules, and many kinds of contracts are acceptable under this Law.

The most common type of contract, and the type pertaining to which the *Shari'a* is best developed in the sense of having the most detailed and precise rules, is a contract for the sale of goods. The generic term in Arabic for a sale of goods is "*bay'*." This word also covers non-monetary exchanges, that is, barter and other counter-trade transactions. The old-fashioned contract of sale also goes by the name "*shirā'*," meaning "purchase."

The most common kind of a *bay'* is a contract for the sale or exchange of goods or property. That property is of a kind permissible to be traded, i.e., it is *māl*. Thus, the agreement is a "*māl*" contract. In a "*māl*" contract, the exchange of goods or property for money, or other goods or property, is contemporaneous, or even simultaneous. The delivery and counter-delivery occur at the same, or very nearly, the same, time. In modern parlance, a "*māl*" contract contemplates delivery-versus-payment (DVP).

As long as they fulfill the basic constitutive elements for contract formation, parties are free to enter into *bay'* contracts. That is, the constraints on general sales contracts are few. Professor Hussain defines a "*bay'*" contract as:

the unconditional and immediate transfer of the ownership of an existing and determined object of legal value, capable of delivery for a fixed price.<sup>4</sup>

From this definition, four points are evident.

First, there must be no conditions on the transfer of ownership of the object of the contract. Literally, that cannot be true. There always is at least one express condition — payment of the price by the buyer. There also are implicit conditions, such as that the seller has good title to convey. The word "unconditional," however, may be understood in that the seller is not making contingent the transfer of ownership on an unrelated or speculative event, such as whether a stock market benchmark like the Hang Seng Index of the Hong Kong Stock Exchange rises by 10 percent, or whether the Turkish national soccer team wins the World Cup.

Second, the transfer of ownership is "immediate." Here, too, some explanation is needed. When, precisely, title is transferred is a topic that has a long history in American Contract Law, and generally is elided in the Uniform Commercial Code (U.C.C.). The above-definition links title transfer with payment of a price. When the seller pays for the object, the seller gets title to it. Note the word "immediate" does not mean contracts in which delivery and payment occur separately — i.e., prepayment (*salam*) and delay (*nasi'a*) agreement — are forbidden. They are permissible.

<sup>4</sup> JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 173 (Annandale, New South Wales, Australia: The Federation Press, 1999) (citing Nigel G. Coulson, *Commercial Law in the Gulf States* (1984)) (emphasis added). [Hereinafter, HUSSAIN.]

Third, the object must meet five parameters: it must be

- (1) in existence;
- (2) defined in the contract;
- (3) a lawful article of commerce;
- (4) have value; and
- (5) deliverable.

It is impermissible to contract for something not in existence, or not yet extant, such as an unborn camel or horse that has not been conceived. It also is not permissible to leave the object of the contract undefined (e.g., "something"), or without a specified price. That does not appear to mean the *bay'* contract, to be valid, must set out the exact price figure. Rather, a price figure not fixed in the contract, but readily ascertainable by means defined in the contract, is permissible.

For example, a contract for the sale of wheat could call for a price as quoted on the Kansas City Board of Trade at 12 noon Central Standard Time on a particular date. As for whether an article is a lawful object of commerce, there may be country-to-country variation. Assuredly, among the most prominent candidates for being forbidden are alcohol, pork, pork products, and pornography. Whether an object has "value" depends on the object. A grain of sand or leaf of a tree do not have it. Air is free, but when collected in a tank used for hospital patients or scuba divers, it has value. Graffiti might not have value to most passers by, but be considered valuable art by some observers. The form of delivery need not be physical, particularly as to land or a large fixture. A document certifying ownership would be delivered from seller to buyer.

Fourth, none of the five parameters precludes a barter or counter-trade exchange. A *bay'* contract can call for reciprocal, reverse deliveries of goods. Such deliveries must be immediate.<sup>5</sup> The logic appears to be that the condition of one or both goods might alter if the exchange is not immediate. One good, if held back, might deteriorate, degrade, or be damaged in some way, during a delay period. The risk of quality problems is especially likely if perishable products are the objects of the contract.

The parameters concerning the definition and value of an object of a contract implicitly assume that the object can be measured, weighed, or counted. These possibilities are particularly important if the contractual object is fungible. The *Shari'a* has terms for all three possibilities —

- (1) Fungible objects that can be measured are called "*makīl*." (A synonym is "*kaylī*.")
- (2) Fungible objects that can be weighted are called "*mawzān*." (A synonym is "*waznī*.")
- (3) Fungible objects that can be counted are called "*ma'dūd*." (A synonym is "*dādī*.")

<sup>5</sup> See HUSSAIN, *supra*, at 173.

Interestingly, Roman Law had a principle known in Latin as *quae pondere numero mensura constant* (meaning “[those] whose weight, number, and measure they all agree [on]”).<sup>6</sup> The concepts of *makīl*, *mauwān*, and *ma’dūd* correspond to, and even may be drawn from the Roman legal legacy.<sup>7</sup>

### [B] Prepayment (*Salam*) Contracts

A sales agreement need not involve the contemporaneous or simultaneous delivery and counter-delivery of goods or property in return for funds, or for other goods or property. In some instances, prepayment may occur, while in other cases delivery may occur first. Both arrangements depend on the context, needs, and interests of the seller and buyer. For instance, buying books from an on-line vendor like Amazon.com involves pre-payment. (Other examples, which involve services, are purchasing a ticket on an airplane, or a music concert or theater performance. An illustration that involves a mixture of goods and services is purchasing food at a fast-food chain.) Conversely, buying a meal at a restaurant (and the attendant services) — as distinct from a cafeteria or fast-food chain — entails deferred payment, namely, until the meal is over.

The *Sharī’a* permits both types of arrangements, depicted in Diagram 22-2. One common kind of sales contract (*bay’*) is called “*salam*.” It is a prepayment contract. Under it, a buyer orders goods for a later delivery, but pays the price immediately. An example is where a trader is given funds now, in exchange for future delivery of a good that the trader is to provide.<sup>8</sup> Another customary instance is where a craftsman or other manufacturer is given funds now, in exchange for future delivery of a good the craftsman or manufacturer is to make. The seller is a producer of a good, and requires up front payment, at least to buy materials and ensure the buyer is serious about taking delivery of the item. Note that a contract for the manufacture of an object is called “*istiṣnā’*.”<sup>9</sup>

Technically, there are two types of *salam* contracts. Diagram 22-2 depicts both. Each kind calls for deferred delivery of goods, but they differ in the precise payment obligations. First, under a *bay’ al-salam* contract, which sometimes is translated as “spot sale,” the buyer is obligated to pay the full purchase price immediately to the seller. That is, the buyer pays the entire price to the seller upon finalization of the contract. The connotation of a spot sale is misleading, if by “spot” the idea is delivery-versus-payment (DVP). The transaction involves immediate, full payment against a future delivery.

<sup>6</sup> “*Quae*” is the feminine or neutral, nominative or accusative case for “which” or “who.” “*Pondere*” is the neutral, singular, ablative case for “a weight.” “*Numero*” is the masculine, singular, ablative case for “a number.” “*Mensura*” is the neutral, singular, ablative case for “a measure.” “*Constant*” is the third person plural present tense verb for “they agree.”

<sup>7</sup> See SCHACHT, *supra*, at 21.

<sup>8</sup> See SCHACHT, *supra*, at 153.

<sup>9</sup> See SCHACHT, *supra*, at 155.

### Diagram 22-2: *Salam* (Prepayment) Contracts — *Bay’ al-Salam* and *Bay’ al-Mu’ajjal* Contracts

#### *Bay’ al-Salam* Contract:

Business Day 1:

Payment of Purchase Price (e.g., U.S. \$1 million). Contract formed.

Business Day 10 (i.e., 10 business days after Business Day 1):

Delivery of merchandise purchased (e.g., specially crafted and fitted office furniture).

#### *Bay’ al-Mu’ajjal* Contract:

Business Day 3:

Lump Sum Payment of Purchase Price (e.g., U.S. \$1 million).

Or

Business Days 2, 4, 6, and 8:

(e.g., installment payments of U.S. \$250,000). Contract formed.

Business Day 10 (i.e., 10 business days after Business Day 1):

Delivery of merchandise purchased

(e.g., specially crafted and fitted office furniture)

Second, under a *bay’ al-mu’ajjal* contract, which means “deferred delivery,” the buyer is obliged to make a scheduled payment, but not necessarily of the full purchase price up front. The deferred delivery (*al-mu’ajjal*) refers to the price (money) to be paid for the good that is the object of the contract, not to that good itself. Accordingly, a *bay’ al-mu’ajjal* contract specifies one of two obligations:

- (1) The buyer pays that price in a lump sum at a contractually-identified later date (but one that is still before the delivery of the good); or,
- (2) The buyer pays in installments according to a schedule prescribed in the contract.

Observe that from an economic perspective, a *bay' al-mu'ajjal* contract involves two deferrals. The first one is the deferral of the delivery of the object of the contract, which renders the contract a species of *salam* contract. The second deferral is the deferral of the payment of the full purchase price, either via a later lump-sum or installment payments.

### [C] Delay (*Nasi'a*) Contracts

The converse of a *salam* contract also is permissible under Islamic Law. That converse is called a "*nasi'a*" contract. It is depicted in Diagram 22-3.

"*Nasi'a*" literally means "deferral" or "delay," and it often is used in the context of *ribā* (interest). The postponement refers to payment (not the good that is the object of the contract). Thus, a *nasi'a* contract calls for immediate delivery of goods, but delayed payment of the purchase price. *Ribā al-nasi'a* is forbidden. The prohibition applies in money-for-money transactions, such as loan arrangements. But, in a routine sales contract, a *nasi'a* arrangement is permissible, and is a species of such *bay'* contracts.

Diagram 22-3:  
*Nasi'a* (Delay) Contracts

Business Day 1:

Delivery of merchandise purchased (e.g., combine-harvester for use in agricultural production). Contract formed

Business Day 10 (i.e., 10 business days after Business Day 1):

Payment of Purchase Price (e.g., U.S. \$1 million).

### [D] Manufacturing Contracts (*Istisnā'*)

Another routine type of sale of goods (*bay'*) contract is known as "*istisnā'*." It is a contract for the sale of goods, where the goods have to be manufactured by the seller. As suggested earlier, insofar as it involves prepayment by the buyer, it is a

species of *salam* contracts. Professor Schacht remarks:

The contract of manufacture (*istisnā'*) . . . is merely a *salam* contract; it is valid only in so far as it is customary.<sup>10</sup>

Yet, this observation understates the distinctiveness and importance of *istisnā'* contracts.

To begin, an *istisnā'* contract, and the legality for it, are well-grounded in the Four Classical Sources of the *Shari'a*.<sup>11</sup> A wide range of objects — any kind of item to be manufactured — fall under this type of contract. For example, a transaction in which a buyer, the Cairo General Hospital, orders a magnetic resonance imaging (MRI) machine from a producer, Malaysian Medical Devices, whereby the latter must build the MRI device, would be an *istisnā'* contract. Specially crafted items, such as furniture or even artwork, qualify as objects of an *istisnā'* contract.

Moreover, an *istisnā'* contract contains at least five noteworthy features. First, both the buyer and seller have a right to revoke the contract.<sup>12</sup> That is, either side can rescind the contract. However, their right of rescission exists only up until the time the seller manufactures the goods. It appears there may be some ambiguity as to whether that time refers to the commencement or completion of production.

Second, the doctrine of change in circumstances may be incorporated or manifest in some way in an *istisnā'* contract.<sup>13</sup> For example, an alteration in the conditions of the buyer or seller may lead to modification, or even rescission, of the contract.

Third, an *istisnā'* contract stipulates that the seller-manufacturer is not personally liable for any defect in the product it produces.<sup>14</sup> The buyer does have a remedy, of course, for breach by the seller-manufacturer of its obligation to provide goods in conformity with the contractual specifications. That remedy typically is set out in a liquidated damages clause. In American Contract Law, as in Islamic Contract Law, this clause specifies in advance the measure of damages to be awarded to an aggrieved party on account of a breach by the counter-party.<sup>15</sup> As long as the liquidated damages clause is not punitive (e.g., by grossly exceeding the probable damage), is not applicable to a wide variety of defaults, some of which are minor, or is not triggered by a mere delay in payment, then American Common Law courts uphold such a clause. That pattern appears to hold true with *Shari'a* courts and arbitral panels applying Islamic Law.

<sup>10</sup> SCHACHT, *supra*, at 155.

<sup>11</sup> See MUHAMMAD AL-BASHIR MUHAMMAD AL-AMINE, *Istisnā'* (MANUFACTURING CONTRACT) IN ISLAMIC BANKING AND FINANCE — LAW & PRACTICE chs. 2-3 (Kuala Lumpur, Malaysia: A.S. Noordeen, 2001). [Hereinafter, AL-AMINE.]

<sup>12</sup> See HUSSEIN, *supra*, at 173.

<sup>13</sup> See AL-AMINE, *supra*, at ch. 7.

<sup>14</sup> See AL-AMINE, *supra*, at 46-47.

<sup>15</sup> See BRYAN A. GARNER, ED., BLACK'S LAW DICTIONARY 1015 (St. Paul, Minnesota: West, 9th ed., 2009) (entry for "liquidated-damages clause").

Fourth, parties to an *istisnā'* contract sometimes choose arbitration over litigation to resolve disputes under their contract.<sup>16</sup> That is not surprising. The contract may call for manufacture of a sophisticated product, and the parties may feel expert arbitrators are best able to understand the complexities of that product. They also may anticipate that arbitration would be a faster, less expensive process than litigation.

Finally, *istisnā'* contracts can and do play an important role in the economic growth of many Muslim countries.<sup>17</sup> That is because their object often is a manufactured item that itself helps stimulate growth. The object could be a machine tool for a factory floor, an important part of a large scale project (such as a toll booth for a toll road), or a sophisticated technological device embodying intellectual property (such as medical or scientific devices, like the MRI mentioned above).

## § 22.03 ADVANCED TYPES OF PERMISSIBLE CONTRACTS

### [A] Suretyship Contracts (*Kafāla*)

Business always has involved the giving of guarantees by one party for the performance of another party. In a general sense, the English word "surety" connotes "certainty," and for transacting parties, certainty and predictability are virtues. Sometimes, the terms "surety" and "guarantee" are used interchangeably, sometimes along with "insurance." But, in American legal parlance, such use is sloppy. Technically, in American Contract Law, they are related, but distinct, concepts:

- *Surety* —

A surety is a party (person or institution) that takes responsibility for the performance of an obligation by another party (also a person or institution). Moreover, a surety is primarily liable for the performance of the obligation of that other party (such as the beneficiary). The obligation is owed to a creditor, or other obligee (which, again, may be a person or institution). The surety receives no compensation from the beneficiary of the surety arrangement. Likewise, the surety obtains no fee from the creditor or other obligee to which the surety provides the guarantee.

- *Guarantee* —

A guarantor is secondarily liable for the performance of an obligation of the beneficiary of the guarantee, such as a debtor. That liability is owed to the creditor or other party to which the beneficiary is primarily liable. In other words, the guarantor is called upon to step in only if the beneficiary fails to satisfy its obligations. Typically, the guarantor receives compensation from the beneficiary for providing the guarantee.

- *Insurance* —

<sup>16</sup> See AL-AMINE, *supra*, at ch. 8.

<sup>17</sup> See AL-AMINE, *supra*, at ch. 10.

An insurer promises compensation to an insured party in the event a risk defined by an insurance contract materializes. The insurer receives a fee, or premium, from the beneficiary of the insurance contract.

A surety arrangement presupposes existence of an obligation or debt — some claim of an obligee (creditor) against and obligor (debtor), in other words. There must be a person or institution owing performance on some extant contract. That contract may be as simple as delivery by a seller to a buyer of merchandise. The merchandise could be fungible, such as a bulk agricultural commodity, or some particularly valuable non-fungible item (like artwork). The transaction could be a domestic one, or an import-export deal. Alternatively, the underlying contract may involve payment by a borrower to a lender of a sum of money with repayment to be made under a pre-existing loan arrangement.

Islamic Law has long recognized surety arrangements. They are called "*kafāla*." The person who is the surety is the "*kafil*," which literally translates as "guarantor." But, it also connotes "surety," hence the fine-line terminological distinction in American Contract Law is not replicated in the *Shari'a*. The party whose performance is being guaranteed is the principal debtor, called the "*asil*."

Thus, under the *Shari'a*, a *kafāla* contract creates a liability with respect to an underlying claim, and with respect to an underlying person or institution. The *Shari'a* imposes certain disciplines on this liability. First, the liability of the *kafil* (surety or guarantor) cannot exceed the liability of the *asil* (the debtor). Second, once the obligee-creditor proclaims the debtor to be "off the hook," then so too is the guarantor. Of course, the reverse is not true. The obligee-creditor could release the surety-guarantor from the *kafāla* contract, but that would not, in itself, lead to a release of the obligor-debtor. Both disciplines accord with common sense. It would be illogical for the surety to take on more of an obligation than called for in the underlying obligation, and once the obligee-creditor says "enough," there is no reason for the surety to remain relevant.

An obvious question is why the surety (*kafil*) agrees with an obligee-creditor to provide backing to the debtor (*asil*). There is no economic incentive for the surety to do so. One answer is that such arrangements may involve a close, even familial, relationship between the surety and debtor. The surety may be the father or uncle of the debtor, and is happy to provide the assurance needed for his relative to secure a loan. A second answer is that the surety may provide the assurance for charitable motives, essentially trying to help out a party in need out of the goodness of the heart of the surety. Still another possibility is there is a course of dealing between the surety and obligee, and on a separate, independent transaction, the roles are reversed.

The *Shari'a* differentiates between two kinds of suretyship arrangements: one that guarantees performance of an obligation by a person ("*kafāla bil-nafs*"), and one that guarantees a claim ("*kafāla bil-māl*") against a person. Diagrams 22-4 and 22-5 outline each type. At a general level, it is possible to collapse this distinction. An obligee fulfills an obligation (or not), and a debtor repays a debt (or not), yet in both instances the person performs an act (or not) that is the subject of the surety. However, the distinction in Islamic Law concerns the precise subject — is the

surety securing the presence of a person or the consummation of a claim? Thus, as Professor Schacht explains:

[s]tanding surety for a person means undertaking the liability for the appearance of the debtor or of his agent in a lawsuit; it is effective only if a lawsuit is possible, and not if the debtor has absented himself and his whereabouts are unknown; it is extinguished by the death of the guarantor or of the debtor; in the case of non-performance, the guarantor is imprisoned.

Suretyship for the claim can be independent or additional to suretyship for the person; if the guarantor stipulates that the debt of the principal debtor be remitted, its effect is that of the *hawāla*.<sup>18</sup>

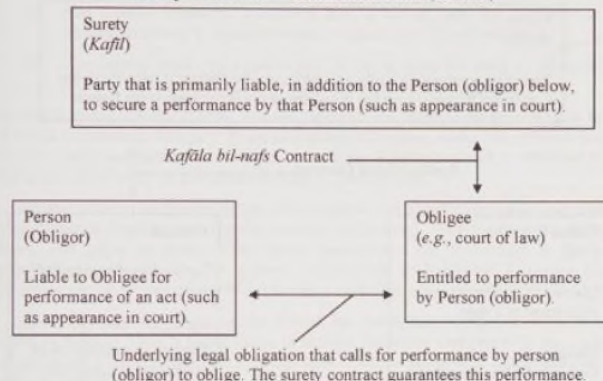

Consequently, a *kafāla* contract for a person (*kafāla bil-nafs*) could take the form of guaranteeing the presence of a defendant in a lawsuit. If the defendant does not appear in court, then the surety must appear. This suretyship arrangement is a serious contingent liability for the surety, because it could result (at least in some countries in former times) in physical confinement to jail of the surety.

In contrast, a *kafāla* contract for a claim (*kafāla bil-māl*) could involve a guarantee of payment of a debt. If the debtor fails to pay, then the claim is transferred, and the creditor presses the claim against the surety. Economically, that transfer is like a *hawāla* (transfer) arrangement. Observe that a *kafāla bil-māl* contract does not involve assumption or assignment of a debt. That is, the surety contract does not cause, or even state, that the surety takes on the debt of the original debtor, or that this debt is transferred to the surety. Rather, the contract simply but poignantly puts the surety in the place of the debtor, holding the surety liable for the payment obligation of the debtor.

A well-written *kafāla* contract should set out clearly the events for termination of the suretyship arrangement. The death of the surety is an obvious one, as the surety no longer is available to be held liable. Another obvious termination event is performance by the person, or satisfaction of the claim, at issue, because the whole point of the contract — adding additional certainty and predictability that the performance or satisfaction will occur — is fulfilled. Still another possible termination event is fraud or malfeasance by the person whose performance the contract secures, or in the underlying debt transaction that generated the claim the contract secures.

Under the *Shari'a*, a surety contract is not always permissible. First, the idea of having a surety, the identity of the surety, and the terms of the arrangement must be agreeable to the creditor in the transaction at issue. That makes sense, because it is the obligation owed to the creditor — the obligee — that is being backed by the surety.

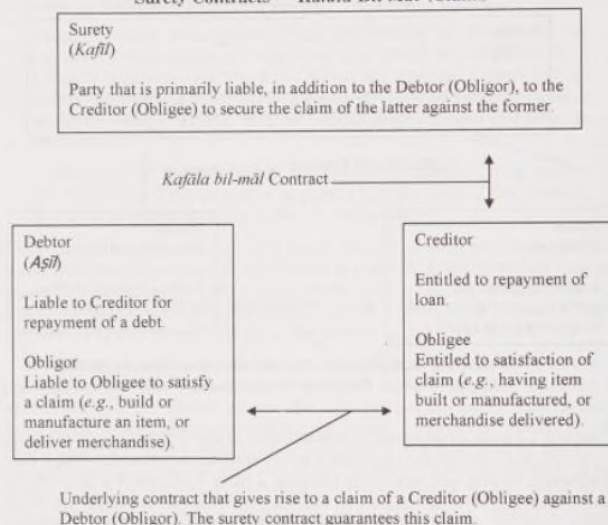

Diagram 22-4:  
Surety Contracts — *Kafāla Bil-Nafs* (Person)

Second, a surety arrangement is impermissible to deal with an obligation arising out of Criminal Law. No one can make a surety contract in connection with a *hadd* punishment, or with retaliation. For instance, a party convicted of a *hadd* offense cannot obtain a surety to ensure that the punishment is carried out, if not on the convict, then on the surety. Likewise, a victimized party entitled to exercise retaliation against a perpetrator convicted of a crime cannot require the latter to obtain a surety to ensure there is some person or some institution against whom or which to retaliate.

Surety Contracts — *Kafāla Bil-Māl* (Claim)

### [B] Hire and Lease Contracts for Goods or Services (*Ijāra*)

Professor Schacht cites contracts for hiring and leasing as an example of transmission of concepts from Roman Law to the *Shari'a*. Early on, Islamic religious and legal scholars (*fukahā'* and *ulema*, respectively) combined three separate types of transactions into one category of contract, called "*ijāra*." An *ijāra* contract is a contract for hire and lease. This contract, he proffers, corresponds to the Roman Legal contract of *locatio conductio* (a hiring or uniting lease).<sup>19</sup> Under Roman Law, originally that contract was conceived of as three separate transactions, and likewise under Islamic Law:

- (1) The *locatio conductio rei* (i.e., a hiring lease for a thing, or a general contract to lease a good),<sup>20</sup> called "*kirā'*" in Arabic. (However, the term

<sup>19</sup> "*Locatio*" is the feminine, singular, nominative (subject) case, and translates as a lease, i.e., a contract of letting and hiring. "*Conductio*" is the feminine, singular, nominative (subject) case, and translates as a bringing together, hiring, or uniting. Together, the term "*locatio conductio*" thus means a lease contract to hire or unite.

<sup>20</sup> "*Rei*" is the feminine, singular, genitive (possessive) case, and means "of things." Thus, "*locatio conductio rei*" refers to a lease contract to hire a thing, or a general lease contract for a good.

"*kirā'*" is rarely used, and refers to a sale.)

- (2) The *locatio conductio operarum* (i.e., a hiring lease for services, or a general contract to lease services),<sup>21</sup> called the "*ijāra*" proper.
- (3) The *locatio conductio operis* (i.e., a hiring lease for work or labor, or a general contract to lease labor),<sup>22</sup> called the "*ju'f*" in Arabic.

As the Romans did, the *fukahā'* and *ulema* combined these three transactions into a single contractual category. Thus, as a practical matter, under the *Shari'a*, there is really only one distinction made as to the type of *ijāra* contract — whether it is for a period of time, or for accomplishing a specific task.

Islamic Law rules governing an *ijāra* contract are straightforward. Only three requirements must be met for the contract to be valid. They concern the object, time, and price at stake. That these parameters are minimalist is further supporting evidence for the general proposition that Islamic Contract Law provides an infrastructure in which modern capitalist economic growth can occur.

First, virtually any object can be leased, but the nature of what is being leased must be defined. Thus, a broad range of objects, including real property, can be the object of an *ijāra* contract and thereby leased. There are special terms associated with leasing two types of real property. In particular:

- Lease of agricultural land (i.e., a field) is a "*muzāra'a*" contract, including the leasing of a plantation of fruit trees (or vines).
- A contract for irrigation, or hiring an individual or firm to provide irrigation services, is a "*musāqāh*" contract.<sup>23</sup>

Notably, most *ulema* agree the rental price may consist of a specific percentage of the produce from the land or trees. In other words, both kinds of agricultural leases can involve sharecropping, whereby the tenant farmer shares some of the crop output with the landowner in exchange for the right to farm the land. The key is that the percentage of crop to be shared is defined in the contract. Likewise, livestock can be leased. Indeed, there is no distinction between hiring property and chattel.<sup>24</sup>

The example of leasing farmland also carries with it some special rules. For example, suppose farmland is leased for a period, but when that period expires, the crop still has not been harvested. Then, the lease automatically is extended under the *Shari'a*, until the crop ripens. After all, the purpose of the *ijāra* contract under which the land is leased is to obtain a yield. Under normal conditions, it is to the benefit of the tenant farmer to stay until that yield is realized. Thus, by operation

<sup>21</sup> "*Operarum*" is the feminine, plural, genitive (possessive) case and means "of services." Thus, "*locatio conductio operarum*" refers to a lease contract for services, or a general lease contract for services.

<sup>22</sup> "*Operis*" is the neuter, singular, genitive (possessive) case and means "of work, of labor." Thus, "*locatio conductio operis*" connotes a lease contract for the hiring or uniting of work, that is, a lease contract for work or labor.

<sup>23</sup> The account by Professor Schacht confuses these two terms. See SCHACHT, *supra*, at 119, 115-116.

<sup>24</sup> See HUSAIN, *supra*, at 173.

of law, an automatic extension provision is implied in the contract. The fair rental price still is applicable during the extended period — that is what the landowner charges the tenant farmer.

Conceivably, economic or environmental conditions could change in a way that cause the tenant farmer or landowner to prefer not to see the contract extended. For example, the land price could rise or plummet dramatically, or a drought could strike. In these circumstances, the tenant-farmer has the right to continue, or quit, the lease. Certain other rules are premised on the prohibition on *ribā*.

Moreover, the hiring of services falls under the category of an *ijāra* contract. That is, a contract of service also falls under the category of “*ijāra*.” Thus, an employment arrangement — such as a contract to hire a dentist for a clinic, consultant for a project, music band to play at a wedding, secretary for an office, teacher for a school, worker on a building project — would be an *ijāra* agreement. In all instances, the object of the contract must be explicitly identified in the contract.

Significantly, under an *ijāra* services agreement, it is not possible to delegate duties. Rather, duties incurred under the contract must be performed by the service provider called for in the contract. To put the point in American Contract Law terms, an *ijāra* service contract calls for specific performance. The logic is clear in both legal systems: what is being bargained for is skill and talent unique to a service provider, such as an artist, athlete, craftsman, doctor, financier, singer, teacher, or writer. As in cases for the hire or renting of an object, a contract to hire a service can be for a definite period, or for a specific job.

Second, if an *ijāra* contract is for a period of time, then that time must be definite. It is not possible to rent an object for a specified amount per unit of time (e.g., \$100 per month), without also specifying the number of months. A contract to rent the object for an indefinite period would be invalid. However, it may be permissible to state a knowable period, which is defined by an objective measure, as long as that measure can yield a specific date. For example, an *ijāra* contract that calls for leasing equipment “until the earlier of completion of the building project, or 90 days,” would be permissible.

In contrast, consider a different scenario, in which the length of the period is not known. For example, suppose a new securities broker-dealer firm may seek to lease a Bloomberg News computer terminal, to obtain world financial market data, “until the firm has underwritten U.S. \$1 billion worth of initial public offerings (IPOs) of financial instruments.” At that point, the firm forecasts it will have generated underwriting fees sufficient to buy its own terminals from Bloomberg. The measure of \$1 billion worth of IPOs is objective, but when the firm will cross that benchmark is unclear. Nevertheless, this *ijāra* contract should be valid, because it is for the accomplishment of a specific task — underwriting \$1 billion in securities.

Third, the price at which the object or services are hired or leased must be defined. If an object is involved, then the rental amount for it must be explicit. If the hiring of a service is involved, then the wages or salary to be paid to the service provider must be clear. In both instances, the amount must be fixed. Presumably,

an *ijāra* contract in which an exact figure is not specified, but is ascertainable through a mechanism that is defined in the contract, is permissible.

For example, a contract to lease for one year a grain storage elevator, for the purpose of storing wheat, at the a rental amount of U.S. \$100 per cubic meter of storage space used, would be permissible. It is not clear how much wheat might be stored, and thus the final storage price is unclear. Yet, once the volume of wheat is known, simply multiplying by a \$100 per cubic meter yields the final tally. Similarly, rental fees based on other objective measures, like an index of market prices, may be acceptable. But, there are limits to this flexibility. It might not be permissible to hire a service provider at a wage rate that is defined merely as the “prevailing wage rate for similar workers.” That might inject uncertainty (*gharar*) into the contract. The solution for the employer and employee would be to negotiate a series of short-term *ijāra* contracts, so that they can revise the wage rate as market conditions change as soon as one contract expires.

Consider the following example. In April 2009, the Camel Reproduction Centre in Dubai, United Arab Emirates (UAE) announced it had cloned successfully a female, one-humped camel named “Injaz,” which means “achievement.”<sup>25</sup> The cloning program is designed to preserve the genetics of elite racing or milk-producing camels. Scientists at the Centre produced the clone by taking DNA from a cell in the ovary of an adult camel (which was killed in 2005 for meat), and putting that DNA into an egg from a surrogate mother. Injaz was genetically identical to the camel from which the cells were taken.

Setting aside ethical questions surrounding animal (not to mention human) cloning, suppose Dubai signs an *ijāra* contract with a famous veterinarian, Dr. Camelstein. The contract indicates its purpose is to hire him for his cloning services for a period of 1 year. The contract indicates he will be paid a fee of U.S. \$1 million for each camel he clones. (Note the object of the contract is not the cloned camels. They do not yet exist, so contracting for them would be impermissible under the *Shari’a*. Rather, the object is veterinary services.) It is not clear how many camels Dr. Camelstein will be able to clone, or even if any that are cloned are attributable directly to his efforts. In turn, there is no precision as to the service fee: it could range from zero to a large number.

Is the use of *qiyās* (analogical reasoning) helpful? First, is there an analogy to a sharecropping contract (*muzāra’a*), in which the percentage of crop to be handed over to the landowner is defined? The contract of Dr. Camelstein does identify a figure. But, it is a fixed sum, not a percentage. That difference suggests the analogy is weak.

Second, might there be an analogy to a *ja’alah* arrangement (i.e., a services fee)? Suppose an owner who has lost her camel, car, or wallet hires a private investigator to find the lost item. Under the deal, the owner pays the investigator nothing unless the investigator finds the lost object. If the investigator does recover the object, then the *ja’alah* arrangement calls for a flat fee (e.g., U.S. \$100,000). Dr. Camelstein gets a fee for producing via cloning a camel, which is akin to finding a missing object. Yet, in respect of the *ja’alah* arrangement, the Four Schools are not

<sup>25</sup> See “First Camel Clone” Born in Dubai, BBC News, 14 April 2009, posted at news.bbc.co.uk.

unanimous on the outcome. (The *Hanafi* School finds this arrangement forbidden (*haram*), because of concerns of *gharar*.) Finally, consider the case of the *ijāra* contract stating Dr. Camelstein is to receive a wage of \$100,000 per month for one year, plus a bonus of \$1,000 per camel he clones. Would the result differ?

### [C] Cancellation (*Faskh*) of an *Ijāra* Contract

Suppose after the *ijāra* contract has been entered into (concluded), the party that is hiring or renting the good or service (i.e., the lessee) discovers a defect in that good or service. Given that the agreement has been concluded, what recourse does this party have? The answer is straightforward: cancellation, known in Arabic as "*faskh*."

Note carefully that *faskh* is a right to cancel, and it is not linked solely to *ijāra* agreements. Rather, cancellation is a possibility in respect of any type of contract under the *Shari'a*. Critically, *faskh* is not synonymous with *khiyar*, which is a right of rescission. For present purposes, it suffices to appreciate that either right produces the same economic effect: the bargain is over. But, the right of *faskh* is held by one party, as in the context of an *ijāra* deal — the hirer or renter. In contrast, the right of *khiyar* is held by both contracting parties. Moreover, the precise grounds for cancellation by one side, versus rescission by either party, are not identical. Finally, as a technical legal matter, the causal steps are different. When a contract is cancelled through a declaration of *faskh*, the immediate effect is as if the agreement never existed. Rescission is one step before cancellation. Rescission leads to cancellation, which in turn produces the effect that the agreement is expunged.

In respect of *faskh*, the hiring or leasing party can notify its counter-party (i.e., the lessor) that the deal is off owing to the defect. That remedy is logical enough, given that an *ijāra* contract embodies an expectation that the good or service rented is of sufficient quantity and quality to fulfill the purpose for which it is being leased. In the event of cancellation, the hirer or renter is liable for payment to the counter-party to cover any use made of the good or service rendered.

Cancellation is possible in a second circumstance. Suppose, again after conclusion of an *ijāra* contract, the party that hired or rented the good or service seeks to cancel the deal based on a good excuse. For instance, the purpose of the *ijāra* agreement has been prevented from reaching fulfillment. That could occur where the need to rent a wrecker is obviated, because the building on which the wrecker was to be used collapsed. In that case, the lessee of the wrecker could cancel the contract. A broad range of purposes may serve as a legitimate reason for cancellation.<sup>26</sup> Illustrations range from death of one of the parties to the contract, to change in a journey (in the instance of hiring a saddle mount).

There is a limitation on the right to exercise *faskh*.<sup>27</sup> The defect must be sufficient to prevent or reduce the possibility of use of the good or service. For example, if the object is a house or apartment, and it is being rented pursuant to an

*ijāra* contract, then the collapse of the house or apartment building clearly would suffice to allow cancellation of a rental contract. Similarly, a severe case of laryngitis afflicting an opera singer would be grounds to cancel a music deal.

Of course, in practice the contracting parties may prefer to renegotiate the *ijāra* arrangement, for instance, by substituting other comparable living quarters, or re-scheduling the performance. In other words, as is true under American Contract Law, nothing in the *Shari'a* compels a party hiring a good or service to the extreme remedy of *faskh*. Rather, Islamic Law flexibly supports alternative commercial arrangements.

The *Shari'a* scheme for *faskh* raises an important practical question about judgment. Who judges whether a good or service is defective, and sufficiently so to be a basis for cancellation? Likewise, who judges whether the hirer or renter is liable for any payment, on account of consuming a portion of the good or service, and for how much? If the hirer or renter is the judge, then that is akin to the fox guarding the chicken coop. As for cancellation based on a good excuse, who judges whether the purpose of the contract has been vitiated by a supervening or subsequent event?

If the provider of the good or service is the judge of these matters, then that is akin to chickens guarding themselves. Ideally, both parties ought to act reasonably, and the defect should be evident to both of them. That may occur if they are known to each other, trust one another, and look forward to a future transactional relationship (i.e., being "repeat players"). In reality, sharp disagreements do occur. The best judge is a *bona fide* commercial law judge who understands when and how invocation of *faskh* is rightful.

### [D] Mortgage or Pledge Contracts (*Bay' al Wafa*)

In the sale of an object, it is possible for the seller to retain a right of redemption in respect of that object. Real property is a classic example. In this scenario, the seller sells the property to a buyer. But, the seller has a right to reclaim or regain ownership and possession of the property. The seller would do so if the buyer defaults on the purchase contract, such as by failing to pay some or all of the purchase price for the property.

For example, suppose the seller of a parcel of real property is a bank. The buyer is supposed to pay the bank a set purchase price for that property. The *bay' al wafa* contract contains a right of redemption in favor of the bank-seller. This right ensures the bank-seller may get back the property from the buyer. To exercise this right, the bank-seller would pay the buyer back the purchase price, in installments, which the buyer previously paid to the bank-seller — if any. Accordingly, Professor Hussain comments that

[t]his [*bay' al wafa* contract] is really a type of mortgage transaction, designed to avoid the prohibition on *riba* (interest, or excess).<sup>28</sup>

<sup>26</sup> See SCHACHT, *supra*, at 154.

<sup>27</sup> See SCHACHT, *supra*, at 154.

<sup>28</sup> HUSSAIN, *supra*, at 173.

She also comments that some *Shari'a* scholars argue that a *bay' al wafo* transaction is best classified as a pledge arrangement (*rahn*).

That is because of the underlying economic reality of the transaction. In the above hypothetical scenario, the real property effectively is pledged to the bank-seller to secure the underlying indebtedness of the buyer to the bank-seller when the purchaser buys the property. The right of redemption is the legal device that has the economic effect of a pledge. The buyer promises that the bank-seller can have the property back if need be. Hence, the property secures the indebtedness of the buyer to the bank-seller. If the buyer does not make good on its obligation to pay some or all of the purchase price, then the bank essentially refunds in installments any money the buyer did pay, and takes back the property from the buyer. Note this contractual arrangement is another particular illustration of the general proposition that the *Shari'a* is a flexible legal apparatus that supports modern capitalist economic growth.

### [E] Loan Contracts ('*Āriyya*)

An *ijāra* contract is related to, but distinct from, a transaction known in Arabic as "*āriyya*." On the one hand, an *ijāra* contract contemplates payment of rent in exchange for the object that is loaned. On the other hand, an '*āriyya*' arrangement involves a loan of a non-fungible object (as distinct from a loan of a fungible item like money) by its owner, with no conditions attached to the deal. Critically, an '*āriyya*' arrangement does not involve a rental payment. Still, it qualifies as a species of contract.<sup>29</sup>

In brief, under an '*āriyya*' contract, the owner of a non-fungible object temporarily grants possessory rights in that object to another person for free. The object, being non-fungible, is particular and identifiable. For instance, an owner of a farm implement, machine tool, or other capital good could lend a piece of equipment to a farmer or industrialist for the latter party to use for a special purpose. As another example, parents of a groom might borrow tables, chairs, and a party tent to host a wedding reception.

Why does the owner grant temporary possessory rights for "free"? The owner is motivated (ideally, at any rate) to be beneficent in the purest sense. Additionally, there is a legal incentive for such motivation. The owner foregoes a payment to avoid being unjustly enriched, and thereby running afoul of the rule against *ribā*.

There are two basic, general obligations in an '*āriyya*' contact, one incumbent on the owner, and the other on the party to whom the object is loaned:

- *Concerning the obligations of the owner:*

The owner must take care not to make a premature demand for the return (called *rujā'*) of the property lent. Otherwise, the owner might be held liable to the borrower for damages. Thus, for example, suppose an owner of agricultural land gratuitously allows a tenant farmer to plant crops on the owner's land. Subsequently, but prematurely, the owner demands return of

the farmland. Then, the owner may be held liable to the tenant farmer for damages.

- *Concerning the obligations of the borrower:*

The borrower is entitled to possession and use of the thing lent. But, the borrower must not hire it out, or pledge it as security.

An '*āriyya*' contract may, or may not, have conditions on the lender or borrower, beyond the basic obligations outlined above. That said, the fact that the loan transaction does not involve a charge does not mean the arrangement is largely unstructured.

At a minimum, as indicated, the borrower does not have a usufruct interest in perpetuity. Rather, the borrowing period is defined in the contract in some way. Moreover, the arrangement calls for explicitly, or assumes implicitly, that aside from ordinary wear and tear from the use of the object, the borrower will not damage the object. Likewise, an '*āriyya*' contract contemplates use of the object by the party temporarily in possession of it. But, that use will not result in complete consumption of the object. Finally, under Islamic Family Law, the right of a father, grandfather, or other lawful guardian of a child concerning the property of the child does not include the unilateral engagement of a disadvantageous transaction. Specifically, the guardian cannot lend out the property of the child via an '*āriyya*' contract.<sup>30</sup>

For non-Muslim lawyers, perhaps the most odd feature of an '*āriyya*' contract is the lack of financial consideration to support it. That an owner grants a temporary possessory right for "free" likely would be classified as a gift, not a loan contract, in American Contract Law. Professor Schacht defines an '*āriyya*' contract as "the gratuitous transfer of usufruct . . ."<sup>31</sup> By this he means the purpose of the contract is to transfer from the owner to the borrower the right to possess and use the object of the contract, i.e., the thing that is being loaned, and enjoy the fruits of that possession and use. That transfer is, of course, limited in duration. Professor Schacht explains:

'*Āriyya*' is defined as putting another temporarily and gratuitously in possession of the use of a thing, the substance of which is not consumed by its use. It is distinguished as a separate contract from the loan of money and of other fungible objects which are intended to be consumed (this is the *kard, mutuum*). The borrower may, generally speaking, lend the borrowed thing to a third party, but he must not hire it out or give it as a security. The owner may at any time demand the return (*rujā'*) of the thing which he has lent, but he may become liable for damages, for instance, if he prematurely demands the return of a field which he has lent for a long period and the borrower has planted on it.<sup>32</sup>

<sup>30</sup> SCHACHT, *supra*, at 168.

<sup>31</sup> See SCHACHT, *supra*, at 134.

<sup>32</sup> SCHACHT, *supra*, at 157 (footnote omitted).

<sup>29</sup> See HUBBARD, *supra*, at 174.

The key point is the loan is "gratuitous," meaning that no charge is imposed by the lender on the borrower. Professor Schacht observes that "[a]ny stipulated reward would be unjustified enrichment."<sup>33</sup> As suggested earlier, that would appear to indicate that *ribā*, which is forbidden, could be involved.

Unfortunately, what neither he nor Professor Hussain points out is the motivation for the lender. In the American Contract Law paradigm, why would an owner lend out valuable non-fungible property, except to make a profit? From the Islamic legal perspective, however, the motive is (or ought to be) clear: charity. If the owner of an asset seeks a financial reward by lending that asset, then the owner does not use an *'ariyya* contract. Rather, the proper device for the owner and borrower is a hire or lease (*ijāra*) contract. In an *'ariyya* contract, the owner and borrower have a relationship of special trust and friendship, and the former seeks to do a good deed toward the latter. In so doing, and insofar as the borrower puts the loaned asset to productive use, the transaction adds to the overall economic development of the community. Thus, an *'ariyya* contract nicely illustrates the spirit of Islamic Contract Law, namely, to support market-based growth, but more importantly to do so in a morally upstanding manner.

To be sure, the owner-lender may gain some kind of benefit from an *'ariyya* contract. For instance, your author loaned out — for free — many of his Islamic Law books to his hard-working Research Assistants. They used these books to help them prepare background memoranda. In turn, the memoranda formed the basis of some sections in the present text. All of these loan arrangements technically were *'ariyya* contracts.

## § 22.04 UNCONSCIONABILITY AND THE PROBLEM OF SHORTAGE OR LACK (GHABN)

There is no doctrine of unconscionability in Islamic Contract Law.<sup>34</sup> At first glance, the lack of this doctrine is a sharp distinction from American Contract Law. In the United States, the doctrine is well-enshrined in the U.C.C. Article 2, which deals with sales of goods. Section 2-302, entitled "Unconscionable contract or Term," states:

- (1) If the court as a matter of law finds the contract or any term of the contract to have been unconscionable at the time it was made the court may refuse to enforce the contract, or it may enforce the remainder of the contract without the unconscionable term, or it may so limit the application of any unconscionable term as to avoid any unconscionable result.
- (2) If it is claimed or appears to the court that the contract or any term thereof may be unconscionable the parties shall be afforded a reasonable opportunity to present evidence as to its commercial

setting, purpose, and effect to aid the court in making the determination.<sup>35</sup>

Article 2A of the U.C.C., which covers lease contracts, contains a similar provision on unconscionability in Section 2A-108 (with one difference being it, but not Section 2-302, allows for the awarding of attorney's fees).

Likewise, Section 208 of the *Restatement (Second) of Contracts*, entitled "Unconscionable Contract or Term," says:

If a contract or term thereof is unconscionable at the time the contract is made a court may refuse to enforce the contract, or may enforce the remainder of the contract without the unconscionable term, or may so limit the application of any unconscionable term as to avoid any unconscionable result.<sup>36</sup>

The commentary to this Section states:

- a. *Scope.* Like the obligation of good faith and fair dealing (§ 205), the policy against unconscionable contracts or terms applies to a wide variety of types of conduct. The determination that a contract or term is or is not unconscionable is made in the light of its setting, purpose and effect. Relevant factors include weaknesses in the contracting process like those involved in more specific rules as to contractual capacity, fraud, and other invalidating causes; the policy also overlaps with rules which render particular bargains or terms unenforceable on grounds of public policy. Policing against unconscionable contracts or terms has sometimes been accomplished "by adverse construction of language, by manipulation of the rules of offer and acceptance or by determinations that the clause is contrary to public policy or to the dominant purpose of the contract." Uniform Commercial Code § 2-302 Comment 1. Particularly in the case of standardized agreements, the rule of this Section permits the court to pass directly on the unconscionability of the contract or clause rather than to avoid unconscionable results by interpretation. Compare § 211.
- b. *Historic standards.* Traditionally, a bargain was said to be unconscionable in an action at law if it was "such as no man in his senses and not under delusion would make on the one hand, and as no honest and fair man would accept on the other;" damages were then limited to those to which the aggrieved party was "equitably" entitled. *Hume v. United States*, 132 U.S. 406 (1889), quoting *Earl of Chesterfield v. Janssen*, 2 Ves. Sen. 125, 155, 28 Eng. Rep. 82, 100 (Ch. 1750). Even though a contract was fully enforceable in an action for damages, equitable remedies such as specific performance were

<sup>33</sup> SCHACHT, *supra*, fn. 1 at 157.

<sup>34</sup> This discussion draws on a paper presented in May 2009 in *Advanced International Trade Law* at the University of Kansas School of Law by Mr. Sattam Saleh Alhomay of Riyadh, Saudi Arabia, S.J.D. Candidate, entitled "Unconscionability Doctrine: International Trade Law Application."

<sup>35</sup> All American states, except Louisiana, have adopted the 1962 Official Text of the U.C.C., though with some variations. All adopting jurisdictions, save for California, adopted Section 2-302. California has an unconscionability rule that is broader than this provision in Section 1670.5 of its Civil Code.

<sup>36</sup> RESTATEMENT OF THE LAW, SECOND, CONTRACTS § 208 (American Law Institute, 1981).

refused where "the sum total of its provisions drives too hard a bargain for a court of conscience to assist." *Campbell Soup Co. v. Wentz*, 172 F.2d 80, 84 (3d Cir. 1948). Modern procedural reforms have blurred the distinction between remedies at law and in equity. For contracts for the sale of goods, Uniform Commercial Code § 2-302 states the rule of this Section without distinction between law and equity. Comment 1 to that section adds, "The principle is one of the prevention of oppression and unfair surprise (Cf. *Campbell Soup Co. v. Wentz*, . . .) and not of disturbance of allocation of risks because of superior bargaining power."

- c. *Overall imbalance.* Inadequacy of consideration does not of itself invalidate a bargain, but gross disparity in the values exchanged may be an important factor in a determination that a contract is unconscionable and may be sufficient ground, without more, for denying specific performance. See §§ 79, 364. Such a disparity may also corroborate indications of defects in the bargaining process, or may affect the remedy to be granted when there is a violation of a more specific rule. Theoretically it is possible for a contract to be oppressive taken as a whole, even though there is no weakness in the bargaining process and no single term which is in itself unconscionable. Ordinarily, however, an unconscionable contract involves other factors as well as overall imbalance.

- d. *Weakness in the bargaining process.* A bargain is not unconscionable merely because the parties to it are unequal in bargaining position, nor even because the inequality results in an allocation of risks to the weaker party. But gross inequality of bargaining power, together with terms unreasonably favorable to the stronger party, may confirm indications that the transaction involved elements of deception or compulsion, or may show that the weaker party had no meaningful choice, no real alternative, or did not in fact assent or appear to assent to the unfair terms. Factors which may contribute to a finding of unconscionability in the bargaining process include the following: belief by the stronger party that there is no reasonable probability that the weaker party will fully perform the contract; knowledge of the stronger party that the weaker party will be unable to receive substantial benefits from the contract; knowledge of the stronger party that the weaker party is unable reasonably to protect his interests by reason of physical or mental infirmities, ignorance, illiteracy or inability to understand the language of the agreement, or similar factors. See Uniform Consumer Credit Code § 6.111.

- e. *Unconscionable terms.* Particular terms may be unconscionable whether or not the contract as a whole is unconscionable. Some types of terms are not enforced, regardless of context; examples are

provisions for unreasonably large liquidated damages, or limitations on a debtor's right to redeem collateral. See Uniform Commercial Code §§ 2-718, 9-501(3). Other terms may be unconscionable in some contexts but not in others. Overall imbalance and weaknesses in the bargaining process are then important.

- f. *Law and fact.* A determination that a contract or term is unconscionable is made by the court in the light of all the material facts. Under Uniform Commercial Code § 2-302, the determination is made "as a matter of law," but the parties are to be afforded an opportunity to present evidence as to commercial setting, purpose and effect to aid the court in its determination. Incidental findings of fact are made by the court rather than by a jury, but are accorded the usual weight given to such findings of fact in appellate review. An appellate court will also consider whether proper standards were applied.

- g. *Remedies.* Perhaps the simplest application of the policy against unconscionable agreements is the denial of specific performance where the contract as a whole was unconscionable when made. If such a contract is entirely executory, denial of money damages may also be appropriate. But the policy is not penal: unless the parties can be restored to their pre-contract positions, the offending party will ordinarily be awarded at least the reasonable value of performance rendered by him. Where a term rather than the entire contract is unconscionable, the appropriate remedy is ordinarily to deny effect to the unconscionable term. In such cases as that of an exculpatory term, the effect may be to enlarge the liability of the offending party.

This commentary is valuable in laying out the nature and meaning of "unconscionability," and remedies for it.

Interestingly, that the *Shari'a* lacks the unconscionability doctrine is not a point of contrast with international contract law. The 1980 United Nations *Convention on Contracts for the International Sale of Goods (CISG)* does not have a provision on unconscionability that is directly analogous to U.C.C. Section 2-302 or *Restatement* Section 208. Rather, the *CISG*, in Article 79, exempts a party from performance on account of an unforeseeable impediment. This Article states:

- (1) A party is not liable for a failure to perform any of his obligations if he proves that the failure was due to an impediment beyond his control and that he could not reasonably be expected to have taken the impediment into account at the time of the conclusion of the contract or to have avoided or overcome it or its consequences.
- (2) If the party's failure is due to the failure by a third person whom he has engaged to perform the whole or a part of the contract, that party is exempt from liability only if:

- (a) he is exempt under the preceding paragraph; and
  - (b) the person whom he has so engaged would be so exempt if the provisions of that paragraph were applied to him.
- (3) The exemption provided by this article has effect for the period during which the impediment exists.
- (4) The party who fails to perform must give notice to the other party of the impediment and its effect on his ability to perform. If the notice is not received by the other party within a reasonable time after the party who fails to perform knew or ought to have known of the impediment, he is liable for damages resulting from such non-receipt.
- (5) Nothing in this article prevents either party from exercising any right other than to claim damages under this Convention.<sup>37</sup>

On close inspection, then, is Islamic Law as different from these other regimes as it first appears?

Perhaps not. The *Shari'a* contains a principle known as "*ghabn*." This Arabic term literally means "shortage," or "lack." But, in the context of Islamic Contract Law, the connotation is broader than the literal meaning. That is because the term covers any agreement that is not the result of bargaining between parties that had freedom of choice and understood what they were negotiating. In other words, the term refers to a situation in which the contract formation process did not occur in a reasonable manner.

Islamic Law identifies what may be dubbed three types of "*ghabn* contracts." All three types, which are contracts of sale (*bay'*), render a contract voidable:

• *Najash* —

A *bay' al najash* contract is one in which a seller artificially inflates the price of the good it seeks to sell by arranging staged bidding. A *hadith* makes clear this practice is *haram*:

[The Messenger of Allāh] . . . has forbidden bidding up the price [dishonestly, not intending to purchase].<sup>38</sup>

This *hadith* is compiled not only by *Imām* Bukhārī, but also by *Imām* Muslim, Ibn Māja, and An-Nasā'ī.

In a *najash* transaction, a seller schemes with another person (or persons) to bid on the item for sale. The confederate has no intention to buy the good. Rather, the confederate seeks to induce others to bid on the item — outbidding the confederate,

<sup>37</sup> CISG Article 79, posted at Pace Law School (New York) Institute of International Commercial Law, [www.cisg.law.pace.edu/cisg/text/treaty.html](http://www.cisg.law.pace.edu/cisg/text/treaty.html).

<sup>38</sup> Quoted in 'AND AL-RAHMAN I. DOI, *SHARI'AH: ISLAMIC LAW* 563 (London, England: Ta-Ha Publishers Ltd., 2nd rev'd ed., 2008) (quoting from the compilation of *Imām* Bukhari). (The author's name is commonly transliterated as in the text above, and used on the copyright page and back of the treatise. But, the transliteration in this citation is more precise, and set out on the cover and title page of the treatise.) [Hereinafter, *DOI*.]

of course — and thereby raise its price. Ultimately, one buyer (not the confederate) emerges, and the dishonest seller garners a higher price than would have been the case but for the ruse.

• *Talāqī Rukbān* —

"*Talāqī rukbān*," or "forestalling," occurs when a buyer purchases a good from foreign merchants before those vendors get to the city market of the buyer. Another *hadith* states this practice, too, is *haram*:

The Messenger of Allāh . . . said, "Do not go out to meet the caravan [in order to buy from them or sell to them]. . . ."<sup>39</sup>

Professor Doi elaborates on this *hadith*:

This sort of trade can lead to fraudulent practices such as buying things at a very cheap rate in order to sell at an exorbitant price since the people of the town would not be able to discover the actual price, or buying up and hoarding in order to be able to dictate the price. It might also be to deceive the caravan traders by offering them a low price before they come to the town and discover that they have been cheated.

Similarly, during famine, the traders might go out to caravans to buy foodstuffs from them at a nominal price without telling them the current market price in the town.<sup>40</sup>

In essence, the problem arises because the foreign merchants do not have the opportunity to offer their goods to other prospective buyers. Likewise, they do not have the chance to compare the prices, availability, or quality of other products that might be like, directly competitive, or substitutable for their good.

• *Mustarsil* —

A *bay' al mustarsil* contract is one in which one of the parties is not fully competent to negotiate. The party in question has some defect in its ability. But, the party is not insane.

There is a common denominator among all three transactions. In each of them, there is a serious defect in contract negotiations, which results in advantage being taken of one party. That defect is imperfect information that arises from a lack of transparency. With a *bay' al najash* contract, the buyer is unaware of the concocted bidding, and thus winds up over-paying for the good. In a *talāqī rukbān* transaction, the outside seller is unaware of local market conditions, and thereby under-prices the good, with the follow-on possibility of price gauging, where the buyer re-sells the good (possibly after hoarding it) at an unreasonable price. In a *bay' al mustarsil*, one party simply lacks the faculties to negotiate adequately. The party may be the buyer or seller, depending on the case. Hence, the result may be the party over-pays for, or under-prices, the good.

<sup>39</sup> Quoted in Doi, *supra*, at 563 (quoting from the compilation of *Imām* Bukhari).

<sup>40</sup> Doi, *supra*, at 563-564.

Consequently, the *Shari'a* treats all three instances as ones of shortage or lacking, that is, of *ghabn*.<sup>41</sup> The result is not automatically a voiding of the contract. Rather, a *ghabn* contract is voidable. The right to render the contract invalid lies with the victimized party, such as a buyer that paid a super-normal price. The right must be exercised within a reasonable period of time from when the victimized party discovered the unfairness of the transaction.

There is a puzzle here. On the one hand, there are *hadith* (quoted above) clarifying that the controversial practices are *haram*. On the other hand, engaging in them does not inexorably result in a void contract. The solution to the puzzle lies in an appreciation of degree — just how egregious was the behavior at issue? In other words, as in disputes about unconscionability, in cases of *ghabn*, the facts matter greatly. Only gross *ghabn* is enough to invalidate a contract. That is, the victimized party bears some burden in showing that what was lacking in the contract negotiations was egregious enough to justify voiding the contract. What, then, is “gross” *ghabn*?

There are at least two approaches to this question. Under the first one, a bright-line test is established. A numerical threshold of one-third delineates “gross” *ghabn*. Any price paid in a *bay' al najash* or *bay' al mustarsil* contract exceeding the fair price by one-third or more is deemed gross. Likewise, for a *talāqī rukbān* or *bay' al mustarsil* transaction, any sale below the fair price by one-third is gross. Of course, some benchmark for the “fair” price must be established, perhaps by an independent expert. The second approach calls for case-by-case assessment of a *ghabn* contract. This review may refer to local customs. It also may involve an independent expert to opine on the fair value of the good and ascertain the degree of deviance from this value. Instead of strict adherence to a one-third rule, the second approach weighs the various factors.

From the above discussion, it should be evident that the *Shari'a* does not condone fraud in contractual relations. Moreover, honesty and fair dealing are not only cherished, but expected of Muslims. That said, fraud occurs, as in any legal system. Professor Doi observes with respect to *talāqī rukbān*:

Unfortunately, this prohibition has long since been subverted in the East and the West, and this practice has become a standard of modern commercial life.<sup>42</sup>

The term relevant to fraudulent transactions is “*ghabn fāhish*.” This term connotes a grave deception. Such fraud renders a contract void (*bātil*) on the Scale of Validity.

## Chapter 23

### CONTRACT LAW: PERFORMANCE, TERMS, AND REMEDIES

My idea of an agreeable person is a person who agrees with me.

Benjamin Disraeli  
(1804-81, Prime Minister of Britain, 1868 and 1874-1880)

#### SYNOPSIS

- § 23.01 PERFORMANCE AND FULFILLMENT (*ĪFĀ'*)
- § 23.02 ASSIGNMENT (*ḤAWĀ' LA*)
- § 23.03 IMPLIED TERMS AND CONDITIONS
  - [A] Implied Term in the Sense of Waiting Period (*Ajal*)
  - [B] Other Implied Conditions
- § 23.04 LIMITS ON EXPRESS TERMS AND CONDITIONS
- § 23.05 LIABILITY (*DAMĀ'N*)
- § 23.06 REMEDIES
  - [A] Termination
  - [B] Rescission (*Khiyār*) and Cancellation (*Faskh*)
  - [C] Damages
  - [D] Performance
  - [E] Imprisonment (*Habs*)
- § 23.07 RATIFICATION (*IMPĀ'*)
- § 23.08 AMICABLE SETTLEMENT (*ṢULḤ*)

#### § 23.01 PERFORMANCE AND FULFILLMENT (*ĪFĀ'*)

As under American Contract Law, under the *Shari'a*, a contract is fulfilled when the obligations it calls for are performed. The usual case is, indeed, fulfillment, which in Arabic is called “*ifā'*.” For example, paying off (or setting off) a debt, or completing a sale, are among the usual cases. A contract of sale (*bay'*) for goods or property (*māl*) is complete when each party takes possession of that to which it is entitled under the bargain. In a simple deal, that may be the buyer getting dates, and seller receiving funds.

When a contract of sale is finished, i.e., not only formed, but also performed, it is said to be “*tāmm*,” which means “complete.” The reciprocal taking of possession that results in *tāmm* is called “*taḥābud*.” Likewise, in the event of a donation (*hiba*),

the donation is complete (*tāmm*) when the donee takes possession (to the extent possible under the donative arrangement) of the item donated. Note that a pure charitable donation, where no counter-value whatsoever is required in exchange for the donation, is called a "*sadaka*." This kind of donation cannot be revoked, i.e., *rujā'* is not possible. Effectively, the transaction is complete (*tāmm*) with the provision of *sadaka*.

Suppose a donor gives an object or property, yet on the condition a counter-value is given first. For example, a donor gives Islamic calligraphy to the University of Kansas School of Law, with the stipulation the Law School name a classroom after the donor. The sign goes up first outside the room, then there is a ceremony at which the donor hands over the art. Under the *Sharī'a*, this arrangement is a sale following counter-value. The donation may be revoked — *rujā'* is possible — up to the time the donee takes possession (which, in the example, presumably would mean until the sign is affixed). Once the donee has possession, the donor ought not to try to re-possess the object or property. To do so would be reprehensible (*makrūh*) from a religious point of view. It is likely to be unsuccessful as a legal matter, as the donor initially received counter-value.

### § 23.02 ASSIGNMENT (ḤAWĀLA)

Generally, the *Sharī'a* permits transfer of rights and obligations arising from a contract, as does American Contract Law. "Transfer" in Arabic is "*hawāla*." The legal effect of a transfer is an assignment of rights or obligations from an original contracting party, the assignor, to a third party, the assignee. No longer does the right or obligation lie in the original party. No longer can a claim under the assigned right be made by the original party. No longer can a claim arise under the assigned obligation against that party. Rather, the right or obligation is with the third party, the assignee. Hence, it is for the assignee to assert any claim, and against the assignee to bring any claim.

For example, suppose the original contracting parties are Nawazish and Zakir. Under the contract, Nawazish has the right to collect money from Zakir. Also under the contract, Nawazish is obligated to deliver wheat to Zakir. Nawazish can assign the right and/or the obligation to Faiza. To assign the right to Faiza means Faiza can collect the money from Zakir. To assign the obligation to Faiza means Faiza must deliver the wheat.

For a *hawāla* to occur, there is no requirement that there be a pre-existing relationship between the third party and the original contracting party that makes the transfer. For example, it could be the case that Nawazish owes money to Faiza, and thus the assignment of the right to collect from Zakir will extinguish the debt owed by Nawazish to Faiza. But, this prior course of dealing need not exist. The assignor and assignee can be complete strangers. If there is no pre-existing liability of Nawazish to Faiza, then the assignment simply creates a right of collection under the contract for Faiza, and extinguishes that right for Nawazish. The concomitant obligations of Zakir to Nawazish and Faiza are extinguished and created, respectively.

However, a critical qualification to the general proposition articulated above must be understood. The *Sharī'a* permits assignment in a narrower scope of circumstances than does American Contract Law, and the Four Schools do not entirely agree on the circumstances in which *hawāla* is acceptable.<sup>1</sup> The "bottom line" is only some contracts are assignable, depending on the nature of the contract and School jurisdiction.

All Four Schools — *Hanafi*, *Māliki*, *Shāfi'i*, and *Hanbali* — agree that assignment is permissible in two cases:

- One claimant, A, holding a claim against B, can sell her claim to anyone the claimant, A, wishes.
- One claimant, A, holding a claim against B, can make a gift of the claim to anyone the claimant, A, wishes, other than to the debtor, B.

The Schools do not all agree on the permissibility of assigning a debt contract, that is, the rights and obligations arising out of a loan agreement.

Consider a simple triangular loan contract.<sup>2</sup> Diagram 23-1 outlines the transaction. One lender, A, lends money to B, the debtor. Is it permissible for A to contract with B and a third party, C, to transfer to C the claim A has against B? That is, can A arrange for B to repay the money to C, rather than to A as initially planned? One reason for the transfer may be that C is a creditor of A (i.e., A owes money to C), and A is trying to repay the debt to C simply by channeling the necessary funds from B straight to C. This transfer, or assignment, would be a *hawāla*.

<sup>1</sup> See JAMILA HUSSAIN, *ISLAMIC LAW AND SOCIETY — AN INTRODUCTION* 172-173 (Annandale, New South Wales, Australia: The Federation Press, 1999). [Hereinafter, Hussain.]

<sup>2</sup> See HUSSAIN, *supra*, at 173; 'ABD AL-RAHMAN I. DOI, *SHAR'AH: ISLAMIC LAW* 554-555 (London, England: Ta-Ha Publishers Ltd., 2nd rev'd ed., 2008) (the author's name is commonly transliterated as in the text above, and used on the copyright page and back of the treatise. But, the transliteration in this citation is more precise, and set out on the cover and title page of the treatise). [Hereinafter, Doi.]

### [B] Other Implied Conditions

These exceptions aside, in every day commerce, many contractual arrangements to which the *Shari'a* applies bear implied conditions. An example is a condition about taking an oath. A condition or prerequisite, in the general sense, is called "*shart*." The condition must occur for the transaction at issue to be legally valid. As with terms on waiting periods (*ajal*), the question is whether a condition may be implied in a contract.

As with such terms, the answer generally is "yes." Here, too, there are exceptions.<sup>6</sup> One is a typical contract of sale (*bay'*) for the immediate transfer of ownership (*tamlīk fil-hāl*). Neither a term nor a condition may be implied. Similarly, a condition may not be implied in a contract for the exchange or division of monetary assets ("*mu'āwada māliyya*"). Nor can a condition be implied in a contract for hire or lease (*ijāra*), though a term (*ajal*) can be implied in these contracts. Thus, parties to any one of these types of contracts must render explicit the conditions on which they agree.

### § 23.04 LIMITS ON EXPRESS TERMS AND CONDITIONS

Every contract will have terms and conditions expressly set forth in it. To what extent are these explicit expressions legally valid? In contracts for the sale (*bay'*) of goods (*māl*), the principal limitation is on a stipulation that

- (1) advantages or disadvantages one of the parties, and, at the same time,
- (2) is extraneous to the purpose of the contract.<sup>7</sup>

An example would be a contract for the sale of leather, where there is a condition from the seller that the buyer makes the leather into shoes.

This kind of stipulation is invalid. Moreover, it renders the contract defective, and makes the contract voidable (*fāsīd*). Interestingly, the source of Islamic Law for this conclusion is not any one of the conventional four sources — the Qur'an, *Sunnah*, *ijma'* (consensus), or *qiyās* (analogical reasoning). It is a result of *istihsān* (discretionary reasoning that does not use *qiyās*).<sup>8</sup>

### § 23.05 LIABILITY (ḌAMĀN)

Obviously, not every completed contract is performed perfectly, leaving the buyers blissfully satisfied. Problems arise after contract formation, disputes erupt, parties accuse each other of failing to live up to their obligations, and they seek to hold each other liable for an actual or perceived breach. In Arabic, liability is called "*ḍamān*." To be "liable" is "*dāmin*."

How does liability arise in contractual relations? As in the American legal system, under the *Shari'a*, the answer is failure (by one or more parties) to perform an

obligation required by the contract. Liability also can arise from committing a transgression, in effect, a civil wrong, or tort, associated with the contractual relationship. In Arabic, "transgression" is "*ta'addi*." In Roman and Civil Law, the concept is "delict." And, a case could arise because of both non-performance of a duty and tortious behavior.

Thus, the *Shari'a* — like American Contract Law — distinguishes between two sources of liability:

- (1) Liability resulting from failure to perform an obligation called for in a contract.
- (2) Liability resulting from the effect of a wrongful act.

The first kind of liability results from behavior contrary to the contract, i.e., a breach. The second kind results from the effect of a tort. Either source of liability triggers a remedy.

### § 23.06 REMEDIES

#### [A] Termination

One straightforward way to deal with a dispute is for contracting parties to terminate their arrangement by mutual agreement. A contract that is well-thought out in advance will contain termination provisions. Those provisions will address key questions such as:

##### • Termination Date —

By what date does the agreement end?

##### • Notice Requirements —

By what means does the agreement normally terminate, i.e., must one or both sides give notice, and if so, how and by when? Or, does the agreement terminate automatically?

##### • Termination Events —

What events, which if any one of them occurs after the contract is completed, would give rise to termination?

In at least five key instances, termination is a remedy exercisable unilaterally. Depending on the case, no judicial intervention is needed to support or give effect to the termination.

First, duress (*ikrāh*) is a ground for unilateral termination. A party compelled to make a bargain can end the deal as soon as it is in a position to do so.

Second, undue influence is a basis for unilateral termination. This basis is somewhat amorphous, and its distinction from duress is not altogether clear. The gist seems to be excessive pressure from a person, or possibly from circumstances.

Third, fraud — as in all legal systems — is a reason to terminate a deal. Fraud can take the form of misrepresentation, through an act or omission of words or

<sup>6</sup> See SCHACHT, *supra*, at 119.

<sup>7</sup> See SCHACHT, *supra*, at 152.

<sup>8</sup> See SCHACHT, *supra*, at 152.

deeds, as to some non-trivial aspect of the contract. Note the importance of a standard to weed out insignificant issues from topics where inaccuracy truly matters.

Fourth, frustration is a reason for termination of a contract. Events that occur after completion of a contract may frustrate the purpose of that contract. Closely related to frustration are impracticability and impossibility. The international contract cases arising out of the 1956 Suez Canal Crisis provide marvelous pedagogy on these doctrines, albeit under American and International Contract Law.

Fifth, undue burden may justify termination. A substantial and material change in circumstances might occur after completion of a contract, and that occurrence may render performance by one party unduly burdensome. In such an instance, the unduly burdened party may end the contract. The threshold for delineating what constitutes an undue burden is important. It cannot be a mere inconvenience.

### [B] Rescission (*Khiyār*) and Cancellation (*Faskh*)

It is not uncommon for contracting parties, having reached an agreement, to seek to unwind their deal before full performance of the obligations specified in the contract has been performed by either or both sides. That is true regardless of the nature and purpose of the contract. In colloquial parlance, the situation is one of either or both parties seeking to "back out" or "call off" the deal. Simply put, rescission is an important remedy for a breach of contract, and this remedy does not require judicial intervention.

Contract Law, be it American or Islamic, would be counter-productively and mercilessly wooden if it did not have doctrines to permit parties to terminate their arrangement after its formation but before completion. Realistic but unforeseen may arise to render continuation of a planned transaction purposeless. Conversely, American and Islamic Contract Law would be counter-productively and mindlessly elastic if they allowed a party to get out of a deal for the slightest of pretexts. Bargains must mean something for there to be certainty and predictability in commercial relations, which in turn are hallmarks of the rule of law and indispensable to economic growth.

Not surprisingly, both legal systems contain the requisite doctrines. Embedded in them is a balancing act between "pulling the trigger" on a deal too easily, and forcing through a deal too strictly. In American Contract Law, these doctrines take the form of rights, such as a right of rescission, and a right of cancellation. Events that allow for the exercise of such a right may include impossibility, impracticability, and frustration. (As mentioned earlier, the international contract cases arising out of the 1956 Suez Canal Crisis are instructive.) Similarly, the *Shari'a* contains rights of rescission and cancellation, known as "*khiyār*" and "*faskh*," respectively. Once again, it might ventured Islamic Law was a source for the reincarnation into the Common Law of these rights.

The right of rescission (*khiyār*) is what was known in Roman Law as *optio*. This Latin term gives a strong clue as to the English meaning of "*khiyār*." It means "option," in the sense of an option to void or rescind. Rescission (*khiyār*) is a

unilateral right, and a unilateral act. It is one side, not both sides, which rescinds a contract. The result of rescission is that the contract is cancelled. Cancellation (*faskh*) is, therefore, technically distinct from rescission (*khiyār*). True, the expressions "right of rescission" and "right of cancellation" (or, "rescission" and "cancellation") sometimes are used inter-changeably. But, to be precise, cancellation is the result of assertion of the right of rescission, i.e., the unilateral act of rescission brings about cancellation. In turn, if and when a contract is cancelled, the legal status of the contract is it never existed. The contract is expunged.

The right of rescission (*khiyār*) cannot exist indeterminately. Otherwise, there would be a lack of certainty and predictability. Contracting parties would not know whether the "other side" might "pull the plug" on a deal at any point up until performance of the final obligation called for in the agreement. Thus, the *Shari'a* requires that *khiyār* be exercised (if at all) within a stipulated time period. If this right is not exercised within the set time frame, the result is a concluded contract of sale that is complete (*tāmm*).

What is that time frame? The general rule cannot be the same as that for the right to withdraw an offer (*rujū'a*). Suppose that as with *rujū'a*, a contracting party (specifically, the offeror) could rescind up until the moment the offer is accepted. In other words, suppose *khiyār* were permitted only until the moment of *kabūl*. The result would be illogical, in that a contract could be rescinded before it is formed. Rescission of a contract would be indistinguishable from withdrawal of an offer, and thus have no meaning.

Accordingly, the time frame for exercising the right to rescind a contract depends on the practical needs of the contracting parties. Consider a contract of sale transaction (*bay'*), specifically a contract for the sale or exchange of goods or property (*māl*). A buyer needs to be able to rescind a contract once she has seen the goods she is buying. The right does her little help in the abstract, because she is unlikely to be aware of a defect until she inspects the goods. It is that defect that will cause her to want to rescind. Thus, under the *Shari'a*, a defect in quality creates a right of rescission. A buyer has a right to rescission at the time she sees the object she has bought.

The illustration of *khiyār* in the context of a contract for the sale of goods or property intimates there are different kinds of rescission. That, indeed, is so. Professor Hussain identifies five kinds of options to withdraw from a concluded contract:<sup>9</sup>

#### (1) *Khiyār al Shart*

In their contract, parties can set forth the parameters of *khiyār*. To be sure, the existence of the option to withdraw from a completed contract is guaranteed by law, i.e., the right is part of Islamic Contract Law, regardless of whether the parties mention it expressly in their document. But, as per agreement of the parties, that existence also can be guaranteed in a contract, which can elaborate the key terms — most notably, the length of time a party has to exercise *khiyār*,

<sup>9</sup> See HUSSAIN, *supra*, at 172.

after which point the right lapses. Stipulating an agreed period of time in which the option to rescind may be exercised is known in Arabic as "*khiyār al shart*." (The word "*shart*" means a condition or prerequisite.)

## (2) *Khiyār al 'Aib*

This form of option to rescind a contract is relevant when there is a contract for the sale of goods or services, and a fault in those goods or services exists at the time the contract is completed. To be sure, the *Shari'a* obligates a seller to make a full, honest, and timely disclosure of the true nature of the goods or services being sold. This disclosure should cover any defects. If the seller fails to do so, and thereby tries to conceal the problematic nature of the goods or services, then the buyer may exercise the option of rescission.

Presumably, the defect must be non-trivial. A minor and insignificant matter ought not to trigger *khiyār al 'aib*. Depending on the circumstances, the correct standard for defectiveness, and its application, may be the source of controversy between buyer and seller. Nevertheless, the point is (as discussed further below) that a prospective buyer need not be wary of being "stuck" with the sub-par goods or services that an unscrupulous seller is trying to pawn off on an unwitting purchaser.

## (3) *Khiyār al Majlis*

The Arabic term "*majlis*" may be translated as "meeting" or "session." One circumstance in which the option to withdraw from a completed contract exists is when the contracting parties are face-to-face. As long as the parties are still in the physical presence of one another, either one may pull out of the bargain.

The purpose of *khiyār al majlis* "is to ensure that the parties are as sure as they can be about the transaction."<sup>10</sup> They can take time with one another to get the parameters of their agreement right, conclude an accord, yet withdraw from it if they decide — while still in each other's presence — those parameters are inappropriate. In effect, the doctrine gives legal effect to second thoughts, thus creating room for maneuver even after a contract is formed. This flexibility may induce parties to bargain in the first instance. It is redolent of the famous "Escape Clause" (also known as safeguards) in the field of international trade law, which allows a country to make trade-liberalizing commitments with knowledge it can put up protectionist measures at variance with those commitments later on, if they face a surge of imports that adversely affects a domestic industry.

The doctrine of *khiyār al-majlis* is sourced in a *hadith* that is reported by Abū Barzāh al-Aslamī and compiled by Ibn Mājah (who lived from 824-886 A.D., 209-295 A.H.):

Each of the parties to a contract of sale has the option against the other party as long as they have not separated.<sup>11</sup>

<sup>10</sup> See HUSAIN, *supra*, at 172.

<sup>11</sup> Quoted in Doi, *supra*, at 560.

Professor Kamali also explains that in respect of the doctrine of *khiyār al-majlis*, a *hadith* allows for the option to cancel completed contracts as long as the parties have "not separated — nor left the

Professor Doi observes that *Imām Mālik* wrote about this *hadith* in his classic treatise, the *Muwatta'*:

This *hadith* of the Prophet . . . expresses the doctrine known as *khiyār al-majlis*, which gives the parties to a contract, duly completed by offer and acceptance, the right to repudiate the agreement during the session (*majlis*) of the bargain.

*Imām Mālik* comments on this *hadith* in the following words:

With us [the People of Madinah] there is no well known definition in this case nor any matter which is acted upon. (*Muwatta'*, Book 31, Number 31:37-80.)

He [*Imām Mālik*] meant there is no definition of what constitutes their separating, and no established practice with respect to that.<sup>12</sup>

Does the above-quoted observation mean that the doctrine is legally valid? The question is a reasonable one, because Professor Doi also reports:

As far as *khiyār al-majlis* is concerned, other schools of law have contested its validity.<sup>13</sup>

These "other schools of law" would be the *Hanafi*, *Shafi'i*, and *Hanbali* Schools. Unfortunately, the Professor does not elaborate on the breadth or depth of skepticism about the doctrine in them.

There are at least two compelling reasons to critique the legal validity of the doctrine *khiyār al-majlis*. First, whether the practice of the people of Medina (*amal ahl al-Madinah*) is consistent with the *hadith* has been a matter of scholarly debate. On the one hand, Professor Kamali writes that the prevailing Madinese practice was to regard a contract as final upon agreement, whether or not the parties remained together or separated.<sup>14</sup> That would suggest a true conflict with

meeting of the contract." MUHAMMAD HASHIM KAMALI, *SHARI'AH LAW: AN INTRODUCTION* 74 (2008). (Hereinafter, KAMALI.)

<sup>12</sup> Doi, *supra*, at 560 (emphasis added).

Professor Doi contests the view of Professor Coulson in respect of this *hadith* and *Imām Mālik's* view of it. In *A History of Islamic Law* (1971), a highly regarded work in its own right, Professor Coulson dubs this *hadith* an "alleged statement of the Prophet." *Id.* at 560 (quoting *A History of Islamic Law* (1971), at p. 46). Professor Doi counters:

Professor Coulson falls into the error of assuming that *Imām Mālik* was in the habit of rejecting Prophetic traditions and the authority of the precepts of the Prophet . . . expressing Islamic Law.

*Id.* In truth, urges Professor Doi, the *Muwatta'* of *Imām Mālik* is widely respected by scholars throughout the Muslim world, and the *Māliki* School relies heavily on the practice of the People of Medina (*amal ahl al-Madinah*) because it believes that Practice accurately reflects the *Sunnah* of the Prophet. See *id.* at 560-561.

<sup>13</sup> Doi, *supra*, at 561 (emphasis added).

<sup>14</sup> KAMALI, *supra*, at 74. Two other examples where a Madinese consensus prevailed as a preeminent source of law are as follows: First, the testimony of children in cases of injury amongst only children is acceptable when no one has left the scene of the incident. *Id.*, at 75. Second, the wife of a missing person

the *ḥadīth*. If, as is the *Mālikī* School approach, priority were given to practice, then the doctrine would be invalid.

On the other hand, the italicized language in the above-quoted observation from Professor Doi indicates a different view of what *Imām* Mālik thought of the practice in Medina.<sup>15</sup> There was, says Professor Doi, no definition of what constitutes separation, nor any set practice as to it. Moreover, as is characteristic of the *Mālikī* School, the practice of the people of Medina legitimates the doctrine:

There were scholars like Ibn Hajar, who were of the opinion that the doctrine *does not contradict* the *ʿamal* of the People of Madinah, because it had been the view of Ibn ʿUmar [the Caliph], Saʿid ibn al-Musayyab, az-Zuhri, and Ibn Abi Dhiʿb, who were eminent leaders in their eras in Madinah.<sup>16</sup>

Second, there is an obvious consequentialist argument against the doctrine of *khiyār al-majlis*. If parties can pull out of a contract that has been formed as long as they remain face-to-face, then how final are their words or writings? They can look each other in the eye, and even shake hands on a deal, and yet not be able to rely on what each has to say as being definitive. Put simply, it is not unreasonable to claim that *khiyār al-majlis* can undermine certainty among contracting parties. As a follow-on point, it might be added that this consequence also undermines a more elemental goal of Islamic Contract Law — the promotion of honesty and fair dealing. That is because ease of withdrawal from completed bargains may facilitate unscrupulous behavior.

The “bottom line” is that there appear to be two views on the doctrine of *khiyār al-majlis*. At least some jurists (*fukahāʾ*) of the *Mālikī* School, as well as other Schools, question the validity of the doctrine. But, overall, including in the majority of the *Mālikī* School, the doctrine is acceptable, with no criticism, as the account of Professor Hussain reflects.

As a practical matter, where the doctrine of *khiyār al-majlis* is accepted, there is no time limit to the *majlis*. The situation may be one of a quickly arranged spot deal, or hours upon hours of negotiations that culminate in a contract. But as soon as either party leaves, the option to exercise this type of *khiyār* ends. Presumably, “leaving,” in this sense, would not mean a temporary break for water or to use a restroom, but rather a permanent cessation of the meeting.

#### (4) *Khiyār al Ruʿya*

In many transactions, goods are sold sight unseen, meaning a buyer purchases them without seeing them. Internet purchases through vendors like Amazon and LL Bean are common examples. There is no opportunity at the moment of contracting for the buyer to inspect the goods. Only when the goods are delivered or otherwise obtained by the buyer, the buyer has the chance to examine them. If there were no option (*khiyār*) to withdraw for this circumstance, then an unscrupulous

may seek judicial separation after completing a four-year waiting period, as well as seek divorce on the ground of injurious treatment by the husband. *Id.*, at 76.

<sup>15</sup> See Doi, *supra*, at 560-561.

<sup>16</sup> Doi, *supra*, at 561.

pulous seller could ship defective goods to the buyer with impunity. To avoid this risk for the buyer, the *Sharīʿa* recognizes another form of *khiyār*, namely, the option to withdraw from a completed contract where goods are sold sight unseen. Under it, *khiyār al ruʿya*, the buyer has the right to reject the goods upon sight, and thereby withdraw from the contract.

#### (5) *Khiyār al Wasf*

It is commonplace for parties to place in their contract a precise description of the goods or services that are the subject of the contract. Either side may provide the description. For instance, in a manufacturing (*istisnāʾ*) contract, a buyer may list technical specifications for a sophisticated item, such as medical or surgical devices, or scientific research equipment. Conversely, a seller may lay out the exact parameters of an item, so as to differentiate it from other similar goods, as in the case, for example, of different types of steel ball bearings.

Unfortunately, goods or services do not always meet the precise contractual description. Sometimes, through no deliberate malfeasance by the seller or manufacturer, the goods do not live up to the standard envisioned by the contract. In such cases, the buyer needs the option to rescind the agreement. That option is *khiyār al wasf*. Presumably, however, the derogation of the goods or services from what was agreed upon is substantial, or material. A trivial departure from the description should not trigger *khiyār al wasf*. The correct standard to distinguish major from minor problems, and how that standard applies in specific cases, may be a source of controversy between buyer and seller.

With respect to each of the above types of withdrawal, it must be exercised, if at all, within a reasonable period of time. As for *khiyār al shart*, the contractual specification of the period must be reasonable.

The significance of the existence of the option to withdraw from a concluded contract (*khiyār*) cannot be overstated. The option, while held by either party, is — as Professor Hussain comments — “for the benefit of the buyer and preclude the common law idea of *caveat emptor*.”<sup>17</sup> Because of *khiyār*, there is no “buyer beware” principle in Islamic Law. An important corollary point is that none of the forms of *khiyār* can be excluded by contract. Thus, for instance, a seller cannot compel a buyer to agree to surrender the option of withdrawal.

#### [C] Damages

Monetary damages are an important contractual remedy in both the American and Islamic legal system. A threshold distinction exists in both systems: damages that an aggrieved party obtains without judicial intervention, and damages that can be had only through an adjudicatory order.

In the first category are money damage remedies like a buyer withholding payment from a seller because of non-performance by a seller, or a buyer exercising a right of set-off (*i.e.*, deducting a payment owed to the seller by an appropriate amount to reflect a counter-obligation not performed by the seller).

<sup>17</sup> See HUSSAIN, *supra*, at 172.

Also in the first category is the exercise of a damages provision in a contract, such as a liquidated damages clause.

"Liquidated" means "[t]o settle (an obligation) by payment or other adjustment; to extinguish a debt . . .," by agreement or litigation.<sup>18</sup> The typical result is the reduction or conversion of an asset (such as a legal right) into cash. A liquidated damages clause, therefore, determines *a priori* (before performance of the contract) what the measure of damages will be if one party breaches the contract.<sup>19</sup> Under the *Shari'a*, as in American Contract Law, parties may identify the events for such exercise — that is, the events of default. The clause indicates the amount of the damages.

There is a large corpus of American jurisprudence on distinguishing between liquidated damages, on the one hand, and a penalty, on the other hand. Under three circumstances, American courts will not uphold a liquidated damages clause:

- (1) the damage amount grossly exceeds the probably damages upon breach,
- (2) the same damage amount applies to a range of breaches, some of which are material, and others trivial, or
- (3) the events of default triggering liquidated damages include a mere delay in payment.<sup>20</sup>

The *Shari'a* embodies similar constraints. But, the extent to which it does is not apparent.

Withholding payment is not an absolute right exercisable in all circumstances. Professor Hussain correctly identifies "withholding payment or performance or set-off" as a remedy "available to the injured party without judicial sanction," as distinct from the option (*khiyār*) of withdrawal. However, in a contract for the sale (*bay'*) of property (*māl*), Professor Schacht posits the question of whether a buyer has the right to pay less to the seller, or to withhold payment (what he calls "abatement") in the event of a defect in the goods?<sup>21</sup> He responds by saying the general answer is "no." In this circumstance, the buyer's remedy is to rescind the contract (*khiyār*), which means he must return the goods, and receive back the payment. Of course, there are sure to be instances when a buyer cannot return the goods. Maybe the goods have been lost. Maybe the goods have been used, in which case they could have been depreciated, or alternatively their value might have increased (as in the example of dyeing of cloth). In such cases, a buyer can pay the correct amount, that is, an amount that proportionally reflects the defective state of the goods.<sup>22</sup> In brief, at least according to Professor Schacht, in a *bay'* contract, withholding payment or exercising set-off are to be used only if return of the *māl* in an unaltered state, coupled with rescission, is not possible.

<sup>18</sup> BRYAN A. GARNER, ED., BLACK'S LAW DICTIONARY 1014 (St. Paul, Minnesota: West, 9th ed. 2009) (entry for "liquidate"). [Hereinafter, BLACK'S LAW DICTIONARY.]

<sup>19</sup> See BLACK'S LAW DICTIONARY, *supra*, at 1015 (entry for "liquidated-damages clause").

<sup>20</sup> BLACK'S LAW DICTIONARY, *supra*, at 1015 (entry for "liquidated-damages clause").

<sup>21</sup> See SCHACHT, *supra*, at 153.

<sup>22</sup> See SCHACHT, *supra*, at 153.

When contracting parties cannot agree on the amount of monetary damages, or even whether damages ought to be awarded (i.e., whether one side is liable to the other), then the second category is relevant. They are unable to reach an amicable settlement (*sulh*). Thus, the parties go to court (or arbitration), plead their cases to a judge (or arbitrator), and obtain a formal decision and order.

## [D] Performance

Still another remedy available to contracting parties under the *Shari'a*, as in American Contract Law, concerns performance. The threshold distinction noted earlier, between remedies that do not need adjudicatory intervention, and those that do, is relevant. A party may withhold performance on account of a breach by the other party. Ideally, the parties will set out in their agreement the terms for withholding performance (and for holding back payment), including the precise conditions that justify this remedy.

If and when contracting parties dispute the point, and cannot reach an amicable settlement (*sulh*), then they must turn to a court (or arbitrator). The aggrieved party may seek specific performance. Monetary damages are a form of compensation to an aggrieved party for the non-execution of a contract. Specific performance is the opposite: it is an insistence the parties execute the agreement. The essence of the meaning of "specific performance" appears similar in American and Islamic Contract Law, namely:

The rendering, as nearly as practicable, of a promised performance through a judgment or decree; specifically, a court-ordered remedy that requires precise fulfillment of a legal or contractual obligation when monetary damages are inappropriate or inadequate, as when the sale of real estate or a rare article is involved.<sup>23</sup>

As this definition indicates, specific performance is an alternative to monetary damages when an adjudicator finds that the latter remedy will not work. One reason may be damages are difficult or impossible to calculate. Another rationale may be that damages, though quantifiable, will not properly compensate the aggrieved party. Either way, the remedy is backed by a court (or perhaps arbitral) order, and these reasons intimate a general hesitancy to intervene heavily and compel performance unless truly justified.

## [E] Imprisonment (*Habs*)

Imprisonment is a contractual remedy that obviously needs judicial intervention. Under American Contract Law, potentially this remedy can arise if a party fails to heed a court order of specific performance. Not executing a contract as ordered by a judge may be treated as contempt of court, triggering the possibility of jail until the non-performing party agrees to render performance.<sup>24</sup>

<sup>23</sup> BLACK'S LAW DICTIONARY, *supra*, at 1529 (entry for "specific performance").

<sup>24</sup> See BLACK'S LAW DICTIONARY, *supra*, at 1529 (entry for "specific performance," quoting G.W. Keeton, *An Introduction to Equity* 304 (5th ed. 1961)).

Under the *Shar'ia*, imprisonment is among the remedies in cases involving contractual obligations or property. The penalty of imprisonment is called "*habs*." However, it appears this remedy is more common, and less of a mere theoretical possibility, than under American Contract Law. In particular, a debtor can be imprisoned until that debtor pays his debt.

The obvious question is what happens if the debtor is (or claims to be) too poor to pay back the debt? Raising this question, which implies that it is both counter-productive and degrading to human dignity to imprison debtors, helped end the use of infamous "debtor's prisons" in the American legal system. As for Islamic Law, Professor Schacht explains that a debtor is put in jail only if the debt arose from a transaction that involved payment of consideration (*badal*), namely:

- sale of a good,
- loan of funds,
- suretyship, or
- *mahr*, i.e., the nuptial gift, and specifically the portion that is due immediately.<sup>25</sup>

For all other debts (i.e., those that do not imply payment of a consideration), a poor person is jailed only if his or her creditors prove he or she has the means to pay the debts. As for the legal nature of any confinement, as Professor Hussain writes, it is "civil imprisonment," meaning that the jailed party is not incarcerated for a criminal offence.<sup>26</sup>

Under the *Shar'ia*, for how long does a poor debtor remain incarcerated? Precisely because the debtor is impecunious, the logical response must depend on willingness, not ability, to pay. Not surprisingly, then, the answer under the *Shar'ia* is the debtor remains in jail until the relevant judge (*qādi*) is convinced the debtor would pay if the debtor could do so. In practice, that period tends to be about two to three months, by which time the debtor has learned that trying to pay off the debt is preferable to sitting behind bars, and has convinced the *qādi* of a change of heart. Note that at any point, a *qādi* will release the debtor if the debtor falls ill.

Do these rules concerning the remedy of imprisonment apply only to cases of debtors in the context of loan agreements? The answer is no. A *qādi* will apply the same rules to a person who usurps the object of another (i.e., a usurper, or *ghaṣīb*), and then claims that object has been destroyed or no longer exists.<sup>27</sup> How broadly beyond cases of debt defaults and usurpation (*ghaṣb*) the remedy of imprisonment is available varies from one Muslim country to another. However, in no country does it appear to be either the preferred or frequently applied commercial remedy.

In the case of indebtedness, suppose a *qādi* orders the release of an imprisoned debtor based on the willingness of that debtor to repay a debt. After the release, however, the debtor remains unable to pay the relevant debt. Is the debtor sent

<sup>25</sup> See SCHACHT, *supra*, at 197.

<sup>26</sup> HUSSAIN, *supra*, at 173.

<sup>27</sup> See SCHACHT, *supra*, at 197.

back to prison? Absent fraud, the general answer is "no." Rather, the *qādi* declares a released debtor, who has proven unable pay the debts, bankrupt — "*muflis*." Does this declaration cause the debtor to be discharged from his debts (as is possible under the United States Bankruptcy Code)? Islamic legal scholars (*fukahā*) do not agree on the answer. Some say all debts of the debtor are wiped out. Others, however, argue creditors can resort to self-help by observing the debtor, and taking any of surplus earnings of the debtor. This argument clearly implies the debts are not extinguished via a declaration of bankruptcy.

## § 23.07 RATIFICATION (İMDÂ')

Technically, it may be appropriate to place the topic of ratification (*imḍā'*) within a discussion of contract formation. However, the right to ratify a contract (*imḍā'*) bears similarities to the right of rescission (*khiyār*).

To begin, parties to an agreement have a right to ratify their contract. Ratification is known as "*imḍā'*" in Arabic. It exists for a stipulated period of time. As in American Contract Law, ratification is adoption of an already-completed act, where the act was originally done in a way that that did not create a binding legal obligation, or was done by a third-party that did not have the authority to act as the agent for the relevant contracting party.<sup>28</sup> Simply put, ratification is a *post hoc* confirmation that renders legally valid and enforceable the agreement based on the prior act that is ratified.

Ratification can occur through express words, which may be written or oral depending on the circumstances of the contract. The words are either a new promise (e.g., as to performance), or to the effect of "I ratify and confirm . . ." Importantly, the words must be more substantive than a mere acknowledgment that an agreement was reached but not performed.<sup>29</sup> The words must clearly convey confirmation of the contract.

As to the similarities between the ratification (*imḍā'*) and rescission (*khiyār*), there are three. First, both are unilateral rights. Second, both must be exercised within a stipulated time period. If the right is not exercised in a timely fashion, then completion (*tāmm*) of the contract of sale results. Third, both rights can be set forth in the contract itself, based on the agreement of the parties, and/or they can be guaranteed by law.

## § 23.08 AMICABLE SETTLEMENT (ŞULH)

It is important to distinguish the exercise of the option to withdraw from a contract, and consequent cancellation of a contract, from the settlement of obligations arising from a contract. That distinction is important in respect of any contractual remedy. Simply put, parties always are free to settle their dispute

<sup>28</sup> See BLACK'S LAW DICTIONARY, *supra*, at 1376.

<sup>29</sup> See WILLIAM R. ANDERSON, PRINCIPLES OF THE LAW OF CONTRACT 179-180 (Arthur L. Corbin ed., 3d American ed. 1919), quoted in BLACK'S LAW DICTIONARY, *supra*, at 1376.

amicably. Indeed, the spirit, if not the letter, of Islamic Law encourages them to do so.

An amicable settlement is called "*ṣulḥ*." One way it can occur is through an amendment to the existing contract that is the subject of the dispute. Rather than cancellation (*faskh*) of the contract, preservation occurs. That is, the essential elements of that contract are retained, and the contract remains in force. Settlement, after all, is friendly, but cancellation may not be. Of course, the necessary mutually agreed upon change or changes are made to it, with supporting consideration (*badal*). The result is the elimination of any dispute, which might not be the case with a cancellation.

## Chapter 24

### BUSINESS ASSOCIATIONS LAW: TRADITIONAL TYPES OF PARTNERSHIP

So do not be disturbed at the sight of wicked men possessing great wealth while the servants of God suffer want. We, my brothers and sisters, must have faith. Competing as we are in the arena of the living God, we are receiving the training in this present life that will make us worthy to be crowned in the life to come. *No honest man becomes rich overnight*; he has to wait for the reward of his labors. If God gave virtue an immediate recompense, we should straightaway find ourselves engaging in commerce, instead of perfecting ourselves in His service.

From a *Homily* written in the 2nd century A.D., *quoted in* THE DIVINE OFFICE, THE LITURGY OF THE HOURS ACCORDING TO THE ROMAN RITE, vol. IV, Ordinary Time Weeks 18-34, Thirty Second Week in Ordinary Time, Second Reading, pp. 529-530 (New York: Catholic Book Publishing Company, 1975) (emphasis added)

- [C] *Sharikah al-Abdān* (Skill-based Partnership)
- [D] *Sharikah al-Wujāh* (Credit Cooperative)
- [E] *Sharikah al-Muḍārabah* (Sleeping Partnership)

## § 24.01 INTRODUCTION

### [A] Importance of Partnership

Partnership is the most important topic in Islamic law on business associations. It is only a modest overstatement to equate the terms "partnership" and "business association." The concept of a corporation as an independent legal personality, which can sue or be sued, and which is so well known to Common and Civil Law Systems, is unknown to the *Sharī'a*. Therefore, to do business in accordance with Islamic Law is to establish, or work with an existing, form of association that is a partnership. Given the central significance of partnership in the *Sharī'a*, it should not be surprising that across the centuries, Islamic legal and religious scholars, coupled with merchant practice, have developed many specific kinds of partnership entities. In turn, the relevance of partnership transcends the legal realm. Members of a community can, and do, become involved in one or another kind of partnership, thereby enabling them to engage in economic transactions beyond what might be possible on an individual basis.

### [B] Historical Origins of Partnership

Partnership has a long history in Islamic legal and religious thinking. The general word in Arabic for a "partnership" is "*sharikah*." Sometimes, the term is transliterated as "*sharikat*." The two words are equivalent, with "*sharikah*" more commonly used in Arabic-speaking countries, and "*sharikat*" typically found in Urdu-speaking countries (most notably, Pakistan).

Substantively, all four *Sunni* Schools of the *Sharī'a* adopt the same definition of "*sharikah*." The equivalence is apparent from a review of what each School states:<sup>1</sup>

- The *Hanafi* School says "*sharikah*" is "the exclusive right of two or more persons to a single subject-matter."<sup>2</sup>
- The *Māliki* School defines "*sharikah*" as "a permission from each of the participants to the others for transactions in his wealth and on their own behalf, while retaining the right to transact personally (in such wealth)."<sup>3</sup>
- The *Shāfi'i* School explains "*sharikah*" is "in its literal meaning is mixing and technically it is an established undivided right in a single thing or it is a contract implying this."<sup>4</sup>

<sup>1</sup> Definitions, interpretations, and perspectives of the *Sunni* Schools are listed in chronological order, that is, in the order in which the School developed historically, with the earliest (*Hanafi*) first and latest (*Hanbali*) last.

<sup>2</sup> IMRAN AHSAN KHAN NYAZEE, *ISLAMIC LAW OF BUSINESS ORGANIZATIONS — PARTNERSHIPS* 15 (Selangor, Malaysia: The Other Press, Malaysian ed. 2002) (quoting 'ABD AL-'AZIZ AL-KHAYYAT, *AL-SHARIKAT*, 2 vols. (Amman: Wizārat al-Awqāf, 1971), vol. 1 at 33). [Hereinafter, NYAZEE and AL-KHAYYAT, respectively.]

<sup>3</sup> NYAZEE, *supra*, at 18 (quoting AL-KHAYYAT, *supra*, vol. 1, at 42, in turn quoting KHALIL, *Al-Mukhtasar (The Summary)* [Hereinafter, KHALIL].)

<sup>4</sup> NYAZEE, *supra*, at 19 (quoting SHAMS AL-DIN MUHAMMAD IBN ABU AL-'ABBAS SHIHAB AL-DIN AHMAD IBN

- The *Hanbali* School teaches that "*sharikah*" is "[j]oint right of ownership or transaction."<sup>5</sup> Similarly, Ibn Qudamah<sup>6</sup> defines partnership as "participation of two or more persons in transactions."<sup>7</sup>

Consequently, all countries in which the *Sharī'a* predominates share the same concept of what a "partnership." A lawyer need not fear that different Islamic countries take fundamentally different approaches to this business association.

However, the broad conceptual similarity masks differences in specific types of partnerships. That is, the *fukahā'* (jurists, *i.e.*, Islamic religious scholars specializing in law) in particular, and *ulamā'* (Islamic religious scholars) generally, have established and refined a variety of specific kinds of partnership to serve commercial needs. Significantly, much of this work occurred during the *Umayyad* and *Abbasid* Caliphates, in which non-Muslims and Muslims alike played prominent roles in commerce, finance, investment, and trade. Accordingly, some of the types of *sharikah* reflect not just Islamic precepts, but also an ecumenical marketplace.

## § 24.02 GENERAL TERM FOR PARTNERSHIP

### [A] Contract-based Partnerships (*Sharikah al-'Aqd*)

The Arabic term "*aqd*" means "contract." Thus, the phrase "*sharikah al-'aqd*" connotes that a partnership is formed by a contract. Stated equivalently, "*sharikah al-'aqd*" means

a partnership created through contract as opposed to co-ownership that may be the result of a joint purchases or agreement or it may result from inheritance or from some other legal situation.<sup>8</sup>

It is expected that the contract be written. Conceivably, a partnership may be created through an unwritten agreement, but only in the presence of two witnesses. However, as a practical matter, under the *Sharī'a*, such an event would be rare and viewed unfavorably.

AHMAD IBN HAMEZ AL-RAMLI, *NIHAYAT AL-MURTADJ [END FOR THE NEEDY]* (Cairo, 1967) vol. 5 at 3 [Hereinafter, AL-RAMLI].

<sup>5</sup> NYAZEE, *supra*, at 15 (quoting AL-KHAYYAT, *AL-SHARIKAT*, *supra*, vol. 1 at 3).

<sup>6</sup> Ibn Qudamah was considered the *Imām* of the *Hanbali* School following the death of *Imām* Ahmed Ibn Hanbal in 855 (241 A.H.) especially in Damascus. Ibn Qudamah was born in Palestine in 1147 (541 A.H.) and died in 1226 (629 A.H.). Living roughly 3 centuries after Ibn Hanbal, and thus obviously not his personal student, Ibn Qudamah rose to become the most outstanding scholar of the *Hanbali* School. Indeed, after *Imām* Ahmed Ibn Hanbal himself, Ibn Qudamah is the principal figure in the *Hanbali* School. His full name is 'Abdullah Ibn Ahmad Ibn Muhammad Ibn Qudamah Ibn Muqdam Ibn Nasr Ibn Abdullah Al-Maqdisi. Typically, he is referred to as "Ibn Qudamah Al-Maqdisi," or "Ibn Qudama Al-Dimashqi." The latter name reflects the fact he moved to Damascus. See *Ibn Qudamah*, WIKIPEDIA, posted at [http://en.wikipedia.org/wiki/Ibn\\_Qudamah](http://en.wikipedia.org/wiki/Ibn_Qudamah).

<sup>7</sup> NYAZEE, *supra*, at 19 (quoting Ibn Qudamah, *Al-Mughni [The Fulfillment]* vol. 5 at 3 [Hereinafter, IBN QUDAMAH].)

<sup>8</sup> NYAZEE, *supra*, at 339.

Because nearly all partnerships are formed by a contract, the phrase "*sharikah al-'aqd*" represents the general term for partnership. That is, the phrase encompasses almost all specific forms of partnership, in Islamic Law, because almost all of the forms are established by a contract. The exceptions, *i.e.*, the only particular forms of partnership not included within the ambit of the term "*sharikah al-'aqd*," are the common right to acquire ownership (called *sharikah al-ibāḥah*), and co-ownership (called *sharikah al-milk*).

Unsurprisingly, as "*sharikah al-'aqd*" is a generic term, all Four Schools agree on what it means. In particular:

- The *Hanafi* School says "*sharikah al-'aqd*" is, "an agreement between two or more persons for common participation in capital and profits."<sup>9</sup>
- The *Māliki* School defines "*sharikah al-'aqd*" as "a permission from each of the participants to the others for transactions in his wealth and on their own behalf, while retaining the right to transact personally (in such wealth)."<sup>10</sup>
- The *Shāfi'i* School explains "*sharikah al-'aqd*" that "in its literal meaning is mixing and technically it is an established undivided right in a single thing or it is a contract implying this."<sup>11</sup>
- The *Hanbali* School teaches "*sharikah al-'aqd*" is "participation of two or more persons in transactions."<sup>12</sup>

Under all Four Schools, the partners in any specific type of *sharikah al-'aqd* can — and, for practical reasons, do — hire employees as non-partners to work on the affairs of the partnership. The employment relationships created by the partners is readily apparent from observing the operations of many businesses in the Islamic World.

Critically, however, agreement ends at this level of generality. That is because there are two different broad categories under *sharikah al-'aqd*. The first category, which is the older one historically, consists of five specific types of partnership:

- (1) *sharikah al-'inān* (limited liability company),
- (2) *sharikah al-mufāwadah* (unlimited mercantile partnership),
- (3) *sharikah al-'abdān* (skill-based partnership),
- (4) *sharikah al-wujūh* (credit cooperative), and
- (5) *sharikah al-mudārabah* (sleeping partnership).

All five types, and the perspectives of the Four Schools on them, are discussed below. The second category, which is the modern one, and on which there is

considerable variation from one Muslim country to another, is comprised of a further four different types. They are:

- (1) *sharikah musāmahah* (stock market partnership),
- (2) *sharikah al-taḍamun* (trading partnership),
- (3) *sharikah al-tawsi'ah* (two-tiered partnership), and
- (4) *sharikah al-mohass'ah* (informal partnership).

## [B] Common Rights of Acquisition (*Sharikah al-Ibāḥah*)

There are two categories of partnership in which the association among individuals is not based on a written contract. These associations are not within the ambit of *sharikah al-'aqd*. The first category of non-contract based partnerships is common rights of association, known in Arabic as "*sharikah al-ibāḥah*." As suggested, the English meaning of "*sharikah al-ibāḥah*" is a common right to acquire ownership.

The *Mejelle*, the Civil Code of the Ottoman Caliphate from 1877 to 1926, which codifies part of the *Hanafi fiqh*, defines "*sharikah al-ibāḥah*" as:

the existence of a mutual possession by the public, of a share in the right to acquire possession, by taking things which are free to the public, that is to say, things, like water, which are not the property of the public, originally.<sup>13</sup>

In other words, a *sharikah al-ibāḥah* is a common right of people to own, through gathering and acquisition, a thing that satisfies two criteria.

First, the thing is *mubāh*, meaning it is both free and legal. That is, it is permissible to acquire and own that thing, because that thing is free, and because acquisition and ownership of that thing is not forbidden by an Islamic precept. Second, the thing is not originally owned by anyone. Rather, the thing has been in the public domain, a part of the commons.<sup>14</sup> Accordingly, anything not owned by individuals could be shared among people. The second criterion follows logically from the first one. If the thing were owned by someone, then other people could not acquire and own it freely (unless it were gifted to them), or lawfully (as theft is illegal). Quintessential examples of things that satisfy both criteria are air, firewood, and water. They can be freely and legally shared among people.

The mutual acquisition and ownership of such things brings people into a non-contract based nexus. That nexus is precisely *sharikah al-ibāḥah*, and it is created automatically, without any legal formalities. In fact, the partnership over air, firewood, and water always exists, among all people, Muslim and non-Muslim, and across all boundaries of time and space. This remarkable cross-cultural,

## [B] Common Rights of Acquisition (*Sharikah al-Ibāhah*)

There are two categories of partnership in which the association among individuals is not based on a written contract. These associations are not within the ambit of *sharikah al-'aqd*. The first category of non-contract based partnerships is common rights of association, known in Arabic as "*sharikah al-ibāhah*." As suggested, the English meaning of "*sharikah al-ibāhah*" is a common right to acquire ownership.

The *Mejelle*, the Civil Code of the Ottoman Caliphate from 1877 to 1926, which codifies part of the *Hanafi fiqh*, defines "*sharikah al-ibāhah*" as:

the existence of a mutual possession by the public, of a share in the right to acquire possession, by taking things which are free to the public, that is to say, things, like water, which are not the property of the public, originally.<sup>13</sup>

In other words, a *sharikah al-ibāhah* is a common right of people to own, through gathering and acquisition, a thing that satisfies two criteria.

First, the thing is *mubāh*, meaning it is both free and legal. That is, it is permissible to acquire and own that thing, because that thing is free, and because acquisition and ownership of that thing is not forbidden by an Islamic precept. Second, the thing is not originally owned by anyone. Rather, the thing has been in the public domain, a part of the commons.<sup>14</sup> Accordingly, anything not owned by individuals could be shared among people. The second criterion follows logically from the first one. If the thing were owned by someone, then other people could not acquire and own it freely (unless it were gifted to them), or lawfully (as theft is illegal). Quintessential examples of things that satisfy both criteria are air, firewood, and water. They can be freely and legally shared among people.

The mutual acquisition and ownership of such things brings people into a non-contract based nexus. That nexus is precisely *sharikah al-ibāhah*, and it is created automatically, without any legal formalities. In fact, the partnership over air, firewood, and water always exists, among all people, Muslim and non-Muslim, and across all boundaries of time and space. This remarkable cross-cultural,

<sup>13</sup> THE MEJELLE — BEING AN ENGLISH TRANSLATION OF MAJALLAH EL-AHKAM-I-ADLIYA AND A COMPLETE CODE OF ISLAMIC CIVIL LAW § 1045 at 166 (Petaling Jaya, Malaysia: The Other Press, January 2001) (C.R. Tyser, B.A.L., D.G. Demetriades & Ismail Haqqi Effendi, trans.). [Hereinafter, MEJELLE.]

<sup>14</sup> IRHAN AHMAN KHAN NYAZEE, ISLAMIC LAW OF BUSINESS ORGANIZATIONS — PARTNERSHIPS 16 (Selangor, Malaysia: The Other Press, Malaysian ed., 2002) (quoting MAJALLAH, *supra*, at § 1045).

inter-faith, inter-generational partnership emanates from a *ḥadīth* of the Prophet Muhammad recorded by Al Shawkānī, which states:

People are partners in three things: water, grass and fire.<sup>15</sup>

From an ethical and religious perspective, this form of partnership underscores the fact all people are common stewards of many things, especially things found in the environment. Further, there seems an obvious similarity to the Catholic Christian social justice teaching concerning protecting and advancing the common good in respect of the environment.

Practically speaking, the *sharikah al-ibāḥah* is a method of teaching people that they have a legal obligation to safeguard the things their partnership owns. Conversely, an individual violates this bond by abusing the common thing, for instance, by using water so excessively that the individual depletes the supply for others, or by emitting pollution into the air or water. That individual is liable for this abuse, typically through a *ta'zīr* (discretionary) punishment determined by the *qāḍī* (Islamic judge). Beyond threat or fear of punishment, however, there is a more profound basis for the obligation to protect the things in an *ibāḥah*. Those things — the assets of the partnership — are gifts to the partners from God (Allāh).

### [C] Co-ownership (*Sharikah al-Milk*)

The Arabic meaning of "*sharikah al-milk*" is co-ownership. It is the second category of a partnership that is not within the ambit of *sharikah al-aqd*. The Ottoman *Mejelle* defines "*sharikah al-milk*" as:

a thing's being common to more persons than one, that is to say, a thing's being special to them, by a cause which is one of the causes of acquiring ownership, like purchase, and the receipt of a gift, and the acceptance of a bequest and inheritance, or by the mixing of properties (*māḥ*), that is to say, by causing properties to mix with one another in a way that they cannot be separated, or by the mixing of properties with one another in that way.<sup>16</sup>

The *Mejelle* definition is rather contorted. One Islamic legal scholar, Ibn 'Ābidīn, a *Hanafi* scholar, explains:<sup>17</sup>

*Sharikat al-milk* is ownership by a number of persons of an '*ayn*' (ascertained property) or *dayn* (debt not ascertained by weight or measure or other means) arising through inheritance or through exchange (*bay'*) or through other means.<sup>18</sup>

What does this clarification mean?

<sup>15</sup> AL-SHAWKĀNĪ, *NAYL AL-AWTĀK*, vol. V at 303, quoted in MUHAMMAD HASSIM KAMALI, *THE RIGHT TO LIFE, SECURITY, PRIVACY AND OWNERSHIP IN ISLAM* 253 (Cambridge, England: Islamic Texts Society, 2008).

<sup>16</sup> *MEJELLE*, *supra*, § 1060 at 167.

<sup>17</sup> The full name of Ibn 'Ābidīn is "Zīnē El-Ābidīn Bin 'Ābidīn Ibn Ibrāhīm Ibn Najīm." He was a *Hanafi* School scholar from Egypt, and died in 1563 (970 A.H.). He wrote *Al-Tuhfat Al-Mardiḥiyya Fi Al-Awḍā' Al-Masriyya* (Masterpiece of the Egyptian Territory).

<sup>18</sup> NVAJEE, *supra*, at 35 (quoting Ibn 'Ābidīn, *Hāshiyah [Margin Notes]*, vol. 4 at 301).

First, co-ownership is the essence of a *sharikah al-milk*. Indeed, Islamic legal scholars tend to refer to *sharikah al-milk* as co-ownership rather than partnership. Second, there are actually two species of *sharikah al-milk*. First, there is a *sharikah al-milk* the assets of which are an '*ayn*', which means tangible (but not intellectual) property that is identified. Second, there is a *sharikah al-milk* in which the assets are a *dayn*, that is, the debt of another or other non-partners. In this second type, the partnership is a creditor.

There is an important distinction (explained more fully below) approval, in the sense of acceptance that a type of partnership exists, and approval, in the sense of recognizing the moral worthiness of a type of partnership. This distinction is relevant to *sharikah al-milk*. That is because not all *fukahā'* agree on all aspects of this type of partnership. To be sure, all *fukahā'* agree on both the existence and moral worthiness of a *sharikah al-milk*, the assets of which are an '*ayn*' (tangible property). They also all agree a *sharikah al-milk* based on *dayn* (debt) exists. However, there is disagreement among the *fukahā'* over the moral acceptability of a *sharikah al-milk* constructed from a *dayn*. The majority of the *fukahā'* in the *Hanafi* School approves of the permissibility of this type. But, a significant minority in this School does not recognize it, viewing as morally unacceptable a partnership based on debt.<sup>19</sup>

In both species of *sharikah al-milk*, the asset may be acquired by inheritance by the partners, purchase by the partners, or some other lawful means such as commingling. The *Mejelle* helpfully gives the following examples:

If two persons have purchased a property, or someone has made a gift or bequest to them and they have accepted it, or a property is inherited by two persons, that property becomes common between them. And every one of those, who are share-holders in that property, participates with the others in it.

Likewise, if two persons mix together their stores of corn, or, in some way, like there being holes in the sacks, the stores of corn of two persons mix together, the mixed or compounded store of corn becomes common property between the two of them.<sup>20</sup>

The first example indicates that a *sharikah al-milk* can be formed through an action that operates on two or more people, even an action they may not have foreseen, such as the death of a person from whom they inherit property.

The second example suggests a *sharikah al-milk* may be formed without the intent of the partners, but in fact by an accident, such as hole in a sack containing a fungible commodity. As to the second example, whether the assets of a *sharikah al-milk* are an '*ayn*' or *dayn*, the key point is the property or debt, respectively, are mixed. That is, to create a *sharikah al-milk*, all partners must mix their '*ayn*' or *dayn* in a way to render them indistinguishable.

<sup>19</sup> The perspectives of other *Sunni* Schools on this issue are not readily apparent from English language sources.

<sup>20</sup> *MEJELLE*, *supra*, § 1060 at 167.

Following from the two illustrations, a *sharikah al-milk* partnership can be formed through manifestation of intent to do so, such as by joint purchase of tangible property. However, as distinct from a *sharikah al-ibāhah*, a *sharikah al-milk* is not automatically in existence at all times, across all peoples and boundaries. Rather, some action must occur for a *sharikah al-milk* to be established. That said, a *sharikah al-milk* may consist of Muslim and non-Muslim partners.

What are the basic legal rights and obligations of partnerships in a *sharikah al-milk*? First, little if any distinction is made between the share of each partner in a *sharikah al-milk* and the share of each of them in assets of the partnership. In effect, co-ownership in the partnership corresponds with, and is concomitant with, co-ownership in the assets. Thus, for instance, in a two-person *sharikah al-milk* comprised of commingled assets, 60 percent from Ayesha and 40 percent from Hashim, then their respective shares in the partnership are 60 and 40 percent.

Second, neither co-owner can sale her share — in the partnership, or equivalently, in the assets — without the prior permission of the other partner. The reason for this requirement is no new or amended partnership should be created with strangers without this prior permission. For instance, if Hashim sought to sell 20 percent of his stake to Abdullah, then the latter would become a partner in the *sharikah al-milk*. It would be unfair to Ayesha to force a new partner into the business venture without her prior approval.

Third, each partner in a *sharikah al-milk* is like a stranger with respect to the share (of the *'ayn* or *dayn*) of the other partner. Therefore, one co-owner cannot alienate (i.e., sell, buy, use, transfer, or otherwise dispose of) the share of the other partner without prior consent. The partners are co-owners in the assets of the partnership. Hence, each needs the permission of the other to act upon the share of the other.

Fourth, there is a distinction in the distribution of revenues and liability. All partners in a *sharikah al-milk*, the assets of which are *'ayn*, share jointly any revenue generated by that property. Yet, the right to recover debt in a *sharikah al-milk* based on *dayn* belongs to each co-owner jointly and severally. Thus, for instance, suppose revenues in a 60-40 percent partnership of Ayesha and Hashim, derived from *'ayn*, are U.S. \$100,000. They are co-owners of this revenue, and would divide it in accordance with their shares.

Conversely, suppose their partnership is a *sharikah al-milk* based on *dayn*, and the debt is U.S. \$100,000. Each is a co-owner, i.e., a creditor, in the full amount of the debt, and has the right to demand recovery of the full amount of that debt. It is critical here to differentiate the legal right to call, or collect, the debt, from the distribution of proceeds from the debt once it is repaid. Either Ayesha or Hashim has the full legal power to collect the \$100,000 debt owed to the partnership. That collection is on behalf of the partnership. However, once the debt is paid, how would the money be distributed between Ayesha and Hashim? For example, if the debtor repaid the loan in response to a demand from Ayesha, then is Ayesha entitled automatically to keep the full \$100,000? The answer is no, because Ayesha's call is made on behalf of herself and her partner. The proper sharing of the repaid funds would be in accordance with shares in the partnership, meaning Ayesha would keep

\$60,000 and Hashim would obtain \$40,000.

## § 24.03 FIVE TRADITIONAL TYPES OF SHARIKAH AL-'AQD

To appreciate points of consensus and divergence among the Four *Sunni* Schools, as to the types of partnership, it is essential to distinguish between agreement, on the one hand, and approval, or recognition, on the other hand. *Fukahā'* from all of the Schools agree there are five major different types of *sharikah*. They are: (1) *sharikah al-'inān*, (2) *sharikah al-mufāwadah*, (3) *sharikah al-'abdān*, (4) *sharikah al-wujūh*, and (5) *sharikah al-mudārabah*. Their agreement, in a theoretical and practical sense, means these five types exist under the *Shari'a*.

One reason for their mutual agreement, in the sense of recognizing the existence of the five types, is their twin concern that entrepreneurs have the flexibility to engage in business ventures, and their ventures ultimately provide a helpful good or service to the community. Suppose the Schools stubbornly reject the approval of each other, and insist on imposing its terms and conditions. This flexibility could be compromised, and prospective customers and clients of a would-be partnership could suffer from lost opportunities. Thus, *Imām* Mālik, founder of the *Māliki* School, author of the great treatise *Al-Muwāḍḍa* and principal *Imām* to the fifth *Abbasid* Caliph Harūn Al Rashīd (reigning from 786-809 A.D.), responded to a question from the Caliph:

O Abū Abdullah [i.e., the Caliph refers to the *Imām* in a respectful manner as "Father of Abdullah," with Abdullah being the eldest son of *Imām* Mālik], if you wish, we could write this book and hold people to use it. *Imām* Mālik said, "O Emir of All Believers, the difference in the perspectives [views] among the *ulema* [and *fukahā'*] is a mercy for the nation [the Caliphate] from Allāh — the Almighty — everyone follows the right he or she has and they all follow the right path to Allāh."<sup>21</sup>

In other words, *Imām* Mālik resists the temptation of opposing one view as a tyranny on all people in the Caliphate. To the contrary, he champions a diversity of views among religious and legal scholars, going so far to say as this heterogeneity is a gift from God.

However, the agreement among the *Sunni* Schools on matters of business association, and the positive spirit of respect for diverse views, does not mean they all agree these five types ought to be recognized as compatible with Islamic ethical

<sup>21</sup> Quoted from an article written by Dr. Abdullah Mahfoudh Beyh (former Minister of Justice of Mauritania), posted on [www.islamtoday.com](http://www.islamtoday.com) (2 August 2004, 1425 166 A.H.) (translated from Arabic by Mr. Ahmed Alyousef). The exact date of this conversation is not available. However, it occurred during the time of the *Abbasid* Caliphate. The Caliph who talked to *Imām* Mālik was Harūn Al Rashīd, who was the fifth and most famous *Abbasid* Caliph. Harūn Al-Rashīd ruled from 786-809 A.D. He was known for his interest in scientific, cultural, and religious matters. Thanks to the collection and translation of manuscripts from foreign lands by the Caliph Harūn (and by his predecessor, the second *Abbasid* Caliph, Al Mansūr, who reigned from 754-775), and owing to the considerable support of the son of Harūn, the Caliph Al-Ma'mun (who reigned from 813-833), the famous library of Baghdad — the "*Bayt Al-Hikmah*" or "House of Wisdom" — was established.

teachings. In particular, *Hanafi* School *fukahā'* approve all five types. In contrast, *Shāfi'i* School jurists approve of only one (or at most two) of these five types, denying recognition to the other four (or three) types. *Māliki* School *fukahā'* approve two (or as many as three) types, whereas *Hanbali* School jurists approve four of the five types. In sum, the distinction between approval, in the sense of acceptance of the existence of a type of partnership, and approval, in the sense of recognizing the moral worthiness of a type of partnership, must be kept in mind.

To make matters a bit more complicated, the aforementioned five types of partnership are not the only ones in existence under the *Shari'a*. Modern Islamic jurists from some of the Schools have approved — that is, established and elaborated on — still more types of *sharikah*. Yet jurists from certain other Schools do not accept, and even do not approve, of these newer types.

### [A] *Sharikah al-'Inān* (Limited Liability Company)

*Sharikah al-'inān* is akin to a limited liability company (LLC) in American business association law.<sup>22</sup> Generally defined, "*sharikah al-'inān*" is "a basic contract of partnership based on agency in which participation may either be on the basis of wealth or labour or credit-worthiness, and in which equality of contribution or legal capacity is not necessary."<sup>23</sup> Note this definition references a contract, or partnership agreement, by which the *sharikah al-'inān* is established, and according to which it operates. Note, too, that literally, the Arabic term "*'inān*" means reins, as in the reins (which are part of the bridle, or head gear) of a horse. The connotation of "*'inān*" is that just as there are reins to govern the direction of the horse, there are rules to help manage the partnership and control the rights and obligations of the partners.

Thus, for example, a *sharikah al-'inān* could consist of five partners, each with a 20 percent share, or each with entirely different shareholdings — even 70 percent by the first partner, 9 percent by the second partner, 8 percent by the third partner, 7 percent by the fourth partner, and 6 percent by the fifth partner. In an American-style LLC, the liability of each shareholder is limited in some way (e.g., by the amount invested by the shareholder), management is by designated members of the LLC, and there are restrictions on transferring shares in the LLC.<sup>24</sup> A *sharikah al-'inān* similarly replicates this pattern. Indeed, the only case in an *'inān* of unlimited personal liability is if one partner abuses the authority

<sup>22</sup> The difference between an LLC and Limited Liability Partnership (LLP) is worth reviewing. An LLC and LLP are quite similar in effect: each is an unincorporated business organization that affords limited liability to its owners. In that sense, they are redundant. But, an LLP is a true partnership in every respect (like a general partnership), except for limited liability, and the governing statute is the *Revised Uniform Partnership Act (RUPA)*. The LLP structure is used most often by professional firms of accountants or lawyers, which in the past were organized as general partnerships. An LLC is governed under a separate statute, which varies somewhat from one American state to another. Typically, an LLC is a hybrid that has both corporate and partnership characteristics. The LLC structure is used by businesses that otherwise would be incorporated, but which seek flow-through (i.e., pass-through) income tax treatment in which the business entity is not a separate taxpayer.

<sup>23</sup> NYAZER, *supra*, at 339.

<sup>24</sup> See BRYAN A. GARNER, ED., *BLACK'S LAW DICTIONARY* 319 (St. Paul, Minnesota: West, 9th ed. 2009) (definition of "limited-liability company"). [Hereinafter, *BLACK'S LAW DICTIONARY*.]

granted to her under the rules of the partnership. But, the unlimited liability is for the abusive partner only. The liability of the other partners remains restricted to their shares, and they are not liable for debts arising from unlawful transactions in which the abusive partner engaged.

The Four *Sunni* Schools agree *sharikah al-'inān* is one of the major types of *sharikah*. Further, these Schools approve of an *'inān*, though there are differences among them in respect of the conditions they require for this approval. That is, the Schools exhibit differences on the criteria for establishing and operating a valid *'inān*.

As for termination, the *Hanafi* School explains that a *sharikah al-'inān* could be terminated in four different ways. The other Schools generally agree on these termination events. First, the partners could agree to its termination, and their consent will end the *'inān*. Second, an intentional violation by a partner of a rule in the partnership agreement that created an *'inān* will trigger its termination. Third, if one partner moves to a different place where it is impossible for other partners to contact her, thereby precluding the normal operation of the *'inān*, termination will occur. Finally, and perhaps most obviously an *'inān* could terminate simply because it loses money. Specifically, if the loss wipes out the initial capital contributions of the partners, then the partnership will cease.

#### • *Hanafi* School:

The *Hanafi* School does not give a specific definition of *sharikah al-'inān*. Yet, certain individual *Hanafi* jurists define "*sharikah al-'inān*" as the:

participation of two or more persons, with the permissibility of stipulating equality, through their work on their wealth, or through their work on the wealth, or through their work on the wealth of another, or through their credit-worthiness without wealth, so that the profit can be shared by them as agreed.<sup>25</sup>

Three features of an *'inān* are implied by this *Hanafi* definition.

First, each partner is considered to be an agent of all other partners. For example, in a *sharikah al-'inān* of 5 partners, each partner is an agent to the 4 other partners, meaning there are 4 bilateral reciprocal principal-agent relationships. Second, no partner is a surety (i.e., guarantor) for any other partner. Third, properties — specifically, tangible and (presumably) intangible assets of the partnership — are shared and managed according to rules established by the partners for their partnership.

The *Hanafi* School requires satisfaction of nine conditions to set up and operate as a *sharikah al-'inān*. All nine conditions must be specified in a written contract by which the partnership is created.

#### (1) Legal Capacity (Capability) —

<sup>25</sup> NYAZER, *supra*, at 102 (Selangor, Malaysia: The Other Press, Malaysian ed., 2002), quoting this definition. The author of *Al-'Inān* [The Cave] says participation through work on the wealth of another is the partnership of artisans, while not in the wealth of another means *sharikat al-'uṣūl*. *AL-'INĀN* ON THE MARGIN OF *IBN AL-HUMAM*, FATH AL-QADIR, vol. 7 at 5.

First, each partner must have legal capacity, or "*ahliyah*." For the *Hanafi* School, *ahliyah* means a partner is *hurr* (free of slavery), *bāligh* (of adult-legal age), and *rasheed* (mature). This condition exists because each partner requires the ability to enter into contracts on behalf of the partnership, and as agent for the other partners, commensurate with her capital contributions.

"*Hurr*" means no partner is a slave. Could a partner be a slave owner (setting aside the likelihood that slavery is illegal under other applicable law) and be a partner in a *sharikah al-'inān*? The answer is yes. "*Bāligh*" means that no partner is a child. There is no specific age threshold, but is generally taken to mean each partner, whether male or female, has reached puberty. "*Rasheed*" is a broader concept than mental concept, that is, it demands more than that each partner not be mentally incompetent (e.g., insane or retarded). Additionally, "*rasheed*" connotes that each partner is a normal functioning person who can make rational decisions.

(2) Right to Do Business —

Second, each partner must have the right to do business in proportion with her share in the partnership, and as an agent for the other partners' share. For example, if a partner holds a 25 percent stake in a *sharikah al-'inān*, then that partner must have the right to commit up to 25 percent of the assets of the partnership in one or more transactions. In so doing, that partner acts as an agent of all the other partners in the '*inān*. That is, each partner acts as a principal with respect to her share, and as an agent for the shares of other partners.

(3) Initial Capital Contributions —

Third, each partner in a *sharikah al-'inān* must present her capital contribution at the time the contract to create the partnership is signed. In effect, the total capital contributions of the partners must be known at the moment of inception. That is because the purpose of an '*inān* is to achieve a profit. It begins to generate profits on the basis of initial capital contributions. Conversely, the absence of funding at the inception of the partnership is incongruous with this purpose. In return for a capital contribution, of course, a partner receives a share interest in the partnership corresponding to that contribution. For instance, if a partner in an '*inān* contributes U.S. \$250,000 to an overall capital pool of \$1 million, then that partner obtains a 25 percent share in the partnership.

Accordingly, suppose an agreement among five partners permits one of them to contribute her capital of U.S. \$1 million in the future, or permits one of them to contribute capital derived from anticipated future earnings of the partnership. That agreement is void, and the *sharikah al-'inān* never takes legal effect. All partners must have the requisite funding at the time of the contract — there is no such thing as a "no money down" or "deferred capital contribution" '*inān*. This result holds true even if the agreement identifies a date certain in the future when the \$1 million is due, and even if that date is just a day after the agreement is consummated.

Does this result mean that a partner is permitted to invest only her own funds? In other words, could a partner invest funds borrowed from a family member, friend, or even a bank? The answer is yes. The condition on capital contributions does not restrict partners to any particular source of funds. That said, the *fukahā'* of the Four *Sunni* Schools agree on an over-arching principle: that which is built

on something void is itself void. Consequently, if a partner contributes money to a *sharikah al-'inān* that is derived from forbidden activities, such as trafficking in alcohol, narcotics, pork products, or pornography, then the partnership would be void. This fact has an important implication for a non-Muslim partner in an '*inān*. There is no restriction against the participation of non-Muslims in this form of partnership. However, a non-Muslim partner should be scrupulous to ensure the source of her capital contribution in an '*inān* is an activity consistent with the *Shari'a*.

Moreover, the general freedom to make capital contributions from any legitimate source of funds extends to assets under joint ownership. If, for example, two partners have a joint interest in a crop of wheat, which they have stored in a grain elevator, then they may contribute that crop, even though it is under their joint ownership. To be sure, there is a risk that one partner might claim a share of profits in the partnership in excess of her share of ownership in the jointly owned wheat she contributed to the partnership. But, this risk — in effect, the risk of greed by one partner — exists in the normal case of capital contributions of individually owned property.

Finally, the power and control of each partner in a *sharikah al-'inān* is directly based on her wealth invested in the partnership, i.e., her capital contribution. As a result, an '*inān* might be comprised of partners of vastly different net worth. But, their net worth is not relevant to their power and control in the '*inān*. To take an extreme example, suppose an '*inān* consists of two partners, Maryam, whose net worth is U.S. \$100,000, and King Abdullah, whose net worth is U.S. \$1 billion. Maryam invests \$30,000 in the partnership, and the King invests \$10,000. Even though the King is vastly more wealthy than Maryam, she holds a 75 percent stake, and concomitant 75 percent power and control over, the partnership, simply and solely because of her investment contribution.

(4) Same Asset Category for Capital Contributions —

Fourth, all partners must contribute assets to the capital of the partnership. But, the nature (that is, the type, or category) of those assets must be the same. For example, if one partner contributes cash, a second partner puts in non-cash financial instruments (e.g., stocks or bonds), and a third partner provides real property, then the *sharikah al-'inān* is void. The *Hanafi* School requires all three partners to agree on a single asset class for their capital contributions. If the partners insist on making capital contributions through distinctive types of assets, then they must find a different form of partnership structure. As a corollary condition, the School does not allow one partner to offer an asset, but another to contribute her own labor or services. Work is not an acceptable form of capital contribution for an '*inān*. (Rather, the relevant partnership form would be *sharikah al-muqārabah*.)

There are two obvious questions created by this condition. First, what kinds of assets are the same? Is a stock in an industrial manufacturing company the same as a stock in an intellectual property or high-technology firm? Is beach-front real estate property the same as downtown office space? There is no easy answer to this question. Ideally, if in doubt, the prospective partners would consult a *fukahā'*.

Second, what purpose does this condition serve? The answer, which comes from the *Hanbali* School, is that different types of capital contributions create *gharar*, or uncertainty. The uncertainty lies in the valuation of the capital contributions, both as an initial matter and into the future. For example, suppose one partner contributes a house, while another contributes stocks. Suppose also that soon after the partnership commences operation, but before its first transaction, the value of the house tumbles. The second partner might contend she has put in a greater capital contribution than the first. Conversely, if the house price skyrockets, the first partner may make that claim. Disputes might ensue as to entitlement to profits. Moreover, changes in the value of one asset category relative to another could lead to uncertainty as to liability for losses.

One way to handle changes in relative valuation would be to permit different asset categories as capital contributions, but value each contribution under generally accepted accounting principles as of the date the partnership agreement is signed, and disregard any subsequent valuation changes. As a practical matter, however, the partners may well examine the current (or market value) of their contributed capital, and try to mark to market the assets. The result could be conflict among the partners. Not surprisingly, then, the *Hanbali* School insists that the only acceptable asset category in which to make a capital contribution is cash (or, in older times, specie, such as gold or silver). Indeed, the funds should be in the same currency (e.g., U.S. dollars), and not an admixture of currencies.

The condition that assets contributed to the capital of a *sharikah al-'inān* be of the same category, if and when adhered to strictly, is rigid. Typically, partners do not come to the proverbial negotiating table with an identical kind of assets. To relax the condition, *Hanafi* School jurists — most notably, Muhammad Al Shaybānī, devised a *hīlah* (legal device, or solution). The *hīlah* essentially is to promote co-ownership of assets. Shaybānī writes of the case of real property with different valuations:

I said, "What is the solution if in the case of two persons one of whom has property worth 5000 *dirhams*, while the other has property worth 1000 *dirhams*, and they wish to form a partnership with this property." He Said: "A partnership with goods is not permitted." I said: "What then is the *hīlah* for them so that they become partners with the property that they have." He said: "The owner of property worth 5000 *dirhams* [sic] is to buy five-sixths of the property of the other with one-sixths of his own property. When they do this, they are co-owners in the same ratio as the property they own. The person who had property worth 1000 *dirhams* now owns a sixth of the entire property, while the other owns five-sixths."<sup>26</sup>

Another example, from Al Kāsānī, concerns the combination of currency (*dirhams*) and property:

The *hīlah* for permitting this is that the owner of the property should sell half his property for half the *dirhams* of his companion. They should

exchange them and mix them both so that the *dirhams* and the property are jointly owned by them. Thereafter, they should conclude the partnership contract, which is then permissible.<sup>27</sup>

The essential teaching from these examples is as follows:

Their [the jurists] main goal is to create an actual co-ownership. Once co-ownership is actually and physically established, the rules of liability and those of sharing of profits can be applied in a very clean manner. The basic principles . . . are two. The first requires the creation of joint ownership or co-ownership. Once this is done, the principle of joint liability follows from it. Not only is joint liability created, but the requirements of the principle, *al-kharāj bi al-damān* ["*kharāj*"] is a land tax, or revenue derived from land, and "*damān*" means liability or compensation, but the entire phrase refers to a principle based on a tradition, and is used in several fields of the *Shari'a* are satisfied and the partner as agent is enabled to share profits in whatever ratio that is agreed upon. In addition to this, all disputes that may arise as a result of the fluctuation of prices or value of the property prior to transactions in the joint capital can be resolved on the basis of the co-ownership established, without causing any ill-feeling or injustice. This appears important as partnership is a terminable contract and the partner seeing the emergence of profit in his capital may be tempted to terminate the contract and rescind it. This option would be lost to him once the properties are inseparably mixed. Further, the act of actual physical mixing helps avoid many likely disputes when the partnership becomes vitiated prior to transactions.<sup>28</sup>

It is worth remarking that the *hīlah* of co-ownership not only facilitates formation of a *sharikah al-'inān* against an otherwise tight condition on asset categories, but also performs an ethical function. As the foregoing passages intimate, the partners become committed to one another more deeply, and are more likely to engage with each through their partnership as a community, by virtue of their shared ownership over assets they have contributed as capital.

#### (5) Known Profit Division —

Fifth, the profits of a *sharikah al-'inān* must be known to each partner. That is, the contract by which an *'inān* is established must lay out a rule about the division of profits earned by the partnership. If the division of profits is not known or ascertainable from the contract, then the *'inān* is void, i.e., the partnership never entered into legal force.

#### (6) Division of Profits on Percentage Terms —

Sixth, profits are divided only by percentage, not by absolute value thresholds. For instance, a specification in a partnership agreement that a partner holding a 25 percent interest is to receive 25 percent of any profits is valid. But, a specification that this partner is to garner U.S. \$250,000 is invalid. Indeed, if any partner were

<sup>26</sup> NYAZEE, *supra*, at 131 (quoting Al-Shaybānī, *Al-Makḥarāj Fi Al-Hiyol*, at 59. (The third sentence of the original text should be translated as 5000 *dirhams*, not 5000 *dirhams*.)

<sup>27</sup> NYAZEE, *supra*, at 131 (Selangor, Malaysia: The Other Press, Malaysian ed., 2002) (quoting Al-Kāsānī, *Baḍā'ī Al-Sanā'ī* [Beauty of the Work], vol. 7 at 3538).

<sup>28</sup> NYAZEE, *supra*, at 131-132.

to ask for a specific sum of money from the profits, the partnership agreement would be void. Therefore, a *sharikah al-'inān* agreement should stipulate not only how to distribute profits among the partners in the *sharikah*, but also be defined in percentage terms, not as lump sum amounts.

Two practical questions arise. First, can partners in a *sharikah al-'inān* agree to distribute profits in a way that differs from their percentage share interests in the partnership? "Yes" is the answer, and for an obvious reason. The partners might decide at the outset that one (or more) of them will perform more work than the others. That one partner might contribute just 10 percent to the start-up capital of the partnership, but engage in over half of the work. Accordingly, the partners might agree the enterprising partner should get 55 percent of any profits.

Second, is it permissible for a partnership contract to allocate profits on the basis of a return on invested capital? The answer is no. The agreement should not allocate profits by rate of return on capital contributions by the partners. Thus, an agreement that says a partner must obtain a 10 percent rate of return on the money she contributed to the partnership would be invalid, and render the *sharikah al-'inān* void. The reason for this result lies in the purpose of an *'inān*, which is to make profits based on the work of the partners. Dividing profits according to initial capital contributions would reward the partners for their starting positions, when the partnership was created, not for their work subsequent to its creation.

#### (7) Division of Profits at the Outset —

Seventh, the determination of profits cannot be postponed until after profits are obtained. Rather, the scheme for division must be set at the time of signing the contract to create the *sharikah al-'inān*. Leaving the matter vague would vitiate the partnership.

The rationale for this condition is avoidance of future conflict among the partners. In a year in which the partnership is highly successful, partners still will be held to their initial agreement on profit distribution. That contract — in theory, at least — forecloses a claim at the end of the year by a partner that she is entitled to a larger chunk of the profits.

#### (8) Liability for Losses —

Eighth, partners are liable for losses incurred by the *sharikah al-'inān* in proportion to their shares in the partnership. Thus, in an *'inān* that incurs a U.S. \$1 million loss, a partner holding a 25 percent share would be allocated U.S. \$250,000 of that loss. Notably, there is no need to stipulate the rule that the bearing of loss follows the *pro rata* share in the capital contribution. That rule is an automatic, or default, one, following from the logic of limited liability, with the limit set by the initial capital contribution.

However, it is possible to deviate from the default rule, but only via a provision set out in the partnership agreement. For instance, a partner holding a 25 percent share could agree in the contract to a disproportionate liability for loss — such as 15 or 35 percent. That stipulation must be in the contract, because it is a deviation from the normal limited liability regime in which losses follow capital contributions.

#### (9) Loss and Work Input —

The ninth condition is closely related to the eighth condition. The amount, nature, or terms under which a partner performed work for a *sharikah al-'inān* are irrelevant in distributing any losses incurred by the partnership. Losses are divided among the partners according to their capital, regardless of how, when, how much, how well, to what end they worked.

This condition has two important practical implications for assumption of liability. First, partners in a *sharikah al-'inān* may not agree *a priori* that one (or a subset) of them will assume the complete liability of the entire partnership. Second, none of them may agree *a priori* to assume the liability of any one partner. These two implications effectively prevent what in modern parlance is known as "free riding." Going into an *'inān*, no partner can take a lachadaisical approach to liability sharing, because each technically is "on the hook."

It should not go unremarked that the *hadith* on which the seventh condition is based may not be authentic. In the chain of transmission from the Prophet, i.e., in the *isnād*, there are some unknown persons, that is, persons the reliability of whom is unclear. Consequently, this *hadith* does not appear in the prominent compilations by *Imāms* Bukhari or Muslim. Occasionally, scholars rely on a *hadith* to buttress their own views on a particular matter. That may be the case here with *Hanafi* School jurists, and even some *Hanafi* sources indicate this *hadith* is weak. Notably, no other School mentions this *hadith* in respect of conditions on *sharikah al-'inān*.

However, *post hoc* (i.e., after a partnership has incurred a loss), the partners may agree to assume liability. One (or a subset) of them could agree voluntarily to take on all the losses of the partnership, or the losses of any one partner. This possibility of a consensual change to the basic condition obviously helps prevent a harsh result, for example, where one or more partners could not bear the loss for which she is technically liable without becoming destitute.

#### • *Māliki* School:

The *Māliki* School defines a "*sharikah al-'inān*" in nearly metaphorical terms:

*Sharikah al-'inān* . . . means *sharikah al-'inān* is valid and is derived from the reins of an animal, that is, each one of the partners has stipulated for the other that he should act on his own in any matter pertaining to the *sharikah*, except with the permission of his partner and with his knowledge. It is as if he has taken hold of his rein, that is, by his fore-lock, so that he does not do anything without his permission."<sup>29</sup>

This definition does not come directly from *Imām* Mālik, the founder of the *Māliki* School, and indeed *Māliki* jurists in the Hejaz during his time did not lay out a precise definition. Rather, it is proposed by a subsequent *Māliki* jurist, Al Khirashī.<sup>30</sup> That fact, however, does not mean the *Māliki* School accepts the *sharikah al-'inān* (i.e., finds it morally acceptable). Rather, like the other Schools, the *Māliki* School simply agrees this type of partnership does exist.

<sup>29</sup> NVAZEE, *supra*, at 182 (quoting AL-KHIRASHI, *SHARAH AL-MUKHTASAR*, vol. 6 at 49). See also MUHAMMAD 'ULAYSH, *Taqrib 'Ala* AL-SHAH AL-KASHI, on the margin of AL-DARUQ, *HABIBAH*, vol. 3 at 359.

<sup>30</sup> The full name of *Imām* Al Khirashī is "Mohammed Ibn Ibrahim Ibn Othman Ibn Sa'id Ibn Al-Shaimi Al Khirashī." He was a *Māliki* School scholar from Egypt, and died in 1443 (847 A.H.).

From the definition of by Al Khirashī, six requirements must be satisfied in a partnership agreement to create a valid *sharikah al-'inān*. The *Mālikī* School embraces these criteria.<sup>31</sup>

(1) Legal Capacity (Capability) —

The *ahliyah* condition for the *Mālikī* School is the same as that for the *Hanafi* School.

(2) Evidence —

Second, an agreement to establish and operate a *sharikah al-'inān* must be confirmed by a written contract, or an oral agreement that is witnessed by two persons. The fact the *Mālikī* School adopts this requirement seems odd, in that an *'inān* is a species of *sharikah al-'aqd*. In other words, there is redundancy in listing evidence as a requirement. Perhaps it may be justified as providing clarity and certainty to prospective business partners, leaving them no doubt that if they expect acceptance and recognition of their *'inān* by the *Mālikī* School, then they had better be solicitous as to its form.

(3) Same Asset Category for Capital Contributions —

Third, as with the condition specified by the *Hanafi* School, all partners must contribute the same type of assets to the capital of the partnership.

(4) Agency —

Fourth, each partner must have the right to act as an agent for all other partners. This condition is the same as the agency feature implied by the definition of *sharikah al-'inān* provided by certain individual *Hanafi* jurists.

(5) Known Profit Division —

Fifth, as with the analogous condition in the *Hanafi* School, the profits of a *sharikah al-'inān* must be known to each partner.

(6) Division of Profits on Percentage Terms —

As to this condition, the *Mālikī* School departs from the *Hanafi* School. To be sure, in all Schools, profits must be divided according to percentages. For instance, in a three-partner *sharikah al-'inān*, one partner might be entitled to 20 percent of the profits, the second partner to 30 percent, and the third partner to 50 percent. Establishing profit entitlements based on absolute numbers, or rates of return, is not permissible.

The divergence among the Schools concerns whether these percentages must match the relative initial capital contributions. In the hypothesized three-person *sharikah al-'inān*, if the first partner contributed 20 percent of the capital, then there is no debate among the Schools, i.e., the first partner is entitled to a 20 percent share of the profits. But, suppose she contributes just 10 percent to the initial capital pool, then the debate is joined — would that partner be entitled to a 20 percent share of the profit, perhaps on the grounds that this partner contributes a disproportionate amount of work to the partnership? The *Hanafi* School allows

<sup>31</sup> The criteria discussed below are synthesized from a variety of books in Arabic.

profits percentage distributions that are not in proportion with capital contributions. But, the *Mālikī* School takes a different approach. The *Mālikī* School says that profit percentage distributions depend on the share of capital each partner contributes: if the partners contribute an equal amount of capital, then the profits must be divided equally between or among them.<sup>32</sup>

• The *Shāfi'i* School:

On business associations law, the *Shāfi'i* School is the most restrictive — that is, least flexible and open to innovative ways of conducting commerce — of the Four Schools. This feature is evident from the definition of *sharikah al-'inān*, articulated by *Imām Shāfi'i* himself:

It is valid, that is, *'inān*, by *ijmā'* (consensus), because it is free from all kinds of *gharar* (uncertainty). The meaning is derived from the reins of an animal due to this equality in transactions and other things, like the equality of the two reins or in each one preventing the other in whatever he likes, and this too is like pulling the reins of the animal.<sup>33</sup>

This definition reflects the *Shāfi'i* School attitude toward partnership. Uncertainty is to be avoided, hence the reason the School approves of *sharikah al-'inān* is that it creates no uncertainty. In turn, the certainty exists because — as the italicized language suggests — each partner can constrain the other. The School holds that no partner may act without the permission of the other, and overall views an *'inān* as a method to constrain commercial behavior of partners, rather than as a vehicle for them to engage in creative and profitable entrepreneurship.

The *Shāfi'i* School sets out six conditions, all of which must be specified in a partnership contract, for the creation of a valid *sharikah al-'inān*. They are as follows:

(1) Legal Capacity (Capability) —

The *ahliyah* condition specified by the *Hanafi* and *Mālikī* Schools are the same for *Shāfi'i* School.

(2) Authorization —

Second, according to most *Shāfi'i* jurists, each partner must give all other partners clear permission for the other partners to act on her behalf. That is, each partner must authorize the other to act as her agent. It is not enough for the partners to say simply they are performing the partnership. Authorization has to be precise. However, a minority of *Shāfi'i* jurists approve of a *sharikah al-'inān* based on general permission to perform the partnership.

(3) Same Asset Category for Capital Contributions —

Third, as with the condition specified by the *Hanafi* and *Mālikī* Schools (discussed above), all partners must contribute the same type of assets to the capital of the partnership.

<sup>32</sup> See NYAZEK, *supra*, at 194 (stating: "We see the same principle operating in the division of profits, and profits are always shared in proportion to the contribution capitals").

<sup>33</sup> NYAZEK, *supra*, at 203 (quoting AL RAMEL, *supra*, vol. 5 at 4) (emphasis original).

## (4) Initial Capital Contributions —

This condition is the same as that established by the *Ḥanafī* School.

## (5) Division of Profits on Percentage Terms —

Fifth, like the *Mālikī* School, and unlike the *Ḥanafī* School (discussed above), the School insists that profits be divided among the partners on a percentage basis that match relative initial capital contributions.

## (6) Liability for Loss —

This condition is the same as that established by the *Ḥanafī* School.

• *Ḥanbalī* School:

The *Ḥanbalī* explains *sharikah al-'inan* as follows:

The meaning of this partnership is that two persons should participate with their wealth and work on the condition that the generated profits will be shared by them. The meaning is derived from the example of a man driving two horses when he gives equal rein to both. It is also said to be derived, according to al-Farrā', from matching each other equally in all things<sup>34</sup>

As with the other Schools, the *Ḥanbalī* School requires seven conditions to establish a valid *sharikah al-'inan* and operate it in a lawful manner.

## (1) Legal Capacity (Capability)

The *Ḥanbalī* School adopts the same *ahliyah* condition specified by the *Ḥanafī*, *Mālikī*, and *Shāfi'ī* Schools.

## (2) Authorization —

This condition is the same the *Shāfi'ī* School lays down. Without proper authorizations for the partners, the *sharikah al-'inan* is void. But, the *Ḥanbalī* School permits authorization in the form of a general permission to a partner to enter into any type of commercial transactions, or a permission to engage in only specific types of partnership transactions.

## (3) Initial Capital Contributions —

This condition is the same as set out by the *Ḥanafī* School. Likewise, there is no obligation on partners to contribute an equal amount of wealth to the capital of the partnership. Subject to their own agreement, each is free to contribute an appropriate amount, whether or not it matches the figures from the other partners.

## (4) Asset Category for Capital Contributions —

Obviously, partners must make initial capital contributions to the *sharikah al-'inan*. Whether the form of those contributions is restricted to currency, or may be any kind of asset, is a matter of debate within the *Ḥanbalī* School.

One view holds that any kind of *sharikah*, including not only *sharikah al-'inan*, but also *mudārabah*, may be formed through contributions of property in general.

<sup>34</sup> NYAZEE, *supra*, at 217 (quoting AL-RAMLI, *supra*, vol. 3 at 496; IES QUDAMAH, *supra*, vol. 5 at 16).

Such property is valued at the time of the contract. Does this view mean the *Ḥanbalī* School accepts the *Ḥanafī* School condition concerning the same asset category for capital contributions, as well as the *hilah* device to mitigate that condition and allow co-ownership in mixed asset situations? The answer is not clear.

What is clear is the *Ḥanbalī* School appears to deal with the risk of disputes among partners by using historical accounting principles. (Thus, in the example above about properties valued at 5,000 *dinārs* and 1,000 *dirhams*, the *Ḥanbalī* School would not re-value those properties, and avoid the questions of co-mingling of the properties and joint ownership over them.) In effect, *Ḥanbalī* School permits the partners to contribute any kind of asset they wish to the capital of the partnership, and then requires them to value their contributions immediately, at the time the partnership contract is signed. The partners must stick with this value in perpetuity. In other words, the *Ḥanbalī* School applies historical accounting values for capital contributions.

The other view in the *Ḥanbalī* School is that a *sharikah al-'inan* formed by capital contributions other than currency is void. This view expressly adopts the *Ḥanafī* School condition demanding capital contributions of the same asset category, but does not agree with the *hilah* device to circumvent the condition. Clearly, the second view is the polar opposite of the first, in that it adopts the rigid condition without the flexible mitigating device.

## (5) Division of Profits on Percentage Terms —

Fifth, like the *Ḥanafī* School (discussed above), the *Ḥanbalī* School is flexible on profit distribution. Partners must divide profits on percentage terms among them, otherwise the *sharikah al-'inan* is void. But, they are free to equate their profit percentage draws with their relative capital contributions, or to derogate from this equivalence and permit some partners (e.g., particularly hard-working ones) to garner a larger percentage of the profits. Manifestly, this condition is different from the *Mālikī* and *Shāfi'ī* Schools, which do not permit the division of profits on percentage terms that are different from relative initial capital contributions.

## (6) Liability for Losses

Sixth, the *Ḥanbalī* School establishes a condition for a valid *sharikah al-'inan* that differs from that of the *Ḥanafī* School. The *Ḥanafī* School limits liability of an individual partner for losses or debts caused by that partner to that partner. No other partner can be sued for losses or debts attributable to the dealing partner. The *Ḥanbalī* School takes a different approach, which amounts to joint and several liability among the partners, meaning that each partner is responsible individually for the entire obligation in question, in the event liability is not apportioned among the partners.<sup>35</sup> Under this School, the partnership contract would specify that all other partners are potentially liable for the losses or debts caused by the dealing partner.

However, there are two exceptions to joint and several liability under *Ḥanbalī* School doctrine. First, suppose a partner intentionally violates a rule in the partnership agreement, thereby causing the loss. That partner is solely and wholly

<sup>35</sup> See BLACK'S LAW DICTIONARY, *supra*, at 907 (definition of "joint and several liability").

liable for the loss. No other partner can be sued. Second, suppose one partner borrows a sum of money beyond the total capital of the partnership. The borrowing partner is personally liable for the overage, and no other partner can be sued to recover it. That is true even if the borrowing partner took the loan with no intent to violate the rules of the partnership contract. To make the distinction between the two exceptions clear, consider a case in which one partner in a *sharikah al-'inan* borrows U.S. \$1.5 million, but the capital of the partnership is \$1 million, and all the money is lost by the partnership. Is the partner liable for the entire \$1.5 million, or just the excess over the capital amount, i.e., \$500,000? The answer depends on the intent of the partner. If the partner intentionally ignored the capital ceiling of \$1 million, then she is liable for the full \$1.5 million debt. Conversely, if the partner did not mean to exceed the \$1 million threshold, then she is liable for \$500,000.

The difference in liability rules reflects dramatically different perspectives on the *sharikah al-'inan*. For the *Hanafi* School, the partnership is a vehicle through which individuals do business and limit their liability. For the *Hanbali* School, the *'inan* is a communal enterprise, with partners bearing a heightened legal obligation, and concomitantly (in theory, at least), emotional commitment, to one another.

#### (7) Commingling of Assets —

Seventh, the *Hanbali* School forbids partners from mixing their own wealth with the assets of their *sharikah al-'inan*. The clear line between personal and partnership property helps preclude disputes among partners over what property was used by the partnership to generate profits, and thus also what profits are owed to each partner. A partnership contract lacking this clear delineation would render the *'inan* void (*bātil*) on the Scale of Validity.

In conclusion, two points are worth emphasizing. First, each of the Four Schools requires that the conditions it specifies for a valid *sharikah al-'inan* be put into the partnership agreement. Failure to do so renders the *'inan* void. Stated differently, enormous importance is placed on "getting it right" in the partnership contract, so as to minimize the number of potential future disputes, and the risk of such disputes arising.

Second, the partners are free to alter their contract later, after they have commenced operation, to account for changed business conditions and individual preferences. But, they may not alter the basic conditions for a *sharikah al-'inan* established by the School under which their partnership operates. Those conditions are not amendable.

Third, approval by all Four Schools of *sharikah al-'inan* as a type of partnership helps deal with a practical problem: some people are unwilling or unable to enter into commercial transactions on an individual basis (i.e., as sole proprietors), perhaps because they lack the capital or experience to compete effectively with extant businesses. The Four Schools empower such persons by allowing them to transact through an *'inan*, thereby pooling capital and experience, and reducing and spreading risks. The overall socioeconomic effect (in theory, at least) is to increase opportunity for and participation by individuals in commerce, and thereby broaden, deepen, and strengthen the market. In sum, the support of the *Shari'a* for the

device of the *'inan* contributes (or ought to do so) to market growth and development.

### [B] *Sharikah al-Mufawadah* (Unlimited Mercantile Partnership)

*Sharikah al-mufawadah* is akin to a general partnership in American business association law. Generally defined, it is an unlimited mercantile partnership. Like a *sharikah al-'inan*, a *sharikah al-mufawadah* is formed by a contract, or partnership agreement, which sets out rules for its operation. Literally, the Arabic term "*mufawadah*" means "negotiation."

Notably, each partner in a *sharikah al-mufawadah* holds an equal share, has full power to direct the affairs of the partnership, and is fully liable for the affairs of all other partners. That is, joint and several liability exists. Moreover, all of the property of each partner, except for their own food and clothing, and that of their families, must be engaged in the *mufawadah*. (To be sure, the partners and their families are responsible for procuring their own food and clothing.) That is, all purchases each partner makes are presumed to be for their joint partnership and intended for commercial transactions of the *mufawadah*, except any purchases for personal consumption and use. Significantly, each partner in a *sharikah al-mufawadah* must be Muslim.

Three of the Four *Sunni* Schools agree *sharikah al-mufawadah* is one of the major types of *sharikah*. The *Shāfi'i* School completely rejects this form of partnership. Within the other Schools that accept the *mufawadah*, there are differences in the conditions they set for creation and maintenance of a valid partnership. As with a *sharikah al-'inan* agreement, if these conditions are not set out in a contract for a *mufawadah*, then the partnership is void (*bātil*).

As for termination, the events that lead to the end of a *sharikah al-mufawadah* are the same as for terminating a *sharikah al-'inan*. The *Hanafi*, *Māliki*, and *Hanbali* Schools broadly agree a *mufawadah* could be terminated in four different ways. First, the partners could agree to its termination, and their consent ends the *mufawadah*. Interestingly, the partners are free to convert the *mufawadah*, which they are terminating, into an *'inan*. Second, as is true for an *'inan*, an intentional violation by a partner of a rule in the partnership agreement that creates a *mufawadah* triggers its termination. Third, if one partner moves to a different place where it is impossible for other partners to contact her, thereby preventing normal operation of the *mufawadah*, termination occurs. Finally, a *mufawadah* could terminate because it loses money. If the loss wipes out the initial capital contributions of the partners, then the partnership ceases.

#### • *Hanafi* School:

The *Hanafi* School defines "*sharikah al-mufawadah*" as a:

contract of participation between two or more persons, with the stipulation of complete equality with respect to capital, profit and status, for working

with their own wealth, or with labour in another's wealth, or on the basis of their credit-worthiness, so that each partner is a surety for the other.<sup>36</sup>

The *Hanafi* School sets out eight conditions for a valid *sharikah al-mufawadah*. The first four conditions are identical to four of the conditions for a valid *sharikah al-'inān*. Those same conditions are

- (1) *Ahliyah* Partners (legal capacity or capability).
- (2) Right to Do Business.
- (3) Initial Capital Contributions.
- (4) Asset Category for Capital Contributions.

However, for a valid *mufawadah*, the *Hanafi* School explains the following additional four requirements must be met in the partnership contract:

- (5) Specification —

The fifth condition outlined by the *Hanafi* School is rather technical in comparison to the equality and status conditions. Basically, all the partners in a *sharikah al-mufawadah* must specify in their agreement to establish the partnership that they are, indeed, creating this kind of *sharikah*. Their contract must be explicit that a *mufawadah* is intended.

- (6) Equality of Profit and Loss Division —

Any and all profits earned by a *sharikah al-mufawadah* must be divided equally among the partners. That also is true for losses. Thus, for example, in a *mufawadah* with five partners and a profit (loss) of U.S. \$500,000, each partner would receive a \$100,000 distribution (or be liable for \$100,000 of loss). This illustration raises the question of whether profits and losses must be divided on percentage terms. The answer is yes, but rather obviously so. In a five *mufawadah*, because of the equality condition, the partners each have a 20 percent profit (loss) stake. If the number of partners were three, or ten, the division would change accordingly, to 33.3 percent and 10 percent, respectively.

The equality condition is notable from an ethical perspective. The *Hanafi* School *fukahā*, in setting this condition, essentially are saying there ought to be at least one kind of partnership treating all members equally, not only in terms of opportunity to transact, but also in terms of economic result. This egalitarianism encourages all partners to work together for a common good. They are to disregard the fact their business talents are distinct. One may be good at sales and marketing, another at information technology, a third at research and product development, a fourth at logistics, and a fifth at finance. They are not to bicker about whose talents are more valued, and demand larger profit draws based on their sense of self-importance. Rather, they are to respect the individual skills and abilities each partner brings to the *sharikah al-mufawadah*, and manifest that respect in the most tangible of ways: equal profit and loss sharing.

<sup>36</sup> NAYEE, *supra*, at 160-161 (quoting MAJALLAH, *supra*, at § 1311).

At the risk of a hyperbolic metaphor, the equality condition is redolent of the leveling effect before Allāh of the *Ramadan* fast, in which all Muslims (who are physically able) are called to participate, and the *Hajj*, in which all Muslims (who are physically and financially able to undertake the Pilgrimage) dress in essentially the same traditional religious garb, *ihram* (with distinctions only along gender lines). Note, however, the ostensibly appealing metaphor — that a *sharikah al-mufawadah* — is akin to a communist enterprise is false. That is for two reasons. First, there is nothing atheistic about a *mufawadah*, whereas Marxist-Leninist doctrine is adamant in its atheism. Second, communism entails public (or government) ownership of the means of production. The partners in a *mufawadah* are private owners and operators of their enterprise. That is to say, a *mufawadah* exists in a capitalist setting.

- (7) Personal Status —

In addition to the equality condition, the most remarkable feature of *Hanafi* School teaching about a *sharikah al-mufawadah* concerns the personal status of the partners. In actuality, there are three key points about status. First, the partnership cannot be performed between a free man and a slave, or between a slave and a slave. That also is true with respect to an indentured or bonded servant, or *mukatab*. A *mufawadah* is not permissible between a free person and a *mukatab*, or between two *mukatabs*. This point follows logically from the *aliyah* condition, which requires that all partners be free men or women. However, this point also is outdated, given the general illegality of slavery in the Muslim World. The point reflects the bygone era in which it arose.

Of relatively greater significance in the contemporary global economy is the second point. A *sharikah al-mufawadah* cannot consist of non-Muslim partners, at least according to the view of *Imāms* Abū Hanifah and Muhammad Al-Shaybānī. That is, the partnership is not valid between Muslim and non-Muslim. This point may be puzzling, even objectionable, to some Muslims and non-Muslims alike. Indeed, *Imām* Abū Yūsuf<sup>37</sup> allowed Muslims and non-Muslims to enter into a valid *mufawadah*. The justification for this restriction, however, is worth contemplating. Certain transactions, which are considered morally acceptable in other faiths, are not viewed as such in Islam. Examples are buying and selling forbidden products, such as alcohol, pork, and pornography. A non-Muslim may be free to engage in such dealings (subject to personal moral and religious views, and applicable law). Muslims are not allowed to operate such businesses. Thus, the obligation all partners in a *mufawadah* be Muslim ensures (in theory, at least) the partnership itself engages only in permissible transactions.

- (8) Transactional Limitations —

The *Hanafi* School lists transactions in which a *sharikah al-mufawadah* may not engage. Ideally, this list ought to be contained in a partnership contract. Entry into

<sup>37</sup> The full name of Abū Yūsuf is "Yaqub ibn Ibrahim al-Ansari." *Imām* Abū Yūsuf was the first *Qādi* *Al Qudhat* in the Islamic world. Based in Baghdad, he served under the 'Abbāsid Caliph Harūn Al Rashid, who reigned from 786-809 A.D. Yūsuf died in 798. Not only was he a member of the *Hanafi* School, but also he was a renowned student of *Imām* Abū Hanīfa, founder of that School, and helped spread the influence of the School.

any of these transactions by any of the partners, unless the transacting partner has the permission of all other partners, renders a *mufāwadah* void (*bātil*) on the Scale of Validity. In brief, the list is as follows:

- (a) Lending money from the partnership to a non-partner ("qard," meaning a loan, particularly an interest-free loan with no fixed period of repayment).
- (b) Lending any non-monetary asset of the partnership to a non-partner ("i'arah," meaning lending utensils or non-fungible items).
- (c) Giving assets of the partnership to charity ("hibah," meaning gift, or *sadaka*, meaning charity for the poor).
- (d) Standing as a surety for the liability of another partner in a crime or tort that is related to the *sharikah al-mufāwadah*. (However, based on principal-agency relationships, all partners are potentially liable for misappropriation affecting third parties, and for torts committed in the course of business. Thus, for example, suppose a two-person *mufāwadah* steals U.S. \$1,000 books from the University of Kansas Library. The Library sues both partners. Ideally, each partner is held accountable for the books that the partner misappropriated, which could be \$500 each. Suppose one partner endeavors to be the surety for the other, thereby paying the Library \$500 for herself, and a further \$500 for the other partner. This suretyship arrangement is not permissible.)

Notably, there is one way to circumvent these transactional limitations. The partners can agree one or more of the limitations ought to be relaxed. (Thus, in the example in (d), the partners could establish a suretyship arrangement by consent.)

There are two further kinds of activities of a *sharikah al-mufāwadah* the permissibility of which is disputed within the *Hanafi* School. First, it is clear the entire partnership, acting jointly, could stand a surety for a third party. But, may an individual partner stand as a surety for a third party? *Imām* Abū Ḥanīfah says yes, but two of his disciples disagree and would consider the suretyship an act of charity (*tabarru'*). In effect, the disciples suggest the act would be outside the scope of the *mufāwadah*.

Second, suppose one partner in a *sharikah al-mufāwadah* is arrested and jailed for allegedly illegal activities. May a second partner bail out the jailed partner using funds from the partnership, e.g., by posting a cash bond with the appropriate law enforcement authority? The answer is yes, at least if the allegedly unlawful activities are connected to the *mufāwadah*. However, suppose the bailing partner pledges himself (effectively asking the authorities to prosecute him if the jailed partner does not appear for subsequent legal proceedings). In the latter circumstance, the bailing partner acts outside of the scope of the *mufāwadah*.

• *Māliki* School:

In respect of establishing and operating a *sharikah al-mufāwadah*, the *Māliki* School agrees with the *Hanafi* School on five conditions:

- (1) *Ahliyah* Partners (legal capacity or capability).
- (2) Right to Do Business.

- (3) Initial Capital Contributions.
- (4) Asset Category for Capital Contributions.
- (5) Transactional Limitations

However, the *Māliki* School parts company with the *Hanafi* School, and establishes three rather different conditions, as follows:

- (6) Personal Status —

The *Māliki* School holds that *sharikah al-mufāwadah* is valid between a free man and a slave. As *Imām* Mālik explains in a grand treatise, *Al Mudawwanah*, which is one of the most significant *Māliki* School works:

there is no harm in a partnership between a slave and a freeman, if the slave is one who has been authorized (by his master) to do business.<sup>38</sup>

Does the *Māliki* School permit non-Muslims to partner with Muslims in a *mufāwadah*? The question was put to *Imām* Mālik by one of his students, Sahnūn ibn Sa'īd ibn Ḥabīb At-Tanukhī, and the dialogue is recounted by the *Imām* in *Al Mudawwanah*:

Is the partnership of a Christian and a Muslim or a Jew and a Muslim valid in Mālik's opinion? He replied: "No! Only if the Christian or the Jew are present at the time of purchase. Further, there can be no sale, possession or demand for debt, unless the Muslim is present with him. If the case is what I have described to you, it is valid, otherwise not."<sup>39</sup>

In other words, under limited circumstances, Muslims and non-Muslims may participate together in a *mufāwadah* according to *Māliki* School doctrine. The key limitation is that non-Muslims be present with Muslims "at the time of purchase," which refers to the time in which a transaction (i.e., the "sale," "possession," or "demand for debt") is undertaken. The logic is the Muslim partner can be sure the transaction is not one involving products the consumption of which is forbidden according to Islamic moral precepts.

This logic raises two questions. First, must the non-Muslim partners be present when the *sharikah al-mufāwadah* is created? For example, if formation is by written contract (the normal case), must they all be in the same venue to sign the deal? The answer is "yes." The reply given by *Imām* Mālik presumes a valid *mufāwadah* has been formed between Muslims and non-Muslims, but has not yet entered into its first transaction. The participation of non-Muslims in the creation of a *mufāwadah* does not vitiate that partnership. Clearly, this distinction is a significant one vis-à-vis the *Hanafi* School (aside from the views of Abū Yūsuf).

Second, the earlier passage from *Imām* Mālik presumes physical presence, i.e., the Muslim partner is witnessing what her non-Muslim partners are doing. After

<sup>38</sup> NYAZEE, *supra*, at 192 (Selangor, Malaysia: The Other Press, Malaysian ed., 2002) (quoting Sahnūn, *Al-Mudawwanah Al Kubrā [The Large Notebook]*, vol. 5 at 70 (Hereinafter, Sahnūn)). The *Māliki* School scholar Sahnūn was from Qayrawan, in what is now Tunisia, and lived from 766/777 to 854/855 (160-240 A.H.).

<sup>39</sup> NYAZEE, *supra*, at 192-193 (quoting Sahnūn, *supra*, vol. 5 at 70) (emphasis added).

all, mystical appearances aside, that was the only kind of presence possible in the time of the *Imām*. Would non-physical presence, for instance, by remote video-conferencing, count as "presence"? The answer is uncertain. However, the goal of the requirement is to provide the Muslim partner (or partners) with the opportunity to oversee, and double-check, the permissibility of a transaction from an Islamic ethical perspective. If that goal can be met through modern technology, then it would seem reasonable to infer that the *Mālikī* School would permit use of that technology to facilitate the transaction by the *sharikah al-mufāwadah*.

#### (7) Equality

The *Mālikī* School does not require that partners in a *sharikah al-mufāwadah* make equal contributions to the capital of their partnership. The matter was posed to a student of *Imām Mālik*, *Sahnūn*, by one of the students of *Sahnūn*:

What do you think if he (a partner) establishes evidence that it is a *mufāwadah* on the basis of one-third capital and two-thirds [?]. Is this permitted according to *Mālik* so that they may be considered partners to the *mufāwadah*." He [*Sahnūn*] said: "Yes, because it is permitted in *Mālik's* view to participate in this way."<sup>40</sup>

*Sahnūn* published this answer in the treatise *Al Mudawwanah Al Kubrā* (The Large Notebook).<sup>41</sup>

This answer is frustrating because it refers back to *Imām Mālik* with no further explanation. Yet, a clue lies in the factual predicate contained in the question of the student of *Sahnūn*. The question presumes there is evidence of the shares each partner contributed. In other words, unequal capital contributions to a *sharikah al-mufāwadah* are acceptable if there is persuasive proof of the percentage contributions. That evidence helps avoid future disputes.

Likewise, in a key departure from *Hanafi* School teaching, the *Mālikī* School does not require equality among partners in the division of profits or losses. The *Mālikī* School teaches:

equality in wealth and profit is also not a condition.<sup>42</sup>

Additionally, the *Mālikī* School does not require equality in work. That is, the School permits different partners to contribute different amounts of labor, and thereby obtain diverging returns from the profits of the *sharikah al-mufāwadah*.

The sixth and seventh conditions that are *sui generis* to the *Mālikī* School suggest an important contrast between it and the *Hanafi* School with respect to *sharikah al-inān* and *sharikah al-mufāwadah*. A *mufāwadah* according to the *Mālikī* School is more comparable to *sharikah al-inān* under the *Hanafi* School than it is to a *mufāwadah* under the *Hanafi* School.

#### • *Shāfi'i* School:

*Shāfi'i* School teaching on the subject of *sharikah al-mufāwadah* is straightforward. The School agrees this type of partnership exists in the marketplace. It does not chastise the other Schools for their acknowledgment or acceptance of it. However, the *Shāfi'i* School does not approve of this type of partnership. The disapproval from *Imām Shāfi'i*, in *al-Umm*, is both powerful and amusing:

*Sharikah al-mufāwadah* is *bātil* [void] and I do not know of anything else in this world that can be declared void if it is not the *mufāwadah* than the *mufāwadah* partnership. . . . If they think that the *mufāwadah* according to them is that they are partners in all that is found in their ownership for some reason, whether wealth or something else, then, the partnership in between them is *fāsid* [vitiated]. I do not know of gambling except in this or less than this that two persons participate with two hundred *dirhams* and then one of them find a treasure and this is to be shared among them. What do you think if they stipulate this and do not mingle their capitals, is it not permitted, and what do you think of the person who has been given a gift or has hired out his services? If he earns something out of this, does the other become his partners in this? They have rejected lesser things than this.<sup>43</sup>

Thus, the *Shāfi'i* School declares void (*bātil*) any *mufāwadah* that partners might attempt to form under its teaching. But, the School would not treat as void a *mufāwadah* properly formed under the conditions of the other three Schools.

Interestingly, the *Hanafi* School replies to the disapproval of the *sharikah al-mufāwadah* by the *Shāfi'i* School by impugning the logic of the *Shāfi'i* School. The *Hanafi fukahā'* argue that because the *Shāfi'i* School approves of a *sharikah al-inān*, it should *a fortiori* approve of a *mufāwadah*. "*A fortiori*," because the contract for a *mufāwadah* is even stronger than one for a *sharikah al-inān*. Why, then, approve of a less stringent kind of partnership, but not the one with tighter conditions? The reply of the *Shāfi'i fukahā'* is to restrict the *inān* with various conditions, so that this kind of partnership "is reduced to the status of a mere co-ownership (*sharikah al-milk*)."<sup>44</sup>

#### • *Hanbali* School:

The *Hanbali* School defines "*sharikah al-mufāwadah*" as follows:

In its literal meaning, *mufāwadah* is participation in each thing.<sup>45</sup>

This rather mysterious definition masks a theoretical perspective of the *Hanbali* School on *sharikah al-mufāwadah* that is fundamentally different from the approach of the other three Schools. Unlike them, the *Hanbali* School does regard a *mufāwadah* as a specific type of partnership under the umbrella of *sharikah al-'aqd*, but rather the other way around.

That is, the *Hanbali* School looks at *sharikah al-mufāwadah* as the general species of partnership, with other types — *sharikah al-inān*, *sharikah al-abdān*

<sup>40</sup> NYAZEK, *supra*, at 193 (quoting *Sahnūn*, *supra*, vol. 5 at 70).

<sup>41</sup> See NYAZEK, *supra*, at 193.

<sup>42</sup> NYAZEK, *supra*, at 194.

<sup>43</sup> NYAZEK, *supra*, at 229 (quoting *Al-Bahūti, Kashāf Al-Qinā'* [Removing the Masks], vol. 3 at 529).

<sup>44</sup> NYAZEK, *supra*, at 162.

<sup>45</sup> NYAZEK, *supra*, at 211 (quoting *Al-Shāfi'i, Al-Umm* [The Mother], vol. 3 at 206).

(*a'māl* or *al-'amal*), and *sharikah al-uwjūh* (credit cooperative) — being the particular types. Stated differently, a valid *mufāwadah* is formed whenever a *sharikah al-'inān*, *sharikah al-'abdān* (*a'māl* or *al-'amal*), or *sharikah al-uwjūh* is created, because these specific types are individually valid. The reason for this distinct theoretical approach, say the *Hanbali fukahā'*, is the strength of the partnership contract establishing and setting the rules for a *mufāwadah*. This contract is the strongest of the lot, say the *Hanbalis*, in the sense of having the most rigorous conditions that are most appealing from the perspective of Islamic moral teaching.

In brief, the *Hanbali* School sees this type of *sharikah* as a general name for all other partnerships. Logically, then, all of the conditions the *Hanbali* School applies to *sharikah al-'inān*, *sharikah al-'abdān* (*a'māl* or *al-'amal*), and *sharikah al-uwjūh* also apply automatically to a *sharikah al-mufāwadah*. Further, for the *Hanbali* School, the *mufāwadah* is more similar to *sharikah al-'inān* under the *Hanafi* School than is the *mufāwadah* under the two Schools. The reason is the *Hanafi* School has the most unique conditions for a *mufāwadah*. That is, the *Hanbali* School (and, for that matter, the *Māliki* School) conditions for a *mufāwadah* are distinct from the conditions for this partnership laid out by the *Hanafi* School. Instead, the *Hanbali* School conditions resemble the conditions the *Hanafi* School lays out for an *'inān*.

As a practical matter, businesspersons can and do establish and operate under the *Hanbali* School a form of enterprise that the School agrees and approves of called "*sharikah al-mufāwadah*." To do so, their partnership agreement must not only meet the above conditions for the other kinds of partnership, but also must satisfy the following four additional requirements:

(1) Suretyship —

Each partner must become a surety for the other partners, in addition to being in a principal-agent relationship with the other partners. Moreover, each partner can be sued for the debts, defaults, or other failings of the partnership. This suretyship condition means any one partner is potentially at risk for the entire liability associated with the partnership. At the same time, each partner has the assurance her other partners will — if need be — assume her liability.

For instance, assume Maryam and Abdullah are partners in a *sharikah al-mufāwadah*, their partnership defaults on a U.S. \$100,000 loan, and the lender sues both partners for the balance due of \$80,000 on the loan. Suppose Abdullah cannot afford to pay, owing to personal insolvency. Maryam is liable for the full \$80,000, part of that liability arising in her own right, and the remainder as a surety for Abdullah.

(2) Authorization —

The *Hanbali* School requires each partner to authorize every other partner to perform any type of work on behalf of the partnership. This authorization must cover both physical labor and service work, i.e., it is a broad one encompassing activities as diverse as hauling bricks to strategizing about financial matters.

(3) Equality —

The *Hanbali* School does not require equality in capital contribution or profit distribution among the partners. They may contribute capital, or divide profit, as they agree in their contract. For instance, they may elect to divide profits in proportion to their initial capital contributions, or to deviate from those percentages. Obviously, the flexibility to agree on unequal profit percentage distributions is a significant departure from the *Hanafi* School equality condition.

(4) Liability for Losses —

Under the *Hanbali* School, the partners must allocate losses according to their shares in a *sharikah al-mufāwadah*. They are not free to agree on a distribution of losses that puts disproportionate liability on one partner, with disproportion gauged by initial capital contributions. That is because the contributions convey consent about liability.

For example, suppose Maryam contributes U.S. \$300,000 to a *sharikah al-mufāwadah*, while Abdullah puts in \$100,000. If their partnership loses money, then Maryam must absorb three-quarters of the loss, while Abdullah would be liable for the remaining one-quarter. This result is justified by the fact that by contributing 75 percent of the capital, Maryam effectively consented to be at risk for three-quarters of any loss, and likewise for Abdullah.

A minority of *Hanbali* School *fukahā'* urge that a *sharikah al-mufāwadah* is too general a type of *sharikah*, given that it combines the other specific types of partnership.<sup>46</sup> They argue a *mufāwadah* should be considered invalid, because its generality creates uncertainty (*gharar*). Is it really a *sharikah al-'inān*, *sharikah al-'abdān* (*a'māl* or *al-'amal*), or *sharikah al-uwjūh*? Could it be a *sharikah al-mudārabah*? These *fukahā'* call for a precise answer to such questions. Understandably, they are unsatisfied at the prospect that one partner may work in the enterprise as if it were an *'inān*, while another partner might operate on the belief it is a *sharikah al-'abdān*, and a third partner might think it is a *sharikah al-mudārabah*.

The situation is akin to three partners in an enterprise under American law where the first partner thinks the enterprise is a limited liability partnership, the second partner thinks the group is engaged in a limited partnership, and the third partner labors under the assumption they have a particular partnership. This uncertainty is all the more galling in modern times, when the partners may work in different cities (Mecca, Medina, and Jeddah), or even different countries (Saudi Arabia, Oman, and Yemen). Accordingly, these *Hanbali* School *fukahā'* insist all

<sup>46</sup> See SHEIKH MOHAMMED SALEH ALQUTHAYMEEN, *AL-SHARIKAH AL-MUWTA' ALA ZAAD AL-MATQUENA*, vol. IX (Cairo, Egypt: Dar Al-Ansar Press, 1st ed., 2003).

Sheikh Mohammed Saleh AlQuthaymeen (whose full name is "Muhammad Ibn Saalih al-Uthaymeen") lived from 1925 to 2001 (1347-1421 A.H.). This Sheikh was born Unayzah, a city in the Qaseem region of Saudi Arabia. A Professor of Islamic Jurisprudence, he was one of the most prominent Islamic scholars in Fiqh (Jurisprudence) and Aqeedah (Faith). In Saudi Arabia, he served on the Board of Senior Ulama and the Permanent Committee for Fatawa and Research. See *Uthaymeen*, WIKIPEDIA, posted at <http://en.wikipedia.org/wiki/Uthaymeen>. His book, *Al-Sharikah Al-Muwa' Ala Zaad Al-Matquena*, is a discussion of *Zaad Al-Matquena*, which was written by Abi Al-Najja Mosa Ibn Ahmad Ibn Mosa Al-Hajawi (who died in 968 A.H.) as an explanation of the main *Hanbali* School treatise, *Al-Mogani*, written by *Imām* Ibn Qudamah.

partners have a clear, unified conception of the edifice in which they work, and view the *sharikah al-mufawadah* as rickety scaffolding. Their insistence is broadly consistent with the condition on authorization.

Notwithstanding their objection, the majority view within the *Hanbali* School is a *sharikah al-mufawadah* is not void for vagueness. The majority counters with the argument that a *mufawadah* may well come closest of any Islamic business association to the modern theory and practice of the general *sharikah*. The majority points out that the authorization condition supports their argument, particularly in cases in which the partners work in distant geographical locations. Dramatically, the majority finds acceptable what the minority dislikes, namely, different partners have a different view as to the precise nature of their partnership.

There is nothing wrong, say the majority of *Hanbali* School *fukahā*, with one partner working in one city as if the enterprise is a *sharikah al-'inān*, while contemporaneously another partner works in a different city as if the partnership were a *sharikah al-mudārabah*. To the contrary, says the majority, the partners ought to have flexibility to operate commercially as they need to under the large umbrella of a *mufawadah*. The modern marketplace needs partners to engage in different tasks in varying locations, not the strictures associated with the minority approach of all partners doing the same activity in the same place.

A final point about the *Hanbali* School approach to *sharikah al-mufawadah* concerns non-Muslim partners. Does this School permit Muslims to partner with Christians, Jews, and others in a *sharikah al-mufawadah*? There appears to be no formal prohibition, and generally the *Hanbali* School emphasizes acts that are not allowed. In other words, an affirmative answer — that ecumenical partnerships are allowed — may be inferred from the silence of the School on the matter. This answer also may be inferred from two other bases.

First, again generally speaking, the *Hanbali* School is inclined to agree with the *Hanafi* School views as articulated by *Imām* Abū Yūsuf, who (as explained earlier) permits non-Muslims in a *sharikah al-mufawadah*. Second, the majority of *Hanbali* School *fukahā* are pragmatic in their approach to a *mufawadah*, in support of modern commercial contexts. The current era of globalization demands nothing less than flexibility on religious affiliations of partners in a common enterprise.

### [C] *Sharikah al-Abdān* (Skill-based Partnership)

In Arabic, "*sharikah al-abdān*" also is known as "*s harikah a'māl*" (plural) or "*s harikah al-'amal*" (singular). These terms convey the idea of a skill-based partnership. The word "*abdān*" is derived from the word "*bdān*," which means "body." The inference is that the partnership is based on skills performed on account of one's bodily talents. The word "*a'māl*" (plural) or "*al-'amal*" (singular) means "work." Here, too, the connotation is a partnership based on work, in a physical sense. More formally, a "*sharikah al-abdān*" is defined as a:

partnership in which participation by the partners is based on labour or skill, but the partnership has to be of the type '*inān* or *mufawadah*.<sup>47</sup>

<sup>47</sup> NYAZEE, *supra*, at 339.

This type of *sharikah* is found in the *Hanafi*, *Māliki*, and *Hanbali* Schools. They approve of it, in the sense of recognizing its existence in the commercial world, and approve of it from a moral perspective. However, *Shāfi'i fukahā* reject it on ethical grounds, and deem it void.

Also common to the in the *Hanafi*, *Māliki*, and *Hanbali* Schools are four basic rules about the operation of a *sharikah al-abdān*. They are as follows:

#### (1) Capital Contributions —

By definition, a *sharikah al-abdān* is based on skills. Therefore, there is no need for the partners to contribute funds at the time they establish their venture. For example, suppose Maryam, Jaber, and Salem finish their medical residencies in orthopedic surgery. They seek to practice their specialty together, as a team. They can form an *abdān* without actually putting up any cash. To be sure, as a practical matter, they may require money to build a new, or buy an existing medical clinic with surgical facilities. But, as an Islamic legal point, they need not specify in their partnership contract they are contributing funds.

#### (2) Profit and Loss Sharing —

In a *sharikah al-abdān*, all profits or losses associated with one partner are divided equally among all of the partners. For example, in a three-person partnership of Maryam, Jaber, and Salem, suppose U.S. \$1,500 of profit are directly attributable to the work of Maryam, and \$300 of loss is directly attributable to the work of Jaber. The profit is divided equally, each partner getting \$500. Likewise, the loss is split equally, each partner bearing \$100. The net result is each partner earns \$400. What is the moral logic for this result? Maryam, Jaber, and Salem are in a cooperative venture, and each acts on behalf of the other. They are a community formed voluntarily to share economic joys and sufferings, even to the degree of an equality of result.

However, there is one exception to the operational rule of sharing profits and losses, known as a "*sharikah al-abdān in 'Inan*." In this association, the partners specify in their written partnership agreement that they intend to derogate from the normal sharing rule. For example, Maryam, Jaber, and Salem could stipulate in their contract, before the partnership commences operation, that profits and losses will be divided amongst them in 50-25-25 percent shares, respectively. Then, Maryam would keep \$750 of the profit and bear \$150 of the loss, for a net gain of \$600. Jaber and Salem each would take \$375 of profit and \$75 of loss, for a net gain of \$300. The rationale for allowing partners to derogate is respect for their free will to enter into mutually beneficial business arrangements, even on grounds that are not strictly egalitarian in the sense of an equality of result. Derogation from the normal rule in the *Shari'a* allows partners to recognize different skill levels they bring to a *sharikah al-abdān in 'Inan*, and consequent different contributions they are likely to make to profits and losses.

#### (3) Acceptance of Work —

Each partner in a *sharikah al-abdān* is authorized to accept work for the entire partnership on behalf of all other partners. For instance, suppose the *abdān* of Maryam, Jaber, and Salem centers on their skills as orthopedic surgeons. Maryam

attends a soccer (football) game in Cairo involving the national teams of Egypt and Morocco. The Moroccan coach asks Maryam if her *abdān* would serve as the official orthopedic consultant to the team, and perform any necessary diagnoses and surgical treatments for the players. Maryam accepts. Her acceptance is on behalf of Jaber and Salem, too. That is, the Moroccan team is now a client of the entire partnership, and they could be called upon to provide medical treatment to the players. In sum, a partner in a *abdān* who accepts work does so on behalf of herself and all the partners.

As an interesting change in the hypothetical, suppose the team is Saudi Arabia instead of Morocco. Under current Saudi law, a woman can provide medical services to a man within a hospital located in the Kingdom, but not in open public, such as in a soccer stadium. (There is no written law to this effect, but in practice women are not observed to provide services in Saudi soccer stadiums.) Maryam's acceptance would mean Jaber or Salem could treat Saudi players, if they had to provide emergency treatment on the playing field, and Maryam could do the surgery in the hospital. The point, then, is simply to show that a *sharikah al-abdān* is a flexible form of association that can accommodate the entrepreneurial desires of its partners to generate new business clients, even in an extreme environment in which one partner might herself not be able to serve a particular kind of client.

To be sure, this flexibility is not unlimited. A *sharikah al-abdān* can be formed with non-Muslim partners, just as in a *sharikah al-inān*. But, it cannot be formed for the purpose of using skills of the non-Muslim partner pertaining to religiously proscribed activities. Maryam, Jaber, and Salem join an *abdān* with George if they do so to take advantage of George's expertise in brewing beer, fermenting wine, producing pork, or trafficking in pornography.

#### (4) Payment —

Each partner in a *sharikah al-abdān* has the right to demand payment for goods provided, or services rendered, by the partnership, on behalf of all the partners. If any one of the partners receives such payment, then the right embodied in the other partners is terminated. That is, the payment to one partner is payment to the whole partnership, and the payee partner is expected to distribute the payment in accordance with the aforementioned rules on profits and losses. So, for instance, Maryam, Jaber, and Salem all have the right to call for payment of \$1,500 for medical services any one of them provided to Morocco's soccer team. If Jaber collects the payment, then Maryam and Jaber no longer have the right to make that call of the payor-obligor, Morocco's team. In turn, Jaber is to distribute the payment accordingly.

Beyond the similarities in operational rules, however, there are some distinctions among the three *Sunni* Schools as to skill-based partnerships. They are as follows.

#### • *Hanafi* School:

The *Hanafi* School identifies two different types of *sharikah al-abdān*. The first type is an *abdān* by way of *mufāwadah*, while the second type is an *abdān* by way of '*inān*'. "By way of" connotes the manner in which the partnership is created, specifically, terms and conditions concerning monetary contributions of partners.

Literally, the Arabic term "*inān*" means "reins" (as in the reins or bridles on a horse), while "*mufāwadah*" means "negotiation."

A *sharikah al-abdān* by way of *mufāwadah* has the same requirements as a *sharikah al-mufāwadah*, except the partners need not contribute any funds when they establish their association. That exception is in keeping with the general point that a *sharikah al-abdān* is a venture based on contributions of skill, not money. In lieu of monetary contributions, a *sharikah al-abdān* by way of *mufāwadah* requires (1) *kafālah* and (2) *wakālah*. The *kafālah* condition refers to a contractual provision in the partnership agreement on suretyship or guarantee. The provision must state each partner is liable for the losses of the others (except in a case in which a partner behaves in an intentional, abusive manner). The *wakālah* condition is an agency specification in the agreement that each partner is authorized to act as agent for every other partner.

In a *sharikah al-abdān* by way of '*inān*', all the conditions for setting up a *sharikah al-inān* apply, except the obligation that each partner make an initial monetary contributions. Instead, this partnership imposes two conditions. First, *wakālah*, i.e., the agency requirement as in a *sharikah al-abdān* by way of *mufāwadah*, must be met. Second, in a *sharikah al-abdān* by way of '*inān*', the work in which the partners are engaged must be of a kind that a normal person could be hired by a client to perform the work. For example, Morocco's soccer team could hire a physician specializing in orthopedic surgery to be its team doctor. Therefore, Maryam, Jaber, and Salem can form a *sharikah al-abdān* by way of '*inān*' on the basis of their orthopedic surgical skills. In contrast, it would be forbidden for the soccer team from Saudi Arabia to hire a company to supply the players with beer, because of the Islamic prohibition on consumption of alcohol. Thus, Maryam, Jaber, and Salem could not form a partnership with this skill in mind, because Saudi Arabia does not permit the hiring of persons to distribute alcoholic beverages.

#### • The *Māliki* School:

The *Māliki* School sets out two distinctive requirements for establishment of a *sharikah al-abdān*, namely, specialty and location. First, all partners must specialize in the same field of work or craftsmanship. After all, reasons the *Māliki* School, an *abdān* is supposed to be a skill-based partnership, not a general mercantile partnership. That is, it is a focused business entity, not a conglomerate. Yet, this requirement is neither as strict nor as practical as it seems. The *Māliki* School permits partners in an *abdān* to be in different types of businesses, as long as those businesses are related to each other. Just how "related" must the businesses be? Consider the case of Maryam, Jaber, and Salem, who finish medical residencies in cardiac surgery, cardiology, and neurosurgery, respectively. Can they form an *abdān*? Cardiac surgery and cardiology are related, though only one involves surgery. Neurosurgery involves an entirely different part of the body. Yet, all are doctors. The hypothetical becomes a bit more difficult if one of them is a dentist, lawyer, or accountant. Arguments can be made within the *Māliki* School, in both directions, as to whether the three persons are engaged in the same field.

Second, the *Māliki* School instructs that all partners in a *sharikah al-abdān* operate from the same place of business. Their partnership must be located in the same spot, as it were. They cannot operate from different geographical locations. As

with the first condition, the restriction on location is not as rigid as it may seem. Consider an orthopedic surgery partnership of Maryam, Jaber, and Salem, and suppose their clinic is in Bahrain. Are the partners required to perform all of their work in the clinic, to the extent they cannot do routine e-mail work from home or a hospital? Certainly not. Are the partners forbidden from traveling to Dubai, or Bangkok, to perform an operation? Such a prohibition would prevent them from serving so-called "medical tourists" in those two cities. It is unlikely *Mālikī* School *fukahā'* would look askance at the partners providing medical services, on an occasional basis, in locations outside of Bahrain. What they would not like to see is that each partner sets up a facility for herself or himself in three different cities. Suppose Maryam's clinic is in Bahrain, Jaber's is in Dubai, and Salem's is in Bangkok, and each routinely operates independently out of those facilities. Then, they hardly can be called a "partnership" in the sense of having a skill-based communal venture.

• **Hanbalī School:**

The difference in perspective on the *s harikah al-abbān* form of partnership between the *Hanbalī* and *Hanafi* School is modest. The *Hanbalī* School teaches an *abbān* is:

The participation of two or more persons in what they accept for their physical labour and are liable for through their work.<sup>48</sup>

Unlike the *Mālikī* School, the *Hanbalī* School does not require partners to be in the same profession, or have the same skill set, to create this kind of *sharikah*. But, the *Hanbalī* School requires satisfaction of four conditions to establish an *abbān*, all of which are to be stated in a partnership agreement.

First, one partner must have the right to accept work for the entire partnership on behalf of all other partners. Second, if one partner accepts a work from a client, all other partners bear joint liability for that work. They are all liable for non-performance, or defective performance, by any one of them. In essence, the second condition means the partners in the *sharikah al-abbān* are sureties, or guarantors, for each other. Third, liability for losses arising out of the work in which the partnership is engaged is joint and several. The only exception to joint liability for losses is if one partner becomes personally liable because of her own abusive behavior. For example, suppose U.S. \$100,000 of loss is incurred by a medical surgery partnership of Maryam, Jaber, and Salem. All of them together, or any one of them individually, is responsible for bearing this loss, e.g., paying off a debt to a creditor of \$100,000. However, suppose the loss arises because of a medical malpractice judgment rendered against Salem, in which he is found to have been culpable for botching a knee replacement operation. Maryam and Jaber would not bear this loss, as it is attributable to abusive behavior by Salem.

• **Shāfi'i School:**

The *Shāfi'i* School considers the *sharikah al-abbān* type of partnership as *bātil* (legally null and void). To be sure, this School recognizes the fact of the existence of this type as established under the doctrines of the other three Schools. But, it is not

possible to establish an *abbān* under the *Shāfi'i* School. As Al-Shirāzī, a leading *Shāfi'i* scholar, explains:

Because of what is recorded from 'Ā'ishah, may Allah be pleased with her, that the Prophet (peace be upon him) said that each stipulation that is not in the Book of Allah [i.e., the Qur'ān] is *bātil* [void], and this [the participation of two persons with their physical labor in a partnership] is a condition that is not in the Book of Allah. Further, because the labor of each person is exclusively his own; it is, therefore, not permitted to another to participate in this with him. If they form such a partnership and earn, then, each one will take what he has worked for because it is a compensation for his body (physical labor) and belongs exclusively to him.<sup>49</sup>

Observe, then, three noteworthy points.

First, the methodology of the *Shāfi'i* School, with its emphasis on grounding commercial transactions on precepts from the Qur'ān and *ḥadīths*, is obvious from the initial sentence quoted above. These roots of Islamic jurisprudence simply do not allow for a *sharikah al-abbān* partnership. If *Imām Shāfi'i* is correct, then how can the other three Sunnite Schools justify their approval of this type of partnership? The answer is *Hanafi*, *Mālikī*, and *Hanbalī* School jurists use *qiyās* (analogical reasoning) to legalize this *sharikah*. They say an *abbān* is similar to *sharikah al-muḍārabah*. Wealth and work are two different faces of both types of partnership, and they may be combined to advance the interests of the partnership.

Second, there is a commercial basis for the objection of the *Shāfi'i* School to a *sharikah al-abbān*. All partnerships should be established with assets contributed by the partners. They must put in real wealth to create a partnership, and in doing so, their contributions are ascertainable. But, a partnership based on labor or skill causes *gharar* (uncertainty). Uncertainty arises from the fact no two partners are identical in respect of the contributions that may arise from their physical work. In the typical case, the partners themselves are physically distinct, some stronger or more gifted than others. In the atypical case of identical twins, even they might not produce the same results, owing to different effort or education levels. Thus, for the *Shāfi'i* School, individual physical distinctions make it impossible to know what benefits each partner would produce. In turn, there could be disputes as to how earnings of the partnership should be divided. Simply put, for the *Shāfi'i* School, an *abbān* is an entity in which no would-be partners can know what the proper shareholdings and distribution rules ought to be.

On this second point, the question again arises if *Imām Shāfi'i* is correct, then how can the *Hanafi*, *Mālikī*, and *Hanbalī* School jurists justify their approval of this

<sup>48</sup> NYAZEE, *supra*, at 213 (quoting Al-Shirāzī, AL-MUḤADDIRAH, vol. 1 at 36). The title "AL-MUḤADDIRAH" means "The Explanation," and this book is one of the renowned works of jurisprudence in the *Shāfi'i* School.

The full name of Al-Shirāzī is "Abū Ishāq Al-Shirāzī Ibrahim Ibn 'Alī Ibn Yusuf Al-Fairouz Abadi Al-Shirāzī Al-Shāfi'i." He lived from 1003 to 1083 (393-476 A.H.). He was born in Fairouz Abad, a small village in Persia, and moved to Baghdad, and became an important *Shāfi'i* *imām*. He wrote *Al-Muḥadḍah* (The Polite), *Al-Lam' Fi Usul Al-Fiqh* (Shine in the Principles of Jurisprudence), *Al-Tunbah* (The Alert), *Al-Ma'nunah Fi Al-Jadal* (Aid in Controversy), and *Al-Molakah Fi Usul Al-Fiqh* (the Summary of Jurisprudence).

<sup>49</sup> NYAZEE, *supra*, at 227.

type of partnership? The answer follows from the use of *qiyās* (analogy) by the other three *Sunni* Schools to legalize this *sharikah*. A *sharikah al-‘abdān* is similar to *sharikah al-muḍārabah*, and the latter type involves a contribution of wealth (the loan from the sleeping partner) that is repaid by profits from work (namely, that of the borrower). Wealth and work are two different faces of a *muḍārabah*. They are combined in it to develop it. An *abdān* is a similar Janus-faced venture, involving revenue from physical work.

Third, from the second sentence in the above quote, the *Shāfi‘i* School perspective on *sharikah al-‘abdān* is one of radical individual autonomy over the fruits of labor from one's own body. This perspective comes much later in Europe, through the writings of philosophers such as John Locke and Thomas Paine, which emphasizes individual rights and freedoms. Yet, it is grounded in the Qur‘ān and a *ḥadīth* of the Prophet Muhammad, recorded by his wife ‘Ā’isha, that people not exploit the labor of one another. Each person is entitled to the rewards from her own labor, and concomitantly is responsible as an individual for work or sloth. Second, *Imām Shāfi‘i* presages the liberal philosophical thinking of the European Enlightenment by nearly 900 years. The *Imām* lived from 767 A.D. (150 A.H.) to 820 A.D. (204 A.H.) John Locke lived from 1632 to 1704, and Thomas Paine from 1737 to 1809.

#### [D] *Sharikah al-Wujāh* (Credit Cooperative)

In a *sharikah al-wujāh*, partners come together to pool their respective credit standings with lenders. The formal definition of a “*sharikah al-wujāh*” is a:

partnership based on credit-worthiness of the partners in which the ratio of profit and loss is based on the liability borne, but the partnership has to be of the type ‘*inān*’ or *muḥawadah*.<sup>50</sup>

The idea of this credit cooperative is leverage on credit worthiness, not on initial paid-in capital contributions. As a cooperative, the partners can borrow more money than any one of them could individually. The larger sum of capital they borrow can enable them, as a partnership, to make bigger investments and commit to bigger commercial transactions.

As an example, suppose Fatima and Omar are interested in securities brokerage and dealing. That is, they would like to buy and sell stocks and bonds for the account of clients (brokerage), and for their own account (dealing). Fatima herself has U.S. \$1 million of liquid capital, and Omar himself has \$3 million in liquid capital. If Fatima opens a broker-dealer business by herself, then she is more constrained by her relatively smaller asset base than would be Omar if he opens a business by himself. Individual and institutional investors will be less willing to open accounts with her, and banks will be less willing to extend her credit to buy stocks and bonds, than Omar, simply because of the differential liquid capital asset base. However, both Fatima and Omar are better off if they pool their capital into a single *sharikah al-wujāh* with a capital base of \$4 million. They appear to clients and lenders as a stronger broker-dealer, and they can deploy that strength to encourage more clients to open accounts, and lenders to offer them larger lines of credit.

<sup>50</sup> NYAEE, *supra*, at 340.

Leverage is controversial in many non-Islamic environments, such as mergers and acquisitions (M&A) and Wall Street hedge funds. The matter also is controversial in Islamic Law. The four *Sunni* Schools are split into two camps on the legitimacy of a *sharikah al-wujāh*. All four Schools agree this type of *sharikah* exists. But, they do not all find it morally acceptable.

The *Hanafi* and *Hanbali* Schools permit and legalize this *sharikah*. In contrast, *Māliki* and *Shāfi‘i* Schools viewed it as a void *sharikah*. Thus, in a jurisdiction in that follows *Māliki* or *Shāfi‘i* School doctrine, it is not possible to establish a *sharikah al-wujāh*. There are two reasons supporting this prohibition. First, the *Māliki* and *Shāfi‘i* School look to the meaning of “*sharikah*.” Literally, it means “share,” and the share relates either to money or work. But, say these two Schools, a *wujāh* consists of neither money nor work. Rather, it is founded on the pooling of the credit standing of two or more individuals. Second, *gharar* (uncertainty) could easily arise in the operation of this kind of *sharikah*. With no money or skill forming the basis of their deal, the partners might be unclear as to their respective shares and liabilities.

For example, suppose Fatima and Omar seek to form a *sharikah al-wujāh*. Fatima has a reputation as smart and honest commercial dealings, but Omar has a larger line of credit with banks because of relatively more experience. The partnership enters the real estate business, seeking to buy and sell properties. It borrows U.S. \$1 million from a bank, purchases a commercial office building for that amount, and earns revenues from lease payments from tenants. How should Fatima and Omar split the revenue stream? Was it Fatima's reputation, or Omar's credit line, which convinced the bank to make the loan that made the deal possible? Uncertainty of this kind concerns *Māliki* or *Shāfi‘i* School *fukahā*.

As the formal definition (quoted above) of a *sharikah al-wujāh* indicates, this kind of partnership may arise in one of two manners. First, a *wujāh* may be established by way of *al-‘inān*. Second, it may be created by way of a *muḥawadah*. That is, just as the *Hanafi* School identifies two different types of *sharikah al-‘abdān*, namely, (1) a *sharikah al-‘abdān* by way of *muḥawadah*, and (2) a *sharikah al-‘abdān* by way of *‘inān*, this School — plus the *Hanbali* School — discerns the same two kinds of *sharikah al-wujāh*. In respect of both types of partnership, “by way of” connotes the manner in which the partnership is created, specifically, the terms and conditions for creation of a legally valid form of business association.

All the requirements and conditions that apply to establishing a valid *sharikah al-‘inān* also apply to a *sharikah al-wujāh* by way of *‘inān*. Briefly, for a *sharikah al-wujāh* by way of *‘inān*, it is necessary to have in the partnership agreement provisions to the effect that:

- (1) Mandate *ahliyah* partners (i.e., partners with legal capacity or capability).
- (2) Authorize the right to do business.
- (3) Explain profit division at the outset.
- (4) Ensure the profit division is ascertained.
- (5) Articulate the profit division on percentage terms.

(6) Delimit the power of each partner.

The normal requirements for a *sharikah al-'inān* as to initial capital contribution, sameness of asset categorization, liability for losses (proportionate with initial capital contributions), and loss and work input (also proportionate with those contributions) are irrelevant in the context of a *sharikah al-wujāh* by way of *al-'inān*. That is because the *wujāh* is a credit cooperative. The partners do not bring cash to the table, as it were, when they set up their venture.

Similarly, all requirements and conditions for setting up a valid *sharikah al-mufā'adah* also apply to a *sharikah al-wujāh* by way of *al-mufā'adah*. Briefly, the partnership agreement must have provisions on the above six topics, plus two additional points, namely, specifications (7) that the partnership is a *mufā'adah* and (8) a specification on suretyship or guarantee.

[E] *Sharikah al-Muḍārabah* (Sleeping Partnership)

Perhaps no partnership form in Islamic law of business associations is more important than *sharikah al-muḍārabah*. This form affects Muslim families everyday around the world, in both Muslim and non-Muslim countries. That is because a *muḍārabah*, commonly referred to in English as a "sleeping partnership," is the form of organization through which borrowing and lending transactions generally occur (if done in a *Shari'a*-compliant manner).

Those transactions typically involve a lending institution, *i.e.*, a bank or other finance company, which is the creditor, and an individual, family, group of persons, or partnership, which is the borrower. This creditor is the sleeping partner (*rabb al-māl*), and the borrower is its working partner (*muḍārib*). The credit transactions range from buying an appreciating asset like a house, or a consumer durable good like a car, to financing a college education, or investing in a start-up internet business. Moreover, because commercial banks are a critically important instrument through which a central bank implements monetary policy in any modern capitalist economy, the lending transactions effected through sleeping partnership arrangements have systemic implications. The sleeping partners are the banks through which a central bank of an Islamic country loosens or tightens the money supply in that country, and thereby increases or decreases, respectively, the amount of funds the banks have to lend to customers.

To appreciate the importance of the *sharikah al-muḍārabah* partnership, it is necessary to do no more than reflect on one's financial dealings, look to the closest shopping area in one's home town, or open the pages of the financial press. Borrowing and lending are commonplace dealings in the life of non-Muslims. Banks are ubiquitous in developed non-Muslim countries. The *Financial Times* and *Wall Street Journal* discuss monetary policies and credit conditions in the United Kingdom, United States, and other countries. So, too, is it with Muslims and Muslim countries. The *muḍārabah* partnership is an integral part of Islamic economic life.

Ironically, however, putting aside hot-button topics like *jihād* (struggle) and the *hijāb* (veil), there is perhaps no more misunderstood field of the *Shari'a* than Islamic banking law. The common stereotype is "Muslims ban interest," which

leads to the scornful epithet "Islamic banking is primitive." The first statement is only half accurate. It omits the sharing of profits that supplants interest charges. The second statement is erroneous. Centuries ago, *fukahā* debated the fairness (or lack thereof) of usury, and considered ethically acceptable ways for lenders to extend credit. One fruit of their scholarship was the *sharikah al-muḍārabah*. The quintessential and most typical context in which a *muḍārabah* arises is a banking or finance transaction.

## Chapter 25

### BUSINESS ASSOCIATIONS LAW: MODERN PARTNERSHIPS AND AGRICULTURAL VENTURES

In the field of *international commerce and finance*, there are processes at work today which permit a positive integration of economies, leading to an overall improvement in conditions, but there are also processes tending in the opposite direction, dividing and marginalizing peoples, and creating dangerous situations that can erupt into wars and conflicts. Since the Second World War, international trade in goods and services has grown extraordinarily fast, with a momentum unprecedented in history. Much of this global trade has involved countries that were industrialized early, with the significant addition of many newly-emerging countries which have now entered the world stage. Yet there are other low-income countries which are still seriously marginalized in terms of trade. Their growth has been negatively influenced by the rapid decline, seen in recent decades, in the prices of commodities, which constitute practically the whole of their exports. . . . Here I should like to renew an appeal for all countries to be given equal opportunities of access to the world market, without exclusion or marginalization.

*Fighting Poverty to Build Peace*, Message of His Holiness Pope Benedict XVI for the Celebration of the World Day of Peace, 1 January 2009, ¶ 9 (emphasis original)

#### SYNOPSIS

##### § 25.01 FOUR MODERN TYPES OF *SHARIKAH AL-'AQD*

- [A] *Sharikah al-Musāhamah* (Stock Market Partnership)
- [B] *Sharikah al-Taḍamun* (Trading Partnership)
- [C] Two Other Modern Partnerships

##### § 25.02 AGRICULTURAL VENTURES

- [A] *Muzāra'ah* (Sharecropping)
- [B] *Musāqāh* (Irrigation)

##### § 25.01 FOUR MODERN TYPES OF *SHARIKAH AL-'AQD*

Modern forms of partnership comprise the second broad category of *al-'aqd* (contract-based) business associations. There are four different types of modern partnerships: (1) *sharikah musāhamah*; (2) *sharikah al-taḍamun*; (3) *sharikah al-tawṣi'ah*; and (4) *sharikah al-mohass'ah*. Notably, no rules prohibit participation in any of them by non-Muslim or women, along with that of Muslims or men.

As a practical matter, this list is not necessarily exclusive. Different forms may be found, or may develop, in different Muslim countries, particularly with changing commercial conditions. Moreover, not all four types are found in every Muslim country. Their appearance depends on the commercial and financial needs in the markets of a particular country.

As a theoretical matter, the modern kinds of partnership are not truly independent forms. Originally, they arose because of a need, and in a context, in a particular market. Islamic legal scholars reached back to the traditional forms of partnership, and modified them so as to accommodate new developments, most notably the information technology (IT) revolution, and the invention of a dizzying array of new financial instruments. Generally speaking, of the four modern types, the most popular are the *sharikah al-musāhamah* and *sharikah al-ta'āmun*.

#### [A] *Sharikah al-Musāhamah* (Stock Market Partnership)

A *sharikah al-musāhamah* is a partnership the capital of which is divided into equal exchangeable shares in the partnership. The purpose of this partnership is to invest in financial instruments traded on a organized exchange, or in financial assets bought and sold over the counter (OTC). The quintessential example of such an instrument is equity (shares of ownership in a business association) traded on a centralized stock market. Other financial assets also are permissible targets for investment, such as debt (bonds), foreign currencies, exchange, and derivatives (i.e., instruments such as options, forwards, futures, and swaps, the value of which is derived from an underlying asset, such as a stock, bond, or foreign exchange). Some of these assets (such as forwards and foreign exchange) are traded OTC. Not surprisingly, the word "*musāhamah*" is derived from the Arabic noun "*sāham*," which means share (as in equity, or stock).

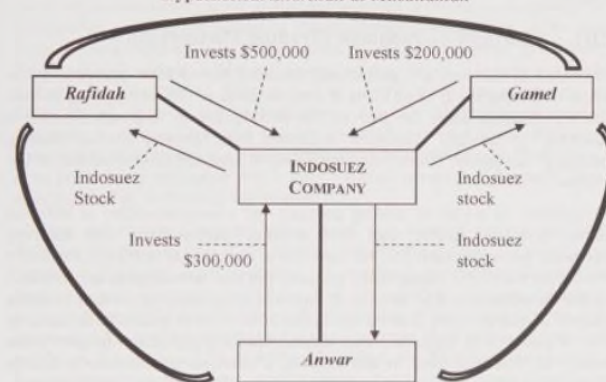

In a *sharikah al-musāhamah* each partner is authorized to buy or sell securities of value up to the amount of her share in the partnership. That share equals her initial paid-in capital contribution. Each partner is liable only to the extent of her share. That is, partners are not jointly and severally liable for the losses incurred owing to the financial decisions of another partner. Critically, a *sharikah al-musāhamah* is a partnership not established *a priori* by the investors, who go forward acting jointly. Rather, it is a venture linking each investor with the enterprise in which they buy shares, and thereby the investors — through their individual choice to procure stock in the same company — become linked to one another.

The *sharikah al-musāhamah* partnership contemplates a community, which reflects (at least indirectly) the ethical footing the *Sharī'a* seeks to provide for legal relationships. The Diagram connected with the hypothetical example below, depicts the nexus among partners and the enterprise in which they invest. In a non-Muslim shareholding pattern, investors are conceived of as independent agents acting rationally and self-interestedly. Their common fortune is tied to that of the company in which they hold stock, and they are able to come together at an annual general meeting (AGM) of shareholders. But, nothing in American Corporate Law would indicate shareholders in a company are linked together to each other in a partnership, and certainly not that this link is a religiously tinged communal bond.

They are hold ownership interests in the company, but they are not partners of one another.

By way of example, suppose Rafidah, Anwar, and Gamel seek to invest in an initial public offering (IPO) of stock issued by the Indosuez Company on the Cairo Stock Exchange. The three investors do not know, or at least need not know, each other. While not prohibited from doing so, there is no expectation they come together and act jointly. There is no partnership agreement unique to the three of them. However, by virtue of their investment in the Indosuez Company, they have formed a *sharikah al-musāhamah*. Diagram 25-1 shows their partnership.

Diagram 25-1:  
Hypothetical *Sharikah al-Musāhamah*

As the emboldened lines in Diagram 25-1 illustrate, the partnership links the three of them to the Company itself. The Company — which takes funds they provide and issues stock to them — is an active, working partner in the *sharikah al-musāhamah*. The partnership also links the three of them to each other, a hallmark distinction. Because they invest in the same enterprise, they are more than atomistic shareholders. They are partners with one another. At AGMs, Rafidah, Anwar, and Gamel can exercise their voice in the management of the Company, either as individuals or a community.

Suppose, then, the initial capital contributions of Rafidah, Anwar, and Gamel are U.S. \$500,000, \$300,000, and \$200,000, respectively. Thus, their respective shares in the partnership are 50, 30, and 20 percent. The aim of the partnership is to invest in shares traded on Middle East stock exchanges. The partners cannot buy stock valued at more than their initial individual capital contributions. Anwar could not, for example, purchase on behalf of the partnership stock of the Indosuez Company traded on the Cairo Stock Exchange worth \$400,000, as that would exceed his limit

by \$100,000. Suppose he invests his entire partnership share in equity of that Company. Subsequently, the Company fails, and the value of its stock drops to zero. The partnership loses \$300,000, which is the cap on the liability of Anwar.

The *sharikah al-musāhamah* form originates from the *sharikah al-'inan* partnership, but also combines features of the *sharikah al-mudārabah*. Like the *'inan* partnership, the partners are contributing capital (in the above example, Rafidah, Anwar, and Gamel). Like the *mudārabah*, these partners are investors (*rabb al-māl*), and the entity the equity of which they purchase is the worker (in the above example, the Indosuez Company). Technically, all requirements for an *'inan* apply to a *musāhamah*. Further, in addition to the standard ways for terminating an *'inan*, a *musāhamah* also can be terminated with the consent of the majority of partners.

### [B] *Sharikah al-Taḍāmon* (Trading Partnership)

*Sharikah al-taḍāmon* is a partnership involving two or more persons for the purpose of dealing in any or all kinds of trade in goods or services (so long as such trade is permissible under the *Shari'a*). The word "*taḍāmon*" is a verb meaning to "guarantee" or "ensure." "*Taḍāmon*" is derived from "*daman*," a noun meaning "guarantor" or "surety." These meanings relate to joint and several liability of the partners.

A *taḍāmon* is a kind of holding company for a conglomeration of different business activities. Rather than form separate partnerships, with different agreements governing each one, for each line of commercial activity in which the partners are commonly engaged, the partners can take advantage of the *sharikah al-taḍāmon* arrangement to serve as an umbrella entity covering all their business ventures. Moreover, there is efficiency, in the form of lower transactions costs, by virtue of the need to forge only one, all-encompassing agreement to govern the diversity of their activities. In this respect, a *sharikah al-taḍāmon* is akin to modern-day holding company in the United States, Japan, Korea, and other non-Muslim countries, the subsidiaries of which engage in an array of businesses from banking and cars to shipping and steel.

In the partnership agreement, the partners must specify the name, purpose (e.g., lines of business activity), and location (including headquarters and any branches) of their *sharikah al-taḍāmon*, plus the names, locations, and citizenships of the individual partners. Also specified in this contract are the time of establishment and duration of the partnership, the operating business year for the partnership (e.g., 1 July through 30 June), and conditions for termination of the partnership (such as the end of the stated life of the partnership, agreement of all partners, bankruptcy of the entire partnership, purchase by one partner of all the shares in the partnership, merger with another partnership, or court order). Termination need not occur with the bankruptcy or death of one of the partners. Rather, the insolvency or expiry means withdrawal by that partner (or, if specified in the agreement, the passing of her share to appropriate heirs), but the association continues.

Partners in a *sharikah al-taḍāmon* pay in initial capital contributions, and receive proportionate shares based on them. The partnership agreement specifies the amounts of capital put up by each partner, and their resulting shares. However, percentage ownership interests in the partnership are less significant in a *taḍāmon* than in most other forms of partnership under the *Shari'a*. First, decisions concerning the partnership are made according to majority vote. That is, the default rule is that decision-making is according to one-person-one-vote, not weighted according to share interests based on capital contributions. The partnership agreement identifies one of the partners as the manager of the *taḍāmon*, or permits designation of a non-partner as manager, and lays out the authority of the manager.

Second, each partner in a *sharikah al-taḍāmon* is liable for all obligations of the partnership. The liability is not limited to the extent of the share of a partner in the partnership, i.e., it is not capped by the initial capital contribution of the partner. Instead, the liability extends to the personal assets of the partner. In addition, the liability of each partner is joint and several. In this respect, a *taḍāmon* is similar to a *sharikah al-mufāwadah*. Furthermore, if a new partner joins a *taḍāmon*, she is liable for all debts of the partnership — not only obligations incurred after becoming a partner, but also obligations existing at the time of joining the partnership. Conversely, if a partner withdraws from a *taḍāmon*, then she is free from any liability associated with it after a certain period (e.g., 1 month) from the effective date of withdrawal has elapsed.

Thus, for example, assume Asma', Altaf, and Mustafa form a *sharikah al-taḍāmon* for the purposes of (1) growing and exporting dates, (2) manufacturing aluminum extrusion (rod) products, (3) providing distribution services for a Japanese camera company, Nikon, and (4) offering training programs in entrepreneurship for women. Obviously, their array of business is diverse, and the *taḍāmon* is the useful conglomerate in which to house their activities. Asma', Altaf, and Mustafa contribute U.S. \$5 million, \$3 million, and \$2 million, respectively, and receive 50 percent, 30 percent, and 20 percent stakes, respectively. Governance of the affairs of the partnership depends not on these percentages, though, but is by majority vote. A decision is taken if two of them favor the contemplated course of action. They decide to form four separate divisions, one for each of the trading activities.

Suppose the "Date Division" loses \$10 million in a particular year, as new competition from Iraqi dates is encountered, and the other three divisions break even that year. The partners would allocate the loss in proportion to their shareholding. Accordingly, Asma' incurs a \$5 million loss, Altaf a \$3 million loss, and Mustafa a \$2 million loss. Suppose the latter two partners are unable to come up with the funds to cover the loss? Then, because each partner is wholly liable for this loss, Asma' incurs the \$10 million obligation, and she logically would look to the capital against which to write down the loss. What happens if the capital is insufficient to cushion this loss? Then, the personal assets of Asma' could be called upon to cover the loss. Alternatively, assume the "Women's Entrepreneurship Division" makes a \$10 million profit in a given year, proving wildly popular with talented young women eager to start their own business. This profit is distributed

among the three partners *pari passu*, i.e., in proportion to their shares in the *sharikah al-ta'amon*.

### [C] Two Other Modern Partnerships

As indicated earlier, in some Muslim countries, two additional modern types of business associations exist, and are recognized and approved. They are:

- *Sharikah al-tawsi'ah*, a two-tiered partnership in which only one partner is jointly and severally liable for the debts of the partnership, and operates the business, and the other partners are jointly liable only up to the extent of their share in the partnership, and cannot direct the affairs of the partnership.<sup>1</sup> The first tier both finances and runs the partnership. The second tier only finances its affairs. Profits and termination are governed by the same kind of arrangements as in a *sharikah al-ta'amon*. "Tawsi'ah" is derived from the Arabic root word "w-s-a," a verb meaning "to direct." "Tawsi'ah" connotes what second tier partners do — provide funds and direct the first tier partners, but otherwise stay out of the management.
- *Sharikah al-mohass'ah*, an informal grouping of persons gathered to engage in businesses of their choosing. Each is responsible for her own share in the business, and not liable for partnership losses beyond that share. Contractual requirements for setting up this partnership are minimal. The word "mohass'ah" is derived from the Arabic root word "h-s-s'ah," a noun meaning "share."

The examples of modern partnerships evince the flexibility, even ingenuity of Islamic legal scholars to develop forms of association to adapt to the needs of the marketplace and market participants. It would not be surprising to observe continued evolution, and perhaps the development of yet new forms of partnership.

## § 25.02 AGRICULTURAL VENTURES

### [A] *Muzāra'ah* (Sharecropping)

Most *fukahā'* do not consider either *muzāra'ah* or *musāqāh* to be types of partnership. Instead, they characterize *muzāra'ah* and *musāqāh* as a type of contract, specifically, one for hiring, known as an "ijārah" contract. They eschew the terms "*sharikah al-muzāra'ah*" and "*sharikah al-musāqāh*." Yet, both *muzāra'ah* and *musāqāh* resemble a *sharikah al-abbān*, in the sense they are built on the skills and labor of the persons involved. Each arrangement involves at least two people — an owner of property (landowner) and a worker (tenant farmer) — voluntarily coming together to engage in an agricultural business. Thus, *muzāra'ah* and *musāqāh* are sometimes considered partnerships, and grouped with a *sharikah al-abbān*, but the controversy continues.

<sup>1</sup> With joint liability, responsibility for an obligation is shared, but (unlike joint and several liability), a partner may not be held individually responsible for the entire amount of the obligation in question. See BRYAN A. GARNER, ED., BLACK'S LAW DICTIONARY 997 (St. Paul, Minnesota: West, 9th ed. 2009) (definitions of "joint and several liability" and "joint liability").

The general meaning of "*muzāra'ah*" is the sharing of crops. "*Muzāra'ah*" is:

[a] contract for the cultivation of land between the owner of the land and the worker with the condition of sharing the produce.<sup>2</sup>

The *Mejelle*, the Civil Code of the Ottoman Caliphate from 1877 to 1926, which codifies part of the *Hanafi fiqh*, defines "*muzāra'ah*" as:

*Muzara'a* is a kind of partnership, where the land comes from one, and the work from the other, i.e., a partnership to cultivate, and divide the crops.<sup>3</sup>

The *Mejelle* refers to the arrangement as a partnership, and identifies its essential feature: a symbiotic link between a landowner (contributing land) and farmer (cultivating it), with the two sharing the yield. In the United States, the arrangement is called "sharecropping."

Despite the straightforward definitions, there is an engaging, lively debate among, and even within, the Four *Sunni* Schools about this arrangement.

#### • *Hanafi School*:

There is a huge split among *Hanafi* School *fukahā'* concerning the *sharikah muzāra'ah*. The issue is whether a *muzāra'ah* is a *bona fide* form of partnership. On one hand, the founder of the *Hanafi* School, Abū Hanīfah, believes a *muzāra'ah* is not legally justifiable, meaning that it is not permissible to establish one. On the other hand, the two companions of Abū Hanīfah, namely, his leading students, Abū Yūsuf and Muhammad Al Shaybānī, see *muzāra'ah* as legally valid. For them, the entity is an authentic type of partnership that may be set up between a landlord and tenant.

Abū Yūsuf and Shaybānī back their position with four arguments:

#### (1) The *Sunnah* (Tradition) of the Prophet —

In Khaybar,<sup>4</sup> the Prophet contracted with certain people for half of their produce. This half related to conquered lands and imposition of a land tax (*kharāj*). A battle occurred in 629 A.D. (7 A.H.) between Muslim and Jewish forces, resulting in the victory of the former, and land being owned by the Muslim state, with Jews as farmers. The essence of the bargain allowed the Jews to remain in possession of the land, in exchange for half of the agricultural output generated by them on that land. The bargain fits the pattern of "*muzāra'ah*" as in the *Mejelle* definition — a partnership to cultivate and divide crops, in which land is provided by the title holder, the

<sup>2</sup> IMRAN ARSAN KHAN NYAZEE, *ISLAMIC LAW OF BUSINESS ORGANIZATIONS — PARTNERSHIPS* 337 (Selangor, Malaysia: The Other Press, Malaysian ed., 2002). [Hereinafter, NYAZEE.]

<sup>3</sup> THE MEJELLE — BEING AN ENGLISH TRANSLATION OF MAJALLAH AL-AHKAM AL-ADLIYA AND A COMPLETE CODE OF ISLAMIC CIVIL LAW § 1431 at 237 (Petyalying Jaya, Malaysia: The Other Press, January 2001) (C.R. TYSER, B.A.L., D.G. DEMETRIADES & ISMAIL HAQFI EFFENDI, trans.). [Hereinafter, MEJELLE.] See also NYAZEE, *supra*, at 246 (quoting MAJALLAH AL-AHKAM AL-ADLIYA [The *Mejelle*], § 1431).

<sup>4</sup> "Khaybar" is a name of a town about 100 miles north of Medina, in the Kingdom of Saudi Arabia. It is renowned for its date farms. In the times of Muhammad, Khaybar was home to a large Jewish community. Several Islamic legal precepts are based historically in events that occurred in and around Khaybar.

Muslim governmental authority, and work by Jewish tenants.

(2) Contemporaneous and Subsequent Practice —

During and after the life of Muhammad, his Companions (*Ṣaḥābah*) and subsequent generations of their followers made use of the *muzāra'ah* arrangement. While their use is not part of the *Sunnah* of the Prophet, and thus technically not a source for an Islamic legal rule, it has tended to broaden and deepen the sense of precedent supporting this kind of partnership.<sup>5</sup>

(3) *Qiyās* (Analogical Reasoning) —

Abū Yūsuf and Muhammad al-Shaybānī compared a *sharikah muzāra'ah* with a *sharikah al-muḍārabah*. At a detailed level, two contrasts were obvious. First, in a *muzāra'ah*, the capital takes the form of land, while in a *muḍārabah* the capital is financial (i.e., money). Second, in a *muzāra'ah*, the work takes the form of agricultural labor, while depending on the specific *muḍārabah*, the work could entail providing one of a wide range of goods or services. But, Abū Yūsuf and Muhammad al-Shaybānī argued that, at a conceptual level, the two forms of business association resemble each other. In both forms, one partner provides capital, and the other partner provides the work. For these students of Abū Hanifah, this similarity — linking the controversial *muzāra'ah* to the valid *muḍārabah* — was further evidence to legitimize the *muzāra'ah*.

(4) Economic Necessity —

Practical economic logic also legitimizes a *muzāra'ah*, according to Abū Yūsuf and Shaybānī. Often, people are owners of land, but do not have the time, inclination, or experience to make productive use of their property. Contemporaneously, other people lack land ownership, but have the time, inclination, and experience to plant, grow, and harvest crops, or raise livestock, on it. It would be a waste to let absentee ownership inhibit productive use of land. Indeed, on religious grounds, wasting gifts from God is sinful. Therefore, Abū Yūsuf and Shaybānī argued legalizing *muzāra'ah* is economically prudent. Doing so does more than simply put absentee-owned land in cultivation. It also results in job opportunities for agricultural laborers, raises incomes in the farm sector, and boosts agricultural output for the community.

The position against which Abū Yūsuf and Shaybānī argue is adopted by Abū Hanifah. The founder of the *Ḥanafī* School offers three reasons why *muzāra'ah* is not a legally valid form of business association:

(1) The *Sunnah* (Tradition) of the Prophet —

Abū Hanifah characterizes the contract Muhammad made with the people of Khaybar as a “*mukhābarah*.” This term is synonymous with

“*musāqah*.”<sup>6</sup> In brief, it is an irrigation contract. In other words, Abū Hanifah is saying the bargain between Muhammad and the Jews of Khaybar did not involve land, cultivation, and yield-sharing. Rather, it was a narrow deal involving only irrigation.

(2) The Khaybar Transaction and *Kharāj* —

Part of the *musāqah* (irrigation) bargain between Muhammad and the Jews of Khaybar involved a land tax, or *kharāj*. Professor Nyazee explains the meaning of “*kharāj*”:

*Kharāj* is of two types. The first is one in which the *imām* imposes a fixed levy in accordance with what the land is able to bear. The second type is the taking of a part of the produce as *kharāj*. Both types are valid. It appears that the people of Khaybar were being subjected to the second type. The evidence for this argument is that the Prophet (peace be upon him) did not stipulate a fixed period for them. Had it been *muzāra'ah*, according to those who permit it, is not valid without stipulation of a period.<sup>7</sup>

Whereas Abū Yūsuf and Shaybānī characterize the arrangement to give up half of the crop as consistent with a *muzāra'ah*, Abū Hanifah argues it is nothing more than a tax on the land. In essence, imposition of the *kharāj* on the Jews of Khaybar, who remained in possession of the land, is part of their submission to (i.e., peace treaty with) Muslim forces after their defeat in battle.

(3) Unknown Wages —

Abū Hanifah pointed out that as a general principle of partnership law, the amount of wages a partner is paid for her labor must be known (or, at least, knowable). In a *muzāra'ah* arrangement, the landowner receives rent, in the form of crop yield, from a tenant farmer, who works the land. In exchange, the worker not only receives possession of the land, but also a wage or earnings of some kind. For example, the wages could be the amount of crop to which the worker is entitled. However, this amount is not known (certainly not before the crop is harvested). A term such as “half the yield” is not specific enough, because the yield is not known. Thus, concluded Abū Hanifah, a *muzāra'ah* breaches the principle that wages be specified, rendering the entire arrangement impermissible.

On balance, the *Ḥanafī* School practices *sharikah muzāra'ah*. That is, the view of Abū Yūsuf and Muhammad al-Shaybānī has prevailed over the arguments of their teacher, and it has become the standard *Ḥanafī* School doctrine accepts a *muzāra'ah* as a *bona fide* form of partnership. This doctrine is embodied in a *fatwā* (i.e., an authoritative legal pronouncement by a *muftī*, who is the highest ranking authority of a School).

<sup>6</sup> NYAZEE, *supra*, at 337.

<sup>7</sup> NYAZEE, *supra*, at 280 (quoting the arguments from both sides, AL-ZAYLA'Ī, TAḤṬĪN AL-HAḠA'Q [CLARIFYING THE TRUTH], vol. 5 at 278 [Hereinafter, AL ZAYLA'Ī]; AL-MAGHRINĀNĪ, AL-HIDAYAH, vol. 4, at 53-54; AL-KASĀNĪ, BADA'Y' AL-SAGĀ'Y [BEAUTY OF THE WORK], vol. 8 at 3808 [Hereinafter, AL KASĀNĪ]).

<sup>5</sup> In general, the *Mālikī* School accepts the practice of the people of Medina (not Mecca) — the Companions of the Prophet (*Ṣaḥābah*) and first generation after him — as the fifth source of the *Shari'ah*, after the *Qur'ān*, *Sunnah* of the Prophet, *qiyās*, and *ijmā'*.

• **Mālikī School:**

The Mālikī School defines "*sharikah muzāra'ah*" as a:

partnership for cultivation and its contract is *ghayr lāzim* (terminable) prior to sowing and either party to this partnership for cultivation may revoke it.<sup>8</sup>

The Mālikī School does not permit *muzāra'ah*, in contrast to the Hanafī School. In other words, the Mālikī School accepts the views on the topic of Imam Abū Ḥanīfah.

• **Shāfi'ī School:**

Generally, the Shāfi'ī School does not accept *muzāra'ah* as a legally valid form of partnership. It reaches this conclusion based on the *Sunnah* of the Prophet, specifically the aforementioned transaction between Muhammad and the Jewish people of Khaybar as characterized by Imam Abū Ḥanīfah. However, there is a unique feature to the Shāfi'ī School perspective on the *muzāra'ah*. This School permits the establishment of a *muzāra'ah*, and accepts it as legally valid, in one narrow case, namely, whenever it is connected to *musāqāh* (irrigation). Thus, only a sharecropping arrangement that includes a provision for irrigation is acceptable to Shāfi'ī School *fukahā*.

• **Hanbalī School:**

In contrast to the Mālikī and Shāfi'ī Schools, the Hanbalī School has the same view on *sharikah muzāra'ah* as the majority of the Hanafī School. That is, the Hanbalī School accepts the arguments of Abū Yūsuf and Shaybānī. Interestingly, this School emphasizes economic necessity as a justification for authorizing a *sharikah muzāra'ah*.

For the Schools that accept the legal validity of a *sharikah al-muzāra'ah*, that is, the Hanafī and Hanbalī School, and in a narrow circumstance, the Shāfi'ī School, what elements are required to establish this partnership? The answer is simple. Only an offer and acceptance are needed. A land owner offers a tenant a parcel of land, by way of a *muzāra'ah*, and proposes they share produce from the land. The tenant is free to respond by accepting or declining the offer. Upon acceptance, the *muzāra'ah* is established. Critically, the share of the agricultural output from the land given over by the tenant to the landowner is all the tenant is obligated to provide to the landowner. In a *muzāra'ah* arrangement, the tenant does not pay any rent for the right to possess and work the land. The tenant may opt not to live on the land, and be an absentee farmer. These features differentiate a *muzāra'ah* from an *ijārah* (hiring of goods or services) arrangement.

A *sharikah muzāra'ah* contract typically is in writing, or at least is supposed to be so. In this partnership agreement, six terms (conditions) should be specified:

(1) **Ahliyah Partners (legal capacity or capability) —**

The contract must identify the partners — landowner (property owner) and tenant (worker, farmer) as having the legal capacity to enter into an

<sup>8</sup> NVAZEE, *supra*, at 278 (quoting MUHAMMAD 'ULAYSH, TAQHRĪT 'ALĀ AL-SHARH AL-KĀMIR ON THE MARGIN OF AL-DASHQ, HUSHTAH [MARGIN NOTES], vol. 3 at 372) [Hereinafter, AL DASHQ].

agreement. Whether a minor has this capability is not in dispute. However, some *fukahā* permit a minor to form *muzāra'ah*, but only if she receives authorization to do so by an adult (presumably, her legal guardian).<sup>9</sup>

(2) **Produce —**

The contract must define what the tenant is to plant, grow, and harvest on the land in question, unless the landowner commits to a general authorization that the tenant is free to sow whatever she prefers. This authorization is akin to a direction to act according to one's own discretion, found in other Islamic partnerships.

(3) **Utility —**

The contract must state that output from the land that is its subject is to be useful and capable of being cultivated. In practice, this condition appears to mean that the product be legal (hence, narcotics would not qualify) and tradable in a marketplace (e.g., dates, eggs, or wheat, all of which can be bought and sold).

(4) **Ownership and Division of the Produce —**

The contract must indicate that both landlord and tenant own the agricultural output from the land in question. The contract must further establish the division of the produce based on a fixed percentage.

(5) **Transfer of Possession —**

The contract should set out the legal obligation of the landlord to hand over the land that the subject of the deal to the worker, and thereby allow the tenant to work on it. It would seem to be an implied term that the landowner not interfere with the ability of the tenant to farm the land.

(6) **Duration —**

The contract should state its ending date.

The sixth condition rightly implies a *sharikah muzāra'ah* is a terminable contract. However, the power to terminate it lies only with the tenant. The contract is binding on the landowner, thus assuring the farmer she cannot be kicked off of the land in an arbitrary or capricious manner. Thus, the standard method of termination is the end of the duration specified in the contract. Death of the farmer also terminates the contract.

Despite the general protection in favor of the tenant against premature termination, there are two ways a *sharikah muzāra'ah* contract may end in a way that imposes adjustment difficulties on him or her. Suppose the landowner is in debt, and the only way she can pay the debt is by selling the land. Alternatively, suppose the land fails to yield any output. In either instance, the *muzāra'ah* contract is terminated.

<sup>9</sup> Likewise, some *fukahā* permit a slave to enter into a *muzāra'ah* arrangement, if allowed by her master.

### [B] *Musāqāh* (Irrigation)

*Sharikah al-musāqāh* is closely connected with, and treated alongside, *sharikah al-muzāra'ah*. The general meaning of "*musāqāh*" is a:

contract for the watering of trees between the owner of land and a worker on the condition of sharing the produce.<sup>10</sup>

Of course, if the land fails to yield any produce, then neither partner receives anything.

Evidently, *musāqāh* is a narrower form of partnership than *muzāra'ah*. Both involve crop sharing, but a *muzāra'ah* does not specify watering of crops. Hence, a *musāqāh* is considered an irrigation arrangement. A *musāqāh* does not mandate crop planting, growing, fertilizing, or harvesting. Technically, the worker is required only to provide irrigation — that is the point of the partnership, namely, for the landowner to get the worker to provide water to her land. Depending on the context, both kinds of partnership may be used to exploit the agricultural potential of the same parcel of land.

For example, consider a hypothetical plot of land called Tamimi Estates. Ms. Tamimi, the owner, is not skilled at farming, nor does she have the technical expertise or equipment to drill a well. She is interested in developing an orange grove on the Estates. Toward this end, Ms. Tamimi establishes a *muzāra'ah* partnership with Mr. Pirzada, an experienced fruit grower. Under the terms of their deal, Mr. Pirzada will plant, fertilize, care for, and harvest oranges on the Estates, in exchange for a defined percentage of the orange output. Ms. Tamimi permits him to live on the Estates as a tenant farmer. As for watering the grove, Ms. Tamimi negotiates a *musāqāh* partnership with Mr. Walid, who is a trained hydrologist and has the heavy equipment needed to find a well. Mr. Walid surveys the property, discovers a water source, and drills a well. Under the partnership terms with Ms. Tamimi, Mr. Walid receives a share of the oranges from the Estates. He does not, however, live on the Estates or otherwise have possession of that land.

That said, the Four *Sunni* Schools do not all specifically reference irrigation in their definitions of "*musāqāh*." The *Hanafi* School makes no mention of it, defining a "*sharikah al-musāqāh*" as:

a contract of work for part of the produce along with the conditions of validity.<sup>11</sup>

The *Māliki* School identifies "*sharikah al-musāqāh*" as:

a contract for serving trees and whatever is associated with it for part of the produce or for the whole lot of it.<sup>12</sup>

"Serving trees" and "associated matters" certainly would cover not only watering, but also fertilizing and other forms of care. The *Shāfi'i* School uses the word "care," teaching that a "*sharikah al-musāqāh*" as:

<sup>10</sup> NYAZEE, *supra*, at 337.

<sup>11</sup> NYAZEE, *supra*, at 286 (quoting AL-KASANI, *supra*, vol. 8 at 3831).

<sup>12</sup> NYAZEE, *supra*, at 287 (quoting AL-DASUQI, *supra*, vol. 3 at 539).

a contract (*mu'amalah* [transaction or agreement]) for the caring of trees for part of their fruit.<sup>13</sup>

Finally, the *Hanbali* School references irrigation, describing a "*sharikah al-musāqāh*" as:

the giving of trees to another so that he undertakes to water them and performs [*sic*] all other associated work for a known part of their produce.<sup>14</sup>

Why does the *Hanafi* School offer the least precise definition of "*musāqāh*"? That School is split on the question of whether a *muzāra'ah* is a *bona fide* form of partnership. Abū Hanifah argues a *muzāra'ah* is not legally justifiable, but his leading students, Abū Yūsuf and Shaybānī, take the opposite view. Insofar as *muzāra'ah* and *musāqāh* are related, given the split over the first kind of partnership, it might be surprising if the *Hanafi* School devoted much attention to articulating a clear definition of the latter term.

Indeed, as for the legal validity of *sharikah al-musāqāh*, the same argument concerning *sharikah al-muzāra'ah* among the Four Schools occurs in respect of *sharikah al-musāqāh*. The *Hanafi* School *fukahā'* are divided. The founder of the *Hanafi* School, Abū Hanifah, thought *sharikah al-musāqāh* is invalid. His two companions, Abū Yūsuf and Muhammad al-Shaybānī, disagreed and argued for the legalization of *musāqāh*. The *Hanbali* School follows the views of Abū Yūsuf and Shaybānī.

The *Māliki* School legal criteria for a valid *sharikah al-musāqāh* are cast in terms of exemptions:

... [*Musāqāh* is permitted as an exemption from the following rules:

1. *Ijārah* [hire or lease] with unknown wages;
2. Renting of land with what it produces;
3. Sale of fruit prior to the process of ripening, in fact, prior to its existence; and
4. *Gharar* [risk or uncertainty], because the worker does not know what the quantity will be.<sup>15</sup>

What this passage connotes is a *musāqāh* is legally valid because it is distinct from the four listed items — it is not a hire contract, land tenancy, fruit sale, or risky transaction. Finally, the *Shāfi'i* School reasons a *musāqāh* must be legally valid by referring to the *Sunnah* of the Prophet:

The source for it is the *mu'amalah* of the Messenger of Allāh (peace be upon him) with the Jews of Khaybar with respect to their date palms and their land for what would be produced by them.<sup>16</sup>

<sup>13</sup> NYAZEE, *supra*, at 287 (quoting AL-RAMLI, NIBAYAT AL-MUHTAJ [THE END FOR THE NEEDY] vol. 5 at 242 [Hereinafter, AL-RAMLI]).

<sup>14</sup> NYAZEE, *supra*, at 287 (quoting IBN QUDAMAH, AL-MUGHNI [THE FULFILLMENT] vol. 5 at 391).

<sup>15</sup> NYAZEE, *supra*, at 287.

<sup>16</sup> NYAZEE, *supra*, at 287 (quoting AL-RAMLI, *supra*, vol. 5 at 242).

In summary, although their exact rationales differ, three of the Four Schools definitively pronounce *musāqāh* to be a legally valid form of partnership.

What are the essential elements in forming a *sharikah al-musāqāh*? The Hanafi School compares a *sharikah al-musāqāh* to *sharikah al-muzāra'ah*. For this School, specifically, Abū Yūsuf and Shaybānī, offer and acceptance are the two key elements to establishing the partnership. A land owner offers land to a worker in the way of *musāqāh*, giving him or her a specific percentage of the produce. The worker accepts or responds by indicating the acceptance. With the acceptance, the *musāqāh* is formed. Among the other three Schools, the majority of *fukahā'* list four ingredients:

- [1] the subject matter specific to it; [2] the portion for which it has been concluded; [3] the description of the work required by the contract; and [4] the period for which it has been concluded and is permitted.<sup>17</sup>

As with other forms of contract-based partnership, these elements, and the entire *musāqāh* arrangement, should be set out in writing.

In a *sharikah muzāra'ah* contract, the same six terms for a *sharikah al-musāqāh* should be specified. But, there are four exceptions unique to a *musāqāh* arrangement:

The conditions of *musāqāh*, in their view [the majority of *fukahā'*], are the same as those of *muzāra'ah*, except in four matters: First, if either one of them refuses to perform the contract, he is to be forced to perform it as there is injury involved in it. This is different from the case of the owner of seed, who cannot be forced. Second if the period is over, access to the trees is to be given without rent and work is to be done without wages, and we will explain this in *muzāra'ah* with wages. . . . Third, if a third party is entitled to the trees, the worker will be entitled to reasonable wages from such a party, while in *muzāra'ah* the value of the crop is to be paid. Fourth, if the period needs to be determined, it will be presumed by way of *istihsān* as the season of the crop is well known.<sup>18</sup>

The first condition raises an interesting difference concerning termination between a *muzāra'ah* and *musāqāh* partnership.

A *muzāra'ah* contract is terminable (*ghayr lāzim*) by the tenant, but binding (*lāzim*) on the landowner. This asymmetry means the landowner cannot force a tenant to work on, or leave, the land. The worker is free to walk away, but then forfeits rights to her share of the crop. In contrast, the *Mālikī* School holds that a *musāqāh* contract binds both parties.<sup>19</sup> The worker must perform by providing irrigation services, in exchange for a designated share of the crop. This School also says a *musāqāh* contract may be inherited. As for termination methods, they are the same for both kinds of partnership.

## PART EIGHT

### BANKING LAW, CAPITALISM, AND GLOBAL FINANCE

## Chapter 26

### BANKING LAW: RISK (GHARAR)

---

If the poor are to be given priority, then there has to be enough room for *an ethical approach to economics* on the part of those active in the international market, *an ethical approach to politics* on the part of those in public office, and an *ethical approach to participation* capable of harnessing the contributions of civil society at local and international levels. . . . The history of twentieth-century economic development teaches us that good development policies depend for their effectiveness on responsible implementation by human agents and on the creation of positive partnerships between markets, civil society and States.

*Fighting Poverty to Build Peace*, Message of His Holiness Pope Benedict XVI for the Celebration of the World Day of Peace, 1 January 2009, ¶ 12 (emphasis original)

#### SYNOPSIS

- § 26.01 DEFINING “GHARAR”
- § 26.02 RATIONALE FOR PROHIBITION ON GHARAR
- § 26.03 TRADITIONAL ILLUSTRATION OF “GHARAR”
- § 26.04 MAJOR VERSUS MINOR GHARAR
- § 26.05 GHARAR AND TYPES OF FORBIDDEN (HARĀM) TRANSACTIONS
  - [A] Short-Selling and *Gharar*
  - [B] *Ja’alah* (Services Fee) Contracts
  - [C] *Bay’ Al-Urbān* (Down Payment) Contracts
  - [D] Sales of Unripe Fruit

#### § 26.01 DEFINING “GHARAR”

Whether banking is conducted on an Islamic or non-Islamic basis, risk is the logical starting point for any discussion of the topic. Every financial transaction involves risk and its allocation. To be sure, there are different types of risk, among the most prominent of which are:

- *Country risk* — the risk that the country in which a transaction is conducted encounters difficulties, typically of an economic nature, that bear adversely on that transaction.
- *Credit risk* — the risk of default by an obligor.

- *Currency risk* — the risk that a currency used in a transaction will appreciate or depreciate, relative to another currency (also called foreign exchange risk).
- *Insolvency risk* — the risk a party to a transaction will go bankrupt.
- *Legal risk* — the risk of a change in laws, regulations, or rules applicable to a transaction.
- *Political risk* — the risk that adverse political developments will occur to the detriment of a party in a transaction.

In every financial transaction, one party willingly accepts the shift of risk from another party, in exchange for compensation (such as a fee) from that other party. Put differently, in both Islamic and non-Islamic banking transactions, it is impossible to banish risk.

This being said, the *Shari'a* has formal rules about risk. In Arabic, "*gharar*" is the loosely equivalent term to the English concepts of "risk" or "uncertainty." It is sometimes said that *gharar* is prohibited in Islamic Law. That is rather an overstatement, insofar as risk and its transfer by mutual consent are at the heart of any financial transaction. However, as explained below, it is accurate to say the *Shari'a* contains important precepts about risk-taking and risk-shifting.

The word "*gharar*" originates from a three-letter past-tense verb "*gharra*," which means "to deceive."<sup>1</sup> The literal meaning of "*gharar*" in Arabic is "trick," or as Qāḍī Ayyad ibn Musa (1083-1149 A.D.) explains:

That which has a pleasant appearance and hated essence.<sup>2</sup>

As in non-Islamic legal systems, the *Shari'a* prohibits trickery, in the sense of fraud, in banking transactions. That is, the literal translation of "*gharar*" as "trick" points to the rationale behind the prohibition. Consider the definition of "*gharar*" offered by Professor Mustafa Ahmad Al Zarqa (1904-1999) of the University of Damascus:

[*Gharar* is] the sale of probable items whose existence or characteristics are not certain, the risky nature of which makes the transaction akin to gambling.<sup>3</sup>

In this definition, the analogy to gambling, and the intimation of excessive risk, are the keys to the justification for banning *gharar*.

<sup>1</sup> See MAHMOUD A. EL-GAMAL, *ISLAMIC FINANCE — LAW, ECONOMICS, AND PRACTICE* 202, endnote 28 (New York, New York: Cambridge University Press, 2006). [Hereinafter, EL GAMAL.]

<sup>2</sup> Quoted in EL GAMAL, *supra*, 202, endnote 28.

The French transliteration of the name of this Islamic judge is Qāḍī 'Iyad. Born in Gibraltar, and a judge in Granada, he was a famous *Maliki* School jurist. His full name is "Abū al-Faḍl Ayyad ibn Amr ibn Musa ibn Ayyad ibn Muhammad ibn Abdillāh ibn Musa ibn Ayyad al-Yahsubi al-Sabti." The university in Marrakech, Morocco, is named after him: University Cadi Ayyad Marrakech.

<sup>3</sup> Quoted in EL GAMAL, *supra*, at 58 (emphasis added) (quoting this and many classical definitions of "*gharar*" that highlight various types of deception, random events, and incompleteness of contract language from W. Al-Zuhayli, *Al-Fiqh Al-Islami wa Adillatuh* vol. 5 at 2408-3411 (Damascus, Syria: Dar Al-Fikr, 1997)).

## § 26.02 RATIONALE FOR PROHIBITION ON GHARAR

The rationale for the prohibition on *gharar* is not risk or uncertainty *per se*. Rather, as the above-quoted definition from Professor Al-Zarqa suggests, *gharar*, in the sense of trickery, and gambling involve unjust enrichment. One side benefits from a transaction, while the other side loses. In itself, this consequence means nothing more than that the transaction is a zero-sum game, the outcome of which is uncertain to the players at the beginning. If they are playing by mutual consent with full knowledge of the risk, then there should be no moral or religious difficulty.

Simply put, the *Shari'a* does not forbid uncertainty — no legal system can do that. Rather, it stresses that gains must be had through straightforward, transparent, and upright dealings. The issue surrounding *gharar* lies in the source of enrichment of one party, and correspondingly, the deprivation of the counter-party. Is that source unjust, because it involves some element of trickery, deception — in a word, fraud? In the compilation of *hadiths* by *Imām* Bukhari, there is an entire "Book of Tricks" containing 25 *hadiths* in which the Prophet Muhammad exhorts believers to avoid the use of trickery in all aspects of their lives, from prayer and *zakāt* to marriage and bargains.<sup>4</sup>

Yet another *hadith* offers a general approach to the problem of *gharar*. The Prophet says:

Why do you get the wealth of your brother, without justification?<sup>5</sup>

The problem with relying on this *hadith* alone to justify the prohibition against *gharar* is its context. The Prophet said these words in response to a hypothetical situation in which fruit is sold that carries a disease and leads to the illness or death of the buyers who consumed the fruit. The teaching that follows is that the seller should compensate the buyers for their loss. The link to *gharar* is only indirect, in that it may have been unclear as to whether the fruit posed a sanitary threat. Accordingly, a more specific *hadith* is needed, and fortunately *Imām* Muslim records one:

A man mentioned to the Messenger of Allah . . . that he was deceived in a business transaction, whereupon Allah's Messenger . . . said: When you enter into a transaction, say: There should be no attempt to deceive.<sup>6</sup>

<sup>4</sup> See THE TRANSLATION OF THE MEANINGS OF SAHIH AL-BUKHARI, ARABIC-ENGLISH by Dr. Muhammad Muhsin Khan vol. IX, book LXXXVI (The Book of Tricks), pp. 71-90, *hadiths nos.* 85-110 (Islamic University, Medina, Kingdom of Saudi Arabia: Dar Ahya Us-Sunnah, Al Nabawiya, March 1978). [Hereinafter, BUKHARI.]

<sup>5</sup> SAHIH MUSLIM — BEING TRADITIONS OF THE SAYINGS AND DOINGS OF THE PROPHET MUHAMMAD AS NARRATED BY HIS COMPANIONS AND COMPILED UNDER THE TITLE AL-JAM'U-S-SAHIH BY IMAM MUSLIM, RENDERED INTO ENGLISH BY ABDUL HAMID SIDDIQI, WITH EXPLANATORY NOTES AND BRIEF BIOGRAPHICAL SKETCHES OF MAJOR NARRATORS, CORRECTED AND REVISED BY DR. HASSAN VOL. III.A, book 22 (Book of Share Tenancy), p. 33, *hadith no.* 1554 (Lahore, Pakistan: Sh. Muhammad Ashraf Booksellers and Exporters, 1990). [Hereinafter, MUSLIM.]

<sup>6</sup> MUSLIM, *supra*, vol. III.A, book 21 (Book of Buyu — Book Pertaining To Business Transactions), p. 13, *hadith no.* 1533. Interestingly, *Imām* Muslim identifies the man as Habbān bin Munqith bin Amr al-Ansari, who was 130 years old and had been wounded in battle.

Essentially the same *hadith* is recorded by *Imām* Bukhari. See BUKHARI, *supra*, vol. III, book XXXIV

Evidently, these two *hadiths* articulate the underlying principle at stake with *gharar*, namely, that it potentially involves taking money through means that involve random chance, or even devious behavior.

It is important to distinguish the Banking Law concept of *gharar* from the Criminal Law concept of *sariqa* (theft). Theft is a *haqq Allāh* (claim of God) offense and triggers a *hadd* (limit) punishment. *Gharar*, even if it seems close to theft because of egregious behavior by one party, does not entail all the requisite elements of *sariqa*. The risk, or uncertainty, may arise from unintentional non-transparency in a transaction, or through the randomness of outcomes. Gambling provides a good analogy. Few observers equate gambling with "theft" in the sense that term appears in criminal law statutes and cases. All observers appreciate the degree of chance that separates winners from losers.

There also is a consequential element to the rationale for the *Shari'a* prohibition on *gharar*. In the first of the above-quoted *hadiths*, Muhammad speaks (disarmingly, perhaps, in comparison with Wall Street parlance) of one's "brother." That reference is not simply to blood relatives, but to all parties with whom or which one might enter a financial transaction. Thus, in financial dealings, a person ought to be sensitive to underlying human relationships, and appreciate the bond among people, and treat their financial counter-parties with dignity. Trickery has deleterious effects on the individuals who are its victims, and on a community at large. The victim resents what transpired, and becomes hostile toward the perpetrator. That is, *gharar* engenders enmity toward a person who cheats to make money from others. The community is worse off on account of this enmity. A general climate of frustration, anger, and even hatred can emerge if the sense of being cheated is widespread, and society can be polarized by a minority wrongfully increasing its wealth at the expense of the majority. Financial transactions can be impeded, markets paralyzed, and economic growth slowed, even halted and reversed, all because of distrust in the integrity of market participants and institutions.

Americans — whether Muslim or not — need look no further back than to the summer and fall of 2008, when problems in the sub-prime mortgage market and with large hedge funds triggered a financial collapse. Smart Wall Street financiers with degrees from brand-name universities no longer appeared trustworthy. Indeed, many were found to be no different than petty thieves — except the consequences of their trickery were far more systemic than that of a common criminal.

### § 26.03 TRADITIONAL ILLUSTRATION OF "GHARAR"

To give a traditional example of *gharar*, consider the following hypothetical illustration. A seller would like to sell an item, such as a horse, but does not have possession of that item. That is because the horse is lost. This example highlights how, in a transaction involving *gharar*, both parties face a potential loss, and either one of two parties actually suffers the loss. The seller is willing to sell the lost horse for half the price to whoever would take the risk of finding it. Conversely, a buyer — who is apprised the horse is lost — is willing to take the risk of buying the lost

horse, and thereafter finding that horse. In this situation, if the buyer finds the horse, the seller loses. Why?

The answer is the seller sold the horse for a lower price than she would have been able to command if the horse had been in her possession. The buyer benefits from procuring a horse for less than what it is worth. The loss to the seller and gain to the buyer are unjust, because they involve a high degree of risk, or uncertainty. What if the buyer does not find the horse? Then, the buyer is the losing party. The loss arises on the assumption she paid money, albeit a reduced amount, for nothing. The seller gains the proceeds from the sale of a horse that is not in her possession. Again, the gain-loss pair is unjust, because of the excessive risk or uncertainty.

### § 26.04 MAJOR VERSUS MINOR GHARAR

Not every transaction involving *gharar* is banned under the *Shari'a*. Some transactions might contain *gharar*, yet still be permitted. The obvious question is what type of *gharar* is permissible versus prohibited? To answer this question, a distinction must be made between two types of *gharar*: major *gharar*, and minor *gharar*. On the one hand, among the *fukahā*, the prohibition of major *gharar* is not controversial. Therefore, there is consensus (*ijma'*) that a major *gharar* invalidates a contract. On the other hand, a minor *gharar* is not forbidden. However, the *Shari'a* encourages Muslims to prevent and avoid the occurrence even of minor *gharar*. The particular distinction between "major" and "minor" thus is the dividing line between permissible and forbidden *gharar*, and this distinction is explored below.

Professor Al Darir identifies four conditions to discern whether *gharar* is major, and in turn, to know whether a contract is invalidated:

- (1) The *gharar* must be excessive.
- (2) The contract that is potentially affected must be a commutative financial contract.
- (3) The *gharar* must affect the principal components thereof.
- (4) If a commutative contract contains excessive *gharar*, but meets a need that otherwise cannot be met, then the *gharar* does not invalidate the contract.<sup>7</sup>

(By "commutative," Professor Al Darir means a transaction involving substitution.) In other words, the first and third conditions state that major *gharar* exists if there is excessive risk or uncertainty about a material term (i.e., one of the principal components, like price or quantity). The second condition limits the general rule against *gharar* to the world of financial transactions, and specifically to deals involving substitution. The fourth condition actually is an exception: even major *gharar* is tolerated if the need the contract serves cannot be fulfilled in any other way.

Accordingly, a financial contract is valid if it is free from the first three conditions. If a contract is not characterized by the first three conditions, then it involves minor *gharar*. Alternatively, a contract is valid if the fourth condition

<sup>7</sup> The Book of Sales (Bargains), p. 186, *hadith* no. 328.

<sup>7</sup> See EL GAMAL, *supra*, at 58-59.

applies. If the contract is not free of the first three conditions, but the fourth condition applies, then it is one involving major *gharar*, and it is saved by the exception. This exception is akin to *ḍarūrāh*, which means necessity. This exception, it may be observed, also is redolent of short-supply rules in International Trade Law. Under such rules (contained in the General Agreement on Tariffs and Trade (GATT), World Trade Organization (WTO) accords, and United States trade law), a measure curtailing or banning exports of a particular product, which otherwise would be illegal, may be permissible if there is no alternative domestic source of supply for the product. Similarly, a ban on trade relations with a particular country typically is subject to an exception to the effect that dealing with the suspect country would serve a larger national interest.

Why does the *Shari'a* allow for the validity of financial contracts with minor *gharar*? "Flexibility" is the answer. It is difficult for financial parties to explain every detail of a transaction, and produce a perfect contract, wherein there is no risk or uncertainty as to any point. Surely some aspect of the deal is ambiguous or unclear, or some term the parties might have inserted in the contract had they thought about it is missing. But, there is no trickery going on between the parties, no effort to obfuscate, and no harm that one party seeks to inflict on another. Islamic Law does not want the best to be the enemy of the good. Knowing that perfection is impossible to reach, it would be senseless — and damaging to the economic interests of the parties and their communities — to invalidate scores of transactions that otherwise involve no fraud. Therefore, the *Shari'a* is pragmatic in showing flexibility by letting the minor *gharar* transaction go forward.

## § 26.05 GHARAR AND TYPES OF FORBIDDEN (ḤARĀM) TRANSACTIONS

### [A] Short-Selling and *Gharar*

The traditional example of *gharar* leads to a modern illustration, characteristic of non-Islamic financial centers like Wall Street. The illustration is short-selling, which means the sale of an asset that the seller does not own, and possibly does not even possess (in which case the deal is called "naked" or "uncovered" short-selling). The asset could be a stock, bond, or other financial instrument, or a foreign currency. For example, suppose a hedge fund called Tiger Capital Management sells short 1,000 shares of stock in Bank of China, to a buyer, the State of Missouri Pension Fund. Tiger does not own those shares, but borrows them from a securities lender, such as United Missouri Bank. (Commercial banks typically lend securities for this purpose, and charge a borrowing fee.) Tiger sells the Bank of China stock short at a price of U.S. \$10 per share, earning a total of \$10,000. It is obligated (under applicable securities regulations) to deliver that stock to the Pension Fund on or before the expiry of three days after the sale transaction, *i.e.*, on or before "T + 3" (where "T" is the trade date). The stock Tiger sells is borrowed from United Missouri Bank for a fee it pays to the Bank of \$1,000. On or before T + 3, Tiger delivers the shares it borrowed from the Bank to the Pension Fund.

At this juncture, attention shifts to the relationship between Tiger and United Missouri Bank, because Tiger is obligated to deliver back 1,000 shares of Bank of China stock. Where does Tiger get that stock, or, as the financial jargon goes, how does Tiger "cover" its exposure, given that it has sold the borrowed shares to the Pension Fund? The answer is that Tiger buys the shares on the stock market (or over the counter, if applicable), in time to meet its delivery obligation. Because the stock is fungible, United Missouri Bank does not mind that the shares Tiger delivers to it are not the precise ones the Bank loaned to Tiger. (Indeed, in modern securities markets, stock typically is paperless, or un-certificated, *i.e.*, it is an electronic entry on the appropriate books and records of its owner.) If Tiger buys the shares at any price less than \$9 per share, then it makes a profit from the short sale. That is because it received \$10,000 on the sale to the Pension Fund, and paid a \$1,000 borrowing charge to United Missouri Bank, the difference being \$9,000. As long as Tiger can cover its open short-sale position of 1,000 shares at less than \$9 per share, it will not consume the profits it made on the short-sale.

Short-selling has at least two distinctly positive effects. First, it adds liquidity to a financial market. Short-sellers are ready, willing, and able to sell an asset, thus adding to the supply of that asset available in the marketplace. Second, short-selling is a signal to the market that there may be problems with the asset or its future environment. Its managers — the officers of the company whose shares are being sold short — may be incompetent or corrupt. The climate for the good or services that company provides may be gloomy, at least in the view of short sellers. For example, sellers may short an airline stock in the belief jet fuel prices are soon to rise.

But, is short-selling un-Islamic? Clearly, there is *gharar* involved. Whether the short-seller makes a profit is uncertain. It depends on whether the price of covering its position (buying another 1,000 of Bank of China shares) is sufficiently below the short-sale price (to the Pension Fund). Stated differently, the short-seller is betting the asset price will fall after its initial sale of the asset, so that it can cover its position at a profit. That gamble involves a potentially unlimited liability. The price of the asset could rise stratospherically, and wipe out the entire capital of the short-seller. At the same time, the *gharar* does not involve trickery, assuming all parties in the transaction understand what each other party is doing, and why, and assuming the short-seller does not spread false rumors in the securities markets to push down the price of the asset. However, assumptions about transparency and integrity often are dubious in practice. Moreover, damage to the community from short-selling can be considerable, if it leads to general stock market declines that depress the value of financial portfolios of average investors.

There are *hadiths* that rather strongly counsel the answer to the above-posed question is that short-selling indeed is un-Islamic. *Imām* Bukhari gives as examples of a "*gharar*" sale the selling of fish that are un-fished, or the selling of a bird that has not yet been caught.\* He records the following injunction:

Allāh's Apostle . . . forbade the sale called '*Habab-al-Habala*' [literally, pregnancy of the pregnant, or simply pregnant, but referring to the sale of

\* BUKHARI, *supra*, vol. III, book XXXIV (The Book of Sales), fn. 1 at p. 199.

an unborn animal] which was a kind of sale practiced in the Pre-Islamic Period of ignorance. One would pay the price of a she-camel which was not born, yet would be born by the immediate offspring of an extant she-camel.<sup>9</sup>

Moreover, *Imām* Muslim recounts the following prophylactic rule:

Allāh's Messenger . . . had forbidden a transaction determined by throwing stones, and the type which involves uncertainty.<sup>10</sup>

An Explanatory Note to the second *hadith* is particularly insightful. The reference to a transaction "determined by throwing stones" is to a market practice prevalent in pre-Islamic Arabia.<sup>11</sup> To determine which among two or more possible transactions would be binding, either the seller or buyer would throw a stone at targets representing each such possibility. The transaction symbolized by the target the tossed stone touched would be the deal that bound the seller and buyer. For example, a seller might offer to sell any one of three shirts to a buyer at the price of one dirham. Which shirt does the buyer get? The answer is the shirt by which the stone the buyer throws comes most closely to rest. Obviously, selecting the terms and conditions of a transaction by throwing stones is unpredictable. It involves random chance influenced only by the skill of the seller or buyer in throwing stones accurately.

As for the reference to "uncertainty" in the second of the two above-quoted *hadiths*, the Explanatory Note summarizes two pre-eminent points:

(a) the transaction should be done after full inspection and *not haphazardly leaving much to chance*. There should be a *clear understanding on both the sides*; (b) Islam does not approve of the transaction which may be called as buying a bird in a bush. The bargain should be struck about *what is present and lying in the possession of the seller*. What lies uncertain in the womb of the future, or what stands outside the possession of the buyer [*sic* (seller)], is not a valid bargain in Islamic Law.<sup>12</sup>

<sup>9</sup> *Bukhari, supra*, vol. III, book XXXIV (The Book of Sales), p. 199, *hadith* no. 353.

<sup>10</sup> *Muslim, supra*, vol. IIIA, book 21 (Book of Buyu — Book Pertaining to Business Transactions), p. 5, *hadith* no. 1513.

<sup>11</sup> *Muslim, supra*, vol. IIIA, (Book of Buyu — Book Pertaining to Business Transactions), p. 5, Explanatory Note (1) to *hadith* no. 1513.

<sup>12</sup> *Muslim, supra*, vol. IIIA, (Book of Buyu — Book Pertaining to Business Transactions), p. 5, Explanatory Note (2) to *hadith* number 1513 (emphasis added).

As cited above, the first *hadith* is quoted from *Imām* Bukhari. Essentially the same *hadith* is recorded by *Imām* Muslim, albeit with less precision and detail than by *Imām* Bukhari. The account in *Sahih* Muslim is:

[The people of pre-Islamic days used to sell the meat of the slaughtered camel up to *habab-al-habala*. And *habab-al-habala* implies that a she-camel should give birth and then the [born should grow young] and become pregnant. Allāh's Messenger . . . had forbidden them that [transaction].

See *Muslim, supra*, vol. IIIA, Book 21 (Book of Buyu — Book Pertaining to Business Transactions), p. 5, *hadith* no. 1514R1, p. 5 (bracketed inserts original). Thus, the Explanatory Note quoted above applies equally well to both compilations.

The italicized language in point (a) reflects the general concern about *gharar*, namely, chance and non-transparency. In point (b), the italicized language can be read as an outright ban on short-selling.

However, a plausible rebuttal to this interpretation would stress the distinction between "possession" and "ownership." A short-seller does not own the asset that is the subject of the sale, yet the seller may well be in actual or constructive possession of that asset. After all, in the above hypothetical, Tiger borrowed shares from United Missouri Bank. As a borrower, Tiger was in possession — at least momentarily, in a physical or imputed sense — of those shares before selling them to the Pension Fund. In sum, the *Shari'a* does rather strongly incline against short-selling, but a lively debate may be had on the point.

It is important to appreciate that *Shari'a* scholars are not the only ones who voice objections to short-selling and hedging practices. Europe first banned short-selling in 1609, when the Dutch banned the practice due to the fall in share prices of the Dutch East India Company. The Bank of England followed suit, banning short-selling in 1697. Today, most developed countries have implemented regulations of some sort to limit the kinds of short-selling risks investors may take on. Australia, Brazil, Canada, China, France, Germany, Hong Kong, Italy, Japan, Korea, Netherlands, Russia, Singapore, Spain, Switzerland, Taiwan, the United Kingdom, and the United States have implemented various regulations against short-selling, especially since financial markets spiraled downwards following the September 2008 collapse of Lehman Brothers.<sup>13</sup> For example, America's Securities and Exchange Commission (SEC) adopted one of the most aggressive stances against the practice, forcing all short-sellers of public companies to deliver the promised securities to the buyer on the settlement date or face penalties. Additionally, a new anti-fraud rule makes it illegal for short-sellers to lie about their ability to deliver the securities on a given date.

Muslim countries, such as the Kuwait, Saudi Arabia, and the United Arab Emirates (UAE, specifically the Emirate of Dubai), also address problems caused by short-selling investors. For instance, in 2008, the Dubai Financial Market called on banks to halt short-selling, because the practice violated existing rules and exacerbated the downward economic trend. Saudi Arabia likened short-sellers to the "mafia," because they manipulated the market and caused suffering to investors.<sup>14</sup>

Internationally prominent non-Muslim religious clerics have spoken out against the practice. The Archbishop of York, John Sentamu (1949-), likened short-sellers to "bank robbers and asset strippers."<sup>15</sup> The Archbishop of Canterbury, who is the leader of the Church of England and head of the world-wide Anglican Communion, called on governments to identify more targets after short-sellers. Short-sellers and hedge funds criticize the Church's condemnation, however, because of the policy of the Church of lending out foreign stock, which many claim perpetuates short-

<sup>15</sup> Quoted in Mackintosh, *supra*.

selling. The Church counters this claim by asserting its portfolio does not include hedge fund products.<sup>16</sup>

In sum, targeting short-sellers and hedge funds for regulatory restrictions has become prevalent, especially during shaky economic periods. Various countries and organizations do so, using a variety of tools. Reputation, too, is a sanction. Short-sellers and hedge funds are painted as villains, even if a more considered approach would be to identify deeper, structural sources of financial woes. It is incumbent on contemporary Islamic scholars to answer in a persuasive manner the important question: does Islam prohibit short-selling, and why? Only when scholars pause to answer crucial financial questions like this one can Muslim investors comfortably devise real solutions to counter economic collapse. To the extent this investigation is an ecumenical one, engaging scholars of different faiths, then so much the better. After all, financial markets are global, cutting across investors of all faiths — and even no faith — so there is no reason to localize the analysis and confine it to a particular religious perspective.

### [B] *Ja'alah* (Services Fee) Contracts

Two transactions that are commonplace in non-Islamic economies are consultancy agreements and down payments. Interestingly, both transactions may be considered forbidden (*harām*), at least among some Islamic legal scholars (*fukahā'*), because they entail *gharar*. In Arabic, the controversial transactions are known as *ja'alah* (services fee) and *bay' al-urbān* (down payment).

Literally, "*ja'alah*" is a noun connoting "give for," and is derived from the verb "*ja'al*," which means "to give." In an economic context, "*ja'alah*" is defined as an

[a]greement with an expert in a given field to undertake a task for a pre-determined fee or commission (as in a consultancy agreement or contract).<sup>17</sup>

Put differently, the agreement is one in which a fee is paid to a service provider to perform a task. Thus, "*ja'alah*" may be thought of as a services fee, or job wages, arrangement.

To clarify further the meaning of this term, it is necessary to appreciate that under a *ja'alah* agreement, the hired person is not entitled to a service fee or wages if that person does not complete the specified work. For example, suppose an owner loses her horse. The owner enters into an agreement with an expert on horses to find the horse. Once the expert finds the horse, the expert is paid a specified sum of wages. But, if the expert is not able to find the horse, the owner is not obligated to pay the expert anything.

Is this *ja'alah* agreement forbidden (*harām*) because it entails *gharar*? Only the *fukahā'* of the Hanafi School answer "yes." These *fukahā'* argue the person hired (in the above hypothetical example, the expert in horses) is the losing party in this

situation. In the above hypothetical, suppose the expert in horses does not find the horse. The expert will have expended time and effort, yet receive no payment. In modern economic parlance, the expert suffers an uncompensated opportunity cost. The obvious response is the expert freely entered into the *ja'alah* agreement, and surely understood the risk of non-payment upon failure to find the horse. In brief, the expert voluntarily assumed this risk. It is perhaps odd the Hanafi School *fukahā'* take a strict approach to *ja'alah* contracts, in light of the general permissiveness of that School to business dealings.

The other three Schools — *Mālikī*, *Shāfi'ī*, and *Hanbalī* — permit a *ja'alah* arrangement. Their *fukahā'* argued the transaction does not involve *gharar*. They see the deal as a win-win or lose-lose transaction, i.e., the outcome is not asymmetric. In the above example, if the horse is returned, then the owner and finder benefit. The former gets back the horse, and the latter is paid a fee. If the horse is not returned, then neither benefits. These three Schools support their argument using *qiyas*. They analogize to an example in *surah* 12 of the Qur'an from the Story of Joseph:

<sup>69</sup>Then, when they [the brothers of Joseph] presented themselves before Joseph, he [Joseph] drew his brothers apart and said [to his closest brother], "I am your brother, so do not be saddened by their [the other brothers] past actions [towards Joseph]," <sup>70</sup>and, once he [Joseph] had given them their provisions, he placed the drinking-cup in his brother's pack. A man called out, "People of the caravan [i.e., the brothers]! You are thieves!" <sup>71</sup>and they [the brothers] turned and said, "What have you lost?" <sup>72</sup>They [the guards of the king] replied, "The king's drinking-cup is missing [i.e., the measuring cup of Joseph, who the Egyptian Pharaoh appointed as the king — that is minister — of commerce and the marketplace]," and "Whoever returns it will get a camel-load [of grain]," and, "I [Joseph, the king of commerce] give you my word." <sup>73</sup>They said, "By God! You must know that we did not come to make mischief in your land: we are no thieves." <sup>74</sup>They asked them, "And if we find that you are lying, what penalty shall we apply to you?" <sup>75</sup>and they answered, "The penalty will be [the enslavement of] the person in whose bag the cup is found: this is how we punish wrongdoers." <sup>76</sup>[Joseph] began by searching their bags, then his brother's, and he pulled it out from his brother's bag.

In this passage, Joseph is the person offering a *ja'alah* contract. That is, he is the one agreeing to pay a fee to anyone who finds the missing drinking cup.

The *fukahā'* argue these *ayat* state that whoever finds the king's cup will receive a fee, namely, grain. Conceptually, there is no difference to finding a horse, or performing any specified task. Note, however, two key facts that make the analogy to a *ja'alah* contract less than perfect. First, Joseph not only offers the contract, but also performs it. He is at once akin to the horse owner and horse finder. Second, the contract arises because of a ruse. Joseph did not lose the cup. Rather, he planted it in the backpack of his favorite brother for two reasons. First, he sought to help that brother escape from the company of his other brothers. Second, Joseph wanted to punish the other brothers for what they previously did to him. Those other brothers

<sup>16</sup> See Mackintosh, *supra*.

<sup>17</sup> ZAMIR IQBAL & ABIR MIRAKHOR, AN INTRODUCTION TO ISLAMIC FINANCE THEORY AND PRACTICE, GLOSSARY at x (Singapore: John Wiley & Sons (Asia) Pte Ltd, 2007). [Hereinafter, Iqbal & Mirakhor.]

abandoned him in a deserted land, because they were jealous that their common father, Jacob, was closest to Joseph.

Despite these distinctions, the *Māliki*, *Shāfi'i*, and *Ḥanbali fukahā'* find the analogy sufficiently compelling to uphold *ja'alah* arrangements. For them, there is no prohibited *gharar* in these deals. By further extension, into modern times, energy exploration contracts are permissible. On the one hand, a finder of an oil well or natural gas source gains a finder's fee. The party (e.g., a land owner or other rights holder) that charged the finder with the exploratory task benefits from having a well or source it can exploit. On the other hand, if no energy supply is discovered, neither the party with exploration rights, nor the explorer, obtains any benefit.

### [C] *Bay' Al-Urbān* (Down Payment) Contracts

A *bay' al-urbān* contract is an arrangement to make a down payment for the purchase of an asset. The term is defined as:

[p]ayment of a portion of the full sale price paid in good faith as earnest money. In case the buyer decides not to complete the sale, this advance payment is forfeited to the seller.<sup>18</sup>

As the definition suggests, the seller of an asset is entitled to the down payment if the buyer defaults on the agreement to purchase that asset.

Where does the *gharar* lie in a *bay' al-urbān* contract? The answer is in the uncertainty as to whether the down payment will be returned to the buyer. The buyer is at risk of losing the down payment, a risk tied to the uncertainty of performance by the buyer of the agreement to purchase the asset in question. If the underlying asset sale transaction is not complete, then the buyer loses the down payment, which the seller gains. That gain is said to be for nothing, i.e., in exchange for no value. Accordingly, the *fukahā'* of three Schools — *Hanafi*, *Māliki*, and *Shāfi'i* — consider a *bay' al-urbān* contract *ḥarām*, because of this *gharar*.

Their conclusion, however, rests on weak grounds. In fact, the seller does give up value in return for a down payment forfeited by a buyer. During the time between (1) final agreement on a sales contract, and (2) closure (i.e., commencement of performance) of that contract, the seller withdrew the asset from the market and preserved it for the benefit of the buyer. The seller incurs an opportunity cost doing so, as it could have sold the asset to another, possibly for an even higher price. The *Ḥanbali fukahā'* accept this rationale, and is the only School that approves of a this type of a *bay' al-urbān* transaction. However, the *Ḥanbali* School requires the prior agreement from both, the seller and the buyer, in order to permit this transaction. As with *ja'alah* contracts, with *bay' al-urbān* deals, it is *Ḥanbali* School — not the normally more progressive *Hanafi* School — that lends its approval.

There is a third transaction commonplace in non-Islamic economies that entails forbidden *gharar*. It is the sale of un-ripe fruit, an everyday occurrence in large values and volumes in modern international and domestic agricultural markets. If

fruit had to be ripe to sell it, then it might be spoiled by the time it is delivered to the buyer. Consequently, fruit typically is picked when it is not yet ripe — green bananas being an obvious example — and shipped in that state. By the time it gets to the buyer, such as a wholesale grocery store, it still is not fully ripe. The ripening occurs over several days, while the grocer proudly displays the fruit in the hopes of attracting retail purchasers.

### [D] Sales of Unripe Fruit

All Four Schools agree on the injunction against selling fruit before ripeness. This prohibition is based squarely on a *ḥadith*:

Allah's Messenger . . . had forbidden the sale of palm trees (i.e., their fruits) until the dates began to ripen, and ears of corn until they were white and were safe from blight. He forbade the seller and the buyer [from such a transaction].<sup>19</sup>
